- Selz, Mr. and Mrs. J. H., Chicago, Ill., gift to Michael Reese Hospital, \$10,000.
- Simple, Mary E., Pittsburgh, Pa., will to charity, \$50,000.
- Senff, Mrs. C. H., New York, gift to University of Virginia, \$15,000.
- Shank, J. W., South Pasadena, Cal., will to church, \$10,000.
- Shardlow, Joseph, New York, will to church, \$5000.
- Shattuck, Joseph, gift to Lawrence, Mass., \$5000.
- Sheffield-Yale Scientific School, gift by unnamed donor, \$100,000.
- Sheppard sisters, Camden, N. J., will to charity, \$6000.
- Sherman, Mary E. P., Bridgeport, Conn., will to church, \$60,000.
- Shippen, Elizabeth F., Philadelphia, Pa., will to University of Pennsylvania, \$25,000; to Bryn Mawr College, \$10,000; to charity, \$1,966,000.
- Shoemaker, E. W., Bridgeton, N. Y., will to charity, \$10,000; to church, \$80,000; training school, \$10,000; to library, \$5000.
- Shonta, Theodore P., Des Moines, Iowa, gift to Drake University, \$25,000.
- Slattery, Margaret M., New York, will to library, \$5000; to charity, \$5000.
- Slimmer, Alexander, Dubuque, Iowa, gift to hospital, \$5000.
- Smith, Byron L., Chicago, Ill., will to charity, \$200,000; to employees, \$100,000.
- Smith, Edwin K., New York, will to Bowdoin College, \$500,000.
- Smith, George W. N., gift of art collection to Springfield, Mass., library, \$1,000,000.
- Smith, Hannah, Quincy, Mich., gift to hospital, \$25,000.
- Smith, Mary J., Santa Ana, Cal., will to charity, \$25,000.
- Smith, Thomas J., Champaign, Ill., gift to University of Illinois, \$200,000.
- Smithsonian Institution, gift by Morris Loeb, \$36,947.
- Snow, R. S., Cambridge, Mass., will to church, \$14,000.
- Snydam, Lambert, New York, gift for cancer research, \$25,000.
- Snyder, George S., New York, will to Bangor Library, \$5000; to Bowdoin College, \$10,000; to Phillips Exeter Academy, \$20,000.
- Snyder, N. W., Sunbury, Pa., will to church, \$7000.
- Socialism, will by William Sayres, \$20,000.
- Society of Fine Arts, will by W. H. Dunwoody, \$100,000.
- Soren, George W., New York, will to charity, \$20,024.
- Southwestern University, gift by various donors, \$11,000.
- Springfield, Mass., gift of art collection to library by George W. N. Smith, \$1,000,000.
- Springfield, Mass., Medical College, gift by J. D. Rockefeller, \$50,000.
- Stewart, David D., St. Albans, Me., gift to charities, \$130,000; gift to church, \$15,000; gift to education, \$85,000; to East Maine Seminary, \$6000.
- Stillwell, Homer A., Chicago, gift to University of Illinois, \$25,000.
- Stone, Nathaniel H., gift to Harvard University, \$50,000.
- Stratheona, Lord, London, will to Yale University, \$500,000.

Suffrage, Woman, will by Mrs. Frank Leslie, \$800,000; gift by Mrs. O. H. P. Belmont, \$5000; gift by unnamed donor, \$15,000.

Sullivan, T. T., Salina, Kan., will to church, \$8000.

Summit, N. J., gift by various donors, \$100,000.

Taddock, Mrs. M. C., Oakland, Cal., will to charity, \$20,000.

Taft, Mr. and Mrs. Charles P., Cincinnati, Ohio, gift to Y. M. C. A., \$25,000.

Tag day, Chicago, Ill., gift to charity, \$46,000.

Telfey, Sarkis A., New York, will to church, \$60,000; to Turkish schools, \$15,000; to Anatolia College, \$10,000; to Euphrates College, \$15,000.

Tenney, Annie S., Portland, Me., will to charity, \$10,000; to Society of Nat. History, \$6000; to Y. M. C. A., \$5000.

Thalman, E., New York, will to charity, \$25,000.

Thayer, Nathaniel, Lancaster, Mass., will to Boston Museum of Fine Arts, \$150,000; to Mass. Institute of Technology, \$50,000; Mass. General Hospital, \$50,000.

Thomas, Mrs. Milton, Los Angeles, Cal., gift to charity, \$25,000.

Thompson, Elizabeth, New York, will to charities, \$750,000.

Thompson, Ferris S., Paris, will to Brown University, \$1,500,000; to charity, \$213,188; to church, \$50,000; to Princeton University, \$1,500,000.

Thorndike, George L., Boston, Mass., will to charity, \$300,000.

Tier, Christian A., New York, will to church, \$28,390.

Torrey, Elbridge, Boston, Mass., will to charity, \$70,000.

Tourtelotte, Jacob F., Minneapolis, Minn., will to Tourtelotte Institute, \$600,000.

Tourtelotte Institute, will by Jacob F. Tourtelotte, \$600,000.

Travers, Bridget, Philadelphia, Pa., will to charities, \$5000.

Trinity College, gift by Duke family, \$275,000; will by H. H. Oberly, \$5000.

Turkish schools, will by Sarkis A. Telfey, \$15,000.

Tuskegee Institute, will by William Endicott, \$5000.

United Charities, will by William G. Irwin, \$25,000.

United Kingdom, trust gift by Andrew Carnegie, \$10,000,000.

University of California, will by F. W. Dohrman, \$5500; by W. J. Young, \$25,000.

University of Illinois, gift by W. B. Champaign, \$14,000; by Thomas J. Smith, \$200,000; by Homer A. Stillwell, \$25,000.

University of Pennsylvania, gift by Louis A. Duh-ring, \$1,500,000; will by Emma L. Forest, \$10,000; will by W. B. Irving, \$200,000; gift by Elizabeth F. Shippen, \$25,000.

University of Pittsburgh, gift by unnamed donor, \$50,000.

University of Rochester, will by Josephine M. Clarkson, \$7000.

University of Utah, gift by James McGregor, \$50,000.

University of Vermont, gift by unnamed donor, \$10,000.

University of Virginia, gift by Charles R. Crane, \$10,000; gift by Mrs. C. H. Senff, \$15,000.

Urbana, Ill., will to library by F. E. Eubelin, \$10,000.

Ure, David M., Pittsburgh, Pa., will to church, \$50,152; to Monmouth College, \$23,750.

Ursinus College, gift by various donors, \$100,711.

Vanderbilt, L. W., New York, gift to Yale University, \$100,000.

Vanderbilt, W. K., New York, gift to Columbia University, \$113,750.

Van Wagoner, Mary L., New York, will to charity, \$83,000.

Vashti College, gift by Edward L. Drury, \$25,000.

Wadleigh, Horace W., will to Museum of Fine Arts, \$125,000; Massachusetts Institute of Technology, \$125,000; charity, \$141,000.

Wallach, David, Chicago, Ill., gift of fountain to city, \$5000.

Warschauer, Harry, New York, will to charity, \$17,000.

Walters, William C., Philadelphia, Pa., will to charity, \$15,000.

Washburn College, gift by General Board of Education, \$100,000.

Washington Traction Company, Washington, D. C., gift to employees, \$30,000.

Washington University, gift by Carnegie Education Board, \$750,000.

Watrous, Juliette, Washington, D. C., will to church, \$8000.

Watt, Jackson A., Oxford, Pa., gift to hospital, \$6,000.

Webb, Mrs. B. F., New York, will to charity, \$200,000; to church, \$10,000.

Wedeles, Julia, Chicago, Ill., will to charity, \$25,700.

Wellesley College, gift by Rockefeller Foundation, \$750,000; unnamed donor, \$100,000; various donors, \$9848.

West Altes, Wis., gift of library by Andrew Carnegie, \$10,000.

Western Reserve University, will by Liberty E. Holden, \$1,000,000; gift by J. D. Rockefeller, \$250,000.

Westfall, Mary B., Dayton, O., will to charity, \$15,000.

White, Alfred L., New York, will to Y. W. C. A., \$5000.

White, Joseph M., Winchester, Mass., gift to charities, \$50,000.

Whiteknight, Charles H., Philadelphia, Pa., will to charity, \$5000.

Widener, George D., Ogontz, Pa., gift to hospital, \$6000.

Wiese, William, New York, will to charity, \$10,000.

Wilder, Mary C., Ashby, Mass., will to charity, \$8,000.

Wittenberg College, gift by Mrs. S. E. Greenawalt, \$10,000.

Wolf children, New York, gift to charity, \$25,000.

Wolverton, W. H., Augusta, Ga., will to library, \$25,000.

Woman's Christian Association, gift by J. D. Ed-manson, \$5000.

W. C. T. U., will by Mrs. A. C. Price, \$20,000.

Woman's Medical College, Philadelphia, Pa., gift by unnamed donor, \$10,000.

Wood, Frank, Boston, Mass., will to charity, \$75,000; to college, \$40,000; to church, \$45,000; to Northfield Seminary, \$40,000.

Wooster, estate of C. H., Limsburg, Conn., gift to town, \$57,000.

Worley, Kate, Philadelphia, Pa., will to charity, \$63,000.

Wright, Joseph, Philadelphia, Pa., will to charity, \$15,000.

Wright, W. G., San Bernardino, Cal., will to charity, \$10,000.

Wyatt, Fair, Montgomery, Ala., will to charity, \$40,000.

Wymer, Morris, Cambridge, Mass., will to Harvard University, \$400,000.

Yale Divinity School, gift by various donors, \$850,000.

Yale University, gift by Brady family, \$625,000; gift by Martha F. Byler, \$10,000; by Mary A. F. Hotchkiss, \$750,000; by the Lander family, \$400,000; by the Lauder family, \$75,000; by National Geographic Society, \$7275; by other donors, \$8000; gift by Strathcona estate, \$11,000; by L. W. Vanderbilt, \$100,000; will by Schuyler B. Jackson, \$7000; will by Lord Strathcona, \$500,000.

Yankton College, gift by various donors, \$50,000.

Yerby, Nettie, Sterling, Ill., gift to church, \$10,000.

Young, W. J., Barnwell, S. C., gift to University of Georgia, \$25,000.

Y. M. C. A., gift by Mrs. Mary M. Emery, \$50,000; by Helen Gould, \$35,000; by L. A. Holmes, \$10,000; by J. D. Rockefeller, \$72,000; by Nettie M. McCormick, \$50,000; will by Annie S. Tenney, \$5000.

Y. M. C. A., Ann Arbor (Mich.), gift by J. D. Rockefeller, \$60,000; Baltimore, Md., gift by various donors, \$400,000; Bellwood, Pa., gift by various donors, \$7870; Brooklyn, gift by J. D. Rockefeller, \$300,000; Cincinnati, O., gift by Mr. and Mrs. Taft, \$25,000; gift by Mrs. May Emery, \$61,217; gift by other donors, \$408,873; Springfield, Mass., gift by J. D. Rockefeller, \$50,000; Columbus O., gift by J. D. Rockefeller, \$36,244; Lancaster, Pa., gift by A. C. Kepler, \$15,000; by various donors, \$86,500; Los Angeles, Cal., gift by various donors, \$20,000; New London, Conn., gift by various donors, \$100,000; Pasadena, Cal., by various donors, \$15,000; Plainfield, N. J., gift by various donors, \$12,000; Staunton, Va., gift by various donors, \$54,000; Stroudsburg, Pa., gift by various donors, \$50,000; Van Wert, O., gift by various donors, \$5000; White Plains, N. Y., gift by J. D. Rockefeller, \$5000; Y. M. C. A., colored, gift by Julius Rosenwald, \$150,000.

Y. W. C. A., gift by Marie Niles, \$25,000; will by Sarah E. Ritchie, \$10,000; will by Alfred E. White, \$5000.

Ypsilanti, Mich., gift to city by Samuel M. Quirk, \$25,000.

GILL, SIR DAVID. A Scotch astronomer, died

Jan. 24, 1914. He was born in 1843 at Aberdeen, Scotland, and was educated at Marischal College, and the University of Aberdeen. His earliest labors in astronomy were devoted to the study of the sun. Previous to his researches the accredited method for determining the sun's distance was to observe transits of Venus; and Gill, who was then director of the private observatory of Lord Lindsay at Dunecht, organized Lord Lindsay's Transit of Venus Expedition to the island of Mauritius in 1874. The results of the expedition were disappointing, and Gill turned to another method, the development of which gave successfully the sun's distance with satisfactory accuracy. He utilized the favorable opposition of the planet Mars in 1877 to make observations of its position with a heliometer from a station near the equator. The earth's rotation would carry the observer from one viewpoint to another during the night, thus affording a basis for calculations of the planet's distance. The experiments were conducted on the island of Ascension, and were entirely successful. They paved the way for further successes with a larger instrument, and with a somewhat different plan of work. After this expedition, Gill was appointed astronomer at the Cape of Good Hope, and under his direction from 1879 to 1906, the Cape Observatory advanced to the front rank. His personal work consisted first in confirming and correcting the result for the sun's distance, and afterwards in obtaining as accurately as possible the distance of those stars which were suspected of being nearest to the earth. His photographs of the Great Comet of 1882 revealed the possibility of employing photography for mapping the stars, and in 1885 he began his *Cape Photographic Durchmusterung*. The task of measuring the photographs, which was undertaken by Professor Kapteyn of Groningen, was completed in 1900, and as a result of the coöperation of the two astronomers, we have a comprehensive survey of the southern sky from 19° S. declination, containing more than 450,000 stars. From this important work sprang directly the execution of the International Star Chart and Catalogue, which is still in progress. During the last years of his directorship at the Cape Observatory, he carried on a series of successful experiments with a large telescope which was fitted with an elaborate spectroscopic apparatus. With this instrument it was possible to attack the problem of the sun's distance by determining the velocity with which the earth moves around it. This determination, completed very soon after Sir David Gill's retirement in 1907, confirmed the direct determination with the heliometer which he had made years before. He published much on astronomical subjects, and his writings are of great authority. He was knighted in 1900. The Universities of Aberdeen and Edinburgh conferred upon him the degree of LL.D. Degrees were also conferred by the Universities of Oxford, Dublin, and Cambridge. He was a member of many scientific societies, and received medals from astronomical and other bodies in recognition of his work. In 1907 he was president of the British Association.

GILLETT, WILLIAM KENDALL. An American scholar and educator, died Sept. 28, 1914. He was born in New York City in 1860, and graduated from New York University in 1880. He afterwards studied at the Columbia Law School,

at the University of Berlin, and at the University of Paris, and carried on approved studies in Paris, Geneva, Florence, Madrid, and Seville. From 1885 to 1888 he was instructor in French and German at Lehigh University. From 1890 until the time of his death he was professor of Romance languages on the undergraduate and graduate faculties of New York University, and from 1902-09 was chairman of the committee on college organizations. He was at the same time curator of the New York University Historical Society and a member of several other learned societies.

GINSBURG, CHRISTIAN DAVID. An English Hebraist, died March 9, 1914. He was born in Liverpool in 1831. When he was 26 years of age he published historical and critical commentaries on *Ecclesiastes* and the *Song of Songs*. This was followed by many other books. The great work of his life, however, was the publication and explanation of the *Massorah*. Another of his books of great value was the *Introduction to the Hebrew Bible*. The learning and labor which underlie all his publications, but especially those dealing with the *Massorah*, are amazing; and Hebrew scholars owe to him an immense debt for the almost exhaustive completeness with which he has made the Massoretic material at present known accessible to them. He was appointed in 1870 to undertake the revision of the Old Testament. He also contributed many articles to various Bible dictionaries and encyclopædias, published in recent years.

GIBARD, ALFRED CONRAD. An American soldier and surgeon, died Jan. 3, 1914. He was born in Switzerland in 1841, and graduated from the University of Würzburg in 1864. In 1865 he removed to the United States and entered the army as acting assistant surgeon. He was promoted successively until he became colonel and assistant surgeon-general, in 1902. In 1905 he was made brigadier-general and in the same year was retired at his own request. From 1867 to 1882 he served in the Departments of Louisiana and Texas. He afterwards visited hospitals in Europe and published the first report in the United States advocating antiseptic surgery. For eight years following he served on the frontier in campaigns against the Indians, and after another trip to Europe published an atlas of clinical microscopy. During the Spanish-American War he was chief surgeon of the second army corps and at its close equipped the General Hospital at the Presidio, Cal. For one year he served as chief surgeon in the Department of Luzon, in the Department of the Philippines. He was then chief surgeon of the Department of California. After his retirement he served for a time as reference librarian of the John Crerar Library at Chicago, and afterwards represented this library in Washington. He contributed articles on medical subjects to medical journals.

GOBAT, CHARLES ALBERT. A Swiss peace advocate, died March 16, 1914. He was born in the Canton of Bern in 1843. He practiced law and in 1882 was elected to the Great Council of Bern. Most of his life was devoted to the cause of international peace. In 1902 he divided the Nobel peace prize with E. Ducommun. In 1904 he visited the United States and attended the Interparliamentary Conference at St. Louis. In the same year he formally asked the United States to intervene in the Russo-Japanese War

At the time of his death he was president of the International Peace Bureau, and administrator of the Interparliamentary Union.

GOLD. The total production of gold in the mines of the United States in 1913 was 4,299,784 fine ounces. This, at a value of \$20.67 per fine ounce, was valued at a total of \$88,884,400. The production in 1912 was 4,520,717 fine ounces, valued at \$93,451,500. There was less gold produced in 1913 than in any year since 1905. The maximum production was in 1909, when it was valued at \$94,560,000. California was the first State in the production of gold in 1913, with 979,174 fine ounces, valued at \$20,241,300. Colorado was second, with 876,057 fine ounces, valued at \$18,109,700; Alaska third, with 735,364 fine ounces, valued at \$15,201,300; and Nevada fourth, with 579,408 ounces, valued at \$11,977,400. Further details in regard to the production in these and other gold-producing States will be found in the paragraphs on *Mineral Production* under these States. The accompanying table gives the value of the production in 1912-14.

GOLD PRODUCTION IN UNITED STATES.

State	1912	1913	1914*
Alabama	\$16,400	\$9,200	\$12,200
Alaska	17,198,600	15,201,300	15,850,000
Arizona	8,785,400	4,101,400	4,507,800
California	20,008,000	20,241,300	21,447,800
Colorado	18,741,200	18,109,700	19,881,000
Georgia	10,900	13,300	11,400
Idaho	1,401,700	1,244,800	1,066,000
Maryland	1,200	700
Montana	3,707,900	3,820,900	3,935,100
Nevada	13,575,700	11,977,400	11,003,800
New Mexico	754,600	892,000	1,207,600
N. Carolina	156,000	115,200	118,900
Oregon	759,700	1,477,900	1,594,500
S. Carolina	15,400	4,100	6,100
S. Dakota	7,828,700	7,214,200	7,810,000
Tennessee	11,500	7,700	5,900
Texas	2,200	200	10,800
Utah	4,312,600	3,570,300	3,180,200
Washington	682,600	657,500	607,400
Wyoming	24,300	17,500	2,200
Continental			
U. S.	\$92,989,900	\$88,176,100	\$91,760,800
Philippines	461,600	707,200	1,060,100
Porto Rico	1,000	3,100
Total	93,451,500	88,884,400	92,823,500

* Preliminary estimates of Director of the Mint.

The total number of mines producing gold in 1913 was 5276. Of these, 3502 were deep mines, and 1774 were placer mines. With few exceptions all the mines producing gold produced also silver, copper, lead, and zinc. The number of mines shows a net total decrease over 1912 of 335 producing mines. The number of placers decreased by 270, and the number of deep mines by 65. In the total number of operating mines, Colorado was first with 858, followed by California with 796, Nevada with 786, and Alaska with 737. In the number of placer mines, Alaska led with 700, followed by California with 386, Idaho with 196, and Montana and Oregon with 128 each. In deep mines Colorado led with 829, followed by Nevada with 722, Montana

with 430, California with 410, and Arizona with 402.

The great bulk of the domestic gold output is from dry or siliceous ores and from placers. Over 91 per cent of the total production comes from these sources. The total contribution of gold derived from the great copper, lead, and zinc mines of the country is therefore relatively small. The total value of the gold placer production in 1913 was \$22,238,424, compared with \$23,019,633 in 1912. From dry and siliceous ores was obtained gold valued at \$59,222,751, compared with \$62,111,916 in 1912.

IMPORTS AND EXPORTS. The imports of gold in 1913 amounted to \$63,704,832, and the exports to \$91,798,610. Of the imports, \$30,163,682 was in foreign bullion, refined; \$16,088,053 in United States coin; \$12,086,204 in foreign ore and base bullion; and \$5,366,893 in foreign coin. Of the exports, \$46,139,054 was in domestic bullion, refined; \$44,547,670 in United States coin; \$602,781 in domestic ore and base bullion; and \$508,604 in foreign coin.

The gold mining industry of the United States was prosperous in 1914 and regained its normal condition. The United States Geological Survey estimate of an output greater by nearly \$4,000,000 than that of 1913 was verified by the returns made to the Director of the Mint. The production in 1913 was lower than for several years preceding, and that for 1914 was considerably below that of any year in the period 1908-12, when the high-water mark was reached. There were increases in Alaska, Arizona, California, Colorado, and other States. The output in Idaho decreased, as it did in Nevada. California retained first rank in 1914, followed in order by Colorado, Alaska, Nevada, and South Dakota.

The imports of gold in 1914 were valued at \$58,122,000, and the exports at \$242,711,000. This large excess of exports was due to the payment in gold of debts owed by Americans in Europe, a notable example being the case of New York City bonds. Credits through deposits of gold were established by the Bank of England at Ottawa, Canada, in South Africa, and in Australia, where such deposits could be credited to persons or firms in London without the danger of the shipment of the gold itself on the high seas.

WORLD'S PRODUCTION. The accompanying table shows the world's production of gold in 1912-14.

GOLD PRODUCTION OF THE WORLD

	1912	1913	1914*
Transvaal	\$188,599,260	\$181,889,012	\$173,275,610
Rhodesia	13,166,230	13,935,681	17,748,275
West Africa	7,386,028	7,846,560	8,805,000
Madagascar, etc.	2,925,000	2,044,600	1,980,000
Total Africa	\$212,076,518	\$205,715,653	\$201,808,885
United States	\$93,451,500	\$88,884,400	\$92,823,500
Mexico	22,500,000	20,500,000	17,500,000
Canada	12,559,288	16,216,131	16,550,000
Central America, etc.	3,682,500	3,030,400	3,500,000

Total for the world	\$474,333,268	\$462,669,558	\$455,305,385

* Preliminary estimates, *Engineering and Mining Journal* (New York).

The production in 1914 again showed a reduction, although the decrease as compared with 1913 was less than the difference between that year and 1912. The total, according to the preliminary figures of the *Engineering and Mining Journal* (New York) in 1914, was \$454,305,385, which was \$7,364,173 less than the corrected total for 1913. The decrease from 1912 to 1914 was \$20,027,883.

With these estimates are included in the table herewith, compiled by the same authority, the figures for 1912 and 1913 corrected by official and other reports. Those for 1914 are based upon returns for 11 months, with estimates for the final month of the year from nearly all the principal countries. The figures for the United States are the preliminary estimates of the Director of the Mint and the U. S. Geological Survey.

The Transvaal, the largest producer of all, showed a decrease of \$8,594,000, or about the same as the difference between 1912 and 1913, though the second half of 1914 showed a considerable gain over the corresponding period of 1913. Rhodesia and West Africa showed large increases.

While there was a decrease in the production of gold throughout the world, there was also an increased demand, and the effects of the war on the general disorganization of trade and exchange served to disturb conditions of production and movement. All of the nations of the world desired not only to retain their gold supplies, but to increase them wherever possible. As a result, with the apparent scarcity of gold, throughout the world there was a general rise in values.

The gold coin minted in the British mint in 1914 totaled £15,126,000, as against £27,638,000 in 1913. The number of silver pieces struck was 92,455,000 in 1914, against 60,159,000 in 1913, including 12,330,000 silver coins struck for the colonies in 1914. The total value of the silver coinage was £6,250,000 in 1914, against £1,934,000 in 1913. The reduction of gold coinage was due partly to the issue of emergency notes to take the place of gold, and to the fact that Egypt, Argentina, and other foreign countries, which usually take large quantities of sovereigns in the latter part of the year made few transactions of this kind in the closing months of 1914. The increase in the silver coinage was due to the war and Lloyd George's decision to add freely to the coinage at the beginning of the war. See METALLURGY; and PRICES, section *Causes*.

GOLD COAST, THE. A British crown colony and protectorate on the west coast of Af-

rica, with a coast line of about 350 miles, and an inland extension of some 440. It borders on the Gulf of Guinea. The area of the colony is 24,200 square miles, of Ashanti 20,000, and of the Northern Territories 35,800. For administrative purposes the colony is divided into three provinces. The 1911 census returns give the population of the colony at 853,766, probably underestimated; Ashanti, 287,814; Northern Territories, 361,806. Population of Accra, the capital, 19,585; Cape Coast Castle, 11,364; Seccondee, 7725; Coomassie, 18,853. In the interior, agriculture is the chief industry. The soil is very fertile, and yams, cassava, corn, plantains, rice, cacao, spices, and rubber are cultivated. The coast tribes carry on fishing. From the forests are brought palm oil, palm kernels, rubber, lumber, cacao, and kola nuts. Since the fifteenth century gold has been exported, but it was not until 1874 that a company was formed for systematic exploitation. The development of transportation facilities favors the progress of this industry. The total exports of the country for the year 1912 were valued at £4,307,802, detailed as follows: £1,642,733 cacao, £1,470,660 gold and gold dust, £228,745 lumber, £205,365 palm kernels, £112,885 palm oil, £168,729 rubber, £134,231 kola nuts, £343,948 specie, etc. The imports, mainly cotton goods, provisions, and wines and spirits, were valued in 1912 at £4,023,322. Customs receipts, 1911, £663,462. Tonnage entered and cleared, 1912, 2,849,248, of which 1,625,804 British. Revenue, 1912, £1,230,850; expenditure, £1,157,091. The railway completed in February, 1898, runs from Seccondee to Tarquah, about 40 miles. An extension was completed to Coomassie Oct. 1, 1903. During the year the extension of the Gold Coast Railway from Komfrodna to Coomassie was under construction, and the first section, to Komfrodna, was reaching completion. The cost of the line from Komfrodna to Coomassie was estimated at \$6,000,000. A branch line from Broomassie to Prestea has been completed; and a line is under construction from Accra to Akwapim, which has been completed to Mangoase, 39 miles. There is a wireless station at Accra. Sir H. C. Clifford (appointed 1912) was Governor in 1914.

GOLF. Francis J. Ouimet of Massachusetts who startled the golfing world in 1913 by defeating Harry Vardon and Edward Ray of England for the United States open title, retained his laurels in 1914 by winning the United States amateur championship. Ouimet also captured the French amateur title by defeating H. J. Topping of England 4 up and 3 to play. The victory of Walter C. Hagen, 20 years old, of Rochester, in the open championship came as a distinct surprise. Hagen returned the remarkable score of 142 for the 36 holes on the opening day of the tourney at Midlothian. His total for the 72 holes was 290, which defeated Charles W. Evans, Jr., by a margin of one stroke.

Mrs. H. Arnold Jackson won the women's national championship. As Miss Kate Harley, this same player had captured this title several years before. The winners in the minor tournaments in the United States were:

Metropolitan amateur, Oswald Kirkby; New Jersey, Oswald Kirkby; metropolitan open, MacDonald Smith; Massachusetts, Francis J. Ouimet; western amateur, Charles W. Evans, Jr.; western open, James W. Barnes.

The English open championship was won by Harry Vardon, who made the 72 holes in 306 strokes. J. H. Taylor, the title holder, was second with 309, and Archie Simpson third with 310. The English amateur championship went to J. L. C. Jenkins of Scotland, who defeated C. C. Hezlet of Ireland 3 up and 2 to play. The English women's championship was won by Miss Cecil Leitch, who defeated Miss Gladys Ravenscroft, title holder, 2 up and 1 to play. The French open championship was captured by J. B. Edgar of Newcastle-on-Tyne, England. Harry Vardon of England was second.

The American team championship of the Intercollegiate Golf Association was won by Princeton, which defeated Harvard in the finals by 5 matches to 4. The individual title went to E. P. Allis of Harvard, who defeated J. M. Washburn of Princeton 11 up and 10 to play. The University of Chicago won the western intercollegiate championship, while J. N. McDonald of Chicago captured the individual honors. In dual college matches Princeton defeated Dartmouth and Pennsylvania, tied Cornell, and lost to Yale. Cornell defeated Columbia and Pennsylvania, and tied Princeton. Yale defeated Princeton and Williams.

GOODKNIGHT, JAMES LINCOLN. An American clergyman and church official, died Oct. 2, 1914. He was born at Aerial, Allen Co., Ky., in 1846, and graduated in 1871 from Cumberland University. He afterwards studied at the Union Theological Seminary, and took post-graduate courses at the Universities of Jena and Edinburgh. He was ordained to the Cumberland Presbyterian ministry in 1872, and from 1879 to 1889 filled pastorates in several towns in Kentucky, Ohio, and Pennsylvania. From 1895 to 1897 he was president of West Virginia University. He was for a time engaged in the banking business, but in 1900 became president of Lincoln University, filling this position until 1904. He was the proprietor of several newspapers from 1904 to 1911. In 1907 he was appointed stated clerk and treasurer of the general assembly of the Cumberland Presbyterian Church. He was one of the most prominent opponents of merging the Cumberland Presbyterian Church into the Presbyterian Church of the U. S. A. in 1906. He traveled extensively in Europe and Asia, and contributed on various subjects to many journals and periodicals. He was given the degree of LL.D. at Cumberland University in 1903.

GOODNOW, FRANK JOHNSON. An American scholar and educator, elected on Oct. 1, 1914, president of Johns Hopkins University. He was born in Brooklyn, N. Y., in 1859, and graduated from Amherst College in 1879, studied law at Columbia University, receiving the degree of LL.B. in 1882, and afterwards studied at Paris and Berlin. From 1883 to 1887 he was instructor in history and lecturer on the administrative law of the United States at Columbia, and was adjunct professor in the same branches from 1887 to 1891, being professor of administrative law from 1891 to 1903, and Eaton professor of administrative law and municipal science from 1903 to the time of his election as president of Johns Hopkins. In 1906-07 he was acting dean of political science at the same university. During the year 1913-14 he acted as legal adviser to the Chinese government. Dr. Goodnow is one of the best known authorities on administrative

law and city government. He has written: *Comparative Administrative Law* (1893); *Municipal Home Rule* (1895); *Municipal Problems* (1897); *Politics and Administration* (1900); *City Government in the United States* (1904); *Principles of the Administrative Law of the United States* (1905); and has also edited several works on law and taxation. He received degrees from Amherst College, and Columbia and Harvard Universities, and was also a member of many learned societies.

GOVERNORS' CONFERENCE. The seventh annual meeting of the Governors of the States, the so-called "House of Governors," met on June 9, 1914, at Madison, Wis. Papers were read on the following topics: "Report of the Committee on Coöperation," by Governor Emmet O'Neal, Alabama; "State Control of National Resources," by Governor William Spry, Utah; "Uniformity of Laws Fixing the Conditions to be Met by Foreign Corporations Before Doing Business in a State;" "Administrative Problems, Extradition, Submission of the Governor's Recommendation in Bill Form;" "Uniformity of Safety and Sanitation Laws for Places on Employment, Including Administrative Machinery."

GRAPHITE. The total production of graphite in the United States in 1913 was 4775 short tons, valued at \$293,756, and 6817 short tons of manufactured graphite, valued at \$973,397. The graphite industry is conducted under uncertain conditions, because the milling of disseminated flake graphite is still in the experimental stage, and the product is of uneven grade. Because of this unreliability of the domestic supply, most of the large consumers prefer to depend on imported material. In 1913 there were imported into the United States for consumption 28,879 short tons, valued at \$2,109,791. The manufacture of graphite on a commercial scale from various forms of amorphous carbon is conducted by the International Acheson Graphite Company of Niagara Falls, which utilizes electric power generated at the Falls. Graphite has many uses. One of its most important is for lubricating, and it is used largely in the manufacture of pencils. It is also employed in the manufacture of graphite paint, especially for structural iron and steel work.

GREAT BRITAIN. THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. A constitutional monarchy. The capital is London. Great Britain consists of England, Scotland, and Wales, but the term "Great Britain" is often used to mean "United Kingdom." Attached to the United Kingdom, but not properly a part thereof, are the Channel Islands and the Isle of Man.

AREA AND POPULATION. The area of the United Kingdom, including inland water, is stated at 121,331 square miles; that of the British Isles, that is, the United Kingdom plus the Channel Islands and the Isle of Man, 121,633 square miles. England and Wales, which are often regarded as a unit, comprise 58,340 square miles, or in land area alone 58,029 square miles; the population in 1901 was 32,527,843, and in 1911, 36,070,492. Scotland comprises 30,405 square miles, or in land area 29,796 square miles. By divisions the area, the population according to the censuses of April 1, 1901, and April 3, 1911, and the density per square mile in 1911, are shown in the following table:

	<i>Sq. m.</i>	<i>Pop. 1901</i>	<i>Pop. 1911</i>	<i>Dens.</i>
England*	50,874	30,813,043	34,045,290	669
Wales	7,466	1,714,800	2,025,202	271
Scotland	30,405	4,472,103	4,760,904	156
Ireland	32,586	4,458,775	4,390,219	135
U. Kingdom	121,331	41,458,721	45,221,615	373
Isle of Man . .	227	54,752	52,016	229
Channel Islands . . .	75	95,618	96,899	1,292
British Isles.	121,633	41,609,091	45,370,580	374

* Including Monmouthshire.

No census is taken of the legal, or resident, population in the United Kingdom, and therefore the figures above do not include British soldiers, sailors, and merchant seamen abroad. As estimated for June 30, 1913, the population of the United Kingdom was 46,035,570; 1914, 46,407,037. Total population of each division of the United Kingdom at each census from 1821 to 1911:

	<i>E. & W.</i>	<i>Scotland</i>	<i>Ireland</i>	<i>U. K.</i>
1821	12,000,286	2,091,521	6,801,827	20,893,584
1831	13,896,797	2,864,386	7,767,401	24,028,584
1841	15,914,148	2,620,184	8,175,124	26,709,456
1851	17,927,609	2,888,742	6,552,385	27,368,736
1861	20,066,224	3,062,294	5,798,967	28,927,485
1871	22,712,266	3,360,018	5,412,377	31,484,661
1881	25,974,439	3,735,573	5,174,886	34,884,848
1891	29,002,525	4,025,647	4,704,750	37,732,922
1901	32,527,843	4,472,103	4,458,775	41,458,721
1911	36,070,492	4,760,904	4,390,219	45,221,615

Percentage of total population in the several divisions in 1891 and 1911, respectively: in England, 72.8 and 75.3; in Wales, 4.0 and 4.5; in Scotland, 10.7 and 10.5; in Ireland, 12.5 and 9.7.

In 1911, there were in England about 1073 females to 1000 males, in Wales 997, in Scotland 1062, and in Ireland 1003.

In England and Wales, the percentage of population in urban districts in 1911 was 78.1, as compared with 77.0 in 1901; in Scotland, the percentage of population in burghs in 1911 was 66.0, as compared with 58.5 in 1901.

The population of the larger cities of England and Wales was returned as follows in 1911: London (administrative county), 4,521,685 (Greater London, 7,251,358); Birmingham, 525,833 (with districts annexed Nov. 9, 1911, 840,202); Liverpool, 746,421; Manchester, 714,333; Sheffield, 454,632 (with area annexed April 1, 1912, 459,916); Leeds, 445,500; Bristol, 357,048; West Ham (within Greater London), 289,030; Bradford, 288,458; Kingston-upon-Hull, 277,991; Newcastle-upon-Tyne, 266,603; Nottingham, 259,904; Stoke-on-Trent, 234,534; Salford, 231,357; Portsmouth, 231,141; Leicester, 227,222; Cardiff, 182,259; Bolton, 180,851; Croydon (within Greater London), 169,551; Willesden (within Greater London), 154,214; Rhondda, 152,781; Sunderland, 151,159.

In Scotland, the 1911 census showed the population of the larger burghs as follows: Glasgow, 784,496; Edinburgh, 320,318; Dundee, 165,004 (in 1913, Broughty Ferry, which had 11,058 inhabitants in 1911, was annexed to Dundee); Aberdeen, 163,891; Govan, 89,605; Paisley, 84,455; Leith, 80,488; Greenock, 75,140.

In Ireland, the reported population of Dublin in 1911 is 304,802 (with suburbs, 403,030); Belfast, 386,947; Cork, 76,673; Londonderry, 40,780; Limerick, 38,518.

The following table shows the rate, per thousand of population, of births, of deaths, and of marriages (that is, persons married):

		<i>E. & W.</i>	<i>Scot.</i>	<i>Ire.</i>	<i>U. K.</i>
Births	1903	28.5	29.4	23.1	28.0
"	1908	26.7	23.1	23.3	26.6

"	1913	469,640	129,169

PUBLIC EDUCATION. The educational system is partly under State and local control and partly private. Elementary education is compulsory between the ages of 5 and 14, and is provided free by the local authorities aided by State grants. Considerable progress has been made in the organization of a secondary-school system, but secondary education is still largely of a private character.

In England and Wales, on July 31, 1913, accommodations in the ordinary public elementary schools numbered 6,940,196, with average attendance of 88.73 per cent (8,862,876 and 88.79 per cent in 1912). At evening and similar schools, there were 798,881 pupils enrolled (784,984 in 1912). In the training colleges and hostels there were 1976 male and 3665 female students.

In Scotland, for the year ended Aug. 31, 1913, there were accommodations for 1,052,859 pupils, 816,055 enrolled, and 729,089 in average attendance (1,042,703 accommodations, 820,171 enrolled, 733,792 average attendance in 1912). Attendance at continuation classes was 143,942 in 1913 (144,815 in 1912). In the training colleges and centres there were in 1913, 508 male and 1876 female students.

In Ireland primary schools at the end of 1913 numbered 8299 (8255 at the end of 1912); school accommodations, 771,974 (769,697); pupils enrolled, 682,011 (668,974); average attendance, 502,622 (499,038). In the training colleges there were 467 male and 725 female students.

PAUPERISM. On Jan. 1, 1914, there were in England and Wales 271,463 persons in receipt of indoor poor relief (283,603 in 1913), and 389,314 in receipt of outdoor poor relief (411,525 in 1913). On Jan. 15, 1914, there were in Scotland 66,832 paupers and 38,413 dependents (67,757 and 40,535 in 1913). At the close of the first week in January, 1914, there were in Ireland 35,355 persons in receipt of indoor poor relief (37,017 in 1913), and 37,837 in receipt of outdoor poor relief (40,129 in 1913). These figures include casual paupers, and no deductions are

made for persons counted twice, such as those who received indoor and outdoor relief on the same day.

AGRICULTURE. The total area of the United Kingdom, together with the Channel Islands and the Isle of Man, is stated at 77,724,044 acres,* of which Great Britain 56,804,166, and Ireland 20,734,124. The total cultivated area in 1902 (first week of June) was 47,752,744 acres, of which 32,387,959 in Great Britain, and 15,240,135 in Ireland; in 1912, 46,793,747 acres, of which 31,996,024 in Great Britain, and 14,673,778 in Ireland. The cultivated area under principal crops in 1913, including that in the Channel Islands and the Isle of Man, and the produce in 1912 and 1913, are reported as follows:

	Acres		Produce	
	1913	1912	1913	1912
Corn crops:			<i>Bushels</i>	<i>Bushels</i>
Wheat	1,791,569	57,402,302	56,696,400	56,696,400

MINING AND METALS. The following table shows the quantity of metal produced in 1912 and the estimated value, at place of production, for 1911 and 1912:

	Production		Value	
	1912	1911	1912	1911
Pig iron*	4,451,636	£18,146,340	£18,419,298	£18,419,298
Pig iron†	4,299,828	14,490,872	15,859,372	15,859,372
Tin	931,917
Lead	19,154	254,259	349,561	349,561

	Production		Value	
	1912	1911	1912	1911
Zinc	6,062	158,598	158,622	158,622
Copper	291	28,461	22,714	22,714
Silver, oz.	122,998	12,123	14,382	14,382
Gold, oz.	1,546	1,415	5,108	5,108

* From British ores. † From foreign ores.

Excepting part of the pig iron, the metals named above were produced from British ores. The output of coal in 1913 exceeded in quantity and value that of previous years. In 1900 the output was 225,181,300 tons (spot value £121,652,596); in 1905, 236,128,936 tons (£82,038,553); in 1910, 264,433,028 tons (£108,377,567); in 1911, 271,891,899 tons (£110,783,682); in 1912, 260,416,155 (£117,921,068); in 1913, 287,430,473 (£145,535,669).

FISHERIES. The value of wet fish (exclusive of salmon and shellfish) landed on the coasts of the United Kingdom in 1911 was £11,427,739; in 1912, £12,779,717; in 1913, £14,229,000. In 1911, 102,000 men and boys were employed in the fisheries; the number of steam vessels employed was 3155, and of sailing vessels 21,827.

COMMERCE. Figures given below for the year 1913 are subject to revision. Total imports, imports reexported, and net imports (that is, imports for home consumption) have been valued as follows (exclusive of specie and bullion, of foreign merchandise transhipped under bond, and of diamonds from the Union of South Africa):

	Total imports	Reexports	Net imports
1903	£542,600,289	£69,578,564	£473,026,725
1908	592,953,487	79,623,697	513,329,790
1911	680,157,527	102,759,184	577,398,393
1912	744,640,631	111,737,691	632,902,940
1913	768,734,739	109,575,087	659,159,702

Imports of gold and silver specie and bullion in 1908 amounted to £56,472,203; in 1911, £62,987,500; in 1912, £69,467,185; in 1913, £74,028,598. Total exports, reexports of foreign and colonial produce, and domestic exports (that is, exports of United Kingdom produce) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

	Total exports	Reexports	Dom. exp.
1903	£360,373,672	£69,578,564	£290,800,108
1908	456,727,521	79,623,697	377,103,824
1911	556,878,432	102,759,184	454,119,298
1912	598,961,130	111,737,691	487,223,439
1913	634,820,326	109,575,087	525,245,289

Exports of gold and silver specie and bullion: in 1903, £39,233,238; in 1908, £63,252,987; in 1911, £57,024,077; in 1912, £64,871,488; in 1913, £62,142,038.

The total imports of merchandise, the domestic exports of merchandise, and the foreign and colonial exports of merchandise in 1912 and 1913 are shown by classes in the following table, in thousands of pounds sterling (details for 1913 subject to revision):

	Total Imports		Dom. exports		Foreign and Colonial Exports	
	1912	1913	1912	1913	1912	1913
I. Food, drink, and tobacco:						
Grain and flour	83,496	85,495	4,239	3,561	1,938	1,655
Meat, including animals for food	49,080	56,726	1,103	1,148	1,426	2,130
Other food and drink	24,725	24,428
1. Non-dutiable	77,319	81,266	5,690	5,630
2. Dutiable	59,334	58,683	5,923	6,262

Total, including others

* Imports do not include diamonds.

† Including Formosa.

SHIPPING. In 1913 the total net tonnage entered at the ports, with cargo and in ballast (exclusive of the coasting trade) was 82,148,569, and cleared 82,661,012, as compared with 76,190,616 and 76,266,429 in 1912, 65,469,057 and marine of the United Kingdom (including the Channel Islands and the Isle of Man) comprised 12,602 steamers, of 18,683,039 gross tons, and 8336 sailing vessels, of 846,504 gross tons; the number at the end of 1912 was 12,382 steamers, of 18,197,117 gross tons, and 8610 sailing vessels, of 982,060 gross tons. Total at the end of 1913, 20,938 vessels, of 19,529,543 tons, as compared with 20,892 vessels, of 19,179,177 tons at the end of 1912. In 1912, 286,806 seamen were employed in British vessels (exclusive of vessels engaged in inland navigation, but inclusive of fishing vessels); of the total, 208,635 were Brit-

ish, 47,211 were Lascars and Asiatics, and 30,060 were other foreigners.

COMMUNICATIONS. The length of railway line open to traffic in the United Kingdom on Dec. 31, 1913, was 23,447 miles, as compared with 23,441 miles at the end of 1912, 23,205 at the end of 1908, and 22,435 at the end of 1903. Of the 1912 total, 13,139 miles were double-track line or more and 10,302 single-track line. Length of line in England and Wales open at the end of 1912, 16,223 miles (10,855 double-track or more, 5368 single-track); in Scotland, 3815 (1603 double-track or more, 2212 single-track); Ireland, 3403 (681 double-track or more, 2722 single-track). Total paid-up capital of railway companies in the United Kingdom Dec. 31, 1913, £1,343,884,518 (£1,334,963,518 Dec. 31, 1912); gross receipts, £139,253,000 (£128,553,417); working expenditure, £87,242,000 (£81,224,343); net receipts, £52,011,000 (£47,329,074); proportion of working expenditure to gross receipts, 63 per cent. The number of persons employed in working the railways in 1913 was 643,135.

The total mileage of tramways and light railways at the end of 1913 was 2675 (2642 at the end of 1912); paid-up capital, £77,198,680 (£76,062,966); gross receipts, £14,972,919 (£14,726,068); working expenses, £9,384,798 (£8,924,420); net receipts, £5,588,121 (£5,801,648).

With the outbreak of the war naturally considerable change in the operation of the railways was required. The various lines were taken over by the government and operated under a board of control formed of the general managers, which was headed by H. A. Walker, of the London and Southwestern, who was responsible to the government rather than to the directors or stockholders. This was done in pursuance of the Regulation of the Forces Act, 1871, which provided that full compensation should be paid for any loss or injury which the railroads might sustain. It was agreed that the railroad companies concerned should be compensated according to the amount of aggregate net receipts for their lines for the period during which the government had them in possession, by an amount corresponding to the difference between the aggregate net receipts for that period and the corresponding period of 1913, unless the net receipts of the first half of 1914 were less than the net receipts of the first half of 1913, when the government would reduce its payment in the same proportion. As soon as the government assumed control the Railway Executive Committee on organization issued a public notice in which it was stated that the railways would be operated as one complete unit in the best interests of the movement of troops, stores, and food supplies. The committee said that the discontinuance of the advertised traffic at short notice might be apprehended at any time, and that certain of the lines might be closed for ordinary traffic, and that no responsibility for delay or loss therefrom could be accepted.

The British military authorities for some years had under consideration arrangements for moving troops, horses, and materials, in case of mobilization, there being a railway council and a railway staff corps attached to the Royal Engineers, and various conversations had taken place at the Board of Trade with the railway officials to secure the best efficiency in any possible event. The actual result of the military

use and of the government operation of the lines was to curtail the passenger train service and to affect the punctuality and general operation. Furthermore, the weekly traffic returns, usually published by the railways, were no longer announced. The decline in European and American imports and exports naturally led to a great curtailment of traffic while the operation of the various lines was attended by increased expense, due to high priced materials, etc. It was estimated that at least 40,000 employees had enlisted for service, and in the case of the North Eastern Railway the men were formed into a special battalion. This company alone contributed 5000 employees, or about one-tenth of its entire force. After the government took over the control of the railways a period of 60 hours was allowed in which to transport troops in 350 special trains to indicated points of concentration or embarkation. This work was actually accomplished in 48 hours, and the Great Eastern handled 75 special troop trains in one day, at the docks at Southampton, preserving a 12-minute interval schedule, in which period the preceding train unloaded troops, horses, etc., and got out of the way of the succeeding train.

On March 31, 1913, there were in the United Kingdom 75,042 miles of State telegraph and telephone lines, with 2,661,378 miles of wire (2,610,656 miles of wire in 1912). Postal telegraph offices in 1912, 11,561; railway, etc., telegraph offices, 2452; telephones, 701,125; post offices, 24,387. Letters delivered in the year ended March 31, 1913, in millions, 3477.8 (3298.3 in 1912); post cards, 926.5 (899.0); newspapers and half-penny packets, 1379.4 (1281.3).

FINANCE. The unit of value is the pound sterling, equivalent to \$4.86656. For the year ended March 31, 1912, ordinary revenue (actual receipts into the exchequer) amounted to £185,090,286, and ordinary expenditure (actual issues out of the exchequer chargeable against revenue) £178,545,100; for the fiscal year 1913, £188,801,999 and £188,621,930. For the fiscal year 1914, the ordinary revenue and expenditure are reported at £198,243,000 and £195,640,000. The table below shows the receipts into the exchequer in the fiscal year 1914 and the estimated receipts for the fiscal year 1915:

Revenue	1913-14	1914-15
Customs	£285,450,000	£235,350,000
Excise	89,590,000	89,650,000
Estate, etc., duties	27,359,000	28,000,000
Stamps	9,966,000	9,900,000
Land tax	700,000	700,000
House duty	2,000,000	2,000,000
Income tax	43,929,000	45,250,000
Land value duties	3,320,000	3,300,000
Tax revenue	163,029,000	164,875,000
Postal services	21,190,000	21,750,000
Telegraph services	3,080,000	3,100,000
Telephone services	6,530,000	6,900,000
Crown lands	530,000	530,000
Suez Canal shares and sundry loans	1,580,000	1,370,000
Miscellaneous	2,304,000	2,130,000
Non-tax revenue	35,214,000	35,780,000
Total	198,243,000	200,655,000
Borrowings to meet expenditure chargeable against capital	*3,717,000	5,265,000

* Exclusive of the sum required to complete the purchase of the National Telephone Company's lines.

Issues out of the exchequer in the fiscal year 1914 and the estimated issues (as voted at the end of July, 1914) for the fiscal year 1915 are reported as follows:

Expenditure	1913-14	1914-15
National debt	£24,500,000	£24,500,000
Road improvement fund	1,840,000	1,545,000
Local taxation accounts	9,065,000	9,885,000
Other consolidated fund services	1,704,000	1,706,000
Consolidated fund services	37,209,000	37,636,000
Army	28,235,000	28,885,000
Navy	46,309,000	51,550,000
Public education	18,717,000	18,978,000
Old-age pensions	12,600,000	12,710,000
Labor exchanges, insurance, etc.	7,499,000	8,312,000
Other civil services	16,172,000	17,066,000
Civil services	54,988,000	57,066,000
Revenue departments	4,538,000	4,696,000
Postal services	24,366,000	26,152,000
Total supply services	158,431,000	168,349,000
Total	195,640,000	205,985,000
Estimated expenditure chargeable against capital....	8,175,000	5,265,000

The expenses of the Great War necessitated a supplementary budget, introduced in November, 1914. As reported, a net deficiency of £339,571,000 was indicated, to be met as follows: new taxation, £15,500,000; suspension of sinking fund, £2,750,000; from existing loans, £91,000,000; from new loan, £230,321,000; total, £339,571,000.

The nominal amount of the funded debt on March 31, 1914, was £586,717,872; estimated capital liability in respect of terminable annuities, £29,522,219; unfunded debt, £35,000,000 (including treasury bills temporarily paid off, but renewable not later than June 30); total "dead-weight" debt, £651,270,091, as compared with £661,473,765 on March 31, 1913, and £674,744,567 in 1912. In addition to the dead-weight debt, there were on March 31, 1914, capital liabilities in respect of sums borrowed under various acts amounting to £56,384,019; the gross debt, therefore, in 1914, was £707,654,110, as compared with £716,288,241 in 1913 and £724,806,428 in 1912. The assets on March 31, 1914, were as follows: estimated market value of Suez Canal shares, £34,929,000; other estimated assets, £3,350,578; exchequer balances, £10,434,519; total, £48,714,097; the net debt, therefore, was £658,940,013.

ARMY. The army of Great Britain, unlike that of the continental powers, was recruited by voluntary enlistment, notwithstanding attempts made to secure compulsory service by conscription. On this basis at the outbreak of the war the various units were expanded to war strength and the wastage of battle made good, while new organizations were brought into being and large forces from the colonies were embodied in the Imperial army in addition to 1,000,000 volunteers being summoned to the colors to serve for the war by acts of Parliament of August 6 and September 10. Naturally during mobilization and throughout the remainder of the year no details were available as to the strength of the forces and the basis of organization. It was stated, however, that at the end of the year there

were 3,000,000 men under arms. On a peace basis the strength of the army as reported in the budget for the fiscal year 1914-15 is given in the accompanying table.

	Establishments Effective Jan. 1,		
	1914-15	1913-14	1914
Regular Forces (Regimental)			
Home and Colonial (including regular establishment of Special Reserves)	168,500	167,868	156,110
Colonial and Native Indian Corps	8,771	8,765	8,638
Army Reserve	147,000	145,000	146,756
Special Reserves (excluding Regular Establishment) ...	80,120	78,714	62,089
Militia, U. K. †	60	90	47
Militia, Reserve Division † ..	60	90	69
Militia, Channel Islands	3,166	3,166	*3,067
Militia, Malta and Bermuda, Volunteers	2,894	2,894	2,703
Territorial Force	315,485	315,438	251,706
Isle of Man Volunteers	126	126	119
Officers Training Corps (officers and permanent staff) ..	1,110	1,099	795
Total Home and Colonial Establishments	727,232	728,160	638,099
Regular Forces (Regimental) on Indian Establishment....	75,896	75,897	78,476
Total	803,128	799,057	711,575

† Forces dying out.

* Oct. 1, 1913.

The organization of the British army, which had its first test in the war of 1914, is based upon two lines, the regular army with its reserve, and the special reserve and territorial forces consisting of the yeomanry and the former volunteers. This force is administered by an army council presided over by the Secretary of State for War, who in 1914 was Field Marshal, the Right Honorable Earl Kitchener of Khar-tum, and with whom was associated the Chief of the Imperial General Staff; the Adjutant General of the Forces, Lieut. Gen. Sir H. C. Selater, in 1914; Quartermaster General of the Forces, Maj. Gen. Sir J. S. Cowans; Master General of the Ordnance, Maj. Gen. Sir S. B. von Donop; Parliamentary Under-Secretary of State, the Right Honorable H. J. Tennant, M.P.; the Financial Secretary of State, H. T. Baker, M.P.; and the Secretary, Sir R. H. Brade, K.C.B. The organization in the United Kingdom was based on eight different commands, six territorial and the London district and Aldershot, designated as follows: The Aldershot Command, the Eastern Command, the Irish, the London District, the Northern Command, the Southern Command, the Western Command, and the Scottish Command, while the scheme of organization involved in the war provided for a number of new armies, each including a number of divisions. On the outbreak of the war the Aldershot Command, which differed from the others in not being territorial but an expeditionary force in readiness for immediate service, was the first into the field, and it was estimated that Great Britain had in Europe by the end of August eight divisions and a cavalry division. These were under the command of Sir John French, Junior British Field Marshal, aided by Lieut. Sir Archibald Murray as Chief-of-Staff, assisted by Maj. Gen. H. H. Wilson, with Maj. Gen. Sir William Robertson as Quartermaster General, and Maj. Gen. Sir Neville McCrady as Adjutant General. The first corps sent into the field was commanded by Lieut. Gen. Sir Douglas Haig, and consisted of the 1st and 2d divisions

previously under his command at Aldershot, while the second corps was commanded by Gen. Sir H. Smith-Dorrien, and consisted of the 3d and 5th divisions, made up partly from the Southern command and partly from the Irish command. At the same time there were also two detached forces namely, the 4th division under General Snow, and the 19th infantry brigade, while a cavalry division commanded by General Allenby, and an independent cavalry brigade under Brig. Gen. Sir Philip Chetwode were also sent into the field, with the Royal Flying Corps, which had been developed and increased under command of Brig. Gen. Sir David Henderson, who had been Director of Military Aeronautics. This British army was duly mobilized, and transported to various concentration points in England, and towards the end of August, having been landed in France, was ready for operations. The strength of this force and succeeding expeditions was estimated at about 165,000 men. At the same time various forces were withdrawn from the colonies, and troops were brought from India to the seat of war in Europe, landing in France. While the army was being dispatched to the seat of war and the various depot organizations for the different regiments were being brought up to strength so as to fill the losses caused on the battlefield, volunteering was being undertaken on a large scale, both for the regiments already organized and for new regiments. While any estimate of the strength of the British army must be considered more or less as a conjecture, yet the following figures published in a military journal may be considered as approximating the military strength of the British Empire at the outbreak of the war: **UNITED KINGDOM:** Regular army (peace establishment), 137,500; army reserve (strength), 139,000; special reserve (strength), 91,000; territorial force (strength), 260,000. **INDIA:** Regular army (war strength), 76,700; Indian army, native troops (regimental establishments) 159,000; reserve, 36,000. **COLONIES AND EGYPT:** Regular army (peace establishment), 45,000. **SELF-GOVERNING DOMINIONS:** *Canada:* Dominion troops, permanent force, 3000; militia, 42,000. *Australia:* Commonwealth troops, permanent force, 2400; citizen forces, 35,000. *New Zealand:* Dominion troops, permanent force, 500; territorial force, 34,000. *South Africa:* The Union defense force had not come into existence, but was proposed.

Changes in the armament of the regular army in the United Kingdom, apart from aircraft, included the issue of an improved cartridge and the adoption of a new howitzer gun. There had been no important change in the organization or armament of the regular army abroad, the Indian army or the Territorial force. The Canadian militia had been reorganized, and the Australian and South African forces established on the basis of a moderate amount of more or less general compulsory training for youths and adults between certain ages. It would have been some years before these forces normally could have reached their full strength, but volunteering for the war was active in the colonies. See **WAR OF THE NATIONS, passim.**

NAVY. Additions to the British navy after the outbreak of the war could not be stated with accuracy at the end of 1914. The following statement of the number of vessels and their displacement, issued by the Bureau of Naval

Intelligence at Washington, relates to July 1, 1914. Number and displacement of warships of 1500 or more tons, and of torpedo craft of 50 or more tons, built and building (displacement of vessels building is estimated): Dreadnoughts (battleships having a main battery of all big guns, that is, 11 or more inches in calibre): built, 20, of 423,350 tons; building, 16, of 421,750 tons. Pre-dreadnoughts (battleships of about 10,000 or more tons, whose main batteries are of more than one calibre): built, 40, of 589,385 tons; building, none. Coast-defense vessels (smaller battleships and monitors): none built or building. Battle cruisers (armored cruisers having guns of largest calibre in main battery and capable of taking their place in line of battle with the battleships): built, 9, of 187,800 tons; building, 1, of 28,500 tons. Armored cruisers: built, 34, of 406,800 tons; building, none. Cruisers (unarmored warships of 1500 or more tons): built, 74, of 382,815 tons; building, 17, of 67,000 tons. Torpedo-boat destroyers: built, 167, of 125,850 tons; building, 21, of 21,770 tons. Torpedo boats: built, 49, of 11,488 tons; building, none. Submarines: built, 75, of 30,362 tons; building, 22, of 17,236 tons. Total tonnage: built, 2,157,850; building, 556,256. Excluded from the foregoing: ships over 20 years old from date of launch unless reconstructed and rearmored within five years; torpedo craft over 15 years old; ships not actually begun or ordered although authorized; transports, colliers, repair ships, torpedo-depot ships, and other auxiliaries.

The following comparative figures (relating to July 1, 1914) of tonnage built and building and the combined amount are of interest:

	Built	Building	Total
United Kingdom	2,157,850	556,256	2,714,106
Germany	951,713	354,864	1,306,577
France	688,840	211,075	899,915
United States	765,133	129,756	894,889
Japan	519,640	180,276	699,916
Russia	270,861	407,957	678,818
Italy	285,460	212,355	497,815
Austria-Hungary	221,526	125,982	347,508

The active personnel, July 1, 1914, is reported as follows; admirals of the fleet, 3; admirals, 12; vice-admirals, 22; rear admirals, 58; captains and commanders, 702; other line officers, 2508; midshipmen at sea, 639; engineer officers, 837; medical officers, 593; pay officers, 750; naval constructors, 122; chaplains, 147; warrant officers, 2740; enlisted men, 119,597; marine officers, 465; marines, 21,414 (including 3130 of the coast guard); total, 150,609. For Germany, on the same date, the total naval personnel is reported at 79,197; United States, 66,273; France, 63,846; Japan, 56,736; Russia, 52,463; Italy, 39,913; Austria-Hungary, 19,531. See **NAVAL PROGRESS.**

GOVERNMENT. The executive authority is vested in the King, acting through his ministers. Parliament is made up of the House of Lords and the House of Commons. The peers entitled to sit in the House of Lords in 1914 numbered 641, including the lords spiritual and temporal and three royal princes. The general election of December, 1910, returned 670 members of the Commons to the second Parliament of George V, which convened Jan. 31, 1911. In the Commons England has 465 members, Wales 30, Scotland 72, and Ireland 103. Party representation November, 1914: 261 Liberals, 37 Laborites, 76

Nationalists, 8 Independent Nationalists, 288 Unionists (opposition)—total, 670.

The King in 1914 was George V, born June 3, 1865, and succeeded May 6, 1910, as the second and only surviving son of Edward VII. He married, July 6, 1893, Princess Victoria Mary, only daughter of the late Duke of Teck. They have issue as follows: Edward Albert, born June 23, 1894, and created Prince of Wales June 23, 1910; Albert Frederick, born Dec. 14, 1895, a midshipman in the royal navy; Victoria Alexandra, born April 25, 1897; Henry William, born March 31, 1900; George Edward, born Dec. 20, 1902; John Charles, born July 12, 1905.

The ministry in 1914 was that of Mr. Asquith (Liberal), which was formed April 8, 1908. Those of the ministers who constitute the cabinet were as follows in November, 1914: Herbert Henry Asquith (appointed by the King in April, 1908), Prime Minister and First Lord of the Treasury; Viscount Haldane (1912), Lord High Chancellor; Earl Beauchamp (1914), Lord President of the Council; Marquis of Crewe (1908-11 and from 1912), Lord Privy Seal; Winston Spencer Churchill (1911), First Lord of the Admiralty. Secretaries of State: Reginald McKenna (1911), for home affairs; Sir Edward Grey (1905), for foreign affairs; Lewis Vernon Harcourt (1910), for the colonies; Earl Kitchener of Khartum (1914), for war; Marquis of Crewe (1910), for India. Chancellor of the Exchequer, David Lloyd George (1908); Secretary for Scotland, Thomas McKinnon Wood (1912); Chief Secretary to the Lord-Lieutenant of Ireland, Augustine Birrell (1907); Postmaster-General, Charles Edward Henry Hobhouse.

Presidents of committees of the council: Walter Runciman (1914), board of trade; Herbert Samuel, local government board; Joseph Albert Pease, board of education. Chancellor of the Duchy of Lancaster, Charles Frederick Gurney Masterman; First Commissioner of Works, Lord Emmott; Attorney-General, Sir John Allsebrook Simon. There are various other ministers besides the foregoing, but they are not members of the cabinet. The management of all maritime affairs, the government of the royal navy, etc., was in early times the province of the "Lord High Admiral"; but since 1708 these duties have been in the hands of commissioners or "Lords of the Admiralty," as follows—a political "First Lord" who is a cabinet minister, a "First Sea Lord," Second, Third, and Fourth Sea Lords selected from officers of the service, a political "Civil Lord" and an additional Civil Lord.

HISTORY

THE IRISH QUESTION. Before the opening of Parliament, which occurred on February 10, the attention of the public was held by a series of remarkable speeches on the all-engrossing topic of Irish Home Rule. The bitter controversy had seemingly entered upon its last stage. The Liberal Government gave no sign of weakening in its determination to carry the Irish Home Rule (Government of Ireland) Bill a third time through the House of Commons, so that in spite of the House of Lords the Home Rule Bill might be placed on the statute book in virtue of the provisions of the Parliament Act of 1911. So surely as the Home Rule Bill became law, the Opposition prophesied, the Ulster Volunteers would maintain by force of arms the right of the Protestants of Ulster not

to be governed by an Irish Parliament. It seemed comparatively certain that the forthcoming session of Parliament would see the question settled one way or the other, either by the Cabinet's yielding, or by civil war in Ireland. Speaking at Bristol on January 15, Mr. Bonar Law, leader of the Opposition in the House of Commons, confirmed the rumor that there had recently been conversations between the various party leaders, with a view to compromise, but without result. The most striking passage of Mr. Law's speech, and one that called forth strong protest, was that in which he declared that "Parliament has a right to govern the people of Ulster; it has not the right to sell them into slavery." Lord Curzon gloomily discussed the prospects of civil war. Sir Edward Carson urged his Ulster Volunteers to continue their military preparations and proclaimed himself "above all things a man of peace, but not at any price." Mr. Redmond, the leader of the Nationalists, was willing to make any concession to Ulster which would be "consistent with (1) the creation of a Parliament for Ireland with an executive responsible to it, (2) the immediate settlement of this question, (3) the unity and integrity of Ireland." That no such concession would satisfy, may be inferred from Mr. Austen Chamberlain's declaration that there was "no concession which will avert the dangers that now threaten, that does not provide for the exclusion of Ulster from the sphere of a Dublin Parliament."

THE OPENING OF PARLIAMENT. The King's Speech, delivered at the opening of Parliament on February 10, referred briefly to the forthcoming royal visit to Paris, the hope for a stable government in Albania, the pending negotiations with Germany and Turkey regarding British commercial and industrial interests in Mesopotamia, the Safety at Sea Conference, and the drought in India. Turning to domestic affairs, the King urged a solution by agreement of the Irish question, and promised to submit proposals for the reconstitution of the second chamber of Parliament, for the more expeditious administration of justice in the King's Bench Division, for housing the industrial and agricultural population, for developing a national system of education, for improving the administration of justice with regard to young offenders, and "if time and opportunity permit, for other purposes of social reform." Among the many amendments offered to the Address in Reply, two are worthy of mention. The first was offered by Mr. Macdonald, who desired the government to reserve the South African Indemnity Bill (see *SOUTH AFRICA, History*), that is, to interfere in the feud between organized labor and the Botha government in the South African Union. The Laborites in England pretty generally resented the failure of the British ministry to check General Botha's attacks on the rights of labor in South Africa; Mr. Ramsay Macdonald's amendment, which was rejected, was designed simply to express this resentment. By holding a monster mass-meeting in Hyde Park the labor leaders in London found another way to show their sympathy for the agitators who had been arbitrarily deported from South Africa. In this connection it may be noted that Lord Gladstone was removed from the Governorship of South Africa, possibly because of the part he had played in the suppression of

the strike; he was succeeded by Sydney Buxton, whose place as President of the Board of Trade in the British cabinet was taken by Mr. John Burns, formerly at the head of the Local Government Board. Mr. Herbert Samuel was appointed to presidency of the Local Government Board, and his place at the post office was given to Mr. Charles Hobhouse, who left the Chancellorship of the Duchy of Lancaster to Mr. Masterman. The second notable amendment to the Address was offered in identical terms in the House of Commons by Walter Long, and in the House of Lords by Lord Middleton: "that it would be disastrous to proceed further with the Government of Ireland Bill until it has been submitted to the judgment of the people." In the House of Commons the amendment was lost by a negative majority of 78 votes; in the House of Lords it was carried by 243 to 55. In the course of the debate in the Commons Mr. Asquith made an important speech supporting the thesis that at the time of the last General Election (1910), the intention of the Liberal party to utilize the Parliament Act for the establishment of Irish Home Rule had been so clearly stated, that there was now no need for another general election or referendum on the Irish question. A general election now, if favorable to the government would not convince Ulster, and if favorable to the Opposition would bring bitter disappointment to the vast majority of the Irish people. Mr. Asquith promised to bring in suggestions "which will consult not only the interests but the susceptibilities of all concerned," in the hope of not only averting civil war, but also securing favorable conditions for the inauguration of the new system of Irish government. Mr. Bonar Law replied to the premier's offer of compromise by pointing out that bloodshed could be avoided only by (1) excluding Ulster or (2) calling an immediate election. During the debate in the upper house, Lord Lansdowne declared his readiness to consider Home Rule with the exclusion of Ulster; but in common with Mr. Bonar Law, he was more inclined to demand an immediate election than to discuss the terms of a possible compromise. Lord Lansdowne put the case for a general election briefly and well: "We plead for a General Election on two very plain and easily intelligible grounds. The first is that we entertain a very sincere doubt as to whether this Bill has the support of a majority of the electorate of the United Kingdom. The second reason is that a General Election is surely the shortest, promptest, and the most efficacious method of escaping the horrors of civil war. If we were to win there would be no civil war because Ulster would have won the day. If there was a dead heat there would be no civil war, because both parties would be compelled to settle down together and thresh out some solution of the Irish Question. Supposing you (the government) win, the chances of civil strife would be enormously diminished, for Ulster would be conscious that England had pronounced against her. These are the reasons why we press for a General Election."

THE PROPOSED COMPROMISE. On March 9, on the occasion of the second reading of the Home Rule Bill, Mr. Asquith made good his promise to propose a basis for an amicable agreement. He proposed that a poll of the Parliamentary

electors should be taken in the counties of Ulster, and that any county in which a majority of the voters so desired might be excluded from the operation of the Home Rule Act for a period of six years from the date of the first sitting of the Dublin Parliament. Each county so excluded would retain its present representation in the United Kingdom House of Commons. This would allow time for at least two general elections in the United Kingdom and five or six years' experience of the Dublin Parliament before Ulster could be asked to submit to Irish Home Rule, and then only with the full and mature consent of the British electorate. As the Roman Catholic Irish, Nationalist to a man, had a majority of the inhabitants in 6 of the 11 counties (the cities of Belfast and Londonderry being counted as counties for the vote, and Newry being included in county Down)—the percentage of Catholics in county Tyrone was 55 per cent, Cavan 81½ per cent, Monaghan 74¼ per cent, Donegal 78.9 per cent, Fermanagh 56 per cent, Derry 56 per cent—the opponents of Home Rule would count upon carrying only Antrim, Down, Armagh, Londonderry, and Belfast. The attitude of the Opposition towards Mr. Asquith's offer was not exactly enthusiastic. Sir Edward Carson, chief of the Ulster Unionists, declared that Ulster would not rest satisfied with a "sentence of death, with a stay of execution for six years." Bonar Law moved a vote of censure against the government, March 19, because Mr. Asquith had not elaborated his proposition in greater detail. The motion was lost by 93 votes, but it served to dispel any illusory hopes of conciliation. The standpoint of the Opposition was made clear by Bonar Law in his speech of March 19, when he "formally" and "solemnly" offered, "If he [Mr. Asquith] chooses to put his new suggestions into his Home Rule Bill, and if he submits these suggestions to the country by a Referendum and the country decides in favor of them, then I have the authority of Lord Lansdowne to say now that, so far as his influence in the House of Lords goes, that body will offer no impediment to carrying out completely, without alteration, and without delay, the decision of the will of the people of this country." Questioned more closely, Bonar Law agreed that in case such a referendum should vindicate the government, Ulster should be coerced; but Sir Edward Carson, when questioned on the attitude of Ulster, would give no answer. It appeared therefore, that if the government yielded to the demand for a referendum, there might still be danger of rebellion in Ulster. The country would vote, moreover, not so much on the merits of Home Rule for Ireland, as on the question of coercing Ulster.

THE ARMY VETO. In the heat of the controversy the Unionists had let fall dark hints and ominous suggestions that in case the government should send the army to force Home Rule on Ulster, the army would refuse to obey. There were even vague references to the possibility of a revolution which would overturn the government. The army would veto the Home Rule Bill. In March, the army's obedience became the question of the hour. On March 14, Colonel Seely, Secretary of State for War, ordered Gen. Sir Arthur Paget to take special precautions for safeguarding government supplies of arms and stores in Armagh, Omagh, Carrick-

fergus, and Enniskillen. Apparently the precautions involved a considerable movement of troops to the Ulster counties; the Unionists feared that Ulster was to be intimidated by overwhelming forces. On March 20 General Paget wired the War Office that Brigadier General Gough and 57 officers of the Third Cavalry Brigade preferred to accept dismissal if ordered north. General Gough and the officers were called to a conference at the War Office, and on March 23 were given a statement over the initials of Colonel Seely, Sir John French, and Sir John Ewart, declaring that the Army Council was glad to learn that there had been no question of disobedience, but only a misunderstanding, and that the government had no intention of using the army "to crush political opposition to the policy or principles of the Home Rule Bill." Returning to Ireland, General Gough and the officers stationed at Curragh rejoiced over what they considered a complete acknowledgment of their right to refuse to coerce Ulster. This was the "Curragh incident." Its consequences were swift and important. The public was informed that the last two sentences of General Gough's "charter," which had the effect of accepting a conditional obedience from the army officers, had not been authorized by the cabinet, and were repudiated. On March 28 Sir John French and Sir John Ewart offered to resign from the Army Council. On March 27 a Special Order on Discipline was issued, declaring that in the future the army would be expected to give unconditional obedience to all lawful commands, without asking or receiving information in advance as to what services would be required. On March 30, in the House of Commons, Mr. Asquith announced that Sir John French and Sir John Ewart had resigned, not because they differed from the government on the question of military obedience, but because they had initialed a memorandum (General Gough's "charter"), which had been partially repudiated. Colonel Seely also resigned, and Mr. Asquith himself took over the portfolio of war. In accordance with Parliamentary usage, upon accepting the new office Mr. Asquith resigned his seat in the Commons, stood for reelection in his constituency in East Fife, and was returned without opposition. In comment upon the Curragh incident, the *Morning Post* (March 26) had jubilantly announced, "The army has killed the Home Rule Bill." Bonar Law had declared (March 23) the view of the Opposition that any officer who refused "to coerce Ulster" would only be "doing his duty." The Liberals, on the other hand, vehemently retorted that never would they allow the army to interfere in a political controversy, to decide which laws should be enforced and which should not, to exercise a virtual veto on Parliamentary legislation; never would they permit a handful of officers, who happened to sympathize with Ulster, to overthrow the principles of Parliamentary government. Nor were the Laborites slow in pointing out that if it were admitted that army officers could refuse obedience when ordered to coerce their friends in Ulster, then common soldiers would be justified in refusing to coerce their working-class friends in case of a strike. Mr. J. H. Thomas, secretary of the railwaymen's organization, declared that, according to Unionist doctrine, he should say to the 400,000 railwaymen, who were

preparing to strike next winter for higher wages and an eight hour day, "organize your forces. We will use our £500,000 of capital in our union to provide arms and ammunition for you." If the army could not be used against rebellious Ulster, it could not be used against insurgent Labor.

Undeterred by the Curragh incident, the government pressed on with the Home Rule Bill, which had been presented for a third time under the Parliament Act, and had received formal first reading in the Commons, March 5. On April 6 the bill passed second reading in the Commons by 356 to 276. The Opposition attempted to stave off the third reading by offering a motion for adjournment, which was defeated by 286 to 176, whereupon the House was thrown into disorder by the continued demand of "adjourn" arising in a rhythmical chant from the ranks of the Opposition. The Speaker asked Bonar Law if this demonstration was planned with his approval, but received only an angry retort. The disorderly sitting was suspended summarily, May 21. When the House sat again on May 25, the Speaker admitted "using an expression which he ought not to have used." The third reading was then passed by 351 to 274 votes, with a government majority of 77, and the bill was sent up to be rejected by the Lords.

THE HOME RULE AMENDING BILL. All the provisions of the Parliament Act having been complied with for the enactment of the Home Rule Bill without the consent of the Lords, i.e. the House of Commons having in three successive sessions signified their approval of the bill, it was time for Mr. Asquith to submit his project of compromise. Lord Crewe was entrusted with the task of bringing into the House of Lords, June 23, a bill to amend the Home Rule Bill in the sense of Mr. Asquith's plan of March 9. If within three months after the passing of the Amending Act, not less than one-tenth of the Parliamentary electors in any county in Ulster (Belfast and Londonderry to be treated as counties; Newry to be included in Down) should so petition, a poll would be taken on the question of temporary exclusion. If a majority of the votes cast favored exclusion, the Home Rule Bill would not apply to that county until the expiration of the six years commencing on the day of the first meeting of the Irish Parliament. The excluded area would send members to the Westminster House of Commons instead of to the new Irish Parliament. The House of Lords, however, so radically amended the Amending Bill before according it a third reading on July 14, that no expectation could be entertained of its acceptance by the Commons.

THE CONFERENCE AT BUCKINGHAM PALACE. In the interval before the Amending Bill should be presented to the House of Commons, the King called a conference of party leaders to discuss the situation. At that time, the Ulster Unionists had organized a force of over 100,000 men, of whom at least 25,000 were well drilled, armed, and uniformed. The Nationalists had not yet pushed their preparations to such length, but were rapidly recruiting a volunteer army which bade fair soon to surpass its rival in numbers. In Belfast on July 10, Sir Edward Carson and his associates held the first meeting of the "Ulster provisional government," whose

object was "to hold Ulster against a home rule parliament in trust for the King and the British Constitution." In celebrating the 225th anniversary of the historic battle of the Boyne, the Ulster Orangemen manifested a quiet determination that was more ominous than turbulent. The long-threatened civil war seemed very near. At this crisis, the King summoned to Buckingham Palace the Speaker of the Commons, Mr. Asquith and Mr. Lloyd George to represent the Government, Lord Lansdowne and Mr. Bonar Law to represent the Opposition, Mr. John Redmond and Mr. Dillon to represent the Irish Nationalists, and Sir Edward Carson and Captain Craig to speak for the Ulster Unionists. The King, in few but vigorous words, urged the leaders to agree upon a compromise which would avert bloodshed. But after four meetings—July 21, 22, 23, 24—the Conference was unable to agree either in principle or in detail upon the possibility of defining an area which should be excluded from the operation of the Home Rule Bill. The press, by the way, raised the interesting constitutional point, whether the King in calling the party leaders together had not taken too active a part in politics; but as Mr. Asquith subsequently announced, the King had acted in perfect constitutionality with the advice and consent of his ministers, and his speech had been approved by Mr. Asquith the day before delivery.

GUN-RUNNING IN IRELAND. A gun-running episode on July 26 made the outlook still gloomier. Nationalist Volunteers attempted to run in a consignment of arms which had been landed from a yacht at Howth, eight miles from Dublin. At Clontarf they were met by the Dublin police and a body of the King's Own Scottish Borderers, and several men were killed. The soldiers, that is, the Borderers, in returning to their barracks, were assailed by an angry mob, and fired without orders, killing 3 and wounding 32 persons. Mr. Redmond in Parliament immediately expressed intense indignation that the authorities had allowed Unionists freely to violate the proclamation against gun-running, whereas the Nationalists had been shot down by soldiers for the same offense. On April 24, for example, the Ulster Volunteers had successfully smuggled into Ireland a huge consignment of Mauser rifles (25,000 or more) and a million rounds of ammunition, in open and flagrant violation of the Proclamation of 1913 which prohibited the importation of firearms into Ireland. By way of anticipation, it may be stated here that a Commission of Inquiry on October 1 reported that the calling out of the soldiers against the Nationalists was quite unjustifiable, and recommended the sufferers to "the sympathetic consideration of the Lords of the Treasury." But at the time only bitter and unmitigated resentment was felt, and Ireland seemed nearer than ever to civil war. Compromise had failed, conference had failed. The government was unflinchingly determined to put the Home Rule Bill on the statute book, and on the other hand the Ulster Unionists were steadfastly resolved that sooner than yield, they would fight to the bitter end. Just at this trying time, when the United Kingdom was in peril of fratricidal strife, Austria-Hungary made war on Serbia. Great Britain was speedily drawn into the conflict. And in the face of for-

eign war, a truce was called in the battle for Irish Home Rule.

THE BUDGET. Before proceeding with the history of events subsequent to the declaration of war, notice must be given to sundry other events which occurred prior to the war. Not the least in importance was the presentation of a remarkable Budget by the chancellor of the exchequer. For the first time since his famous Budget of 1909, David Lloyd George had to introduce new taxation, in order to meet increased naval and social expenditure, and in order to give relief to local ratepayers. Whereas the revenue of 1913-14 had amounted to £198,243,000, the estimated revenue for 1914-15 was to attain the figure of £209,275,000. Of this sum, £8,620,000 was expected to come from new taxation. In detail, (1) the Death Duties were to be increased from 7 per cent to 8 per cent on estates between £60,000 and £70,000; and so on up to estates exceeding £1,000,000, on which the rate of the duty was raised from the old 15 per cent to 20 per cent. (2) The general rate of the tax on unearned incomes, and on all incomes exceeding £2500 was to be increased from 1s. 2d. on the £ to 1s. 4d. (3) The super-tax on incomes over £3000 was increased in scale so as to yield £2,500,000 more. (4) A tax upon foreign investments was to bring in £250,000. Of this new revenue, £2,717,000 was absorbed by the increase in the naval estimates. About the same amount—£2,768,000—was to be expended in local grants in aid of the local rates for public health, housing, and other important services. The government intended to carry out, moreover, a reform of local taxation by establishing a national system of land valuation as a basis for the assessment of rates. Lloyd George expected that in the following year, 1915-16, he would be able to assign much larger funds for educational and local grants, as the new taxes would then produce a more considerable increase in the revenue. In June, the cabinet decided to postpone the payment of local grants until the spring of 1915, and for the time being to drop the 16th penny of the income tax. This left the estimated revenue at £207,146,000 and the expenditure at £207,021,000. The Finance Bill was finally passed in the Commons on July 23, and in the Lords July 30.

THE PARLIAMENT ACT BILLS AND OTHER MEASURES. The most significant, although not the most spectacular feature of the session was the introduction on March 5 of the three bills which the government was determined to carry over the Lords' veto, in virtue of the provisions of the Parliament Act of 1911, whereby a bill if passed in three successive sessions by the House of Commons may be presented for the royal assent without the approval of the House of Lords. In pursuance of this plan, the Plural Voting Bill had already been passed once by the Commons, and the Government of Ireland Bill and the Established Church (Welsh Disestablishment) Bill had been passed in two successive sessions by the House of Commons and rejected by the Lords. The Government of Ireland Bill has already been treated. The Welsh Disestablishment Bill came up for debate in April, and on second reading, April 21, received a majority of 84 votes. Mr. McKenna stated that after disestablishment the Anglican Church in Wales would retain an income of £19,000 from private benefactions, £84,-

000 from Ecclesiastical Commissioners and Queen Anne's Bounty, £80,000 from the commutation of life interests, and £32,000 from augmented grants from the Ecclesiastical Commissioners and Queen Anne's Bounty—in all £215,000 a year. All church buildings, palaces, residences, deaneries, rectories, and vicarages, together with all movable property, would remain in the hands of the Church. The motion to reject the bill was defeated by 77 votes on May 19, and the bill was read the third time in the House of Commons. It will presently be noticed that these two bills, the Irish Home Rule and the Welsh Disestablishment Bills, were rejected by the Lords but nevertheless received the royal assent and were placed on the statute book, September 18. The Plural Voting Bill received a majority of 77 on second reading April 27; at that time Sir Robert Finlay, a Unionist, stated that "Previous Reform Bills had been enfranchising Bills, but this was a disfranchising measure, which would take away 500,000 votes. It was introduced because, by four to one, the plural voters were against the Government." The bill was passed on third reading in the Commons, June 15, by a majority of 78, and was thrown out on second reading by the Lords on July 15. Other bills passed by the session which ended on September 18 concerned British Nationality and Naturalization; East African Protectorates Loan, Housing, Administration of Justice, Anglo-Persian Oil Contract, Bankruptcy, Coal Mines, Finance, Sudan Loan, Irish Education, National Insurance Amendment. Twenty other government bills of minor importance were passed into law, besides 11 private members' bills, and a number of war measures. Early in the session, the House of Lords instituted an inquiry into the charges of corruption brought against the former Chief Liberal Whip Lord Murray of Elibank, who frankly acknowledged that he had used the funds of the Liberal party to purchase shares in the American Marconi Company, without consulting other members of his party, and without informing his successor, Mr. Illingworth; but since Lord Murray had taken over the shares himself, at the price paid at the date of purchase, at a very large personal loss, the Select Committee found him guilty of no more serious fault than a grave error in judgment. Although brief space is here allotted to it, the progress of Lloyd George's land campaign must not be allowed entirely to escape observation. The Urban Report of the Land Enquiry Committee—the Rural Report had been published in 1913—and the Report of the Scottish Land Enquiry Committee may be regarded as historical documents of the highest importance, for they furnished both an orientation for the government's future land reforms, and an exhaustive examination of existing conditions.

SIR EDWARD GREY AND THE NEAR EAST. In the international negotiations regarding the ever-troublesome Near Eastern Question, Sir Edward Grey played a most important rôle, acting practically as spokesman for the Triple Entente. On Dec. 13, 1913, it will be recalled, he had proposed: (1) the postponement of the evacuation of Southern Albania by Greece; (2) the retention by Greece of the Ægean Islands, except Imbros and Tenedos; (3) the restoration to Turkey of the 12 islands (Dodecanesia) held by Italy. Replying to Sir Edward Grey,

the Powers of the Triple Alliance agreed to recognize Greek possession of Chios, Mytilene, Lemnos, and Samothrace, on condition that Greece should at once evacuate Albania. As for the Dodecanesia, Italy alleged that Turkey had not yet withdrawn all Turkish officers and soldiers from the Tripolitaine, as stipulated in the Treaty of Lausanne, and that consequently the time was not ripe for the restoration of the 12 islands. Moreover, Italy demanded certain concessions in the vicinity of Adalia (Asia Minor), as compensation for the considerable expense entailed by the occupation of Rhodes. This demand necessitated negotiations between Italy and Great Britain, since British interests predominated in the Adalia region. Later it was reported that the two Powers had come to an understanding about their interests in Asia Minor. Resuming the discussion of the first two points of his December note, Sir Edward induced the Powers to present a collective Note to Greece on February 13, and a similar Note to Turkey on February 14, proposing that, on condition of the withdrawal of Greek troops from Albania before March 31, Greece should be allowed to retain all the Ægean Islands held by her, except Tenedos, Imbros, and Castelorizo, which must be restored to Turkey. Greece would undertake to prevent smuggling, to protect the Moslem minorities in the islands, and to erect no fortification or naval base upon the islands. The Greek Reply was received in February, and in the main Sir Edward Grey's propositions were accepted.

BRITISH ARMAMENTS. In view of the great war, particular interest attaches to the question of British armaments. Great Britain did not pretend to have a strong army. A paltry 121,000 made up the army at home; a like number composed the army abroad; and there were 146,000 in the Army Reserve. No attempt was being made to increase the size of the army; indeed, no little difficulty was experienced in maintaining the present strength under a system of voluntary enlistment. The Army Estimates for 1914-15, presented in April, totaled £28,845,000, the increase of £625,000 over the previous year being accounted for by the introduction of a higher schedule of payment for officers and by increased attention to aviation. With the navy, the case was different. The British Naval Estimates for 1914-15 amounted to £51,550,000, and showed an increase of £2,740,000 over the amount spent in 1913-14, including the supplementary estimates (March, 1914) of £2,500,000. The personnel of the navy was to be augmented by 5000 officers and men: by the end of the year the total number of officers and men would be 151,000, an increase of 17,285 since 1911. During the same period, from 1911 to the end of the current year, the increase in the personnel of the German navy amounted to 18,581. Great Britain's 62 sea-planes and 41 other 'planes could not be matched by any other Power. The new programme of naval construction included 4 battleships, 4 light cruisers, 12 destroyers, and other craft to be constructed at a total cost of £14,817,000, as compared with £18,824,700 in the programme of the previous year. Owing to the deplorable deadlock on the defense question in Canada, Mr. Churchill proposed to accelerate the construction of two ships in the British programme of 1914 so as to have them ready in

1916. As for the colonies in Australasia, they would be amply protected by the Imperial Navy and by Japan. In order that all available ships might be placed under the control of the Admiralty, Mr. Churchill proposed the creation of an Imperial Squadron, to which the colonies would contribute their dreadnoughts; and the demands of local patriotism and commerce-protection might be met by the maintenance of colonial flotillas of light cruisers and destroyers, which could coöperate with the Imperial Squadron if necessary. While the strength of the British navy was being tremendously increased, it was plain that in Great Britain the cost of maintaining the navy was regarded with increasing dissatisfaction. The annual business meeting of the National Liberal Federation at Northampton on April 3, for example, passed a resolution expressing alarm at the ever-increasing naval expenditure, "which cannot fail, sooner or later, to lead to an increase of taxation," and urging the government to press forward friendly negotiations with foreign Powers "in order that an end may be put to suspicion and misunderstanding, the most fruitful causes of the disastrous rivalry in armaments between the nations of Europe." Mr. Churchill, on March 17, made an offer to Germany, for the slackening of naval competition. "We are seeking to complete eight battle squadrons (in the Home Fleet), by the time the next naval power has completed five," he declared. "Every delay, accidental or deliberate, on the part of the next strongest naval power in the development of its enormous fleet organization will be matched by us." Formerly Great Britain had aimed at a 10 per cent superiority over the two next strongest naval powers; but since Great Britain had no need of defense against the United States or France, a new standard had been adopted in 1908-09 of a 60 per cent superiority over Germany. In April, 1914, Mr. Churchill affirmed that Great Britain had more than the required 60 per cent superiority in dreadnoughts, as the British First Fleet included 19 dreadnoughts as opposed to 11 dreadnoughts in the German High Sea Fleet, from which 2 dreadnoughts were temporarily absent. In July Sir Edward Grey informed the House of Commons that all efforts on the part of the British government to bring about an agreement for the reduction of armaments had been received in a hostile spirit and interpreted as attempts to lessen the freedom of action of the Powers in naval competition with Great Britain.

GREAT BRITAIN AND THE WAR. For Great Britain, the War of the Nations came at a most inauspicious moment. Ireland was on the verge of civil war. The army was not in prime condition. The self-governing colonies were more or less at variance with the mother country on the question of naval policy. And the hesitation of the British government about entering the European conflict had encouraged the rise of a pacifist party, reluctant to make war unless Great Britain should be directly attacked. The resignation of three prominent pacifists from the cabinet gave rise to the rumor that the cabinet itself had been sadly divided on the question of going to war. At any rate there was a reorganization of the ministry, Earl Beauchamp succeeding Viscount Morley as Lord President of the Council, Mr. Walter Runciman succeeding John Burns as President of the

Board of Trade, Lord Lucas succeeding Mr. Runciman as President of the Board of Agriculture, and Lord Emmott succeeding Earl Beauchamp as First Commissioner of Works. The appointment of Lord Kitchener as Secretary of War secured the active coöperation of an eminently able administrator: it also signalized the triumph of the partisans of war. From German sources emanated reports calculated to produce the impression that a serious pacifist and Laborite opposition was being encountered by the British government; on the contrary we have the statement issued in October over the signatures of officials of mining federations, railway clerks, trades organizations, the Fabian Society, the Parliamentary Committee of the Trades Union Congress, and the General Federation of Trade Unions. This statement, which may be taken as the voice of the Labor movement, reviewing the causes of the war, pledged the loyal support of the working classes for the war against German militarism, since the victory of the German army "would mean the death of democracy in Europe."

THE WAR AND THE IRISH QUESTION. The Irish question continued to embarrass Great Britain, although a truce was declared in the factional strife at the outbreak of the war. The threatened Ulster insurrection, it is true, was averted; and John Redmond, the Irish Nationalist, vied with Sir Edward Carson, the Ulster Unionist, in promising that in the hour of peril Ireland would not desert England. "The coast of Ireland," declared John Redmond, "will be defended from foreign invasion by her armed sons, and for this purpose armed Nationalist Catholics in the South will be only too glad to join arms with the armed Protestant Ulstermen in the North." But the vexed Irish Question again arose to disturb the patriotic unanimity of parties. Lord Lansdowne, the Unionist leader in the House of Lords, on September 14 proposed that the Irish Home Rule Bill and the Welsh Disestablishment Bill—both of which having been passed three times by the Commons needed only the formal assent of the King to become law—should be held up until the conclusion of the war, when, by a special dispensation, a single session would suffice to carry them over the Lords' veto. The proposition was not even considered in the Commons, however, where on September 15, Mr. Asquith introduced a Suspensory Bill (passed September 18), whereby the Home Rule Act and the Welsh Church Act were suspended from operation until the expiration of 12 months from the date of passing of those acts, or "until such later date (not being later than the end of the present war), as may be fixed by His Majesty by Order in Council." Mr. Asquith, on September 15, in the Commons, gave his solemn pledge that (1) "the Home Rule Bill will not and cannot come into operation until Parliament has had the fullest opportunity by an Amending Bill of altering, modifying, or qualifying its provisions in such a way as to secure at any rate the general consent both of Ireland and of the United Kingdom." (2) "The employment of force of any kind for what you call the coercion of Ulster is an absolutely unthinkable thing." With these provisos, the Irish Home Rule Bill and the Welsh Disestablishment Bill received the formal assent of the King at the prorogation of Parliament on September 18, in

spite of the dissent of the Lords. The effect upon the internal harmony of Great Britain may well be judged from Sir Edward Carson's denunciation of Mr. Asquith's "unparalleled treachery," and Mr. Bonar Law's fulminations against what he considered a breach of faith on the part of the government in failing to observe a strict party truce. Nor was Ireland captivated by the measure; to be sure a Home Rule Act had been placed upon the statute book after decades of fruitless attempts, but the fact that the act was to be suspended in operation, and might be radically amended, tended to diminish enthusiasm. While the Ulster Unionists found in the war a splendid chance to prove their boasted loyalty to the British Crown, the Irish Nationalists were less eager to enlist in the army. Perhaps the paucity of Irish recruits was partly caused by the reluctance of the British government to provide an adequate number of Catholic chaplains for the army. The fact that several Irish journals had to be suppressed, however, could be explained upon no other hypothesis than that Ireland could not forget in a day the wrongs of centuries.

WAR MEASURES. The situation created by the war demanded prompt and far-reaching action on the part of the government. In the first place, Mr. Asquith on August 6 asked Parliament to authorize a war credit of £100,000,000 and an increase of 500,000 men for the army. Two days later an Act was passed for the Defense of the Realm, whereby espionage was made a military offense, punishable by life imprisonment, and even in some cases by death. About 9000 German and Austrian men of military age were apprehended and held as prisoners of war in detention camps, in addition to 70,000 registered enemy aliens who were held under police surveillance. The press was placed under a strict, and to some minds, an unreasonable, censorship. The government assumed control over the railways, and a committee of general managers under the honorary chairmanship of the President of the Board of Trade handled the railways with creditable coolness during the crisis caused by the transportation of troops, arms, and supplies. A committee to relieve distress was formed under the presidency of Herbert Samuel, the President of the Local Government Board; and local committees were set up to guarantee efficient and business-like measures for the alleviation of misery. John Burns, it is interesting to note, became chairman of the committee for London. In dealing with the financial situation Lloyd George exhibited such resourceful and statesmanlike ability as to win praise from his hitherto most bitter opponents. A moratorium was declared for all liabilities accruing between August 4 and September 4 (the moratorium was later extended to November 4); but the payment of wages, salaries, rates, taxes, freights, interest, dividends, and liabilities of less than £5 was not thereby affected. New £1 and 10s. bank notes were issued, and postal orders made legal tender. One of the most remarkable emergency measures was the arrangement effected whereby the State guaranteed the Bank of England against any loss which it might incur in discounting bills of exchange accepted prior to August 4. The bank discount rate, which at first had risen from 3 per cent to 10 per cent, now dropped to 5 per cent. In order to encourage shipping, the

government assumed 80 per cent of the war risks on vessels venturing out during the war. By guaranteeing war risks on wheat and flour shipped from across the ocean, and by fixing maximum prices for the retail sale of foodstuffs, the government averted the danger of famine. In consequence of these prompt remedial measures, and of Great Britain's supremacy on the high seas, British trade suffered less than might have been expected: in August there was a falling off of £37,000,000; but in September the imports picked up by £2,700,000, and the exports by £2,452,000. According to Mr. Runciman's statement, there was a serious depression in the cotton industry, not wholly due to the war, but the woolen mills were working overtime, and the iron and steel industries, in Birmingham and Sheffield at least, were busily filling armament orders. On October 29 the German-born Prince Louis of Battenberg resigned his position as First Sea Lord, and was succeeded by Baron Fisher of Kilverstone. The execution of a German spy, Karl Hans Lody, on November 10, was the first execution in the Tower of London since 1749. On November 24 the British government took the extraordinary step of sending Sir H. Howard as envoy to the Vatican.

THE NOVEMBER SESSION. On November 11 Parliament was convened for a session that lasted only until November 27. During that short time, some twenty bills were approved, including a new war credit of £225,000,000, a finance bill imposing new taxation, an augmentation of a million men for the army, and amendments to the Trading with the Enemy Act and the Defense of the Realm Act. The party truce was strictly observed, and no divisions were taken. The War Budget, in the preparation of which Lloyd George had invited Austen Chamberlain to coöperate, was calculated to make good a falling-off of £11,350,000 in the estimated revenues for the year 1914-15, and to meet an increase of expenditures (including the war credits of £100,000,000 voted on August 8, and £225,000,000 voted November 17) which swelled the total expenditure to the enormous sum of £535,367,000. £45,000,000 had already been advanced in loans to Belgium (£10,000,000), to Serbia (£800,000), and to Canada, Australia, New Zealand, and South Africa. In order to supply the vast sums so freely disbursed, Lloyd George increased the tax on tea from 5d. to 8d., the tax on beer from 7s. 9d. to 25s. per barrel, the tax on incomes by a third, and the super-tax by a third (this effect was obtained by doubling the rate for the remainder of the year). But the increased taxation would bring in only £15,000,000. Twenty times that amount had to be raised by a war loan of £350,000,000. As the loan was issued at 95, its actual yield was only £332,500,000; and the 3½ per cent interest on each share of the loan represented almost 3.7 per cent on the actual investment. By oversubscribing the loan, the British market gave proof of its strength, and lent confirmation to Lloyd George's prophecy that by "silver bullets" Great Britain would purchase the victory.

	115,975†	4,256,000	37

* Density. † 44,778 square miles.

AREA AND POPULATION. The area previous to the war in the Balkans was given at 64,657 square kilometers (24,964 square miles), with a population in 1907 of 2,631,952. The status of the Aegean islands was still unsettled in 1914. The principal towns with their 1907 population follow: Athens, 167,479; Piræus, 73,579; Patras, 37,724; Corfu, 18,978; Volo, 23,563; Larissa, 18,041; Trikkala, 17,809; Hermoupolis, 17,773; Pyrgos, 13,690; Zante, 13,580; Calamada, 15,397; Chalcis, 10,958; Tripolitsa, 10,958; Laurium, 10,007; Syra, 18,132. In the new territory ceded by Turkey are: Salonica, 174,000; Serres, 50,000; Candia (Crete), 25,185; Cavalla, 25,000; Canea (Crete), 24,399; Drama, 19,382; Voden, 12,500; Yannina, 20,000; Kozani, 11,000.

PRODUCTION. The area under cultivation is given at about 5,563,000 acres—1,112,000 under cereals, 1,200,000 fallow, 2,025,400 under forests. There are in addition 5,000,000 acres under pasture. The principal crop is currants, with an annual average yield of 150,000 tons, which far exceeds the export; the surplus is utilized in the manufacture of denatured alcohol. A law limiting the output has resulted in the uprooting of many large plantations. The cereals grown are wheat, barley, rye, corn, and meslin. The output of currants in 1913 was 160,000 tons; olives, 1912, 40,000,000 oke (1 oke = 2.85 pounds); wheat, 1912, 4,194,446 bushels; tobacco, 86,355 cwts.; figs, 240,000 cwts.; grapes, 140,551,000 oke. There are about 30 mining concessions, covering an area of about 20,000 acres. Output of iron, 1911, 500,996 tons; iron pyrites, 35,956; manganese iron, 26,083; lead, 5802; magnesite, 27,296; sulphur, 52,025; nickel, 7893. The total imports in 1912 were valued at 154,067,000 drachmas, and the exports at 145,022,000 drachmas.

From an English source come details of the 1911 and 1912 trade by great classes, value in thousands of pounds sterling.

	Imports		Exports	
	1911	1912	1911	1912
Agricultural prods.....	2,172	2,918	2,918	2,820
Yarn and tissues	791	931
Raw minerals	1,072	704	931	936
Forest products	483	364	158	131
Wrought metals, etc.	265	212	31	35
Chemicals	822	158	43	68
Live animals	122	31
Fishery products	305	43	36	20
Animal products	236	86	212	229
Paper, books, etc.....	178	5
Wines, etc.	704	679
Olive oil, etc.	364	841
Sugar, etc.	6	5

The total imports for 1911 were valued at 172,202,000 drachmas, and the exports at 140,903,000 drachmas. The imports of Crete in 1911 were valued at 21,359,000 drachmas, and the exports at 15,631,000. Great Britain is the leading country of origin and destination, having contributed imports in the 1911 trade valued at 40,580,000 drachmas, and received 33,777,000 exports; Russia, 34,449,000 imports, and 2,601,000 exports; Austria-Hungary, 23,721,000 and 13,520,000; Bulgaria, 14,146,000 and 360,000; Germany, 13,336,000 and 16,364,000; France, 10,438,000 and 13,733,000.

In the 1910 trade, 2747 vessels, of 3,763,583 tons, were entered at the port of Piræus, and 3005, of 4,099,636 tons, cleared; this port received about three-fifths of the total shipping. In 1913, 788 sailing vessels, of 138,698 tons, and 389 steamers, of 433,633 tons, were included in the merchant marine.

COMMUNICATIONS. There were in 1912 about 990 miles of railways in operation. The Greek government early in 1914 arranged to secure control of the railway known as La Société des Chemins de Fer Hellénique, and made a contract to connect the railway with the lines from the port of Salonika to Monastir, and from Salonika to Scopia. It was expected that the work would be finished and the new line put in operation some time in 1915, and plans were being made for the purchase of and for the necessary locomotives and other rolling stock. The contract price for the construction was \$2,316,000. Telegraph lines, 1911, 5056 miles, with 10,359 miles of wire; offices, 745. Telephone lines, 1085 miles. Post offices, 1278.

ARMY. Military service is compulsory in Greece, and after the Balkan Wars of 1912 and 1913 the needs of an increased army were felt. The reorganization following the royal decree of August, 1913, was in progress during 1914, and six army corps were organized to consist at first of two, and later three divisions. Ordinarily the recruit serves 2 years in the active army, 11 years in the first reserve, and 9 years in the second reserve, followed by 7 years in the national guard. Each division was made up of 3 infantry regiments, each of 3 battalions, and 1 cavalry regiment, so that the army was to consist of 54 infantry regiments of 3 battalions, 12 evezone battalions, 10,000 cavalrymen, 72 field, 72 mountain, and 15 howitzer batteries. The budgetary strength of the army for 1913 was 1891 officers, 872 officials and musicians, 20,772 men, 3938 horses and mules. In war the strength of each infantry battalion of 4 companies is 22 officers, 4 staff officials, and

1080 men, of each squadron 5 officers, 1 staff official, 145 men, 150 horses; of each field battery, 5 officers, 1 staff official, 193 men, and 162 horses; and mountain artillery batteries, 5 officers, 1 staff official, 227 men, and 95 horses and mules.

NAVY. The fleet, which was reorganized in 1906, has been since 1911 manipulated under the advice of British naval officers. It included in July, 1913, 4 ironclads, 1 modern cruiser, 14 destroyers, 4 corvettes, 13 torpedo boats, 2 submarines, and miscellaneous minor craft. The *Salamis*, launched 1914, has a displacement of 19,500 tons; its principal armament is eight 14-inch guns and twelve 6-inch guns; torpedo tubes, 5; horsepower, 40,000; maximum speed, 23 knots. In the summer of 1914 the Greek navy was strengthened by the battleships *Mississippi* and *Idaho*, purchased from the United States, and renamed *Lemnos* and *Kilkis*. These are sister ships, laid down by the Cramps (Philadelphia), May 12, 1904, and commissioned one February 1, and the other April 1, 1908. The *Mississippi* was built at a total cost of \$5,832,801, and the *Idaho* \$5,892,821. Their displacement is 13,000 tons; mean draft, 24 feet, 8 inches; speed, 17 knots; main armament, 4 12-inch, 8 8-inch, and 8 7-inch guns.

GOVERNMENT. The executive authority is vested in a king, assisted by a responsible ministry of seven members. The King in 1914 was Constantine I, who succeeded to the throne upon the assassination of his father, George I, March 18, 1913. Heir-apparent, Prince George, born July 19, 1890. The constitution vests the legislative power in a single chamber, the National Assembly, or Boulé, consisting of 235 members elected by manhood suffrage for four years. The ministry appointed Oct. 19, 1910, was composed as follows: E. Venezelos, premier and minister of war; D. Panas, foreign affairs; K. Raktivan, justice; E. Repoulis, interior; I. D. Tsirimokos, instruction; A. N. Diomidis, finance; N. Stratos, marine; A. Michalacopoulos, national economics.

HISTORY. The events of the year 1913, which had given Greece her great accession of Macedonian territory, had also bequeathed to Greece a number of international disputes. First of all, there was the antagonism between Greece and Turkey, complicated by the refusal of Turkey to recognize Greek possession of the *Ægean* Islands, as well as by the alleged ill-treatment of Turks in New Greece and of Greeks in Turkey, and expressed by an intense Greco-Turkish rivalry in acquiring new warships. This Greco-Turkish crisis will be found more fully treated in the article on **TURKEY**. In the second place there was the bitter enmity between Greece and her former ally Bulgaria, caused by territorial jealousy, aggravated by the war of July, 1913, and stimulated both by the rumor that Bulgaria intended to join with Turkey in an attack upon Greece, and by the wholesale emigration of aggrieved Bulgars from New Greece. Finally there was the dispute as to how much of Epirus should be included within the southern boundary of the new principality of Albania. The Chauvinist element in Greece was deeply offended because the more or less Hellenic districts of Koritza and Argyrocastro had been allotted by the Powers to Albania instead of to Greece, and as the Greek troops had not yet been completely withdrawn from Albania since the Balkan War,

there seemed to be an idea that by keeping her troops in Southern Albania, Greece might gain an extension of territory in that direction. The three questions just indicated formed in all probability the subject of conferences which the ever diplomatic premier Venezelos held with the governments of the Great Powers when in January and February, 1914, he paid flying visits to Rome, Paris, London, Berlin, Vienna, Petrograd, and Bucharest. Consequently when on February 13 Greece received a collective Note from the Powers (a similar Note was delivered to Turkey on the following day), it could not have been a great surprise. The Note stated that (1) on condition of the Greek troops being withdrawn from Albania by March 31, (2) the Powers would permit Greece to retain all the *Ægean* Islands occupied by her, with the exception of Tenedos, Imbros, and Castelorizo, which must be returned to Turkey; Greece must furthermore give guarantees that on the islands retained by her she would faithfully protect the Moslem minorities, prevent smuggling, and refrain from erecting fortifications or constructing naval bases. In replying on February 16 to the Note of the Powers, the Greek government accepted the conditions therein laid down, but protested against the inclusion of Greek districts in Albania. Subsequent negotiations obtained the consent of the Powers for a slight extension or "rectification" of the Greek frontier in the Argyrocastro region, and guarantees that the Albanian government would protect the rights of the Greeks in Southern Albania in respect of their language, their religion, and their unwillingness to be governed by Moslems. For further details regarding Albania, the reader is referred to the article on **ALBANIA**.

The political opponents of the Venezelos ministry did not hesitate to censure the government's foreign policy. They reviled him for yielding to the Powers in the Albanian question, they complained that the status of the *Ægean* Islands had not been clearly determined, they magnified the sufferings of Greeks in Turkish Thrace, and they demanded a war on Turkey before the Ottoman navy should have been reinforced by the addition of two or three dreadnoughts. Such accusations, however, were unavailable to alter the pacific determination of the cabinet. Greece had but recently acquired a large extension of territory, and it would have been disastrous to enter upon a fresh war before the new provinces had been thoroughly assimilated, and before the country had recuperated from the Balkan War. For one thing, it was highly important that the Greek railway system—and it should be borne in mind that railways are the modern "sinews of war"—should be extended into Macedonia and linked up with the Orient Railway and the general European system; this task was undertaken by a French syndicate. In order to increase the commercial importance of Salonika, and at the same time to strengthen the friendship between Greece and Serbia, a commercial convention was concluded in 1914 with Serbia, whereby considerable privileges were accorded to Servian commerce utilizing the port of Salonika.

The budget for 1914, laid on the table in June, showed that the national expenditures had been almost doubled in the last two years, and that the revenue from the newly acquired districts amounted to only 9,000,000 drachmas from

Crete, 66,000,000 drachmas from Macedonia and Epirus, and 10,500,000 drachmas from the Aegean Islands—some 85,500,000 drachmas, or \$17,100,000. In addition to the ordinary expenditures of 220,000,000 drachmas (\$44,000,000), huge sums were needed for paying the deficit of 1913, for the partial redemption of war debts, and for armament. It would therefore be necessary to contract a loan of \$100,000,000, and perhaps a further loan of \$80,000,000 for additional naval aggrandizement and railway extension. The budget provided that the army should be raised to a peace footing of 60,000, and a war footing of 500,000 men. The expense in 1914 would be 37,000,000 drachmas, in addition to 87,000,000 drachmas for the purchase and renewal of stores and equipment; but when the army had been raised to the indicated figures the annual cost would be 52,000,000 drachmas. For the navy 186,000,000 drachmas was appropriated in ordinary and extraordinary estimates; but this figure apparently did not include the \$12,535,275.96 which was paid to the United States in July for the United States battleships *Mississippi* and *Idaho*.

At the outbreak of the War of the Nations, which in August threatened to involve all of Europe, the Opposition parties in Greece demanded neutrality. The Ministerial press was far from bellicose, but decidedly favorable to the Triple Entente. Germanophil sentiment was represented by a few of the Opposition journals, and by M. Streit, the foreign minister, who had formerly served as the diplomatic representative of Greece in Vienna. M. Streit in September resigned the portfolio of foreign affairs into the hands of the premier, M. Venizelos. When the new session of the Chamber began early in October, M. Venizelos declared that Greece intended to remain neutral unless called upon to assist her ally, Serbia. He referred to the interruption by Turkey of the *pourparlers* at Bucharest (see *TURKEY, Foreign Relations*) which had promised to settle the question of the Aegean Islands. It seemed generally to be understood that in case Bulgaria should attack Serbia, or in case Turkey should attack Rumania, Greece would be inclined to enter the arena, especially if the Triple Entente so desired. Meanwhile the army and the navy were being constantly exercised and held in readiness for all emergencies. The reoccupation of Southern Albania by Greek troops in October was explained as a police measure without bearing upon the international situation. See *INTERNATIONAL ARBITRATION AND PEACE, Bryan-Wilson Treaties*.

GREEN, JOSEPH REYNOLDS. A British botanist and physiologist, died June 3, 1914. He was born at Stowmarket, Suffolk Co., England, and was educated at Trinity College, Cambridge, and at London University. He was senior demonstrator of physiology in Cambridge University (1885-87); Rolleston prizeman, University of Oxford (1890); was elected fellow of Downing College, Cambridge (1902); was made president of section K (Botany) of the British Association for the Advancement of Science (1902); and was professor of botany, Pharmaceutical Society of Great Britain (1887-1907). He was also lecturer in Downing College, and Hartley lecturer in vegetable physiology, University of Liverpool. In 1895 he was elected a fellow of the Royal Society; and was also a fellow of the

Linnæan Society. He published: *A Manual of Botany* (1895); *The Soluble Ferments and Fermentation* (1899); *Introduction to Vegetable Physiology* (1900); "Vegetable Physiology," an article in the *Encyclopædia Britannica*; *Primer of Botany* (1910); *History of Botany from 1860 to 1900* (1910); and various papers on scientific subjects in the *Philosophical Transactions of the Royal Society*, and other journals. Some of his publications were translated into German.

GREENE, RICHARD GLEASON. An American editor and clergyman, died July 7, 1914. He was born at East Haddam, Conn., in 1829, and studied at Yale College in 1849. He left before graduation, however, because of the death of his father. In 1853 he graduated from the Andover Theological Seminary. After acting as pastor in several churches, he was ordained to the Congregational ministry in 1856. He filled pastorates in a number of churches in New England, New York, and New Jersey, until 1890, when he engaged in editorial work. He was editor of the *Library of Universal Knowledge*; 1st edition of the *International Cyclopædia*; *Columbian Cyclopædia*; and several books of reference. He wrote magazine reviews of theological and philosophical books.

GREENLAND. A Danish Arctic colony, with an estimated area of 2,200,000 square kilometers, or 849,420 square miles. The area of the settlements, the colony proper, is 88,100 square kilometers, or 34,015 square miles. The population of the colony proper in 1901 was 18,893; in 1911, 12,968. The director resides at Copenhagen. See *POLAR RESEARCH, Arctic*.

GRENADA. The most southerly of the Windward Islands group; a British colony. Attached to Grenada are some of the Grenadines, the largest of which is Carriacou, with an area of 8467 acres, containing 6886 inhabitants. Grenada covers 133 square miles, with a population (1911) of 66,750 (estimate 1912, 68,485). The capital is St. George's, with (1911) 4916 inhabitants; it is also the principal town and a port of registry, with a fine harbor. Other towns are Gouyave (Charlotte Town), Victoria (Grand Pauvre), Sauters, Grenville (La Baye), and Hillsborough, in Carriacou. About 2 per cent of the people are of European blood, the remainder, except for 406 East Indians in 1911, being negroes. Cacao is the chief product, the export for 1912 being valued at £225,317; spices are also exported in considerable quantities, as well as tropical fruits and foreign products. Total imports and exports for the year 1912 were valued at £279,875 and £285,590, respectively. Tonnage entered and cleared in 1912, 563,788, of which 562,461 British. Revenue and expenditure, 1912-13, £86,393 and £84,093, respectively. Customs revenue, 1912-13, £46,611. Public debt, 1912, £123,670. The Governor of the Windward Islands (Lieut. Col. Sir James Hayes Sadler) administers the colony.

GREY, SIR EDWARD. See *WAR OF THE NATIONS*.

GRIFFITHS, JOHN LEWIS. An American diplomat, died May 17, 1914. He was born in New York City in 1855, but at an early age removed with his parents to Indianapolis. He was educated in the collegiate and law departments of Iowa State University. He was admitted to the bar and practiced law, and in 1887 he was elected a member of the Indiana Legislature. From 1889 to 1893 he was a Supreme

Court reporter. In 1905 he was appointed American Consul at Liverpool, and in 1909 was promoted to be Consul-General at London. He held the latter post until the time of his death. In 1910 he was a delegate to the International Chambers of Commerce and Commercial Associations.

GRISWOLD, PUTNAM. An American operatic singer, died Feb. 28, 1914. He was born in California, and was employed in a shoe store in San Francisco before it was found that he had a remarkable voice. Through the generosity of Mrs. Phoebe Hearst he went to New York to study singing. For a time he sang in a church choir and later appeared in English opera under the management of Henry Savage. He then went to Germany where he took place in an opera company and sang in several provincial opera houses in that country. He was then engaged to return to the United States to sing in *Parsifal* in the company organized by Mr. Savage. He appeared as *Amfortas* at the New York Theatre. Following this he again went to Germany where he found a position in the Royal Opera House in Berlin, assuming basso rôles. He was immediately successful and was engaged by Guilo Gatti-Casazza to return to the Metropolitan Opera House. He appeared at this opera house for three successive seasons. His rôles included all the important German bass parts. He also sang in the American operas, *Mona* and *Cyrano*. He had appeared with success in the performance of a German opera at Covent Garden, London.

GRUENING, EMIL. An American surgeon, died May 30, 1914. Born in Hohensalza, Prussia, in 1842, he removed to the United States in 1862. He entered the College of Physicians and Surgeons in New York City, but interrupted his course to enlist in the Seventh New Jersey Volunteer Infantry. He took part in the siege of Petersburg, and was present at the surrender of General Lee. After the war he returned to the College of Physicians and Surgeons, graduating in 1867. He then studied abroad for three years, and in 1870 began practice in New York. In the following year he was appointed assistant surgeon of the New York Ophthalmic and Aural Institute. He served also as surgeon to the Mount Sinai Hospital and to the German Hospital. He became one of the most notable authorities on the eye and ear in the United States. His best-known achievement was the development of the mastoid operation as it is now performed. He was president of the American Ophthalmological Society and of the American Otological Society. Beside contributing many papers to medical journals on subjects connected with the eye and ear, Dr. Gruening was the first in the United States to call attention to the danger of blindness from wood alcohol poisoning.

GRUNDY, SYDNEY. An English playwright, died July 5, 1914. He was born in Manchester in 1846, and was educated at Owens College, Manchester. He studied law, and in 1869 became a barrister. Until 1876 he practiced in Manchester. In the meantime he wrote plays and novels and his writings soon became such a profitable source of income that he devoted all his time to fiction. His first book, *A Little Change*, was published in 1872, and was succeeded by many others. Among the best-known of his dramatic works were: *A Pair of Spectacles*; *The New Woman*; *A Marriage of Con-*

venience; *The Degenerates*; *Sowing the Wind*; and *A Bunch of Violets*. His most successful play was *Sowing the Wind*, which ran for almost seven years in England, and had also a long run in the United States. Altogether he wrote and adapted more than sixty plays. His last play was *World Without End*, written in 1914.

GUADELOUPE. A French colony composed of islands of the Lesser Antilles. These are Guadeloupe proper, Grande-Terre, La Désirade, Marie-Galante, Saint-Barthélemy, and part of Saint-Martin. The capital is Basse-Terre. The total area is 687 square miles, and the population (1911) 212,430. The name Guadeloupe is applied also to the two islands Guadeloupe proper and Grande-Terre, which are separated by a narrow channel; their area is 583 square miles, and population about 183,000. Guadeloupe proper, or Basse-Terre, has 364 square miles, and about 83,000 inhabitants. Imports, 1912, 19,524,116; exports, 26,084,302.

GUATEMALA. A Central American republic, bordering on Mexico. The capital is Guatemala City.

AREA, POPULATION, ETC. The republic is divided into 23 departments. The area is variously stated, one estimate being 48,290 square miles, and another 43,641 square miles. There is a boundary dispute with Honduras. The population, as calculated for Dec. 31, 1913, was 2,119,165; the census of Dec. 31, 1903, returned 1,842,134. About 60 per cent of the inhabitants are Indian, and most of the remainder mestizo. Births in 1912, 73,797; deaths, 43,355; marriages, 5340. Urban populations are not known accurately, but may be estimated as follows: Guatemala City, 125,000; Quezaltenango, 34,000; Cobán, 31,000; Totonicapán, 29,000; Esquintla, Chiquimula, Zacapa, and Jalapa, each about 18,000; Santa Cruz del Quiché, 17,000; Jutiapa, 16,000; Salamá, Huehuetenango, and Antigua, each about 15,000; Amatitlán, 12,000; Sololá, 11,000.

In 1912 there were 1837 public primary schools, with 59,631 pupils. There are a few secondary schools, a medical school, a law school, and several other educational institutions. There is no state church, and liberty of worship obtains, though Roman Catholicism is the prevailing religion.

PRODUCTION AND COMMERCE. Coffee, which is produced largely on German plantations, is commercially the most important crop. The principal food crop is corn; other crops include sugar, bananas, cacao, tobacco, and wheat. There are valuable forests in which are worked rubber, chicle, dye woods, cedar, and mahogany. Mining and manufacturing are little developed.

Imports and exports for 1912 were valued at \$9,822,462 and \$13,156,538, respectively; for 1913, \$10,062,328 and \$14,449,926. The actual invoice value of imports through the maritime customs houses in 1912 was \$7,781,985, and in 1913 \$7,959,326; but to these values the Guatemalan authorities add 25 per cent—an estimate covering freights, insurance, commissions, etc.—and the value of imports through frontier customhouses. This latter item is small, being only \$113,171 in 1913. The maritime invoice values of leading imports in 1912 and 1913, respectively, were as follows, in thousands of dollars: Cotton textiles and manufactures, 1926 and 1734; iron and steel manufactures, 730 and 686; food products, 713 and 567; railway mate-

rial, 290 and 427; wheat flour, 512 and 305; agricultural and industrial machinery, 281 and 350; wines and liquors, 341 and 348; drugs and medicines, 276 and 269; silk textiles and manufactures, 329 and 263; woolen textiles and manufactures, 300 and 253; linen, hemp, and jute textiles and manufactures, 214 and 222; petroleum, 73 and 185.

Principal exports in 1912 and 1913, respectively, in thousands of dollars: Coffee clean, 9126 and 9905; coffee in parchment, 1863 and 2350; bananas, 667 and 826; cattle hides, 190 and 455; sugar, 565 and 349; woods, 241 and 248; chicle, 275 and 142; rubber, 141 and 100.

Trade by countries, thousands of dollars:

	Imports		Exports	
	1912	1913	1912	1913
United States	4,532	5,053	8,864	8,923
Germany	2,251	2,043	6,975	7,654
United Kingdom	1,740	1,650	1,458	1,600
France	437	402	1	21
China and Japan	308	305
Belgium	146	125	19	1
Mexico	116	111	47	78
Austria-Hungary	215	514
Total, including other ..	9,822	10,062	13,157	14,450

The export of clean coffee in 1913 amounted to 707,491 Spanish quintals, of which 418,393 quintals went to Germany; coffee in parchment, 209,807 quintals, of which 113,935 to Germany. The entire banana export went to the United States.

COMMUNICATIONS. San José and Champerico, on the Pacific, are connected by rail with Guatemala City, and the latter with Puerto Barrios, on the eastern coast. In 1914 the length of railway in operation was reported at 502 miles. Telegraph lines, over 4200 miles; offices, about 225. Post offices in 1912, 323.

FINANCE. The budget for the year ending June 30, 1914, showed estimated expenditure of 48,170,787 pesos paper. For the year ending June 30, 1915, 50,620,617 pesos paper. The paper peso is reckoned as approximately equivalent to one-sixteenth of an American dollar. The estimated expenditure for the fiscal year 1915 was distributed as follows: Interior and justice, 4,945,020 pesos paper; foreign affairs, 2,178,997; finance, 3,128,490; public debt, 25,211,245; fomento, 2,694,065; war, 7,609,765; public instruction, 4,269,943; miscellaneous, 583,192. Of the revenue, nearly four-fifths is derived from customs. The foreign debt, with arrears of interest, was reported to stand on Dec. 31, 1913, at £2,357,063.

GOVERNMENT. The legislative power is vested in a national assembly and a council of state. The former consists of 69 members, elected for four years by direct vote, and the latter of 13 members, in part elected by the assembly, and in part appointed by the president. The executive authority rests with a president, elected for six years by direct vote, and assisted by a cabinet of six members. The President in 1914 was Manuel Estrada Cabrera (born, 1857), who succeeded to the executive office in March, 1898, and subsequently was elected for terms ending March 15, 1905, 1911, and 1917.

Arbitration treaties with Italy and the United States were ratified by the Congress of Guatemala. See **INTERNATIONAL ARBITRATION AND PEACE, Bryan-Wilson Treaties.**

GUIANA. See **BRITISH GUIANA, DUTCH GUIANA, FRENCH GUIANA.**

GYMNASTICS. The sixteenth annual inter-collegiate gymnastic championships were won by New York University with a score of 17 points. The University of Pennsylvania was second with 15 points, and Princeton third with 8½ points. Other scores were: Yale, 8; Haverford, 6; Rutgers, 5; Amherst, 1½; Harvard, 1. The all-around title went to Cremer of New York University, with Clark of the University of Pennsylvania second. Dual college meets resulted as follows: New York University 33½, Yale 20½; New York University 39, Columbia 15; New York University 26½, Rutgers 14½; New York University 20, United States Naval Academy 34. Princeton 42, Columbia 14; Princeton 29, Pennsylvania 25. Yale 29, Rutgers 25; Yale 30, Princeton 24. Pennsylvania 35, New York University 19; Pennsylvania 34, Haverford 20. Naval Academy 34, Pennsylvania 20; Naval Academy 37½, Columbia 13½. The western intercollegiates were won by the University of Wisconsin, with the University of Chicago second. The individual championship winner was Replinger of Wisconsin.

The club championships of the A. A. U. resulted as follows: Horizontal bar, Franz Kanis, Newark Turn Verein; rope climb, 25 feet, Edward Lindenbaum, Young Men's Hebrew Association; parallel bars, Franz Kanis, Newark Turn Verein; club swinging, Ray W. Dutcher, New York Athletic Club; side horse, Franz Kanis, Newark Turn Verein; tumbling, Melvin J. Bedford, National Turn Verein; flying rings, J. Duncan Gleason, New York Athletic Club; all-around, Franz Kanis, Newark Turn Verein.

GYPSY MOTH. See **ENTOMOLOGY.**

GYRO COMPASS. See **SUBMARINES.**

HAGGIN, JAMES BEN ALI. An American capitalist and sportsman, died Sept. 12, 1914. He was born at Harrodsburg, Ky., in 1827, and was educated for the law. He was admitted to the bar and opened an office first at St. Joseph, Mo., and later at Natchez, Miss. He remained in this city until 1849, when he went to California with the Forty-niners. In San Francisco he engaged in the real estate business and in mining enterprises, and rapidly acquired a fortune. He was associated with Lloyd Tevis. From small beginnings they expanded their landed interests until they had acquired more than 120,000 acres, with a value estimated from \$20,000,000 to \$40,000,000. Mr. Haggin's influence in California in early days was great and it was largely through his efforts that irrigation was employed in the development of agriculture in that State. He also acquired a large amount of property in New York City. In his later years Mr. Haggin became best known as a breeder of horses and a devotee of the race tracks. He was generally regarded as the foremost breeder of thoroughbreds in the United States. At one time he operated two extensive breeding establishments in California and Kentucky. Some of the greatest race horses known to American racing came from these farms. Among the famous horses owned by him were Waterboy, Nasturtium, and Hamburg Belle. In addition to his other interests, Mr. Haggin was one of the organizers of the so-called "Silver Trust" in 1906. He also developed extensive copper mines in Anaconda, Mont., which gave employment to 3000 men. He owned the famous

Homestead gold mine in Deadwood, S. Dak., and mines in Arizona and California.

HAGUE TRIBUNAL. See INTERNATIONAL ARBITRATION AND PEACE.

HAIG, SIR DOUGLAS. See WAR OF THE NATIONS.

HAITI. A republic occupying the western part of the West Indian island of Haiti. The capital is Port-au-Prince.

AREA, POPULATION, ETC. The area is estimated at 28,676 square kilometers (11,072 square miles). The country is densely populated, though the number of inhabitants cannot be stated with accuracy. According to an estimate of 1909, based on parish registers, the population was about 2,030,000. In 1912 the number was estimated at 2,500,000. Negroes constitute probably 90 per cent of the people, and most of the remainder are mulattoes. Varying estimates are made for the urban populations. Port-au-Prince, the largest city, is estimated to have 100,000 inhabitants; Cap Haïtien, 30,000; Les Cayes, 25,000; Gonaïves, 18,000. Instruction has been nominally compulsory since 1910, but the educational system is imperfect, and illiteracy prevails. The people speak a French patois and profess Roman Catholicism.

PRODUCTION AND COMMERCE. The people are mainly engaged in agriculture. There are few manufactures of commercial importance, and mining is almost entirely undeveloped. Valuable crops are cacao, sugar-cane, tobacco, cotton, and coffee, the last being by far the most important. The coffee crop in 1914 was estimated at 87,660,000 pounds. From sugar-cane considerable quantities of rum are distilled. The forests yield logwood and other valuable woods for export. The value of imports, as reported for the fiscal year 1911, was \$7,948,117, and of exports \$15,475,331; for 1912, \$9,876,555 and \$18,734,275; for 1913, \$8,100,125 and \$11,315,559. Of the 1913 importation, the United States furnished the value of \$5,908,956; France, \$817,335; United Kingdom, \$595,319; Germany, \$535,544; other countries, \$242,971. The greater part of the exports goes to France. For 1913 the total coffee export was reported at 56,962,000 pounds; cotton, 4,266,000 pounds; cacao, 3,898,000 pounds. Vessels entered at the ports in 1913, 1142 steamers, of 2,244,847 tons, and 52 sail, of 31,918 tons.

COMMUNICATIONS. There are about 140 miles of railway (including light railway), while some 250 miles are reported as under construction. Completion of the latter mileage, however, is conjectural. In 1910, there were 124 miles of telegraph line; post offices (1911), 88.

FINANCE. Customs receipts constitute the greater part of the revenue. Import and export duties are paid in American gold. The paper gourde, nominally equivalent to about 96.5 cents, is current at about one-fourth its face value. For the fiscal year 1913, the estimated revenue was \$3,914,480 and 7,571,083 gourdes, and the estimated expenditure \$3,904,291 and 9,095,006 gourdes; for the fiscal year 1914, estimated revenue \$5,078,754 and 4,898,680 gourdes, and estimated expenditure the same as for 1913. The larger estimated disbursements were in thousands of dollars and of gourdes: for the public debt, 2802 and 331; interior and police, 315 and 1314; war and marine, 231 and 2380; instruction and worship, 132 and 1860; finances, 66 and 1187. The public debt, including arrears, amounted on

July 1, 1914, to \$25,892,181 and 13,534,812 gourdes.

ARMY. Haiti maintains a regular army varying in strength with the exigencies of the government and the strength of the ruling officials. Any figures given as to the organization must be more or less of a conjecture, but the available armed forces probably do not exceed 3000 men at any time.

GOVERNMENT. The legislative power is exercised by a national assembly consisting of the Senate (39 members) and the Chamber of the Communes (96 members). Members of the Chamber are elected for three years by direct vote (one member from each commune). The Senators are elected by the Chamber for six years, from a list prepared in part by the President and in part by the electors. According to the constitution, the President is elected for a term of seven years by the two chambers in joint session. Gen. Cincinnatus Leconte, President for the term ending May 15, 1918, lost his life in a fire which destroyed the executive residence Aug. 8, 1912. His successor was chosen in the person of Gen. Tancrede Auguste for the term ending May 15, 1919. General Auguste died May 2, 1913, and on May 4 Sen. Michel Oreste was elected President for the unexpired term. A revolutionary outbreak occurred in January, 1914, under the leadership of Davilmar Théodore, former President of the Senate, and Gen. Oreste Zamor, provincial authority at Cap Haïtien, who had been Minister of War in 1911. On January 27 President Oreste fled for safety to a German warship, and on February 8 General Zamor was elected to succeed him.

HISTORY. The revolutionary disturbances which had been comparatively insignificant in the latter part of 1913 took on a more serious complexion in January, 1914. Under the leadership of Sen. Davilmar Théodore a new insurrectionary movement arose in the north. So rapid was the progress of the rebellion, that Cap Haïtien and Gonaïves were speedily captured and the march on the capital begun. In fear of his life, President Michel Oreste on January 27 abdicated, took refuge on board the German cruiser *Vineta*, and made his way ultimately to New York. Immediately marines were landed from the United States armored cruiser *Montana*, and from the German cruiser *Vineta* to prevent rioting in Port-au-Prince. Within a few days a British contingent from the *Lancaster*, and a French landing party from the *Condé* joined the German and American marines, while a United States battleship was rushed to the spot as an additional precaution. No sooner had the rebellion triumphed than dissensions appeared in the rebel ranks, and Senator Théodore was compelled to retire to Cap Haïtien after having sustained a severe defeat at Gonaïves on February 2 at the hands of his rival for the presidency, Gen. Orestes Zamor, who had formerly held the post of Governor of the Northern Department, and in 1911 had been minister of war. General Zamor was a full-blooded negro, whereas Senator Théodore sprang from mulatto stock, and was financed by ex-President Antoine Simon. Reorganizing his forces at Cap Haïtien, and proclaiming himself President, Senator Théodore set up a provisional government in that city and prepared for a decisive conflict with his rival. General Zamor in the meantime entered Port-au-Prince

on February 7 amidst the acclamations of the populace. The new Congress, which had been elected January 10, and had held its inaugural session January 26, was now convoked in joint session with the upper chamber for the purpose of electing a president, February 8. As was to be expected, General Zamor, already dictator in fact, received a large majority of the votes cast—95 out of 105; and assumed the title of provisional president. In his cabinet, the new provisional president included: as minister of foreign affairs, J. N. Léger; finance, Edmund Lespinasse; public works, Gen. Beaufossé Laroché; interior, Gen. Carlos Zamor; education, M. Dalencour; war and marine, General Etienne. With his army of about 2000 men, President Zamor marched against Cap Haïtien, simultaneously dispatching three small warships to the same point. He easily routed the rebel army, put Théodore to flight, February 21, and entered Cap Haïtien in triumph. On February 24 the government forces recaptured Trou from the adherents of Senator Théodore; on March 20 yet another defeat was administered to the Senator's forces at Grand Bassin. Even before these victories had assured his position, General Zamor received the recognition of the United States, although President Wilson's refusal to recognize Huerta's "blood-stained" government in Mexico had led to the expectation that a revolutionary government in Haiti would wait long for recognition. In his dealings with the European Powers, General Zamor was not so successful. First a French warship came to demand the immediate payment of interest due to the French creditors of the negro republic. The success of the French experiment in the use of warships as debt collectors induced the German government to follow suit. Great Britain made a tardy third in the troublesome trio of creditors, demanding on May 6 under threat of force, the payment of \$62,000 claimed by a British subject as compensation for a sawmill which had been destroyed during the Leconte revolution. Against the British claim, the government of Haiti most strenuously and unavailingly protested, but no time was lost in satisfying the demands. In order to finance his administration, General Zamor had to place himself still more deeply under obligations to German financiers, with the result that in June strong pressure was brought to bear upon him to place the customs administration under foreign control. In the American press it was persistently urged that the United States should exercise the same sort of financial protectorate over Haiti as over the other half of the island, collecting the customs, satisfying the foreign creditors, and turning the balance over to the native government. But Germany and France, whose share in the Haitian debt exceeded that held by the United States, were not disposed to allow the establishment of any other than an international financial protectorate over Haiti. While Haitian affairs were thus hanging in the balance, the United States prepared for all eventualities by sending a battleship to Port-au-Prince, and stationing 700 marines at Guantánamo, Cuba, within easy striking distance of the turbulent republic. A new outburst of revolutionary activity in June was followed by considerable fighting in July, but no signal success was scored by the adversaries of President Zamor until October, when Davilmar Théodore,

having gotten control of the government gunboat *Nord Alexis*, was able to establish himself again in Cap Haïtien. For a second time Sen. Davilmar Théodore proclaimed himself president. On October 30 President Zamor fled to Curaçao. The United States at once ordered the battleship *Nebraska*, and the transport *Hancock* to Port-au-Prince for the protection of American interests during the interregnum. Following the practice of his predecessor, Davilmar Théodore had no sooner made himself military master of the country than he sought constitutional sanction for his rule; on November 7 the Congress went through the form of electing him, Théodore, president. The following day the United States marines returned on shipboard. President Théodore inherited the financial embarrassments of the foregoing president, but the chief difficulty was now with the United States; for, if credence is to be given to a report which was circulated late in December, Secretary Bryan was endeavoring to reduce the Haitian government to financial impotence by preventing the negotiation of new loans, as well as by holding in the United States half a million dollars in gold which had been removed to New York by the National Bank of Haiti, although it had been deposited by the Haitian government. For further information regarding Haiti, consult the article INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*, and the article on the UNITED STATES.

HALL, CHARLES BADGER. An American soldier, died May 11, 1914. He was born in Portland, Me., in 1844, and graduated from the Portland High School in 1862. In the same year he became second lieutenant of the Twenty-fifth Maine Volunteer Infantry and served through the Civil War. He was brevetted first lieutenant "for gallant and meritorious services," and received also the brevet of captain. He was honorably mustered out of service in 1865, and in 1867 became second lieutenant of the Twenty-eighth United States Infantry. He received successive promotions until in 1908 he was appointed major-general. He was a member of several military and patriotic societies.

HALL, EDWARD JULIUS. An American telephone official, known as the "father of the long-distance telephone," died Sept. 17, 1914. He was born in Perth Amboy, N. J., in 1853. When he was 13 years of age he removed with his parents to Buffalo, where he was educated in the schools of that city, and in 1873 graduated from the Sheffield Scientific School, Yale University. He at once became manager of his father's terracotta and firebrick plants, at the same time acting as an editor for a Buffalo paper and performing duties as organist in a church of that city. The invention of the telephone was of much interest to him. When the parent company of the Bell system was organized in 1877, he organized a local operating company in Buffalo, holding offices as vice-president and manager. In 1885 he was made manager of the American Telephone and Telegraph Company, organized in that year, a year before an experimental long-distance line had been tried between New York and Boston. Mr. Hall took up the development of the long-distance telephone line and within two months was directing the work of the first long-distance line between New York and Philadelphia. The rapid development of

long-distance transmission was due largely to his efforts.

HALL, RICHARD NICKLIN. An English archaeologist, died Nov. 20, 1914. He was born in 1853, in Dudley, Worcestershire, and was educated at Birmingham and at Kinver College. He studied law and for a time was a solicitor in the High Court of Judicature in Rhodesia. He afterwards acted as political agent and as secretary of the Rhodesia Landowners and Farmers Association. He was for a time editor of the *Matabele Times* and representative in Rhodesia for several London papers. In 1899 he was Commissioner for Rhodesia at the exhibition in London, and again at the time of the Glasgow exhibition in 1901. In 1902 he was engaged by Cecil Rhodes to explore the ruins of the Great Zimbabwe on behalf of the Rhodesian government. This was his most noteworthy achievement. In 1909 he traveled alone for five months down the Sabi and Lundi Rivers, collecting ethnological information. In 1910 he became editor of the *Rhodesia Journal*. He was a fellow of many European and South African societies. His published writings include *The Ancient Ruins of Rhodesia*, and *Great Zimbabwe*. He was also the author of *Pre-Historic Rhodesia* (1908). He lectured before the British Association on the Archaeological Remains in Rhodesia.

HAMILTON, WILLIAM REEVE. An American army officer and writer, died Sept. 16, 1914. He was born at Fond du Lac, Wis., in 1855. After studying for one year at the University of Wisconsin, he was appointed to the United States Military Academy, graduating in 1876. In the same year he was appointed second lieutenant. From 1879 to 1883 he was professor of military science at Asbury University, and from 1894 to 1897 was professor of military science and tactics at the University of Nevada. In the former year he graduated from the Artillery School. During the Spanish-American War he was in charge of the siege artillery train. From 1899 to 1901 he was in command at Fort Schuyler, N. Y., and from 1901 to 1903 at Fort Terry. He was appointed captain in 1898, major in 1903, lieutenant-colonel in 1907, and colonel (retired) in 1909. His published writings include: *Elementary Principles Connected with the Art of War* (1887); *Practical Instructions for the National Guard* (1889); *Decisions on Upton's Tactics* (1886); *Rank of Knights of Pythias* (1883); *Our Young Soldiers* (1888); *Cadet Days* (1885); *The United States Army Retired List* (1900); *The Gunner's Catechism* (1902).

HAMILTON COLLEGE. An institution for higher learning, in Clinton, N. Y., founded in 1812. There were enrolled in the several departments in the autumn of 1914, 190 students, and the faculty numbered 20. No noteworthy benefactions were received during the year. The productive funds of the college amount to about \$1,200,000, and the library contains about 67,000 volumes. During the year Prof. William J. Miller of the chair of geology resigned to accept a chair in Smith College, Nathan Clark Dale being appointed associate professor in geology to succeed him. The president is M. W. Stryker, D.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution for the education of negroes, founded at Hampton, Va., in 1868. The enrollment in all departments of

the university in the autumn of 1914 was 1309, and the faculty numbered 130. There were no important changes in the faculty during the year, and no noteworthy benefactions were received. The productive funds of the university for the fiscal year ending June 30, 1914, amounted to \$2,709,344, and the annual income from all sources amounted to \$408,786. The library contained about 35,000 volumes. The president is H. B. Frissell, D.D.

HARBORS. See DOCKS AND HARBORS.

HARDWICK, THOMAS WILLIAM. An American public official, elected in 1914 United States Senator from Georgia. He was born in Thomasville, Ga., in 1872, and graduated from Mercer University in 1892. In the following year he was admitted to the bar and from that time was engaged in practice at Sandersville, Ga. From 1895 to 1897 he was prosecuting attorney of Washington Co., and from 1898 to 1901 was a member of the Georgia House of Representatives. In 1903 he was elected to the Fifty-eighth Congress and was reelected to successive Congresses up to and including the Sixty-third. On Sept. 2, 1914, he was nominated by the State Democratic Convention to fill the unexpired term of the late Senator A. O. Bacon (q.v.), and on November 3d was elected to the United States Senate by the people for the term ending March 3, 1919.

HARJES, JOHN H. An American financier, died Feb. 15, 1914. He was born in Philadelphia in 1830, and in 1868 left that city to found the bank of Drexel, Harjes & Co. in Paris. This bank later became Morgan, Harjes & Co., and was the French branch of the firm of J. P. Morgan & Co. He retired from this firm in 1909, after sixty-three years of business activity. He was regarded as one of the strongest men in the French financial world. For more than thirty years he managed the famous bank of Morgan, Harjes & Co., where international loans and the financial affairs of the world were discussed in secret conference. Mr. Harjes was an art collector of fine judgment, and was a familiar figure in the American colony in Paris. Many years ago he presented a statue of Benjamin Franklin to the city, and it was erected in the Place du Trocadéro. He was an officer of the French Legion of Honor.

HARPER, ROBERT FRANCIS. An American Assyriologist, died Aug. 6, 1914. He was born in New Concord, Ohio, in 1864, and was educated at Denison and Muskingum Colleges, and at the University of Chicago, graduating from the latter institution in 1883. He then took post-graduate courses at the University of Leipzig, receiving the degrees of A.M., Ph.D., in 1886. In the same year he was appointed instructor in Semitic languages at Yale. This position he held until 1886, and again from 1889 to 1891. In 1888-89 he was Assyriologist of the Babylonian Exploration Fund of the University of Pennsylvania, and filled the same post for the British Museum in 1891-92. From 1892 to 1900 he was associate professor of Semitic languages and literatures at the University of Chicago. In the latter year he was appointed full professor of this chair. From 1907 until the time of his death he was editor of the *American Journal of Semitic Languages*. He was also associate editor of the *Biblical World* and the *American Journal of Theology*. He was director of the expedition to Babylonia of the Oriental Ex-

ploration Fund from 1903 to 1906. He was curator of the Haskell Oriental Museum from 1900 until the year of his death, and in 1908-09 was director of the American School for Oriental Study and Research in Palestine. He was a member of several geographical and archaeological societies. His published writings include: *Assyrian and Babylonian Letters Belonging to the Kouyunjik Collections of the British Museum* (1892-1913); *Babylonian and Assyrian Literature* (1901); *The Code of Hammurabi* (1904). He edited with Francis Brown and George F. Moore *Old Testament and Semitic Studies in Memory of William Rainey Harper* (2 vol., 1908).

HARVARD UNIVERSITY. The total number of students enrolled in the several departments of the university in the autumn of 1914 was as follows: College, 2473; Graduate School of Applied Science, 121; Graduate School of Arts and Sciences, 524; Graduate School of Business Administration, 154; Divinity School, 63; Law School, 727; Medical School, 320; Dental School, 301. The total, including the university extension students, was 5407, and the officers of instruction and administration numbered 803, of whom 141 were professors, 9 associate professors, 86 assistant professors, and 78 lecturers. The productive funds of the university in the collegiate year 1913 amounted to \$27,797,004, and the income to \$1,363,899. The library contains 1,121,036 volumes, and 680,078 pamphlets. (For the gifts and bequests received by the university during the year, see the article GIFTS AND BEQUESTS; and for further notes in regard to the work of the university in general, see article UNIVERSITIES AND COLLEGES.) The president is Abbott Lawrence Lowell, Ph.D., LL.D.

HAUPTMANN, CARL AND GERHART. See GERMAN LITERATURE.

HAWAII. POPULATION AND IMMIGRATION. The estimated population of Hawaii on June 30, 1914, was 227,391, and in 1910, 191,909. The 90,000 Japanese form by far the larger part of the population; of Hawaiians there are about 25,000; Portuguese, 23,000; Chinese, 21,000; of Americans, British, Germans, and Russians, about 16,000; Filipinos, about 15,000; and of part-Hawaiians, about 14,000. Among the pure Hawaiians there has been a steady decrease for many years, due to an excess of deaths over births, while on the other hand the part-Hawaiians have steadily increased. The Chinese are gradually decreasing in numbers, while the Japanese have increased. The most rapid increase in 1914 was among the Filipinos, who were introduced by the Hawaiian Sugar Planters' Association.

The scarcity of labor in the islands has made it necessary to stimulate immigration in order

to supply the demands of the sugar plantations and other agricultural industries. During 1914 nothing was done toward the further introduction of Europeans accustomed to agricultural pursuits, as the inducements offered this class of labor in the Territory have not warranted any further effort, and the outlook for the agricultural interests has become such as to make the introduction of even small parties of desirable immigrants unwarranted. The most considerable immigration in recent years has been that of Filipinos, nearly 17,000 of whom have been brought to the islands by the sugar planters.

AGRICULTURE. The Territory of Hawaii is practically a two-crop country. It produces a varying per cent of perishable articles for local consumption, but sugar and fruit raising are by far the leading industries; the chief fruit product has in recent years been canned pineapples. This industry has had such rapid growth that in 1914 it outstripped the means of caring for the field product. The exports of sugar in 1914 amounted to 1,089,389,928 pounds of raw sugar, valued at \$32,108,518, and 25,499,374 pounds of refined sugar, valued at \$1,086,394, being a decrease of about \$3,000,000 in the value of raw sugar over 1913. The fruits and nuts exports in 1914 were valued at \$5,061,525, compared with a value of \$4,055,622 in 1913. Among other agricultural products are rice and coffee, of which latter 5,505,240 pounds were exported in 1913. The rice is grown chiefly for local consumption, and is raised by the Chinese, Japanese, and Portuguese. The growing of live stock is of considerable importance, most of the meat being consumed in the islands, where the presence of a large proportion of Orientals makes the pork industry important. The United States Department of Agriculture makes a rigid inspection of all imported animals, and a Federal experiment station is maintained, the main energies of which are devoted to research work in problems which have arisen in Hawaiian agriculture.

COMMERCE. The total imports for the fiscal year 1914 amounted to \$35,550,257, and the exports to \$41,594,072; the imports were practically the same as those of 1913, and the exports showed a decrease of about \$2,000,000. Of the imports, \$29,267,699 came from the United States, and \$6,282,558 from foreign countries. Of the exports, \$40,678,827 went to the United States, and \$915,245 to foreign countries. The greater part of the imports from foreign countries is from Japan, followed by British India, Germany, United Kingdom, and China. The largest amount of foreign exports are to Germany. The following table gives the aggregate of exports and imports for the fiscal years 1913-14:

Countries	Imports		Exports	
	1913	1914	1913	1914
Australia and Tasmania	\$467,078	\$569,287	\$14,979	\$2,956
Other British Oceania	39,834	39,951	7,918	14,404
British India	844,078	950,804	992
Canada	24,144	21,677	64,201	88,525
Chile	708,628	332,310	12
France	25,241	15,524	18,697	27,839
Germany	424,560	696,197	97,715	118,755
Hongkong	393,294	369,887	6,686	28,761
Japan	2,845,756	2,516,463	113,941	20,491
United Kingdom	797,839	468,006	144,352	70,026
Other foreign	303,081	302,952	290,157	547,484
Total foreign	6,873,531	6,282,558	758,646	915,245
United States	29,129,409	29,267,699	42,713,294	40,678,827
Grand total	36,002,940	35,550,257	43,471,940	41,594,072

TRANSPORTATION. The islands are dependent to a large extent upon the development of their transportation facilities. In the fiscal year 1914, 305 vessels were engaged in the coastwise trade, and 142 in foreign trade. The total tonnage of vessels cleared in coastwise trade was 941,228, and in foreign trade 701,330. Traffic between the islands is conducted chiefly by the Interisland Steam Navigation Company, which operated in 1914, 16 steamers. Traffic between Hawaii and the Atlantic coast of the mainland is largely in the hands of the American-Hawaiian Steamship Company, which operates 26 steamers of the highest class of freighters. The bulk of the trade with the Pacific coast is handled by the Matson Navigation Company, which operates a fleet of 7 freight and passenger steamers. There are four through steamship lines, besides the United States army transports, which touch regularly at Honolulu on their voyages between San Francisco and the Philippines. The steam railroads of the islands had a mileage in 1914 of 296. The largest mileages are in the islands of Oahu and Hawaii. The only street railway is at Honolulu. This in 1914 carried 12,263,402 passengers, and expended for road construction \$378,707. At the close of the fiscal year there were 3035 licensed automobiles in the Territory.

EDUCATION. The total number of pupils in the 168 schools in 1914 was 26,990, and there were 713 teachers. There was paid for the maintenance of the schools \$742,310. Of those attending school by far the largest number are Japanese, followed by Portuguese, Hawaiians, part-Hawaiians, Chinese, and 1403 American children.

FINANCE. The bonded debt of the State at the close of the fiscal year 1914 was \$6,844,000, and the total receipts from all sources for the fiscal year amounted to \$3,768,468, and the disbursements to \$4,687,545. There was a cash balance at the beginning of the fiscal year of \$716,729, and at the end of \$366,001. The principal tax is the general property tax, but there is a specific property tax on carriages, carts, bicycles, automobiles, etc., which goes to the counties for road purposes. There is a poll tax of \$1, and the general income tax, which goes to the Territory for general purposes, is 2 per cent on incomes in excess of \$1500.

PUBLIC HEALTH. During the year the general health conditions of the Territory were good, and no serious epidemics occurred. A number of improvements were made in the leper settlement on the island of Molokai, the leper hospital, and the homes for nonleprous boys and girls of leprous parents in Honolulu; these constitute the four institutions maintained in connection with the treatment of this disease. There were at the end of the year 666 lepers, 409 males and 257 females. Rat and mosquito campaigns were prosecuted at Honolulu and Hilo with good results.

POLITICS AND GOVERNMENT. The Legislature did not meet in 1914 as the sessions are biennial and the last was held in 1913. The Governor in his annual report recommends the revision of the land laws of the Territory, and also calls the attention of Congress to the Kilauea National Park. The officers in 1914 were as follows: Governor, L. E. Pinkham; Secretary, W. W. Thayer; Attorney-General, I. M. Stainback; Treasurer, D. L. Conkling; Commissioner

of Public Lands, J. D. Tucker; Superintendent of Public Instruction, H. W. Kinney; Superintendent of Public Works, C. R. Forbes; Auditor, J. H. Fisher.

The Hilo Railroad operates about 72 miles of line on the island of Hawaii, and is the only standard gauge railway in the Territory.

HAWKINS, JOHN PARKER. An American soldier, died Feb. 7, 1914. He was born in Indianapolis, Ind., in 1830. He studied for two years at Wabash College, and was then appointed to the United States Military Academy from which he graduated in 1852. He served throughout the Civil War, chiefly in the commissary department, and as commander of volunteers. He was made brigadier-general in 1863, and was honorably mustered out of service in 1866. In 1874 he was appointed major in the commissary department and was later appointed lieutenant-colonel, and in 1892 brigadier-general. He was retired by operation of law in 1894. He received brevets of major, lieutenant-colonel, colonel, brigadier-general, and major-general during the Civil War for gallant and meritorious services.

HAY. Data on the world's production of hay are not published, but reports from many countries on the condition of hay crops through the season indicated about an average yield. In the United States and Canada dry weather reduced the yield to some extent, although late rains were beneficial, especially to the second cutting. The crop was better than in 1913, and was also better distributed. The yield of alfalfa hay, especially that of the first cutting in the principal alfalfa-growing sections of the Mississippi Valley was quite satisfactory. On account of the war, data on European hay production were not generally available. England and Wales reported a yield in 1914 of 2,120,919 tons from grass and other hay crops under rotation, and of 5,148,929 tons from permanent meadows, or a total of 7,269,848 tons. The area in temporary meadows was 1,554,907 acres, and in permanent meadows 4,785,626 acres, the average yields per acre being 27.28 and 21.52 cwt., respectively. As reported by the Department of Agriculture, the United States produced in 1914 70,071,000 tons on 49,145,000 acres, the average yield being 1.43 tons per acre. In 1913 the production was 64,116,000 tons on 48,954,000 acres, with an average yield per acre of 1.31 tons. The total value of the crop of 1914, based on a ton value of \$11.12, the average price received by farmers on December 1, was placed at \$779,068,000, as compared with a ton value of \$12.43 and a total crop value of \$797,077,000 the year before. The Canadian hay crop of 1914, according to the Census and Statistics Office of the Dominion of Canada, amounted to 10,477,400 tons as against 11,096,770 tons in the preceding year. The demand arising through the European war increased Canadian exports of hay to a considerable extent, and also influenced the price.

HEATON, SIR JOHN HENNIKER. An English public official, died Sept. 8, 1914. He was born in Rochester, England, in 1848, and was educated at Kent House School, and at King's College, London. At the age of sixteen he left England to seek his fortune in Australia. He

became a landowner in that country and part proprietor of several newspapers. He returned to England in 1885, and was elected to the House of Commons as member for Canterbury, a seat which he continued to hold until he retired from Parliament at the end of 1910. In the first year of his Parliamentary career he moved a resolution in the House of Commons inviting the Government to enter into negotiations with other Governments with a view to the establishment of a universal system of penny postage. The motion was opposed by the Government on financial grounds and was defeated. He continued his efforts, however, to bring this about, and at the same time advocated many other reforms in the administration of the Post Office. Some of these demands were conceded from time to time, but he was still able to present to the Postmaster-General in 1910 a budget of 82 reforms, which he regarded as indispensable to the ideal post office. After the rejection of his plans for penny postage by the House of Commons he preached a crusade throughout the world in favor of postal reform, and in particular of universal cheap postage. In 1908 his efforts were rewarded by the initiation, though not at once by the completion, of penny postage throughout the British Empire. Heaton at once began another campaign for the adoption of penny postage by other countries. His first and greatest triumph was the adoption of penny postage between the United States and England in 1908, and was followed by its adoption in other countries. Sir Henniker Heaton's energies were also directed to the improvement and cheapening of international telegraphy, especially of oceanic telegraphy, and to the further development of the telephone, and his efforts were crowned with a large measure of success. He introduced the telegraph money orders in England, and the parcel post in France. In 1899 the freedom of the City of London was conferred upon him. His published writings include: *A Short Account of a Canonization at Rome*; *The Manners and Customs of the Aborigines of Australia*; *Australian Dictionary of Dates and Men of the Time*.

HEERINGEN, JOSIAS O. O. See WAR OF THE NATIONS.

HEGAR, ALFRED. A German gynecologist, died at Freiburg on Aug. 6, 1914, at the age of 84. He was made professor of gynecology at Freiburg in 1864, and remained there until 1904 as the regular professor and director of the gynecologic clinic. His publications cover the entire field of modern gynecology, of which he is regarded as the founder. A number of his treatises are closely related to psychology and social medicine. In collaboration with his pupil, Kaltenbach, he wrote a standard work on operative gynecology; and in advanced age he founded a journal entitled *Beiträge zur Geburtshilfe und Gynäkologie*.

HEINZE, FRITZ AUGUSTUS. An American capitalist and mine operator, died Nov. 4, 1914. He was born in Brooklyn in 1869, and after several years spent in study and travel, graduated from the Columbia School of Mines in 1889. He then went to Montana and obtained work in the copper mines of Butte. For two years he worked in these mines as a day laborer. He, with his brother, made a careful examination into the titles of the companies held by the

Amalgamated Copper Company in Butte, and on account of the carelessness shown in staking mining claims and preparing leases, he was able to lay claim to several important ore bodies. He had in the meantime formed a corporation known as the Montana Ore Purchasing Company, and many suits were brought against him by the Amalgamated Company. Most of these suits he won, but for many years Heinze was involved in fierce struggle with Marcus Daly, the late Henry H. Rogers, and other men representing the interests and control of the Amalgamated Copper Company. The litigations were finally settled by the payment of a large sum, said to be \$10,000,000, to Heinze for his interests. In 1902 he organized the United Copper Company, and three years later removed to New York City with the intention of engaging in the banking business. He established the firm of Otto C. Heinze & Co., which included his two brothers, and bought control of the Mercantile National Bank and became its president. By various manipulations he soon obtained control of a chain of banks. Hardly had he become established, however, when the panic of 1907 occurred. About the same time Heinze, as a speculative enterprise, endeavored to make a corner in United Copper stock. Great quantities of this stock were thrown into the market and were bought by firms commissioned by Heinze's company. The company was unable to pay for these and the brokerage house was suspended by the Stock Exchange. The Clearing House committee compelled Heinze to resign from the Mercantile National Bank presidency, and began an investigation of its affairs. As a result of this investigation Charles W. Morse, O. F. Thomas, and E. R. Thomas, who were also officials of the bank, were obliged to resign. Largely as a result of these transactions Charles W. Morse was found guilty of misuse of the funds and spent a term in prison. Heinze was arrested for over-certifying checks. He was acquitted, and then returned to Butte. During the last few years preceding his death he did not take an active part in financial matters. He was defendant in several suits, and several days before his death had appeared in court as a witness in a suit brought against him.

HENSON, POINDEXTER SMITH. An American clergyman and writer, died April 24, 1914. He was born in Fluvanna Co., Va., in 1831, and graduated from Richmond College in 1848. In 1855 he was ordained to the Baptist ministry. He was pastor of the Broad Street Church in Philadelphia from 1861 to 1867, of the Memorial Church in the same city from 1867 to 1882, and of the First Church in Chicago from 1882 to 1901. From 1901 to 1903 he was pastor at the Hanson Place Church in Brooklyn, and was pastor at the Tremont Temple, Boston, from 1903 to 1908. From 1867 to the time of his death he was editor of the *Baptist Teacher*. He wrote the *Bible Text Book of Christian Doctrine* (1892); and *The Royal Scroll* (1896). He received the degree of D.D. from Bucknell University, and that of LL.D. from Richmond College.

HEREDITY. See ALCOHOL; ZOÖLOGY.

HERKOMER, SIR HUBERT VON. An English artist, died March 31, 1914. He was born at Waal, Bavaria, in 1849. His parents removed

to the United States when the boy was two years of age. In 1857 they removed to England and settled in Southampton. The father framed and cleaned pictures for a living, while the mother taught music. Hubert assisted the family in his early years by playing the piano. He began to show artistic taste while still a boy, and it was decided that he should become a painter. A commission from Munich enabled the family to remove to that city, and there Professor Echter gave to Hubert his first technical instruction in art. When his mother and father returned to England in 1866 the boy returned with them and began to study at the South Kensington School. There his work showed great merit and promise, and in the same year he became a regular contributor to the *Graphic*, and some of his pictures received recognition at exhibitions. "Hoeing" was given the place of honor at the Dudley exhibition in 1870, and three years later the Royal Academy hung his "After the Toil of the Day." Perhaps his best-known work, "The Last Muster," was painted in 1875. This picture immediately won recognition, and the jury which hung it applauded it—an extremely unusual procedure. The painting was later sent to Paris to be exhibited. Von Herkomer then took up water color portraiture, and among those who sat for him for portraits were Wagner, John Ruskin, and Tennyson. In 1881 he founded a school of painting at Bushey, which later developed into a flourishing art colony. In 1885 he became Slade professor of fine arts at Oxford, and an honorary Fellow of All Souls' College. He was already an associate of the Royal Academy, having been chosen in 1879. He became an Academician in 1890. Although best known as an artist in oils, he also painted in water colors, did engraving and wood carving, and was in addition a musician and composer, playwright, scene painter, and also showed talent as an amateur actor. He was created a Knight in 1907. Honorary degrees were given him by Oxford and Cambridge Universities, and he received many distinctions from foreign governments and societies. Some of his well-known paintings are: "Found," "The Chapel of the Charterhouse," "Portrait of the Lady in Black," "Hard Times," "On Strike," and "The Guards' Cheer."

HEROULT, PAUL. A French metallurgist, died on May 13, 1914. The exact date of his birth is not known, but he was born in Normandy about 1862. When he was four years old he was taken to England by his parents; but he returned to France, where he was educated at the Ecole des Mines, Paris. His electrolytic process for the reduction of aluminum was patented in 1887, and in 1888 a factory was built to make use of his discovery. He invented an electric furnace for making high-grade steel, later adopted by the United States Steel Corporation and by British manufacturers.

HESSE. See GERMANY.

HEYSE, PAUL JOHANN LUDWIG VON. A German poet, novelist, and dramatist, died April, 1914. He was born in Berlin in 1830, his mother being a Jewess. His father was a professor of philology. He studied classics in Berlin, and Romance languages at Bonn. The most important intellectual influence in his early days, however, was that which came from the

literary circle at the house of Franz Kugler and his wife. He spent 1852-53 in Italy. Made famous by his short story *L'Arrabbiata*, he was invited in 1854 by King Max of Bavaria to reside in Munich with a pension of £100, and no duties save that of attending the symposia at which the King gathered around him for the friendly discussion of arts, literature, history, etc., many of the finest minds in Europe. Heyse soon became the leader of the literary world in Munich. Heyse held his pension until 1864, when on account of the withdrawal of the pension granted his friend Geibel, because of an ode to King Wilhelm of Prussia, the former laid down his own pension and retired from the court. He continued, however, to make his home in Munich, although in his later years most of his winters were spent in his villa on Lake Garda. In 1910 he was awarded the Nobel Prize for Literature. His writings include prose fiction, poetry, and dramas, but his reputation rests upon his short stories.

HILL, GEORGE WILLIAM. An American agriculturist and editor, died March 30, 1914. He was born in St. Peter's Port, Guernsey, England, in 1845, and was educated in France at the French Lycée, and at private schools. Removing to Canada, he studied law at McGill University. After completing his course he was employed in the Bank of Montreal, and later served on the staff of the *Montreal Herald*. From 1870 to 1879 he was in the service of a life insurance company in Chicago. In 1879 he established the *Farmers' Review* in that city. In 1886 he removed to St. Paul, Minn., where he managed and edited *The Farmer* until 1888. From 1899 to 1911 he was editor-in-chief for the United States Department of Agriculture, and from 1897 to 1911 was editor of the *Year Book* of that department.

HILL, GEORGE WILLIAM. An American astronomer, died April 16, 1914. He was born in New York City in 1838, and graduated from Rutgers College in 1859. In 1861 he became assistant in the office of *The American Ephemeris and Nautical Almanac*. Researches made by him in connection with the lunar theory secured for him a gold medal of the Royal Astronomical Society of London in 1887. In 1888 he was awarded the Darnley prize of the Paris Academy of Sciences. From 1898 to 1901 he was a lecturer in celestial mechanics at Columbia University. He was a member of many astronomical and scientific societies. His published writings include: *The Theory of Jupiter and Saturn* (1890); *Collected Mathematical Works* (1905); and papers on mathematical astronomy, etc.

HINDENBURG, PAUL VON BENECKENDORF UND VON. See WAR OF THE NATIONS.

HISCOCK, FRANK. Former United States Senator from New York, died June 18, 1914. He was born in Pompey, N. Y., in 1834, and was educated at Pompey Hill Academy. He studied law, and in 1855 was admitted to the bar.

Shortly afterward he and his brother removed to Syracuse, N. Y., where he soon achieved a local reputation as an able lawyer. He also took part in politics and was a prominent member of the "free soil" element in the Democratic party. In the ensuing presidential campaign he acted with the Republican party, thus becoming identified with its formation. In 1860 he was elected district attorney of Onondaga Co., and in 1867 he was a member of the State Constitutional Convention. He supported the nomination of Horace Greeley for the Presidency in 1872, and was a candidate for Congress on the ticket nominated by the Liberal Republicans and Democrats. Following his defeat he resumed his place in the Republican party, and in 1876 was a delegate to the Republican National Convention. In 1877 he was elected to Congress, serving until 1887. In the Forty-sixth Congress, as chairman of the Ways and Means Committee, he was practically the leader of the House. In 1887 he was elected to the United States Senate and served until 1893. After leaving the Senate he returned to his private practice in Syracuse, where he continued to be an important factor in politics.

HISTORICAL ASSOCIATION, AMERICAN. The thirtieth annual meeting of the association was held in Chicago on Dec. 29, 30, and 31, 1914. The following papers were among those read at this meeting: "Fresh Light upon the History of the Earliest Assyrian Period," Robert W. Rogers; "Hadrian and His Reign," W. D. Gray; "One Hundred Years Ago," Max Farrand; "An Approach to a Study of Napoleon's Generalship," R. M. Johnston; "The House of Commons and Disputed Elections," Henry R. Shipman; "The Influence of the Rise of the Ottoman Turks upon the Routes of Oriental Trade," Arthur H. Lybber; "The Earlier Relations of England and Belgium," Charles W. Colby; "Roger Bacon," Earle W. Dow; "Principles of Classification for Archives," Waldo G. Leland. The membership in December, 1914, was 2900. The officers of the association are: President, H. Morse Stephens, University of California; first vice-president, George L. Burr, Cornell University; second vice-president, Worthington C. Ford, Boston, Mass.; secretary, Waldo G. Leland, Carnegie Institution of Washington, D. C.; treasurer, Clarence W. Bowen, New York; curator, A. Howard Clark, Smithsonian Institution, Washington, D. C.

HISTORICAL RESEARCH. See **CARNEGIE INSTITUTION.**

HOCKEY. The championship of the American Amateur Hockey League was won by the St. Nicholas Skating Club of New York with 7 victories and 1 defeat. The Hockey Club of New York was second, winning 5 games and losing 3. The standing of the other teams was: Irish-American A. C., won 4, lost 4; Crescent A. C., won 4, lost 4; Wanderers, won 0, lost 8.

The intercollegiate title went to Princeton largely as the result of the brilliant playing of Hobey Baker. Toronto University captured the Fellows Trophy, emblematic of the college championship of Canada.

The professional matches held in New York City resulted in a victory for the Wanderers of Montreal, who defeated Quebec in the deciding series by a total score of 15 to 12.

HOLDEN, EDWARD SINGLETON. An American astronomer and educator, died March 16, 1914. He was born in St. Louis in 1846, and graduated from Washington University with the degree of B.S., in 1866. He then entered the United States Military Academy, from which he graduated in 1873. He served as lieutenant of engineers in the United States Army from 1870 to 1873. He then resigned to become professor of mathematics and astronomy at the Naval Observatory in Washington. From 1881 to 1885 he was a director of the Washburn Observatory and professor of astronomy in the University of Wisconsin. In the latter year he was chosen president of the University of California, serving in that post until 1883, when he was appointed director of the Lick Observatory, where he remained until 1898. In 1902 he became librarian at the United States Military Academy, and held this post until his death. He was the author of many books dealing with astronomical and other subjects. These include: *The Bastian System of Fortification* (1872); *Index Catalogue of Nebulae* (1877); *Life of Sir William Herschel* (1881); *Writings of Sir William Herschel* (1881); *Astronomy* (with Simon Newcomb, 1887); *Hand-book of the Lick Observatory* (1882); *Mogul Emperors of Hindustan* (1895); *Mountain Observatories* (1896); *Pacific Coast Earthquakes* (1898); *Earth and Sky* (1898); *Elementary Astronomy* (1899); *Family of the Sun* (1899); *Essays in Astronomy* (1900); *Stories of Great Astronomers*; *Real Things in Nature* (1903); *The Sciences* (1903). He also edited publications of the Washington Observatory from 1881 to 1885; the publications of the Lick Observatory, 1888 to 1894; and the *Centennial of the United States Military Academy* (1902). He was a member of many learned scientific societies. He received the degree of LL.D. from the University of Wisconsin and from Columbia University.

HOLLAND. See **NETHERLANDS.**

HOLLAND, JOHN PHILIP. An American inventor, died Aug. 12, 1914. He was born in Liscannor, Ireland, in 1844, and was educated at the Christian Brothers' School, Limerick. He taught school for 15 years, including five years at Paterson, N. J. He had come to the United States before the Civil War, and the battle between the *Monitor* and the *Merrimac* set him thinking on the subject of a submarine boat. In 1875, after nearly 15 years of study and experiment, he submitted his plans to the United States Navy Department. These plans were handed to naval engineers and were reported as practical in every way save one. This exception was the judgment that men could not be found to risk their lives in such a perilous experiment. The scheme was therefore rejected by the Navy Department, and Mr. Holland returned to his shop, where he spent 18 years more in studying and perfecting his ideas. In 1893 he again returned to the Navy Department with his improved plans. This time he was more successful, and an appropriation for \$200,000 was authorized. With this the first Holland submarine boat was constructed. This boat, a very small one, was sent under the water with a cat and a rooster aboard. The experiment was en-

tirely successful, and following this an appropriation was granted to build a man-carrying submarine. On account of criticism and the interference by navy engineers, Mr. Holland withdrew his plans and set about to raise money to construct a submarine himself. This he did, and in 1898 the *Holland* was launched and proved so successful that the Government bought it directly after the war with Spain. After this success he turned his attention to aerial navigation and spent several years in building aeroplanes that did not fly. In his old age he met with financial reverses and suffered much hardship.

HOME, SIR ANTHONY DICKSON. An English physician and surgeon, died Aug. 8, 1914. He was born on Nov. 30, 1826, and after completing his medical education entered the army medical department in 1848. He served in the Eastern campaign, 1854-55; in the Indian Mutiny (1857); in China (1860); in New Zealand (1863-65); in the Ashantee War (1873-74). He was principal medical officer in Ashantee (1873); in Cyprus (1878-79); and to the British forces in India (1881-85). He was made surgeon-general in 1880, and retired in 1886. He published *Service Memories* (1912).

HOME RULE. See GREAT BRITAIN.

HONDURAS. A Central American republic. Capital, Tegucigalpa.

AREA, POPULATION, ETC. The area of the republic is estimated at 114,670 square kilometers (44,274 square miles). Estimated population at the end of 1911, 566,017. Most of the inhabitants are Indians, of whom perhaps 90,000 are uncivilized. The largest town is Tegucigalpa, with 22,137 inhabitants in 1910; Santa Rosa, 10,574; Juticalpa, 10,529; Danté, 8477; Nacaome, 8152; Choluteca, 8065; San Pedro Sula, 7820. Reported marriages in 1911, 2114; births, 21,825; deaths, 10,620. Reported primary schools in 1912, 890, with 35,703 pupils, and 25,917 in average attendance. For secondary education the government maintains an institute at Tegucigalpa and subsidizes colleges in the departments. A university is also maintained at Tegucigalpa, and at Comayagua a law school.

PRODUCTION, COMMERCE, ETC. The crop commercially most important is bananas, cultivated chiefly in the Caribbean coast region. Here also are grown large quantities of coconuts. Corn is a very important crop throughout the country; other products include sugar cane, tobacco, and coffee. Cabinet woods, especially mahogany, and rubber are exploited. Grazing is important. Reported number of live stock in 1912: cattle, 420,275; horses, 87,732; mules, 14,542; sheep, 24,935; swine, 108,048. Honduras is exceptionally rich in minerals, but they are not extensively worked except at the famous Rosario gold (and silver) mine, situated not far from Tegucigalpa.

Imports and exports in the fiscal year 1912 amounted, respectively, to 10,793,286 and 7,700,446 pesos silver, as compared with 9,258,441 and 7,561,816 pesos in 1911. The largest imports are cotton manufactures and foodstuffs. Leading exports in the fiscal year 1912: Bananas, 3,473,766 pesos; gold and silver cyanides, 2,049,528; coconuts, 485,536; cattle, 415,199; hides and skins, 325,181; coined silver, 323,595; coffee, 205,522; rubber, 159,473. Of the imports in the fiscal year 1912, the United States furnished the

value of 7,230,000 pesos, and of the exports received the value of 6,805,000 pesos; United Kingdom, 1,366,000 and 178,000; Germany, 1,215,000 and 322; France, 1,215,000 and 5000; Central America, 174,000 and 331; other countries, 330,000 and 59,000.

COMMUNICATIONS. Inadequate means of communication and transportation account in considerable degree for the country's meagre development. A 10-mile railway from Trujillo to Juticalpa, built in 1913, was under extension during the year. The Guyamel Fruit Company began work on an extension of this line from Vera Cruz to Omaso, 9 miles in length, and a wharf 800 feet in length at Omaso was under construction. Reported for 1913 are 186 kilometers (116 miles) of railway, and 55 kilometers (34 miles) of plantation railway. In 1912 there were 245 telegraph offices, with 5182 kilometers (3220 miles) of wire. Post offices (1912), 278.

FINANCE. The monetary unit is the silver peso (25 grammes, .900 fine), whose value fluctuates with the price of silver. At the beginning of 1913, it was worth about 45.1 cents, and at the beginning of 1914 about 43.4 cents. Revenue for the fiscal year 1912 was 4,627,905 pesos; for 1913, 5,207,232 pesos. For the latter year, the revenue had been estimated at 4,714,065 pesos, and the expenditure at 4,824,000 pesos. Estimates of the larger departmental disbursements were: war, 1,795,887; interior, 701,224; public works and agriculture, 671,978; public instruction, 510,501; finance, 401,374 (exclusive of 342,820 for the public debt).

There are four foreign loans, contracted in 1867-70, aggregating £5,398,570; these, with arrears of interest accumulating from 1872, amounted to £24,323,969 at the end of 1913. Reported internal debt, Aug. 31, 1912, 6,625,206 pesos.

GOVERNMENT. The legislative power is exercised by a unicameral congress of 42 members, and the executive authority is vested in a president. The members of Congress and the President, as well as the Vice-President, are elected for four years by direct vote. In November, 1911, Gen. Manuel Bonilla was elected President, and Francisco Bertrand Vice-President. They were inaugurated for the four-year term on Feb. 1, 1912. On March 13, 1912, Bonilla died and was succeeded by Bertrand for the remainder of the term.

HISTORY. On March 10 a terrible conflagration destroyed 23 city blocks in the town of Ceira and caused damages which were estimated at no less than \$3,000,000. In April a proposal was pending whereby the United Fruit Company—an American syndicate headed by Minor C. Keith—would undertake to pay the government \$400,000 down and \$1,000,000 in 40 annual installments, in return for control of the railways for 99 years. For information regarding the arbitration treaty with the United States, see the article on the UNITED STATES. See also the article on INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

HONGKONG. An island (about 32 square miles) off the southeast coast of China, at the mouth of the Canton River, which, with a strip of territory on the mainland leased from China (376 square miles) and about 4 square miles of the Kowloon Peninsula, besides some islets, constitutes a British crown colony. The harbor,

one of the most magnificent in the world, has an area of 10 square miles; it is surrounded by a line of granite hills, between 2000 and 3000 feet high. The total civil population (1911) numbers 456,739, of whom 444,664 are Chinese, 5538 Europeans, 6537 various races. There is a continual flow of Chinese immigration and emigration; the number of immigrants in 1912 was 163,248, and of emigrants 122,657, principally to and from the Straits. These figures are exclusive of those to and from Chinese ports. The island has many manufactories for the production of rope, sugar, rum, beer, paper, vermilion, sauce, bricks, tiles, cement, bamboo work, and shipping stores. The boat-building trade is largely in the hands of the Chinese. Victoria is the capital, overlooking the harbor.

Hongkong being a free port, accurate trade returns are not available; but a glance at the shipping table below will give an idea of the enormous extent of the trade (A—ocean-going, B—river steamers, C—steamships under 60 tons in the foreign trade, D—steam launches engaged in local trade):

	Number		Tonnage	
	1911	1912	1911	1912
British A	3,907	3,956	7,589,995	7,779,970
Foreign A	4,180	4,367	7,917,640	8,592,320
British B	6,871	6,968	4,116,736	4,197,744
Foreign B	1,423	1,738	736,057	894,349
C	3,263	3,981	130,092	150,612
Junks	25,334	25,598	2,572,588	2,654,275
Total	44,978	46,603	23,063,108	24,269,270
Local D	461,984	411,990	10,981,990	10,609,404
Local Junks	36,608	30,056	2,134,054	1,856,475
Total	543,570	488,649	36,179,152	36,785,149

Cables connect Hongkong with all parts of the world. In 1910 a railway was completed from Kowloon to the Chinese frontier, where it connects with the one from Canton. The revenue in 1912 (about one-seventh derived from the opium monopoly, the remainder from licenses, land sales, stamps, duties, and fees), amounted to 8,180,694 dollars Mexican, and the expenditure to 7,202,503, against 7,497,231, and 7,077,177 dollars Mexican respectively in 1911. The public debt totals £1,485,732. Sir F. H. May (appointed 1912), was Governor in 1914. The headquarters of the new territory is at Taipo, where a district officer resides, with police and magisterial functions. An assistant district officer presides over the Southern district.

HOOKWORM DISEASE. Reports from various States in the Southern United States indicated that the campaign against hookworm disease was proceeding with unabated vigor. The Kentucky State Board of Health reported that up to January 1 last year the physicians of the State had reported 45,470 cases. Tennessee State hookworm examiners found that James County was heavily infected, 75 per cent of the children examined having the disease in various degrees of severity. In North Carolina the work was being carried on under the hookworm bureau of the State Board of Health and satisfactory reports were received from all communities in which work was being directed. In Texas school children were being examined county by county to determine the degree of infection. Here the disease appeared to vary greatly in its occurrence. The commission

made 200 examinations in Bell County and found only one case, whereas in Nacogdoches County, of 564 children of school age examined, 332, or nearly 59 per cent, harbored the hookworm. The general percentage of infection was about 34; among the Mexican population it was over 90. Investigations as to the cause of anæmia, which is a constant symptom of the disease, have been made by many laboratory workers. The subject could not be considered by any means settled. It was first assumed that the worms in biting and attaching themselves to the wall of the intestine lead to a great loss of blood; but postmortem examinations of the small intestine showed a wide variety of lesions. Sometimes a diffuse catarrh only is observed, or there may be large spots of hemorrhagic infiltration, each with a worm attached to its centre. Hemorrhages may or may not be present. It does not follow, therefore, that the worms suck blood, for although blood is not infrequently found in the intestine of the worms, red corpuscles are not digested to any extent. Looss believed their natural food was the epithelium of the intestine. Other observers adopted the toxin theory. The toxin may either be secreted by the worm itself or its presence may favor the multiplication of other extraneous intestinal bacteria which penetrate through the damaged mucous membrane. The greatest objection against the latter theory is the rapidity with which the anemia disappears on the elimination of the worm. It is probable that several factors enter into the situation.

HOOPER, FRANKLIN WILLIAM. An American institute director, died Aug. 1, 1914. He was born in Walpole, N. H., in 1851, and was educated at Antioch College and at Harvard University, from which he graduated in 1875. He then took post-graduate studies in biology at Harvard, and received an honorary M.A. degree in 1897. He served on the scientific expedition to the Florida Keys for the Smithsonian Institution in 1875-76, and on his return became principal of the Keene High School in New Hampshire. In 1880 he was appointed professor of chemistry and biology at the Adelphi Academy in Brooklyn. He became one of the first trustees of the Brooklyn Institute in 1887, and two years later was made its director. This position he held until the time of his death. He was a fellow of the American Association for the Advancement of Science, and vice-president of the American Bison Association. He was lecturer on geology and biology at the Brooklyn Institute, and was a director of the Brooklyn Public Library. He was editor of the year books and bulletins of the Brooklyn Institute.

HOPE-JONES, ROBERT. An Anglo-American organ builder, died in September, 1914. He was born in England in 1841, and became chief electrician of the English Telephone companies and a member of the British Institute of Electrical Engineers. It was through his application of electricity in organ building that he gained a wide reputation. His instruments were widely installed in English-speaking countries, and in Germany and France, those at Worcester Cathedral, England, and at the Ocean Grove (N. J.) Auditorium being especially celebrated. He became a member of the Royal College of Organists. Coming to the United States in 1903, he built organ factories at Elmira,

N. Y., and later at North Tonawanda, N. Y. The Rudolph Wurlitzer Company purchased the latter factory in 1914. Hope-Jones had latterly made his home in Buffalo. He committed suicide.

HOPS. The world's hop production in 1914 based on European estimates amounted to 1,955,000 hundredweights, as compared with 1,365,000 hundredweights in 1913. In several European countries, and notably in England and Germany, the yields surpassed those of previous years and the quality of the crops was also good. The production in hundredweights was reported for the different countries as follows: Australia 15,000, Austria-Hungary 377,000, Belgium 70,000, England 507,000, France 43,000, Germany 400,000, and Russia 100,000. In 1913 England produced only 275,000, and Germany only 320,000 hundredweights. The United States produced in 1914 approximately 300,000 bales of about 180 pounds each. Of this quantity Oregon produced 125,000, California 105,000, Washington 50,000, and New York 20,000 bales. As compared with the year before, these figures indicate larger total yields in California and Washington and a smaller yield in New York, while the production in Oregon was the same for the two years. The average acre yield in New York was estimated at about 700 pounds. The consumption of hops in the United States from the crop of 1913 was about 245,000 bales, and on this basis the crop of 1914 represents a surplus of over 50,000 bales or one-sixth of the total production. Data compiled from the records of the Treasury Department show that for the year ending June 30, 1914, the brewers consumed 43,987,623 pounds of the domestic crop, and 24,262,896 pounds were exported. Owing to the short crop in Europe in 1913 the domestic exports were heavier than they had been for a series of years. A test of a hop-picking machine on the Pacific coast was reported as having resulted most favorably, the machine picking 105 bales clear and clean in 24 hours. A hop growers' mutual protective association was organized in California in October of this year.

HORNBLOWER, WILLIAM BUTLER. An American jurist, died June 16, 1914. He was born in Paterson, N. J., in 1851, and was educated in the Collegiate School in New York City, and at Princeton University, from which he graduated in 1871. He then studied law at Columbia Law School, receiving the degree of LL.B. in 1875. He at once began the practice of law in New York City, and soon became senior member of the law firm of Hornblower, Byrne, and Taylor. His ability as a lawyer soon won him a foremost position in the bar of New York City. He took no official part in public affairs until 1890, when he was appointed by Governor Hill a member of the commission created by the Legislature to propose amendments to the judiciary article of the State Constitution. Three years later, however, it was Governor Hill, then United States Senator, who was largely responsible for the failure of the Senate to confirm the nomination of Judge Hornblower to the United States Supreme Court. President Cleveland in the year mentioned appointed Judge Hornblower to the justiceship during a recess of Congress. Previous to that time in the same year Mr. Hornblower had led a Democratic revolt against Judge Maynard, an intimate friend and sup-

porter of Senator Hill. Judge Maynard was candidate for the judgeship of the Court of Appeals of New York, and through Judge Hornblower's efforts he was defeated. On the appointment of Mr. Hornblower to the Supreme Court, Senators Hill and Murphy of New York fought the appointment bitterly. So successful was their opposition that the Senate voted against the appointment. In February, 1914, Governor Glynn of New York appointed Mr. Hornblower as associate judge of the Court of Appeals. The nomination was unanimously confirmed by the Senate. Judge Hornblower was prominent in the American Bar Association, and was elected president of the State Bar Association in 1904, and president of the Association of the Bar of the City of New York in 1913.

HORNE, CHARLES SILVESTER. English Congregational clergyman and member of Parliament, died May 3, 1914. He was born at Cuckfield, Sussex, in 1865, and was educated at Glasgow University. He subsequently studied theology at Mansfield College, Oxford. From 1889 to 1903 he was minister of Kensington Chapel. In the latter year he volunteered to serve as minister to the reorganized Whitefield's Church, in Tottenham-court-road, London, which was at the time an ordinary church in the poor district of the city, but under Dr. Horne's ministrations it became London's first great central mission. He established a number of social agencies to work in connection with the church. Mr. Horne became widely known as a preacher, was also active in politics, and in 1910 was elected Liberal Member for Ipswich. He died in Toronto while on a visit to Canada. His published writings include: *A Modern Heretic* (a novel); *Popular History of the Free Churches*; *Life of David Livingstone*; and various volumes of sermons.

HORSES. See STOCK RAISING; VETERINARY SCIENCE.

HORTICULTURE. The world's fruit and vegetable production was considerably above normal in 1914, with a consequent lowering of prices except in and about the war zone. With a restricted distribution area emphasized by unfavorable internal trade conditions, the big commercial crops of the United States were marketed with some difficulty. This was notably true of fresh fruits. Canned and dried products were receiving only a temporary setback, awaiting the improvement of shipping facilities to European countries. In the British Isles the lack of sugar seriously interfered with the jam making industry.

The commercial apple crop in the United States was fully 50,000,000 barrels. Canada also had a large crop, and in both countries only the best fruit was worth marketing. California shipped a banner citrus crop of 48,548 cars, as compared with 18,085 cars in 1913. California's fresh deciduous fruit shipments amounted to 16,146 cars, or 2800 cars more than in 1913, with receipts about \$3,000,000 less than in 1913. Florida's total shipments of fruits and vegetables amounted to 44,478 cars, of which 21,500 cars were oranges and grapefruit. The first cargo of fresh fruits and vegetables for New York via the Panama Canal left San Francisco on the American-Hawaiian liner *Ohio* on December 23. The cargo, which was shipped under refrigeration, was composed of oranges, lemons, apples, celery, and Casaba

melons. The total canned vegetable pack of the United States for 1913 was 14,206,000 cases of tomatoes, 7,283,000 cases of corn, and 8,770,000 cases of peas. The onion crop for 1914 was estimated at 6,900,000 bushels, as compared with 4,690,000 bushels in 1913. The Irish potato crop approximated 384,000,000 bushels, as compared with 331,525,000 bushels in 1913. During the year ending Sept. 1, 1914, the Norfolk, Va., trucking sections shipped over 4,000,000 packages of fruits and vegetables. Porto Rico shipped \$1,504,000 worth of oranges and grapefruit and \$1,246,000 worth of fresh pineapples. Increased shipments of Porto Rico coffee are being made both to the United States and Europe.

EXPORT AND IMPORT TRADE. Imports of fruits, vegetables, and nuts to the United States increased from \$53,981,414 worth to \$68,554,793 worth during the fiscal year ending June 30, 1914. There was a decrease in exports from \$44,432,639 in 1913 to \$38,786,908 in 1914. The considerable increase in imports and decrease in exports was due to the short home supply in 1913. Of the exports, fruits amounted to \$31,030,713; vegetables, \$6,936,400; and nuts, \$819,795. The import figures were: Fruits, \$33,638,334; vegetables, \$15,133,535; and nuts, \$19,782,924. Of the total imports, bananas alone amounted to \$16,397,884. Ornamental trees and plants to the value of \$3,597,008 were imported in 1914. There were notable increases in exports of oranges and fresh pears. During the latter part of the year, the export trade was seriously interfered with by the great war in Europe. By the close of the year, however, there was an active demand for fresh apples, as well as canned and dried fruits and vegetables. Owing to the general congestion of shipping, fruit exporters were having difficulty in securing steamer space.

The Hawaiian canned pineapple industry, which has steadily increased from a pack of 1893 cases in 1903 to over 2,000,000 cases in 1914, is now confronted with serious marketing problems. A large percentage of the 1914 pack was undisposed of at the close of the year. Porto Rico and New Zealand have both made a start in the canned pineapple industry. All of the Australian fruit industries have shown rapid development. Over 1,000,000 boxes of apples were shipped in 1914, principally to the British Isles.

Great Britain imported in 1913 raw fruits and edible nuts to the value of about £11,500,000 sterling and raw vegetables amounting to £5,500,000. Much of this trade is with continental Europe and was seriously affected by the war. Belgium markets were practically destroyed. The German export business was cut off. In Holland all vegetables capable of being stored rose sharply in price. Millions of Dutch flowering bulbs were rotting for lack of buyers. Tulip bulbs were being utilized to some extent with flour in making bread. The normally large Servian prune crop was practically eliminated from the market. Vintage in France was continued, and partial success was being attained in filling foreign orders for nursery stock. Spain was having difficulty in marketing her orange crop through disturbance of transportation facilities. The value of fruit production in Spain last year approximated \$48,650,000. Oranges alone were worth \$12,-

848,593. Insects known as red lice caused considerable damage to the orange industry.

QUARANTINE MEASURES. In view of the serious outbreak of citrus canker in Florida, the Secretary of Agriculture issued an order effective Jan. 1, 1915, prohibiting the importation from all foreign countries of citrus nursery stock, including buds, scions, and seeds, except for experimental purposes by the U. S. Department of Agriculture. The embargo was removed on November 30 from Canadian potatoes, provided that they come from disease-free districts and are entered through the ports of New York and Boston, where the Federal Horticultural Board maintains inspectors.

APPLE TABLE SIRUP. Following extensive experiments begun last spring the U. S. Department of Agriculture has applied for a public-service patent covering the making of a new form of table sirup from apples. The new sirup, one gallon of which is made from seven gallons of ordinary cider, is a clear ruby or amber color of the same consistency as cane sirup and maple sirup. It will keep indefinitely when properly sterilized and put in sealed tins or bottles. An extensive commercial experiment in manufacturing apple sirup was under way at a large cider mill in Oregon late in the year. An important feature of the process consists in freezing ordinary cider and separating the concentrated juice from the crushed ice in a centrifugal machine. The same principle has been applied in work with other fruit juices. By a recent decision of the department, all fruit juices to which alcohol has been added must be plainly labeled to show this when intended for interstate shipment.

FLOWERING PLANTS IN THE ALPS. Investigations by Herr von Klebelsberg in the Tyrolese Alps have revealed the existence in that region of no less than 86 species of flowering plants above the snow limit. Of these 56 were found some 300 feet above the snow line, while six occurred over 1500 feet above. The highest species of all, the glacial *Ranunculus*, was met at over 12,000 feet above sea level on the Gross Glockner.

FORCING PLANTS WITH CARBONIC ACID GAS. A number of German investigators, among them H. Fischer, E. Reinau, and R. Klein, have secured remarkably increased growth among greenhouse plants by charging the confined air with an excess of carbonic acid gas. In Fischer's work the yield of tomatoes was practically doubled and the yield of cucumbers increased 12½ per cent by the carbonic acid treatment. Treated fuchsia plants came into bloom quicker and the bloom was prolonged for several weeks. Reinau and Klein used a commercial-sized greenhouse and treated one compartment containing 40 cubic meters of space with 150 liters of pure carbon dioxide twice a day at 7 A. M. and at 12 M. A similar compartment was used as a check. Observations taken at the end of a four- and a seven-week period showed an increased growth ranging from 24 to 152 per cent. The authors' experiments as a whole indicate that the carbon dioxide content of air and of organic manures should receive more attention as an important plant food.

SULPHUR AS A PLANT FOOD. Experiments conducted by W. Janicaud with tomato plants, and by J. Chauzit with grapevines, indicate that

sulphur has an important fertilizer action when used in combination with complete organic and inorganic fertilizers. Sulphur used alone was of relatively little value and had a somewhat deleterious effect on the tomato plants.

CHANGE OF SEX IN THE PAPAYA. As a result of long-continued investigations in Hawaii, J. E. Higgins and V. S. Holt have found that it is possible by using a hermaphrodite parent to do away with the very large proportion of male trees, which usually result from dioecious seed. Observations have also been made of the appearance of hermaphrodite flowers on trees that have previously produced only staminate flowers. In one authenticated instance reported by J. T. Gulick, female flowers with resulting fruit developed on a male tree which had been beheaded. Higgins and Holt cut the tops off of a number of male trees and succeeded in getting female flowers in two cases. No record has been found which would indicate that the strictly female or pistillate tree has ever changed its sex. Certain trees have been found to be capable of parthenocarpic development of fruit, but no cases of parthenogenesis have been recorded.

NEW FRUITS, NUTS, AND PLANTS. The U. S. Department of Agriculture's most recent list of new or little-known fruits and nuts considered worthy of more extensive trial include the Banana, McCroskey, and Opalescent apples; Lizzie peach; Flower and James grapes; Triumph persimmon; Lue orange; and the Boone chestnut. During the year a "citrindarin," obtained by crossing the Oneco tangerine and the trifoliolate orange, ripened for the first time and yielded a fruit so sweet and of such good quality that it appears to be promising as a table fruit. Judging from its actual behavior during the past three winters, the citrindarin is likely to prove nearly as hardy as the citrange and other trifoliolate hybrids.

For a number of years the Department of Agriculture has experimented with udo (*Aralia cordata*), a Japanese vegetable that has been grown in this country as an ornamental for about 20 years. It has been found that udo may be grown and used very much like asparagus. The shoots must be blanched because the green shoots are rank in flavor, whereas the blanched shoots are said to be delicious. The plant requires very little care and yields about as well as asparagus. Analyses show it to have about the same dietetic value as asparagus or celery. David Fairchild describes the culture and uses of udo in *U. S. Department of Agriculture Bulletin* 84, entitled "Experiments with Udo, the New Japanese Vegetable."

As a result of a cultural test of the "Poire de terre Cochet," or Yacon (*Polymnia edulis*), of the Andes region of South America, R. de Noter concluded that although this plant was rejected some 50 years ago as a substitute for the Irish potato, it may prove of more value than the Jerusalem artichoke for French conditions. The tubers are prolific, of an agreeable flavor, and are as readily lifted from the soil as a clump of dahlia tubers, which they closely resemble. Moreover, the foliage appears to have value as a fodder crop.

In consequence of the bud selection work with citrus fruits conducted by the U. S. Department of Agriculture in California (see HORTICULTURE, 1912), it is rapidly becoming a matter of or-

chard practice in that State to work over unprofitable individual trees with buds from those that consistently produce the desired type of fruit in abundance. Extensive studies of supposed walnut-oak hybrids occurring in California have led E. B. Babcock to conclude that they are merely mutations of the common California walnut, *Juglans californica*.

NEW METHODS OF PROPAGATING NUT TREES. R. T. Morris has found that when grafting the shagbark hickory with scion wood more than one year old, if a small side branch from old wood carries a large terminal bud, this bud will start promptly, providing care is taken to remove vigorous stock sprouts. Scions four, five, and even six years of age have been used with success. An inarch method was recently experimentally employed with success in grafting hickories. In this method the scion is cut free from the parent plant and the part below the inarch is inserted in a test tube or a small bottle containing water. It was found that the water can be kept in good condition by inserting specimens of bladderwort (*Utricularia*). The successful development of this method will be of special value in extending the grafting season.

INSTITUTIONS, SOCIETIES, ETC. By a bill passed on August 12, the National Botanic Garden at Washington is to be transferred from its present restricted site opposite the Capitol to a 400-acre tract in the unimproved northern end of Rock Creek Park, where conditions are favorable for the development of an important economic as well as ornamental garden. A new horticultural building was dedicated at the Pennsylvania Agricultural College and Maurice G. Kains, associate editor of *The American Agriculturist*, was appointed professor of horticulture and horticulturist of the station. L. C. Corbett has resumed charge of the horticultural and pomological investigations of the U. S. Department of Agriculture in place of A. V. Stubenrauch, who is now in charge of the new division of pomology at the University of California. A plant industry building is under construction at the Iowa Agricultural College. The new landscape art building at Cornell University was occupied during the year.

A new experiment station for pomology, known as the Salghir Station, was established in the Crimea, in the town of Simferopol. In connection with the development of a system of agricultural experiment stations in Algeria, branch fruit stations are to be located at Orleansville, Guelma, Tlemcen, and Kabylie. The Province of Salta in Argentina has given the subtropical agricultural experiment station at Güemes nearly 500 acres of land for experimental work in the cultivation of citrus fruits.

The first horticultural school for women in France, a higher school of horticulture for young women, was opened in the latter part of 1913 at Brie-Comte-Robert, near Paris, under the auspices of the Union for the Agricultural and Horticultural Instruction of Women.

The Royal Horticultural Society of England was compelled to abandon its annual fruit show on account of the war. *Zeitschrift für Pflanzenzüchtung*, a joint organ of the German and Austrian Societies for the Promotion of Plant Breeding, is being published in Berlin.

Bibliography. Among the recent contributions to horticultural literature are the follow-

ing: H. I. Triggs, *Garden Craft in Europe* (New York, 1913); L. H. Bailey, *New Standard Cyclopedia of Horticulture* (vols. i, ii, ib., 1914); E. B. Copeland, *The Coconut* (London, 1914); P. W. Humphreys, *The Practical Book of Garden Architecture* (Philadelphia, 1914); G. W. Kerr, *Sweet Peas Up-to-date* (rev. ed., Philadelphia, 1914); Lowther, Worthington, et al., *Encyclopedia of Practical Horticulture* (three vols., North Yakima, Wash., 1914); H. F. MacMillan, *Handbook of Tropical Gardening and Planting with Special Reference to Ceylon* (2nd ed., Colombo, 1914); F. C. Sears, *Productive Orchardng* (Philadelphia, 1914); H. H. Thomas et al., *Rose Book* (New York, 1914); C. J. J. Van Hall, *Cocoa* (London, 1914); Whitson and Williams, *Luther Burbank, His Methods and Discoveries and Their Practical Application* (three vols., New York, 1914).

HOSPITAL BUILDINGS. See ARCHITECTURE.

HOSPITALS. Among the great number of donations to hospitals during the year of 1914 a few of the larger amounts may be mentioned here. The National Jewish Hospital for Consumptives received \$350,000 from Dr. Samuel Grabfelter, of Philadelphia, its president; The Presbyterian Hospital, New York City, about \$125,000 by the will of Mrs. Nellie M. Noe; Wesley Hospital of Chicago, \$1,000,000 from James Deering; New York State Women's Hospital, \$150,000; Presbyterian Hospital, \$100,000; Manhattan Eye and Ear Institute, \$50,000; New York Institute for Deaf and Dumb, \$50,000; Memorial Hospital for Cancer and St. Luke's, each \$10,000, and Denver Home for Consumptives, \$50,000, by the will of Maria DeWitt Jesup. Mr. John D. Rockefeller gave \$2,550,000 to the Rockefeller Institute for Medical Research for additions to the present plant, in addition to a fund of \$1,000,000 for the establishment of a department of animal pathology, which will give special attention to the investigation of hog cholera, foot-and-mouth disease, diseases of poultry, etc. Bequests to the Hospital for Deformities and Joint Disease, of New York City, \$25,000, and to the Presbyterian, Mount Vernon, and Episcopal Hospital each \$20,000, were made in the will of Mrs. A. Gertrude Cutter. Medford Sanitarium of Long Island, N. Y., received an endowment of \$100,000, donated from an anonymous source. Homestead Sanatorium, Providence, N. Y., the tuberculosis hospital for Saratoga County, opened in 1914, with capacity of 12 patients, costing \$50,000, exclusive of gift of 400 acres of land, and a roadway of 4½ miles by Gen. H. W. Carpentier. It stands at an altitude of 1467 feet on a spur of the Kayaderosseras Mountains. The Mercy Hospital of Chicago received \$250,000 by the will of Charles Heines. William Hood Dunwoody of Minneapolis, Minn., donated \$1,000,000 for the upkeep of Dunwoody Home for convalescents, at Newton, Pa. The new Herman Knapp Memorial Eye Hospital was opened December 12, in New York City. The institution carries on the work of the old New York Ophthalmic and Aural Institute, which was founded by Dr. Knapp in 1869. The new hospital in connection with the work of the Hebrew Infant Asylum in the Bronx, New York City, was dedicated February 8. The building cost \$25,000, and provides a separate room for each patient. The Psychopathic Pavilion at the Los Angeles

County Hospital was opened August 3. The ward has accommodation for 100 patients, and was erected at a cost of \$175,000. The Robert W. Long Hospital, Indianapolis, costing \$250,000, exclusive of the site, was dedicated in May. It was the gift of Mr. and Mrs. Robert W. Long. The new St. Francis Hospital, Beech Grove, Ind., was dedicated June 21. The institution cost \$200,000 to build and will accommodate 200 patients; The Scott County, Iowa, Tuberculosis Hospital, costing \$75,000, was opened July 4. The first building of the new Cook County Hospital was opened August 15. The entire eighth floor is arranged for surgical work; there are nine operating rooms, including two amphitheatres. The old hospital buildings were to be removed in order to make room for new structures which will cost, when completed, \$16,000,000. A Maternity Hospital, costing \$50,000, was given by Mr. Abraham Mendels, as an adjunct to the Hebrew Hospital and Asylum at Baltimore. A new hospital was opened at Hindman, Ky., and dedicated October 19. The investment represents \$150,000 in buildings and equipments. The new Mayo Clinic Building, Rochester, Minn., was opened on March 6. The building is four stories in height, the top floor having an immense storeroom for the disposal of specimens and for the photographic equipment of the clinic. The formal opening of the Children's Hospital, Brookline, Mass., took place on April 15. The hospital cost about \$650,000. The new St. Elizabeth's Hospital, Brighton, Mass., was opened September 1. It was erected at a cost of \$250,000, and has accommodations for more than 200 patients. Plans for rebuilding the Ancon Hospital of Panama were under consideration, many of the existing buildings being in a bad condition and needing constant and expensive repairs. A committee consisting of Capt. R. E. Wood, Dr. A. B. Herrick, and Mr. Samuel Hitt, the canal architect, had the matter under advisement. The United States Quarantine Station, Pelican Island, was fitted up as an emergency hospital for contagious diseases with especial reference to bubonic plague.

Hospital activities in Canada were very marked during 1914, particularly in the newer western section. In the province of Ontario there were 89 public hospitals, 37 refuges, and 8 sanatoria for consumptives, 33 orphanages, 3 homes for incurables, and 31 county houses of refuge. During the year ending Sept. 30, 1913, 68,738 patients received treatment. The total amount expended during the year on hospitals was \$3,155,340. In the province of Saskatchewan there were 26 hospitals, having a total bed capacity of 1200. The King George Isolation Municipal Hospital was put into operation; it cost \$400,000, and the bed capacity is 200. At Bath, England, the fashionable watering-place of the 18th century, the Royal Mineral Water Hospital opened a research laboratory for the study of the pathology of rheumatoid arthritis, a disease which is much treated by mineral waters. The laboratory was opened by Sir William Osler. At Madrid, Spain, a new and elaborately equipped building was completed to accommodate the *Instituto de Higiene de Alfonso XII*. The institute was founded in 1899, but has long since outgrown its old quarters. Professor Ramón y Cajal is the director-in-chief.

The European war necessitated the creation of a great number of military and convalescent hospitals both on land and sea. Of the hospital ships the *Gascogne* is probably the largest and best equipped. The great transatlantic liner was completely transformed into a hospital ship for the accommodation of convalescents removed from auxiliary or temporary hospitals. In order that patients might have sufficient air space and light, the great saloons, music rooms, and reading-rooms were made over into dormitories. The saloons near the upper bridges were reserved for the wounded who could walk only with great difficulty. Dining-rooms were installed on the first deck. The American National Red Cross Ship sailed early in October for Rotterdam, where nurses grouped into units were landed for Germany, Austria, and Russia. Two units arrived in Vienna on October 14, one of which proceeded to Hungary, the other being assigned to duty in the suburbs of Vienna. The hospital ship that sailed from New York via the Mediterranean for Serbia, reached Nish on October 15. The Maharaja Scindia of Gwalior, and other native Indian rulers presented a hospital ship named *Loyalty*, of 300 beds, for use in the war. The Grand Trunk Pacific steamer *Prince George* was transformed into a hospital ship and equipped with operating tables, wards, and elevators.

A contribution of \$1000 was given by John A. Roebling to help maintain an American Red Cross hospital in Munich. The American Hospital in Paris, a magnificently equipped institution, entirely under American control, was transformed into a military and convalescent hospital. The managers expected to spend \$500,000 and to furnish accommodations for 1200 sick. The cost of maintenance in the hospital was 10 francs a day per bed, in spite of the fact that all of the doctors and nurses are volunteers. An American Women's Hospital in London with accommodations for 200 patients, and equipped through the efforts of American women in London, was turned over to the war office for the care of wounded soldiers. Spain sent offers to France to receive 30,000 wounded soldiers in her hospitals. The hospital of Madrid offers to accommodate 6000.

HOTELS. See ARCHITECTURE.

HOUSE FLY. See ENTOMOLOGY.

HOUSTON, EDWARD JAMES. An American electrical engineer and writer, died March 1, 1914. He was born in Alexandria, Va., in 1847, and graduated from the Central High School in Philadelphia in 1864. He was one of the inventors of the Thomson-Houston system of arc lighting. He held chairs of professor of physics at the Medico-Chirurgical College in Philadelphia, and was emeritus professor of physical geography and natural philosophy at the Central High School, emeritus professor of physics at the Franklin Institute. He was a prolific writer on electricity, and wrote also many stories for boys. His writings include an edition to many text books on electrical subjects: *Arc Lighting* (1897, 1906); *Electrical Heating* (1897); *Telegraphy* (1906); *Telephony* (1906); *Electricity in Every Day Life* (1904); *Franklin as a Man of Science* (1906); *The Search for the North Pole* (1907); *Wonder Book of Light* (1908); *Five Months on a Derelict* (1908); *A Chip of the Old Block* (1910); *The Jaws of Death* (1910); and *The Yellow Magnet* (1911).

HOVEY, HORACE CARTER. American clergyman and scientist, died July 27, 1914. He was born at Rob Roy, Ind., in 1833, and graduated from Wabash College in 1857. He studied divinity at the Lane Theological Seminary, graduating in 1857, and in the following year was ordained to the Presbyterian ministry. From 1857 to 1862 he was a home missionary, and until 1909 held pastorates in many cities in the West and in New England. He retired from active service in the pulpit in 1909, and from that year until his death was engaged in literary and scientific work. He was well-known as a lecturer on scientific subjects. He made a special study of grottoes and caves, and is said to have explored more than 300 caverns and grottoes in the United States. He was an authority on this subject. His published writings include: *Celebrated American Caverns* (1882); *The Mammoth Cave of Kentucky* (1897, revised in 1909). He also contributed to magazines on the proceedings of scientific societies many articles on caverns in the United States and other countries. He wrote over 100 articles on natural science and travels in America, France, and Russia. He was editor of *The Hovey Book of the descendants of Daniel Hovey of Ipswich, Mass.*

HOWARD UNIVERSITY. An institution for higher learning at Washington, D. C., under the direct supervision of the national government. There were enrolled during the school year 1913-14, 1463 students, and the faculty numbered 110. In the autumn of 1914 the positions of director of physical culture, instructor in physical culture, and secretary of the Y. M. C. A. were added to the faculty. The college received during the year from the Emily H. Moir estate \$16,500, and from the Henry C. Maynard estate \$500 for endowment. The productive funds amount to \$30,816, and the income in 1913-14 was \$201,101. The library contains about 30,000 volumes. The president is Stephen M. Newman, A.M., D.D.

HUERTA, VICTORIANO. See MEXICO, *History*.

HUNGARY. See AUSTRIA-HUNGARY.

HYATT, STANLEY PORTAL. An English novelist and engineer, died June 24, 1914. He was born in 1877, and was educated at Dulwich College. As a boy he worked on a sheep station in New South Wales, afterwards went to Matabeleland, and when he was 21 years of age had set up the largest trading business in eastern Mashonaland. He helped erect the first mining machinery in the Chartered Territory. With his brother he explored the rubber jungles of Central Mozambique for the Portuguese Government, but on his return home found his business ruined through a new cattle disease, the African coast fever. He then began writing for several Indian and English papers. In 1904-05 he fought through the American campaign in the Philippines. After a period of hardship he returned to England and there wrote his first novel, *Marcus Hay*. This proved to be successful, and was followed in 1908 by *The Little Brown Brother*, which embodied his Philippine experiences. Other published writings include: *The Marriage of Hilary Carden*; *The Law of the Bolo*; *The Diary of a Soldier of Fortune*; and *Off the Main Track*.

HYDRIATICS. The use of water as a medical agent. See HYDROTHERAPY.

HYDROLOGY. The department of medical

science which treats of the use of waters, especially mineral waters, for therapeutic purposes (Foster). See HYDROTHERAPY.

HYDROPATHY. A word of improper etymology formerly signifying the practice of an extinct sect which employed water treatment to the exclusion of medicine. See HYDROTHERAPY.

HYDROPHOBIA. See RABIES.

HYDROPLANE. See AERONAUTICS.

HYDROTHERAPY. The science of the treatment of disease with water, ordinary still fresh water or mineral water. It includes **BALNEOLOGY**, which comprises all bathing for medical purposes, and **CROUNOTHERAPY**, which denotes the use of mineral waters by drinking. Hydrotherapy is not a specialty; it is a department of general practice of medicine, as the use of tonics or digestants might be considered a selective department. The internal use of alkaline-saline waters has a wider effect on physiological processes than that for which the cathartic, or alternative, or tonic dissolved ingredients account. An analogue exists between treatment of the human being with alkaline-salines with a resulting enkindling of vital processes, and the use of sea water by Jacques Loeb in causing developmental changes in the egg-cell. The inorganic medium seemed, in Loeb's demonstrations, to condition morphologic and chemical transformations, as is stated in a recent editorial in the *Journal of the American Medical Association*. The problem of the effecting of metabolic changes by thus altering the environment of cells is being tested, in the interest of rational balneology, at the laboratory of the Agricultural College in Berlin, under Zuntz.

The 35th annual congress of physicians interested in balneology was held at Hamburg, Germany, in March. Stress was placed on the necessity of excluding tuberculosis and grippé patients, as well as the carriers of those diseases, influenza being especially insidious because no appreciable immunity to it develops in the individual. Police regulations are advised to control the beds, the expectoration, food preparation and distribution, and soiled linen. A disinfection apparatus and a trained disinfecter should be available in every large health resort. Desert climate was discussed, and its limitations were defined. Timely discovery and supervision of early kidney disorder were emphatically advocated, to postpone development of the severe degree of arteriosclerosis which renders so much kidney disease fatal. The limitations of diathermy were discussed, as well as its usefulness in acute joint diseases, chronic arthritis, neuritis, myalgia, epididymitis, prostatitis, and paræsthesias.

The European War has closed to the invalids of the world the spas of Belgium, Austria, Germany, and France, and probably England will also suffer in this respect. The trend of travel will probably be toward resorts providing balneologic and crounologic opportunities in the United States, and many scores of mineral-water spas will be prepared for the demand. Last year's **YEAR BOOK** enumerated some of the varieties of available waters, hot and cold. But a further division of the non-thermal waters must be made into still waters and those containing carbonic acid gas in solution, and therefore suitable for giving the "Nauheim system"

of baths, for heart and arterial disorders, joint affections, some nervous disorders, anemia, and early kidney disease. East of the Rocky Mountains, waters containing carbonic oxide in natural solution are apparently very rare, the great group of wells and springs at Saratoga Springs furnishing the only waters apparently available for the purpose, through proper equipment. Brine springs devoid of gas exist in different localities, and their product is used for the purpose by the addition of gas artificially, with a comparable, though not equivalent, result. Dr. Rupert Blue, of the Marine Hospital Service of the United States, stated that he believed the radio-active waters of the mineral springs of the United States as efficacious and valuable as those of Europe. See **SARATOGA SPRINGS**.

HYGIENE. The Annual Report of the Bureau of Health for the Philippine Islands, 1912 and 1913, reviewed the sanitary work there undertaken, and demonstrated that the remarkable sanitary triumphs achieved in the canal zone were being duplicated over a much more extensive territory in the Far East. Health conditions for the entire archipelago, according to the report, were excellent, with no serious epidemics. Installation of artesian wells had brought about a reduction in the death rate, and great improvement in the general health of the districts where they were used. In the city of Manila the death rate was cut down remarkably when water from the uninhabited watershed was consumed in place of the ordinary river water. The routine use of quinine among the inmates of the Iwahig Penal Colony demonstrates that malaria can be controlled in communities, even when they are situated in the midst of a malarial district. The inmates of the Penal Colony were said to be as healthy as the people of New York. Another field of activity was the elimination of intestinal parasites. In Manila, in spite of the fact that small-pox was constantly imported, there had not been a death from this disease during the year, because the population was kept thoroughly vaccinated. Formerly hundreds died of small-pox annually. Among the government employees for the fiscal year 1912-13 the death rate was 3.18 per thousand. When every allowance was made for the exceptional physical condition of the employees, their comparative youth, and careful selection, the death rate among them was still lower than that of the civilian population of any other country. The rate among Americans was 2.47 per thousand; among Filipinos it was 3.46. Beriberi still presented a problem, although it was known that this terrible disease was entirely prevented without increasing the cost of living, by substituting unpolished rice for polished rice. It was recommended that a tax of four centavos a kilogram be placed on polished rice, and that the unpolished be admitted duty free. This would make polished rice too expensive for general use, and limit it to the well-to-do who could protect themselves by a diversified diet. It was estimated that at least 5000 deaths from beriberi occur every year, and it seems probable that it is the cause of the high mortality, which would make it responsible for 20,000.

A committee appointed by the Council of Health and Public Instruction of the American Medical Association, to coöperate with the National Education Association began the study of

rural schools and schoolhouses. It was found that surprisingly little was known of the actual conditions of rural schools and a preliminary survey was promptly undertaken, through the United States Bureau of Education. Professor Dressler made a careful study of many country school districts in the South. Special surveys in Connecticut, Vermont, and New York, Idaho, Pennsylvania, New Jersey, and Virginia were made, as well as the collection of statistics gathered from every State of the Union, resulting in the accumulation of a large mass of information which will be made public when it has been thoroughly digested. Dr. Wood, chairman of the Education Committee, stated that contrary to general belief, the country school child is from 15 to 20 per cent more defective than the city child. For example, in Pennsylvania a study was made of 1831 rural school districts, and the health of the children compared with that of the school children of Harrisburg, Altoona, and Pittsburgh. The percentage of defective children in Altoona was 69 per cent, in Pittsburgh, 72.2 per cent, while in the rural school districts defective children occur in 75 per cent. In New York City only 72 per cent of the children are at all defective. These figures indicate that among children in the same general class, the city school child has a slight advantage over his rural contemporaries. In the matter of nutrition also the school child of the city apparently has the advantage. The average of malnutrition among the school children in New York City is 23.3 per cent, while that of rural school children in the districts investigated is 31.2 per cent. The discrepancy between the two classes is even more marked in the case of mental defect. Statistics from twenty-five cities, and from rural districts in Pennsylvania, Massachusetts, New Jersey, Idaho, and Virginia were compared, and showed that the average of mental defect among city school children was 0.2 per cent; that among rural school children 0.8 per cent. Heart disease is twice as prevalent among country children; curvature of the spine was present in 0.13 per cent among the city children, 3.5 among rural school children. Ear troubles are 5 times and eye defects 4 times more frequent among country children. The same general condition was found as to adenoids and tonsils. Dr. Wood found in considering the causes for these startling conditions that even in the slums food is better prepared than in the country. Also oculists, dentists, and throat specialists are more easily reached in the city. Ventilation in country houses is unsatisfactory, where the children are more exposed to cold, heat, and dampness. School houses are often old, carelessly built, and badly ventilated, and general sanitary conditions often unspeakable. In many instances the only opportunities afforded for cleanliness are a pail of water, a dirty basin, and a common towel. The drinking water is often contaminated. In seven States there is no regulation of sanitary conditions of country schools. It is believed that the mere calling attention to this state of affairs will result in a country-wide improvement in rural school sanitation. See PUBLIC HEALTH SERVICE, *United States*.

INFANT HYGIENE. The Bureau of Child Hygiene of the Department of Health of New York City was organized late in 1908, its main work being the prevention of disease among children,

and the education of the public in this direction. The work starts with the prenatal care of the child, and follows it through infancy and the school age. As a partial result of the Bureau activities, ophthalmia neonatorum has practically disappeared from New York City. 16,000 babies were last year under the care of the Bureau's nurses, with a mortality of 1.4 per cent. Since the organization of the Bureau the death-rate of babies under one year of age has been reduced from 144 per thousand births in 1907, to 101.9 in 1913. The only large city in the United States which shows a better rate than this is St. Louis, with 99.5 per thousand. Trachoma has been reduced from 20 per cent to 3 per cent, defective vision from 13.1 per cent to 8.5 per cent, defective nasal breathing from 18.7 per cent in 1909 to 8.9 per cent in 1913. The Bureau's activities are also directed to the enforcement of the child labor law, to seeing that children are physically and mentally able to work before they are granted working papers. The Bureau has 705 employees, including physicians and nurses. Its appropriation for 1913 was \$652,000.

A museum for infants was established in Berlin in connection with the Kaiserin Augusta Victoria House, on June 4th. Here the mother may find all sorts of information in regard to birth, development, nutrition, and care of infants, and of herself. There are departments of artificial feeding, physical care, general hygiene, and diseases of infants. All this information is illustrated by charts, models, photographs, etc.

ICELAND. A Danish crown colony. Area, about 40,456 square miles, of which only 16,245 are inhabited; population 1911, 85,183. The trade in 1911 amounted to 14,123,000 kroner imports, and 15,691,000 kroner exports—6,753,711 kroner salt cod, 1,646,020 fish oil, 1,246,242 wool, 966,833 salt mutton, etc. The Minister for Iceland resides at Reikjavik.

On Easter Sunday Iceland voted on the new Constitution which had been adopted by the Icelandic Parliament in 1911, and subsequently approved by Denmark. Henceforth Iceland was to enjoy complete control of its domestic affairs, with universal suffrage for men and women alike. In the elections to the Legislature the parties opposed to the government were able to obtain twenty out of thirty-four seats.

IDAHO. POPULATION. The estimated population of the State on July 1, 1914, was 395,407. The population in 1910 was 325,594.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

	Acreage	Prod. bu.	Value
Corn 1914	19,000	589,000	\$424,000
1913	14,000	448,000	305,000
Wheat 1914	549,000	14,362,000	12,495,000
1913	510,000	14,094,000	8,879,000
Oats 1914	332,000	14,608,000	5,551,000
1913	325,000	15,112,000	4,836,000
Rye 1914	3,000	60,000	40,000
1913	3,000	66,000	38,000
Barley 1914	185,000	7,030,000	3,515,000
1913	180,000	7,560,000	3,629,000
Potatoes 1914	34,000	5,270,000	2,530,000
1913	34,000	5,780,000	2,890,000
Hay 1914	705,000	21,868,000	13,686,000
1913	705,000	2,044,000	14,717,000
a Tons.			

MINERAL PRODUCTION. The mine output of gold, silver, copper, lead, and zinc in 1913 was valued at \$24,149,049, compared with a value of \$21,466,521 in 1912. The production of all metals except gold increased. The Cœur d'Alene regions, the main producing area of the State, had a greatly increased production, especially in silver, lead, and zinc. The gold production had a value of \$1,344,559, or \$38,655 less than that of 1912. The production of silver increased from 8,294,745 ounces, valued at \$5,101,268 in 1912, to 9,989,193 ounces, valued at \$6,033,473 in 1913. There was an increase in the copper output from 7,492,152 pounds, valued at \$1,236,205 in 1912, to 9,592,966 pounds, valued at \$1,486,910 in 1913. All records were broken in the production of lead, which increased from 284,185,657 pounds, valued at \$12,788,355 in 1912, to 317,871,945 pounds, valued at \$13,986,366 in 1913. An unusual production of zinc ore increased the spelter output from 13,905,502 pounds, valued at \$959,479 in 1912, to 23,173,953 pounds, valued at \$1,297,741 in 1913. There were in 1913, 384 producing mines. During the year two smelting plants were active, one a lead plant at Clayton, and the other a copper matting plant at Ivers. Investigations by the United States Geological Survey in 1913 revealed the existence of several new mining districts in the State. These include the Loon Creek, Yankee Fork, and Bay Horse districts. The area includes several promising ore deposits, and a few mines where a considerable tonnage is blocked out, awaiting more advantageous transportation facilities. These districts are in the northwestern part of Custer County. Additional investigations by the survey revealed the existence of large areas of coal beds in Cassia County. The coal is lignite. Other metals mined in the State include gem materials, clays, lime, mica, phosphate rock, salt, sand and gravel, sand-lime brick, and stone. Small quantities of iron and tungsten are also produced. The total value of the mineral production in 1913 was \$24,565,826, compared with \$21,816,390 in 1912.

The mines of the State made a record production of silver, lead, and zinc in 1914, according to the estimates of the United States Geological Survey. The value of the gold, silver, copper, lead, and zinc in 1914 was about \$24,141,000, compared with \$24,149,049 in 1913. The gold output decreased from \$1,344,559 in 1913 to \$1,115,000 in 1914, but the production of silver increased from 9,889,193 ounces in 1913 to about 13,000,000 ounces in 1914, or about 30 per cent. The copper production was greatly affected by market conditions, and decreased from 9,592,966 pounds in 1913 to 5,500,000 pounds in 1914. The mine production of lead in 1914 was about 345,000,000 pounds, or nearly 9 per cent more than that of 1913, which was a record production up to that time. The value of the output, however, was slightly less in 1914 on account of less favorable price conditions. Shipments of zinc ore and concentrate from the mines of the State increased from 33,178 tons in 1913 to about 51,000 tons in 1914, and contained about 45,430,000 pounds of zinc.

TRANSPORTATION. The total railway mileage in Idaho for the year ending June 30, 1914, was 3577. The roads having the longest mileage were the Oregon Short Line Railroad, 1817; Chicago, Milwaukee and St. Paul, 251; Oregon-

Washington Railroad and Navigation Company, 159; Spokane International Railway, 162; and the Great Northern, 133.

EDUCATION. The enrollment in the schools of the State on June 30, 1912, was 84,791, and the average daily attendance was 66,359. There were 2710 teachers, of whom 2021 were women and 689 men. The average monthly salary paid to women teachers was \$68.88, and to men teachers, \$87.21. The estimated value of all school property was \$7,090,106. The total number of city and town high schools was 102, and of rural high schools 15. In the city and town high schools were enrolled 4066 pupils, and in the rural high schools 304. The total expenditures in 1912 amounted to \$3,225,496.

FINANCE. The report of the State Treasurer brought a balance at the beginning of the fiscal year 1914 of \$1,091,151. It showed a balance for the biennial period 1912-14 of \$26,860. The receipts for the period amounted to \$2,143,122, and the payments to \$2,169,817, leaving a balance at the end of the year of \$165.85. The funded debt of the State is made up of a great many small issues of bonds. In nearly every case these were issued for public improvements either for roads, bridges, or for improvements or buildings of State institutions. On Sept. 30, 1912, two larger issues, dated 1905 and 1911, were both for the capitol building, and amounted to \$100,000 and \$750,000 respectively. The total funded debt on that date amounted to \$2,364,250. The floating debt was \$86,453. The per capita debt was \$5.92. The total outstanding bonds of the State on Sept. 30, 1914, amounted to \$2,390,250.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under control of the State include the State Penitentiary at Boise; Industrial Training School at St. Anthony; Idaho Soldiers' Home at Boise; Deaf and Blind School at Gooding; Idaho Insane Asylum at Blackfoot; and Northern Idaho Insane Asylum at Orofino.

POLITICS AND GOVERNMENT. There was no meeting of the State Legislature in 1914 as the sessions are biennial, and the last was held in 1913. Elections were held for State officers and for United States Senator. At the nominating primaries held in July, J. M. Haines was nominated by the Republicans, Moses Alexander by the Democrats, and H. E. McElroy by the Progressives. For United States Senator the Republicans renominated J. H. Brady, the Democrats nominated J. H. Hawley, and the Progressives P. Clagstone. At the elections held on November 3 Mr. Alexander, the Democratic candidate, was elected, with 49,627 votes, compared with 40,349 for Mr. Haines, and 10,583 for Mr. McElroy. Both Republican and Democratic votes showed an increase over the vote in 1912, while the Progressive vote fell off from 25,527 in 1912 to 10,583 in 1914. Senator Brady was reelected with 47,486 votes, compared with 10,286 for Mr. Hawley, the Democratic candidate, and 10,321 for Mr. Clagstone, Progressive. The Republicans elected two representatives at large.

STATE OFFICERS 1915. Governor, Moses Alexander; Lieutenant-Governor, H. H. Taylor; Secretary of State, Geo. R. Barker; Treasurer, J. W. Eagelson; Auditor, Fred L. Huston; Attorney-General, J. H. Peterson; Superintendent of

Education, Bernice McCoy—all Republicans except Governor.

JUDICIARY. Supreme Court: Chief Justice, Isaac N. Sullivan, Rep.; Associate Justices, Warren Truitt, Rep.; one vacancy; Clerk, I. W. Hart.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Republicans	19	31	50
Democrats	11	28	39
Progressives	2	1	3
Socialists	1	0	1
Undecided	0	1	1
Republican majority	5	1	6

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

IDAHO, UNIVERSITY OF. An institution founded at Moscow, Idaho, in 1892. The total enrollment for the year 1914-15 was 595, and the faculty numbered 75, besides 13 on the Agricultural Extension staff. There were no notable changes made in the faculty during the year and no noteworthy benefactions were received. The university is supported by appropriations from the State Legislature. The total expenditures for all purposes in 1913-14 was about \$385,000. The president is Melvin Amos Brannon, Ph.D.

ILLINOIS. POPULATION. The estimated population of the State on July 1, 1914, was 5,986,781. In 1910 the population was 5,638,591.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

	Acreage	Prod. bu.	Value
Corn .. 1914	10,346,000	800,034,000	\$183,021,030
1913	10,450,000	282,150,000	177,754,000
Wheat .. 1914	2,500,000	46,250,000	46,712,030
1913	2,240,000	41,888,000	36,024,000
Oats .. 1914	4,300,030	125,990,000	55,436,000
1913	4,375,000	104,125,000	39,568,000
Rye .. 1914	49,000	784,000	666,000
1913	49,000	808,000	525,000
Barley .. 1914	55,000	1,622,000	989,000
1913	54,000	1,404,000	800,000
Potatoes 1914	124,000	7,440,000	4,538,033
1913	125,000	5,750,000	5,118,000

MINERAL PRODUCTION. In 1913 Illinois was third among the States in the value of its mineral production. The State owes its prominence as a mining State chiefly to its importance as a producer of coal and petroleum, and to the development of its clay-working industries. In coal production Illinois is exceeded only by Pennsylvania and West Virginia, and in the production of petroleum only by California and Oklahoma. In the manufacture of clay products Illinois ranks fourth. The total value of the mineral production in 1913 was \$131,825,221, of which the coal mines contributed \$70,313,605, or 53 per cent; the petroleum wells, \$30,971,910, or 23 per cent; and the brickyards, tile works, and potteries \$15,195,874, or 12 per cent. In 1912 the value of the total mineral production was \$123,068,867. The coal mined in Illinois in 1913 amounted to 61,618,744 short tons, valued at \$70,313,605, compared with 59,-

885,226 short tons in 1912, a gain of 1,733,518 tons. The value, however, showed scarcely an increase in 1913, due to the low average price per ton. It declined from \$1.17 in 1912 to \$1.14 in 1913. The decrease in the production was due to labor troubles, to inadequate transportation facilities, and to floods which occurred in March and April, and a drought which began in June and lasted until October. There are more coal-producing counties in Illinois than in any other State in the Union. Of the 102 counties in the State, half are or have been producers of coal. Until 1909 Illinois ranked second in importance among the coal-producing States. In that year it dropped behind West Virginia and has remained the third State in coal-producing importance. The coal production of the State in 1914, according to the estimates of the United States Geological Survey, decreased about 10 per cent, compared with 1913, and as the markets were oversupplied and competition for trade was keen, prices in general fell below a profit-making figure. In the manufacture of pig iron Illinois stands second only to Pennsylvania and Ohio. The value of the pig iron products is not included in the total value of mineral products. If it was added the value would be increased by nearly \$55,000,000. Another important industry of the State is the manufacture of Portland cement. This product in 1913 had a value of \$4,784,696, an increase of \$1,340,611 over the previous year. The value of the stone produced in 1913 was \$4,140,953. Illinois ranks first in the production of fluorspar, and in the production of tripoli. Other mineral products are asphalt, lead, lime, mineral paint, mineral water, pyrite, silver, sulphuric acid, and zinc.

EDUCATION. The school population of the State on June 30, 1914, was 1,650,258. The teachers numbered 31,805. The average annual wages paid to teachers was \$684.83. The amount expended for all school purposes in 1914 was \$40,287,856.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State Board of Charities include the Lincoln State School and Colony, at Lincoln; the Soldiers' Orphans' Home, at Normal; the Kankakee State Hospital, at Kankakee; the Dunning State Hospital, at Chicago; the Soldiers' Home, at Quincy; the Anna State Hospital, at Anna; the Jacksonville State Hospital, at Jacksonville; the Elgin State Hospital, at Elgin; the Chester State Hospital, at Chester; the Industrial Home for the Blind, at Chicago; the Eye and Ear Infirmary, at Chicago; the Watertown State Hospital, at Watertown; the State Training School for Girls, at Geneva; the St. Charles School for Boys, at St. Charles; the Soldiers' Widows' Home, at Wilmington; and the Peoria State Hospital, at Peoria. The Alton State Hospital and a Colony for Epileptics were created by the Legislature of 1913. The total population of these institutions on June 30, 1913, was approximately 19,816, and the total appropriations for the two years beginning July 1, 1913, were approximately \$13,000,000, for maintenance, improvement, and extension. The correctional institutions of the State are the State prisons at Joliet and Chester, and the State Reformatory for Boys at Pontiac.

FINANCE. The report of the State Treasurer for the biennial period 1912-14 shows a balance

in the Treasury on Oct. 1, 1912, of \$5,499,210. The receipts from all sources from Oct. 1, 1912, to Sept. 30, 1914, amounted to \$39,708,784; the disbursements for the same period amounted to \$32,952,862, leaving a balance on Sept. 30, 1914, of \$12,255,132. The bonded debt of the State outstanding Oct. 1, 1914, was \$17,500.

TRANSPORTATION. The total mileage of railways in the State on June 30, 1913, was 12,168. This was of main lines only. There were in addition 3024 miles of additional main track, 563 miles of industrial track, and 7496 miles of yard tracks and sidings, or a total of 23,252 miles of track of all sorts. There were in the same year 1544 lines of surface and elevated electric railways, including only main lines. In railway mileage Illinois exceeds every other State except Texas.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial, and the last was held in 1913. In spite of the fact that there were no elections for State officers in 1914 it was an interesting year politically. The term of Senator Sherman who was elected in 1913 to fill out the unexpired term of William Lorrimer, expired in 1915, and it was necessary to elect his successor. Women for the first time in the history of the State took part in general elections. These were held in April, chiefly for municipal officers. In Chicago 47,000 women voted. This was about 30 per cent of those who had registered. The percentage of men who voted, compared with those who registered, was about 34 per cent. Women were candidates for the board of aldermen in Chicago in eight districts. None of these candidates were elected, but in other parts of the State 26 women were elected to the office of town collector, and three women made town clerks. The influence of women was exerted effectively in voting against saloons. Sixteen counties which heretofore were license counties voted against license. Included in these counties were eleven cities. As a result of these elections, over 1000 saloons went out of business in the State.

The contest for the nomination of United States Senator was a very aggressive one. Senator Sherman was a candidate for reelection, and opposed to him for nomination on the Republican ticket was William E. Mason, former United States Senator from Illinois. The Democratic nomination was contested for by Roger C. Sullivan, for many years known as the Democratic boss in Chicago, and Lawrence B. Springer, also a well-known Democratic politician. In the primary elections, held on September 9, Senator Sherman was renominated by the Republicans, Mr. Sullivan by the Democrats, and Raymond Robins by the Progressives. All the candidates made an active campaign for reelection, and on account of the division of the Republican party into two parts, it was quite generally believed that Mr. Sullivan would be successful. In the voting on November 3, however, Mr. Sherman was reelected with 390,661 votes, compared with 373,403 cast for Mr. Sullivan, and 203,027 for Mr. Robins. This may be compared with the voting in 1912 when the Republicans cast 253,613 votes, the Democrats 405,048, and the Progressives 386,478. It will thus be seen that while the Republicans gained nearly 50,000 votes, the Democrats lost over 30,000, and the Progressives over 180,000. Mr. Sullivan carried Chicago and Cook County by approximately 75,000

votes, but this was overcome by the preponderance of votes for Sherman in other parts of the State. Not only were the Republicans successful in electing their Senator, but they also succeeded in electing thirteen members of the House of Representatives. Among these were Joseph G. Cannon, former speaker of the House of Representatives, and William B. McKinley, who in 1912 managed the presidential campaign for President Taft. William B. Hinebaugh of the twelfth district, chairman of the National Progressive Committee, and a member of Congress since 1912 was defeated by C. E. Fuller, Republican.

OTHER EVENTS. By an explosion in the mine of the Franklin Coal Company at Royalton, on October 27, over 100 men were killed.

STATE OFFICERS, 1915. Governor, Edward F. Dunne, Democrat; Lieutenant-Governor, B. O'Hara, Democrat; Secretary of State, L. G. Stevenson, Democrat; Treasurer, Andrew Russell, Republican; Auditor, James J. Brady, Democrat; Attorney-General, P. J. Lucey, Democrat; Adjutant-General, Frank S. Dickson, Republican; Superintendent of Public Instruction, Francis G. Blair, Republican; Superintendent of Insurance, Rufus M. Potts, Democrat.

JUDICIARY. Supreme Court: Chief Justice, George A. Cook, Democrat; Associate Justices, Alonzo K. Vickers, Republican; Wm. M. Farmer, Democrat; F. K. Dunn, Republican; Chas. C. Craig, Democrat; James H. Cartwright, Republican; O. N. Carter, Republican; Clerk of the Court, J. McCan Davis, Republican.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Republicans	25	52	77
Democrats	24	78	97
Progressives	2	25	27
Socialists		8	3

The representatives in Congress will be found in the section *Congress*, of the article UNITED STATES.

ILLINOIS, UNIVERSITY OF. A State university for higher education at Urbana and Chicago, founded in 1867. The total number of students enrolled in the several departments on Nov. 1, 1914, was 5664, distributed as follows: liberal arts and sciences, men, 1079; women, 650—engineering, men, 1195; women, 3—agriculture, men, 934; women, 144—music, men, 4; women, 64—law, men, 112—library school, men, 3; women, 43—graduate school, men, 282; women, 58—summer session, 938—medicine, men, 264; women, 23—dentistry, men, 83; women, 1—pharmacy, men, 191; women, 8. The most noteworthy benefaction during the year was the gift by Capt. Thomas J. Smith, of Champaign, a former president of the board of trustees of the university, of extensive farm lands valued at \$215,000 for the purpose of providing funds to erect a building for the School of Music; this being the largest single gift ever received by the university. The alumni of the university are at work soliciting funds for a building in memory of John Milton Gregory, the first president of the institution. The endowment fund of the university amounts to about \$650,000, and the total income to about \$2,825,000. The library contains about 328,000 volumes. The president of the university is Edmund Janes James, Ph.D., LL.D.

IMMIGRATION AND EMIGRATION.

The total number of immigrants arriving in the United States in the fiscal year 1914 was 1,403,081. Of these, 1,218,480 were immigrants and 184,601 nonimmigrants. The term "immigrant" relates to permanent arrivals and "nonimmigrant" signifies temporary arrivals. The total immigration for the year was a decrease of 24,146 compared with 1913. Rejections for the year amounted to 33,041 aliens, or 2.3 per cent of the applicants, compared with 19,936, or 1.4 per cent for the previous year. In 1914, 4610 aliens were arrested and expelled from the country, compared with 3461 for the previous year. During the fiscal year a total of 303,338 emigrant aliens and 330,467 nonemigrant aliens departed from the United States, making a total of 633,805. The net increase in population, therefore, resulting from immigration and emigration of aliens was for the year 769,276. The net increase corresponding with the foregoing for the fiscal year 1913 was 815,303. Of the total number of immigrants arriving in 1914, 248,729 were common unskilled laborers and 201,389 were classified as skilled laborers. The departures of unskilled laborers in 1914 numbered 274,307 and of skilled laborers 85,666.

Of the 1,218,480 immigrant aliens admitted, 981,692 were between the ages of 14 and 44, 158,621 were under 14, and 78,107 were 45 or over. Of those admitted, 260,152 could neither read nor write and 3074 could read but not write. These figures do not include aliens less than 14 years of age. Thus 24.8 per cent of the aliens admitted in 1914 were illiterate.

During the year 8604 Japanese applied for admission to continental United States, of whom 8462 were admitted and 142 debarred. Of the total number applying, 8350 were in possession of passports and 254 were not. Of those holding proper passports, 8259 were found on examination to belong to the classes entitled by the understanding between the Japanese and the United States governments to receive passports. During the year 5773 Chinese were admitted and 410 were deported. The following table shows the immigration for the fiscal years ended July 30, 1913-14, by race or people.

<i>Race or People</i>	<i>1913</i>	<i>1914</i>
African (black)	6,684	8,447
Armenian	9,353	7,785

Turkish	2,015	2,693
Welsh	2,820	2,558
West Indian (except Cuban)	1,171	1,396
Other peoples	3,038	3,880
Total	1,197,892	1,218,480

Efforts were made throughout the year to promote a beneficial distribution of aliens among the several States and Territories, in accordance with the immigration act of Feb. 20, 1907. During the year an investigation was carried on as to the conditions resulting in immigration from eastern Europe. The investigation included inquiries into the causes of such immigration; whether it is promoted in violation of United States law; whether emigrants are subjected to undue hardships and exploitation while in transit; whether diseased or otherwise inadmissible emigrants are brought to the United States ports when the fact that they are excluded classes might be determined before leaving home; whether foreign governments will cooperate in disseminating information relative to the United States law, in order that intending emigrants may know before leaving home the condition of admission to the United States; and what other measures should be taken to remedy evils that may exist. It was found that for the most part emigration from eastern Europe is due to the fact that the demand for labor is much greater and the wages paid far higher in the United States than in the countries from which the immigrants come. Other important reasons are avoidance of military service and dissatisfaction with political, social, and religious conditions. The chief secondary causes are the advice and often the financial assistance of previous immigrants, and the activity of steamship ticket agents and brokers. It was found that emigration was to a considerable extent promoted by steamship agents in violation of the law. It was found also that there was no well-established evidence as to undue hardships and exploitation of emigrants while in transit. The investigation revealed the fact that the eastern European nations recognized emigration as a natural movement which cannot well be stopped but which ought to be kept under careful control. In every country there is a more or less widespread sentiment in favor of restricting emigration or of forbidding it altogether, but as a rule it is considered to be an economic necessity. Hungary and Bulgaria have enacted comprehensive emigration laws, and Russia, Austria, Greece, and Servia are contemplating such legislation. It is contemplated that these laws shall conform to the immigration laws of the country for which the immigration is destined. On the whole the policies of the emigrant-furnishing countries in several important particulars are essentially the same as the policy of the United States.

As a result of the investigation it is recommended that a branch of the United States Immigration Service be permanently established in Europe and Asiatic Turkey. It is further recommended that a thorough study of the agricultural distribution of immigrants be made

and that the knowledge of United States law should be promoted abroad.

The general Immigration Bill, which in 1912 was vetoed by President Taft on account of the literacy provision, was introduced into the Sixty-third Congress in practically the same form. It was passed by the House of Representatives in the early part of the year. An attempt was made to attach to the bill an amendment excluding all Asiatics, except those having rights under existing treaties or agreements. This, however, was rejected by a vote of 203 to 54. An anti-Japanese amendment was rejected by a vote of 182 to 6. The bill bars aliens over 16 years of age who cannot read some language. The bill was not taken up in the Senate until December and no vote was taken on it in 1914.

INDIA, BRITISH. British India is that part of East India administered by the British sovereign (as Emperor of India) through the Governor-General of India in council. India, as defined by the British Parliament, includes British India and the native States under British suzerainty. The capital of British India is Delhi.

AREA AND POPULATION. The combined area of British India and the native States under British suzerainty, as covered by the 1911 census, is stated at 1,802,192 square miles, or somewhat more than the area of the United States prior to the annexation of Texas in 1845, which was 1,792,223 square miles. British territory, amounting to 1,093,074 square miles, is divided into 15 provincial governments. Interprovincial transfers of territory, and transfers from native to British territory, and vice versa, occasionally take place, so that censuses as originally reported are subject to adjustment. The accompanying table shows the area of the British provinces and of the groups of native States, and the population according to the censuses of March 15, 1901, and March 10, 1911. The population returned at these censuses and the areas have been adjusted, as far as possible, to allow for subsequent interprovincial transfers. Sikkim, which in 1901 was classed under the Bengal States, is shown separately in the 1911 census. The tribal areas in the North-West Frontier Province are now shown under native States. Manipur State, which in 1901 was included under British territory, is now included under native States. The area newly included within the scope of the 1911 enumeration had a population (for the most part estimated) of 1,731,116; of this number, 1,604,265 were returned from the agencies and tribal areas of the North-West Frontier Province. Subsequent to the 1911 census, that is, April 1, 1912, the Province of Eastern Bengal and Assam (which was erected from Eastern Bengal and the Province of Assam Oct. 16, 1905) and the Province of Bengal were reconstituted and erected into three provinces. These provinces are Bengal (which received the style "presidency"), Bihar and Orissa, and Assam. On Oct. 1, 1912, still another new province, Delhi, was erected out of the division of Delhi in the Punjab; its area is provisionally

stated at 557 square miles, and its 1911 population at 391,828.

The area censused on March 10, 1911, and the population on that date, as compared with the population on March 15, 1901, are as follows (the figures being adjusted, as far as possible, to subsequent interprovincial transfers):

Provinces:	Sq. m.	Population	
		1901	1911

* Included in the Bihar and Orissa Province. † Included in the Bombay Presidency. ‡ Included in the United Provinces. § Included in the Madras States.

The population of the French and Portuguese settlements is not shown in the table. A Portuguese census of Dec. 31, 1910, returned a population of 604,930, and a French census of March 10, 1911, 282,472. Geographically a part of India are the Himalayan States of Nepal and Bhutan, both regarded as independent (though the foreign relations of Bhutan are under British control). Little is definitely known of the population of Nepal, but it may be estimated at 3,000,000, and that of Bhutan at 250,000. If these figures be included, the population of Indian territory becomes about 319,270,000. If Burma and Aden be excluded as not being geographically a part of India, the total amounts to about 307,109,000.

In the decade 1891-1901, the population in-

crease in British India was about 4.7 per cent, while in the native States there was a decrease of about 5 per cent; there being for India an increase of 2.5 per cent. From 1901 to 1911, there was an increase of 5.5 per cent in British India, and of 12.9 per cent in the native States; the increase for India being 7.1 per cent. The largest increase during 1901-11 was in the North-West Frontier Province agencies and tribal areas, 1831.9 per cent; but this enormous percentage was due to an extension of the censused area rather than to any unusual increase in the actual number of inhabitants. The largest decrease, 7.5 per cent, was in the Baluchistan States; this large percentage, too, is only apparent, as the figures for 1901 were largely based on estimates which were doubtless excessive. If the Baluchistan States and the North-West Frontier Province agencies and tribal areas be omitted as not being representative of the actual facts, the only decrease in the population of the groups of native States, as shown in 1911, was in the Punjab States, 4.8 per cent; and the greatest increase in Sikkim, 49.0 per cent. In British territory the greatest increase was in the Central Provinces and Berar, 16.2 per cent; and the greatest decrease in Coorg, 3.1 per cent. Other large increases were: Central Provinces States, 29.8 per cent; Manipur, 21.7; Hyderabad State, 20.0; Bihar and Orissa States, 19.0; Central Provinces and Berar, 16.2; Burma, 15.5; Assam, 14.9; Kashmir, 14.9; and Madras States, 14.9.

Of the total population in 1911, about 78 per cent was in British India, and about 22 per cent in the native States. Males numbered 161,326,110, and females 153,806,427. The census shows the population according to civil condition in the case of 312,643,693 persons; certain details of interest are given in the following table:

	Males	Females	Total
Total	160,001,822	152,642,871	312,643,693
Unmarried	78,884,686	52,516,947	130,901,333
Married, total	72,906,881	78,704,162	146,611,043

* Including divorce.

In 1911, persons of Aryan vernacular numbered about 232.82 million; of Dravidian vernacular, 62.72 million. Persons whose vernacular was Hindi numbered about 82 million; Bengali, 48.37; Telugu, 23.54; Marathi, 19.81; Tamil, 18.13; Punjabi, 15.88; Rajasthani, 14.07; Western Hindi, 14.04; Gujarati, 10.68; Kanarese, 10.53; Oriya, 10.16; Burmese, 7.89; Malayalam, 6.79; Western Punjabi, 4.78; Sindhi, 3.67; Eastern Hindi, 2.42; Santali, 2.14; Pashto, 1.55; Assamese, 1.55; Gond, 1.53; Western Pahari, 1.53; Kashmiri, 1.18; Karen, 1.07; Shan, 0.90.

According to occupation, the population is reported as follows in 1911, in thousands: Agriculture and grazing, 224,696; fishing and hunting, 1855; mines, quarries, etc., 530; industry, 35,323; transportation (including postal, tele-

graph, and telephone services), 5029; trade, 17,839; army and navy, 670; police, 1729; public administration, 2648; professions and liberal arts, 5325; domestic service, 4599; other, 13,227; total censused in respect of occupation, 313,470.

Population of the larger cities according to the 1911 census: Calcutta, 896,067 (with suburbs, 1,222,313); Bombay, 979,455; Madras, 518,660; Hyderabad (including Secunderabad, Bolaram, and the Residency Bazar), 500,623; Rangoon, 293,316; Lucknow, 259,798; Delhi, 232,837; Lahore, 228,687; Ahmedabad, 215,835; Benares, 203,804; Bangalore (including civil and military station), 189,485; Agra, 185,449; Howrah (included above in Calcutta suburbs), 179,006; Cawnpore, 178,557; Allahabad, 171,697; Poona, 158,856; Amritsar, 152,756; Karachi, 151,903; Mandalay, 138,299; Jaipur, 137,098; Patna, 136,153; Madura, 134,130; Bareilly, 129,462; Srinagar, 126,344; Trichinopoly, 122,028; Meerut, 116,227; Surat, 114,863; Dacca, 108,551; Nagpur, 101,415; Jubbulpore, 100,651; Baroda, 99,345; Multan, 99,243; Peshawar, 97,935; Rawalpindi, 86,483; Ajmer, 86,222; Moradabad, 81,168; Umballa, 80,131; Calicut, 78,417; Bhagalpur, 74,349; Rampur, 74,316; Shahjahanpur, 71,778; Mysore, 71,306; Koil (Aligarh), 64,825; Sholapur, 61,345; Salem, 59,153; Bhopal, 59,153; Fyzabad-cum-Aiodhya, 54,656; Gaya, 49,921; Lashkar, 46,952; Indore, 44,947; Quetta, 33,922; Mirzapur, 32,446.

RELIGION. The table below shows the population by religion in 1901 (with the proportion per 10,000) and in 1911. That the 1911 total is 313,523,981 instead of 315,132,537 (the total returned by the census) is due to the fact that religion was not recorded in the case of 1,608,556 persons in the North-West Frontier Province.

	1901		1911	
	No.	Per 10,000	No.	1911

* Included in Hindu.

The principal Christian sects in 1911 were: Roman Catholics, 1,490,864; Anglicans, 492,317; Romo-Syrians, 413,142; Baptists, 336,596; Jacobite Syrians, 225,190; Lutherans, 218,499; Presbyterians, 181,128; Methodists, 171,754; Congregationalists, 75,848; Reformed Syrians, 75,848; Salvationists, 52,407; Chaldean Syrians, 18,780. Of the total number of Christians, 199,776 were recorded as European, 101,657 as Anglo-Indian (Eurasian), and 3,574,830 as native. Numerically the native Christian element is conspicuously strong in the South; in Madras 1,191,266 Christians were recorded, and in the Madras native States 1,154,209. Most of the Buddhists—10,384,579 in 1911—are in Burma.

EDUCATION. In respect of literacy, the 1901 census recorded 293,414,906 persons, of whom 14,154,602 males and 883,565 females were literate, 1,021,319 males and 103,912 females being literate in English. The number recorded by the 1911 census in respect of literacy was 313,415,389 (160,418,470 males and 152,996,919 females); literate males numbered 16,938,815, and literate females 1,600,763, 1,518,361 males and 152,026 females being literate in English. Notwithstanding the prevalence of illiteracy, education has made noticeable progress in recent years. Increased attention is being given by the Department of Education to primary, commercial, and technical instruction. In 1913, educational institutions numbered 181,659 (exclusive of those in British Baluchistan), with 7,173,000 scholars, including 1,008,000 females. About 70 per cent of the institutions are maintained by the State or aided by grants, the rest being private and unaided. Instruction in State institutions is secular. State expenditure on education in the year 1912-13, £6,055,000. There are universities at Calcutta, Bombay, Madras, Lahore (Punjab University), and Allahabad.

AGRICULTURE. In British territory in 1912-13, the reported area cropped was 255 million acres, of which 9 per cent was under wheat, 31 per cent under rice, 39 per cent under other food grains and pulses, 6 per cent under oil seeds, and 7 per cent under cotton, jute, and other fibres. Sugar, tea, and tobacco are other important crops. Jute culture in recent years has been exceptionally profitable. The central and provincial agricultural departments, which have been developed since 1906, supply information on cultivation, crop prospects, etc., and distribute seeds.

In the year 1911-12, the area in British territory under food grains was 195,097,434 acres, of which rice 76,636,887, wheat 25,025,236, jawar 21,184,164, bajra 15,540,225, gram 13,946,210, barley 7,840,222, corn 6,311,627, and ragi 4,288,927; the area under oil seeds was 16,494,865 acres, cotton 14,568,189, sugar 2,565,770, and tea 543,565. Some of the more important estimated yields for 1911-12 (including the crops in certain of the native States) are: rice (cleaned), 521,992,000 hundredweight; wheat, 9,813,000 tons; tea (calendar year), 268,823,436 pounds; jute, 8,234,700 bales (of 400 pounds); cotton, 3,925,000 bales (of 400 pounds); rape and mustard, 1,271,000 tons; linseed, 641,200 tons; cane sugar, 2,390,400 tons.

For 1912-13 and 1913-14, area and production of important crops are reported as follows, in metric measure, with yield per hectare in 1912-13:

Hectares		Quintals		Qs.
1912-13	1913-14	1912-13	1913-14	Ha.
Wheat—				
11,947,772	11,208,422	98,708,966	85,622,281	8.3
Cotton—				
8,914,291	9,958,105	8,364,246	9,436,588	..
Rice—				
28,984,396	28,563,528	289,413,406	286,188,928	10.
Linseed—				
1,669,265	1,212,866	5,472,429	3,883,382	8.3

MINERALS. In 1912 the coal output (which is chiefly in Bengal, and in Bihar and Orissa) amounted to 14,706,339 tons; in 1913, 16,208,000 tons. The output of crude petroleum (chiefly in Burma) increased from about 19,000,000 gallons in 1898 to over 249,000,000 in 1912, and about 278,000,000 in 1913. The annual salt production is nearly 1,500,000 tons. In 1912, the export of Indian manganese ore was about 708,000 tons, and in 1913 about 815,000 tons. About 15,000 tons of saltpetre are produced annually, and exported. In 1912 about 590,500 ounces of gold were produced (chiefly in Mysore), and in 1913 about 596,000 ounces. There is some production of mica, monazite, jade, and rubies.

COMMERCE. In the table below are given imports of private merchandise and treasure, government stores and treasure, and total imports; exports of foreign and domestic produce, government stores, and government and private treasure, and total exports—in thousands of pounds sterling for successive years—in the sea-borne trade:

	1910-11	1911-12	1912-13	1913-14
Imports:				
Private mdse.	86,236	92,383	107,382	122,165
Gov't stores	2,901	8,654	8,754	5,878
Total mdse.	89,137	96,087	111,086	127,588
Private treasure	26,445	35,615	34,132	24,414

Total treasure ...	4,751	6,916	7,088	4,722
Total exports ...	144,726	158,909	171,233	170,744
Net imp. treas.	21,740	28,781	34,133	24,288
Net exp. mdse. ...	50,838	55,956	53,059	38,464
Excess exports ..	29,098	27,225	18,926	14,246

In all directions imports in the year 1913-14 show a general increase, the only articles of importance declining being coal, raw silk and cotton, and silk piece goods. Imports of treasure have greatly declined. Government stores imported are principally railway materials and army stores. Among the exports, raw cotton shows an increase of 45 per cent, and there are large increases in jute, tea, and seeds; while cereals, opium, and hides and skins have declined. Some of the principal articles for home consumption, and exports of Indian produce are shown in the table below, with values for 1913-14 in thousands of pounds sterling:

Imports	1000 £	Exports	1000 £
Cotton goods	41,423	Cotton	27,362
Cotton yarn	2,776	Jute	20,551
Iron and steel	10,663	Jute mfrs.	18,849
Sugar	9,971	Rice	17,756
Railway material	6,890	Seeds	17,116
Machinery, etc.	5,172	Tea	9,983
Copper	2,745	Wheat and flour	9,590
Mineral oil	2,744	Cottons	8,080
Hardware, etc.	2,632	Hides and skins	7,815
Woolen goods	2,568	Leather	2,833
Silk goods	2,068	Grain, etc.	2,767
Provisions	1,649	Opium	2,280
Liquors	1,491	Wool	1,670
Glass	1,297	Lac	1,311
Instruments, etc.	1,214	Coffee	1,024
Spices	1,155	Oilcake	920
Apparel	1,141	Manganese ore	809
Haberdashery, etc.	1,087	Wood, etc.	714
Paper, etc.	1,058	Dyes, etc.	694

Among the reexports were cotton yarn and cloth, £1,040,000; raw wool, £331,000; metals, £148,000; sugar, £139,000.

Percentages of imports and exports of merchandise (private sea-borne trade) by countries in the year 1912-13: United Kingdom, 64.1 per cent of the imports and 23.7 per cent of the exports; Germany, 6.9 and 10.3; China, 0.9 and 2.3; Hongkong, 0.5 and 3.2; Japan, 2.6 and 9.2; France, 1.5 and 7.1; Belgium, 2.3 and 4.9; Java, 5.8 and 0.8; Straits Settlements, 1.9 and 2.8; Austria-Hungary, 2.3 and 3.9.

SHIPPING. In the foreign trade, vessels entered and cleared at ports in British India in the year 1913-14 numbered 8617, of 17,386,408 tons. Of this tonnage, about 53 per cent was from or to the United Kingdom and British possessions. About 75 per cent of the total trade of India was under the British flag. The chief ports are Calcutta and Bombay, which have about 70 per cent of the foreign trade. The other leading ports are Karachi, Rangoon, and Madras.

COMMUNICATIONS. On March 31, 1914, according to the Administration Report on the Railways of India there were open to traffic in British India and the native States 34,656 miles of State and privately owned railways, 1053 miles having been added during the fiscal year ended on that date. There were under construction 2443 miles. Of the mileage in operation, about 51 per cent was British standard gauge (5½ feet), and about 42 per cent meter gauge.

The year proved profitable for both State and private railways, with increased gross receipts and net earnings, but with a lower percentage of net earnings to capital outlay on the State railways due to increased interest charges. The net earnings for all railways for the fiscal year, 1913-14, were about £20,394,835 as compared with £20,309,078 in 1912-13. The capital on March 31, 1914, was £369,265,000. The net gain to the State in 1913-14 was £5,706,000, as compared with £5,739,000 in the preceding year. The total capital expenditure on railways in 1913-14 was £13,226,000.

The number of passengers carried during the year was 457,717,900, and the passenger revenue was about £14,137,643, of which £12,221,637 was from third-class traffic. The average rate for all classes of passengers was slightly over 4 mills per mile, and the average distance traveled was 36.6 miles, not having been materially changed since 1884.

The amount of goods carried on the railways during the year was 83,000,000 tons. This

freight traffic was an increase in the tonnage carried, but there was not a corresponding increase in the earnings, due to the decrease in the average distance each ton of freight was carried. This change was caused by the failure of crops in the united provinces and some parts of Bengal, and increased exports of grain to Europe.

During the year sanction was accorded for a survey by the Bengal-Nagpur Railway for a line 66 miles long between Gopalpur and Russelkonda. Another survey that was made during the year was that in connection with the Indo-Burma connection railway, where three possible routes were being considered, the coast route, the Manipur route, and the Yukon Valley route. A reason given for this work was that Burma was cut off from the rest of the Indian Empire during the activity of the German cruiser, *Emden*.

The Great Indian Peninsula Railway during 1914 was constructing the tunnel in the Western Ghats, 1507 feet in length, about 100 miles from Bombay, and on July 8, 1914, the headings met and the completion of the work, which had been under way since 1913, was promised for 1915.

On September 1, 1914, the East Indian Railway had 26,192 freight cars running on its system, an increase of 26 per cent over April 1, 1913, and under normal conditions this number would have increased to 33,304 by April 1, 1915. Over 1700 trucks a day were required by the Bengal coal fields.

On March 31, 1913, there were 311,000 miles of telegraph wire; the capital cost of the telegraphs to that date was £7,865,000. Post offices on March 31, 1912, numbered 18,801. At the end of the fiscal year 1914, the postal and telegraph services of British India were amalgamated.

FINANCE. The British sovereign (par value \$4.86656) is the standard coin, but the current coin is the rupee (par value 32.444 cents), 15 rupees to the pound sterling. For British India, the gross revenue and the expenditure charged to revenue, in thousands of pounds sterling, were as follows for financial years (revised estimates for 1913-14):

	1900-1	1905-6	1908-9	1911-12	1912-13	1913-14
Rev.	64,724	70,842	69,762	82,835	86,863	84,485
Exp.	63,054	68,750	73,499	78,895	83,755	82,998

In the table below are shown the principal sources of gross revenue for fiscal years in thousands of pounds sterling (revised estimates for 1913-14):

	1908-9	1911-12	1912-13	1913-14
Land revenue	19,759	20,765	21,288	21,251

Army and marine ..	20,651	20,902	20,953	21,399

Total 78,499 78,895 83,755 82,998
 * Including insurance. † Railway revenue account; the working expenses are treated as deduction from revenue instead of as expenditure. ‡ These totals are adjusted to compensate for net excess on provincial allotments amounting to £267,000 in 1908-9, £296,000 in 1911-12, £4,514,000 in 1912-13, and a net deficit of £602,000 in 1913-14.

Besides expenditure charged to revenue there is an additional expenditure on railways (£8,813,000 in 1912-13), on irrigation works (£1,408,000), and in connection with the new capital at Delhi (£115,000); these items are charged against capital.

In the table below are shown net revenue and expenditure from which departmental receipts, interest charges, and working expenses of railways and irrigation works, refunds and assignments, cost of cultivating and manufacturing opium, etc., have been deducted. The figures for 1913-14 are revised estimates.

	1911-12	1912-13	1913-14
Land revenue	£20,000,000	£20,519,000	£20,470,000
Opium export	5,228,000	4,516,000	562,000
Taxation	24,851,000	26,099,000	26,928,000
Commercial enter- prises	6,658,000	8,863,000	8,153,000
Tribute	394,000	419,000	424,000
Mint & exchange ..	856,000	446,000	882,000
Total	£56,987,000	£60,362,000	£56,919,000
Expenditure:			
Collection	£ 6,884,000	£ 6,514,000	£ 6,694,000
Debt	589,000	387,000	177,000
Military services ..	19,559,000	19,565,000	20,019,000
Civil services	24,546,000	25,324,000	28,144,000
Famine relief ...	1,000,000	1,000,000	1,000,000
Total	£53,047,000	£57,254,000	£56,432,000

There was a surplus of net revenue over net expenditure in 1911-12 of £3,940,000; 1912-13, £3,108,000; 1913-14, £1,487,000.

The debt stood March 31, 1914, at £274,525,000, detailed as follows: £177,398,000 sterling debt, and £97,127,000 rupee debt (converted into sterling at 1s. 4d. the rupee). Miscellaneous obligations, including savings-bank balances,

amounted to about £32,927,000, besides the annual charge for railway annuities of £899,000. Railway construction outlay reached £153,859,000 by March 31, 1914, and irrigation construction £39,447,000. Cost of purchase of nine railways from private companies, £108,092,000; loans to native States, £11,550,000 (net); advances to railway companies, £8,555,000. Gold standard reserve, £25,510,000; cash balances in England, £8,133,000, and in India, £15,627,000. A loan of £2,000,000 at 3½ per cent was raised in India in 1912-13.

ARMY. In India there is maintained a headquarters staff of the Imperial army with Gen. Sir Beauchamp Duff as commander-in-chief, with a general staff branch which includes branches of the adjutant-general department, quartermaster-general's department, a medical branch, ordnance branch, and a military works branch. The forces are divided into two armies, a northern army under command of Lieut.-Gen. Sir J. Willcocks, with headquarters at Murre, and a southern army with headquarters at Ootacamund, with Lieut. Sir J. E. Nixon in command. These armies were made up both of British and native troops, and their strength was as follows:

	Northern Army		Southern Army		Total
British Army					
Royal Artillery	7,973	7,796			15,769
Cavalry	8,756	1,878			5,634
Royal Engineers	213	111			324
Infantry	23,948	24,798			53,746
Indian Army, etc.	72	80			102
	40,962	34,613			75,575

	British Indian Army		British Indian Army		British Indian Army	
Indian Army						
Artillery ..	57	6,440	11	3,608	68	10,043
Cavalry ..	372	15,440	211	8,810	583	24,250
Infantry ..	1,095	65,688	930	54,804	2,025	119,992
Sappers, Miners, etc. ...	167	2,251	269	3,325	486	5,576
	1,691	89,819	1,421	70,042	3,112	159,861
Imperial Service Troops	9,077		11,992			21,069
(Indian)						
Indian Reservists	22,743		13,381			36,124
Volunteers, British, including Anglo-Indians	18,617		20,853			39,470

The artillery in India had been increased and ordinary works had been erected, while a central flying school was established at Sitapur and a General Staff college is maintained at Quetta. Additions to the soldiers' pay and enlarged expenditures for various military purposes have brought up the cost of the military establishment in India, but it was not considered possible that any relief could be secured for existing conditions. At the outbreak of the European War of 1914 material changes in the distribution of the troops in India took place. A certain number of native troops were sent to Europe; they were landed in Southern France, and from there were sent forward to the front. Details as to the organization and changes naturally were unavailable at the end of the year.

GOVERNMENT. The King of Great Britain and Ireland is Emperor of India. In England, the administration of Indian affairs is intrusted to the Secretary of State for India (a member of the British cabinet), who is assisted by a council. The expenditure of Indian revenues is determined by the Secretary of State in council. The Secretary of State for India in 1912 was the

Marquis of Crewe (from November, 1910). In India the executive power resides in the "Government of India," that is, the Governor-General in council. In 1912 the Governor-General, who is appointed by the crown for five years, was Baron Hardinge of Penshurst, who succeeded the Earl of Minto in 1910. The council consists of six members, appointed by the crown, and of the commander-in-chief of the army in India. The Governor-General's legislative council, in addition to ex-officio members, consists of 28 official and 32 nonofficial members (including 27 elected). There are similar legislative councils in Madras, Bombay, Bengal, Bihar and Orissa, the United Provinces, the Punjab, Burma, the Central Provinces and Berar, and Assam. British India is divided into 15 local governments and administrations, viz.: under governors, the presidencies of Madras, Bombay, and Bengal; under lieutenant-governors, the provinces of Bihar and Orissa, the Punjab, the United Provinces of Agra and Oudh, and Burma; under chief commissioners, the Central Provinces and Berar, Assam, Ajmer-Merwara, Coorg, British Baluchistan, the North-West Frontier Province, Delhi, and the Andamans and Nicobars.

The native States are governed by their princes, ministers, or councils, but the government of India, through British residents or agents, exercises control in varying degrees, and does not permit the States to maintain external relations.

The Secretary of State for India is the head of the Indian administration in England, responsible to Parliament; he is a member of the cabinet, and in matters of foreign policy and native affairs can act on his own authority without consulting his council. Subject to his direction, the Governor-General in council is supreme in both civil and military affairs.

HISTORY

INDIA AND "BRITISH CITIZENSHIP." One of the most difficult problems confronting the British administration in India was propounded in December, 1913, when the National Congress (or rather the congress of Nationalists) and the Moslem League both demanded a clearer definition of the rights of Indians as "citizens of the British Empire." Fundamentally the question involved was the right of the British to rule India, for when one begins to ask whether Gurkhas and Sikhs have not rights as citizens of the British Empire, it is very easy to go a step further and ask whether Gurkhas and Sikhs and the other natives of India have not the right to govern themselves, as much as the inhabitants of Australia or Scotland. The particular grievance which gave rise to the controversy was the manifest determination of the British self-governing colonies to impose humiliating restrictions upon immigrants coming from India as undesirable "Asiatics." The Indians, on the other hand, claimed that as citizens of the British Empire they possessed the privilege of settling freely in any portion of the Empire; and especially they resented the manner in which Canada and South Africa discriminated against Indian immigration. In another place (see the article SOUTH AFRICA, section *The Settlement of the Indian Question*) we have recounted the events which led the South African government to remove the most irritating of the Indian grievances. We have also given an ac-

count of the uncompromising resistance encountered by the shipload of Sikhs who sailed to Canada on the *Komagata Maru* hoping to gain entrance into that Dominion (see article CANADA, section *The Komagata Maru*). Late in July the *Komagata Maru* began her return voyage to India with her cargo of angry Indians, and in October reports were received that when the ship arrived at Bajaj (India) the pent-up indignation of the passengers found vent in a violent riot, which resulted in almost a score of fatalities. The adventure of the *Komagata Maru* had established the fact that Canada was unyielding and vindicated the right, or at least proved the power, of the self-governing colonies to exclude Indian immigrants.

REFORM PROJECTS. Meanwhile well-educated young Nationalists continued to foment discontent in India; the police persevered in their rather futile efforts to bring to justice the agitators who were supposed to be conspiring against the government; it was found necessary to throttle the press by introducing in March a new press law which made it an offense under the Penal Code to comment subversively upon judicial investigations and trials before their conclusion; and almost every phase of the British rule in India was touched by criticism or by projects of reform. Lord Crewe, the Secretary of State for India, sponsored a bill in the Westminster Parliament with the object of converting his present advisory council into a smaller, better paid, executive, council; but the House of Lords, acting under the influence of Lord Curzon, rejected the bill, probably feeling that if the council were made more effective and if its members became practically heads of departments, it would be able even more than at present to exercise unwarranted and unwise interference in matters which should be left to the discretion of the Governor-General. In this connection it is interesting to note the criticisms which have of late been directed against the financial administration of the council. The council, as the supreme authority in London on Indian affairs, controlled enormous sums deposited in London by the government of India; and it was frequently alleged that not only did the council pursue policies disadvantageous to India, but that it manipulated these enormous sums for the advantage of certain London bankers. It was pointed out that in 1909 seven leading London banks enjoyed the use of £7,500,000 as deposits without security, of which sum over half was deposited in the three banks whose directors were connected with the India Office Finance Committee. All such charges of favoritism, however, were denied early in 1914 by the report of the Royal Commission on Indian Currency and Finance. In fact, the Commission appeared to be more energetic in repelling criticism than in performing the main task assigned to it, namely, the elaboration of a scheme to place India's currency on a more satisfactory basis; for in regard to the establishment of a gold mint for India the commission expressed an exasperatingly noncommittal judgment, and contented itself with suggesting that the paper currency might be made more elastic by loaning out some of the Paper Currency Reserve to banks on security.

In India the year was characterized by the diffident attitude of the government to a number of proposed reforms. In The Imperial Legisla-

tive Council the Hon. Raja Kushal Pal Singh attempted in vain to secure the exemption of improvements on land from the assessments of the land tax. Again, it was proposed by a non-official member of the Legislative Council that permanent conciliation boards be appointed to settle the numerous violent disputes which arise between Hindus and Mohammedans concerning religious processions; but the government considered that the various practical difficulties of such a plan would be too great at present. With the hope of securing the more effective protection of religious endowments against maladministration, a conference was convened in March, 1914; reports were not at hand, however, with regard to the results of the conference. Recent estimates and reports on the great reform which was undertaken in 1911, the removal of the government headquarters to Delhi, placed the cost of the work at £8,000,000, distributed over the eight years 1912-20, exclusive of military accommodation, railway construction, and the improvement of sanitary conditions in the old city of Delhi. One other event, although not of general significance, received such widespread and sympathetic attention in India that it deserves mention here: the death of Lady Hardinge, wife of the Viceroy.

INDIA AND THE WAR. When the British Empire engaged in the great war against Germany (Aug. 4, 1914), and especially when the Turkish Sultan came to the support of Germany in the tremendous struggle, thoughtful observers turned their eyes toward India with unusual eagerness. For, it was assumed, the Mohammedans of India would not remain quiet while their brother-Mohammedans were fighting in a "holy war"; nor would the other Indians, of whatever religion, ignore the opportunity to cast off the British yoke while Great Britain was being harassed. Prophecies were current that, profiting by England's embarrassment, the embers of smoldering rebellion in India would flare forth into full blaze. If such an insurrection was destined to occur, it certainly was not immediately apparent. The masses were too inert, and the princes too conscious of the advantages of British rule. The Viceroy was able with confidence to assert that a large force would be dispatched from India to aid England. Such forces were actually sent, some to Egypt, where their presence tended to stimulate the faltering loyalty of the Egyptians, some to the Persian Gulf, and presently report was received that Indian troops, native-Indian as well as British-Indian, were fighting side by side with British troops in Europe. Meanwhile in India the native princes were coming forward with expressions of loyalty, and offering to help in the war. The Maharaja of Mysore offered 50 lakhs of rupees (over \$1,500,000) and placed all his troops at the disposal of the Empire. On September 8 the Viceroy telegraphed to the Secretary of State that many generous offers were being received from most of the 700 native princes, not a few of whom had volunteered for active service: among them the septuagenarian Sir Pertab Singh, the chiefs of Jodhpur, Bikanir, Kishangarh, Rutlam, Sachin, and Patiala. A camel corps was furnished by Bikanir. Most significant of all were the expressions of loyalty on the part of Indian Moslems; for it might have been expected that they would embrace the cause of the Turks. But Moslem associa-

tions throughout India, and the Aga Khan himself, zealously promised to support the British Empire. As in all countries, the war produced a serious business depression; but there seemed to be no imminent danger of India's being more seriously injured by the struggle; and no real alarm was caused by the spectacular exploits of the German cruiser *Emden*, which sank several British steamers in the bay of Bengal, temporarily paralyzed the trade of Calcutta, and dropped a few shells on the oil-tanks at Madras.

INDIANA. POPULATION. The estimated population of the State on July 1, 1914, was 2,779,467. The population in 1910 was 2,700,876.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acres	Prod. bu.	Value
Corn	1914	4,949,000	163,317,000	\$94,724,000
	1913	4,900,000	176,400,000	105,840,000
Wheat	1914	2,485,000	43,239,000	44,586,000
	1913	2,150,000	39,775,000	35,052,000
Oats	1914	1,575,000	44,888,000	19,302,000
	1913	1,700,000	36,380,000	13,824,000
Rye	1914	99,000	1,614,000	1,372,000
	1913	103,000	1,566,000	971,000
Barley	1914	8,000	200,000	184,000
	1913	8,000	200,000	130,000
Rice	1914
	1913
Potatoes	1914	75,000	6,000,000	3,860,000
	1913	75,000	3,975,000	3,839,000
Hay	1914	1,764,000	a 1,764,000	24,872,000
	1913	1,800,000	1,800,000	25,380,000
Tobacco	1914	13,500	b 12,150,000	1,094,000
	1913	15,900	11,925,000	1,312,000
Cotton	1914
	1913

a Tons. b Pounds.

MINERAL PRODUCTION. The principal mineral products of the State are coal, clay wares, cement, and stone. The aggregate value of these four substances in 1913 exceeded 90 per cent of the total value of the output of the mines and quarries. In 1913 the total value of the mineral production was \$46,807,864. Of this total the coal mines contributed \$19,001,881, the Portland cement plants \$10,218,867, the clay products \$8,498,646, and the stone quarries \$4,676,689. In 1912 the mineral output of the State was valued at \$42,239,193, compared with which the production in 1913 shows an increase of \$4,368,671, or over 10 per cent. These values do not include that of the pig iron produced in the State, which in 1912 exceeded \$17,000,000 and in 1913 was over \$20,600,000, nor do they include the value of the coke produced, which in 1913 amounted to nearly \$13,200,000. These two items make the total value over \$80,000,000. In the production of coal, which is the principal mineral product, Indiana ranks seventh, with an output in 1913 amounting to 17,165,671 short tons, valued at \$19,001,881, compared with 15,285,718 short tons, valued at \$17,480,546 in 1912. The coal production in 1914 was practically the same as that of 1913, although the production after the 1st of October decreased about 10 per cent, compared with the same period in 1913. The manufacture of Portland cement is the second among the activities in mineral production in the State. There were made in 1913, 10,219,492 barrels, valued at \$10,218,867, compared with 9,634,582 barrels, valued at \$7,237,591 in 1912. The value of clay products, which ranked third in value, was in 1913

\$8,498,646. Since the completion of its plant of 560 retort ovens at Gary by the United States Steel Corporation, Indiana has assumed importance as a manufacturer of coke and has advanced from seventeenth place in 1910 to third in 1913. The production of coke in the latter year amounted to 2,727,025 short tons, valued at \$13,182,136. The value of the natural gas produced in the State decreased from \$1,014,295 in 1912 to \$948,278 in 1913. The production of petroleum decreased from 970,009 barrels in 1912 to 956,095 barrels in 1913. The value, however, increased from \$885,975 in 1912, to \$1,279,226 in 1913. Other important products are sand and gravel, lime, mineral waters, pyrite, sand-lime brick, and sulphuric acid.

EDUCATION. The total school population of the State in 1914 was 766,383. The enrollment in the public schools in the same year was 548,497 and the average daily attendance was 441,168. The teachers, both male and female, numbered 18,449, receiving an average yearly salary of \$593.70. The Legislature of 1913 enacted three measures which will have an important effect on the schools of the State. The first of these laws was the vocational education law, under which there were established in 1913, 13 classified State-aided vocational schools in 13 cities and towns of the State. They are classified as full-time day schools, part-time co-operative schools, evening trade schools for boys and girls, evening trade extension schools for men and women, and home-making schools for girls. The second measure was the high school inspector law, which is designed to provide a single standard for high school inspection, and has already accomplished satisfactory results. The third law passed was an attendance law, which requires that all children between the ages of 7 and 14 must attend school, and that all children must attend school until they have reached the age of 16 if they have not completed the fifth year's work or its equivalent; the law further provides that all children between the ages of 14 and 16 must either attend school or be employed in a gainful occupation. Great benefit has already been derived from the operation of this law which coöperates well with the vocational education law. The same Legislature passed a measure establishing a township high school.

TRANSPORTATION. The total mileage of railroads of the State on Jan. 1, 1913, was 7359, and of this, 4688 were main lines. There were on that date 45 companies operating or leasing electric railways in the State.

FINANCE. The report of the Treasurer for the fiscal year 1914 showed a balance in the Treasury on Dec. 30, 1913, of \$378,271. The receipts for the period amounted to \$12,544,007, and the disbursements were \$12,272,314. There was a balance on Dec. 30, 1914, of \$649,964. The total State debt at the end of the fiscal year was \$1,425,163. Of this, \$1,289,548 was domestic debt, and \$135,615 was foreign debt.

CHARITIES AND CORRECTIONS. There were in 1914, 17 charitable, educational, and correctional institutions under the supervision of the Board of State Charities. These institutions included the Central Hospital for the Insane at Indianapolis; the Eastern Hospital for the Insane at Richmond; the Northern Hospital for the Insane at Logansport; the Southeastern Hospital for the Insane at Evansville; the Soldiers' Home at Lafayette; the School for Feeble-minded

Youth at Fort Wayne; the Village for Epileptics at New Castle; the School for the Deaf, and the School for the Blind at Indianapolis; the State Prison at Michigan City; the State Reformatory at Jeffersonville; the Indiana Girls School at Clermont; and the Indiana Boys School at Plainfield. In these institutions there were during the fiscal year ending Sept. 30, 1913, 13,488 inmates. For their support there was drawn from the State treasury \$2,318,347. There were in addition extraordinary expenses amounting to \$316,443.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial and the last one was held in 1913. There was an election for Congressmen and State officers, except Governor and Lieutenant-Governor, and the expiration of the term of Senator Shively in 1915 made it necessary to elect his successor. Elections were also held for members of the Legislature. The Democratic State Convention was held in March. The most important plank adopted related to a State-wide primary law. Senator Kern brought to the convention letters from President Wilson and from Secretary Bryan, favoring such a law. After a protracted discussion a State-wide primary plank was reported and was adopted by unanimous vote. In addresses made by the temporary chairman, Governor Ralston, and others, the President and his policies were commended. The nomination of Senator Shively for another term was ordered by the convention. At the Progressive State Convention held in April, Albert J. Beveridge, former United States Senator, was nominated for the Senate. In the platform adopted by the convention the party pledged itself to work for the elimination of saloons and breweries in the State. It pronounced for equal suffrage for women, for a State-wide primary law, for the initiative, referendum, and recall for all elective and judicial officers, for the short ballot, for the prohibition of injunctions in labor disputes, for a minimum wage for women, and for free public school textbooks. The Republicans in their State Convention nominated Hugh T. Miller, former Lieutenant-Governor, for the Senate. The platform adopted declared that the new tariff law greatly depressed business without reducing the cost of living; disapproved of the administration's Mexican policy; and favored arbitration of labor disputes. In the elections on November 3, Cook, Democrat, for Secretary of State, received 262,703; Jackson, Republican, 233,213; and Pierson, Progressive, 93,683. Senator Shively was re-elected by a vote of 272,249, compared with 226,766 for Miller, the Republican candidate, and 108,581 for Beveridge, Progressive candidate. The total vote cast by all parties for Senator was 646,059, compared with a presidential vote of 654,474 in 1912. The Democratic vote showed a decrease of about 10,000; the Republican a gain of about 75,000; and the Progressives a loss of about 55,000. The Democrats elected 11 representatives to Congress and the Republicans 2, a Democratic loss of 2 Congressmen. The Democrats elected a majority in each branch of the Legislature.

FRAUDS AND INDICTMENTS. Following the election there were charges of fraud in Vigo and other counties. As a result of investigations the mayor of Terre Haute, Donn M. Roberts (who had announced himself as a can-

didate for Governor in 1916), was arrested, together with two judges, the chief of police, the sheriff, and several other city Democratic officials, and nearly 100 citizens. Those arrested included members of all parties, but all belonged to the Roberts local machine which was charged with bipartisan corruption in several counties. Forty-six of the men arrested turned State's evidence, and later 81 plead guilty, 8 not guilty, and 26 filed demurrers. The direct acts leading to the indictments were frauds at the registration a few weeks prior to the election of November 3, and at the election itself. Indictments were drawn by the Federal authorities because a member of Congress from the fifth district and a United States Senator were chosen at the election. It was charged against Mayor Roberts that he levied assessments against proprietors of gambling houses, saloons, and dance halls, the proceeds of which were to be used for the registration of voters for the election. He plead not guilty and declared that he would stand trial. Charges of fraud at the elections were also made in Marion, Vanderburg, and Lake counties (Indianapolis, Evansville, and the Gary district). These charges were taken before the United States grand jury. An incident of the fall election was the defeat of the proposed constitutional convention to restate the State's fundamental laws.

In the summer of 1914 it was discovered that certain bills before the Legislature in 1913 had been signed by the Governor under a misrepresentation. These bills had been passed in one house of the Legislature and defeated in another but had been presented to the Governor as having been duly passed in both houses. He demanded an investigation which was made by the Marion County grand jury. No indictments were found involving these transactions but the grand jury in the course of its investigation indicted the Lieutenant-Governor, the Speaker of the House (then a candidate for Secretary of State), and 11 other prominent politicians. The charge was that these men had unlawfully increased the number and pay of legislative employees. The defendants demanded immediate trial and the case was heard on an agreed statement of facts by the Marion Criminal Court. The defendants were all acquitted on the theory that there was no intention to defraud, no personal gain, and that at any rate no Legislature is bound by the act of its predecessor in fixing the number and pay of legislative employees.

STATE OFFICERS, 1915. Governor, Samuel M. Ralston; Lieutenant-Governor, Wm. P. O'Neill; Secretary of State, Homer L. Cook; Treasurer, Geo. F. Bittler; Auditor, Dale Crittenberger; Attorney-General, ———; Superintendent of Education, Chas. A. Greathouse—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Richard K. Erwin; Associate Justices, Moses B. Lairy, John W. Spencer, Douglas Morris, and Charles E. Cox; Clerk of the Court, J. Fred France—all Democrats.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Democrats	41	60	101
Republicans	8	39	47
Progressives	1	1	2
Democratic majority	32	20	52

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

INDIANA UNIVERSITY. A State institution for higher education, founded in 1820, at Bloomington, Ind. The students enrolled in the autumn of 1914 numbered 1468, and the faculty were 113. There were no notable changes in the faculty during the year and no noteworthy benefactions were received. The annual income amounts to about \$744,000, of which the greater part is received from the State. The library contains about 100,000 volumes. The president is William L. Bryan, Ph.D., LL.D.

INDIANS. Perhaps the most interesting event in connection with the history of the Indian tribes in 1914, was the practical extinguishment of the tribal form of government of the Cherokees, one of the Five Civilized Tribes. The tribal form of government was abolished at the close of the fiscal year as the result of the final completion of the technicalities necessary to admit this tribe of Indians to citizenship in Oklahoma. The work of equalizing the allotments of the other tribes, the Choctaw, Chickasaw, Seminole, and Creek nations, was carried on and will probably be completed within a few years.

There were on the Indian reservations in 1913, 217 day schools which are conducted similarly to the public schools in the several States. There are in addition large nonreservation schools at Carlisle, Pa., Lawrence, Kan., Chillico, Okla., Riverside, Cal., Phoenix, Ariz., and Salem, Ore. The total enrollment of Indians in all the schools in 1914 was 57,898. At the close of the fiscal year there were 50 hospitals, with a combined capacity of 1400 patients, and six other hospitals under construction. Plans are being completed for the construction of seven new hospitals at a cost of from \$12,000,000 to \$15,000,000 each, but even these facilities will be hardly adequate for a population of over 300,000 persons with a high percentage of tuberculosis and trachoma.

The industrial welfare of the Indians received careful attention in 1914. The Navajo blanket industry furnishes to this tribe an annual income of \$600,000, and basketry and lace-making are industries promising remunerative employment to Indian women. At 56 different reservations there are 62 principal irrigation projects or systems, covering an area of 900,000 acres, which are capable of making farms of 20 acres each for 45,000 Indians, with an estimated value of \$72,000,000. For these projects there has been expended \$8,500,000, and they will require for completion a further expenditure of \$13,000,000. The irrigable lands belonging to the Indians form one of the principal sources of wealth for these people and also form probably the best opportunity for them to be individually self-supporting. Nearly 100,000 acres of Indian lands were sold during the year for a consideration of \$1,652,815. This money is in large part used by the Indians in improving their retained lands, but in the case of the old and feeble, it is paid to them as their needs require.

INDUSTRIAL RELATIONS COMMISSION. This commission was created by Congress in August, 1912. On June 26, 1913, President Wilson named the following to constitute the Commission; they were later confirmed and organized in October, 1913: Representing the public: Frank P. Walsh, chairman, attorney for the Board of Public Welfare, Kansas City, Mo.; Prof. John R. Commons, economist, of the University of Wisconsin; and Mrs. J. Borden Harriman of New York City, member of the National Civic Federation; representing employers: Frederick A. Delano, Chicago, railway manager; Harris Weinstock, San Francisco, merchant and publicist; and S. Thurston Ballard, Louisville, Ky., manufacturer; and representing organized labor: John B. Lennon, Philadelphia, treasurer of the American Federation of Labor; Charles O'Connell, District of Columbia, head of the National Trades Department of the same Federation; and Austin B. Garretson, Cedar Rapids, Iowa, president of the Order of Railroad Conductors. The commission had resulted from a movement by various social workers and economists, instigated by the great industrial unrest manifested by the Lawrence and other strikes and the notorious dynamite cases, in order to determine the causes of this widespread dissatisfaction among the working population and the means of harmonizing conflicting interests. A total appropriation of \$300,000 was made for the commission, of which \$100,000 was available during the first year. An effort was made in the Senate in July, 1914, to cut the remaining \$200,000 to \$50,000, but failed.

The commission planned to investigate public agencies related to the labor problem, trade disputes, unorganized labor and its problems, and legal aspects of industrial relations. During the summer Dr. Charles McCarthy, former legislative reference librarian of Wisconsin, was made director of the investigational work. Public hearings were begun in April, 1914, and continued until September, during which the commission heard witnesses in Washington, New York, Paterson, Philadelphia, Chicago, Lead, S. Dak., Butte, Portland, Seattle, San Francisco, and Los Angeles. During this time there testified witnesses representing 319 organizations, firms, and corporations as follows: labor organizations, 82; employers' associations, 36; firms and corporations, 113; civic organizations, 38; public institutions, 50. Such problems as industrial arbitration, unionism, open or closed shop, minimum wage, unemployment in its various phases, efficiency, and the conditions of labor in various trades were discussed from the standpoints of laborers and employers.

The preliminary report of the commission to Congress was given out on December 7. The underlying causes of dissatisfaction were analyzed under three heads. Those most frequently advanced were: world-wide and laudable desire for better living conditions; protest against low wages, long hours, and improper working conditions; desire of workers for a voice in fixing conditions of labor; unemployment and insecurity of positions; misunderstanding and prejudice; agitation and agitators; rise of prices; and a rapidly growing feeling

that redress for injustice and exploitation cannot be secured through existing governmental institutions. Among the causes of unrest advanced by employers were: normal desire for better living conditions; misunderstanding and prejudice; agitators; unemployment; unreasonable demands due to strength of organization; inefficiency of workers; rapidly increasing complexity of industry; sudden great freedom of immigrants accustomed to repression; craze to get rich quick; decay of old ideas of honesty and thrift; misinformation in newspapers; too many organizations for combat and not enough for co-operation; violence; sympathetic strikes; boycotting; meddlesome and burdensome legislation; the closed shop; and financial irresponsibility of labor unions. Causes advanced by employees included many of the foregoing and in addition the following: demand for industrial democracy; unjust distribution of product of industry; unfair attitude of the courts, one law for rich and another for poor; immigration and consequent oversupply of labor; the double standard sanctioning low wages for hardest labor, but luxury for many performing no useful service; disregard of grievances by employers; control of industry by large corporations; lack of proper training; unfair competition from prison and other exploited labor; the rapid pace, resulting in accidents and premature old age; inattention to sickness and accidents; arbitrary discharge of employees; blacklisting; exploitation of women and children in industry; promotion of violence by hiring gunmen and spies; monopolization of land and natural resources; and suppression of free speech and right of peaceful assembly.

The commission stated that the majority of labor representatives considered the most important or indeed the only real remedy for the industrial situation to be the extension of labor organization. It therefore made a tabulation of the principal criticisms of existing trade unions as advanced by the employers on one hand and by the radical Socialists and Syndicalists on the other. Among the criticisms advanced by employers were: lack of responsibility; the closed shop with its labor monopoly and interference with efficiency; restriction of output, while insisting on a standard wage for output below standard; the uniform wage for all regardless of efficiency; arbitrary restrictions on apprentices; the use of violence; the power of union officials which is abused by blackmailers and grafters; the undermining of shop discipline; unreasonable demands and union rules; unreasonable jurisdictional disputes; ruthless and illegal use of the sympathetic strike. Criticisms of trade unions advanced by the radicals included the following: organization by crafts and consequent destruction of the solidarity of labor; acceptance of the doctrine that the interests of employers and of labor are the same; lack of democracy and domination by leaders; monopolization of labor power by skilled workers; neglect of the political field; restrictions on members. To each of these numerous criticisms trade unionists made replies. On the other hand trade unionist witnesses advanced numerous criticisms of employers' associations. These were accused of denying or attempting to prevent labor organization; of maintaining an attitude of bitterness and hatred; of being dominated by small cliques; of being ignorant of,

and indifferent to, conditions of labor; of using blacklists and boycotts; of employing armed guards and gunmen to maintain a state of feudalism and to provoke violence; of maintaining detectives and spies to harass unionists and provoke strikes; of maintaining strike-breakers; of being insincere in their advocacy of the open shop; of using their financial power to compel the support of outsiders and to corrupt the sources of public information; of exercising undue influence over courts and other public officials; of bribing union officials; of opposing humane and necessary legislation; of being unincorporated and financially irresponsible.

The report declared that there was almost uniform condemnation of compulsory arbitration, but general approval of mediation in industrial disputes. The formation of a Federal commission of mediation to be composed of representatives of employers and employees was almost unanimously approved. Such a commission could exercise only voluntary services and would cooperate with State boards of mediation whenever possible. With equal unanimity a national system of labor exchanges covering the entire country and supervised by a central bureau at Washington was approved.

In December it was announced that the Industrial Relations Commission would undertake an investigation of the great charity trusts, including the Rockefeller Foundation, the Russell Sage Foundation, the Baron de Hirsch Fund, the Cleveland Foundation, and the various Carnegie benevolences. The commission declared it would inquire into the rights, powers, and functions of these endowments, the extent to which their charters may be stretched, and their attitude toward industrial questions. It would inquire how the policies of these organizations are shaped.

INDUSTRIAL WORKERS OF THE WORLD. The I. W. W. which has come into prominence during the last few years is a radical labor organization which had its inception in the Colorado strike of 1903. Actual organization came about early in 1905 through the combination of the Western Federation of Miners, the United Metal Workers, and the Labor Alliance. Soon after, the Western Federation of Miners and some Socialists withdrew and three years later a split occurred, resulting in the establishment of two branches with headquarters at Chicago and Detroit, the former the more revolutionary in its attitude. It favors direct action, opposes the conventional trade unionism, preaches discontent among the workers and the appropriation of capital goods, and is strongly prejudiced against political action.

During 1914 the I. W. W. continued very active. The leaders took a conspicuous part among the unemployed of New York City in the spring and it was charged that they instigated the raids on the churches. (See **UNEMPLOYMENT**.) An attempted general meeting of unemployed at Union Square under the auspices of the I. W. W. was broken up by the police, but this action elicited much hostile criticism. In Butte, Mont., the I. W. W. aided the newly-formed union opposed to the Western Federation of Miners.

BOYD CASE. A decision of momentous significance for the I. W. W. was handed down in the New Jersey courts. In October, 1913, F. S. Boyd, an I. W. W. leader, was given an indeterminate

sentence of one to seven years in the penitentiary and fined \$500 for advocating sabotage and telling the Paterson strikers to make use of it when back at work. He was held on the charge of inciting to the destruction of property. Last summer the conviction of Boyd was upheld by the New Jersey Supreme Court. Should the attitude of most of the courts be the same on this matter, the I. W. W. would be forced to relinquish the carrying on of its propaganda in the open.

INGALLS, MELVILLE EZRA. American railway official and financier, died July 11, 1914. He was born at Harrison, Me., in 1842, was educated at Brighton Academy and at Bowdoin College. He studied law at the Harvard Law School, receiving the degree of LL.B., in 1863, and for a time practiced law at Gray, Me., but soon removed to Boston. In 1867 he was elected to the Massachusetts Senate, and three years later began his railroad career, when he was chosen president of the Indianapolis, Cincinnati, and Lafayette Railroad. In the following year this road went into bankruptcy, and he was appointed receiver. Taking a leading part in the reorganization of the road, he placed its successor, the Cincinnati, Indianapolis, St. Louis, and Chicago Railway upon a paying basis. This road was consolidated in 1889 with the Cleveland, Columbus, Cincinnati, and Indianapolis Railway, and the Indianapolis and St. Louis Railway, into the Cleveland, Cincinnati, Chicago, and St. Louis Railway, known as the Big Four. Mr. Ingalls was made president, and in 1905 chairman of the board, but resigned from the chairmanship in 1912. He was also president of the Kentucky Central Railroad from 1881 to 1883, and of the Chesapeake and Ohio Railway Company from 1888 to 1900. His work in restoring the Indianapolis, Cincinnati, and Lafayette road is considered one of the most remarkable feats in railroad history, especially because he had had no previous experience in the railroad business. His success attracted the attention of the Vanderbilt interests, and this made possible the organization of the Big Four Railway. In politics Mr. Ingalls was a Democrat. He aided in the second election of Grover Cleveland to the Presidency and urged conciliatory measures between Mr. Cleveland and the President's opponents in Congress. When free silver came into the Democratic platform in 1896, he went with the sound money advocates, but did not take any active part in the campaign. In 1903 he was Democratic candidate for mayor of Cincinnati, but was defeated. In 1905 he was president of the National Civic Federation.

INITIATIVE AND REFERENDUM. See **ELECTORAL REFORM**.

INJUNCTION. The efforts of the trade unions to secure some change in the existing laws regarding the issuance of injunctions, resulted in the passage of the labor provisions in the Clayton Antitrust Bill. The latter prohibits the granting of restraining orders or injunctions by any United States court or judge, unless necessary to prevent irreparable injury to prop-

erty or property right; nor can an order be given which will prohibit any person or persons from stopping work or from persuading others to work or stop work. (See *TRADE UNIONS, Clayton Bill*.) An injunction which elicited hostile criticism and which can no longer be issued by a Federal judge, was that allowed to the American Steel Foundries at Granite City, Ill., by Judge Humphrey. This "perpetually restrained and enjoined from in any way or manner whatsoever by use of persuasion, threats, or personal injury, intimidation, suggestion of danger or threats of violence of any kind, from interfering with, hindering, obstructing or stopping any person in the employ of the American Steel Foundries." Massachusetts also passed a statute providing that no injunction shall be granted where no irreparable injury was liable to be permitted.

CONTEMPT CASE. Early in the year, the contempt cases against Samuel Gompers, John Mitchell, and Frank Morrison were finally concluded. The Supreme Court decided that the statute of limitations barred the punishment of the defendants, but did not discuss the question as to the use of injunctions in labor disputes. The case started in December, 1907, when the Buck's Stove & Range Co. of St. Louis secured an injunction from Justice Wright of the Supreme Court of the District of Columbia restraining the officers of the American Federation of Labor from prosecuting a boycott. Claiming that this denied them the right of free speech, this injunction was strenuously objected to by those enjoined, and they refused to carry out some of the features of the injunction. They were found guilty of contempt of court for violating the injunction, and Messrs. Gompers, Mitchell, and Morrison were sentenced to twelve, nine, and six months' imprisonment respectively. These sentences were affirmed by the Supreme Court of the District with one justice dissenting. By the time the case reached the Supreme Court of the United States, the Buck Company and the Federation had settled matters, and the Court therefore dismissed the original injunction suit. However, it was held that the dismissal of the injunction should not prejudice the right of the original court to punish any contempt committed. The case thus again reached the Court of Appeals of the District of Columbia and Gompers was sentenced to jail for thirty days, while Mitchell and Morrison were fined \$500 each. The case was re-argued before the United States Supreme Court April 20, 1914. In May this Court reversed the judgment because of the lapse of time since the act was committed. This conclusion was a distinct disappointment to all parties since such a hard-fought suit resulted in no judicial pronouncement on fundamental issues involved.

Another important case was that of the Hitchman Coal & Coke Co. of West Virginia against John Mitchell. In December, 1912, Judge Dayton, after giving a most detailed review of the history of the case, granted a perpetual injunction against John Mitchell and his associates, declaring that they had attempted to establish a monopoly of labor in the coal fields of the State. In May, the Federal Circuit Court of Appeals set this injunction aside but the Supreme Court has granted the request of the coal company to review the decision.

INSANITY. Owing to greater confidence in

public provision for the insane; to greater longevity in the race, which results in bringing more people into the third and fourth decades of life, the most fruitful in insanity of some forms; and to the greater pressure of the strenuous life of to-day, the numbers of the insane under care are increasing in countries or States in which accurate statistics are compiled.

The New York State hospital commission (formerly State commission in lunacy) reported on Sept. 30, 1914, the number of committed insane and voluntary cases in the 16 State hospitals, together with the committed insane in licensed private houses as 16,897 men and 18,833 women, making a total of 35,721 patients (an increase of 690 over last year); of which number 1344 were inmates of Dannemora and Matteawan, the criminal institutions, and 1019 were in private retreats. There were 1300 on parole from civil hospitals. The net increase in the civil hospitals for the year was 758 against 975 for 1913, and 573 for two years ago. During the year over a thousand were returned to other States or deported to foreign countries. The total number admitted to civil hospitals during the year was 7956, of which number 6279 were first admissions and 1677 were readmissions. From the 14 civil hospitals 1703 were discharged as recovered, 1727 as improved; and 3008 died during the twelvemonth. The amount disbursed for maintenance was \$6,729,126.79. Upon new buildings, extraordinary repairs or equipment, or emergencies was expended the sum of \$495,889.08. The annual *per capita* for maintenance was \$208.98 omitting calculation of the cost of lodging, against \$206.08 last year. The ratio of the insane to the estimated population of the State was 1 to 277. The chief contributing cause, next to heredity, is alcohol; and syphilis is the determining cause in a large percentage of cases. These two preventable causes are the precipitating factors in over 40 per cent of the cases in New York State.

The Massachusetts State Board of Insanity reported on Nov. 30, 1913, in the latest published statement, a total of 13,766 patients for the year ending Oct. 1, 1913, including 6701 males and 7065 females, of which number 12 men and 324 women were under family care, in the "boarding out" system. Of the total mentioned, also, 115 men and 232 women were in private institutions. The increase for the year was 401 against 451 for the previous year, and 340 two years ago. The average annual increase for five years was 444. The increase of insane in private care was 2, compared with 16 last year. Court commitments totaled 3493 against 3093 last year. Voluntary admissions were 487 in number, compared with 254 the previous year. Of the total of 4051 admissions, 3108 were first cases, and of these 45.30 per cent were of foreign birth, and 69.46 per cent were born of foreign parentage. Alcohol was a causative factor in 18.46 per cent, syphilis in 8.72 per cent of first admissions. In the first cases, manic-depressive insanity occurred in 11.94 per cent, and dementia precox in 17.66 per cent. The recovery rate for the State was 13.52 per cent of the commitments, compared with 15.08 the previous year. The ratio of insane persons to the estimated population of the State was about 1 to 262.

The report of the commissioners in lunacy for England and Wales for Jan. 1, 1914, stated that the number of notified insane under care was

140,237 which exceeded that recorded a year ago by 1860. Of this number, 4744 men and 6501 women were called "private patients," including those in county and borough establishments (including idiots), in licensed houses (including idiots), and in naval military hospitals, and "private single patients." Of the total stated, 127,827 (59,604 men and 68,223 women) were classed as "paupers," and 1165 (889 men and 276 women) were classed as criminals. The new asylum at Rampton, for criminal insane, was completed in July, 1912, and on Jan. 1, 1914, the following was the disposition of the insane criminals: 767 in Broadmoor, 217 in Rampton, and 181 in county and borough asylums. The number of insane in England and Wales was as 1 to 266 of the estimated population, against 1 to 267 last year, and 1 to 275 two years before. The number discharged recovered in 1913 was 7296; discharged as "relieved," or "not recovered," 2609; while 10,617 died. From these figures were excluded 82 patients who had to be recertified as transfers. The recovery rate, reckoned upon total admissions, was 32.71 per cent; the rate for females being 38.08 and for males 30.09 per cent. In borough asylums the rate was 31.9 per cent; in hospitals, 46.1 per cent; in licensed houses, 37.4; and in "single care," 54.2 per cent.

The inspectors for lunatics in Ireland reported on Jan. 1, 1914, 13,030 men and 11,979 women, or in all 25,009 insane under care, representing a net increase of 170 during the year. Of this total, 886 were in "licensed houses and mental hospitals," 166 in Dundrum (the criminal institution), and 149 were "single chancery cases" and other patients in unlicensed private houses.

Of the total, 2672 (1378 men and 1294 women) comprised the first admissions. Alcohol is assigned as the principal or contributing cause in 388 cases or 14.5 per cent. The ratio of the insane of Ireland to the estimated population is 1 to 176.

A steady increase in the number of insane in Prussian asylums is reported. In 1901 there were 73,955 under care, while in 1911 there were 132,982 (73,953 male and 59,029 female) patients, an increase of 80 per cent in the decade. Over 1910 the figures had risen by 5068, or 3.9 per cent.

Magnan, head of the examination service of St. Anne's asylum, Paris, France, and Fillassier, head of the statistics department of Paris, report an increase in the known cases of insanity in the department of the Seine alone, from 27,169 cases registered between 1871 and 1880 to 43,035 cases registered between 1901 and 1910. Alcoholics formed more than 25 per cent of the number.

Boarding of insane persons in families under medical supervision, so many years practiced at Ghel, Belgium, and in recent years so elaborated in Scotland and to a very small degree in Massachusetts, is becoming comparatively general in Germany. From the asylum at Dalldorf, in 1913, 165 men and 158 women were thus boarded out in families, the greatest care being taken in selecting the cases and the caretakers. Two years ago Moeli established at Herzberge an institution to which discharged and other mental cases may repair for advice and suggestion or actual assistance. This is similar to the bureau established in Ogdensburg, N. Y., at the St. Law-

rence State hospital in 1909, and later at others of the State.

During 1914 an interesting study of the incidence of insanity among the Jews in a New York city hospital for the insane was made by Brill and Karpas, to test the truth of the prevailing report of an excessively high proportion of mental cases among the Hebrew race. Their figures did not corroborate this report, but it was argued by Kirby that incidence of insanity cannot be determined from a comparison of an essentially immigrant population (such as the Jews in New York) with the native-born population, since the former contains a disproportionate number of young adults, while the native-born population contains from one-sixth to one-fifth of children and a much larger proportion of middle aged and old people. Fishberg showed, in this connection, that against 33 per cent of non-Jews, 95 per cent of Jews are city dwellers, who have a higher incidence of insanity than rural populations.

Savage of London concluded, from wide experience with private and hospital cases, that syphilis is the dominant, if not the sole, cause of general paralysis (paresis) of the insane. A deputation of members of the British Parliament, and of physicians, started a movement advocating the adoption of measures for the early treatment of mental cases, with a view to preventing insanity, and advocating admission and treatment of incipient cases without certification. This is a step further than the voluntary admissions into Massachusetts and New York State hospitals which have been so beneficial in those commonwealths for six or seven years.

INSECTS AND THE PROPAGATION OF DISEASE. The importance of the flea in transmission of plague is now generally admitted. Investigations into the precise method by which the disease is conveyed are constantly being made. Among the various ways which have been suggested whereby the flea may transmit plague are ingestion of the infected fleas by animals; mechanical conveyance of the bacilli to the healthy animal by the proboscis of the flea; infection of the salivary glands of the flea, inoculation with the bacilli then occurring through the deposition of saliva. It is admitted that animals may be inoculated with the dejecta of infected fleas. Bacot and Martin, of the Lister Institute in London, set out to ascertain whether or not the flea could infect during the act of sucking, and discovered that two species of rat-fleas, *Xenopsylla cheopsis* and *Ceratophyllus fasciatus*, could, when fed on septicemic blood, transmit the disease during the act of sucking, and that certain insects suffering from a temporary obstruction at the entrance of the stomach were largely responsible for all the infections. They found that in many infected fleas the bacilli developed so rapidly that the alimentary canal was occluded. The pest develops in the intercellular recesses of the proventriculus. Fleas in this condition can still suck blood, since the pumping apparatus is situated in the pharynx, but most of the blood is forced back into the wound as soon as the pumping operation is suspended. Such fleas are persistent in their efforts to obtain food and they are thus the more dangerous. They do not necessarily perish; in the course of a few days the alimentary passages may again become patent. It is, however,

for the time incapable of ingesting fresh fluid and is therefore in danger of drying up should the temperature be high. The investigators are led to attach some importance to the connection between these facts and the observation that epidemic plague in India is limited to the cooler and moister seasons, and particularly the fact that in Central India the epidemics are abruptly terminated by the onset of the dry hot season. Studies of the life and habits of the common rat-flea of Great Britain were made by Strickland under government auspices. The important point brought out by the investigators was that the flea would readily feed on man, even more readily than on the rat, but it is remarked that the flea needs rat blood to enable it to reproduce. Rat's blood seems to contain a substance stimulating to the sexual organs of the flea. It was also discovered that an infected flea will live for at least 17 months in rubbish. In the absence of rubbish it will survive only for about a month.

Barber found that cockroaches may harbor cholera vibrios in their intestines, and these vibrios may be excreted in enormous numbers at least two days after the insects have been fed with human cholera excreta, and may occur in smaller numbers as long as seventy-nine hours after ingestion. Cockroaches therefore may act as carriers of the disease by infecting human food. Food thus contaminated will remain infected for 16 hours after the deposition of cockroach excreta and the vibrios retain their virulence after 29 hours' residence in the intestine of a cockroach. See PELLAGRA; POLIOMYELITIS; TROPICAL DISEASES.

INSTITUTE OF FRANCE. See ACADEMY, FRENCH.

INSURANCE. **LIFE INSURANCE.** *Statistics.* According to *The Spectator* the total assets of two hundred and thirty-five life insurance companies in the United States on Dec. 31, 1913, were \$4,654,509,000, an increase of \$246,551,000 over the year previous. The aggregate premiums for the year were \$712,865,000; the total income, \$922,353,000; their total disbursements aggregated \$656,667,000, of which \$468,026,000 went to policy holders. New insurance amounted to \$3,334,117,000; of this, three-fourths was 'ordinary,' and the remaining one-fourth 'industrial.' The total amount of insurance in force in all companies was \$20,527,908,000, of which slightly more than 80 per cent was 'ordinary' and somewhat less than 20 per cent was 'industrial.' Compared with a year earlier, the 'ordinary' insurance showed a gain of \$1,044,562,000, and the 'industrial' a gain of \$225,646,000. The gain in aggregate insurance amounted to 40 per cent during the last five years.

The preliminary report of the Insurance Department of New York showed that the thirty-five companies doing business in that State had total assets Dec. 31, 1913, of \$4,351,747,000, of which over 56 per cent was credited to New York State companies, and nearly the entire remainder to other American companies. The Prussian Company with its home office in Germany was the only foreign concern. Among the assets were mortgage loans of \$1,454,001,000; policy loans of \$589,314,000; bonds and stocks, \$1,948,254,000. The total assets increased during the year nearly one-fourth of a billion dollars. The total number of 'ordinary' policies in force Dec. 31, 1913, was 7,452,154, representing \$14,304,638,000 in-

surance. This was an increase for the year of 450,241 policies and \$777,317,000 insurance.

Policy Loans. Much attention has been given during the past few years to the remarkable increase in loans on life insurance policies. These loans increased from one-third of 1 per cent of the reserve funds of American companies in 1888 to 16 per cent in 1912 and nearly 18 per cent at the beginning of 1914. Total policy loans then amounted to nearly \$600,000,000 dollars. The reason for this was universally believed to be a decline of thrift, reckless extravagance, a tendency to live beyond means. It was pointed out that these loans mean the withdrawal of an equal amount of insurance protection, since they are usually never paid back. Numerous writers contend that it is illogical to urge men to insure and then greatly stimulate them to borrow on their policies by enticing loan privileges. The movement therefore for the enactment of laws restricting loan privileges is getting headway.

This situation was well illustrated by the figures of the Mutual Life Insurance Company. On Dec. 31, 1913, loans to policy holders aggregated 14.5 per cent of the total assets of the company as contrasted with 4.8 per cent ten years earlier. To discourage borrowing on policies this company on January 31 raised the interest rate on policy loans from 5 per cent to 6 per cent and made this increase retroactive so far as policy provisions permitted.

Deer Lodge Case. The State of Montana passed a law requiring all insurance companies to pay a specified tax each year upon the excess of premiums collected in that State over losses and regular expenses within the State. This was attacked by the New York Life Insurance Company as being in violation of the interstate commerce provision of the constitution. The company showed that its business is done through agents who are instructed by mail or telegraph from New York City; that funds are deposited there; and that loans are determined there. In its decision early in the year the United States Supreme Court sustained the doctrine of the famous case of *Paul v. Virginia* decided in 1868 that insurance is not commerce. The Court held that insurance policies are only contracts of indemnity entered into for a consideration. Justice McKenna in rendering the majority opinion said, "to reverse the cases, therefore, would require us to promulgate a new rule of constitutional inhibition upon the States and would compel a change of their policy and a readjustment of their laws." Justices Hughes and Van Devanter dissented.

Federal Supervision. The above case was an important incident in the effort of numerous leading insurance companies to secure Federal supervision of insurance in place of the existing supervision by so many different States. This movement is led by President Kingsley of the New York Life Insurance Company. In reply to a letter from him, the heads of insurance companies in the United States expressed themselves as overwhelmingly in favor of Federal supervision, and as willing to exert every effort to secure it. Early in the year there was introduced in Congress the following resolution: "Congress shall have power to regulate the business (or commerce) of insurance throughout the United States, its territories, and possessions." It was the intention to secure passage of this resolution through Congress and have it submitted to

the States as a proposed amendment to the constitution. The opinion of leading constitutional authorities was secured regarding it. Moreover the insurance companies took steps to secure an expression of the policy holders as to the desirability of such an amendment to the constitution.

Insurance Taxation. The discussion of the question whether premiums paid on life insurance policies should be subject to taxation, was continued throughout the year. The aggregate taxes paid by American life insurance policy holders in 1913 was \$13,000,000. It was pointed out that this would have added fourteen per cent to the dividends paid policy holders, or it would have purchased \$550,000,000 additional life insurance protection; or it would have reduced insurance quotations by more than 2 per cent.

Metropolitan Life. In November it was announced that plans were on foot for the mutualization of the Metropolitan Life Insurance Co. of New York. This company had a total of 14,500,000 policy holders of whom 13,000,000 were in the "industrial" department. There were over 14,250,000 nonparticipating policies. One of the advantages of the proposed mutualization was that these could be made participants in the savings and surplus. It had total insurance in force on Dec. 31, 1914, of \$1,038,000,000. It was by all odds the largest company in the United States as regards policy holders and fifth as regards volume of insurance in force. Its capital stock worth \$2,000,000 at par was divided into 80,000 shares. It was proposed that the company should buy this stock for \$6,000,000, to be taken from the company's surplus of nearly \$40,000,000. Though the stock paid but 7 per cent, the financial advantages of its ownership were sufficient to make \$6,000,000 a fair valuation. A general meeting of the policy holders called on December 28 to consider the proposal, resulted in a vote of 65,000 in favor of the plan as against 1600 opposing it.

FRATERNAL INSURANCE. The report of the Insurance Department of New York showed that seventy-seven fraternal orders doing business in that State had total insurance in force Dec. 31, 1913, amounting to \$6,193,000,000. Their income during the year was \$88,483,000 and their disbursements \$81,102,000. They reported total assets of \$134,019,000. These orders had in force approximately 5,200,000 certificates of insurance, but were estimated to include not over sixty per cent of the total members of fraternal insurance organizations of the country. Vastly exceeding all other fraternal orders in size is the Modern Woodmen of America. This society had an income of \$14,209,000 in 1913 and disbursements of \$13,312,000. Its assets aggregated \$13,896,000; and the insurance in force, \$1,457,402,000, the latter being a decrease of \$88,000,000. In the two years preceding Dec. 31, 1913 this organization showed a decrease of members between the ages of eighteen and fifty-four of 297,901, and an increase of those between fifty-five and eighty inclusive, of 22,600. During this same period members in the former age group paid in \$2,432,000 more than they claimed in death losses, while those of the other age group paid in \$2,100,000 less than their death losses. These figures indicate that the organization has reached a turning point in its history. The record of scores of fraternal orders that have risen and declined in the past shows that during the early years of rapid

growth when the membership is comprised mainly in the lower age group, these societies meet all losses and expenses in spite of abnormally low assessments on members. But as the years pass and the age grouping of members changes showing a tendency for the older age groups to predominate, the introduction of sounder, actuarial principles becomes necessary.

FIRE INSURANCE. Statistics. According to the president of the Board of Fire Underwriters, the total net premiums received by fire insurance companies in the United States during the year 1913 amounted to \$321,555,000; the losses aggregated \$172,128,000; the total expenses were \$128,579,000. If to losses and expenses increased liabilities of \$16,448,000 be added, the amount of profit, exclusive of all sums accruing from investments, was only \$4,398,000.

During the ten years preceding Dec. 31, 1913, the aggregate net premiums received were \$2,675,312,000; losses paid were \$1,502,508,000; expenses totaled \$1,029,968,000; and liabilities increased \$159,610,000. Exclusive of income from investments, the business showed a loss during the ten years, of \$16,775,000. Thus in ten years the incomes of fire insurance companies taken at large have been due to the interest on their investments. This source of income, however, has been sufficient in most cases to pay satisfactory dividends and to add to surplus funds. According to the Insurance Department of New York State, 250 fire-marine and marine insurance companies doing business in that State reported assets of \$899,351,000 on Dec. 31, 1913, an increase of \$19,692,000 during the year. Their liabilities, other than capital, were \$379,844,000. Their total income was \$401,477,000; total disbursements, \$376,177,000; and total insurance in force at the end of the year, \$57,500,000,000, an increase of \$5,000,000,000. The gain from underwriting was \$16,528,000, and from investments, \$5,388,000, but for various reasons, partly bookkeeping changes, there was a net loss in surplus of \$10,041,000.

State Regulation. During the past few years a wave of State regulation of fire insurance companies has swept over the country. A number of States have authorized their insurance commissioners to fix the maximum rates for fire insurance companies operating within the State borders. The constitutionality of the Kansas fire insurance rate law was tested in the Supreme Court of the United States by the German Alliance Insurance Company of New York. The company argued that fire insurance is a private business as shown by its right to accept or reject proper business. The company held that if the State could fix the rates of fire insurance, it could fix the prices of any commodities. It held further that the fixing of fire insurance rates was not a valid exercise of the police power in the protection of life, health, and morality. By a vote of five to three the Supreme Court held that the State Legislature has power to regulate fire insurance rates. The opinion of the majority declared that the business of fire insurance is charged with a public interest.

At the convention of Insurance Commissioners and Superintendents of 25 States in New York City December 9-10 the enactment of uniform laws bringing rating associations under State supervision was favored. Also favored was the prohibition of discriminations between persons with similar risks. Other matters considered in-

cluded the regulation of mutual fire and mutual casualty companies; the permission of fire companies to write automobile insurance; and the licensing of companies chartered in other States.

CASUALTY, CREDIT, FIDELITY, AND SURETY INSURANCE. During 1913 there were 62 insurance companies doing business of these sorts in New York State with total assets on December 31 of that year amounting to \$170,162,000. The principal item of assets was corporation securities valued at \$112,062,000. The capital of these companies amounted to \$43,100,000; their surplus, \$34,072,000; total premiums received during the year were \$122,430,000; total losses paid were \$53,984,000; commissions, \$29,907,000; dividends, \$5,877,000; salaries, fees, and traveling expenses, \$17,296,000. The excess of disbursements over income was \$4,844,000. See also SAVINGS BANKS, section *Savings Bank Insurance*.

INTERBOROUGH RAPID TRANSIT COMPANY. See **RAPID TRANSIT**.

INTERNAL COMBUSTION ENGINES. The year 1914 witnessed the progress of the internal combustion engine along lines which had been indicated previously. For central station work the small internal combustion engine had proved most serviceable, and large units were installed only with economical fuel, in fact virtually when it was a waste product. The two types of gas engines most used were those in which producer gas of some form was the fuel, and those, such as the Diesel engine, employing a liquid fuel. Improvements of the year consisted in making provisions for the scavenging of gases burned, and the introduction of the fresh charge under pressure, so as to secure an increased amount of fuel for the volume of the cylinder, and a corresponding increase in the output. Advantage was taken of the heat from the exhaust of the engine economically to generate steam available for the compression of the charge. Of course the limit was expected to be reached with the application of this method, consisting in the rising of pressure at the end of compression to the point at which preignition might occur. The Diesel engine was making headway slowly, receiving as it was, constantly, careful consideration and study from engineers, who had reached definite conclusions, as to its advantages within certain limits of size and conditions of operation. During the year, a 600-horsepower 4-cylinder Diesel engine for pumping service was built, this being the largest engine of this type to be constructed in the United States, up to the end of 1914. It was built by the Lyons Atlas Company of Indianapolis, for the Hawaiian Commercial and Sugar Company, to be used for irrigation purposes. It had four 21 by 31-inch cylinders, which would develop normally 600-horsepower, with a maximum of 690-horsepower, being designed to drive a 2-stage turbine pump of 15,000,000 gallons capacity against a head of 200 feet. It was built and guaranteed for continuous operation for 710 hours out of 720 hours per month, running on California asphaltum base fuel oil with gravity of 14° to 18° Baumé.

In connection with internal combustion engines, progress was being made to utilize the waste heat for heating water, making steam for

heat, while for industrial purposes keeping boilers warm, or even for generating power by low pressure turbines.

Little in the way of progress in connection with gas and oil engines was to be recorded from Europe. In the hot bulb ignition type of oil burning engine, developments in practice were noted in Europe during the year. This engine is of simple construction, of moderate cost, with a moderate compression pressure. It does not show the economy of the Diesel engine, but is more readily adaptable for small sizes, and has a lower first cost and greater simplicity. The Ehrhardt-Sehmer Company of Saarbrücken, Germany, by thoroughly scavenging burnt gases, and introducing a fresh charge under pressure, was able to increase the power and efficiency of their machines. A blower, driven by a motor or by a turbine, supplied with steam from a waste heat boiler, was employed to deliver the air and gas under a pressure of 10 to 15 pounds, so that a heavier charge and better mixture of live gas was obtained, due to the lower temperature from scavenging and the pressure.

An interesting development in the way of producing economical power was that practiced at the works of the Ford Motor Co., combining a gas engine with a steam engine. See **STEAM ENGINE**.

INTERNATIONAL ARBITRATION AND PEACE. THE BRYAN-WILSON TREATIES. These treaties which are not strictly speaking arbitration treaties, but what the government calls "treaties for the advancement of peace," passed through the usual stages, being first proposed by identic note, accepted in principle, and then, embodied in treaties duly signed, presented to the appropriate parliamentary bodies, and after formal notifications and exchanges thereof, duly promulgated as law. Concerning these treaties, proposed by President Wilson and Secretary of State Bryan (see **YEAR BOOK**, 1913, page 41), the Foreign Relations Committee of the Senate of the United States Senate, said:—

"Their main purpose is to give time for nations engaged in international controversies to reflect, and to afford opportunity for subsidence of passion before hostilities shall begin; before the passions of war shall have inflamed a nation an opportunity is given for the influence of peace and reason to prevail. It is believed that the existence of such treaties as these will be most potential in preventing the precipitation of sudden wars such as now exist in Europe."

With informal discussion only, the Senate on Aug. 14, 1914, ratified 18 of the 20 treaties negotiated by Secretary Bryan. The treaties with Panama and the Dominican Republic were held up temporarily until it could be ascertained exactly what effect they would have on existing treaty relations. It was suggested that if either Panama or San Domingo sought to free itself from its present position of tutelage the treaties might prove embarrassing to the United States. The Senate's amendments were inconsiderable.

The treaties then ratified were with Norway, the Netherlands, Portugal, Switzerland, Denmark, Italy, Salvador, Guatemala, Honduras, Nicaragua, Bolivia, Persia, Costa Rica, Venezuela, Uruguay, Argentina, Brazil, and Chile.

Such opposition as there was came mainly from Senator Falls of New Mexico, who urged that any new convention should prevent the possibility of complications arising through an al-

liance with foreign interests by citizens of Panama to purchase ships.

The treaties ratified are generally of the same character and scope. They provide for the creation of an international commission with each country, to which disputes that may arise in the future, which diplomatic methods fail to adjust, shall be referred for investigation and report. The parties to the treaties agree not to declare war or begin hostilities during such investigation and before the report is submitted. The life of the treaties is limited to five years. The contracting parties are not bound by the finding of facts as made by the international commission, but each reserves the right to act independently upon the dispute after the report of the commission shall be submitted. Those with Salvador, Guatemala, Panama, Honduras, Nicaragua, and Persia contained a provision which the Senate eliminated, providing that the contracting parties agree not to increase their naval or military programme unless danger from a third Power should compel such increase pending report of the international commission. The committee agreed that this provision "would produce complications, and might embarrass this government far more than benefit it."

The World Peace Foundation has prepared a memorandum showing the action taken by the nations of the world on the several stages of these treaties, namely:

1. Negotiation proposed by identic note, accepted in principle;
2. Negotiation, resulting in treaties signed;
3. Ratification advised by parliamentary organs (where necessary);
4. Ratification by executives of States;
5. Exchange of ratifications;
6. Proclamation, promulgation, or publication of treaties to people.

Argentine-Republic. Order of acceptance in principle, 13; nineteenth treaty, signed at Washington, July 24, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratified by President.

Austria-Hungary. Order of acceptance in principle, 9; invited to negotiate, Sept. 15, 1914; treaty signed at Washington.

Belgium. Order of acceptance in principle, 20; treaty signed at Washington.

Bolivia. Order of acceptance in principle, 11; seventh treaty signed at Washington, Jan. 22, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratified by President.

Brazil. Order of acceptance in principle, 4; twentieth treaty, signed at Washington, July 24, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratification by President.

Chile. Order of acceptance in principle, 22; twenty-first treaty, signed at Washington, Sept. 15, 1914; ratification advised by United States Senate, Oct. 13, 1914; approved by Chilean Congress, Nov. 17, 1914.

China. Order of acceptance in principle, 14; twenty-sixth treaty, signed at Washington, July 24, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratified by President.

Costa Rica. Order of acceptance in principle, 24; twelfth treaty, signed at Washington, Feb. 13, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratified by President.

Cuba. Order of acceptance in principle, 23.

Denmark. Order of acceptance in principle, 21; tenth treaty, signed at Washington, Feb. 5,

1914; ratified by Danish House, Feb. 27, 1914; rejected by Danish Senate, March 28, 1914; re-drafted and signed at Washington, April 17, 1914; ratification advised by United States Senate, Aug. 14, 1914; ratified by President.

Dominican Republic. Order of acceptance in principle, 15; thirteenth treaty signed at Washington, Feb. 17, 1914; ratification advised by United States Senate.

Ecuador. Order of acceptance in principle, 33; twenty-seventh treaty, signed at Washington, Oct. 13, 1914; ratification advised by United States Senate, Oct. 20, 1914; ratified by President.

France. Order of acceptance in principle, 3; twenty-third treaty, signed at Washington, Sept. 15, 1914; ratification advised by United States Senate, Sept. 25, 1914.

Germany. Order of acceptance in principle, 12; invited to negotiate, Sept. 15, 1914; treaty signed at Washington.

Great Britain. Order of acceptance in principle, 2; twenty-fourth treaty, signed at Washington, Sept. 15, 1914; ratification advised by United States Senate, Sept. 25, 1914; ratified by the President, Nov. 4, 1914; ratified by Great Britain, Oct. 8, 1914; ratifications exchanged at Washington, Nov. 10, 1914; proclaimed and effective, Nov. 11, 1914, for five years; text, Treaty Series, No. 602 G.

Greece. Twenty-eighth treaty, signed at Washington, Oct. 13, 1914; ratification advised by United States Senate, Oct. 20, 1914.

Guatemala. Order of acceptance in principle, 16; second treaty, signed at Washington, Sept. 30, 1913; ratification advised by the Senate, with amendments, Aug. 13, 1914; ratified by the President, Aug. 27, 1914; ratified by Guatemala, May 15, 1914; ratifications exchanged at Washington, Oct. 13, 1914; proclaimed and in effect, Oct. 13, 1914, for five years; text, Treaty Series, No. 598.

Haiti. Order of acceptance in principle, 17; treaty signed at Washington.

Honduras. Order of acceptance in principle, 29; fourth treaty, signed at Washington, Nov. 3, 1913; ratification advised by United States Senate, Aug. 14, 1914.

Italy. Order of acceptance in principle, 1; fifteenth treaty, signed at Washington, May 5, 1914; ratification advised by United States Senate, Aug. 14, 1914.

Japan. Order of acceptance in principle, 31.

Netherlands. Order of acceptance in principle, 10; sixth treaty, signed at Washington, Dec. 18, 1913; ratification advised by United States Senate, Aug. 14, 1914.

Nicaragua. Order of acceptance in principle, 30; fifth treaty, signed at Washington, Dec. 17, 1913; ratification advised by United States Senate, Aug. 14, 1914.

Norway. Order of acceptance in principle, 6; sixteenth treaty, signed at Washington, June 24, 1914; ratification advised by United States Senate, Aug. 13, 1914; ratified by the President, Oct. 14, 1914; ratified by Norway, Sept. 18, 1914; ratifications exchanged at Washington, Oct. 31, 1914; proclaimed by President, Oct. 22, 1914; Treaty Series, No. 599.

Panama. Order of acceptance in principle, 28; third treaty, signed at Washington, Sept. 20, 1913; ratification advised by United States Senate.

Paraguay. Order of acceptance in principle,

27; twenty-second treaty, signed at Washington, Aug. 26, 1914.

Persia. Order of acceptance in principle, 32; ninth treaty, signed at Teheran, Feb. 4, 1914; ratification advised by United States Senate, Aug. 14, 1914.

Peru. Order of acceptance in principle, 8; seventeenth treaty, signed at Washington, July 14, 1914; ratification advised by United States Senate, Aug. 20, 1914.

Portugal. Order of acceptance in principle, 19; eighth treaty, signed at Washington, Sept. 20, 1913; ratification advised by United States Senate. Signed at Lisbon, Feb. 4, 1914; ratification advised by United States Senate, Aug. 13, 1914; ratified by the President, Oct. 21, 1914; ratified by Portugal, Sept. 26, 1914; ratifications exchanged at Washington, Oct. 24, 1914; proclaimed by President, Oct. 27, 1914; text, Treaty Series, No. 600.

Russia. Order of acceptance in principle, 7; treaty signed at Washington, Oct. 31, 1914; ratification advised by United States Senate, Oct. 13, 1914.

Salvador. Order of acceptance in principle, 25; first treaty, signed at Washington, Aug. 7, 1913; ratification advised by United States Senate, Aug. 14, 1914.

Spain. Order of acceptance in principle, 18; twenty-fifth treaty, signed at Washington, Sept. 15, 1914; ratification advised by United States Senate, Sept. 25, 1914; approved by Spanish Council of Ministers, Oct. 15, 1914.

Sweden. Order of acceptance in principle, 5; treaty signed at Washington; ratified Nov. 13, 1914.

Switzerland. Order of acceptance in principle, 26; eleventh treaty, signed at Washington, Feb. 13, 1914; ratification advised by United States Senate, Aug. 14, 1914.

Uruguay. Order of acceptance in principle, 35; eighteenth treaty, signed at Washington, July 20, 1914; ratification advised by United States Senate, Aug. 14, 1914.

Venezuela. Order of acceptance in principle, 34; fourteenth treaty, signed at Caracas, March 21, 1914; ratification advised by United States Senate, Aug. 14, 1914.

PENDING ARBITRATIONS. Naturally the European conflict has retarded the cause of international arbitration, as well as resort to it where it has been established, although arbitration negotiations under way (except of course between belligerents) have proceeded in their orderly course. The war has had no effect on arbitrations outside of The Hague machinery, and not pending between States at war. Such cases will take their regular course. The Hague Court will not hold sessions until after the war. The effect of the war on treaties between belligerents is to annul them, and they may be either resurrected or renewed after peace is effected. Treaties pertaining to the state of war have of course been brought into effect.

There are three well recognized types of arbitration: 1, that provided under "compromisary causes" in treaties of all kinds; 2, that provided for under general treaties requiring the submission of definite classes of cases; and 3, voluntary arbitration under the general engagement of The Hague Convention for the pacific settlement of international disputes.

The first type of arbitration may be illustrated by articles 7, 9, and 12 in the protocol

of the Græco-Turkish treaty of peace of Nov. 1-14, 1913, by which it is agreed that all questions relating to the interpretation or application of those articles shall be submitted to arbitration. For several years this clause in treaties dealing with practical affairs has become customary, and war has put no bar to its use by the States which are not fighting. The second type customarily contains the first in a general application to all treaties between the parties and has not advanced greatly during the past year, or the previous one (See YEAR BOOK, 1913, page 41), as practically all States between which it was usable were already bound by such treaties. Many of these, the bulk of the 22 signed in 1908, and some of the 32 signed in 1909, have expired during the year, and have been renewed. The third type is important only as it results in the actual submission of disputes to arbitration. Such submission tends rather to decrease than increase by the operation of the same principle that makes it more likely that two persons will settle their difficulties between themselves when they know that if they fail the dispute will have to go to court, there to be judged on its merits.

Arbitration it must be constantly borne in mind is resorted to only after negotiation fails, and it yearly becomes clearer that arbitration is of great service to fair negotiation. Resort to arbitration, however, must and will occur for the irreducible minimum of cases to which it is applicable.

In the opinion of the World Peace Foundation, the tendency of the past year has been away from trying cases by arbitrators outside the panel of The Hague Tribunal.

On June 25, 1914, a decision was handed down in the *Dutch-Portuguese* case as to frontiers in the Island of Timor. Though a thorny dispute, the matter was a minor one, and the two small disputants wishing to avoid the expense of a large court, chose a single arbitrator from The Hague panel, feeling that the case should be decided under Hague auspices.

Pending before the Tribunal at the outbreak of war were two cases, one, *Spain, France, and Great Britain vs. Portugal*, relating to religious property in Portugal, and the other, *France vs. Peru*, relating to financial claims.

1914 witnessed a notable case of mediation. The intervention of the United States in Mexico in April was rapidly drifting into a state of belligerency by force of circumstances, when Argentina, Brazil, and Chile jointly tendered good offices and there resulted the Niagara Falls protocol of June 24, which enabled the United States to retire from Mexico, and which laid the basis for what it was hoped would be a solution of Mexico's tangled affairs. Some workers for peace regarded this settlement as important because of the spirit which prompted the mediation: the formal recognition of the unity of half the world, and their desire and demand for peace in the international community, and the practical application of the ideal of international coöperation, without apparent ulterior motives.

As a result of the friendly good offices of the United States, *Costa Rica and Panama* agreed to submit their long-standing dispute with respect to their boundary, which had already been the subject of an arbitral award by the President of France under date of Sept. 11, 1900, to the Chief Justice of the United States as sole arbi-

trator. The Chief Justice rendered his decision on Sept. 12, 1914. Costa Rica asked the arbitrator to award what may be called a primary line, or in the alternative, what may be called a secondary line. Panama claimed still another line. The award of the Chief Justice is substantially the secondary line asked by Costa Rica.

The present status of the *Pecuniary Claims* arbitration between the *United States and Great Britain* is one of suspended animation, owing to the great war. The tribunal met in Washington in the spring of 1914 for about three months; heard a number of cases argued, and handed down a number of opinions in cases which had been argued the year before in Canada. It then adjourned until July, when it met in Paris for the purpose of formulating and handing down its opinions on the cases argued in Washington last spring, which proceedings were interrupted by mobilization. The tribunal suspended its sessions without handing down any decisions, and has not yet been reconvened.

Of the 25 arbitration treaties negotiated in 1908, those with the Argentine Republic, Bolivia, and Chile never became effective by the exchange of ratifications. The treaty with Ecuador will not expire until June 22, 1915; that with Brazil, until July 26, 1916; and that with Uruguay, until Nov. 1, 1917. Of the remaining 19 treaties, 12 (those with France, Spain, Great Britain, Norway, Sweden, Japan, Germany, Switzerland, Portugal, Costa Rica, Austria-Hungary, and Salvador) have by renewal become effective for another period of five years. Agreements extending the treaties with Paraguay and the Netherlands for a further period of five years were also signed but have not been ratified on the part of either of the two countries named. Overtures for a renewal of the treaties were also made to China, Denmark, Peru, and Haiti, but have not as yet been responded to favorably. As no diplomatic relations have existed between the United States and Mexico for some time, negotiations for the renewal of the treaty with Mexico have not been possible.

THE AMERICAN PEACE SOCIETY. In its 86th annual report for the year ending April 30, 1914, the American Peace Society pointed out that in five years the number of constituent branches had increased over 340 per cent; in seven years the paying members of the society have increased over 600 per cent; in five years the section societies have increased over 100 per cent. The net receipts of the society, including the branches, sections, and auxiliaries reached during the year the sum of \$74,308.16, an increase over five years ago of 340 per cent. The net expenditures reached \$64,657.05, an increase in five years of nearly 320 per cent. The American Peace Society is, we believe, the largest peace society in the world, having 6969 members at the present time. It was estimated that fifteen hundred lectures by one hundred and fifty lecturers have been given under its auspices during the year. The executive director in concluding his report said that the society had, during the preceding year, concluded its policy of quiet, constructive, educational work among the people. He added: "It initiated and directed successfully the Fourth American Peace Congress at St. Louis. It has on various occasions co-operated concretely with the government, and influenced legislation in behalf of arbitration and international peace. It has maintained its lec-

ture bureau, its library of peace information, and it has distributed tons of literature to writers, speakers, schools, colleges, and libraries."

Dr. Benjamin F. Trueblood, secretary of the society for 23 years, resigned, on account of ill health, in 1914.

THE WORLD PEACE FOUNDATION (see YEAR BOOK, 1913, page 45) has pursued its work without interruption during 1914. Its annual report published in December announces the success of the Peace Conferences for Peace Workers in Boston, and the probable establishment of a Summer School of Peace. Special attention has been given to work among the schools, with gratifying results, and among the higher educational institutions. Denys P. Myers has prepared for the foundation an index of the 20 *Reports* of the Lake Mohonk Conference. In the opinion of the Foundation "the war year" has seen advances in the peace movement—"permanent advances, none the less real because they have been out of the ordinary developments of what is generically called the peace movement." . . . "The European War has affected the peace movement, as it has all other human activities; but it has given the peace movement a tremendous impetus. Ideas for which pacifists have stood were considered by people in general as a sort of philosophy before the war began. Since its outbreak these ideas have become the foremost programme of all forward-looking people, and nothing has given peace workers more satisfaction than to see the solutions of international problems for which they have labored dealt with by writers of all kinds quite independently of any pacifist prompting."

The board of trustees have prepared and formally submitted for the consideration of the American people the following declaration:

The influence of friends of peace everywhere, and especially in the neutral nations, should be steadily exerted to direct public attention toward the conditions which can alone make peace permanent. Some of those conditions we believe to be embodied in the following demands, which we commend to the consideration of our fellow-citizens:

1. No territory should be transferred from one nation to another in disregard of the will of the inhabitants, nor any readjustment be made of which the effect would necessarily be to sow the seeds of future war.

2. As the alliances and ententes of Europe have proved their incapacity to safeguard the welfare of the people, the nations of that continent should establish and maintain a representative council in order to insure mutual conference and concerted action.

3. Competition in armaments should end. The nations should agree to abandon compulsory military service and to limit military force to purposes of police and international defense.

4. All manufactures of arms, armaments, and munitions for use in war should hereafter be national property. No private citizen or corporation should be permitted to engage in such manufacture. The export of such goods for use in armies and fleets should be prohibited.

5. No neutral nation should permit its citizens to make loans to belligerents for war purposes. As our own State Department has said: "Loans by American bankers to any foreign na-

tion which is at war are inconsistent with the true spirit of neutrality."

We believe that the delusive argument that armaments are the only sure guarantee of peace and national security has now been exposed in all its hideous falsity. We call upon all the world to witness that the spirit of militarism leads to brutality and slaughter, and that the only principle of international relations consistent with civilization is that of Peace with Justice under Law.

A UNIVERSAL PEACE CONGRESS was to have been held in Vienna, September 15-19, that being the twenty-fifth anniversary of the first Congress in 1889, and the hundredth since the Peace of Vienna rearranged Europe and sent Napoleon to Elba. The outbreak of the European War resulted in the indefinite postponement of all the plans.

THE INTERNATIONAL PEACE BUREAU. Recommendations that the Commission of the International Peace Bureau at Berne be called to meet at the earliest possible moment were sent out in October by Dr. Ludwig Quidde, president of the German Peace Society (now at The Hague), and Dr. B. de Jong Van Beek En Donk, editor of the organ of the Dutch Peace Society.

Dr. Quidde, in an open letter, enumerates certain of the tasks which the bureau should at once undertake:

(1) The *mobilization* of public opinion in the neutral countries. The formation of committees representing all organizations and parties to carry on the campaign for mediation and pacific settlement. This should be done on the initiative and under the unifying agency of the Berne Bureau. . . . In short, the bureau is the natural and logical international centre for the movement for peace.

(2) There should be bureaus for communication between the pacifists of the belligerent countries and their fellow-workers. Berne and The Hague have already become such centres, but others are needed.

(3) Interchange of reliable and nonpartisan news. National passion is inflamed and hatred stirred up by the one-sided and fantastic reports that are being spread abroad. Perhaps there should be published a bulletin for the dissemination of accurate information.

(4) Shall there be a declaration by the pacifists concerning the violations of international law? Shall these be investigated by an impartial commission?

(5) Documents should be collected dealing with the history that preceded the outbreak of the war.

(6) A commission perhaps ought to be formed to prepare for the international treaty to be made after the restoration of peace.

Dr. de Jong Van Beek En Donk states four reasons for the calling of the Berne Bureau:

(1) It should lead in combining and giving utterance to the different ideas now finding expression in the neutral countries.

(2) It ought to form an international organization of pacifists, a separate organization, to include representatives of all sorts of bodies. In Holland, for example, the Dutch Peace Society has formed a "Dutch Council against War," consisting of representatives of all political organizations, labor parties, and the like.

(3) It could make use of the present time to study the great problems which will demand

solution after the war closes; small committees could be named to study limitation of armaments, a federation of the nations, the abolition of secret diplomacy, etc.

(4) It could declare its continued belief in *internationalism*, and speak for all the pacifists of all the nations as with one voice.

THE NOBEL PRIZE FOR 1914. The prize was awarded in 1914 for 1913 to Senator Root of the United States and to La Fontaine of Belgium (YEAR BOOK, 1913, p. 43). Since then there have been proposals suggesting that it should be given to King Albert of Belgium, or to the King of Sweden. It has been rumored that it has been decided not to award the prize at all. At any rate none has been formally awarded to date (Jan. 15, 1915).

INTERNATIONAL TRADE ROUTES AND INTERNATIONAL EDUCATION. A numerous signed and a widely distributed statement sets forth, that in the judgment of those signing it Germany and England are fighting primarily for control of the trade routes of the world, "Germany wanting these for the development of her markets, and England for her own security." If this is the case, they ask, "Can the conflict be permanently settled until all international trade routes, cables, etc., are under the joint control and protection of all nations?" declaring that "Certainly, until such plans are developed, nations will have no incentive to pool their armaments for international police duty, as they will never so combine simply to compel other nations to abide by treaties or court decrees which do not directly affect them. Nations, however, would naturally combine to protect the neutrality of the trade routes and the joint regulation of national barriers—after such neutrality and joined power has once been secured. Wars between nations can permanently be ended only in the same manner as revolutions within nations have been made to cease; namely, by providing machinery which will enable nations to secure, peacefully, the same results as they could secure by armed conflict. Hence the ultimate success of The Hague Court is dependent upon the adding of a representative legislative body which shall—among other things—neutralize and regulate inter-nation trade channels and barriers. Until such plans are developed and the United States is a part thereof, we should continue to increase our armaments, and seriously prepare for war. Unless we are willing to join other nations in yielding some of our sovereignty rights for the good which would come to us from such a federation, then we should be prepared to fight. Whether or not an international federation would be to our immediate advantage may be a debatable question; but all should realize (1) that there is no half-way position, and (2) that as the first step some nation must inaugurate a systematic world educational campaign to teach the advantage of such a federation."

ONE HUNDRED YEARS OF PEACE. The American Peace Centenary Committee 1914-15 to celebrate the 100 years of peace that has existed between the United States and Great Britain has been busily engaged in its preparations (see YEAR BOOK, 1913, p. 44), although the formal celebration has been postponed until the close of the European War. In the interest of the movement a statement to the people of the United States, signed by a long list of distin-

guished men, headed by William H. Taft and Joseph H. Choate, has been issued. It was published on the anniversary of the signing of the Treaty of Ghent.

"We appeal to the people in all the States and to all civic bodies," says the statement, "to mark this notable anniversary by suitable exercises in the churches of all denominations on the 14th of February, the date agreed upon for that purpose with our associate, the Canadian Committee; by formal addresses at the capitals of the respective States on the 17th and 18th of February, the dates of the ratification and proclamation of the Treaty; and also by appropriate exercises in all the schools on the 22d of February, or on such later date or dates in the spring of 1915 as may be locally deemed preferable."

An informal conference of the American Committee with the Canadian and Newfoundland Committees was held at Mackinac Island, Mich., in July.

THE CHURCHES AND PEACE. The Church Peace Union (endowed by Andrew Carnegie) was organized in February, 1914, with the Bishop of New York (Rt. Rev. David H. Greer, D.D.) as president. At the first annual meeting in December it was decided to set aside a sum of several thousand dollars for organizing the churches of the world into a permanent World Alliance of the Churches for Promoting International Friendship. Ten thousand dollars was appropriated "to arouse the churches of the United States to a realization of their duties in regard to the terms of peace in Europe and the threatened growth of militarism here." Another appropriation of \$10,000 was made for introducing systematic peace instruction into the Sunday schools and promoting the observance of Peace Sunday, and a further sum of \$3000 for the work through the Federal Council of Churches in promoting friendly relations with Japan. The Rev. Frederick Lynch is secretary of the Union. His address is 70 Fifth Av., New York.

Five thousand dollars was again set aside for prize essays, by theological students, Sunday school pupils, and church members, on international peace.

In connection with the meeting of the Executive Committee of the Federal Council of the Churches of Christ in America, a number of measures were adopted that bore directly on the peace movement. One provided for organizing the churches in local committees in the interest of international peace and for publishing a book (to be prepared by Dr. Sidney L. Gulick) in this interest and placing it in the hands of every pastor in the nation. Two ambassadors to the churches of Japan were appointed, the president of the council, Prof. Shailer Matthews and Dr. Gulick. These gentlemen will sail Jan. 9, 1915, to enter on their important mission.

THE CHURCH PEACE CONFERENCE which had been called to meet at Constance on the border between Germany and Switzerland on August 2, met, notwithstanding war conditions, on that date. Thirteen nations and 35 different religious bodies were represented. Many delegates were not able to reach the seat of the conference. About 50 American delegates were present. Dr. Frederick Lynch was elected secretary. Resolutions were adopted and sent to the European rulers and to President Wilson. The American delegates left Constance on August 3 by the

last train to Holland, under the special protection of the Emperor of Germany and of the Grand Duchess of Baden. They arrived in London on Tuesday night, reassembled there in conference, and passed strong resolutions making large plans for a future campaign for peace through the churches. The Church Peace Union has published an extended account of the conference.

PRESIDENT WILSON'S OFFER OF MEDIATION. On Aug. 4, 1914, the President of the United States sent to King George of England, Emperor Nicholas of Russia, President Poincaré of France, Emperor William of Germany, and Emperor Franz Joseph of Austria, an offer of mediation.

In due time replies were received from all the governments of the warring nations, but they were in the nature of formal acknowledgments merely. The secretary, in discussing the situation, said that it might be some time before the nations would be ready to listen to any idea of mediation, but that the United States had put itself on record as ready to render every assistance toward restoring peace at the earliest moment possible. The administration has officially disapproved of loans by American capitalists for belligerent purposes.

AN EMERGENCY FEDERATION OF PEACE FORCES designed ultimately to include all the peace organizations of the world, was organized in Chicago, Dec. 19, 1914, at a meeting over which Miss Jane Addams presided. The federation adopted what it calls a "minimum programme" on which all its activities shall be based until the great conference shall make some change. In brief this programme provides:

Either that President Wilson shall be urged to invite the neutral countries of Europe to name envoys to act with other envoys named by him to urge the warring nations to declare cessation of hostilities until they receive a message from the United States, "being confident that this armistice would be the first step toward permanent peace," or that the neutral powers of the world shall issue a joint offer of mediation to the warring nations.

In the terms of settlement these agreements should be included:

1. No province shall be transferred from one government to another without the consent by plebiscite of the population of such province. The plebiscite, in which women shall be included, shall be taken by an international commission of neutral nations.

2. No war indemnities shall be assessed.

3. No treaty, alliance, or other arrangement shall be entered upon by any nation unless ratified by the representatives of the people. Adequate machinery for insuring democratic control of foreign policies shall be created.

The belligerents should be urged to agree to these terms:

1. Foreign policies of nations shall not be aimed at creating alliances for the purpose of maintaining the "balance of power," but shall be directed to the establishment of a concert of nations, with

- (a) Court or courts for settlement of all disputes between nations;

- (b) An international congress, with legislative and administrative powers over international affairs, and with permanent committees in place of present secret diplomacy;

- (c) An international police force.

Organizations forming the federation are: The Chicago Peace Society, the Political Equality League, the Chicago Woman's Club, the Socialist Women's League, the Chicago School of Civics and Philanthropy, the Penny Phone League, the Chicago Teachers' Federation, the Iroquois Club, the Playground and Recreation Association of America, the Young People's Socialist League, the Chicago Progressive Club, the Illinois Equal Suffrage Association, the Social Service Club, the Single Tax Club, the National Socialist Party, the Federation of Churches, the National Socialist Women's Committee, the executive board of the Chicago Federation of Labor, the Women's City Club, the Women's Trade Union League, and the Socialist Party of Cook County.

A LEAGUE OF PEACE has been suggested by Hamilton Holt, editor of *The Independent*. He aims at the extension of the federal idea, as exemplified in the United States, to a federation of nations, with a government founded on law, and using force only as a police power against nations not yet willing to abandon aggression and enter the league. The principles on which he would have the League of Peace formed are these:

1. The nations of the league shall mutually agree to respect the territory and sovereignty of each other.
2. All questions that cannot be settled by diplomacy shall be arbitrated.
3. The nations of the league shall provide a periodical assembly to make all rules to become law unless vetoed by a nation within a stated period.
4. The nations shall disarm to the point where the combined forces of the league shall be a certain per cent higher than those of the most heavily armed nation or alliance outside the league. Detailed rules for this pro rata disarmament shall be formulated by the Assembly.
5. Any member of the league shall have the right to withdraw on due notice, or may be expelled by the unanimous vote of the others.

In commenting upon the announcement made over the cables that, "The British, French, and Russian governments, on Saturday, September 5, mutually agreed not to make peace separately during the present war, and no one of them shall demand conditions of peace without the previous approval of the others," Andrew Carnegie declared:

"Here the allied nations combine and act as one. After the present belligerents agree upon peaceful settlement, Germany and Austria should be the first invited by the allies to join in forming a League of Peace. Should they accept, then some of the other nations might be invited. At the first meeting of the league some general principles might be formulated: First, one general World Peace Commission shall be established to which each member shall contribute toward expenditure in proportion to its population and wealth. Their respective fleets shall be merged, controlled and operated under such management as the league may direct from time to time. No war policy, or attack upon any nation or fleet shall be made except by a majority vote of two-thirds of all the members of the World Peace League, and then only after timely notice to the nations threatened. The commission shall exercise undisputed authority, always provided it is sustained and its action

approved from time to time by two-thirds of the total membership.

"An executive committee shall be elected by two-thirds majority of the commission, a separate vote being taken upon each candidate. This committee shall elect a president and vice-president by a majority vote who shall each serve four years, but the vice-president shall serve six years for the first term, and his successor be elected for four years, thus preventing the simultaneous change of both the former high officials."

THE TWENTIETH ANNUAL LAKE MOHONK CONFERENCE OF INTERNATIONAL ARBITRATION was held on May 27, 28, and 29. The official utterance of the conference embodies only those principles upon which the members unanimously agree. The platform for 1914, after calling attention to the horrors of war, recognized as of far-reaching importance the acceptance of mediation in regard to the Mexican situation, and urged that steps be taken by the American government looking to the convoking of the Third Hague Conference, recommending, in addition to the present permanent board of arbitration at The Hague, the creation of a board with a determinate personnel. The organization of the Church Peace Union was gratefully recognized, and the proposed celebration of the Centenary Peace Union between the United States and Great Britain to be held on Christmas Eve, 1914—the anniversary of the treaty of peace—was heartily approved.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE. Its *Year Book* for 1913-14 contains the reports of the different divisions, as well as the secretary's report, and gives in detail the various activities of the endowment, accentuating those which seem to be the most important and influential. The establishment of the Academy of International Law at The Hague was perhaps the most important project falling within the activities of the Division of International Law. This academy was established early in 1914 at The Hague in cooperation with the Carnegie Endowment. It is to be a centre of advanced studies in international law, both public and private, and of related sciences, for the purpose of facilitating a profound and impartial study of the questions of international relations. To this end, "the most competent men of the different States are called upon to teach by means of courses, lectures, or seminars, the most important subjects relating to international theory, practice, legislation, and jurisprudence, particularly as resulting from the action of conferences and from international awards."

THE AMERICAN INSTITUTE OF INTERNATIONAL LAW was founded Oct. 12, 1912, and the final organization effected in 1913. It parallels the Institute of International Law of Europe, but as its name implies, is confined to the Western Hemisphere. Each country on the hemisphere is represented in the present institute and, if the purposes of its founders are to be fulfilled, it will be an influential means for extending interest in the study of international law and the relations of the different countries of the Western Hemisphere.

THE ASSOCIATION FOR INTERNATIONAL ARBITRATION whose monthly publications average 80,000 copies, operates in connection with the Carnegie Endowment, as do now such bodies as the American Peace Society, Le Bureau Interna-

tional Permanent de la Paix, the International Arbitration League, and the Franco-American League, all of which enjoy subventions from the endowment. The offices of the Carnegie Endowment for International Peace are: for the Division of Intercourse and Education and for the Division of Economics and History, 407 West 117th Street, New York City; for the Division of International Law, No. 2 Jackson Place, Washington, D. C.

The Hon. Robert Bacon, formerly Secretary of State and formerly Ambassador to France, at the instance of the Carnegie Endowment undertook a journey to South America "to secure the interest and sympathy of the leaders of opinion in the principal Latin-American republics in the various enterprises for the advancement of international peace which the endowment is seeking to promote and by means of personal intercourse and explanation to bring about practical coöperation."

IOWA. POPULATION. The estimated population of the State on July 1, 1914, was 2,221,755. The population in 1910 was 2,224,771.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

	Acres	Prod. bu.	Value
Corn ... 1914	10,248,000	889,424,000	\$194,712,000
1913	9,950,000	888,300,000	202,980,000
Wheat .. 1914	810,000	15,066,000	14,468,000
1913	795,000	16,395,000	12,460,000
Oats ... 1914	5,000,000	185,000,000	67,650,000
1913	4,880,000	168,360,000	57,242,000
Rye ... 1914	59,000	1,121,000	863,000
1913	60,000	1,092,000	655,000
Barley .. 1914	860,000	9,360,000	5,148,000
1913	400,000	15,000,000	5,500,000
Potatoes 1914	147,000	12,642,000	7,459,000
1913	150,000	7,200,000	5,904,000
Hay ... 1914	2,950,000	4,071,000	41,117,000
1913	3,000,000	4,440,000	42,624,000

a Tons.

MINERAL PRODUCTION. The mineral production of the State in 1913 reached a value of \$25,602,015, an increase over the value of the product of 1912 of \$2,701,665. The two principal mineral industries of the State are coal mining and clay working, which contribute nearly 80 per cent of the total value. Iowa ranks tenth among all the States and second among the States west of the Mississippi River in the production of coal. There were produced in the State in 1913, 7,490,641 short tons, valued at \$13,431,061. This was an increase over 1912 of 201,112 tons in quantity and of \$278,973 in value. The slight increase in the production over 1912 was due to the disturbed labor situation in Colorado. Iowa is primarily an agricultural State, and the markets for its coal, outside of that taken by the railroads, are chiefly in rural communities and cities of moderate size that are dependent on agricultural trade. Some coal is shipped from Iowa to Nebraska,

Minnesota, and other States, but an equal amount comes into the State from Illinois and eastern fields. The number of men employed in the coal mines in 1913 was 15,679, compared with 16,370 in 1912. The coal production in 1914 showed a considerable decrease. The clay-working industries in 1913 showed a decided improvement over the preceding year, the product increasing in value from \$4,522,326 to \$5,573,681. The manufacture of Portland cement is the third industry in importance. The output in 1913 showed an increase of about \$1,000,000 over that of 1912. The value of the gypsum products in Iowa in 1913 was \$1,157,939, an increase of more than \$300,000 over the preceding year.

EDUCATION. In 1913 the school population of the State between the ages of 5 and 21 was 671,016. The total enrollment in the public schools was 507,845 and the average daily attendance was 369,874. The total number of teachers was 27,432, of whom 24,888 were females and 2544 were males, the average monthly compensation of male teachers being \$83.22 and of female teachers \$49.91. The total expenditures for schools in 1913 was \$16,442,528, and the total number of schoolhouses in the State in that year was 13,858. The Legislature of 1913 passed a measure providing for the teaching of elementary agriculture, domestic science, and manual training in the public schools after July 1, 1915.

TRANSPORTATION. The total mileage of steel railway main track in the State in 1914 was 9998, compared with 9975 in 1913. The total mileage of interurban railways was 452, compared with 448 in 1913. The railways having the longest mileage were the Chicago, Burlington, and Quincy, 1356; the Chicago, Rock Island, and Pacific, 2203; the Chicago, Milwaukee, and St. Paul, 1867; the Chicago and North Western, 1601; and the Chicago Great Western, 772.

FINANCE. The report of the State Treasurer for the biennial period 1912-14 shows a balance on hand on July 1, 1912, of \$1,041,486. The total receipts from all sources for the period amounted to \$11,524,770, and the disbursements to \$11,828,396, leaving a balance on hand June 30, 1914, of \$737,860. The total floating debt of the State on July 1, 1914, was \$142,313; the State has no bonded debt.

CHARITIES AND CORRECTIONS. The institutions under the direct control of the Board of Control for State Institutions are as follows: the Reformatory, Anamosa; Cherokee State Hospital, Cherokee; Clarinda State Hospital, Clarinda; School for the Deaf, Council Bluffs; Soldiers' Orphans' Home, Davenport; Industrial School for Boys, Eldora; State Penitentiary, Fort Madison; Institution for Feeble-minded Children, Glenwood; Independence State Hospital, Independence; State Hospital for Inebriates, Knoxville; Soldiers' Home, Marshalltown; Industrial School for Girls, Mitchellville; Mount Pleasant State Hospital, Mount Pleasant; and the State Sanatorium, Oakdale. The total expenditures for the maintenance of these institutions for the two years ending June 30, 1914, was \$4,546,468. The average number of inmates during this period was 9309.

POLITICS AND GOVERNMENT. The State Legislature was not in session in 1914 as the sessions are biennial and the last was held in 1913.

There were elections for United States Senator, members of the House of Representatives, and for Governor. On February 10 an election was held for a Representative in Congress to succeed Congressman Pepper, who died. Henry Vollmer, the Democratic candidate, was successful. He received 12,285 votes, against 10,435 for H. E. Hull, Republican, and 3672 for Charles P. Hanley, Progressive. The total vote was only 68 per cent of the vote in 1912. At the Republican primary June 1, the Republicans renominated Senator A. B. Cummins and Governor George W. Clarke and at the election in November they were elected, the former by 40,000 over Maurice Connolly, Democrat, and the latter by 25,000 over John T. Hamilton, Democrat. Schenk, Progressive candidate for Senator, polled about 15,000 votes. The total vote cast for Governor was 422,579, as compared with 492,356 in 1912. The Republican vote showed a gain of over 100,000; the Democratic vote a loss of nearly 20,000, and the Progressive vote a loss of nearly 150,000. The Republicans elected 10 members of the House of Representatives and the Democrats one. The Republicans control the General Assembly by 60 majority.

The sterilization law passed by the Legislature of 1913 was declared unconstitutional on June 24 by the United States District Court, and the "blue sky" law, regulating investment companies, passed by the same Legislature, was also declared unconstitutional on July 6.

STATE OFFICERS, 1915. Governor, George W. Clarke, Republican; Lieutenant-Governor, W. L. Harding, ———; Secretary of State, W. S. Allen, Republican; Auditor, Frank S. Shaw, Republican; Treasurer, W. C. Brown, Republican; Attorney-General, George Cooson, Republican; Superintendent of Education, A. M. Deyoe; Adjutant-General, Guy E. Logan—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Horace E. Deemer; Judges, William D. Evans, Frank R. Gaynor, Byron W. Preston, Silas M. Weaver, Scott M. Ladd, Benj. I. Salinger; Clerk, Burgess W. Garrett—all Republicans.

STATE LEGISLATURE, 1915.

	Senate	House	Joint	Ballot
Republicans	36	74	110	
Democrats	14	34	48	
Republican majority	22	40	62	

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

IOWA, STATE UNIVERSITY OF. A State institution for higher education, founded at Iowa City, Iowa, in 1847. The students enrolled in the several departments in the autumn of 1914 were 2678, and the faculty numbered 275. The notable changes in the faculty during the year included the election of Dean McClain to the College of Law, Dean Dean to the College of Medicine, and T. H. MacBride to the presidency of the university. There were no noteworthy benefactions received during the year. The productive funds at the end of 1914 amounted to \$259,733. The annual income amounted at the same time to \$911,707. The library contains about 110,000 volumes.

IRELAND. See GREAT BRITAIN.

IRON AND STEEL. The course of the iron industry in 1913 was unusual in several respects. The production of iron ore, pig iron, and steel ex-

ceeded that of any previous year, and stocks of finished products were reasonably low at the close of the year, yet this apparently favorable record does not accurately reflect the actual conditions for the year as a whole. The activity of the closing months of 1912 characterized the first quarter of 1913, and continued to some extent during the second and third quarters of the year. In the latter part of the year, however, the production of the metals greatly declined and prices dropped nearly to the low level of 1911.

The quantity of crude iron ore mined in the United States in 1913 was 61,980,437 long tons, compared with 55,150,147 long tons in 1912, an increase of 6,830,290 long tons, or 12.38 per cent. The quantity of iron ore shipped from the mines in 1913 amounted to 59,643,098 long tons, valued at \$130,905,558, as compared with 57,017,614 long tons, valued at \$107,050,153 marketed in 1912. Iron ore was mined in 28 States in 1913, compared with 27 in 1912. Of these States, three—Idaho, Montana, and Nevada—produced ores for fluxing only. Half of Colorado's production was for fluxing and half for pig iron; the magnetic ore of Utah was shipped to a Salt Lake iron foundry for testing a new method of reduction and the remainder was used for fluxing; the remaining States produced iron ore for blast-furnace use only, except small tonnages for paint from Georgia, Michigan, New York, and Wisconsin. The five States producing the largest quantity of iron ore in 1913 were Minnesota, Michigan, Alabama, New York, and Wisconsin. The rank of these States remained unchanged in 1913. The Minnesota iron ranges produced in 1913, 62.37 per cent of the output of the United States. The Lake Superior district, comprising all the mines of Minnesota and those in northern Wisconsin, mined 52,377,362 long tons in 1913, or 84.51 per cent of the total production. The accompanying table gives the rank and production of the iron-mining States in 1912 and 1913.

State	Rank	1913	
		Mined	Percent-
		Quantity, in long tons	age of total
Minnesota	1	34,481,768	62.48
Michigan	2	11,191,430	20.29
Alabama	3	4,568,603	8.28

Other States		115,370	.19
Total		61,980,437	100.00

In 1913 there were 411 iron ore mines active, as compared with 382 in 1912. The largest quantity produced by any single mine in 1913 was 3,457,608 long tons of hematite, at the Hull Rust mine, near Hibbing, on the Mesabi Range, Minn. The general average price of all kinds of iron ore in the United States was \$2.19 in 1913, compared with \$1.88 in 1912. There were imported into the United States in 1913, 2,594,770 long tons of iron ore, with a value of \$8,336,819. Of this, Cuba produced approximately 63 per cent and Sweden 14 per cent. Most of the remainder came from Newfoundland, Labrador, Canada, and Spain. The exports in 1913 amounted to 1,042,151 long tons, valued at \$3,513,419. The production of iron ore in the principal countries from 1910 to 1913 is shown in the accompanying table:

Country	1910	1911	1912	1913

^a Shipments.

^b Statistics not yet available.

^c Russia produced 2,936,024 long tons of pig iron in 1910, and 3,536,417 tons in 1911.

^d Exports.

^e Japan produced 66,131 long tons of pig iron in 1910, and 52,223 tons in 1911.

^f Nearly 8 tons of iron (metal) produced in 1910, and 1.5 tons in 1911.

The Lake Superior district was estimated to have shown a decrease of about 37 per cent. Iron-ore prices generally were 50 to 75 cents a ton lower than in 1913. The depression in the iron industry affected seriously the lake carrying trade, which depended largely on the transportation of ore from the Lake Superior district. During the later part of the autumn many iron mines were closed or running on half time.

PIG IRON. The production of pig iron in 1913 was 30,966,152 long tons, valued at \$458,342,345, compared with 30,180,969 long tons, valued at \$420,563,388 in 1912. The average price per ton in 1913 was \$15.08, and in 1912 \$13.93. The production of pig iron in 1912-13 by States is given in the table on page 378.

From this table it will be noted that Pennsylvania ranked first in production of pig iron, followed by Ohio, Illinois, New York, and Alabama. The relative rank of these States remained the same in 1913 as in 1912.

The whole number of furnaces in blast on Dec. 31, 1913, was 205, compared with 313 on Dec. 31, 1912. By grades the production in 1913 was as follows: Bessemer and low phosphorus, 11,590,113 tons; basic (mineral fuel), 12,536,693 tons; foundry and ferrosilicon, 5,220,343. The remainder included forge pig iron, malleable pig iron, spiegeleisen, ferromanganese, and miscellaneous. The imports of pig iron in 1913 amounted to 156,450 long tons, compared with 129,325 long tons in 1912. The

The iron ore mined in the United States in 1914 was estimated by the United States Geological Survey at between 41,000,000 and 42,500,000 long tons, a decrease over the production of 1913, amounting to about 33 per cent.

United Kingdom furnished the largest quantity in both years, with Germany and Canada following in the order of importance. The exports in 1913 amounted to 277,648 long tons, compared with 272,676 long tons in 1912. The

^a Bureau of statistics of the American Iron and Steel Institute.

largest quantity was shipped to Canada and important quantities were also shipped to Italy, England, Australia, Tasmania, Austria-Hungary, Belgium, and Panama.

STEEL. The total production of all kinds of steel ingots and castings in 1913 was 31,300,874 long tons. Of this, 9,545,706 tons was Bessemer, 21,599,931 tons open hearth, and 155,237 crucible and other kinds. The largest production of Bessemer steel was in Ohio, while Pennsylvania led in the production of open hearth. The production of steel by the electric process in 1913 amounted to 30,180 tons, as compared with 18,309 tons in 1912, an increase of over 64.8 per cent. See METALLURGY, section on *Iron and Steel*.

IRRIGATION. Throughout the world the year 1914 was one of comparative inactivity in the undertaking of new irrigation enterprises. This is particularly true in the western hemisphere. Another noticeable fact is that nowhere in the world is any construction of irrigation works of any magnitude being carried on by any but governmental agencies, except that in Canada by the Canadian Pacific Railway, which is subsidized by the government. The progress of irrigation development for the year 1914 is summarized in the following paragraphs.

UNITED STATES. Irrigation construction in the United States has been confined almost exclusively to projects of the United States Reclamation Service, begun in former years. While that service has been expending large sums in pushing to completion projects begun in former years, it has been devoting much more attention than formerly to the problems of settlement. The annual report for 1913 showed that but little more than one-half of the land to which the Service was ready to supply water was actually being irrigated. In addition to this, there was continual complaint on the part of settlers on the land, that they were not able to meet the payments due from them to the government. In response to these conditions Congress enacted a law extending the time of repayment under government projects to 20

years. A further provision for aiding settlers on these projects was an appropriation to the Department of Agriculture providing for the employment of agricultural advisers for settlers on reclamation projects.

The annual report of the Reclamation Service for the fiscal year ended June 30, 1914, shows the condition of the Service to be as follows: The total receipts from the sale of public lands credited to the reclamation fund up to June 30, 1914, were \$81,813,772.71, and the estimated receipts for the balance of the calendar year were \$2,616,000, making a total of \$84,429,772.71. In addition to this, the Service had available a loan from the treasury of \$20,000,000, and the receipts from repayments to the fund. The total allotment to projects was \$110,209,956, and the amount expended was \$91,664,628. The acreage included in projects is 2,921,165, and the service was ready to supply water for the season of 1914 to 1,343,193 acres. The acreage covered by water-right applications and rental agreements—that is, the acreage covered by some sort of agreements to take and pay for water—was 983,487 acres. The acreage irrigated in 1914 was about 750,000, an increase of 50,000 acres over the acreage irrigated in 1913. There was therefore an acreage of 359,706 acres for which water was available that was not covered by agreements, and an area of 593,193 acres for which water was available that was not irrigated. Under the Reclamation Law the cost of construction is to be returned to the reclamation fund, originally in 10 annual installments, now 20, these payments to begin on publication of notice by the Secretary of the Interior fixing the cost and the dates of repayment. Such notices have been published for only a part of the projects, the others being operated under temporary rental agreements. To June 30, 1914, the receipts from payments of building charges amounted to \$3,058,459.41; those from operation and maintenance charges amounted to \$1,895,827.88, while temporary water rentals amounted to \$2,248,615.57.

The operations under the Carey Act (Act of Aug. 18, 1894, granting public lands to the

States on condition that they provide for their reclamation by irrigation) further indicate the lack of activity in new irrigation enterprises. During the year ended June 30, 1914, there were applications for segregations under this law covering 21,766.48 acres, there was segregated an area of 6237.70 acres, and there was patented 30,006.16 acres. From the date of the passage of the act to June 30, 1914, the acreage applied for was 7,682,445.33 acres, the acreage segregated was 3,692,230.01 acres, and the area patented was 460,054.23 acres.

The general stagnation in irrigation construction during the year has led to much discussion of possible methods of reviving irrigation development. The immediate cause of the cessation of irrigation construction is the impossibility of financing new enterprises, and most of the discussion has related to this matter. The most common proposal is the placing of the credit of the States or the Federal Government behind the securities to be sold for the purpose of raising funds. Various schemes for accomplishing this are proposed, the most common one being the guaranteeing of interest on irrigation district bonds by either the State or the Federal Government. It is also proposed that the Federal Government accept district bonds in payment of construction charges on the reclamation projects, thus releasing the reclamation fund for new projects. A Federal bond issue of \$100,000,000 for new projects is also proposed. With the present condition of Federal revenues and the lack of effective demand for irrigated land it does not seem likely that any of these proposals will be realized.

The existence of large unused areas under both Federal and private projects has led to much discussion of colonization. Men without capital can not meet the financial requirements, and there is no large demand for the land from men with capital. This condition has led to much discussion of the desirability of aiding settlers and of methods of doing this. The extension of the time of payment on reclamation projects to 20 years is a step in this direction, but it is quite generally believed that the success of both Federal and private projects will require still further aid in putting settlers on the land and giving them a start. Plans for accomplishing this have not been formulated.

CANADA. The year 1914 has witnessed but little new construction in Canada. The Canadian Pacific Railway, which is doing most of the irrigation construction in Canada, is engaged largely on the problems of settlement of the lands already supplied with water. Experiments in aiding settlers have been made but without marked success so far. This aid has taken the form of selling "ready made farms" on easy terms, and the making of liberal loans for improvements on lands bought on other plans. During the year the Province of British Columbia adopted a comprehensive code of water laws based on those of some of the Western States of the United States. This code includes provisions for public control of sources of water supply and also provision for the formation of irrigation districts similar to those of the Western States.

MEXICO. The unsettled conditions in Mexico have prevented any attempt at irrigation development.

PERU. In 1913 the Peruvian government au-

thorized a bond issue of £2,000,000 sterling, the proceeds from which are to be used exclusively for irrigation and colonization. The bonds are to run for 30 years, bear $5\frac{1}{2}$ per cent interest, and may not be sold for less than $87\frac{1}{2}$. The law provides that the government may do the work directly or through concessions, or may guarantee the interest on bonds issued by those holding concessions. So far the work done has consisted of investigations of various possible projects, all of which are on the coastal plain.

ARGENTINE. The Argentine government has, during the year approved several small projects, but no large development has taken place. In most cases the national government provides the funds for construction in the form of loans to the provinces, which repay them on easy terms. Projects approved during the year are to cost a little less than \$2,000,000.

SPAIN. The Spanish government has authorized but little construction during the year. The most notable project is the dam on Turon River, to provide water for about 25,000 acres.

RUSSIA. The Russian government is proposing the reclamation of a tract of 8,000,000 acres in Samarkand Province, Turkestan, at a cost of \$360,000,000. The object of the proposed development is the production of cotton.

EGYPT. In the last year Egypt experienced the lowest Nile in a century, and as a consequence many crops were short. The rice crop was almost a total failure. There was little new development. Plans for dams on both the Blue and the White Nile are being prepared, and it is expected that several hundred thousand acres will ultimately be reclaimed. This development has not yet begun.

SOUTH AFRICA. The government of South Africa has undertaken to aid irrigation development principally by the granting of loans to small projects. Up to 1914 it had expended \$4,136,000 in this way, and the expenditures authorized for the year ending March 31, 1915, are \$2,677,000. In addition the government is constructing two large projects to reclaim 35,000 and 63,000 acres respectively.

TURKEY. Work on the dams and canals for the reclamation of the valleys of the Tigris and Euphrates Rivers is being pushed forward but they are not yet completed.

INDIA. India showed greater activity in irrigation construction in 1914 than any other country. In the Punjab the great triple project, the Upper Chenab, the Upper Jehlum, and the Lower Bari canals, begun in 1912, were about two-thirds completed at the beginning of the year and it was estimated that they would be approximately completed during the year. These canals will provide for the irrigation of about 2,000,000 acres. The Upper Swat Canal in the Northwest Frontier was formally opened in April, 1914. It will irrigate about 400,000 acres. In the Bombay Presidency canals on the Upper Godavari River irrigating about 70,000 acres were completed in 1914, and other works estimated to cost \$140,000,000 are being planned and begun.

SIAM. Last year the government of Siam made a grant of \$37,000 for irrigation studies, and the budget for 1914-15 provides \$362,230 for the establishment of a regular irrigation department. The works to be built have not yet been decided upon.

AUSTRALIA. The Commonwealth and the

States have agreed upon a scheme for improving the Murray River at a cost of \$25,000,000, to be shared by the Commonwealth and the States. It is estimated that this will provide for the irrigation of 1,500,000 acres, in addition to making the river navigable. In New South Wales the Burrinjuck dam is nearing completion and the government is investigating the feasibility of a similar project on the Clarence and Mitchell Rivers. In Victoria the irrigation work of the year has consisted principally in settling the areas already supplied with water. Further construction is proposed but has not yet been taken up.

IRVING, LAURENCE SYDNEY BRODRIBB. An English actor and playwright, died May 30, 1914. He was the second son of the famous actor, Sir Henry Irving, was educated at Marlborough College, and at the College Rollin, Paris, and afterward spent three years in Russia, studying for the Foreign Office. His first appearance on the stage was made at Dundee in 1893 with Benson's Shakespearean Company. From 1894 to 1896 he was associated with J. L. Toole, and after various other engagements he joined his father's company of players from 1900 to 1904. In the following year with his wife he appeared with his own company, creating the part of "Crawshaw" in *Raffles*. In 1908-09 he produced several plays in the United States and England. He undertook the management of the Garrick Theatre in 1910, producing *The Unwritten Law*. This was followed by tours in the United States and other countries. Mr. Irving perished with his wife in the sinking of the steamship *Empress of Ireland* in a collision with the collier *Storstad* in the St. Lawrence River on May 30, 1914. His published writings include: *Peter the Great*; *Bonnie Dundee*; *Translations of Sardou's Robespierre*; *Dante*; *Maxim Gorki's The Lower Depths*; *Richard Lovelace*; *The Unwritten Law*; *The Terrorist*; *The Phoenix*; and *The Typhoon*, all plays. Although Mr. Irving never attained the distinction of his father, he was well and favorably known as an actor in the United States and England.

IRWIN, AGNES. An American educator, died Dec. 5, 1914. She was born in Washington, D. C., in 1841, and was educated in private schools. She conducted private schools in New York and Philadelphia until 1894, when she was elected dean of Radcliffe College, serving in that position until 1909. In 1900 she was commissioner from Massachusetts to the Paris Exposition, and she served also as commissioner for that State on the adult blind. She received the degrees of Litt.D. from the University of Pennsylvania, and LL.D. from St. Andrew's University.

ISHAM, SAMUEL. American artist and art critic, died June 12, 1914. He was born in New York City in 1855, and graduated from Yale in 1875. His art education was obtained in Paris, where he began to study in 1883. He returned to the United States in 1887 and followed his profession in New York City. He was a figure painter, and his picture which has probably been exhibited most often is "In the Park," which won the silver medal at the St. Louis Exposition in 1904. He also exhibited "The Apple of Discord" at the Pan-American Exposition in Buffalo. Mr. Isham was perhaps better known as a critic and writer on art subjects, than as an artist. His *History of American Painting* is a work of great importance. He was also an au-

thority on, and a collector of, old Japanese color prints, and was a member of many art and literary societies.

ISOSTASY. See GEOLOGY.

ITALIAN LITERATURE. A glance at the continuous output of Italian literature in 1914, which the crisis of August checked for a moment, but only for a moment, presents the Italian mind still occupied with what have been its main concerns for the past decades: the interpretation of regional life, particularly in the short story, makes up its most characteristic feature; while the national spirit, which seeks the common bonds between Italy's divergent regional tempers, continues to exploit the memories of the past and the actual problems of faith and the Church in relation to contemporary life. If one asks why Italian literature exerts at present a relatively slight international influence, the answer is doubtless to be found in these facts. For Italy is still concerned pre-eminently with the consolidation of its own national consciousness—distinctly a national and local concern.

A positive action upon European and American thought—if we exclude futurism, in Marinetti, Buzzi, and their followers, and journalism, which in Guglielmo Ferrero still extends to social criticism the methods of Lombroso—appears from Italian literature only in the critical school of Benedetto Croce. The *Estetica* of Croce is now 14 years old. That in this interval Croce's revival of Vichian aesthetics has profoundly affected Italian criticism and even Italian education there can be no dispute. To be sure the positivistic school that centres vigorously around the *Giornale storico della letteratura italiana*, edited from Turin by Ridolfo Renier, has lost little of its prestige, so deeply does the study of the past for its own sake answer, as we said above, one of the strong tendencies of growing Italian nationalism. It is rather that historical criticism has been forced into a new consciousness of its purposes and *raison d'être*. Without Croce we may say that such a critic as Guglielmo Borgeese, who writes regularly in the *Corriere della sera* (one of the most important European dailies, edited from Milan), and who directs the *Nuova Cultura* (Turin), could not have developed his incisive method or found such a wide audience. Croce's influence at home has not, moreover, depended on his followers alone. His monthly *Critica* (Bari) has set for itself the task of applying the Vichian principles, as criticised and elaborated by Croce, to the interpretation particularly of Italian literature and Italian thought of the nineteenth and twentieth centuries. Croce's own articles, forming a remarkable body of essays, have just been collected and published at Bari (*Saggi di letteratura italiana*). We may note in passing that an incidental tendency of the Crocian movement, explained by his Neapolitan origin without doubt, is to stress perhaps to excess the product of Southern Italy, both in literature and philosophy. Nevertheless such an imposing series as the *Scrittori d'Italia*, ultimately to reach 600 volumes, testifies to the broad outlook of Croce himself. Philosophically the Crocians have strenuously revindicated idealism of the Hegelian type against nineteenth-century empiricism. There was a chance that in the Florentine group of pragmatists, headed by Pannini, a new move-

ment of Italian thought, independent of all the older traditions, might arise. But in 1914 Pannini seems to have been swept away from careful study into the vortex of the propaganda for the *new nationalism*. Croce, meanwhile, can look with complacency upon a considerable following in Germany, England, and America; nor has his thought been entirely without effect upon the French syndicalists. Consult L. Tonelli, *La critica letteraria negli ultimi cinquant'anni* (Bari, Laterza).

The Italian public is continually exercised over the small universal significance of its literary production. Perhaps nowhere is so much artificial stimulus offered for excellent work. Yet oftentimes, as in the case of the prizes announced by the Società Drammatica of Rome, awards are withheld for lack of worthy presentments. The theatre, in fact, is a subject of special concern at present. For work of the first order one still has to depend on Roberto Bracco, who is rehearsing a new play, *La principessa*; on revivals of E. A. Butti, deceased in 1907; on Arturo Venturi and Giannino Antona-Traversi (who represent, with debatable literary value, the best stage-sense of the average contemporaries); even on Sem Benelli, who, after selling out his old stock to the "movies," is likewise threatening another historical novelty. Pirandello has written *Se non così* and *Il piacere dell'onestà*, D'Annunzio an *Amaranta*, while Amelia Rosselli has added to her list another delightful Venetian drama, *San Marco*. To elevate the tone of the stage the city council of Rome voted in February the sum of \$5000 for the Argentina theatre, and the maintenance of a permanent stock-company of the best actors. It will be interesting to watch whether this attempt will ultimately bring forth an Italian national theatre comparable at all to the Comédie Française. Rome, of course, is far from representing to Italy what Paris does to France. The problem rather takes the form of establishing a series of communal subsidized theatres. A well-defined propaganda is on foot in this direction, taking as its point of attack the star-system in the formation of companies, which prevents evenly balanced productions and the development of beginners of genius, and the tour system of presentation, which rests on the economic considerations only and tends to neglect the best classic materials as well as serious efforts of new authors not aimed essentially at popularity. A fine idea of the problems of the contemporary theatre in Italy as well as their history may be found in the new memoirs of Antonio Salsilli, *Tra un atto e l'altro* (Palermo, Sandron).

For the short story and novel let us mention simply the names of some of the most typical writers: Alfredo Baccelli (*La via della luce*), Gino Maffei (*Signora vita*), Giuseppe Lipparini (*La vista pastorale*), Virgilio Brocchi (*Il laberinto*), Rina Maria Pierazzi (*L'inutile attesa*), Gino Ricchi (*Sorrisi*), Cesare Schiapperelli (*Novelle strambe*), and Ferruccio Luppis (*La ruota*); noting, however, the indefatigable activity of Grazia Deledda (*Le c'âlpe altrui*) and passing over with some regret the representative tales of Roberto Bracco's *La favola e la vita*. For it is in the surprisingly rich output of verse during 1914 that one seems to get most closely in touch with the intimate pulse-beat of Italian aspiration. Read the *Dominante* of

Apartaco Myratti: typical of the backward outlook of the Italian middle class, for here he reflects the delusion of a woman's sensualistic life on the background of the fall of Venice. And the same fascination of the past for the younger generation appears in the *Inni alle navi* of Giacomo Bulgarelli. For the reflection of regional life, we have the Sardinian poems of Sebastiano Satta, and more important still, in their inevitable suggestion of Fucini's best manner, the Pisan sonnets of Giuseppe d'Angiolo. The Modenese dialect is turned in *I mée rechiem eterna* of E. Stuffer to a more personal poetry over which broods the melancholy of death; while from the region of Rome, the poems of Trilussa, in their new edition, are assuming almost the scope of Belli's work. Does Italian middle class life, meanwhile, offer only delusion to its most sensitive spirits? The poetic personality of Rosmunda Tomei Finamore is now becoming well defined. Through her earlier work ran a vein of bitterness and sarcasm. In her new *Rime sentimentali* experience has shown her that life "after a brief period of illusion offers nothing but devastation and sorrow"—which she expresses in a splendid *Francescana*, parodying the *Laudes creaturarum* of Saint Francis. Disillusion, too, informs the *Eliotropia* of Eugenio Treves, saved perhaps by a humorous resignation that seeks the title of the new poems in the humor of Boccaccio. Disillusion again in the *Carmi della città d'oro* of Paride Chistone, who does indeed seek poetry in gayer subjects, but who finds it only in the sadness of *Mimi e Cesco*. Disillusion ungarnished finally in the *Lenta Viburna* of Ariele Callofilo and only to a less extent in the *Parole* of Antonio del Mastro. The trouble is that not only in verse does this spirit reveal itself. Unmitigated despair breathes from the *Novelle napoletane* of Salvatore di Giacomo, and similar is the mood predominant in most of the analytic studies of popular life. In the past men like Butti and Fogazzaro have sought relief from this in Catholic idealism; Carducci and D'Annunzio in the sensuousness of the Hellenic spirit or in patriotism. It is clear, nevertheless, that in spite of all recent history the romantic virus in Italy runs deep; and if new ideals have appeared at all, they are found, and inarticulate at that, among the futurists.

ITALIAN SOMALILAND. An Italian colony and protectorate in northeast Africa. Area, 365,400 square kilometers, or 141,081 square miles. Estimated population, 300,000. Imports 1912, 5,533,462 lire; exports, 2,055,018. Budget 1912-13, 6,534,856 lire. Mogadisho is the headquarters.

ITALY. A constitutional monarchy of southern Europe, including the Apennine Peninsula, the islands of Sicily, Sardinia, Elba, and about 66 minor islands. Capital, Rome.

AREA AND POPULATION. The compartimenti composing the kingdom, the number of provinces in each compartimento, the area in square kilometers, and the *de facto* population, Feb. 10, 1901, and June 10, 1911, are given in the table below:

	P	Sq. km.	1901	1911
Piedmont	4	29,367	3,317,401	3,424,450
Liguria	2	5,278	1,077,473	1,197,231
Lombardy	8	24,085	4,282,728	4,790,473
Venetia	8	24,547	3,184,467	3,527,360
Emilia	8	20,701	2,445,035	2,681,201

* 110.688 square miles.

PRODUCTION. Of the total area 70.6 per cent is productive. The soil is exceedingly fertile, and cereals, wines, olives, olive oil, citrus, and other fruits, with root and industrial crops, are produced in abundance. In the table below are shown principal crops, with area planted in hectares, and production in quintals for two years, with yield per hectare in 1913-14:

	1910	1911
A	476,269	509,831
B	10,011	9,500
C	97,976	108,805
D	18,295	22,298
E	289,746	288,914
F	84,809	82,027
G	42,456	50,358

* Production of seed; fibre production was 25,000 qrs. in 1913-14. † Production in hectoliters.

Live stock 1908: 849,723 horses; 388,337 mules; 6,198,861 cattle; 11,162,926 sheep; 2,714,878 goats; 2,507,798 swine; 19,266 buffaloes. The total forest area, exclusive of chestnut plantations is about 4,000,000 hectares, and in 1909 the value of the forest products was reported at 124,132,000 lire. The department of forestry was reorganized June 2, 1910, under a director-general of forests. The output of chemical industries was valued in 1912 at 181,000,000 lire. The total number of industrial establishments returned by the census of June 10, 1911, was 243,985, with 2,305,698 employees, and 1,573,774 aggregate horsepower. In the table below are shown productive mines in operation in 1912, the operatives employed, output in metric tons, and value in lire.

There were 70,914 persons employed in the quarries in 1912; total value of output, 64,258,333 lire. Employed in lime and brick kilns, 106,730 persons; value of output, 189,211,416 lire.

In the fishing industry 28,402 boats, with a tonnage of 78,981 were employed Dec. 31, 1911; persons engaged; 127,792; value of total catch in home waters, 24,265,000 lire, of which 4,111,000 lire from the tunny fisheries and 75,320 from coral fisheries.

COMMERCE. The totals for three years of imports for consumption and exports of domestic produce, merchandise, with the countries of origin and destination and the value of their trade, are shown below in thousands of lire:

<i>Imports</i>		<i>Exports</i>	
<i>1912</i>	<i>1910</i>	<i>1911</i>	<i>1912</i>
577,130	210,356	222,797	264,406
7,640	4,965	2,719	2,525

In thousands of lire are given in the table below some details of the special trade for the year 1912:

Imports	1000 lire	Exports	1000 lire
Wheat	399,737	Raw silk	364,190
Coal and coke	362,060	Cotton mfrs.	158,922
Raw cotton	342,627	Silk mfrs.	103,762
Machinery	98,302	Olive oil	57,093
Timber	134,374	Wines	78,809
Raw silk	44,055	Cheese	79,140
Pig iron	26,736	Dried fruits	130,826
Wool	24,840	Hemp (raw)	51,781
Coffee	48,347	Hides	48,431
Instruments	68,776	Eggs	48,400
Hides	133,285	Sulphur	39,080
Oats	29,081	Flour	22,193
Horses	29,944	Pulp of wheat	32,547
Silk mfrs.	48,252	Yarn, etc.	32,657
Fish (dried)	43,884	Hair	14,989
Fish (in oil)	11,828	Automobiles	35,896
Silk cocoons	44,055	Fresh vegetables	19,569
Woolen mfrs.	53,768	Straw hats	14,091
Ships and boats	14,188	Marble, etc.	40,343
Scrap iron, etc.	30,936	Rice (cleaned)	35,202
Tobacco	34,559	Worked coral	19,381
Oil seed	35,057	Straw plaiting	3,413
Copper, etc.	60,535	Poultry	15,183
Petroleum	16,985	Felt hats	28,915

The total transit trade amounted to 77,878,000 lire in 1910, and 78,754,000 in 1911. Imports of precious metals in 1910 amounted to 31,065,700 lire; in 1911, to 28,896,500; in 1912, to 25,906,000—making the total imports for the three years 3,277,041,661, 3,418,194,053, and 3,727,828,000 lire, respectively. Exports of precious metals amounted to 48,116,400 lire in 1910, 42,091,700 in 1911, 41,475,000 in 1912—making the total exports for three years 2,128,093,776, 2,

246,365,199, and 2,438,402,000 lire, respectively.

The total number of vessels entered at Italian ports in the 1911 trade was 173,437, of 56,050,306 tons, of which 159,647 vessels, of 35,924,881 tons, were Italian; cleared, 173,353, of 56,082,448 tons, of which 159,552, of 35,945,206 tons, were Italian. The merchant marine included Jan. 1, 1912, 757 steamers, of 696,994 tons, and 4713 sailing, of 410,991 tons; a total of 5470 vessels, of 1,107,985 tons.

COMMUNICATIONS. Open for traffic March 1, 1913, were 17,634 kilometers of railway, 13,769 operated by the State. Tramways in operation, 5150 kilometers. The Italian State railways in 1914 placed contracts aggregating \$10,446,974 with 17 Italian firms for 885 baggage and passenger cars, and 4481 freight cars. In Sicily the State-owned railway system has a total length of 839 miles, all standard gauge except the 46 miles of 3-foot 1-inch gauge. Train service is also maintained across the Straits of Messina, a distance of 14 miles. The Turin-Savona Railway during 1914 inaugurated electric operation for passenger traffic on the section of the line across the Apennines between Savona and Cera, a distance of 29 miles, which is the heaviest part of the line, including the Belbo tunnel, about 3 miles in length, with maximum grades of 2.5 per cent. The maximum speed is 31 miles per hour. During the year 34 new 3000-volt, 3-phase, 16 $\frac{2}{3}$ -cycle locomotives were ordered for the electrically equipped sections of the Italian State Railways, which were in course of extension. These motors were designed to develop

1300-horsepower each, at 45 miles an hour, and by various connections, economical speeds were obtained at 22, 30, 45, and 60 miles an hour. There were in operation June 30, 1911, 51,172 kilometers of telegraph lines, and 311,584 of wires; State telegraph stations numbered 5874, and railway and other stations 1994. There were 20 wireless stations, and 125 on board vessels. The urban telephone system had 12,089 kilometers of lines, and 192,838 of wires; inter-urban lines had a total length of 31,354 kilometers, with 60,905 of wires. Post offices numbered 10,238 in 1911.

FINANCE. The monetary unit is the lira, par value 19.295 cents. Revenue and expenditure for three years are shown below in lire, 1912-13 being provisional only:

	1910-11	1911-12	1912-13
Revenue	2,838,164,212	2,682,640,373	2,698,620,121
Expend.	2,753,625,043	2,628,425,632	2,615,208,705

In the table below are shown in thousands of lire the details of the budget for the year ending June 30, 1914:

Revenue	1000 l.	Expend.	1000 l.
Real property.	12,830	Treasury	638,625
Railways	39,225	Finance	328,269
Various	4,036	Justice	55,476
Land tax	81,800	Foreign Affairs.	25,156
Income tax	313,000	Instruction	137,634
House tax	106,000	Interior	132,990
Succession	48,000	Public Works	58,215
Registration	96,503	Posts & Tels.	132,198
Stamps	85,000	War	363,652
Traffic	40,350	Marine	226,707
Various	64,900	Agriculture, etc.	27,735
Excise	210,230	Total ordinary	2,126,662
Customs	266,700	Extraordinary:	
Octrois	122,092	Treasury	229,321
Tobacco	327,030	Finance	3,828
Salt	89,300	Justice	203
Lotteries	106,000	Foreign Affairs.	608
Quinine	2,700	Instruction	8,111
Posts	122,030	Interior	4,718
Tels. & Tels.	40,800	Public Works	144,010
Repayments	87,265	Posts & Tels.	5,526
Various	68,789	War	63,677
Virements	64,064	Marine	30,028
		Agriculture, etc.	7,245
Total ordinary	2,397,738	Total	2,620,937
Extraordinary	198,801		
Total	2,656,995		

The nominal capital of the consolidated and redeemable debt stood at 13,429,361,597 lire, July 1, 1912, and the interest amounted to 451,085,681. The interest, including premium of the total public debt, 1912-13, was 523,084,574; sinking fund, 1,921,047. The total estimated value of State properties, including funds in treasury, was 8,070,563,526 lire, June 30, 1911.

ARMY. While the Italian army was not actually engaged in war during the year 1914, yet it was believed that a crisis was impending and the effective strength was increased, and the army was mobilized, looking towards its extension on a war basis. The Italian army in 1914 was organized in 12 corps, each of two divisions, and the first line was estimated to consist of 310,000 men available. In addition there was maintained a considerable active reserve and a mobile militia. Military service in Italy was compulsory by the terms of the law of June 30, 1910, and extends from the twentieth to the thirty-ninth year. The service consists of two years in the active army for those actually

called to the colors, while the second class spend a shorter time, practically but a few months, while the third are allowed to go on unlimited leave. Those free from service in the permanent army are enrolled in the mobile militia, and are called out from time to time for instruction. The territorial militia is made up of others available for service and a limited amount of training is given them. For the mobile militia there existed cadres for 75 regiments of infantry and 23 Alpine battalions, so that the various regiments could be readily raised to full strength. The number of squadrons of cavalry and battalions of artillery in the militia had not been formally decided on, as was the case with other arms of the service. For the territorial militia, 324 battalions of infantry were contemplated, and 75 Alpine companies forming 26 battalions, as well as 100 companies of coast and fortification artillery and 30 companies of engineers. Inasmuch as the Italian army was mobilized and greatly augmented in 1914 its organization on a war basis is of interest. This scheme contemplated four armies, each composed of 2, 3, or 4 army corps, 1 division of cavalry, 2 or 3 companies of sappers and miners and pontoon troops with their equipment, 1 aeronautical section, 1 park of artillery, 1 park of engineers, the field hospital, and other technical troops. There would be 12 army corps, each comprising 2 divisions and eventually 1 division of the mobile militia, 1 regiment of bersaglieri, of which the fourth battalion were to be cyclists, 1 regiment of cavalry, 1 regiment of artillery, 1 company of telegraphers, 1 park of artillery, and various technical and other troops, making the effective strength of an army corps 50,062 men, 6330 horses and 126 guns. The infantry accordingly would form 24 active divisions with 12 from the mobile militia, each division comprising 2 brigades of infantry, 1 regiment of artillery, and 1 company of sappers, 1 ammunition column and medical and subsistence troops, while the divisions of the militia would include in addition 1 or 2 battalions of bersaglieri, 2 or 3 squadrons of cavalry, and its artillery would be organized in two sections. Accordingly the effective strength of an active division would be on a war footing, 14,156 men, 1399 horses, and 30 or 36 guns; the three divisions of independent cavalry would each comprise 2 brigades of 2 regiments, 1 group of horse artillery of 2 battalions, 1 cyclist battalion, 1 park of artillery, and section of medical and subsistence troops, making an effective of 4138 men, 4165 horses, and 12 guns. The three groups of Alpine troops include in the active Alpine battalions, the companies of the mobile militia and the battalions of the territorial militia with the guns. The militia are incorporated within the battalions of active Alpine troops which include 3, 4, or 5 companies. The figures for the mobilization of Italy in 1914 as in the case of the other nations were not available, and any statement of the strength is more or less a conjecture. The effective strength of the army including the forces actually mobilizable were authoritatively estimated as follows before the outbreak of the European War, and the mobilization: Permanent army first line actually under arms 250,000 men, including the permanent cadres, 2 classes, on leave 550,000 men, in 7 classes, in the second line or mobile militia 350,000 men, in 4 classes, in the third

line or territorial militia 500,000 men, in 6 classes.

NAVY. The number and displacement April 1, 1914, of warships built of 1500 or more tons, and of torpedo craft of 50 tons and over, were as follows: 3 battleships (dreadnought type), having a main battery of all big guns, 11 inches or more in calibre, of 62,644 tons (and 7, of 187,150 tons estimated, building); 8 battleships (predreadnought type), of 96,100; 9 armored cruisers, of 74,020; 6 cruisers, of 18,830 tons (and 2, of 4888 tons, building); 36 torpedo-boat destroyers of 16,807 tons (and 15, of 14,203 tons, building); 68 torpedo boats of 11,584 tons (and 2, of 272 tons, building); 19 submarines, of 5475 tons (and 8, of 5842 tons, building)—a total tonnage built of 285,460, and 212,355 building, making a total tonnage built and building of 497,815. Excluded from the foregoing are ships over 20 years old, unless reconstructed and rearmed within 5 years; torpedo craft over 15 years old; transports, colliers, repair ships, torpedo-depot ships, and other auxiliaries. The Italian navy classes armored cruisers as battleships. The authorized personnel is 40,063. The programme projected in 1914 contemplated the completion by 1916 of dreadnoughts to make a total of 10 in commission.

GOVERNMENT. The King (1914, Victor Emmanuel III) is the executive, acting through a responsible council of 11 ministers. The legislative authority is vested conjointly in the King and a Parliament composed of a Senate of 318 members, and a Chamber of Deputies of 508. The King is required to convoke Parliament annually, but may dissolve it at will. Heir-apparent, Prince Humbert, born Sept. 15, 1904. The ministry, as constituted March 24, 1914, is given in the paragraph on *History*.

HISTORY

THE CABINET CRISIS IN MARCH. A storm of hostile criticism greeted the Finance Bill which the Giolitti ministry submitted to the Chamber on February 3. The dissatisfaction was caused chiefly by the fact that the Finance Bill contained a number of new taxes—taxes on cinematograph exhibitions, taxes on bottled mineral waters, a higher tax on motor vehicles, and readjustments of the succession and stamp duties—calculated altogether to increase the revenue by 47,000,000 lire. The burden of taxation had been made enormously heavier, as the whole country knew, by the expenses incurred in the occupation of Libya, which had reached the figure of 1,150,000,000 lire by the end of 1913, and by the additional expenditure upon armament necessitated by Italy's enhanced importance as a Mediterranean Power. Four new dreadnoughts designed by Signor Ferretti were to be completed by 1916, and after that one capital ship a year was to be constructed up to 1921. But paying for these gratifications of Italy's national pride was a decidedly disagreeable matter. The difficulty was further increased by the division of opinion in the cabinet as to how the new taxation should be distributed. The Radical members of the cabinet, Signor Sacchi and Signor Credaro, already at variance with the premier on other questions of social policy, seized this occasion to present their resignations. The revolt of the Radical members of the ministry synchronized with the declaration of a general

strike in Rome. Realizing the weakness of his position, and foreseeing, perhaps, that he could only injure his own prestige by attempting to remain in power, Signor Giolitti on March 10 tendered to the King the collective resignation of his cabinet. Baron Sonnino refused to take up the reins of government which Giolitti had let fall. Signor Salandra, however, undertook and accomplished the delicate task of forming a cabinet representative of all parties except the Clericals. The constitution of the cabinet was as follows: Premier and minister of the interior, Salandra; foreign affairs, Marquis di San Giuliano; colonies, Martini; justice, Daneo; public works, Rava; treasury, Rubini; agriculture, Dari; public instruction, Fusinato; finance, Ciuffelli; posts and telegraphs, Riccio; marine, Rear Admiral Millo; war, General Grandi. The new ministry presented itself before the Chamber on April 2. In point of policy the Salandra ministry appeared to differ but little from its predecessor, and declared its adherence to most of Signor Giolitti's programme. In discussing the unfavorable financial situation, the premier announced that in order to relieve the present tension, Treasury bonds to the amount of \$10,000,000 would be put into circulation. The vote of confidence was passed by 303 to 122. On May 7 the government embodied its financial proposals in a bill to increase the succession duties, as well as the taxes on theatres, mineral water, motor cycles, promissory notes, and revolver licenses. These, together with an increased excise tax on spirits and tobacco, were expected to bring in about \$20,000,000. So obstinate was the opposition which the Socialists offered to these proposals, that when the Parliament rose for the summer vacation in July, the budget had not yet been voted and the new taxes were still unauthorized. Signor Salandra, however, was not thus easily to be thwarted. By provisionally promulgating the new taxes, without Parliamentary authorization, he obtained the desired augmentation of the public revenues and rendered nugatory the obstruction which the Socialists had so assiduously practiced.

ANTIMILITARISM AT ANCONA. Antimilitarism in Italy was intimately bound up with the industrial agitation of the laboring classes, and led during the course of the year to violent conflicts between the government and the partisans of a social revolution. The temper of the Italian Socialists was demonstrated in January when the fourth constituency of Milan elected to Parliament Sr. Amilcar Cipriano, a zealous advocate of violent revolution, who forty years previously had been convicted of manslaughter. Throughout the spring the government had been constantly threatened with a general strike on the part of the railway employees. The trial of strength did not come until June, however. June 7, the national holiday, had been fixed as the day for general antimilitarist demonstrations throughout Italy. The government had prohibited the holding of such demonstrations. At Ancona, in defiance of the government's prohibition, a demonstration was nevertheless organized, and resulted in a clash with the police, who fired into the mob, killing two and wounding four persons. In protest against the action of the police, a general strike was declared at Ancona. Socialists and Syndicalists in other cities likewise went on strike. For a day or two there seemed to be some danger of a concerted revo-

lutionary movement of the organized laboring classes which would overturn the government and the social order. In several places "the Republic" was proclaimed. Strikers and police frequently came to blows, and the police were not always the victors. But starting in Venice and in Rome a reaction set in against the strike, and the government exerted itself powerfully to restore order, with the result that the general strike was brought to an end on the night of June 10. Administrative elections held a fortnight later resulted in a defeat for the Socialists at Florence, Pavia, Bergamo, Brescia, and Savona, although at Bologna the Socialists carried the day. In July the determination of the government to punish the 15,000 employees of the State railways who had participated in the revolutionary movement of June 8, 9, 10, precipitated a new crisis, and the government called the reserves of the class of 1891 to the colors in anticipation of a railway strike. For further details in regard to the Italian strikes, consult the article on STRIKES.

CHANGES IN THE SALANDRA CABINET. With the reasons for Italy's refusal to join Germany and Austria-Hungary in the war against the Triple Entente, the article on the WAR OF THE NATIONS deals in detail. In this place it remains to remark that the war, and the possibility of Italy's entering into the conflict, so intensified the controversial questions of militarism and finance that Premier Salandra found it necessary to make several changes in the constitution of his cabinet. In the first place a quarrel arose between the minister of war, General Grandi, and the new chief of the general staff, General Cadorna, because the minister would not agree to the costly military reforms which General Cadorna regarded as absolutely essential. Early in October the cause of military preparedness triumphed, and General Grandi was superseded by General Zupelli, a veteran of the Tripolitan war, and a sympathizer of General Cadorna's. A cabinet council on October 9 authorized the expenditure of \$11,360,000 to keep the reservists with the colors up to December 31; \$8,994,756 for warlike preparations due to the war situation; \$9,200,000 for winter equipment and stores; \$1,500,000 to increase the garrisons in Libya and the Ægean Islands by 30,000 men; \$900,000 for the purchase of motor wagons for the army; \$1,154,400 for the mobilization of the navy; and \$2,181,600 for warlike naval preparations; making a total for army and navy of \$35,290,000, in addition to the \$36,200,000 already authorized for the period from August 1 to October 9. A new cabinet appointment, but not necessarily a modification in the policy of the ministry, was necessitated by the death of the foreign minister, Marquis Antonio di San Giuliano, on October 16. Two weeks later the finance minister, Signor Rubini, resigned his portfolio, alleging that he could not agree with his colleagues on the postponement of taxation to cover the increased military expenses of the government. On November 1 the entire cabinet resigned, in order that Signor Salandra might have a free hand in redistributing the portfolios. Three days later, it was announced that Baron Sonnino, former premier and Opposition leader, and two members of the former Giolitti cabinet had consented to enter the new cabinet, which was constituted as follows: Premier and minister of the interior,

Salandra; foreign affairs, Sonnino; treasury, Paolo Carcano; justice, Vittorio Orlando; colonies, Martini; finance, Ciuffelli; education, Fusinato; marine, Admiral Millo; posts and telegraphs, Riccio; public works, Rava; war, General Zupelli; agriculture, Vari. Parliament was called together for a two-weeks session in December. Confidence in the new ministry was voted by 413 to 49. A loan of 1,000,000,000 lire and 10 per cent increases in the land and income taxes were authorized. In the course of the debates, the premier expressed the hope that the coming year would add to the nation's glory and greatness, and gave utterance to what might be interpreted as a frank admission that Italy intended to secure her own territorial aggrandizement. For a discussion of Italy's attitude toward the war, consult the article on the WAR OF THE NATIONS. For the military operations incidental to the Italian occupation of Tripoli and Cyrenaica, see the article TRIPOLI. See also INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

ITO, YUKO, COUNT. A Japanese admiral, died Jan. 14, 1914. He was born in 1843 in Satsuma Province, the son of Yuten Ito, a Samurai of the Satsuma clan. He studied at the Naval College during the Tokugawa Shogunate, and early in the Meiji era he was sent to the United States to pursue his studies. In 1868 he entered the navy, and rapidly rose until in 1890 he was rear-admiral and commander of the Standing Squadron. Upon his promotion to vice-admiral he was appointed chief of the Yokosuka Naval Station, principal of the Naval College, and a member of the Board of Admirals. He was in command of the Japanese fleet at the time of the war with China in 1894, and had already shown himself to be a capable officer, when he was called upon to face the enemy at the battle of Yalu. This battle was won by the good organization and discipline of the Japanese fleet and the energy and skill of its officers, which was in a great part due to Admiral Ito. He remained in command until the conclusion of the war, assisting the army in its operations at Port Arthur, and continuing his attacks upon the Chinese until he had completed the destruction of their fleet at Wei-hai-Wei. His chivalrous attitude toward Admiral Ting, his defeated enemy, created much favorable comment, and his energy and activity was subject to professional commendation in Europe and in the United States. In 1895 he was appointed chief of the General Staff of the Navy, and later was created a viscount. He reached the rank of admiral in 1898. He was chief of staff in the war with Russia, and his strategy materially contributed to the final result of that war. In 1897 he was made a count.

IVES, BRAYTON. American banker and soldier, died Oct. 22, 1914. He was born in Farmington, Conn., in 1840, and graduated from Yale in 1861, enlisting shortly after in the Union army. At the age of twenty-two he became colonel of the First Connecticut Cavalry, and he displayed such remarkable bravery and ability that he was advanced rapidly. He was brevetted brigadier-general for gallantry in action at the battles of Ream's Station and Five Forks. Soon afterward he was attached to the Army of the Potomac and took part in Sheridan's raid in May, 1864. He commanded General Grant's escort when the latter went to receive General

Lee's surrender. In 1865 he was mustered out of service with the rank of brevet brigadier-general. After the war General Ives removed to New York where he became a stock broker. He made a study of finance and within a short time became an active advocate of the plan that led to the establishment of the New York Stock Exchange. He was vice-president of that institution in 1876-77, and president in 1878-79. For thirteen years he was a member of the governing committee of the stock exchange. After being in Wall Street twenty-two years he retired as a broker and became president of the Western National Bank, a position which he held until many other interests demanded his attention. He became widely known as an authority on finance and made a specialty of railroad finance. For many years he was president of the Northern Pacific Railway Company. He was president of the Metropolitan Trust Company and also an official of many other financial and industrial corporations. A patron of art and literature and well-known as a collector of books and pictures, his collection of Japanese swords, now in the Metropolitan Museum of Fine Arts, is considered among the best collections in the world.

IVORY COAST. One of the colonies composing the French West Africa government-general. The capital is Bingerville, with 78 European and 780 native inhabitants. Other centres are Grand Bassam, 164 European and 2832 native inhabitants; Abidjan, 110 and 613; Lahou, 78 and 3050; Aboisso, 38 and 1241; Assinie, 38 and 1135. The principal products for export are mahogany and other woods, palm kernels and oil, rubber, manioc, and ground nuts. Neither the climate nor the vegetation is conducive to the development of the grazing industry. The total imports were valued in 1912 at 17,534,048 francs—cotton textiles 4,641,578 francs, rice 1,111,049, beverages 941,880, machinery 711,653, tobacco 387,936, etc. Total exports, 17,615,775 francs—mahogany 1,955,600 francs. The export of palm kernels was 6799 tons, palm oil 6776 tons, rubber 1376 tons. The railways under construction are destined to put into communication with the coast, by way of the equatorial forests, the regions of Bouaké, Kong, and Koroko. The main line in operation starts at Abidjan, on the Ebrié lagoon, and extends through Dimbokro on the N'Zi, an affluent of the Bandama, as far as Bouaké, a distance of 316 kilometers. The line will ultimately reach the frontier. There entered at the ports in the 1911 trade, 380 vessels, of 843,927 tons. The Lieutenant-Governor, 1914, is G. Angoulvant. See FRENCH WEST AFRICA.

I. W. W. See INDUSTRIAL WORKERS OF THE WORLD.

JAFFRAY, ROBERT. A Canadian legislator and capitalist, died in December, 1914. He was born near Bannockburn, Scotland, in 1832, and was educated at Stirling Academy. He entered business at Edinburgh, but emigrated in 1852 to Toronto, Canada, where he was engaged in the grocery trade until 1883. He later became director of the Canada Life Insurance Company, of the Canadian Electric Railway Company, of land corporations, and of other interests. In 1888 he became president of the Globe (Toronto) Printing Company, and in 1906 was chosen vice-president of the Imperial Bank of Canada. He was appointed to the Dominion Senate in 1906.

Although Jaffray was not active in politics, he exercised considerable influence among Liberal leaders, by whom he was frequently consulted on matters of policy.

JAIL CEDEMA. See BERIBERI.

JAMAICA. The largest of the British West Indian islands; a British crown colony. The island is very mountainous, and is watered by the Black and Rio Grande Rivers. The total area is 4207½ square miles, with a population in 1911 of 831,383—15,605 white, 163,201 colored, 630,181 black, 22,396 East Indian. The capital is Kingston, with 57,379 inhabitants in 1911; it possesses a fine harbor.

About 80,000 acres are uncultivable, and of the remaining area, 922,633 acres were reported as productive in 1912-13, divided as follows: 267,276 acres tilled lands, 152,527 under guinea grass, 502,830 commons. Of the 267,276 acres reported under crops, 31,743 were devoted to sugar cane, 22,275 to coffee, 17,377 to coconuts, 81,071 to bananas, 11,236 to cacao, and 103,564 to various products. Port Antonio is the point of departure for the great fruit exports from the Portland district. The Blue Mountain Range is the site of the majority of the coffee plantations, and the district of Vere of the sugar estates. The coast regions of St. James and Trelawney also grow sugar, and here the famous Jamaica rum is produced. Cattle are raised in St. Anne's, Hanover, Westmoreland, and the western part of St. James. The export of sugar in 1912 was 197,960 cwt., valued at £132,798; coffee, 89,586 cwt., £274,730; ginger, 25,213 cwt., £48,203; pimento, 107,504 cwt., £78,388; rum, 894,697 gals., £67,100; dyewoods, 39,322 tons, £88,538; cacao, 65,675 cwt., £139,833. Total exports for 1912, £2,709,283, against £2,948,067 in 1911. The principal imports are foodstuffs, clothing, hardware, alcohol, and building materials. The total imports for 1912 were valued at £3,050,479, against £2,865,553 in 1911. The United Kingdom contributed imports and received exports valued at £1,333,352 and £358,516, respectively; the United States, £1,273,389 and £1,618,614; Canada, £291,363 and £148,943. The total length of railway lines in operation in 1914 was 197.35 miles. There is a line from Kingston to Montego Bay, 112.69 miles; with a branch from Spanish Town to Ewarton, 17.16 miles. From this branch, another branch leaves Bogwalk for Port Antonio, 54.50 miles. There is also a branch from Maypen to Chapelton, 13 miles. There are cables, telegraph, and telephone systems; and 2245 miles of excellent main roads, besides 4000 miles of byways. Revenue, 1912-13, £1,432,400 (£1,356,092 in 1911-12); expenditure, £1,549,667 (£1,350,551). Tonnage entered and cleared, 1912-13, 4,688,438 (4,319,112 in 1911-12), of which 2,617,886 tons British (1,925,983). The public debt stood March 31, 1912, at £3,910,620. Customs revenue, 1911-12, £494,349. The Governor in 1914 was Sir W. H. Manning (appointed 1913). Administratively attached to Jamaica are the Turks and Caicos Islands, the Cayman Islands, Pedro Cays, and Morant Cays.

JANSEN, MARIE. An American singer, died March 20, 1914. She was born in 1849 in Boston, her real name being Hattie Johnson. She made her début on the stage in 1881, and in 1883 came under the management of Colonel McCaull, and appeared in *The Beggar Student* which was her first great success. In the next

year she went to London where she created for Charles Wyndham the title rôle in *Featherbrain*. Upon her return to the United States she became leading woman for Francis Wilson, a position which she retained for several years. In 1901 she organized a company of her own and toured the United States, retiring shortly after.

JAPAN. A Far Eastern island empire, composed of four large and many small islands off the eastern coast of Asia; together with Formosa (q.v.), the southern half of Sakhalin, Korea (q.v.), and the leasehold of Kwantung. Capital, Tokyo.

AREA AND POPULATION. In the table below are shown the principal islands and the number of adjacent islands composing Japan proper; the area in square miles of principal islands, adjacent islands, and total area; and the total legal population Dec. 31, 1908:

Islands	No.		Square miles		Pop. 1908
	Adj.	Isle.	Adj.	Total	
Honshiu	166.5	86,305	470	86,775	87,041,187
Shikoku	74.5	6,856	175	7,031	3,288,310
Kiushiu	150.0	13,768	1,820	15,588	7,167,148
Hokkaido	13.0	80,114	162	80,276	1,134,002
Chishima*	6,024	6,024	3,453
Sado	335	335	120,510
Oki	1.0	180	180	38,349
Awaji	1.0	218	1	219	210,646
Iki	1.0	51	51	40,522
Taushima	5.0	262	4	266	39,264
Riukiuf	934	934	501,815
Ogasawara-jima†	27	27	8,595
Total	412.0	145,024	2,633	147,657	49,588,801

* 31 islands.

† 55 islands.

‡ 20 islands, not including the volcanic Iwojima.

The total population was estimated in 1912 at 52,200,685. The total population with dependencies was reported in 1912 at 69,148,936, or with the addition of Kwantung (leasehold) at 69,437,025. The Japanese dependencies have an area of 111,150 square miles, as follows: Chosen (Korea), 84,106; Taiwan (Formosa), 13,841; Hokoto (Pescadores), 48; Karafuto (Japanese Sakhalin), 13,155. The Manchurian leasehold of Kwantung (Kwanto) has an area of 1221 square miles.

Foreigners in the country at the end of 1910 numbered 15,154 (8462 Chinese, 2471 English, 1665 Americans, 8090 Germans, 547 French, 237 Portuguese, 116 Russians, etc.). The total number of Japanese proper residing at home and abroad was estimated in 1913 at 52,985,423.

The marriages in 1910 numbered 442,498, living births 1,726,522, deaths 1,073,732, stillbirths 157,392. Some of the largest cities follow, with their resident population, Dec. 31, 1908:

Tokyo, 2,186,079; Osaka, 1,226,647; Kyoto, 442,462; Yokohama, 394,303; Nagoya, 378,231; Kobe, 378,197; Nagasaki, 176,480; Hiroshima, 142,763; Kanazawa, 110,994; Kure, 100,679; Sendai, 97,944; Okayama, 93,421; Saseho, 93,051; Otaru, 91,281; Hakodate, 87,875; Fukuoka, 82,106; Wakayama, 77,303; Yokosuka, 70,964; Sapporo, 70,084; Tokushima, 65,561; Kago-shima, 63,640; Niigata, 61,616; Kumamoto, 61,233; Sakai, 61,103; Shimonoseki, 58,254; Toyama, 57,437; Moji, 55,682; Shidzuoka, 53,614; Fukui, 50,390; Kofu, 49,882; Naha, 47,562; Awomori, 47,206; Utsunomiya, 47,114; Omuda, 45,681; Maebashi, 45,183; Matsuyama, 44,166; Toyohashi, 43,980; Otsu, 42,869; Takamatsa,

42,578; Yamagata, 42,234; Gifu, 41,488; Tsu, 41,229; Himeji, 41,028; Asahigawa, 40,453; Takasaki, 39,961; Wakamatsu, 39,265; Nagano, 39,242; Ashikago, 38,908; Mito, 38,435; Kochi, 38,279; Ujiyama, 37,539; Hiroasaki, 37,487; Akita, 36,294; Matsuye, 36,209; Saga, 36,051; Morioka, 36,012; Kurume, 35,928; Yonezawa, 35,380; Nagaoka, 35,376; Matsumoto, 35,011; Takaoka, 33,603; Fukushima, 34,493; Chiba, 33,341; Nara, 32,732; Tottori, 32,682; Hamamatsu, 32,381; Kiriu, 32,189; Kokura, 31,615; Yokkaichi, 30,704; Onomichi, 30,367; Oita, 29,547; Ashio, 28,618; Takata, 28,021; Wakamatsu, 27,774; Hachioji, 27,550; Marugame, 27,019; Tochigi, 26,301; Kawagoe, 26,031; Akashi, 25,951; Shuri, 25,141; Fushimi, 24,883; Okazaki, 24,824; Bofu, 23,916; Ueda, 23,838; Sakata, 23,513; Yawata, 22,767; Senju, 22,739; Iwamizawa, 22,349; Ogaki, 21,762; Kuwana, 21,544; Yamaguchi, 21,100; Tsuruoka, 21,056; Usuki, 20,923; Tamashima, 20,815; Hikone, 20,648; Muroran, 20,335; Sendagaya, 20,207.

EDUCATION. Primary instruction is compulsory, and there is a highly efficient educational system. The total number of primary schools in 1911-12 was 26,750, with 114,797 male and 42,739 female teachers, and 7,023,661 pupils, of whom 3,763,984 were boys. Middle schools for boys numbered 314, with 6092 teachers, and 125,304 pupils; superior schools for girls, 250, with 3300 teachers, and 64,809 pupils; normal schools, 83, with 1571 teachers, and 27,076 students; special and technical schools, March 31, 1911, 6647, with 8091 teachers, and 349,858 pupils. There are 4 universities, with (1911-13) 684 teachers, and 7438 students.

RELIGION. Shintoism and Buddhism are the principal religious forms, though absolute religious freedom prevails. The State supports no creed. Shrines dedicated to the ancestors of the imperial house are sometimes supported by State or local authorities, but they are independent of creed. The 13 administrative heads of Shinto sects had Dec. 31, 1910, 74,559 priests, 14,527 monks, 171 State temples and temples of superior rank, 51,113 district temples and temples of inferior rank, and 85,850 undesignated temples. The 56 administrative heads of Buddhist sects had 51,830 high priests, 891 high priestesses, 73,047 preaching priests, 50,401 monks, and 71,819 regular, and 36,743 other temples. There were 2046 Christian ministers in the country.

AGRICULTURE. Under cultivation by peasant proprietors is about three-fifths of the arable land, the remainder being worked by tenant farmers. The taxed land owned by private persons and local corporations was reported Jan. 1, 1913, at 14,750,939 cho (1 cho = 2.4507 acres), of which 5,676,086 cho were under cultivation, 7,752,959 under forests, and 1,321,894 open field. In the table below are given details of planted area and yield for comparative years:

	1910	1911	1912

* In cho of 2.4507204 acres.

** In koku of 4.9629141 bushels.

† In kwan of 8.2678297 lbs.

Quantity of refined sugar produced in 1909-10, 98,024,518 kin (1 kin=1.3227727 pounds); in 1910-11, 109,547,141; in 1911-12, 114,600,675.

There were in the country, Dec. 31, 1912, 1,399,498 cattle, 1,518,743 horses, 308,970 swine, 3308 sheep, and 101,475 goats.

OTHER INDUSTRIES. The mining products in 1911 were 150,544 ounces of gold, 4,438,140 ounces of silver, 14,240,438 kwan of copper, 17,032,591 kwan of iron ore, 19,666,367 kwan of sulphurous iron, 1,099,934 kwan of lead, 2,605,315 kwan of manganese, 6,288,941 kwan of zinc ore, 31,812 kwan of tungsten, 406,508 kwan of chrome, 17,354,181 tons of coal, 1,529,593 koku of petroleum, 13,406,503 kwan of sulphur, 30,512 graphite, 336,135 asphalt, 604,869 phosphorus. Production of salt, 1911-12, 949,233,252 kin.

The total fisheries products were valued for 1911 at 123,890,722 yen—83,019,709 yen fresh fish and marine plants, 21,407,732 yen dried fish, 2,247,040 salt fish, 6,899,980 manure, 479,994 fish oil, 9,836,267 other products. There were in 1911, 14,228 industrial establishments, employing 317,388 male and 476,497 female operatives, and 122,359 male and 40,412 female assistants. There were 90 cotton mills, employing 16,921 male and 71,628 female operatives, with 1,901,290 spindles; output, 55,974,015 kwan of yarn. Weavers numbered 41,531 males and 707,350 females, with 89,003 machine looms, and 638,412 hand looms; value of output of woven piece goods, 107,413,465 yen silk, 30,025,115 yen mixed silk and cotton, 139,745,299 yen cotton, 3,998,960 yen hemp, etc. Value of output from the paper mills, 20,330,306 yen Japanese and 18,985,650 yen European paper; matches, 12,203,908 yen; earthenware, 14,895,603; lacquer ware, 5,964,104; matting, 10,407,993; leather, 6,462,618; oil, 12,607,775.

COMMERCE. In the table below are given for comparative years in yen import and export values—total merchandise, coin and bullion, and total trade:

	1911	1912	1913
Imports mdse.	513,805,705	618,992,277	729,431,644
" C & B.	6,168,268	11,544,851	1,021,351
Total	519,973,973	630,536,628	730,452,995

	1911	1912	1913
Exports mdse.	447,438,888	526,981,842	632,460,213
" C & B.	24,398,286	28,325,153	27,098,846
Total	471,832,174	555,306,995	659,558,559

Of the above totals, 512,942,169 yen in 1911, and 618,160,786 yen in 1912 were imports for home consumption, and 863,536 yen in 1911 and 831,491 yen in 1912 were reimports; 442,996,848 yen in 1911 and 524,614,921 yen in 1912 were exports of Japanese produce, and 4,437,040 yen in 1911 and 2,366,921 yen in 1912 were reexports. Details of the special trade for three years are given in the following table, in yen:

	1911	1912	1913
Imports			
Rice	17,721,085	30,192,437	48,472,446
Wheat	8,728,829	4,400,938	12,851,029

Toys		1,898,345	2,489,843

Preliminary trade returns for 1914 show a great decline in import values, most of which is attributed to the European War. The estimate for imports is 625,000,000 yen, and for exports 680,000,000 yen. By principal countries of origin and destination import and export values are given below for 1912 and 1913, in thousands of yen:

	Imports		Exports	
	1912	1913	1912	1913
British India	134,742	178,174	28,648	29,878
United Kingdom	116,147	122,737	29,792	32,870
United States	127,016	122,408	168,709	184,473

Italy	803	1,078	18,412	29,417

	Imports		Exports	
	1912	1913	1912	1913
Russia in Asia	669	750	3,542	4,271
Russia in Europe	78	41	2,540	4,897
Total mdse. *	618,992	792,482	526,981	682,460
Coin & bullion	11,544	1,021	28,825	27,093
Total	680,537	730,453	555,307	659,553

* Including other countries.

There were entered at the ports in the 1912 trade, 9386 vessels, of 21,700,268 tons, of which 5358 steamers of 10,220,202 tons, and 422 sailing ships and junks of 56,236 tons were Japanese, and 3599 steamers of 11,413,616 tons, and 7 sailing ships of 10,214 were foreign. The merchant marine included Jan. 1, 1913, 1981 steamers of 20 tons and over, with an aggregate tonnage of 1,230,329; 6443 sailing vessels of 20 tons and over with an aggregate tonnage of 447,307; besides 20,635 native craft. Japanese shipping companies for foreign trade are subsidized by the government.

COMMUNICATION. Total State railways in operation March 31, 1912, 6008 miles; private railways, 1059 miles—total, 7067 miles. Gross income, 109,170,105 yen (104,248,132 yen from State and 4,921,973 yen from private railways); expenditure, 50,179,068 (47,777,085 and 2,401,983); goods carried, 36,008,113 tons (31,501,510 and 4,506,603); passengers carried, 185,962,149 (156,636,964 and 29,325,185). Electric tramways in operation in 1912, 844 miles; under construction, 306 miles. In 1914 within a radius of 50 miles of Osaka there were nearly 250 miles of double track in operation, and 80 miles additional were under construction or proposed for immediate building. In the immediate neighborhood through electric lines to the amount of less than 50 miles were in operation; as much more was under construction. Length of telegraph lines in operation in 1912, 20,524 miles, with 103,962 miles of wire; post and telegraph offices, 7187.

FINANCE. The standard of value is gold, and the monetary unit the yen, whose par value is that of the Mexican dollar, or 49.846 cents. In the table below are shown revenue and expenditure in yen for successive years:

	1911-12	1912-13	1913-14
Revenue	657,192,221	875,765,090	424,965,494
Expenditure	585,874,618	401,578,195	423,509,969

The revenue was estimated for 1914-15 at 645,200,000 yen, and the expenditure at 640,000,000 yen. The details of the budget for the year ending March 31, 1914, are shown in the table below in thousands of yen:

Revenue	1000 yen	Expenditure	1000 yen
Land tax	75,885	Civil list	4,500
Income tax	85,472	Foreign affairs . . .	4,298
Business tax	25,059	Home affairs	12,591
Liquor tax	89,047	Finance	188,910
Sugar excise	15,125	Army	78,155
Tax on textiles	19,180	Navy	42,236
Customs duties	55,907	Justice	12,394
Enterprises	140,034	Instruction	9,547
Stamps	29,071	Agriculture, etc. . .	7,708
Posts & Tels.	58,993	Communications . . .	61,678
Forests	10,763		
Monopolies	68,850	Total ordinary . . .	422,018
Total ordinary	529,756	Extraordinary	164,789
Extraordinary	57,052		
Total	586,808	Total	586,808

The total of the debt stood March 31, 1913, at 2,493,969,745 yen, of which internal loans totaled 1,066,286,841 yen, and foreign loans 1,427,682,905 yen.

ARMY. Service in the Japanese army is compulsory for all men between the ages of 17 and 40, and the peace establishment of the active army is maintained at an actual strength of about 240,000 men of all ranks. On a war basis the first line or field army could be augmented to 450,000, and the second line, which is fully trained, would be 300,000. Through its alliance with Great Britain, Japan became involved in the great European War, and its army participated in the siege and capture of Kiaochow, the fortress of Tsingtao surrendering on November 1, after an investment of less than two months. No great mobilization of the Japanese army was undertaken during the year, but the forces were in readiness for active work should the war be carried vigorously into Asia. In 1913, at the time of the discussion of the military budget for 1913-14, there was a considerable controversy, and the establishment provided for by that document was molded to a certain extent by public feeling. It was reported that the military authorities had a secret plan in view to increase the number of divisions to 25, or an increase of 8 new divisions; the 17th and 18th having been organized in 1909 were virtually complete in 1910, and the 19th soon after. Two more divisions were demanded at the time of the discussion of the budget of 1913-14, and were to have been used for the permanent garrison of Korea, where the troops are relieved every two years, the garrison in 1913 being 1 entire division and a provisional brigade formed by drawing 24 companies from 6 divisions in April of each year. The whole budget of 1913-14 amounted to 135,550,363 yen, and did not represent an increase over the previous year as was hoped, so that as a result the increase in the military forces of Japan came to a halt, and the military authorities were still demanding the 2 divisions previously required. The organization of the army in 1914 was essentially as indicated in the YEAR BOOK for 1913.

NAVY. The number and displacement of warships of 1500 or more tons, and of torpedo craft of 50 or more tons, built and building, on July 1, 1914, are reported as follows: Dreadnoughts (battleships having a main battery of all big guns, i.e., 11 or more inches in calibre): built, 2, of 41,600 tons; building, 4, of 122,400 tons. Predreadnoughts (battleships of about 10,000 or more tons displacement, whose main batteries are of more than one calibre): building, 13, of 191,380 tons; built, none. Coast-defense vessels: built, 2, 9086 tons; building, none. Battle cruisers (armored cruisers having guns of largest calibre in main battery and capable of taking their place in line of battle with the battleships): built, 2, of 55,000 tons; building, 2, of 55,000 tons. Armored cruisers: built, 13, of 138,483 tons; building, none. Cruisers (unarmored warships of more than 1500 tons): built, 13, of 57,915 tons; building, none. Torpedo-boat destroyers: built, 50, of 20,487 tons; building, 2, of 1676 tons. Torpedo boats: built, 27, of 3017 tons; building, none. Submarines: built, 13, of 2672 tons; building, 2, of 1200 tons. Total tonnage built, 519,640; building, 180,276. Excluded from the foregoing: ships over 20 years old from date of launch, unless recon-

structed and rearmed within five years; torpedo craft over 15 years old; transports, colliers, repair ships, torpedo-depot ships, and other auxiliaries; vessels not actually begun or ordered, although authorized. Japan is fifth among the nations in amount of warship tonnage built and also in the aggregate of tonnage built and building, being exceeded by the United Kingdom, Germany, France, and the United States. In the amount of tonnage building, Japan was exceeded also, July 1, 1914, by Russia and Italy, the former having 407,957 tons under construction, and the latter 212,355 tons.

The active personnel in 1914 was 55,736 officers and men, including 2 admirals of the fleet, 6 admirals, 19 vice admirals, 38 rear admirals, 270 captains and commanders, 1965 other line officers, 119 midshipmen at sea, 811 engineer officers, 364 medical officers, 388 pay officers, 135 naval constructors, etc., 1569 warrant officers, and 50,050 enlisted men.

GOVERNMENT. The Emperor is the executive, acting through a cabinet of ministers whom he appoints and who are responsible to him. The legislative body is a parliament, or imperial diet, of two chambers—a house of peers of 366 members and a house of representatives of 379. With the consent of the diet, the Emperor also exercises legislative power. Representatives are elected by male subjects having attained the age of 25, and possessing certain qualifications. The reigning Emperor in 1914 was Yoshihito, born at Kyoto, Aug. 31, 1879; succeeded his father, Mutsuhito, July 30, 1912; he married, May 10, 1900, Princess Sadako. The heir-apparent is Prince Hirohito, born April 29, 1901. The cabinet as composed April 16, 1914, is given in the paragraph on *History*.

HISTORY

NAVAL QUESTIONS AND THE CABINET. The most significant feature of Japanese politics was the energetic campaign carried on in Parliament and in the country against the navy. Popular sentiment was steadfastly opposed to any policy of naval aggrandizement which would add to the heavy burden of taxation. Consequently a very cool reception was accorded to the budget estimates, which the government submitted in January, when it was discovered that, although the army estimates were lower than in the current year, the naval estimates called for an expenditure of \$50,000,000, an increase of about 3 per cent. The total budget expenditure showed an increase of \$25,000,000. Moreover, a new naval programme was laid down involving the expenditure of \$80,000,000 in seven years. Such a budget, when Japan needed above all things economy and retrenchment, was sure to provoke hostile criticism; but the spirit of antagonism to the navy was just at this time even more violently aroused by the revelation of widespread corruption on the part of high naval officials. The naval scandals took their rise from the trial in Berlin of one Carl Richter, formerly employed in the Tokyo office of the German naval contractors, Siemens Schuckert, on the charge of stealing important documents, which, Richter alleged, contained proof that the German firm had attempted to bribe Japanese officials in order to obtain Japanese naval contracts. An inquiry was instituted in Japan, and it developed that Herr Hermann, Tokyo representative

of Siemens Schuckert, had given an indirect bribe of some \$5000 in connection with a wireless contract, and had burned some documents which might have been used as incriminating evidence. Mr. Pooley and Mr. Blundell, agents of Reuter's news agency, were alleged to have purchased for \$375 certain documents stolen from the office of Siemens Schuckert by Richter for the purpose of blackmailing Siemens Schuckert. The firm actually had paid \$25,000 for the surrender of the documents. Even more startling were the accusations leveled at the *Mitsui Bussan Kaisha*, the Japanese agents for the British armament firm of Vickers, Ltd. Three directors of the *Mitsui Bussan Kaisha*, it was alleged, had transmitted bribes totaling \$200,000 to Vice Admiral Matsumoto through the instrumentality of Admiral Matsuo. Admiral Matsuo, Rear Admiral Fujii, Captain Sawazaki, Commandant Suzuki, and various civilians were placed under arrest for suspected complicity. On March 17, Yoshida, a Japanese employee of the German firm, hanged himself in his cell in the Tokyo jail. In May the public learned that Admiral Fujii had accepted over \$175,000 in commissions from British shipbuilders between January, 1911, and September, 1912. Late in May Vice Admiral Matsumoto was sentenced to 3 years' penal servitude and ordered to pay the \$200,000 bribe. Captain Sawazaki had to repay \$6000 and received 1 year's imprisonment. Commander Suzuki was acquitted. All this made splendid material for those who condemned the big navy appropriation. Early in February the critics of the government opened fire in Parliament. A vote of censure was proposed, but on this occasion the *Seiyukai* party voted with the government and defeated the motion. Huge mass meetings indicated the excitement of the populace. On February 14 the House of Representatives was thrown into a tumult, while the ballot boxes were destroyed by an Opposition member. After a stormy debate, the House of Representatives decided to reduce by \$15,000,000 the naval expenditure for the years 1916-20, and to divert \$23,000,000 from the replenishment of the navy fund to agricultural and industrial development. The House of Peers went even further and struck off an additional \$20,000,000 from the estimates for 1916-20. A deadlock between the two chambers ensued. In the face of the crisis thus brought about, the government on March 23 unexpectedly suspended the Diet for three days; on March 24 the cabinet resigned; and on March 26 the session of the Diet was terminated. The *Genro*, or Council of Elder Statesmen, then met to select a new premier. First they asked Prince Tokugawa, the president of the House of Peers; then Viscount Kiyoura was asked, and refused; finally Count Okuma was invited to form a cabinet representing the Opposition parties. On April 16 the constitution of the new cabinet was announced as follows: Premier and home secretary, Count Okuma; foreign affairs, Baron Kato; finance, Wakatsuki; navy, Admiral Yashiro; war, General Oka; justice, Ozaki; education, Ichiki; communications, Taketomi; commerce, Viscount Oura. In his declaration of policy Count Okuma demanded economic reform, the elimination of corruption, and the establishment of true constitutionalism. In May he elaborated his programme along these lines, and promised to work towards the reduction of taxes, the improvement

of official discipline, the preservation of peace, the development of the constitutional system of government, the encouragement of education, and the promotion of productive enterprises.

ANTIMILITARISM IN THE DIET. The Diet was convoked for a very brief session in June. In December a more important session of the Diet was inaugurated. Naturally the discussion turned upon the part played by Japan in the War of the Nations, and the ministry which had promised retrenchment and economy had to confess that enormous sums had been expended for the conduct of the war. The Diet was asked to prove its patriotism by voting a new budget for 1915, authorizing substantial army increases, and showing a total expenditure of 556,000,000 yen (\$278,000,000), with a falling off in the revenues of 81,000,000 yen (\$40,500,000). Ignoring the ministry's appeals for unanimity, the Lower House of the Diet rejected the army increase by a majority of 65 votes. Rather than give up the demand for the augmentation of the army, the cabinet appealed to the Mikado, with the result that on December 25 he dissolved the House of Representatives and called new elections for March, 1915.

The Dowager Empress Haruko died on April 9 at the palace at Numadzu; her body was taken to Tokyo, where her official death took place, and her funeral was impressively celebrated on May 24. Japan's participation in the war, and the capture of Tsingtao, are treated in the article on the **WAR OF THE NATIONS**. The difficulties between Japan and the United States in regard to anti-Japanese legislation in California, are treated in the article on the **UNITED STATES**.

JAURÈS, JEAN LÉON. French Socialist public official, assassinated July 31, 1914. He was born at Castres in the Tarn, Sept. 3, 1859. At the age of 17 he entered the Lycée Louis le Grand, and in 1881 became a fellow in philosophy. He soon afterwards became professor of philosophy at the lycée of Albi, the capital of his native department, and later was appointed to the chair of philosophy in the faculty of arts at the University of Toulouse. In 1885 he entered the Chamber of Deputies as a Republican, and four years later, defeated for reelection, he retired to teach philosophy and to write essays on that subject. He became a municipal councillor and later an assistant to the Mayor of Toulouse. During this period he helped to found the medical faculty of the university. As a result of his study in politics, his opinions began to change, and he took the part of the miners in a strike at Carmaux, and was rewarded by being returned as a Deputy for the Albi division in 1893. From this time his talents were devoted to the purpose of "transforming the political republic into the economic and social republic." His eloquence in the Chamber brought him rapid recognition, and under his leadership the group of fifty Socialists in the Chamber grew steadily, and, with great political shrewdness, he used them to forge against the majority a weapon which became very formidable. It became necessary to reckon with him when cabinets were being formed, and in 1899 his opposition prevented Poincaré from forming a cabinet. He induced Waldeck-Rousseau to take Millerand, a Socialist, into the same ministry with the Marquis de Gallifet. In 1907 he openly defied the Premier Clémenceau, and he fought Briand on his railway strike policy.

Early in 1914 he accused Caillaux, the minister of finance, of having abandoned his principles on the income tax of 1909, and he was apparently preparing to attack Premier Viviani on the subject of the three years' army service law. During the last fifteen years of his life he was one of the acknowledged leaders of the French Unified Socialists, and as a statesman, journalist, debater, and orator, he gave his splendid abilities to their cause without stint. He hoped ardently that peace would come through economic freedom. He was denied the privilege of speaking in Berlin by Chancellor von Buelow. Speaking as the foe of militarism, he made the threat to Germany that if she sought to make France a hostage in the event of war with Great Britain, there would leap forth a resistance unequalled in the history of the world. It was his unqualified opposition to the three years' military service bill and the consequent fear of his possible disloyalty to France that led a militaristic fanatic, on the eve of the outbreak of the War of the Nations (q.v.), to assassinate him. See **FRANCE, History, passim**.

Jaures was the editor of *Humanité* (which he founded in 1904), and wrote for it every day a special article which was widely read by his enemies as well as by his friends. He was also editor of *La Petite République*. His published writings include: *Les Preuves* (1898); *Action Socialiste* (1900); *Etudes Socialistes* (1902); *Discours Parlementaires* (1904); *Histoire Socialiste, 1789-1900* (1906); and *Idealisme et materialisme dans la conception de l'histoire* (with P. Lafargue).

JELlicoe, Sir John Rushworth. See **WAR OF THE NATIONS**.

JESSOPP, AUGUSTUS. An English clergyman and writer, died Feb. 15, 1914. He was born in 1823 and was educated in St. John's College, Cambridge. After serving as curate in a parish in Cambridgeshire in 1854, he became headmaster of Helston Grammar School, and five years later became head of King Edward's School at Norwich. During this period he began writing, contributing chiefly to the *Nineteenth Century*. In 1870 he became a member of the University of Oxford, and in 1890 was appointed select preacher at Oxford, being made an honorary canon of Norwich in 1895, and from 1902 to 1910 serving as Chaplain-in-Ordinary to King Edward. His writings include a variety of subjects. Among them are: *Essays in Divinity* (1855); *History of the Diocese of Norwich* (1879); *Arcady for Better for Worse* (1881); *The Autobiography of Roger North* (1887); *Trials of a Country Parson* (1896); *Before the Great Pillage* (1901). He contributed many important articles to the *Dictionary of National Biography*.

JEWS AND JUDAISM. Accurate statistics of Jewish population are still wanting. The most authoritative estimate, made by the American Jewish Year Book for 1914-15, reckons the total Jewish population of the world as 13,277,542, distributed as follows: Africa, 413,259; America, 2,500,054; Asia, 356,617; Australia, 19,415; and Europe, 9,988,197. By countries, the same estimate shows 2,258,262 Jews in Austria-Hungary; 15,000 in Belgium; 37,656 in Bulgaria; 75,681 in Canada; 100,000 in France; 615,000 in Germany; 6127 in Greece; 43,929 in Italy; 1270 in Luxemburg; 481 in Portugal;

289,015 in Rumania; 6,060,415 in the Russian Empire; 5729 in Servia; 19,023 in Switzerland; 188,900 in Turkey; 245,000 in the United Kingdom; and 2,349,754 in the United States.

GENERAL EVENTS. The overwhelming event in the Jewish world during 1914, as in all the rest, was, of course, the great war. A glance at the figures given above will show that nearly three-fourths of the Jews of the world are directly affected by the Eastern campaign alone. Some 600,000 Jews were engaged in all the belligerent armies at the close of the year. Russia alone commanded about 350,000 Jewish soldiers. Quite apart from the extreme suffering and privation which the Jews in this war must undergo with the rest of the world, their lot was much aggravated by being forced to fight friend and foe alike. Being found in the ranks of every army, they must of necessity battle for and against every European country, regardless of all self-interest. In this most awkward position—a position between hammer and anvil—are the half-million Jewish soldiers engaged in the war, especially those fighting for and against Russia. This dilemma provoked considerable discussion among the leaders of Jewish thought. Thus, while the Jewish Deputy from Kovno officially pledged the undivided support of his coreligionists to the Russian cause, English and American Jews urged the opposite course, holding that Russian victory would hazard the social and political prospects. On the other hand, such prominent leaders of Judaism as Israel Zangwill and Richard Gottheil unequivocally urge their brethren to support the respective nations of their domicile. The predicament of the Russian Jews in this conflict was greatest perhaps in the case of Palestine, whose Russian Jewish inhabitants averted wholesale expulsion by naturalization, which was accorded them as a special privilege. Thousands of Jewish aliens, however, who would not or could not become naturalized fled the country. According to official dispatches to the State Department at Washington (Jan. 18, 1915) 6000 such refugees have already reached Alexandria (Egypt), with thousands more to follow. Of these 75 per cent were Russian Jews, and the rest British or French. Destitution in Palestine and the adjoining colonies was well-nigh universal, and the appeals for help through the American Ambassador in Turkey (Morgenthau) were frequent and urgent during the year.

LABOR AND LEGISLATION. The year 1914 began and ended in crises for Jewish American labor. Not since 1907 have the Jewish trades in the United States experienced such hard times, for, added to the general industrial depression caused or induced by the war, the Jewish trade-unions have gone through a number of rather serious labor controversies. Of these the most important were the cloakmakers', the bakers', and the tailors' strikes. (See STRIKES.) Despite these and other industrial disputes, the Jewish trade-unions have not been disorganized, as under similar circumstances in previous years, and have more than held their own. In legislation nothing has been done the world over of particular interest to Jews, unless President Wilson's veto of the Burnett Immigration Bill, to which American Jews were especially opposed, may be considered as such. The Russian-Jewish passport question, which has held up our commercial treaty with Russia, is still unset-

tled and promised to remain so during the continuance of the war. In England the introduction into Parliament of the Humane Slaughter of Animals Bill, and the Weekly Rest-Day Bill momentarily threatened Judaism.

LITERARY EVENTS. The present distressing conditions in Europe have forced many Jewish writers to seek haven in the United States, and thus the centre of Jewish literary activity has been temporarily, if not permanently, shifted to America. Among those who have already joined the Jewish writers in America, the most important are Sholom Aleichem, the famous Yiddish humorist whose real name is Solomon Rabinovitch; Sholom Asch, the celebrated novelist and playwright; and Abraham Reisin, the well-known poet and novelist. The others include Peritz Hirshbein, M. S. Malamed, G. Goldstein, and Olgin. This influx of Jewish writers has already given new life and strength to the Jewish-American press. Several new Jewish and Jewish-English periodicals have already sprung into existence, while the old ones are pulsating with the infusion of new blood. Passing over the numerous literary productions both here and abroad, mention must be made of the new Jewish translation of the Bible, which has been many years in preparation, and is the most authentic and complete Jewish version of the Bible ever made. As a semiliterary event we might mention the formation of the American-Jewish Press Association, an organization of Jewish weeklies published in the United States.

PERSECUTION AND DISABILITIES. In spite of the almost universal loyalty of the Jews in this war to their respective governments, their civil and political disabilities have nowhere been removed. In Russia, as an aftermath of the Beiliss affair, 25 lawyers were tried and convicted on the charge of insulting the Ministry of Justice. At the same time another attempt to fabricate a "ritual murder" case was made on the murder of an alleged Christian boy (Pashkov). This attempt proved futile on the discovery that the Jew charged with the boy's murder was his own father. Earlier in the year the petition of 16,800 Russian Jews to the Czar for clemency in connection with the tercentenary of the Romanov dynasty, was flatly turned down. Some of these asked for the privilege of being allowed to remain outside the Pale, others begged to be permitted to send their children to government educational institutions, while the rest sought exemption from fines imposed in connection with conscription and the removal of certain restrictions in the legal profession. All appeals in behalf of educational and professional privileges were refused. Out of 1791 domicile petitions, only 9 were successful; while of the 316 appeals against military fines, 29 only were granted. The rumored promise by the Czar of full civil and political rights to his Jewish subjects still awaits official confirmation, while *Novoye Vremia*, the semiofficial Petrograd daily, boldly proclaimed that the Jews have nothing to expect in Russia even after the war. In the meantime, thanks to anti-Semitic agitation, the Russian decree permitting Jews to rank in the army as officers and surgeons has been revoked. Moreover, anti-Semitic outbreaks throughout the Russian Empire have continued during the year. Elsewhere, too, the lot of European Jew has undergone no change for the better.

In Galicia the anti-Semitic elements have been clamoring for the prohibition of Jewish land-owning. Rumania's promise of Jewish emancipation made in the Balkan campaign has not been kept, although the Rumanian Jews saw a gleam of hope when a convention was called for the revision of the Constitution. But, despite persistent demands by the "Union of Native-born Jews," the Jewish question was entirely ignored by the Constituante, which held, that Article VII of the Rumanian Constitution (which provides a procedure for the naturalization of aliens) does not apply to Jews. At the same time the Liga Cultura, a Rumanian nationalist organization, threatened to give the signal for a general massacre of Jews, should the Union call another meeting. The latter was about to make its grievances known to the world at large when the great war thrust this question into the background.

ZIONISM. The troubled year of war has given Zionism the greatest setback in its history. The means with which this movement has been carried on, and its most active workers, have been chiefly European. Its organization, which had its headquarters in Berlin, has naturally been completely disrupted. In this emergency a provisional Zionist Actions Committee, with Louis Brandeis as president, has been formed in the United States to carry on the work which the war has interrupted. Palestine, the objective realization of Zionism, had made considerable progress before the war broke out. Its Jewish population had reached 100,000, while the agricultural colonies numbered between 12,000 and 15,000 souls, possessing some 100,000 acres of land. We have already seen how the war has paralyzed its normal activities, for the great conflict has cut it off from European support, and forced it to appeal to America for aid, while its male population was forced to choose between enlisting in the Turkish army, paying exorbitant ransom money, and fleeing the country. Under these circumstances, American Jewish philanthropy has been repeatedly drawn upon. Indeed, signs are multiplying that the centre of Zionist activity, like the centre of Jewish literary activity, is being shifted from Europe to the United States. At the same time England has been discussing seriously the possibility of forming a Jewish State in Palestine at the close of the war, and an international Jewish organization to look after Jewish interests when the world's peace is made has been repeatedly suggested in the Jewish-American press.

JODL, FRIEDRICH. A German educator and philosopher, died Jan. 26, 1914. He was born at Munich Aug. 23, 1849, and was educated in the gymnasium and university of that city. He became instructor in history at the Kriegs-akademie of Munich in 1873, lecturer at the university in 1880, and professor of philosophy at the German University of Prague in 1885. In 1896 he was called to the chair of philosophy at the University of Vienna. He became an active member of a society to advance the knowledge of German science, art, and literature in Bohemia, second president of the German society for Ethical Culture, and a member of the Imperial Academy of Vienna. In 1890 he became an editor of the *International Journal of Ethics*. Jodl belonged to the positivist school of philosophy. His publications include: *Leben und Philosophie David Hume's* (1872); *Die Kultur-*

geschichtschreibung, ihre Entwicklung, ihre Problem (1878); *Geschichte der Ethik in der Neueren Philosophie* (vol. i, 1882, 2d ed., 1906; vol. ii, 1889, 2d ed., 1912); *Volkswirtschaftslehre und Ethik* (1886); *Moral, Religion, und Schule* (1892); *Ueber das Wesen des Naturrechts* (1893); *Wesen und Ziele der ethischen Bewegung in Deutschland* (1893; 2d ed., 1898); *Abriß der Geschichte der Ethik* (1896); *Lehrbuch der Psychologie* (2 vols., 1896; 3d ed., 1908); *Gedanken über Reformkatholizismus* (1902); *Ludwig Feuerbach* (1904); *Das Problem des Moralunterrichts in der Schule* (1912).

JOFFRE, JOSEPH J. C. See WAR OF THE NATIONS.

JOHNS HOPKINS UNIVERSITY. An institution for higher and special education, founded at Baltimore, Md., in 1876. There were enrolled in the several departments of the university in the autumn of 1914, 1374 students, of whom 898 were in regular courses, 170 in college courses for teachers, and 366 in summer courses; at the same date the faculty numbered 240. The most notable event in the history of the university during the year was the election of Frank J. Goodnow, LL.D. (q.v.), to succeed Ira Remsen as president. Dr. Theodore C. Janeway, of New York, was appointed professor of medicine. The university received during the year \$50,000 from the General Education Board for surgical and pediatric research, and \$20,000 to establish the Quincy Fund for physical research. The annual income amounts to about \$451,000, and the productive funds to \$6,265,479. The library contains 181,300 volumes.

JOHNSON, JEREMIAH AUGUSTUS. An American lawyer and public official, died Feb. 28, 1914. He was born in Boston in 1836, and received an academic education. From 1858 to 1867 he was United States Consul at Beirut, Syria, and was consul-general in the same city from 1861 to 1870. In 1862 he procured the arrest and execution of the Turk who assassinated Mr. Coffing, an American missionary, the case being famous at the time. President Lincoln publicly thanked Mr. Johnson for his success in this undertaking. While he was in Syria he became interested in archaeological research, and with the Rev. Samuel Jessup, discovered the stones containing the famous Hittite inscriptions. While still at Beirut, he was admitted to the bar and after resigning from the consular service in 1870 he practiced law in New York City. He was a member of several patriotic societies.

JOHNSTON, CHRISTOPHER. American scholar and educator, died June 26, 1914. He was born in Baltimore in 1856, and graduated from the University of Virginia in 1878. He studied medicine at the University of Maryland and afterwards specialized in Assyriology and Semitics at Johns Hopkins. For a few years he practiced medicine, but devoted much time to the study of ancient languages. In 1908 he became Professor of Oriental History and Archaeology at Johns Hopkins University. He wrote extensively on the literature of the Assyrians and Babylonians, and edited a number of works on similar subjects. He was a member of many learned societies in the United States and Europe.

JOHORE. A native State in the Malay Peninsula, under British control. Estimated area,

9000 square miles; population, 1911, 180,412, of whom about one-half are Malays, and about one-third Chinese. Johore Bharu is the capital. A State railway extends from Johore Bharu 120½ miles northwest to Kuala Gemas, on the Negri Sembilan border, where it connects with the Federated Malay States Railways.

JONES, THOMAS GOODE. An American jurist, died April 28, 1914. He was born in Macon, Ga., in 1844, and graduated from the Virginia Military Institute in 1862. He served with the Confederate Army as staff officer under Gen. John B. Gordon and obtained the rank of major. He was several times wounded during the war, and after its close he established a law practice at Montgomery, Ala. From 1870 to 1890 he was reporter on decisions for the Supreme Court of Alabama. He was a member of the Alabama Legislature from 1884 to 1888, acting as Speaker from 1886 to 1888, and in 1890 was elected Governor of the State, serving until 1894. In 1901 he was appointed United States district judge for the Middle and Northern Districts of Alabama. During his term as judge in this court he several times came in sharp contact with the State officials, as a result of radical railroad legislation passed by the Legislature of Alabama which the State officials undertook to enforce. Judge Jones held that certain of these measures were in direct conflict with Federal laws. In 1897 he acted as chairman of a relief commission in the yellow fever epidemic. He compiled 18 volumes of Alabama Supreme Court Reports, and was the author of State laws regulating employment of military in enforcement of law and suppression of riots.

JONES, WILLIAM ALBERT. An American soldier, died Nov. 15, 1914. He was born in St. Charles, Mo., in 1841, and graduated from the United States Military Academy in 1864, being appointed first-lieutenant of engineers in the same year. From 1864 to 1866 he was assistant professor of civil and military engineering, law, ethics, and other branches at the United States Military Academy, at the same time acting as treasurer of the Academy. He served for a time in the sixth corps in the Army of the Potomac in the Civil War, afterwards conducting the United States exploring expedition in northwestern Wyoming and Yellowstone Park. He is supposed to have been the first white man to cross the great range of mountains east of the park. He afterwards assisted in the construction of fortifications, harbors, and lighthouses on the Atlantic coast and on the Great Lakes, and in the improvement of rivers in the Northwest. He served as division engineer of the Chesapeake, and was consulting engineer in the location and construction of railways, etc. He was promoted to be captain in 1867, major in 1882, lieutenant-colonel in 1895, colonel in 1903, brigadier-general and retired in 1905. He served as consulting engineer in the State of California and to the Commonwealth of Massachusetts, and was also a member of several military and learned societies. His published writings include: *Report of Exploration of Northwestern Wyoming and Yellowstone Park* (1874); and *The Salmon Fisheries of the Columbia River*. He also wrote numerous special reports on internal improvement and contributed to professional and other journals.

JORDAN, CHESTER BRADLEY. An American public official, former Governor of New Hamp-

shire, died Aug. 24, 1914. He was born in Colebrook, N. H., in 1839; was educated in the public schools of that town and at the Kimball Union Academy at Plainfield; was clerk of the Supreme Court of New Hampshire from 1868 to 1874, and in the following year was admitted to the bar. He was elected to the New Hampshire House of Representatives and in 1881 was Speaker of that body, later becoming a member of the Senate and president of it in 1897. In 1901 he was elected Governor of the State and served until 1903. He was a prominent Freemason and was a member of several patriotic and professional societies.

JOYCE, PATRICK WESTON. A British public official and scholar, died Jan. 7, 1914. He was born at Limerick in 1827 and was educated privately. In 1845 he entered the service of the Commissioners of National Education in Ireland, and held successive posts until 1874, when he was appointed professor and subsequently principal of the Commissioners' Training College at Dublin, from which post he retired in 1893. He was an approved student of Irish history and was one of the commissioners for the publication of the *Ancient Laws of Ireland*. Among his published writings are: *The Origin and History of Irish Names of Places* (two vols.); *Ancient Irish Music*, a collection of hitherto unpublished Irish airs and songs; *Old Celtic Romances: a Short History of Ireland to 1608: a Child's History of Ireland*; and a *Social History of Ancient Ireland* (two vols., 1903).

JUDAISM. See JEWS AND JUDAISM.

JUDSON, EDWARD. An American Baptist clergyman, died Oct. 23, 1914. The son of a noted missionary, Adoniram Judson, he was born at Maulmain, British Burma, on Dec. 27, 1844. He came to the United States in 1850, and was educated at Brown University (A.B., 1865; A.M., 1868). He was principal of Leland and Gray Seminary at Townshend, Vt., in 1865-67, and then served as professor of Latin and modern languages at Madison (now Colgate) University in 1867-74. After traveling in Europe in 1874-75, he was ordained to the Baptist ministry in 1875, and then held a pastorate at Orange, N. J., until 1881. Thereafter he was pastor of the Berean (now Memorial Baptist) Church in New York, and later of the Judson Memorial, which he erected at Washington Square, New York, in memory of his father. He lectured on theology at the University of Chicago in 1904-06, and on Baptist principles and polity at the Union Theological Seminary in 1906-08. He became professor of pastoral theology at Colgate University, which conferred on him the honorary degree of D.D. in 1881, a fellow of Brown University, and a trustee of Vassar College. He is author of *Life of Adoniram Judson* (1883) and *The Institutional Church* (1899).

JUVENILE COURTS. The establishment of special courts for children, begun in Chicago in 1898, has spread to nearly every civilized country. These courts make possible private hearings by a highly intelligent and broadly sympathetic judge, who is able to give wise counsel and individual treatment to the youthful offenders who, under the careless and unintelligent methods of the past, were very likely to become hardened to criminals. The latest development in these courts is the establishment of

women judges to hear girls' cases, begun in Chicago in March, 1913. St. Louis followed in January, 1914, by naming two women as assistant judges in the juvenile court.

The report of the Children's Court at Manhattan, issued about July 1, showed that about 25 per cent of the arraignments were for trifling causes; about 38 per cent for improper guardianship; and about 38 per cent for serious charges. Of the 9019 children arraigned during the preceding year, 20 per cent had committed previous offenses. It was found that the fourteenth and fifteenth years are the most common ages for youthful offenders. Of these children, 35 per cent came from broken homes, one or both parents being dead; 54 per cent were involved with associates in crime.

JUNIOR JUVENILE COURT. A unique development of the juvenile court idea was the establishment of the Junior Juvenile Court at Hiram House, a social settlement in Cleveland. This court was suggested by the fact that out of 2380 cases handled by the regular juvenile court of the city in 1913, 552 came from the Hiram House region. The new court was established with the assent of Judge Addams of the regular juvenile court, who appointed three lawyers to act as judges, and commissioned as probation officers 14 Hiram House boys from 13 to 15 years old. These boys are the policemen, reporting every kind of offense from petty gambling or swearing to cigarette smoking and stealing. Summonses are issued under the authorization of the regular juvenile court. The procedure is serious and follows the plan of regular court. The result has been a remarkable transformation of the boy gangs in that district.

DISTRICT OF COLUMBIA. On March 6, 1914, the Attorney-General, having been impressed with the necessity of amending, revising, and codifying the laws in force in the District relating to children and to the jurisdiction and procedure of the Juvenile Court of the District, appointed the following committee to study such laws: Bernard Flexner of Chicago; Miss Julia C. Lathrop, chief of the Children's Bureau; Rev. William J. Kerby of the Catholic University of America; Walter C. Clephane, and William H. Baldwin of Washington. This committee held numerous hearings, but did not complete its report in 1914. It was expected to present a juvenile court law which might serve as a model for the country.

MISSOURI. In May, the Supreme Court of Missouri held the juvenile court law of 1913 applying to every county except the six largest to be unconstitutional. This law gave probate courts sole power to act in cases involving neglected and dependent children. The grounds of the decision were: The Constitution required the duties of probate courts to be uniform throughout the State; and the law, though applying to children committing crimes, did not follow the criminal procedure required by the Constitution. This second ground caused some astonishment in that the court took the older view that children may be criminals.

PHILIPPINES. The Juvenile Protective Association of the Philippine Islands was organized in behalf of the Filipino juvenile delinquents. It is composed of leading American and Filipino residents. It hopes to establish a juvenile court for the Islands and a model reformatory on the

cottage system. In December, 1914, it had a building fund of \$100,000. It favors also visiting nurses to the homes of juvenile delinquents; children's libraries; probation officers; medical aid and inspection; vocational training; and a modern placing-out system.

Bibliography. New books of the year included: *Review of the Work of the St. Louis Juvenile Court for the Five-Year Period 1908-1913*, prepared by the Court itself; Bernard Flexner and R. N. Baldwin, *Juvenile Courts and Probation*; M. G. Barnett, *Young Delinquents*; G. B. Mangold, *Problems of Child Welfare*.

KAISER-WILHELMS-LAND. That part of German New Guinea (q.v.) which is in New Guinea Island.

KAMERUN. A protectorate of Germany, lying between Nigeria and French Equatorial Africa. The area, including the territory ceded by France in 1911, is estimated at 790,000 square kilometers, or 305,000 square miles. Native population, 3,500,000 (estimate). White inhabitants numbered 1871 on Jan. 1, 1913. Imports and exports in 1911 were valued at 29,317,000 and 21,251,000 marks, respectively; in 1912, 34,242,000 and 23,338,000. Imports from and exports to Germany in 1912, 27,216,000 and 19,841,000 marks. There were 310 kilometers of railway in operation at the end of 1913, and 133 kilometers under construction. Vessels entered in the 1912 trade, 604, of 1,733,030 tons. The budget balanced at 15,344,624 marks for 1913-14. Buëa is the capital.

An Anglo-French force invaded the German protectorate of Kamerun and captured the town of Duala on September 28; and on the following day the French government announced that French forces had taken possession of a large part of the Kamerun. Consult the article on the WAR OF THE NATIONS.

KANSAS. POPULATION. The estimated population of the State on July 1, 1914, was 1,784,897. The population in 1910 was 1,690,949.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn1914	5,850,000	108,225,000	\$68,182,000
1913	7,320,000	23,424,000	18,271,000
Wheat1914	8,660,000	177,200,000	168,340,000
1913	6,710,000	86,983,000	68,717,000
Oats1914	1,760,000	58,960,000	24,763,000
1913	1,760,000	34,320,000	15,444,000
Rye1914	50,000	1,000,000	800,000
1913	45,000	680,000	472,000
Barley1914	240,000	5,880,000	2,764,000
1913	240,000	1,994,000	1,069,000
Potatoes1914	72,000	4,464,000	3,437,000
1913	73,000	2,920,000	2,657,000
Hay1914	1,650,000	2,492,000	18,441,000
1913	1,500,000	1,350,000	16,875,000

a Tons.

MINERAL PRODUCTION. The coal production in 1913 was 7,202,210 short tons, valued at \$12,036,292, compared with 6,986,182 short tons, valued at \$11,324,130 in 1912. Coal mining conditions in general were excellent in 1913, there being no serious troubles with labor, and railroad consumption increasing somewhat on account of the strike in the Colorado mines. There were employed in the coal mines of the State in 1913, 12,479 men. The output of coal represents nearly 45 per cent of the total value

of the mineral products of the State. The coal production of the State in 1914 showed a slight increase over that of the previous year. Natural gas ranks second to coal in importance, there being produced in 1913 natural gas to the value of \$3,288,394, a decrease from \$4,264,706 in 1912. The production of Portland cement decreased from 3,592,148 barrels in 1912, to 3,291,818 barrels in 1913, although the value increased from \$2,815,113 in 1912, to \$3,286,861 in 1913. The mineral product which showed the most significant gain in 1913 was petroleum, which increased from 1,592,796 barrels, valued at \$1,095,698 in 1912, to 2,375,029 barrels, valued at \$2,248,283 in 1913. The value of the lead and zinc produced at mines in Kansas in 1913 was \$1,343,432, compared with \$1,680,744 in 1912. The recoverable metallic content of the zinc mined in 1913 amounted to 10,088,000 short tons, valued at \$1,129,856, a slight decrease from the production of 1912. Other important mineral industries are salt mining and evaporating, stone quarrying, and the mining and calcining of gypsum. The total value of the mineral products of the State in 1913 amounted to \$27,312,563, compared with \$26,554,967 in 1912.

EDUCATION. The school population of the State in 1913 was 510,273, the total enrollment 395,064, and the average daily attendance 298,128. The male teachers employed numbered 2639, and the female teachers 11,464, the average monthly salary of teachers being in the rural schools \$52.11, and in the graded schools \$67.25. The number of school districts in 1912 was 8717. There are over 200 high schools maintaining normal training courses, over 100 high schools offering courses in agriculture and domestic science, and many schools offering commercial courses.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State include Topeka State Hospital, Ossawatimie State Hospital, Larned State Hospital, Parsons State Hospital for Epileptics, State Home for the Feeble-minded at Winfield, State Orphans' Home at Atchison, and State Tubercular Sanatorium at Norton. There are in addition many private associations and institutions which are under supervision of the State. The State Hospital for the Insane at Larned was authorized by the Legislature of 1911, and the first buildings were completed and ready for occupancy in 1914. On July 1, 1913, the School for the Deaf, and the School for the Blind were placed under the management of the new State Board of Administration, while the Girls' Industrial School, and the Boys' Industrial School were placed under the management of a new State Board of Corrections. The State Board of Control has the management of the Insane Hospital at Larned, and the State Tubercular Sanatorium at Norton.

FINANCE. The receipts from all sources for the fiscal year ending June 30, 1913, amounted to \$8,471,318, and the disbursements to \$8,025,250. At the beginning of the fiscal year there was in the treasury a balance of \$1,289,209, and at the close of the fiscal year 1913 a balance of \$1,735,276. The receipts include the direct State tax, receipts on account of payment of bonds and interest due the several State school funds, fees of State officers, insurance fund receipts, etc. The disbursements include the purchase of bonds and securities by the State School

Fund Commission, and the general running expenses of the State and its various educational and benevolent institutions.

TRANSPORTATION. The total mileage of single track line operated in the State on June 30, 1914, was 9492. There were in addition 307 miles of second and third track, and 119 miles of new line were constructed during the year. The roads having the longest mileage in the State are the Atchison, Topeka, and Santa Fe, 2816; Missouri Pacific, 2384; Union Pacific, 1215; and the Chicago, Rock Island, and Pacific, 1166.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. There were elections for United States Senator, members of the House of Representatives, for Governor, and for other State officers. The term of Senator Bristow expired on March 3, 1913. He was a candidate for renomination on the Republican ticket, although for several years he had been identified with the Progressive wing of the Republican party, and had taken an active part in the campaign of 1912 as a supporter of Mr. Roosevelt. Opposed to him for the Republican nomination was Charles Curtis, a Conservative Republican, who six years before had been defeated for reelection by Senator Bristow. Victor Murdock, the Progressive leader in the House of Representatives, was the Progressive candidate for Senator. At the nominating elections held on August 3, Mr. Curtis defeated Senator Bristow. Congressman G. A. Neeley was nominated by the Democrats for Senator, and Victor Murdock by the Progressives. For Governor, the Republicans nominated Arthur Capper; the Democrats renominated Gov. G. H. Hodges, and the Progressives nominated H. J. Allen. The campaign which followed these nominations was a very spirited one. All the candidates made vigorous campaigns, and on account of division in the Republican party, the chances of the Democrats for success were considered good. In the elections on November 3, however, Capper, the Republican candidate, was elected with 209,543 votes, compared with 161,696 for Hodges, Democrat, and 84,060 for Allen, Progressive. For Senator, Curtis received 180,323 votes, Neeley, Democrat, 176,929, and Murdock, Progressive, 116,755. The total number of votes cast in this election was 528,206, compared with 365,444 in 1912. The larger vote in 1914 is accounted for by the fact that women voted in this election. The Republicans showed a gain of over 100,000 votes; the Democrats a loss of about 20,000, and the Progressives a loss of about 40,000. A constitutional amendment providing for the recall of public officials was adopted at this election by a vote of 240,240 for it to 135,360 against it.

STATE OFFICERS, 1915. Governor, Arthur Capper; Lieut.-Governor, W. Y. Morgan; Secretary of State, J. T. Botkin; Treasurer, Earl Akers; Auditor, W. E. Davis; Attorney-General, S. M. Brewster; Superintendent of Education, W. D. Ross; Superintendent of Insurance, C. J. Wilson; Commissioner of Agriculture, ———; ———all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Wm. A. Johnston; Associate Justices, Judson S. West, Silas Porter, Clark A. Smith, Rousseau A. Burch, Henry F. Mason, and Alfred W. Bensen, all Republicans; Clerk, D. A. Valentine.

STATE LEGISLATURE, 1915.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

KANSAS, UNIVERSITY OF. A State university for higher education at Lawrence, Kan., founded in 1866. The students enrolled in all departments of the university in the autumn of 1914 numbered 2650, and the faculty numbered 202. There were no notable changes in the faculty during the year and no noteworthy benefactions were received. The productive funds of the university amount to about \$150,000, and its income to \$590,000. The library contains 93,000 volumes. The president is F. Strong, LL.D.

KEAN, JOHN. Former United States Senator from New Jersey, died Nov. 4, 1914. He was born in 1852 at Ursino, Union Co., N. J.; studied at Yale University, but did not finish the course, graduating from Columbia Law School in 1875; he was admitted to the bar, but never practiced. He at once went into business with his father, who had large financial interests, and on the death of the latter inherited great wealth. Early in life he entered politics and was Representative to Congress in 1882; was defeated in 1884, but was again elected in 1886. In 1891 he was elected State chairman of the Republican committee, and a year later was nominated for Governor, but was defeated by the Democratic candidate. In 1889 he was elected United States Senator and was reelected for the term 1905-11. In the Senate he very seldom spoke, but was a potent factor in shaping corporation legislation especially as it applied to railroads, serving on the Committee on Interstate Commerce with Senators Aldrich, Elkins, and Crane.

KEDDIE, HENRIETTA. A Scottish novelist, died Jan. 8, 1914. She was born at Cupar, Scotland, in 1827, and was educated at home. From 1848 to 1870 she conducted with her sister a boarding and day school for girls, and from 1870 to 1884 she lived in London where she engaged in literary work, afterwards making her home at Oxford. She wrote many novels, some of which achieved considerable popularity. The best known are: *Citoyenne Jacqueline* (1865); *French Janet* (1889); *The Macdonald Lass* (1895); *Women Must Weep* (1901); *The Girls of Inverbarns* (1906); *Three Generations* (1911).

KEKEWICH, ROBERT GEORGE. An English soldier, died Nov. 5, 1914. He was born in 1854 and entered the army at the end of 1874. He served with the Nile Expedition of 1884-85, and in Burma in 1892; his fame as a soldier, however, was won by his successful defense of Kimberley in the South African War. When the Boers besieged the town General Kekewich commanded about 800 mounted men and nearly 3000 foot soldiers, but was handicapped by a great deficiency of food, ammunition, arms, and artillery. Means of communication with the outside world were cut on Oct. 15, 1899; the actual siege began on November 6th, and was not raised until February 16th, when Sir John

French relieved the town. Several months before his death General Kekewich was in command of a division of the British army. He was, however, in ill health and was obliged to undergo treatment in a hospital. He died by his own hand, probably on account of depression resulting from his inability to take part in the European War.

KELLOGG, AMOS MARKHAM. American editor and educator, died Oct. 31, 1914. He was born in Utica, N. Y., in 1832, and graduated from the Albany State Normal School in 1851. From 1852 to 1856 he was instructor in several normal schools, and in the latter year became principal of the New Jersey Preparatory Normal School. From 1858 to 1860 he conducted the Teachers' Institute in Michigan, and after acting as principal for several schools in that State, became in 1874 editor of the *School Journal*, and continued in this capacity until 1904. He was also editor of several educational journals, and wrote many text books, including: *School Management* (1877); *How to Manage Busy Work* (1897); *How to Teach Botany* (1897); *How to be a Successful Teacher* (1901); *Elementary Psychology* (1894); *Nature Study* (1900).

KELLOGG, EDGAR ROMEXN. American soldier, died Oct. 7, 1914. He was born in New York City in 1842, and received a public school education. He served throughout the Civil War, rising to the rank of captain, and after the close of the war was appointed captain in the Twenty-fifth Infantry, rising through various grades until he became colonel of the Sixth Infantry. In 1898 he was appointed brigadier-general of volunteers, and in the following year was retired with the rank of brigadier-general, U. S. A., after thirty years of service, having received three brevets for gallantry during the Civil War.

KELLY-KENNY, SIR THOMAS. A British soldier, died Dec. 26, 1914. He was born in 1840 at Kilrush, County Clare, Ireland, and in 1858 entered the army as ensign in the Second Foot. Two years later he served in China, and afterwards in Abyssinia and in India, rising to the rank of adjutant-general. In 1897 he was appointed Inspector General of Auxiliary Forces and Recruiting, serving until 1899, when he was placed in command of the troops at Aldershot. From 1899 to 1901 he was lieutenant-general on the staff in command of the Sixth Division of the South African Field Forces and was twice mentioned in dispatches. From 1901 to 1904 he was Adjutant General of the Forces and in 1907 retired.

KENTUCKY. POPULATION. The estimated population of the State on July 1, 1914, was 2,350,731. The population in 1910 was 2,289,905.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	... 1914	3,650,000	91,250,000	\$58,400,000
	... 1913	3,650,000	74,825,000	56,867,000

a Tons.
b Pounds.

MINERAL PRODUCTION. The coal production of Kentucky in 1913 was 19,616,600 short tons, valued at \$20,516,749. Kentucky is one of the 12 States that in 1913 established a new record in the quantity and value of its coal production; and in the percentage of increase Kentucky surpassed all States. The increase in quantity mined amounted to 3,126,079 short tons, or 19 per cent, and the value increased \$3,662,542, or 21.7 per cent. Nearly 80 per cent of the increase in 1913 was in the eastern counties. Until 1912 the larger portion of the coal produced was mined in the western counties, but the increases aggregating more than 4,200,000 tons in the eastern counties during the last two years have given the supremacy to that portion of the State. The number of men employed in the coal mines of Kentucky increased from 24,304 in 1912, to 26,332 in 1913. Kentucky, unlike most coal-producing States, showed a small increase during 1914, according to the estimates of the United States Geological Survey. This was due almost entirely to the great developments which have taken place in the eastern part of the State during the last two or three years. The total production is estimated at approximately 20,000,000 tons. There were no labor troubles of importance in the State during the year. Coke is manufactured from coal mined in both eastern and western parts of the State. The production increased from less than 50,000 tons in 1909 to 191,555 tons in 1912, and to 317,084 tons in 1913. During 1913 a plant of 54 Semet-Solvay by-product ovens and 50 new beehive ovens were constructed, and by a coincidence 104 ovens were abandoned, so that the total number in existence at the close of 1913 was the same (1049) as at the close of 1912. The clay-working industry is second in importance. The total value of the manufactured clay products in 1913 was \$2,914,276, an increase of \$470,536 over 1912. The quarrying industry is third in importance, with products in 1913 valued at \$1,150,205, compared with \$1,282,148 in 1912. The principal product is limestone, most of which is crushed for road making, railroad ballast, and concrete. The production of petroleum in the State increased from 484,368 barrels, valued at \$424,842, in 1912 to 524,568 barrels, valued at \$675,748, in 1913, while the value of the natural gas produced decreased from \$522,455 to \$509,846. Kentucky is one of the few States in which fluorspar is produced, and in 1913 the output was nearly double in quantity and value that of 1912. Other mineral products are asphalt, cement, iron ore, lead, lime, mineral waters, oil-stones, sand and gravel, sand-lime brick, and zinc. The total value of the mineral products increased from \$22,477,530 in 1912 to \$26,845,579 in 1913.

TRANSPORTATION. The railway mileage of the State on June 30, 1913, was 3789. There were 493 miles of electric railways in 1912. The longest lines in the State are the Illinois Central, 271, and the Cincinnati, New Orleans, and Texas Pacific, 197.

EDUCATION. The total school population in 1914 was 725,204, the enrollment 517,299, and the average daily attendance in schools 362,602, the total number of teachers being 11,300. The average monthly salary of male teachers was \$52.47, and of female teachers \$43.92. Disbursements for educational purposes for rural schools in 1913 amounted to \$4,390,507, and for city schools, \$2,248,964. The most important school legislation passed by the legislature of 1914 was a measure pertaining to certification; under this act first-class county certificates may be validated by the State Board of Education for use in any county in the State; and teachers having taught 20 consecutive years under no certificates of less grade than first class certificate, may obtain a life certificate through the State Board of Education; certificates from other States may be accepted in Kentucky on the reciprocity plan.

CHARITIES AND CORRECTIONS. The charitable institutions are under the supervision of the State Board of Control. With their populations in 1913 they are Eastern State Hospital, Lexington, 1132; the Central State Hospital, Lakeland, 1500; the Western State Hospital, Hopkinsville, 1100; and the Kentucky Institution for Feeble-minded Children at Frankfort, 321. The correctional institutions are under the control of the State Prison Commission.

FINANCE. The report of the State treasurer for the fiscal year ending June 30, 1913, shows a balance in the treasury on July 1, 1912, of \$300,549. The receipts for the fiscal year amount to \$7,666,781. The disbursements for the period were \$7,605,427, leaving a balance on June 30, 1913, of \$361,903. The total debt of the State in 1913 was \$4,452,000. The per capita debt was \$1.90.

POLITICS AND GOVERNMENT. The State Legislature met in 1914 as the sessions are biennial in the even years, but most of the legislation was of local interest. The House of Representatives on March 13 put itself on record as being absolutely opposed to granting the voting privilege to women by vote of 51 to 29, defeating a resolution submitting to the people an amendment to the State constitution, allowing women to vote. A measure submitting a State-wide prohibition amendment to the constitution to the people was also defeated by the Legislature. On May 30 Governor McCreary appointed Johnson N. Camden United States Senator to fill the vacancy caused by the death of Senator W. O. Bradley. It was necessary to elect two United States Senators, one for the unexpired term of Senator Bradley, to fill which, as noted above, J. N. Camden was appointed, and another for the full term beginning March 4, 1915. For the long term the candidates were J. C. W. Beckham, Democrat, who received 176,605 votes, and A. E. Willson, Republican, who received 144,758 votes, both former governors of the State. For the unexpired term the candidates J. N. Camden, Democrat, got 177,797 votes, and W. M. Bullitt, Republican, got 133,139 votes. The total number of votes cast at this election was 340,361, compared with 453,698 in 1912. The Democratic vote showed a loss of about 40,000 and the Republican a gain of about 30,000. The Progressives showed a falling off of 88,658 votes.

STATE OFFICERS, 1915. Governor, James B. McCreary; Lieutenant-Governor, Edward J. Mc-

Dermott; Secretary of State, C. F. Crecelius; Treasurer, Thomas S. Rhea; Auditor, Henry M. Bosworth; Attorney-General, James Garnett; Superintendent of Public Instruction, Barksdale Hamlett; Commissioner of Agriculture, James W. Newman; Commissioner of Insurance, M. C. Clay—all Democrats.

JUDICIARY. Court of Appeals: Chief Justice, J. P. Hobson, Democrat; Justices, W. E. Settle, Democrat; C. C. Turner, Democrat; J. B. Hannah, Democrat; John D. Carroll, Democrat; C. S. Nunn, Democrat; Shackelford Miller, Democrat; Clerk, Robt. L. Greene, Democrat.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

KHUEN-BELASI-HEDERVARY, KAROLY (CHARLES), COUNT. A Hungarian statesman, died April 25, 1914. He was born in Freiwaldau, Upper Silesia, on May 23, 1849. His long public career began in the county of Veröcse, where he was elected to the Landtag of Agram in 1870. In 1875 he was sent by a Croatian constituency to the Hungarian Reichstag, where he sat as a member of the Liberal party. He became count of Raab in 1879, and in 1883 Viceroy or Governor of Croatia, Slavonia, and Dalmatia, an office that he held for nearly 20 years. In this position he built up a strong government party, and made noteworthy reforms in administration and education; but the opposition party complained continually of his censoring of the press, influencing elections, and interfering with public assemblies by virtue of the powers of his office. In 1894 and again in 1895 he was nominated by the crown for the Hungarian premiership, but on each occasion the Liberal party of Hungary refused to accept him. On June 26, 1903, he succeeded Szell to the presidency of the ministry, but when the Reichstag met in October they voted a want of confidence, and his premiership came to an end November 3. In March, 1904, he entered the cabinet of his successor, Tizra, as minister without a portfolio, but left office on the fall of that ministry in June, 1905. On Jan. 17, 1910, he succeeded Wekerle as premier, but the defeat of his reform measures for national defense, and the discord between the war ministry and the government party led to the dismissal of his ministry on April 17, 1912. He was succeeded by Ladislaus von Lukács.

KIAOCHOW. A harbor, town (Tsingtao), and district on the east coast of the Chinese province of Shantung, leased by Germany from China for 99 years from March 6, 1898. The district was declared a German protectorate in April, 1898. Area, exclusive of the bay, 552 square kilometers (213 square miles). The native population is estimated at 190,000. Whites numbered Jan. 1, 1913, 4470. A neutral zone, or rather a German sphere of influence surrounds the district and bay to a distance of 31 miles from high-water mark, embracing about 2500 square miles, with an estimated population of 1,200,000. At Tsingtao, the port of Kiaochow, imports and exports in the fiscal year

1912 were valued at 114,938,000, and 80,295,000 marks respectively; in the fiscal year 1913, 121,254,000 and 79,640,000. Vessels entered at Tsingtao in the 1910-11 trade numbered 614, of 1,071,000 tons. A railway extends from Tsingtao to Tsinan, the capital of Shantung, 271 miles, with a branch line of 30 miles to Poshan. The railway is controlled by the Shantung Mining Co., which operates coal mines at Fangtai and Poshan, and iron mines at Tchilingchen. The 1913-14 budget balanced at 16,787,625 marks, including 9,507,780 marks imperial subvention. Tsingtao is the administrative headquarters. Captain Meyer-Waldeck was Governor in 1914, under the direction of the Department of Marine. See WAR OF THE NATIONS, *Military Operations*.

KIEL CANAL. See CANALS.

KIKUYU. See ENGLAND, CHURCH OF.

KING, ALBERT FREEMAN AFRICANUS. An American physician, died Dec. 6, 1914. He was born in England, Jan. 8, 1841, the son of Dr. Edward King. He came to the United States, graduated at Columbia University in 1861, and in medicine at the University of Pennsylvania in 1865. He was acting assistant surgeon, United States army in 1864. He was professor of obstetrics and diseases of women and children in the medical department of Columbian University (1871-1913), and in the University of Vermont (1871-1913), and was president of the Washington Obstetrical and Gynecological Society in 1885-87. He was dean of the Medical School, Columbian University, in 1879-94. He early advocated with energetic confidence the theory that malaria is transmitted by the mosquito. This claim, republished in 1883, was accepted by the medical world in 1899. He first advocated the present system of personal and municipal prevention of the propagation of disease by insects. He was elected a member of the Royal Society of Medicine, London; a member of the American Gynecological Society; of the Washington Academy of Sciences; and a Fellow of the American Association for the Advancement of Science. He published: *A Manual of Obstetrics* (1882, 11th ed., 1910); and *Mosquitoes and Malaria* (1883).

KINGSBURY, OLIVER ADDISON. An American Presbyterian clergyman and writer, died May 5, 1914. He was born in New York City in 1830, and graduated from Yale in 1860; then studied theology at the Union Theological Seminary, and from 1865 to 1873 was pastor of churches in Connecticut, Illinois, and New York. From 1873 until 1889 he was editor of the *Illustrated Christian Weekly*, and in 1891 was called to the pastorate of the First Presbyterian Church of New Hartford, N. Y., where he remained until he was retired as pastor emeritus in 1912. He was the author of many contributions to religious periodicals as well as of several books.

KITCHENER, FIELD MARSHAL EARL. See GREAT BRITAIN, *History, passim*, and WAR OF THE NATIONS, *passim*.

KLUCK, ALEXANDER HEINRICH RUDOLF VON. See WAR OF THE NATIONS.

KNUTSFORD, HENRY THURSTAN HOLLAND, first VISCOUNT. An English politician and public official, died Jan. 29, 1914. He was born in 1825, and was educated at Harrow and Cambridge. In 1849 he was called to the bar, but did not actively practice, becoming engaged in of-

ficial work in connection with the Colonial Office, originally as legal adviser, and in 1870 as Under-Secretary. In 1874 he was elected member of Parliament and remained there until 1888 when he was raised to the peerage. He served as financial secretary to the Treasury and as vice-president of the Council on Education. He entered the Cabinet as Secretary of State for the Colonies, an office which he held until the Unionist Cabinet resigned after the general election of 1892.

KÖNIGSBERG. See **NAVAL PROGRESS.**

KOPP, GEORG. A German Roman Catholic Cardinal, died March 4, 1914. He was born in 1837, and in 1856 entered the Civil Service of the Kingdom of Hanover as an official in the telegraph department, but gave up this post for the priesthood. In 1872 he was made a canon of the cathedral and vicar-general of the diocese of Hildesheim; nine years later was appointed Bishop of Fulda. In 1884 he was nominated a member of the Council of State, and in 1886 after the agreement between Germany and the Vatican, following on the arbitration on the Caroline Islands, he was called to a seat in the Prussian Upper Chamber. In 1887 he became Prince-Bishop of Breslau, one of the largest dioceses in North Germany, including within its confines the city of Berlin. This position was one of preëminence in the Catholic Church in the German Empire. In 1893 he was made cardinal.

KOREA, or officially **CHOSŒN**. Formerly an independent monarchy occupying the peninsula between the Sea of Japan and the Yellow Sea; it became a Japanese protectorate March 2, 1906, and was annexed to Japan Aug. 29, 1910. Capital, Seoul.

AREA, POPULATION, ETC. The estimated area is 14,123 square ri (84,606 square miles). The population in 1913 was estimated at 15,164,066. The official estimate of Dec. 31, 1911, was 14,055,869, as compared with 13,299,699, the estimate of Dec. 31, 1910. At the end of 1911, males numbered 7,397,994, and females 6,657,875; of the total, Koreans numbered 13,832,376 (7,271,526 males, 6,560,850 females); Japanese 210,689 (114,759 males, 95,930 females); foreigners (chiefly Chinese), 12,804 (11,709 males, 1095 females). Estimated native population of the larger towns at the end of 1911: Seoul, 223,381; Fusan, 72,947; Kwangju, 42,910; Pingyang, 39,769; Haisyöng, 38,025; Taiden, 32,822; Taiku, 31,140; Chemulpo, 26,187; Wönsan, 20,093; Chingnampo, 17,546; Luju, 17,391; Yongsan, 17,307; Haiju, 16,163; Hamheung, 14,434; Kongyöng, 13,857; Jenju, 13,814; Yongampho, 13,371; Jinju, 12,102. Ancestor worship prevails throughout the country. Christianity has made considerable progress, the number of native Christians in 1910 being reported at about 250,000. The Japanese have undertaken the reorganization of the primary-school system, and the establishment of industrial and technical schools.

PRODUCTION; COMMERCE, ETC. Agriculture is the only productive occupation of importance, but cultural methods are primitive, and transportation facilities inadequate. The leading crops are rice and other cereals, beans, hemp, ginseng, tobacco, and cotton. Stock raising is a long-established industry. Sericulture is increasing in importance. Gold mining is carried on with some success. Iron, coal, and copper

are abundant, but these minerals are not yet worked to any great extent.

Imports and exports of merchandise were valued in 1911 at 54,087,682 yen and 18,856,955 yen, respectively; in 1912, 67,115,447 and 20,985,617. Imports and exports of specie and bullion in 1911, 4,739,245 and 12,857,023; in 1912, 1,472,528 and 10,124,232. Leading imports are cotton piece goods, cotton yarns, timber and lumber, kerosene, sugar, coal, wheat and flour, matings, etc., galvanized iron, rails, cigarettes, salt, paper, salt fish, and sake. Chief exports of merchandise in 1911 and 1912, respectively, in thousands of yen: Rice, 5284 and 7525; beans (daizu), 4362 and 5001; cattle hides, 1069 and 1032; fertilizer, 374 and 497; raw cotton, 237 and 341; coal, 376 and 334; iron and copper ore, 279 and 315; gold ore, 235 and 275; live animals, 704 and 208; red ginseng, 67 and 202; dried fish, 96 and 214; fresh fish, 134 and 138; salt fish, 53 and 69; azuki (*Phaseolus radiatus*), 245 and 183; seeds of *Perilla ocymoides*, 137 and 216; graphite, 132 and 165. Imports and exports of merchandise by principal countries in 1912, in thousands of yen: Japan, 40,756 and 15,369; China, 7027 and 4058; United Kingdom, 9802 and 198; United States, 6460 and 96; Germany, 1592 and 6.

COMMUNICATIONS. At the beginning of 1914 Korea had about 970 miles of railway, 133.2 miles of line having been opened in the year 1913. On August 16 the entire Keigen line from Seoul to Gensan was thrown open to traffic upon the completion of the section from Seoul to Kozan, 17 miles in length. This makes a total length of about 138 miles for this railway, which traverses the provinces of Kyeng-Ki, Kang Won, and South Hamgyeng. The trains from Seoul to Gensan make this journey in about eight hours, and the last named city is the chief city on the east coast, occupying the third place in foreign trade among the open seaports of Korea.

On September 6 the Seoul-Gensan Railway was formally opened, having been in active construction since October, 1910, although it had been begun previously at the time of the war. This line crosses the peninsula east and west, and is 141 miles in length.

The length of railway open to traffic in 1913 was reported at 1345 kilometers (836 miles); telegraph lines, 6018 kilometers, with 15,317 kilometers of wire; telephone lines, 4011, with 27,971 kilometers of wire; post offices, 567.

FINANCE. The monetary unit is the yen, par value 49.846 cents. The revenue and expenditure for the year 1910-11, together with budget estimates for 1912-13 and 1913-14, are shown below, in yen:

	1910-11	1912-13	1913-14
Rev. ordinary . . .	11,610,226	26,732,332	30,106,168
Rev. extraord. . .	10,368,475	26,159,877	27,883,447
Total rev. . . .	21,978,701	52,892,209	57,989,610
Exp. ordinary . . .	9,471,936	30,232,490	34,751,104
Exp. extraord. . .	8,343,719	22,659,719	23,238,506
Total exp. . . .	17,815,655	52,892,209	57,989,610

The subvention from the Japanese treasury was 2,885,000 yen in 1910-11, and in each of the two succeeding years was estimated at 12,350,000 yen. Chief items of estimated ordinary revenue for 1913-14: Taxes, 12,485,372 yen; pro-

ceeds of government enterprises, etc., 14,824,557; stamps, 1,145,658. For the fiscal year 1914-15, the estimated revenue (including subvention) and expenditures were reported to balance at 59,412,966 yen.

GOVERNMENT. Upon its annexation to Japan in 1910, Korea was placed under the administration of a Governor-General, Gen. Viscount (later Count) Terauchi Masakata, who continued to hold the office in 1914. Civil Governor-General, Yamagata Isaburo. Each of the 13 provinces is administered by a Governor.

KOSSUTH, FRANCIS. A Hungarian statesman, died May 25, 1914. He was born in 1841, the son of Louis Kossuth, the great Hungarian patriot. His father at the time of the birth of Francis was the editor of the chief organ of the Liberal party and had nearly attained the height of his importance, so that he was beginning to attract the adverse attention of the government. The boy was educated in Budapest, and while still a youth was sent to Paris to receive a technical education; after taking his degree as engineer, he worked in England on the Forest of Dean Railway, and from there, in 1861, he went to Italy, where for the next 33 years he practiced his profession. During the period of his engineering work, however, he carried on his father's propaganda in a series of newspaper and magazine articles, and also lectured on political freedom. He was twice elected a member of the Hungarian Parliament in 1867, but on both occasions declined to serve. In 1876 he married in Italy Miss Emily Hoggins, an English woman. His work as an engineer gained such a reputation for him that, in 1885, the Italian government decorated him for his services in railway construction. His last great engineering feat was the construction of steel bridges across the river Nile. He was with his father at the time of the latter's death at Turin in March, 1895, and he accompanied the remains of the patriot back to Budapest, where he was enthusiastically greeted by the Hungarian Independents and acclaimed the natural successor of his father to the leadership of that party. He immediately began to take an active part in Hungarian politics, writing, lecturing, and leading in the conclaves of his party. In 1896 he was elected to the Diet, but as his party was in the minority his power except in party matters was not great. In 1905, however, the elections sent his party back to the Diet with a large majority and his influence extended even to the King. He was received in audience by the Emperor Francis Joseph, and helped to construct the Wekerle ministry, of which Kossuth was Minister of Commerce. For four years, under the leadership of Kossuth, the Independents continued in power, but in 1909 he advocated a measure establishing a Hungarian national bank and in the party caucus was able to obtain only 74 votes, while 120 voted against him. He immediately resigned his leadership and his seat in the Diet, and, with his influence gone, the Independents lost control of the Parliament. From this time his activity in politics diminished. From 1899 until his death he was practically an invalid. He edited several volumes of Louis Kossuth's memoirs, and wrote several scientific papers; for years he contributed editorial articles to political newspapers, and wrote also on the subject of Hungarian independence in English, French, German, and American periodicals. He

was an accomplished linguist, reading and writing six European languages. He also had considerable ability as a painter.

KRUPP. The Fried. Krupp Aktien Gesellschaft during 1914 increased its share capital by 70,000,000 marks, raising it from 180,000,000 marks (£9,000,000) to 250,000,000 marks, thus making it the second largest German limited liability company, second only in the amount of share capital to the Deutsche Bank. The entire new capital, of which half was to be paid in before the end of 1915, was taken over by the Krupp family. The Krupp Company paid the following dividends from 1906-07 to 1913-14: 1906-07, 10 per cent; 1907-08, 1908-9, 1909-10, 8 per cent; 1910-11, 10 per cent; 1911-12, 12 per cent; 1912-13, 14 per cent; 1913-14, 12 per cent.

KURIA MURIA ISLANDS. Attached to Aden (q.v.).

KWANGCHOW-WAN. A division of French Indo-China (q.v.).

KWANTUNG. A Japanese leasehold in the southern part of the Liaotung Peninsula (Manchuria). Kwantung is the Chinese name, the Japanese name being Kwanto. The area is 1221 square miles. The estimated population at the end of 1911 was 488,136, or, including certain persons in Manchuria who, though outside of Kwantung, were regarded as residents thereof, 547,145; as compared with 519,836 in 1910, and 384,755 in 1906. Of the 1911 population (488,136), Chinese (or Manchus) numbered 446,760, Japanese 41,260, foreigners 116. In 1910, the population of Dairen, the chief port, was 40,758; Ryojun (Port Arthur), 16,797. In 1911, imports and exports were valued at 42,274,722 yen and 47,416,047 yen, respectively; in 1912, 58,198,107 and 55,306,297; in 1913, 55,036,000 and 66,209,000. The trade is chiefly with Japan. Kwantung forms a customs district under the Chinese Maritime Customs. Railway in operation, about 80 miles. In 1910-11, the revenue amounted to 4,273,473 yen (including subvention 3,000,000), and the expenditure to 3,451,488; for 1913-14, estimated revenue, 5,739,684 yen (including subvention 3,047,800), and estimated expenditure, 5,697,328. Kwantung is administered by a Governor-General, resident at Ryojun (Lieut.-Gen. Baron Fukushima in 1914).

LABOR. In spite of the European War, the year 1914, especially in the United States, was one of much importance in the development of labor problems. The radical theories presented by the Industrial Workers of the World (q.v.), or various brands of Syndicalism (q.v.), were less prominent than in the immediately preceding years. The year was notable, however, for several strikes of most extraordinary bitterness, described under Strikes and Lockouts (q.v.). In the article on Trade Unions (q.v.) will be found an account of the movement of organized labor in various countries. The industrial problems connected with women and children are treated under CHILD LABOR; MINIMUM WAGE; PENSIONS FOR MOTHERS; and WOMEN IN INDUSTRY. Other phases of the labor problem will be found under: ARBITRATION AND CONCILIATION, INDUSTRIAL; BOYCOTT; CHILD LABOR; INFUNCTION; INDUSTRIAL RELATIONS COMMISSION; FACTORY INVESTIGATION COMMISSION; LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION; LABOR LEGISLATION, AMERICAN ASSOCIATION

FOR; OCCUPATIONAL DISEASES; OLD-AGE PENSIONS; and WORKMEN'S COMPENSATION.

WAGES AND HOURS. *Bulletin No. 150* of the United States Bureau of Labor Statistics contained data relating to "Wages and Hours of Labor" in the cotton, woolen, and silk industries, 1907-13. As to cotton-goods manufacturing, this report showed that the average full-time weekly earnings of employees were 1.4 per cent higher in 1913 than in 1912, 14.7 per cent higher than in 1911, and 15.3 per cent higher than in 1910. Full-time hours per week showed no appreciable change between 1912 and 1913, but were 1.7 per cent lower in 1913 than in 1910 or 1911. In cotton-goods finishing, full-time weekly earnings in 1913 were 0.5 per cent lower than in 1912, but 1.2 per cent higher than in 1911. Full-time hours per week had varied little. In woolen and worsted mills, full-time weekly earnings were 2.2 per cent lower in 1913 than in 1912, and 7.8 per cent higher than in 1911, and 8.1 per cent higher than in 1910. Regular full-time hours per week in 1913 were 1.6 per cent lower than in 1910. In the silk-goods industry, full-time weekly earnings in 1913 were 5.6 per cent higher than in 1912, 8.8 per cent higher than in 1911, and 10.1 per cent higher than in 1910. Full-time hours per week in 1913 were 1.4 per cent lower than in 1910. Thus wages per hour were 5.8 per cent higher in 1913 than in 1912, 10.1 per cent higher than in 1911, and 11.7 per cent higher than in 1910.

Another report of the United States Department of Labor gave the union scale of wages and hours in the bakery, building, metal, and printing trades, including 49 occupations. The report covered 40 cities in 32 States. The wages and hours considered were those agreed to by an employer and an organization of union men. Taking the index number of wages per hour for 1913 as 100, the index for 1912 was found to be 97.0; for 1911, 95.2; for 1910, 93.1; for 1909, 90.2; for 1908, 88.6; for 1907, 84.8. It was shown that in these seven years union wages have either risen or not declined at times when prices of commodities had fallen; in general it was believed that union wages had risen faster than prices of commodities during this period from 1907-13.

A third Federal report showed that the average full time weekly earnings of the employees in lumber manufacturing were 3.4 per cent higher in 1913 than in 1912, and 5.4 per cent higher in 1913 than in 1910. Hours of labor were slightly lower than in previous years, and earnings per hour in 1913 were 5.7 per cent higher than in 1910. In mill work rates of wages per hour were 6.2 per cent higher than in 1910; while in furniture manufacturing in 1913 rates per hour were 7.9 per cent higher than in 1910. In these two latter industries the full time weekly earnings were respectively 5.4 per cent and 4.1 per cent higher in 1913 than in 1910.

Set over against these official reports was an analysis made by I. M. Rubinow in *The American Economic Review* of the relation of prices and wages as shown by official reports. He drew the conclusion that the wage earners of America have been able to raise their standard of living and to lead somewhat easier lives during the last 30 or 40 years. This favorable result, however, has been due to the decline in the number of children demanding support, and the increase in the employment of women, thus increasing the

sources of income. He concluded that the purchasing value of wages had increased slightly between 1870 and 1890, but had fallen rapidly since 1900, so that real wages were not much higher in 1913 than in 1870. In other words, labor receives no larger return for its effort than three decades or more ago; but the enormous increase in industrial productivity together with smaller families and the increase in number of wage earners per family has resulted in an elevation of standards of living in the industrial population.

ROCKEFELLER INVESTIGATION. About October 1 the Rockefeller Foundation, to which Mr. John D. Rockefeller had given a trust fund of \$100,000,000, announced that it would undertake an investigation of industrial conditions throughout the world. For this purpose it secured as director Mr. W. L. Mackenzie King, formerly Minister of Labor in Canada, and author of the Canadian Industrial Disputes Act. It was stated that this inquiry would seek to ascertain the causes of the bitter opposition between labor and capital and to bring forward means of promoting harmony. It declared this "the most complicated and the most urgent problem of modern times," and requested the coöperation of employers, labor unions, universities, and governments in carrying on its investigation in all principal industrial nations. Although the immediate incentive for this inquiry was the excessive bitterness of the Colorado strike in which the Rockefeller interests had been involved (see **STRIKES**), nevertheless the matter had been under consideration for several years previous, and it was announced that the spirit of the investigation would be thoroughly scientific, and comparable to that of the Rockefeller Institute for Medical Research. See also under **RELIEF FOR WAR VICTIMS**.

ALIEN LABOR LAWS. About 1897 the New York Legislature enacted a law requiring that only citizens be employed on State and city construction work, and that New York State citizens be given preference for such work; severe penalties were imposed for violations. For many years the law had been treated as a dead letter, and its constitutionality generally doubted. Acting on behalf of trade unionists, the Bricklayers' and Masons' Union on November 17 demanded the application of this law to the work on the new system of subways under construction in New York City. This required the discharge of 18,000 aliens, and had the effect of seriously hampering the work. On November 18 the contractors decided to obey the law; but suits were at once begun to test the validity of the statute. Justice Newburger of the Supreme Court on December 8 upheld the constitutionality of the law and its application to subway work; but by a unanimous decision of the Appellate Division of the Supreme Court the law was declared inapplicable to subway contracts on the ground that these were not public works within the meaning of the law; that the city was building them through contractors, not as a branch of the sovereign power, but as a proprietor.

In the November election Arizona had adopted by referendum vote a law requiring that every pay-roll containing five or more names should contain not less than 80 per cent of qualified voters. Protest against this law was made officially by Great Britain, Italy, and Austria-Hun-

gary as in violation of the treaty rights of their subjects. Japan also showed considerable interest. In December the Federal District Court for Arizona issued a temporary injunction restraining the State from enforcing the law. This was made permanent by the Circuit Court at San Francisco on Jan. 7, 1915, the law being held unconstitutional because in violation of the 14th Amendment. The court held that no State under the guise of its police power could deprive a man of his right to labor guaranteed by that amendment. "The Supreme Court of the United States has held that the right to labor is a right to property. An alien cannot be deprived of the right of property under the Federal Constitution."

LABOR, AMERICAN FEDERATION OF. This body is the most extensive group of organized labor in the United States if not in the world. It is organized on the basis of individual trade union autonomy, in so far as consonant with the interests of organized labor in general. It has uniformly opposed radical labor movements such as socialism and syndicalism, and its president, Samuel Gompers, is an able and vigorous opponent of compulsory arbitration. The strike is believed to be an important and necessary weapon in trade-union policy; so also the boycott (q.v.). The Federation has not affiliated with any political party, but has at various times thrown its influence against members of Congress and State Legislatures who have manifested hostility to trade unionism. However, the Federation has been an effective advocate of legislation before Congress. For an account of the Contempt Case involving leading Federation officers, see **INJUNCTION**.

Among its present policies are the following: Free schools, free textbooks, and compulsory education; reduction of the powers of the courts in the issuance of injunctions in labor disputes (see **TRADE UNIONS**, *Clayton Bill*); an eight-hour day; one day's rest in seven; the abolition of the contract system on public work; municipal ownership of public utilities; the abolition of the sweat-shop; sanitary inspection of factory, mine, and home; nationalization of telegraph and telephone; the protection of child labor; equal woman suffrage; plentiful playgrounds in all cities; the initiative, referendum, and recall; the prohibition of interstate trade in convict-made goods; old-age pensions for all civil service employees; prohibition of so-called scientific management schemes in public service; minimum wage legislation.

MEMBERSHIP. For the year ending Sept. 30, 1914, the Federation had an average paying and reported membership of 2,020,671, an increase of 24,667 over the preceding year. This membership was distributed among 110 national and international unions, 570 local trade and Federal labor organizations, 43 State federations, and 670 city central bodies. All told there were 21,460 local unions. The central headquarters at Washington include the following five departments: Building trades; metal trades; union label; mining; and railroad. The funds available for the year were \$366,230; expenditures, \$265,737. There were in the field 1760 Federation organizers, of whom about 1700 were volunteer workers.

LABOR EXCHANGES. See under the article **UNEMPLOYMENT** the paragraphs on *Public Employment Exchanges*.

LABOR LEGISLATION. All of the 11 States that held regular sessions in 1914 passed laws relating to labor, as did the 63d National Congress. For legislation not treated below, see **ARBITRATION AND CONCILIATION**; **CHILD LABOR**; **OLD-AGE PENSIONS**; **TRADE UNIONS**; **INJUNCTION**; **MINIMUM WAGE**; **UNEMPLOYMENT**; **WORKMEN'S COMPENSATION**; and **WOMEN IN INDUSTRY**. The Industrial Relations Commission and the Factory Investigating Commission of New York are treated under separate heads.

ADMINISTRATION. Although there were no changes from the old style labor department to the commission form during the year, yet special commissions or boards to administer compensation laws were created in Kentucky, Maryland, and New York. (See **WORKMEN'S COMPENSATION**.) Likewise, there were special boards created for the handling of definite phases of the labor problem. For the enforcement of the recent law passed by Congress regulating women's work in the District of Columbia, a new inspection staff has been established. Also Louisiana, Mississippi, New York, and New Jersey have provided for additional inspectors in connection with the administration of child labor laws, and in Massachusetts a factory investigator has been appointed. Besides granting the Board of Labor in Massachusetts more powers, the Legislature has ordered the commission to present a compilation of the laws relating to labor, and to call attention to any changes that should be made. Coming to realize the necessity for trained men in the carrying out of the laws, several of the States have provided for salary increases.

ACCIDENTS AND DISEASES. Progress was made in reporting these matters, Massachusetts making it compulsory for those engaged in the manufacture or sale of gas or electricity to inform the newly created Board of Gas and Electric Light Commissioners of deaths in those occupations; and New Jersey added to its existing provisions by requiring the report of vocational diseases in lead works and potteries. However, the most forward steps were taken in the matter of prevention. Like Massachusetts, New York and Virginia put forth attempts to protect laborers from fire; and comprehensive statutes regulating canneries and workshops were enacted in Maryland. These placed under the supervision of the State Board of Health the sanitation of creameries, bakeries, canneries, and other places where food products are manufactured. Virginia has decreed that several new sanitary and safety devices shall be introduced into manufacturing plants.

Noteworthy advance was made in New Jersey by most elaborate law for the protection of workers in compressed air, the second such law in any State in the Union. This required working and resting periods, and time for decompression. For the safety of workers in mines, three States have legislated, Kentucky rewriting her entire mine code. Accidents are to be prevented by detailed stipulations as to safety appliances, posting notices in the languages spoken by the miners, and several other regulations. Four States have provided for greater safety on railroads, South Carolina requiring warning boards, Louisiana stating that a period of training must precede operation of street cars, and Virginia making headlights and a caboose on freight trains required. By a popular vote in Missouri

the full crew law was repealed, while in Mississippi a similar bill was passed.

WAGES AND HOURS. In nine States and Alaska, wages were legislated upon in 1914. Maryland and Massachusetts fixed the rates of pay of several classes of public employees, while New Jersey required that certain county workers be remunerated at regular intervals. Alaska and Kentucky granted first lien on mine property to those performing labor in connection with the mines; while Louisiana, Massachusetts, Mississippi, Ohio, and South Carolina enacted laws regulating the payment of wages in private industries. The question of granting two weeks' annual vacation with pay to laborers employed by cities and towns, and provision for Saturday half-holiday throughout the year for public employees, was approved by the voters of Massachusetts at the last election. Twenty-six States and the Federal government, and one territory—Alaska—now have an eight-hour day on public works. By a large majority, Buffalo, N. Y., in November, accepted the new charter which established the eight-hour day for the employees of that city. In the matter of limiting the hours of private employment, Alaska again led by adopting an eight-hour day in mines and smelters, while Porto Rico amended its law governing closing hours. Maryland and Massachusetts provided for two full days' rest each month for railroad employees; and the latter State, in addition, limited the working day for station laborers and baggage men. The ten-hour law of Mississippi for adult men in manufacturing and repairing was amended so as to exempt establishments dealing in perishable agricultural products. Also, New York amended her weekly rest-day law by excluding certain milk-handling establishments from its provisions, and by granting the commissioner of labor authority to exempt some continuous industries.

EUROPE. Among the important labor legislation passed during the year was a law in Belgium imposing regulations upon the employers of workers in compressed air caissons. This law, similar in many respects to the one in New Jersey, provided for safety devices and for means of insuring comfort to the workers, stipulated what the height of the room and the extent of pressure within it should be, and stated that the air in the chambers should be thoroughly purified after mines have been exploded therein, before the workers are readmitted. Time for decompression, and working and resting periods were also regulated. No one under 16 years of age, nor those found in a state of intoxication, nor those having no doctor's certificate are allowed to work in these caissons. In addition, there are rules for the foremen and workmen, and for their medical supervision. In Germany, a law was enacted late in 1913 relating to the employment of women and young people in brick works, which limited their labor to the lighter work involved. Also during the spring of 1914, provisions were made for the management of works in the iron industry, regulating the hours of labor and periods of rest. A most elaborate law was enacted in Austria, early in the year, with regard to the contracts of persons employed in the higher branches of the service of agriculture and forestry; this prescribed the employer's liability, the obligations of the employee, and the details as to dismissal or termination of employment.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This is the American branch of the International Association of like name. While established only a few years ago, it has succeeded in creating branches in a number of leading industrial States and has gained great prestige in the promotion of legislation for the betterment of working conditions. During 1914 it gave particular attention to the subjects of sickness, industrial injuries, and the problem of unemployment. It held a conference on occupational diseases in 1910, and on social insurance in 1913. At the same time it gave much publicity to European methods of insuring the working population against the evils consequent upon sickness. These steps were followed by the formation of a committee to investigate the possibilities of sickness insurance in the United States, and to draw up a proposed bill for legislative action. This committee was composed as follows: Henry R. Seager, Miles M. Dawson, Edward T. Devine, and Dr. I. M. Rubinow of New York; Charles R. Henderson of Chicago; Henry J. Harris of the Library of Congress; and Carroll W. Doten of Boston. This committee worked in cooperation with representatives of workers and employers, and expert legislative draftsmen were employed by it. For results of its deliberations, see **SOCIAL INSURANCE**.

The Association held the First National Conference on Unemployment in New York City, February 27-28; and the Second Conference at Philadelphia, December 28-29; and has cooperated with the American section of the International Association on Unemployment in an effort to alleviate this great evil of the industrial system. (See **UNEMPLOYMENT**.) In addition, the Association stands for the following: One day's rest in seven; protection from occupational diseases and industrial accidents; compensation for industrial diseases and accidents; additional safeguards for working women; and more efficient factory inspection and labor law enforcement.

LABRADOR. A peninsula in the northeastern part of British America, attached partly to Newfoundland (q.v.) and partly to Canada.

LABUAN. See **STRAITS SETTLEMENTS**.

LACROSSE. The Crescent Athletic Club of Brooklyn, N. Y., again in 1914 turned out the strongest lacrosse team in the United States. In their clashes with the Canadian players, however, the Crescents were not so successful as in the preceding year. The only important victory won in the series with the Dominion teams was that over Toronto University by a score of 11 to 2. The Canadian teams which defeated the Crescents, and the scores were: Toronto Lacrosse A. A., 6 to 3; St. Catherine's, Ontario, 5 to 4; Maitland Lacrosse Club of Canada, 8 to 5.

The victors in the United States Intercollegiate League were Cornell in the Northern division, and Lehigh in the Southern division. These teams battled to a tie in an effort to determine the supremacy. The standing follows: Northern Division—Cornell won 3, lost 0; Harvard won 2, lost 1; Hobart won 1, lost 2; Stevens won 0, lost 3. Southern Division—Lehigh won 2, lost 0; Johns Hopkins won 1, lost 1; Swarthmore won 0, lost 2.

LAFAYETTE COLLEGE. An institution for higher education, founded at Easton, Pa., in 1832. The total attendance in all departments

in 1914 was 580, and there were 59 members of the faculty. No important gifts were received during the year, and there were no notable changes in the faculty except the election in December of John Henry MacCracken (q.v.) as president. The library contains about 44,000 volumes. The amount of productive funds in 1914 was \$607,678, and the total income was \$129,907.

LAKE CHAMPLAIN CENTENARY. See CELEBRATIONS.

LAKE MOHONK CONFERENCE OF INTERNATIONAL ARBITRATION. See INTERNATIONAL ARBITRATION AND PEACE.

LAKING, SIR FRANCIS HENRY. An English physician, died May 23, 1914. He was born in 1847 and received his medical education at St. George's Hospital. After holding junior appointments at this hospital, he entered into partnership with the Apothecary to the Royal Household, and so completely gained the confidence of Queen Victoria that on his principal's death he was appointed Surgeon Apothecary in Ordinary to the Queen, and also Apothecary to the Royal Household and the Households of the Prince of Wales and the Duke of Edinburgh. For a long period of years he was physician to various members of the royal family, and during the period of his official connection with the British court he enjoyed a warm personal friendship with his patients. He attended King Edward during his illness in 1902, and he signed the official intimation of the death of that sovereign. He received many decorations from foreign rulers and was a commander of the Legion of Honor.

LAMPS, ELECTRIC. See ELECTRIC LIGHTING.

LANDS, PUBLIC. Important measures relating to public lands were passed by the Sixty-third Congress. One of these was a new reclamation act, the purpose of which is to make it easier for the pioneer farmer on a reclamation project to bring his farm into full yielding. The time for the payment of the farmers' indebtedness to the government was extended from 10 to 20 years. Thus, by reducing the annual installments paid for water rights, the settler may be enabled to level his land, secure the necessary farm implements and cattle, and in general is given an opportunity to take from the land enough to pay for his water rights. There are other provisions in the act which make for the fuller use of the land, not the least important of which is one which should compel cultivation of private holdings and no longer permit their being held for speculation.

Another measure, which at the close of the year had passed the House, but had not been acted upon in the Senate, and which promises to be of even greater importance in the administration of public lands, is the power and general leasing bill. The bill relating to power provides for the granting of a 50-year lease of a government site or other needed government lands; at the end of that period the government may take over the power plant, paying for the right of way, water rights, and lands only their actual cost, and for all other property (excepting franchise or good will) its reasonable value.

The general leasing bill is called for chiefly by the existence of certain absurdities in the present laws, for example, making the placer law applicable to the entry of oil lands. As for coal, the bill permits a lease to be made of 2560

acres, but does not repeal the existing laws under which coal land may now be purchased from the government. The only other minerals covered by the bill are phosphates and potash. This measure makes available for the upbuilding of the West, through irrigation, whatever moneys may come out of its enactment. The reclamation fund in the first instance is to have these moneys and later such revenue is to be divided in equal portions between the States whence the resources come and the Federal government. The Secretary of the Interior estimates that if there had been such a law during the past ten years the government could have had for reclamation work not less than \$50,000,000 as a 10 per cent royalty upon the oil produced from government lands.

GENERAL LAND OFFICE. This office in 1914 surveyed more than 17,000,000 acres of public lands at a cost of less than 4 cents an acre for field work. It also issued 73,999 patents covering 14,391,071 acres of land, as compared with 63,496 patents covering 12,678,076 acres in 1913. There were approved during the year over 4900 forest and reclamation homesteads and miscellaneous entries, as against 2800 in the preceding year. The office patented 10,000,635 acres under the homestead laws, or 2,680,577 acres more than in 1913. It patented 6,645,046 acres under the three-year homestead law, compared with 3,500,388 acres in 1913. There were restored 516,000 acres of land embraced in fraudulent or erroneous entries. Investigations and reports were made on more than 22,000 cases in the field.

During the year 19,602,859 acres of coal lands were classified and appraised. These lands are valued at \$777,305,698. There were withdrawn 209,488 acres of oil lands, and restored 187,867 acres. Of phosphate lands there were withdrawn 169,885 acres, and restored 250,392. Of potash lands there were withdrawn 92,160 acres, and restored 320 acres. Power site reserves withdrawn in 1914 amounted to 183,612 acres, and there were restored 90,400.

LAWN TENNIS. Maurice E. McLoughlin of California stamped himself the greatest lawn tennis player of his day during the season of 1914. But although the year saw an American crowned king of the sport, it also saw the Davis Cup, emblematic of the world's team championship, depart for Australasian shores. McLoughlin did his best to prevent such a catastrophe, but single handed he was unable to check the brilliant attack of Anthony F. Wilding and Norman E. Brookes which had carried them triumphant through the preliminary matches with the teams of Canada, Germany, and Great Britain.

The final round for the Davis trophy was fought on the courts of the West Side Tennis Club at Forest Hills, L. I., and was witnessed by 25,000 persons. In addition to McLoughlin, the American team comprised R. Norris Williams, 2d, in the singles, and Thomas C. Bundy as partner of McLoughlin in the doubles. The

Australasian representatives, aside from Brookes and Wilding, were A. W. Dunlop and S. N. Doust, but neither of the two last named was called into the fray.

Brookes met McLoughlin in the singles on the first day of the matches, and a struggle resulted that brought thrill after thrill to the thousands in the stands. It was veritably a battle between youth and age, between a comparative novice at the game and a man bearing the scars of experience received in scores of similar conflicts. Youth eventually came off victorious, but that first set, which went to 32 games, will never be forgotten by those lovers of tennis who were fortunate enough to watch the amazing display of endurance and skill.

The second match of the first day was between Wilding and Williams, Wilding winning in straight sets. On the following day the doubles were contested, the Australasians being easy victors. The score was two matches to one in favor of the challengers, when in the morning contest of the third day Williams again went down to defeat at the hands of Brookes. This victory gave the Australasians the cup. In the fifth match, which could have no bearing on the outcome, McLoughlin defeated Wilding by three sets to one.

A summary of the Davis Cup contests follows:

Preliminary Round at Folkestone, England. T. M. Mavrogordato, England, defeated P. de Borman, Belgium, 6-1, 6-3, 8-6; J. C. Parke, England, defeated A. G. Watson, Belgium, 6-2, 6-3, 6-3; H. R. Barrett and T. M. Mavrogordato, England, defeated W. H. Duivier and A. G. Watson, Belgium, 6-1, 6-2, 6-2; T. M. Mavrogordato, England, defeated A. G. Watson, Belgium, 6-1, 6-0, 6-3; J. C. Parke, England, defeated P. de Borman, Belgium, 6-4, 6-3, 6-0.

Preliminary Round at Wimbledon, England. T. M. Mavrogordato, England, defeated Max Germot, France, 4-6, 7-5, 9-7, 6-2; J. C. Parke, England, defeated Max Decurgis, France, 6-2, 4-6, 3-6, 6-3, 6-3; Max Decurgis and Max Germot, France, defeated H. R. Barrett and T. M. Mavrogordato, England, 6-3, 5-7, 7-5, 6-4; T. M. Mavrogordato, England, defeated Max Decurgis, France, 6-1, 7-5, 7-5; J. C. Parke, England, defeated Max Germot, France, 7-5, 6-1, 6-3.

Preliminary Round at Lake Forest, Ill. N. E. Brookes, Australasia, defeated B. P. Schwengers, Canada, 6-2, 6-3, 6-2; A. F. Wilding, Australasia, defeated R. B. Powell, Canada, 6-1, 6-2, 6-2; N. E. Brookes and A. F. Wilding, Australasia, defeated B. P. Schwengers and R. B. Powell, Canada, 6-4, 6-3, 6-4; A. F. Wilding, Australasia, defeated B. P. Schwengers, Canada, 7-5, 6-3, 6-1; N. E. Brookes, Australasia, defeated R. B. Powell, Canada, 6-0, 6-1, 6-3.

Preliminary Round at Pittsburgh, Pa. A. F. Wilding, Australasia, defeated Oscar Kreutzer, Germany, 6-2, 6-2, 6-4; N. E. Brookes, Australasia, defeated Otto Froitzheim, Germany, 10-8, 6-1, 6-2; A. F. Wilding and N. E. Brookes, Australasia, defeated Oscar Kreutzer and Otto Froitzheim, Germany, 6-1, 6-2, 6-2; A. F. Wilding, Australasia, defeated Otto Froitzheim, Germany, 6-3, 6-4, 6-2; N. E. Brookes, Australasia, defeated Oscar Kreutzer, Germany, 6-4, 6-2, 8-6, 6-2.

Preliminary Round at Boston, Mass. A. F. Wilding, Australasia, defeated A. F. Lowe, England, 6-3, 6-1, 16-14; N. E. Brookes, Australasia, defeated J. C. Parke, England, 6-2, 4-6, 6-3, 1-6,

7-5; N. E. Brookes and A. F. Wilding, Australasia, defeated J. C. Parke and T. M. Mavrogordato, England, 6-1, 6-0, 6-4; Brookes defaulted to Lowe and Wilding to Parke, S. N. Doust and A. W. Dunlop being substituted as the Australasian team; J. C. Parke, England, defeated A. W. Dunlop, Australasia, 6-0, 7-5, 6-3; A. F. Lowe, England, defeated S. N. Doust, Australasia, 6-4, 6-4, Doust retiring at 7 all in the game because of the heat.

Final and Challenge Round at Forest Hills, L. I. A. F. Wilding, Australasia, defeated R. N. Williams, 2d, United States, 7-5, 6-2, 6-3; M. E. McLoughlin, United States, defeated N. E. Brookes, Australasia, 17-15, 6-3, 6-3; A. F. Wilding and N. E. Brookes, Australasia, defeated M. E. McLoughlin and T. C. Bundy, United States, 6-3, 8-6, 9-7; N. E. Brookes, Australasia, defeated R. N. Williams, 2d, United States, 6-1, 6-2, 8-10, 6-3; M. E. McLoughlin, United States, defeated A. F. Wilding, Australasia, 6-2, 6-3, 2-6, 6-2.

The United States national championships held on the Casino Courts at Newport, R. I., afforded a surprise in the defeat of McLoughlin by Williams for the singles title. Williams showed tremendous speed and captured the match in straight sets. McLoughlin and Bundy had little difficulty in retaining their doubles title, defeating G. M. Church and Dean Mathey of New York, 6-4, 6-2, 6-4.

Miss Mary K. Browne of California successfully defended the woman's singles title by her victory over Miss Marie Wagner of New York. Miss Browne and Mrs. R. H. Williams of Chicago for the second successive year captured the women's doubles title. Miss Browne and William T. Tilden repeated their success of 1913 by winning the mixed doubles honors. Clarence J. Griffin of California won the national clay court title.

A summary of the principal tournaments in the United States and Europe follows:

All-Comers National at Newport. Men's Singles, final round, R. N. Williams defeated M. E. McLoughlin, 6-3, 8-6, 10-8; Men's Doubles, final round, M. E. McLoughlin and T. C. Bundy defeated G. M. Church and Dean Mathey, 6-4, 6-2, 6-4.

Women's Singles, final round, played at St. Martin's, Pa. Miss Mary K. Browne defeated Miss Marie Wagner, 6-2, 1-6, 6-1; Women's Doubles, final round, Miss Mary K. Browne and Mrs. R. H. Williams defeated Mrs. Edward Raymond and Miss Edna Wildey, 8-6, 6-2.

National Indoor Championships, played in New York City. Men's Singles, final round, G. F. Touchard defeated Dr. William Rosenbaum, 6-2, 6-2, 4-6, 6-2; Men's Doubles, final round, W. C. Grant and G. C. Shafer defeated G. F. Touchard and W. P. Cragin, Jr., 3-6, 6-2, 6-2, 6-8, 6-1; Women's Singles, final round, Miss Marie Wagner defeated Mrs. C. N. Beard, 6-1, 2-6, 6-2; Women's Doubles, final round, Miss Clare Cassel and Mrs. S. F. Weaver defeated Mrs. W. McLean and Mrs. R. Schmitz, 4-6, 6-2, 6-4.

Clay Court Championships, played at Cincinnati, Ohio. Men's Singles, final round, C. J. Griffin defeated Elia Fottrell, 3-6, 6-8, 8-6, 6-0, 6-2; Men's Doubles, final round, N. Browne and C. Wayne defeated C. J. Griffin and Elia Fottrell, 6-3, 4-6, 6-3; Women's Singles, final round, Miss Mary K. Browne defeated Mrs. R. H. Wil-

liams, 6-1, 3-6, 6-2; Women's Doubles, final round, Miss Mary K. Browne and Mrs. R. H. Williams defeated Miss M. Lyons and Miss Dodd, 6-2, 6-1.

Metropolitan Championship, final round, played at Forest Hills, L. I. Men's Singles, R. L. Murray defeated F. B. Alexander, 6-8, 7-5, 7-5, 2-6, 6-4; Doubles, G. M. Church and Dean Mathey defeated G. C. Shafer and King Smith, 6-3, 7-9, 6-4, 12-10; Women's Singles, Mrs. Edward Raymond defeated Miss Clare Cassel, 6-3, 6-0; Women's Doubles, Miss Marie Wagner and Miss Clare Cassel defeated Mrs. S. F. Weaver and Mrs. Rawson Wood, 5-7, 7-5, 9-7.

Pacific Coast. Men's Singles, William M. Johnston defeated Elia Fottrell, 6-4, 6-0, 6-2; Men's Doubles, C. J. Griffin and W. M. Johnston defeated R. Roberts and Van Dyke Johns, 6-2, 6-2; Women's Singles, Mrs. H. A. Neimeyer defeated Miss Helen Baker, 6-3, 6-8, 6-2; Women's Doubles, Miss E. Tenant and Miss C. Tarlton defeated Mrs. H. A. Neimeyer and Miss Helen Baker, 8-6, 6-3.

Intercollegiate Championships played at Philadelphia. Singles, final round, G. M. Church, Princeton, defeated R. N. Williams, 2d, Harvard, 8-6, 9-7, 4-6, 7-5. Doubles—R. N. Williams, 2d, and Richard Harte, Harvard, defeated G. M. Church and A. M. Kidder, Princeton, 6-2, 6-2, 7-5. Western Conference Championships at Madison, Wis. Singles—A. M. Squair, University of Chicago, defeated J. Stellanwagen, University of Minnesota, 6-1, 6-3, 2-6, 6-4. Doubles—Squair and McNeal, Chicago, defeated Buhai and Moses, Illinois, 6-1, 6-2.

English Championships at Wimbledon. Singles—N. E. Brookes, Australia, defeated A. F. Wilding, New Zealand, 6-4, 6-4, 7-5. Doubles—N. E. Brookes and A. F. Wilding, Australasia, defeated H. R. Barrett and C. P. Dixon, England, 6-1, 6-1, 5-7, 8-6. Women Singles—Mrs. R. Lambert Chambers defeated Mrs. Larcombe, 7-5, 6-4. Women Doubles—Miss E. Ryan and Miss A. M. Morton defeated Mrs. Larcombe and Mrs. Hannam, 6-1, 6-3.

International Tournament at Monte Carlo. Singles—A. Wilding, New Zealand, defeated Gordon Lowe, England, 6-2, 6-3, 6-2. Doubles—Poulin, France, and Kleinschroth, Germany, defeated A. F. Wilding, New Zealand, and Craig Biddle, United States, 2-6, 6-4, 2-6, 6-3, 6-4.

LAW SCHOOLS. See UNIVERSITIES AND COLLEGES.

LEAD. The production of primary lead from domestic ores in 1913 was 436,430 short tons, valued at \$38,405,840, compared with 415,395 tons, valued at \$37,385,550 in 1912. Though lead prices were maintained at a fairly high level for the first 10 months of the year, the total production from all sources fell off 18,000 tons from the total of 1912. This decline in the output was due to the shutting down of mines and smelters in Mexico on account of the unsettled conditions in that country. The lead of foreign origin smelted or refined in the United States in 1913 was less than half of similar lead refined in each of the three preceding years. Of the total lead produced in 1913, 462,460 tons were refined lead, 330,593 tons were desilverized lead, 131,867 tons were soft lead, and 16,665 tons were antimonial lead. Missouri ranks first in lead production, followed by Idaho, Utah, and Colorado. These are the chief lead-producing States. Details of the production in

these and other States will be found in the articles on *Mineral Production* under the States.

The largest gain in domestic smelter production in 1913 was made by Utah, with 10,405 tons, or 17 per cent; Idaho followed closely with an increase of 10,022 tons; Colorado and California had gains of 5801 and 2483 tons, respectively; and Missouri's output suffered the greatest loss, 10,180 tons, or 6 per cent, notwithstanding which the State retained first place in production. Since 1910 Idaho has gained annually about 10,000 tons, and Missouri has lost about 30,000.

WORLD PRODUCTION. The production of lead in the principal producing countries in 1912-13 is shown in the following table.

PRODUCTION OF LEAD IN PRINCIPAL PRODUCING COUNTRIES IN 1912 AND 1913, IN SHORT TONS

Country	1912	1913
United States (domestic refined) .	392,517	411,878
Spain	205,799	223,767
Germany	194,666	199,627
Australia	118,387	127,867
Mexico	132,276	68,343
Belgium	56,438	55,997
Great Britain	82,187	83,620
France	84,282	80,864
Other countries	115,961	118,495
Total	1,282,518	1,270,458

PRODUCTION IN 1914. According to the United States Geological Survey, the year 1914 was marked by an enormous increase in the output of domestic lead. This amounted to nearly 100,000 tons over the production of any preceding year. There was also a heavy decrease in the tonnage of lead of foreign origin treated in the United States, and for the first time in years there was a great increase in the quantity of domestic lead exported to European countries. At the same time the average price of lead in the United States was the lowest since 1898. The production of varieties of lead from domestic and foreign ores in 1914 was approximately 537,079 short tons, worth at the average New York price \$41,892,162, compared with 462,460 short tons, valued at \$40,696,480 in 1913. See CHEMISTRY; METALLURGY; OCCUPATIONAL DISEASES.

LEAD POISONING. See OCCUPATIONAL DISEASES.

LEATHER. The hide and leather industry during the year 1914 was complicated by the war and the outbreak of the foot and mouth disease. At the outbreak of the war the supply of hides appeared plentiful, and the shipments usually received at Antwerp and Hamburg, which normally are among the largest and most important dry hide markets of the world, were turned to London and New York. Nevertheless the actual amount of supply was relatively smaller and the slaughtering of cattle in South America was less than usual, due to financial conditions. As a result, at the end of the year, there was no surplus of hides, either in the United States or available for export to manufacturing centres, and the prices of packer hides advanced five cents a pound, when shoe manufacturing was at a low ebb. Russian hide dealers petitioned during the year the Minister of Commerce to export such hides as were not necessary for consumption, to the United States. In France the leather industry was stagnant, while in Belgium no business of any kind could

be carried on. In Germany supplies of leather required for military consumption were of course very large, and large demands from Turkey were also looked for, while German leather manufacturers hoped to make some exports to the neutral countries, although if contracts were carried at prices entered before the war, great losses would be occasioned.

Artificial leather continued during 1914 to be in active demand, having made itself a definite place, especially for the upholstering of automobiles, carriages, furniture, car seats, etc., taking the place of what was termed in the leather industry, splits. Artificial leather is not available as a substitute for shoe soles, belting or harness, or No. 1 grain leather, when used for upholstery, but as its basis is a very strong cloth, having twice the strength of the ordinary split, which is the weaker, fleshy side of the hide, it has a wide application. It has been estimated that by 1914 several hundred thousand automobiles had been upholstered in artificial leather and an independent demand for the product had arisen quite aside from its previous use as a substitute for the natural product. See BOOTS AND SHOES.

LEEWARD ISLANDS, THE. A British colony; the most northerly group of the Lesser Antilles. It is made up of five presidencies, detailed as follows:

	Sq. m.	Pop.	Capital
Antigua	170 1-2	32,265	St. John
Montserrat	32 1-2	12,196	Plymouth
St. Kitts & Nevis	150 1-3	43,803	Basseterre
Dominica	304 2-3	33,868	Roseau
Virgin Islands	58	5,562	Road Town
Total	716	126,818	St. John

The population is that returned by the census of 1911. With Antigua are included its dependencies, Barbuda and Redonda; with St. Kitts and Nevis, Anguilla. The islet of Sombrero was added to the colony by an order in council dated Aug. 10, 1904. St. John, the colonial capital, has 7910 inhabitants.

Except in Dominica, the system of elementary education is denominational; in Dominica, with a few exceptions, the schools are supported with public funds, as are also two schools in Antigua. There are also secondary, agricultural, and technical schools. Industrial and other statistics will be found in the articles on the separate presidencies. Total trade and finance statistics are given in the table below, revenue and expenditure being exclusive of government grant:

	1909-10	1910-11	1911-12	1912-13
Imports	£485,393	£567,817	£713,414	£640,729
Exports	441,728	558,165	568,754	563,339
Revenue	149,670	164,375	174,818	172,480
Expenditure	149,906	159,263	158,924	162,266

There are no railways and no internal telegraphs. There is cable connection with Guadeloupe, and thence with the United States, Bermuda, Canada, and Europe.

The Governor in 1914 was Sir H. Hesketh-Bell (appointed 1912); he is aided by executive and legislative councils.

LE FEVRE, EGBERT. An American physician and educator, died March 30, 1914. He was born in Raritan, N. J., in 1858, and graduated from Rutgers College in 1880. He studied medicine at the University Medical College, New York University, receiving the degree of M.D. in 1883, and for the two years following he saw service in hospitals. From 1880 to 1890 he was clinical lecturer on the practice of medicine at New York University, adjunct professor of medicine in 1895, associate professor of therapeutics, and professor of clinical medicine in 1898. In that year he also became dean of the School of Medicine at New York University. He was consulting physician to several hospitals in New York City and was a member of several medical and scientific societies. He was the author of *Physical Diagnosis* (1902).

LEHIGH UNIVERSITY. An institution for higher education at South Bethlehem, Pa., founded in 1866. There were enrolled in all departments of the university in the autumn of 1914, 672 students, and the faculty numbered about 75. The Taylor Gymnasium was completed during 1914 and an additional playing field was provided. The plant of the university has also been improved by the erection of a commodious home for the Department of Arts and Sciences, which has been named Coppée Hall, as a memorial to Dr. Henry Coppée, the first president of the university. In connection with the regular extension work of the university an evening school has been organized in the plant of the Bethlehem Steel Company. The productive funds of the university amount to about \$1,314,000, and the annual income to about \$240,000. The library contains 133,200 volumes. The president is Henry Sturgis Brinker, E.M., LL.D.

LELAND STANFORD JUNIOR UNIVERSITY. An institution for higher learning, founded in 1891. The number of students enrolled in the several departments for the fall semester of 1914-15 was 1879, and the faculty numbered 229. The only notable change in the faculty during the year 1913-14 was the creation of the office of Chancellor, to which the first president of the university, Dr. David Starr Jordan, was transferred, Dr. John Casper Branner being chosen to succeed him as president. Dr. Flügel, who had been professor of English philology from the beginning of the university, died on November 14. Among the gifts received during the year was the benefaction of \$30,000 from Thomas Welton Stanford of Melbourne, Australia, the first installment of a fund for the erection of a fine-arts museum; \$10,000 to the Medical School by the will of Charles Gaylord Lathrop, late trustee and treasurer of the university; \$10,000 from the estate of the late W. J. Dickey of Fresno, Cal., for the establishment of two undergraduate scholarships; \$10,000 from Charlotte S. Playter, to establish the C. Annette Buckel fellowship in the study of retarded school children. At the end of the college year 1913-14 the endowment funds

of the university amounted to \$23,961,338, and the annual income to \$1,461,315. The library contained 239,122 volumes on July 31, 1914.

LEMAÎTRE, (FRANÇOIS ELIE) JULES. A famous French critic and dramatist, died at Tavers (Loiret), Aug. 5, 1914. He was born at Vennecey (Loiret), April 27, 1853, graduated from the Ecole Normale Supérieure, Paris, in 1875, and soon afterward received an appointment as professor of rhetoric at the lycée of Havre. In 1880 he became lecturer at Algiers; joined the faculties of Besançon in 1882, and Grenoble in 1883; but in the following year gave up university work to devote himself to literary production. In 1880 appeared his first volume of verse, *Les médaillons*; in 1882 he obtained his doctorate in letters for an able thesis on *La comédie après Molière et le théâtre de Dancourt*; and in 1883 he published his second volume of verse, *Les petites orientales*. In 1885 Lemaître succeeded J. J. Weiss as critic on the *Journal des Débats*, and he contributed also to the *Temps*, *Figaro*, *Gaulois*, *Echo de Paris*, and *Revue des Deux Mondes*. The literary and dramatic criticisms which appeared in these journals and reviews were collected in two large series, *Les contemporains* (7 vols., 1885-99), and *Les impressions du théâtre* (10 vols., 1888-98). His appreciations of modern French writers are remarkably keen, and his style is worthy of the best traditions of France. Much the same may be said of his dramatic criticisms, which were made especially valuable by his own practical experience as a playwright. His plays, not lacking in many fine qualities, include: *Révolte* (1889); *Député Leveau* (1891); *Mariage blanc* (1891); *Flipote* (1893); *Les rois* (1894); *L'âge difficile* (1895); *Le pardon* (1895); *L'ainée* (1895); *La bonne Hélène* (1896); *La massière* (1904); *Princesse de Clèves* (1905); *Bertrade* (1905); *Le mariage de Télémaque*, with Maurice Donnay (1910). His stories include *Sérénus* (1886); *Dix contes* (1889); *Myrrha* (1894); *En marge des vieux livres* (3 vols., 1905, 1907, 1914). His later critical works included: *Opinions à répandre* (1902); *Théories et impressions* (1904); *J. J. Rousseau* (1907); *Racine* (1908); *Fénelon* (1910); *Chateaubriand* (1912). Lemaître succeeded Victor Duruy as a member of the French Academy in 1895, and in 1898, with François Coppée, he founded La Ligue de la Patrie Française.

LEPROSY. In April, 1913, a bill was introduced into the House of Representatives providing for a national leprosarium under the control of the Surgeon General of the United States. This bill was before Congress over a year, but there seemed small chance of its enactment into law. Dr. W. C. Rucker, Assistant Surgeon-General, United States Public Health Service, pointed out the necessity for the establishment of a national leprosarium. Segregation and cleanliness are the only effective weapons, he believes, against the spread of leprosy. There exists no positive means for diagnosis in the early stages; no specific treatment has yet been found. There was evidence that the disease was on the increase in the United States, where there are several well established foci. Leprosy was made notifiable in most States, but in only three of them were well established leprosariums, in which the per capita cost for maintenance and treatment is exces-

sive. Another reason why such a national institution should be established exists in the inhuman treatment meted out to lepers in this country. Rucker says, "Let a man be marked as a leper and he becomes a pariah, an outcast from society, to be hounded from place to place, to be locked up in a lonely, often filthy, building, there to be viewed at a distance by the more intrepid as some wild and dangerous animal. The unwelcome visitor disturbs trade, and he is hurried by night over the State line, there to be subjected to further indignities and to become a thorn in the side of another community, by reason of the economic losses which his presence produces. Verily the lot of the leper in this Christian country of ours is sad and troubled." Since 1894 the Louisiana Leper Home has cared for a considerable number of patients; in 1914 there were nearly 100 inmates. Texas was believed to have 30 cases or more. California about the same number. In New York the number was estimated at more than 100.

The prevalence of leprosy in Norway is shown by a table in *Public Health Reports* for May 29, 1914. It appears that from 1906 to 1910 there were 211 deaths from leprosy. Of these 128 were males and 83 females. At the end of 1910 there were 323 lepers, 137 males, and 186 females. The latest treatment for leprosy advocated, was that by the injection of iodoform. The iodoform is dissolved in liquid paraffin and ether, the skin of the patient's arm is cleaned with an antiseptic solution, a tourniquet is applied above the elbow and the iodoform mixture injected into the median basilic or median cephalic vein. The solution may also be injected into the substance of nodules. Here it has the effect of destroying the nodules and leaving a clean granulating surface free from the lepra bacilli. Courtney, who used the method in 12 cases, reports good results except in the anæsthetic cases, which did not respond.

LESLIE, MRS. FRANK (BARONESS DE BAZUS). An American publisher, died Sept. 18, 1914. She was born in New Orleans, La., in 1828. Her maiden name was Miriam Florence Folline, and she was a descendant of a noble French Huguenot family from which she took the title of Baroness de Bazus late in life. In 1880, upon the death of her husband, Frank Leslie, the publisher, she took charge of his then badly involved business, and soon brought it to a flourishing condition. Under her management the *Popular Monthly*, which she later sold, increased 200,000 copies in four months. While making an extensive European tour she met William Wilde, a brother of Oscar Wilde, to whom she was married in 1891 and from whom she was divorced in 1893. She is also supposed to have been married once or twice before she met Frank Leslie. By her will Mrs. Carrie Chapman Catt was made residuary legatee of a fortune estimated at \$1,500,000, this fortune to be spent by Mrs. Catt to advance the cause of woman suffrage. The bequest was popularly reported as a "million dollar gift to suffrage," but inasmuch as the will was contested by relatives the gift to "the cause" may prove to be much smaller.

LEWIS, ALFRED HENRY. American writer, died Dec. 23, 1914. He was born in Cleveland, Ohio, in 1858, and received an academic and high school training, after which he studied law, being admitted to the bar and successful in practice. At the age of 23 years he was elected

prosecuting attorney for the city of Cleveland, and he continued the practice of law in Cleveland until the late '80s, when he and his brother opened a law office in Kansas City, Mo. Previous to his school days Mr. Lewis had spent some years in the southwestern part of the United States. He continued his studies of the West in Kansas City, and soon began to write stories which were studies of western character. These stories, known as the "Wolfville" stories, were so successful that Mr. Lewis gave up law and began his literary career. Going to Washington as political correspondent for several papers, his work became widely known and he was finally placed in charge of the Washington bureau of the *New York Journal*. He removed to New York in 1898 and founded a weekly publication called *The Verdict*, which for some time he edited. Although in his later years he did much newspaper work, it was as a writer of books, short fiction, and magazine articles that he was chiefly known. He contributed to magazines several series of articles of a political nature, which were extremely frank and radical in the treatment of men and measures. His published writings include: *Episodes of Cowboy Life*; *Sandburrs*; *Wolfville Days*; *Wolfville Nights*; *Black Lion Inn*; *Peggy O'Neal*; *Wolfville Folks*; *Confessions of a Detective*; *An American Patriot*—Aaron Burr; and *Faro Nell and Her Friends*.

LIBERIA. An independent negro republic on the West African coast, covering an area variously estimated at from 35,000 to 41,000 square miles. Out of a population estimated to number between 1,000,000 and 2,000,000, about 12,000 are Americo-Liberians. The country is almost totally undeveloped. Roads are few and railroads unknown. Trade is mostly with Hamburg, the United Kingdom, Netherlands, and the United States. The imports for 1912 were reported at \$1,667,857, against \$1,154,924 in 1911; exports, \$1,199,152, against \$1,013,849 in 1911. The revenue for 1912-13 amounted to \$618,809, and the expenditure to \$529,548; 1913-14 budget, \$531,500. The debt stood Dec. 31, 1913, at \$1,352,000. The internal floating debt amounted to \$200,000. Monrovia is the capital. President in 1914, Daniel Edward Howard. He assumed office in January, 1912, for four years.

ARMY. While the military forces of Liberia could hardly be termed an army, yet there is an enlisted frontier force of about 600 men with native officers, who have received training at the hands of officers from the United States army.

HISTORY. In June, John L. Morris, the Liberian Secretary of the Treasury, and Ernest Lyon, the Liberian counsul-general at Baltimore, complained to President Wilson of the United States that Reed Paige Clark, who had been appointed receiver of customs in connection with the Kuhn, Loeb & Co. loan of \$1,700,000 in 1912, was arrogating to himself almost dictatorial powers and playing the petty tyrant in the negro State. In December the French *Annales Coloniales* alleged that the Liberians were sending "armed bands which make incessant bloody incursions into the territory of French Guinea and the Ivory Coast"; that Liberia gave shelter to hostile ships; and that reasons existed for supposing a German wireless station to be operating on Liberian soil.

LIBRARY ASSOCIATION, AMERICAN. A

society organized in 1876 and incorporated in 1879 to develop the public library in its bearing on American education and by coöperation to increase the efficiency of library administration. The present membership is about 3300. Annual meetings are held, the 36th being in Washington, D. C., May 25-29, 1914, at which there was an attendance of 1366, of whom 300 were from libraries in the District of Columbia. E. H. Anderson, director of the New York Public Library, took for the subject of his presidential address, "The Tax on Ideas," and emphasized the fact that Russia and the United States are the only powers of the first class which impose a duty on books published beyond their borders. Some of the other principal papers were the following: "The Need of a National Archive Building," J. Franklin Jameson; "The Library and the Immigrant," John Foster Carr; "Libraries for Rural Communities," P. P. Claxton, United States Commissioner of Education; "The Present Trend," Charles Knowles Bolton; "Prestige," W. N. C. Carlton; "How the Library of Congress Serves the People of the Several States," W. W. Bishop; and "The County Agent in Relation to Rural Library Work," D. W. Working, of the Department of Agriculture. The official council passed resolutions relative to library service in schools and qualifications of school librarians, emphasizing that good service from school libraries is indispensable in modern educational work, and that this work should be directed by one who is equally competent in scholarship, talent, and teaching power with the head of any other department of instruction in the same school.

Committees the past year have studied, among other things: uniformity in library statistics, with a view to having each public library of the country report on certain matters of common interest from a uniformly common basis; the establishment of a general clearing house for information on library labor saving devices; library work in penal and charitable institutions; and the preparation of a year book of general library information and statistics. An exhibit of the principal features of American library economy was sent to the International Exposition of the Book and Graphic Arts in Leipzig, and the association has prepared a similar exhibit for the Panama-Pacific International Exposition at San Francisco.

Executive offices, in charge of a salaried secretary, are maintained in Chicago in the public library building. This is the centre for the association's activities which may be roughly grouped as follows: (a) Editing and publishing the official bulletin, issued bimonthly, through which the membership is kept informed of the plans and work of the association and its committees. One number is entirely devoted to the proceedings of the annual meeting and another to the *Handbook*, containing lists of officers, committees, members, etc. (b) Editing and publishing the *A. L. A. Booklist*, a monthly guide to the selection and purchase of the best of the current books. This work is conducted by an editor (Miss May Massee), and a corps of assistants, who devote their entire time to this periodical. (c) Publishing and sale of all publications of the association. (d) Correspondence on all phases of library work, the executive office acting, so far as it is able, as a clearing house of library information.

During the year about 21,000 letters have been mailed from the office, in addition to about 20,000 pieces of circular matter, and the publications which have been sold. (e) Coöperation with the association committees, library commissions, State library associations and library clubs, and other national, educational, and civic associations. (f) Promoting better library architecture by collecting and loaning plans of library buildings. (g) Promoting general publicity of the aims and activities of the association and library work at large.

Affiliated with the American Library Association are four national associations of kindred purpose: National Association of State Libraries, League of Library Commissions, American Association of Law Libraries, and Special Libraries Association. The National Education Association has a library section closely connected, though not officially affiliated, with the American Library Association.

Among the important publications of the year are a supplement (1900-10) to the *A. L. A. Index to General Literature*, an index to kindergarten songs, a list of books for boys and girls, an enlarged and revised edition of its *Cataloguing for Small Libraries*, and five chapters in the *Manual of Library Economy*, making 25 chapters thus far printed out of the 32 projected. The publishing activities operate under a gift to the association of \$100,000 made in 1902 by Andrew Carnegie. There are about 80 publications now in print. The officers for the year 1914-15 are as follows: President, H. C. Wellman, City Library, Springfield, Mass.; first vice-president, W. N. C. Carlton, Newberry Library, Chicago, Ill.; second vice-president, Mary L. Titcomb, Washington County Free Library, Hagerstown, Md.; secretary George B. Utley, 78 E. Washington Street, Chicago; treasurer, Carl B. Roden, Public Library, Chicago, Ill.

The 37th meeting will be held at Berkeley, Cal., June 3 to 9, 1915. See LIBRARY PROGRESS.

LIBRARY BUILDINGS. See ARCHITECTURE; LIBRARY PROGRESS.

LIBRARY OF CONGRESS. The total number of books in the library at the close of the fiscal year 1914, was 2,253,309, an increase of 125,054 during the year. There were in addition 141,712 maps and charts, 663,474 volumes and pieces of music, and 376,812 prints. Of the accessions, 20,534 were by purchase, 14,753 by gift, 35,331 by transfer from United States Government libraries, 15,815 by copyright, and 23,959 by the Smithsonian Institution. Others were gifts from State governments, local governments, foreign governments, exchange, etc.

The most important single accession during the year was the gift of Mr. Jacob F. Schiff, consisting of more than 4200 volumes to reinforce the collection of Semitica given by him to the library in 1912. The present collection, like the former, was brought together by Dr. Ephraim Deinard, who spent the preceding year in Europe and Palestine in gathering material. With a few exceptions the collection consists of Hebraica, in all branches of literature from the earliest antiquity to modern times, including several notable bibles. Another valuable gift was a collection of 265 volumes from Miss Martha C. Codman, which included much valuable material relating to early colonial history and literature. The principal purchase of the year was a group of Chinese and Manchu books

selected in Peking by Dr. Hing Kwai Fung. This includes 6467 volumes, embracing works dealing chiefly with lexicography, history, and physiography, the arts, agriculture, medicine, bibliography, and epigraphy.

The editing of the journals of the Continental Congress progressed during the year. The volumes for 1782 were printed and the copy for 1783 was in the hands of the printer. Since this publication was begun in 1904, it has gone forward at the rate of the annual publication of the journal for one year, with one exception. About seven years will be required to complete the publication at this rate of progress. A large number of valuable manuscripts relating to early colonial history and personages was added during the year.

LIBRARY PROGRESS. The year 1914 in American libraries was marked by steady growth along lines already familiar rather than by any unusual movements. The chief event of professional interest was the great exhibit in Leipzig of the Book and Graphic Arts to which the libraries of America made a gratifying contribution. The Library of Congress and the American Library Association combined in a joint exhibit which set forth graphically and in very practical fashion certain of the distinctively American features of library practice. This great exposition was rudely interrupted by the outbreak of the war, but the exhibits have been returned in safety to the United States.

The annual meeting of the American Library Association was held in Washington in May. The attendance was the largest ever recorded (1366). The *Proceedings* have been issued from the offices of the Association, 78 East Washington Street, Chicago, and contain the reports of papers read at the various meetings of sections and affiliated organizations. A new section for high school librarians met for the first time. The Bibliographical Society of America, League of Library Commissions, Association of Law Libraries, Special Libraries Association, and other bodies met in Washington with the Library Association.

LIBRARY LEGISLATION. There was much less legislation on library matters than in 1913, as but 14 State legislatures were in session. New York not only restored certain appropriations for State work in aid of libraries to their former figures, but in addition threw open school libraries for public circulation in school districts in which there is no public library, thus providing legal machinery for the creation of a free circulating library in every school district in the State. In New Jersey school libraries as a result of new enactments are to be brought directly under the supervision of the Public Library Commission, and law libraries are provided for in counties having from 20,000 to 50,000 inhabitants. Massachusetts passed an act enabling towns adjacent to cities containing public libraries to contract with such public libraries to permit the inhabitants of their towns to draw books. This method of coöperation between country and city is becoming one of the marked features of modern library practice. The benefits of the city public library are shared by the surrounding rural districts in return for a modest contribution to the support of the library. Massachusetts also materially increased the appropriations for the work of its Library Commission.

LIBRARY LITERATURE. Antrim, S. B. and E. I., *The County Library* (Van Wert, Ohio, 1914), chiefly devoted to a history of the Brumback Library of Van Wert; Bishop, Wm. W., *Practical Handbook of Modern Library Cataloguing* (Baltimore, 1914); Severance, Henry O., *Guide to the Current Periodicals and Serials of the United States and Canada* (Ann Arbor, 1914), a third edition of an invaluable tool; Kaiser, John B., *Law, Legislative, and Municipal Reference Libraries* (Boston, 1914); Chipman, Charles Phillips, *Books and Libraries* (Waterville, Me., 1914); Brown, James Duff, *Subject Classification*, 2d ed. (London, 1914); Richardson, Ernest C., *The Beginnings of Libraries and Biblical Libraries* (Princeton, N. J., 1914); the latter bringing library history down to about 150 A.D.; *Catalogue of Books Relating to Architecture . . . in the Boston Public Library* (Boston, 1913); *Books for High Schools*, compiled by Martha Wilson (Chicago, American Library Association Pub. Board, 1914); Library of Congress—*Catalogue of opera librettos printed before 1800*, 2 vols.; *List of geographical atlases*, vol. iii; *Handbook of the libraries of the District of Columbia*; *American doctoral dissertations printed in 1912*; several select lists of books on topics of current interest; A. L. A. *Index to general literature, supplement 1900-1910* (Chicago, 1914).

LIBRARY TRAINING SCHOOLS. The school in connection with Drexel Institute in Philadelphia was closed after many years of honorable service in training librarians. No new schools were established, but the Brooklyn Public Library introduced a course of training for children's librarians, and the New York Public Library School one for training persons for work in municipal reference libraries.

LIBRARY TRAINING SCHOOLS. See LIBRARY PROGRESS, under heading so entitled.

LIBYA. A French possession on the Mediterranean coast of Africa, comprising Tripoli and Cyrenaica. See TRIPOLI.

LIÈGE, ASSAULT AND CAPTURE OF. See WAR OF THE NATIONS.

LIFE INSURANCE. See INSURANCE.

LIGHT. See ELECTRIC LIGHTING and PHOTOGRAPHY.

LIGHTHOUSES. During the year there was little in the way of new lighthouse construction, either in Europe or America, which involved striking departures from existing methods of work, or unusual dimensions. The number of aids to navigation maintained by the United States Lighthouse Service on June 30, 1914, is shown by the accompanying table:

Lighted aids:	
Lights (other than minor lights)	1,588
Minor lights	2,793
Light-vessel stations	52
Gas buoys	453
Float lights	118
Total	5,004
Unlighted aids:	
Fog signals	519
Submarine signals	48
Whistling buoys, unlighted	86
Bell buoys, unlighted	283
Other buoys	6,880
Day beacons	1,978
Total	9,104
Grand total	14,198

LIND, JOHN. See MEXICO, *History*.

LINDSAY, THOMAS M. A Scottish clergyman and educator, died Dec. 7, 1914. He was born in 1843 and received his education at Edinburgh University. In 1872 he was appointed to the chair of Church History at the College of the Free Church, in Glasgow, and for fifteen years was Convener of the Foreign Mission Committee of the Free Church of Scotland. In 1902 he was appointed principal of the United Free Church College, in Glasgow. He wrote much on matters connected with church history and other subjects; his published writings including Handbooks on Reformation, on Acts, Mark, Luke; Life of Luther; Cunningham Lectures on the Church and the Ministry in the Early Centuries. He also contributed to the *Cambridge Modern History*, *Cambridge Mediæval History*, and the *Cambridge History of English Literature*.

LIQUOR REGULATION. Although comparatively few of the State legislatures were in session in 1914, and thus the laws designed to regulate the liquor traffic were fewer than in 1913, there was no halt in the progress of prohibition in the States. In the South the movement continued and three States, Tennessee, Virginia, and West Virginia, either by legislative enactment or by votes of the people, are or will be prohibition States. In the elections of November 3, Arizona, Colorado, Oregon, and Washington voted for prohibition, and while the movement was defeated in California and Ohio, the vote showed a strong sentiment in favor of it in these States. * The addition of the States noted brings about one-fifth of the population of the country under State-wide prohibition, or more than one-half if local option areas are included. Thirteen States were under prohibition at the end of the year, five of these voting "dry" during 1914. In Kentucky a measure providing for State-wide prohibition was passed in the House but defeated in the Senate. For further details in regard to prohibition enactments and measures in these States, see the historical sections under them.

The Federal measure for the submission to the States of a constitutional amendment providing for prohibition in the United States did not receive the necessary two-thirds vote. (See LIQUORS.) In general the opponents of the measure based their objection to the amendment on the ground that the matter was a question for State and not Federal regulation. This, it is understood, was the attitude taken by President Wilson and Secretary Bryan. The Prohibition party made notable gains in November in Arizona, California, Massachusetts, Minnesota, New York, and Oregon. The Prohibition candidate for Congress who combined with the Democrats in California was elected, and it was in this State that the Prohibition gain was greatest. Prohibition vote increased over 15,000.

LIQUORS. During 1914 the thing which had the greatest effect upon the liquor industry in the United States was the prohibition agitation. The following States voted prohibition during the year: Arizona, Colorado, Oregon, Washington, and Virginia. The greatest fight occurred, perhaps, in the States of California and Ohio, one being a great wine centre and the other a great whisky centre. In both of these States the prohibition amendment was defeated. On Dec. 22, 1914, the House of Representatives

of the United States voted on the prohibition amendment to the Constitution. The amendment received a majority vote but failed to obtain the necessary two-thirds.

WINES. The following table shows the production of wines for the year 1912 as given in the *Moniteur Vinicole*:

Countries	Gallons	Countries	Gallons
France	1,568,751,845	Roumania .	23,775,800
Italy	1,195,612,286	Servia	11,887,650
Spain	875,121,400	Brazil	11,887,650
Algeria	176,232,588	Tunis	6,604,250
Argentina ..	108,309,700	Uruguay	5,547,570
Russia	180,884,600	Australia	5,288,400
Portugal ..	95,761,625	Peru	5,288,400
Hungary ..	70,533,390	Cape of Good	
Austria ..	66,042,500	Hope	3,962,550
Chile	66,042,500	Coraisca	2,568,683
Germany ..	63,400,800	Bolivia	2,113,860
Greece and		Luxemburg ..	1,188,765
Islands ..	55,475,700	Canada	1,056,680
U. S.	42,267,200	Azores, Canaries,	
Bulgaria ..	31,700,400	and Madeira ..	1,003,846
Turkey and		Persia	79,251
Cyprus	26,417,000	Mexico	528,340
Switzerland .	23,854,551	Egypt	89,625

The above table is probably only an estimate of the production of the various countries, but is very interesting in showing their relative importance in the production of wine. A glance at the tabulation shows what a small part California plays in the world's production (producing 90 per cent of American wines). Although that great State has the same climate, soil, and sun as Italy, and is one-third larger, yet it produces only one-thirtieth as much wine.

No accurate figures for the California product in 1914 are at present available; estimates are approximately 39,000,000 gallons, of which about 23,000,000 gallons are dry wines. The quality is expected to be decidedly better than the vintage of 1913. Reports from France vary; in some departments the yield will only be from 50 to 70 per cent of a normal crop. A rough estimate calculates the total yield from France and Algeria together as approximately 2,000,000,000 gallons. The effect of the war is at present uncertain; probably the districts in Northern France around Rheims, and the Moselle and Rhine have suffered considerably. The worst effect undoubtedly will be felt in 1915, as the labor for handling the crops will not be available as in the past.

The United States emergency war revenue act, passed in the fall of 1914, placed a tax of 8 cents a gallon on wines not fortified, and 55 cents a proof gallon on brandy used in the fortification of sweet wines, as against no tax on dry wines, and 3 cents a gallon on brandy used in fortification in the past. While this tax is only for one year it is expected that it will be continued.

FERMENTED LIQUORS. The following table, credited to *Gambrinus*, published in Vienna, showing gallons of beer produced, and the number of breweries in the various countries, is of interest:

Country	Gallons	Breweries
United States	1,686,476,000	1,446
Germany	1,484,296,000	10,967
United Kingdom	1,394,652,000	3,846
Austria-Hungary	543,994,000	1,159
Belgium	359,700,000	3,214
France	353,452,000	3,210
Russia	247,280,000	940
Switzerland	75,020,000	97
Sweden	62,848,000	190
Denmark	45,408,000	386
Holland	42,460,000	444

Fiscal year	Number of denaturing warehouses	Completely denatured Wine gallons	Specialty denatured Wine gallons	Wine gallons	Total Proof gallons
1907	8	1,897,861.16	882,415.19	1,780,276.35	3,084,950.8
1908	12	1,812,122.88	1,509,829.35	3,321,451.73	5,640,331.2
1909	12	2,370,889.70	2,185,579.15	4,556,418.85	7,967,736.4
1910	12	3,076,924.55	3,002,102.55	6,079,027.10	10,605,870.7
1911	14	3,374,019.92	3,507,109.94	6,881,129.86	11,682,887.9
1912	14	4,161,268.56	3,933,246.44	8,094,515.00	13,955,903.8
1913	21	5,223,240.78	4,608,417.76	9,831,658.54	16,953,552.8
1914	25	5,218,129.56	5,191,846.03	10,404,975.59	17,811,078.2

DENATURED ALCOHOL. The preceding statement shows, for the United States, the quantity of such spirits denatured during each of the fiscal years since the enactment of the denatured alcohol law of June 7, 1906.

The emergency war revenue act of 1914 did not increase the rate of tax on distilled spirits.

CORDIALS AND OTHER COMPOUNDS. No data are available as to the amount produced. The United States emergency war revenue act of 1914 placed a tax of 24 cents a gallon on such preparations.

The following table shows the production of fermented liquors per capita consumption, etc., in the United States:

Year ends June 30	Bbls. beer	Per capita gallons	Number of breweries	Retail dealers
1912	62,176,694	19.96	1,506	17,253
1913	65,324,876	20.62	1,462	16,828
1914	66,189,473	20.50	1,392	15,760

This statement shows that the production is increasing instead of decreasing, but the number of breweries and retail establishments is decreasing; or, in other words, a larger volume of business is being done by a smaller number of establishments.

The 1914 emergency war revenue act increased the tax on beer to \$1.50 per barrel.

DISTILLED SPIRITS. The amount of distilled spirits produced and consumed in the United States in the past three years is as follows:

Year ends June 30	Produced proof gallons	Consumed proof gallons	Per capita consumption
1912	187,571,808	133,259,148	1.44
1913	193,606,258	140,289,425	1.50
1914	181,919,542	136,269,752	1.38

The consumption fluctuates from year to year, but a comparison for the last 10 years shows that it is steadily increasing in the United States. The following amounts of spirits were bottled in bond during last five years:

Year ends June 30	Proof gallons
1910	8,985,759
1911	10,631,091
1912	9,752,486
1913	10,626,633
1914	10,441,588

Illicit distilling is increasing, in the opinion of the Internal Revenue officers, due largely to the prohibition laws.

The following table shows in millions of gallons (imperial) the consumption of wines, beer, and spirits in the principal countries for which statistics are at present available. (For other countries and earlier dates see previous volumes of the YEAR BOOK.)

	Year	Great Britain	Germany	France
Wines	1910	12.6	48.8	752.6
	1911	11.2	90.3	1156.1
	1912	11.2	69.1	1464.8
	1913	11.3

	Year	Great Britain	Germany	France
Beer	1910	32.8 (a)	1410.9	337.3
	1911	34.2	1589.7	395.3
	1912	33.9	1484.7	345.5
	1913	34.9
Spirits (pure alcohol)	1910	24.0 (b)	89.2	80.8
	1911	25.2	43.3	34.6
	1912	25.1	42.5	38.8
	1913	26.1

(a) barrels.
(b) potable.

LITERATURE. See FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; SCANDINAVIAN LITERATURE; and SPANISH LITERATURE.

LITERATURE, ENGLISH AND AMERICAN. The great war of 1914 did not affect the number of books published as unfavorably as might have been expected. Most of the contracts for the fall book trade were under way when war was declared. The output did not differ markedly from that of the previous year. But in the sales of books after the opening of the war, fiction fell off very considerably, and works bearing directly upon the conflict were in great demand. Poetry and drama were less affected, so that in the month of October the number of volumes of poems and plays doubled that of novels. Characteristic tendencies seem to be indicated by the continued increase in the number of new books devoted to religion, theology, and philosophy, and the decrease in those dealing with science, pure and applied. The *Publishers' Weekly* reports the year's output as follows:

ENGLISH AND AMERICAN BOOK PRODUCTION, INTERNATIONAL CLASSIFICATION.

	England 1913	1914	United States 1913	1914
Philosophy	280	179	324	408
Religion, theology	889	969	944	1,032

Total	12,379	11,537	12,230	12,010

WAR LITERATURE. The coming of the Great War in August, besides checking somewhat the demand for books unrelated to the all-absorbing topic of the hour, had a positive influence as well in stimulating the production and enhancing the sale of works aiming to throw light upon the European situation. In four directions this new impetus has been particularly fruitful; in studies of the diplomatic crisis which led up to the conflict; in controversial or apologetic works, chiefly written to sway public opinion in the neutral countries; in reprints or translations of books dealing with contemporary world politics and especially with the tone and temper of the modern German Empire; and, finally, in technical studies of the conditions and methods of twentieth century warfare. Studies of the conduct of the present war, either from the historian's standpoint or the journalist's, have as yet been few, partly because of the brief time which has elapsed since it began, but perhaps even more because of the careful censorship of news and the systematic suppression of the activities of the war correspondent which has marked the policy of all the nations involved.

The completest survey of the military situation during the opening months of war is given in *The Times' History of the War*, the first volume of which has now been published by the London Times, but *The War in Europe*, by Albert Bushnell Hart, the American historian, and *The Great War*, by Frank H. Simonds, are models of how history should be written while it is yet in the making. Other historical sketches include volume i of *The History of the Great European War*, by W. S. M. Knight; books on special phases and aspects of the war, such as *The Siege of Liège*, by Paul Hamelius; *From the Trenches*, by G. W. Young; *First from the Front*, by Harold Ashton; *Fighting in Flanders*, by E. A. Powell; *The World War*, by Elbert Francis Baldwin; *With the Allies*, by Richard Harding Davis; *In the Firing Line*, by A. St. John Adcock; *Tommy Atkins at War*, *As Told in His Own Letters*, by J. A. Kilpatrick; *Paris War Days*, by Charles Quinan Barnard. The eagerness with which the general public has studied the causes of the war is one of the most remarkable features of its reaction upon literature. The official documents published by the German, British, French, Russian, and Belgian governments have had a sale both as newspaper supplements and as pamphlets which places them among the "best sellers." Among the books dealing primarily with the causes of strife may be noted *The Diplomatic History of the War*, edited by M. P. Price; *The Clash of Nations*, by Rossiter Johnson; *Causes and Consequences of the War of 1914*, by Howard P. Okie; *The New Map of Europe*, by Herbert Adams Gibbons; *The Nations of Europe*, by Charles Morris; *The World War*, by E. F. Baldwin; *The Evidence in the Case*, by James M. Beck. The most widely noted pro-German books include *The Truth about Germany*; *What Germany Wants*, by Edmund von Mach; *The War and America*, by Professor Hugo Münsterberg. The cause of the Allies has been urged by Arnold Bennett in *Liberty*; by H. G. Wells in *The War that Will End War*; by Cloudeley Brereton in *Who Is Responsible?*; by Douglas Sladen in *The Real "Truth about Germany"*; and in the *Ox-*

ford Pamphlets, 1914, by many noted writers.

Books expounding the philosophy of Pan-Germanism, whether from a friendly or a hostile standpoint, have been enormously in demand. An example of this is Roland G. Usher's *Pan-Germanism*, which was little noticed at the time it first appeared, early in the year, but became with the war, the most widely read book (other than fiction), in America. Professor Treitschke, who has been little more than a name to those who have not mastered the German language, appears this year in *Selections from Treitschke's Lectures on Politics*, by A. L. Gowans; in *Treitschke*, by Adolf Hausrath; in *The Political Thought of Heinrich von Treitschke*, by H. W. C. Davis. The doctrines of militarism appear in a more popular and less original form in the books of Gen. Friedrich von Bernhardi, a disciple of Treitschke, whose *Germany and the Next War* has been widely read and quoted, and whose later book, *Our Future*, has also been translated. Prince von Bülow's *Imperial Germany* was translated before the outbreak of the war, but even at the time it was published it attracted no little attention because of the importance of the author in determining German policy and because of the charm and candor of his style. Another book to which the war has given importance is the late Professor J. A. Cramb's *Germany and England*, delivered as a series of lectures in 1913, urging England to put herself in readiness for the inevitable conflict with the German Empire. The German Emperor is a favorite topic for students of world politics, and we have many sketches of his personality: *Germany and the German Emperor*, by Herbert Perris; *William of Germany*, by Stanley Shaw; *The German Emperor and the Peace of the World*, by A. H. Fried; *The Real Kaiser*; *The Kaiser*, edited by Asa D. Dickinson; *Builder and Blunderer*, by George Saunders; *My Ideas and Ideals, Kaiser Wilhelm II*; *The Kaiser's War*, by Austin Harrison. Other studies of modern Germany are: *Germany's Madness*, by Dr. Emil Reich; *The German Empire's Hour of Destiny*, by Col. H. Frobenius; *The German Enigma*, translated from the French of Georges Bourdon; *Secrets of the German War Office*, by Dr. Armgaard Karl Graves (a work of very doubtful reliability); new editions of *Germany and the Germans*, journalistic sketches by Price Collier; and of William Harbutt Dawson's admirable work, *The Evolution of Modern Germany*, and his recent careful study of *Municipal Life and Government in Germany*. Other books more or less related to the present struggle include *Great Britain and the Next War*, by A. Conan Doyle, a remarkable piece of prophecy; *France Herself Again*, by Ernest Dimnet; *Italy's Foreign and Colonial Policy*, by Tommaso Tittoni; *Belgium*, by John MacDonnell; *Arms and Industry*, by "Norman Angell" (Ralph Norman Angell Lane).

Of course the war has called forth many works on the technical side of warfare, explaining the new inventions and new methods of organization which have made this conflict so radically different from the wars of the past. Perhaps the most interesting of these is *How Germany Makes War*, condensed from General von Bernhardi's *On War of To-day*. For light on relative personnel we have a series of books dealing with the French, British, Russian, and

German armies by men who have studied them from within. Among other studies of military science we may note: *Germany's Fighting Machine*, by E. F. Henderson; *Cavalry*, by Von Bernhardt; volume i of *The Principles of War*, by General E. A. Altham; *The Modern Army in Action*, by Gen. John F. O'Ryan and Capt. W. D. A. Anderson; *The Fleets at Sea*, by Archibald Hurd; *The Naval Battle*, by Lieut. A. Baudry; and *Operations Upon the Sea*, by Freiherr von Edelsheim.

FICTION. The year has seen little falling-off in the number of novels published, but those of distinction and arresting quality are rare. *The Wife of Sir Isaac Harman*, by Herbert George Wells, is another serious study of marriage, a subject to which this author returns again and again, his contention being that absolute autonomy is essential to any real happiness, especially to that of the wife. In *The World Set Free*, Mr. Wells writes a romance of the world inside the atom and earth's last war ended by releasing its energy. *The Last Shot*, by Frederick Palmer, startlingly prophetic of the war of 1914, is a realistic picture of modern warfare by an eye-witness of many battles. *War*, by W. Douglas Newton, treats of an invasion. *When Ghost Meets Ghost*, by William De Morgan, is a leisurely romance which reconstructs the London of 50 years ago. *Chance*, by Joseph Conrad, from the standpoint of artistry the greatest novel of the year, treats of the deep wisdom of the sea, and of the tragedy that comes from morbid self-distrust. *The Price of Love*, by Arnold Bennett, is another story of the Five Towns with a shabby, dishonest hero, and a lovable heroine. William J. Locke's new novel, *The Fortunate Youth*, is a fairy tale for fortunate readers, a Puss-in-boots for grown-ups. *The Three Sisters*, by May Sinclair, is a study of three temperaments. Other English novels selected—arbitrarily it may seem—for mention are: *The Pastor's Wife*, a tale of East Prussia by the author of *Elizabeth and Her German Garden*; *Full Swing*, by "Frank Danby," a pathetic study of a hard and inexpressive woman; *The Wanderer's Necklace*, by Sir H. Rider Haggard, which presents the Byzantine Empire at its height; *Waiting*, by Gerald O'Donovan, a propagandist novel of modern Ireland, containing a bitter arraignment of the priesthood; *The Encounter*, by Anne Douglas Sedgwick, which takes Nietzsche as its central figure; *Set to Partners*, by Mrs. Henry Dudeney, realism and a "triangle"; and *Children of the Dead End*, by Patrick MacGill, a semi-autobiographical novel about a young Irish navy.

Among the American novels, *Diane and Her Friends*, by Arthur Sherburne Hardy, has the distinction of an exquisite style. *Perch of the Devil*, by Gertrude Atherton, shows the evolution of the wife of a successful Butte, Mont., miner. *Clark's Field*, by Robert Herrick, is a single-tax novel, the story of an unearned fortune and the experiences it brought to a neutral heroine. *The Titan*, by Theodore Dreiser, a sequel to *The Financier*, tells with wearisome detail the life of a successful brute and financial superman. *The Salamander*, by Owen Johnson, gives the sordid story of a woman who walks in the flame of passion untouched, and demands devotion and its material perquisites without any return. *Vandover and the Brute*, a posthumous novel from a strangely recovered manuscript of Frank Norris,

depicts the degeneration of a soul. *Penrod*, by Booth Tarkington, adds another American boy to the Immortals. *The Witch*, by Mary Johnston, is a tale of witch-baiting in the spacious days of great Elizabeth. *The Rise of Jennie Cushing*, by Mary S. Watts, depicts a self-controlled heroine of strong appeal to the sympathies of the reader. *The Auction Block*, by Rex Beach, is an ugly story of a woman's soul bartered for money. *The Street of Seven Stars*, by Mary Roberts Rinehart, in refreshing contrast, is a sweet, clean tale of American student life in music-loving Vienna. Other cheerful and wholesome novels are: *Pierre Vinton*, by Edward C. Venable, the adventures of a superfluous husband, wittily told; *Angel Island*, a feminist allegory, by Inez Haynes Gilmore; *Little Eve Edgerton*, by Eleanor Hallowell Abbott, with an odd, impossible, but fascinating little heroine; *Bambi*, by Marjorie Benton Cooke, absurd, but vivacious; *A Stepdaughter of the Prairie*, by Margaret Lynn, a charming story of child life in the Missouri Valley; *Sunshine Jane*, by the late Anne Warner; *The Heart's Country*, by Mary Heaton Vorse, a girl's life in New England 50 years ago; *The Clarion*, by Samuel Hopkins Adams, a man's life-work; *Saturday's Child*, by Kathleen Norris, a story of work and of home; *Yourselves and the Neighbors*, by Seumas MacManus—an American by residence, though in other respects entirely Hibernian—which tells of Irish life in a mountain parish. There are two novels which celebrate the Mississippi River: *Duichest*, by Charles Egbert Craddock; and *Gideon's Band*, by George W. Cable. *The New Clarion*, by William Nathaniel Harben, is another story of the Georgia mountains. *The Blind Spot*, by Justus Miles Forman, analyzes a reformer who preached the gospel of "Common Sense," but who lacked love and sympathy. In *Playing With Fire*, Amelia Edith (Huddleston) Barr returns to the Scotland of her girlhood. *The Victim: a Romance of the Real Jefferson Davis*, by Thomas Dixon, is semi-biographical. A few novels explicitly treat the marriage question: *Love's Legend*, by Harold Fielding-Hall, the man's and the woman's view of marriage; *The Raft*, by Coningsby (William) Dawson; and *World's End*, by Amélie Rives (Princess Troubetskoy). Good short stories are: *The Strength of the Strong*, by Jack London, stories of the Pacific; *Night Watches*, by William Wymark Jacobs, inimitable sketches of quaint English seafaring men; *Fables*, by Robert Louis Stevenson, a fortunate literary find, unpublished before his death; *At the Casa Napoleon*, by Thomas Janvier, six tales of Bohemian New York; *The Return of the Prodigal*, by May Sinclair; *The Copy-Cat and Other Stories*, by Mary E. Wilkins Freeman; the exquisite imaginative tales, breathing the perfume of the Orient, in the *Indian Stories* of F. W. Bain, and *A Sirup of the Bees*—purporting to be a translation of Indian originals—by the same author; and *The Incandescent Lily*, by Gouverneur Morris.

To Winston Churchill's *The Inside of the Cup* belongs the unique honor of heading the list of the best-selling books for two successive years. The other names on the 1914 list are also mostly of last year's output. In the order of popularity they are: *Pollyanna*, by Eleanor H. Porter; *The Fortunate Youth*, by William J. Locke; *Penrod*, by Booth Tarkington; *T. Tembarom*, by Frances Hodgson Burnett; *Laddie*, by Gene

Stratton Porter; *The Salamander*, by Owen Johnson; *The Dark Flower*, by John Galsworthy; *The Devil's Garden*, by William Babbington Maxwell. As a clue to the cause of popularity we may note that the books that head the list are wholesome and sunshiny presentations of life in England and the United States. The others are doubtfully ethical in trend, but more artistic in workmanship. None of them could be fairly counted as trash.

ESSAYS AND LITERARY CRITICISM. Essays, the product and resource of leisure, seem to have been growing in popularity. Among them, in almost equal numbers, are criticisms of books and criticisms of life. One of the most arresting of the latter type is *Human Quintessence*—English in translation at least—by Sigurd Ibsen, showing much of the bitterness and distrust of life characteristic of his distinguished father, and reversing the dictum of Rousseau, "Back to Nature," into "Away from Nature!" Another Scandinavian view is presented in *The Comedies of Holberg*, by Oscar James Campbell, important as the first book in English to give any extensive account of the greatest man of letters whom Denmark produced in the eighteenth century. *The Author's Craft*, by Arnold Bennett, is a defense of pot-boiler literature. *Appearances*, by G. Lowes Dickinson, gives vivid glimpses of the East and West. Mr. Arthur Christopher Benson in *Where No Fear Was* is reassuring and yet pensive as usual. *Notes on Novelists*, with some other notes by Henry James, discusses the art of imaginative prose from 1895 to 1914. *Pedestrian*, by George Macaulay Trevelyan, is admirable in style and spirit. Admirable, also, is the literary criticism of *Walt Whitman*, by Basil de Selincourt. Concerned with the drama we have: *Dramatic Actualities*, by W. L. George; and *Shakespeare Personally*, by David Masson. More general in scope are: *Impressions and Comments*, by Havelock Ellis; *Barn Doors and Byways*, by Walter Prichard Eaton; *The Americans and the Britons*, pointing a contrast unfavorable to America, by Frederick C. de Sumichrast; *Politics and History*, addresses by John Morley; *Meditations on Votes for Women*, by Samuel McChord Crothers, a genial, feminist view of the question; and *Major Prophets of To-day*, by Edwin Emery Slosson, studies of Maeterlinck, Bergson, Henri Poincaré, Metchnikoff, Ostwald, and Haeckel. *The Life and Genius of Nathaniel Hawthorne*, by Frank Preston Stearns, and *Joseph Conrad*, by Richard Curle, are adequate criticisms of two great novelists.

DRAMA. The "closet drama" has made way for plays that are both read and acted. Among the plays that are equally delightful on the stage and in the library are: *Half-Hours*, by James M. Barrie, containing four one-act plays: "Pantaloon," "The Twelve Pound Look," "Rosalind," and "The Will," full of fantasy and charm; *Androcles and the Lion*, a derisive but not unsympathetic treatment of the early Christian martyrs, by Bernard Shaw, and five other plays, *Pygmalion*, *The Great Catherine*, *Misalliance*, *The Dark Lady of the Sonnets*, and *Fanny's First Play*, by the same brilliant dramatist; *The Post Office*, and *The King of the Dark Chamber*, by Rabindra Nath Tagore; *Plays*, by John Galsworthy, containing "The Fugitive," "The Pigeon," and "The Mob"; and *Mary Goes First*, a comedy of social customs, by Henry Arthur Jones. Other

plays, bright and readable, or otherwise notable are: *Romance*, New York in the 60's, by Edward Sheldon; *Nowadays*, a comedy, by George Middleton; and *A Pageant of the XIII Century*, written by John Erskine for the seven hundredth anniversary of Roger Bacon. Mr. Herbert F. Schwartz has done good work in reprinting, with complete and scholarly editorial equipment, *The Tragedy of Alphonsus, Emperor of Germany*, ascribed to George Chapman, and originally issued in 1654. A complete edition of the *Dramatic Works* of Gerhardt Hauptmann has been printed in English, and several translations have appeared of the plays of the Swedish dramatist, August Strindberg. The dramatic criticisms contained in the conversation of two gentle ghosts, Shakespeare and Francis Bacon, in *The Seen and the Unseen at Stratford-on-Avon*, by William Dean Howells, were, strangely enough, not included by Professors Neilson and Thorndike in their *All the Facts About Shakespeare*. Other valuable works of dramatic criticism are: *The Elizabethan Drama and Its Mad Folk*, by Edgar Allison Peers; *English Drama and Medieval Drama of England*, to Sheridan, 1779, by Felix Schelling; *The Theatre of Max Reinhardt*, by Huntly Carter; *The Theatre of To-day*, by Hiram Kelly Moderswell; *Criticism*, by W. C. Brownell; *On Acting*, by Brander Matthews; *Studies in Stagecraft*, by Clayton Hamilton; *Second Nights*, by Arthur Ruhl; *Our Irish Theatre*, by Lady Gregory; and *John Millington Synge and the Irish Theatre*, by Maurice Bourgeois.

POETRY. The increasing interest in poetry has been accelerated by the emotional stimulus of the war, which has called forth several volumes already: *Songs and Sonnets for England in War Time*; *Lord God of Battles*, compiled by A. E. Manning Foster; and *Poems of the Great War*. Most of this verse is of inferior quality, but Alfred Noyes and John Masefield have written noteworthy poems, though dwarfed by the enormity of a subject too vast for any poet to compass short of an epic. Four volumes of the work of last year's Nobel prizeman, Rabindra Nath Tagore, have appeared in English: *The Gardener*; *The Crescent Moon*, child poems; *Sādhana*, *The Realization of Life*; and *Chitra*. Sir Sidney Colvin and Dr. E. Horner published two lost sonnets and several other poems of John Keats interesting to students and lovers of his verse. Thomas Hardy's *Satires of Circumstance* are depressing and wintry music, but music still. The Irish harp is swept by several hands: *Irish Poems* and *The Wild Harp*, by Katherine Tynana; *Irishry*, by Joseph Campbell; *Modern Anglo-Irish Verse*, by Padric Gregory; *Irish Literary and Musical Studies*, by Alfred Perceval Graves. George Edward Woodberry publishes a fourth volume of his fine poems in *Flight and Other Poems*. *The Shadow of Ætna*, by Louis Vernon Ledoux, contains poems of dignity and beauty. *Trees and Other Poems*, by Joyce Kilmer, show the poetry in common things. *The Lonely Dancer and Other Poems*, by Richard Le Gallienne, strike a new and manlier note. While not blind to the embarrassment of choice, we may mention also: *Saint-Gaudens an Ode, and Other Poems*, by Robert Underwood Johnson; *The Complete Poems* of S. Weir Mitchell, literary pastimes of the late novelist and scientist; *The Republic*, by the late Madison Cawein; *The Present Hour*, poems of war and peace, by Percy

Mackaye; *Pagan Poems*, by Professor Franklin H. Giddings, showing the noted American sociologist in a new rôle, and evincing at once his robust vigor and sensibility.

LITERARY BIOGRAPHY. The best biography of the year is unquestionably *Notes of a Son and Brother*, by Henry James, which is a sequel to *A Small Boy and Others*, and delightfully discourses of Henry James, Sr., of William James, and of the life about them from 1855 to 1870. Another autobiography dealing with a similar period is the charming *Memories of My Youth*, by George Haven Putnam. *My Autobiography*, by Samuel S. McClure, gives the story of an indomitable life. The ninth and tenth volumes of the *Journals of Ralph Waldo Emerson*, edited by Edward Waldo Emerson and Waldo Emerson Forbes, show no falling off in interest. *Thomas Wentworth Higginson: The Story of His Life*, by Mary Thacher Higginson, gives the well-told story of the last of the New England group of writers. *The Collected Essays of Edmund Gosse*, in five volumes, are full of Victorian portraits, limned with skill and charm. *William Morris*, by A. Clutton-Brock, adequately discusses the work and influence of the poet and craftsman. *In the Footsteps of the Brontës*, by Mrs. Ellis H. Chadwick, is zealous but undiscriminating. *A First Year in Canterbury Settlement*, with other early essays, by Samuel Butler, gives a bit of autobiography of a posthumous celebrity. *The Life of Matthew Prior*, by Francis Bickley, is worthy of mention; also *Ouida: a Memoir*, by Elizabeth Lee. A few able biographies of foreign men of letters remain to be mentioned: *Euripides and His Age*, by Gilbert Murray; *Paul Verlaine*, a sad story of wasted genius, by Wilfred Thorley; *Balzac*, and *Gustave Flaubert*, by Emile Faguet; *Reminiscences of Tolstoy*, by his son, Count Ilyá Tolstoy, translated by George Calderon, an intimate and tender tribute; and *Letters of Fyodor Michailovitch Dostoevsky*, translated by Ethel Colburn Mayne.

GENERAL BIOGRAPHY. The book of the year in the field of general biography is probably Katherine O'Shea's amazingly frank and intimate biography of *Charles Stewart Parnell*, but its importance is due rather to the interest of its revelations than to any literary merit in the book itself. A close second in frankness and interest, although as different as possible in subject, is the late Lester Frank Ward's *Glimpses of the Cosmos* in three volumes, a unique autobiography consisting of the author's early writings arranged in chronological order. A number of other valuable autobiographies have appeared, from which we may select: *Recollections of Bench and Bar*, by Viscount Alverstone; *The Memoirs of Admiral Lord Charles Beresford*; *Thirty Years' Anglo-French Reminiscences*, by Sir Thomas Barclay; *Memoirs of Youth, Things Seen and Known*, by Giovanni Venosta Visconti; *Forty Years of It*, by Brand Whitlock. Not a few of these self-portraits are of noted women, for example: *My Own Story*, by Emmeline Pankhurst; and *Julia Ward Howe and the Woman Suffrage Movement*, a compilation of her speeches and essays by her daughter, Florence Howe Hall.

There are the usual number of studies of European statesmen and warriors to record. Dealing with the perennial Napoleon, are: *The Decline and Fall of Napoleon*, by Field Marshal

Viscount Wolseley; *Life of Napoleon*, by Major Arthur Griffiths; *Napoleon in Exile at Elba*, by Norwood Young. The year's biographies of British public men, include: *The Life of William Pitt, Earl of Chatham*, by Basil Williams; *Life of Walter Bagehot*, by his sister-in-law, Mrs. Russell Barrington; and the third volume of the *Life of Lord Beaconsfield*, by G. E. Buckle and the late W. F. Monypenny. Among American biographies those of President Lincoln continue to occupy a foremost place. Rose Strunsky in *Abraham Lincoln* deals primarily with the economic background of the slavery struggle, and Lincoln's position on the question is well outlined in *President Lincoln's Attitude Toward Slavery and Emancipation*, by the late Henry W. Wilbur. Other American biographies are: *John Hay, Author and Statesman*, by Lorenzo Sears; *Frémont and '49*, by Frederick Samuel Dellenbaugh; *Daniel Webster*, by Frederick Austin Ogg; *Confederate Portraits*, by Gamaliel Bradford, Jr.; *The Life of Robert Toombs*, by Ulrich Bonnell Phillips. The seventh centenary of the birth of Roger Bacon has attracted no little interest in academic circles, and as a result we have *Roger Bacon*, by Sir John Edwin Sandys, and *The Life and Work of Roger Bacon*, by J. H. Bridges.

HISTORY. The Great War abruptly truncated the production of works of general historical interest. In the latter part of the year, with few exceptions, the writers of history turned their attention to the problems of contemporary world politics. Very few works of outstanding importance appeared in 1914, and there has been no marked increase in the tendency so evident of late years toward economic and social rather than purely political history. On the contrary, such topics as have attracted particular attention lie for the most part in the fields of national development and of international relationships. The hundred years' peace between Great Britain and the United States is one of these topics, and William Archibald Dunning's *The British Empire and the United States* has superseded Senator Lodge's earlier work in the same field, *One Hundred Years of Peace*, by its greater impartiality and adequacy. Several noteworthy books have appeared dealing with British imperialism: *The Ancient Roman Empire and the British Empire in India*, and *The Diffusion of Roman and British Law Throughout the World*, two studies by Viscount Bryce; *The Oxford Survey of the British Empire*, by A. J. Herbertson and O. J. R. Howarth, now complete in six volumes; *A History of England and of Greater Britain*, by Arthur Lyon Cross; *The Pan-Angles*, by Sinclair Kennedy, an appeal for federation; *A History of England and the British Empire*, by Arthur Donald Innes, carrying England's story down to the nineteenth century in three out of four volumes; *A History of England from the Defeat of the Armada to the Death of Elizabeth*, volume i, by Edward Potts Cheyney. Among many good studies of English history the following are, perhaps, best worthy of notice: *George III and Charles Fox*, volume ii, by Sir George Otto Trevelyan; *The Passing of the Great Reform Bill*, by James Ramsay Montagu Butler; *The Place of the Reign of Edward II in English History*, by Thomas Frederick Tout; and *British Shipping*, by A. W. Kirkaldy.

The two Balkan Wars have been discussed

from every angle, but their literary aftermath only increased with the temporary restoration of peace. Of exceptional importance is *The Report of the International Commission*, commonly called the "Carnegie Commission," which investigated conditions in the seat of war. Other books on the Near East include William Milligan Sloane's *The Balkans, a Laboratory of History*; *The Balkan Wars*, by Jacob Gould Schurman; *Turkish Memories*, by Sidney Whitman; *With the Turk in War Time*, by Marmaduke Pickthall; *Hellas and the Balkan War*, by D. J. Cassovetti; *The Inner History of the Balkan War*, by Lieut.-Col. Reginald Rankin; and *Albania, the Foundling State of Europe*, by Wadham Peacock. Russia has called forth a very considerable literature, from which we may select: *Russia: The Country of Extremes*, by Mme. N. Jarintzoff; *The Mainsprings of Russia*, by Maurice Baring; *A History of Russia*, by Vasilii Osipovich Kluchevski; *Economic History of Russia*, by James Mavor; *Russian Expansion on the Pacific*, by F. A. Golder. The Farther East is treated in: *Ancient India*, by Edward James Rapson; *Annals and Memoirs of the Court of Peking*, by E. Backhouse and J. O. P. Bland; *China's Dayspring After Thirty Years*, by the Reverend Frederick Brown. Other studies of history, ancient and modern, that require notice, are: *Outlines of European History*, by James Harvey Robinson; *Roman Imperialism*, by Tenney Frank; *Ancient Rome and Modern America*, by Guglielmo Ferrero; *Republican Rome*, by Herbert Lodge Havell; *Chronicles of Three Free Cities: Hamburg, Bremen, Lübeck*, by Wilson King; *The Hussite Wars*, by Count Lützow; *My Days of Adventure*, by Alfred Vizetelly, chronicles of the Franco-Prussian War; *The French Revolution*, by H. Packwood Adams.

Several important books have appeared in American history. "American" history has come to mean more than the history of the United States proper, for *The Two Americas*, by Rafael Reyes of Colombia, *Latin America*, by William R. Shepherd, and Dean C. Worcester's monumental study of *The Philippines, Past and Present*, rank among the best books of the year. Interesting studies in the history of the United States, are: *Contemporary American History*, by Charles Austin Beard; *The Rise of the American People*, by Roland G. Usher; *Colonizing Activities of the English Puritans*, by Arthur Percival Newton; *Virginia Under the Stuarts*, by Thomas Jefferson Wertenbaker; *Narratives of the Witchcraft Cases*, by George Lincoln Burr; and *Political History of Secession*, by Daniel Wait Howe. Books on Mexico, giving very diverse views of local conditions and of the policies of the American government, include: *The Real Mexico*, by H. Hamilton Fyfe; *Modern Mexico*, by Robert Joseph MacHugh; *The Political Shame of Mexico*, by Edward Bell; *Insurgent Mexico*, by John Reed; and *The Mexican People: Their Struggle for Freedom*, by L. Gutierrez De Lara, and Edgcomb Pinchon.

TRAVEL AND DESCRIPTION. The year 1914 is marked by a rediscovery of the two Americas. A very considerable number of interesting and noteworthy books of travel in the western continent have appeared, but while there are numerous studies of political conditions in Europe, the number of noteworthy volumes of travel and description dealing with the old world is less than usual. Theodore Roosevelt's account of his

trip *Through the Brazilian Wilderness* has enjoyed a great and deserved popularity. Two transatlantic writers of great charm have given appreciative pictures of the United States; Canon Hannay (writing as George A. Birmingham) in *From Dublin to Chicago*, and Stephen Graham in *With Poor Immigrants to America*. We have also a picture of *America Through the Spectacles of an Oriental Diplomat*, by Wu Ting Fang, twice minister to the United States. Two other intimate studies of the country and people, are *Abroad at Home*, by Julian Street, and *The Personality of American Cities*, by Edward Hungerford. Arch deacon Hudson Stuck has written vivid descriptions of Arctic travel in *Ten Thousand Miles With a Dog Sled*, and his *Ascent of Denali* (Mount McKinley). We have many other studies of Canada, Alaska, and the American northwest, and a thrilling account by Ellsworth L. Kolb of a trip *Through the Grand Canyon from Wyoming to Mexico*. Important travels in South America, are: *The Upper Reaches of the Amazon*, by Joseph F. Woodroffe; *The Amazing Argentine*, by John Foster Fraser; and Annie Smith Peck's *South American Tour*.

Central Asia and northern Africa continue to attract the attention of travelers and of book-lovers. *Through Siberia*, by Fridtjof Nansen, is the most important book in the former field, but Ernest Henry Wilson's *Naturalist in Western China*; Francis Kingdon Ward's *Land of the Blue Poppy*, travels in Eastern Tibet; *The Cradle of Mankind*, by Edgar and W. A. Wigram; and *Unknown Mongolia*, by Douglas Carruthers, are also interesting. Recent travels in northern Africa, are: *North Africa and the Desert*, by George E. Woodberry; *The Women of Egypt*, by Elizabeth Cooper; *The Eastern Libyans*, by Oric Bates; *The New Tripoli*, by Ethel Braun. Other interesting travels, are: *Antarctic Adventures*, a tale of Scott's "Northern Party," by R. E. Priestley; *An Australasian Wander-Year*, by H. M. Vaughan; *A Woman in the Antipodes, and in the Far East*, by Mary Hall; *Ways of the South Sea Savage*, by Robert W. Williamson; *Through Europe on the Eve of War*, by Frederick Lynch; *Peaks and Precipices*, by Guido Rey, an account of mountaineering in the Dolomites and Savoy; *Travels in the Pyrenees*, by V. C. Scott O'Connor; *Tourist's Spain and Portugal*, by Ruth Kedzie Wood; and Hamilton Wright Mabie's *Japan, To-day and To-morrow*.

POLITICS AND SOCIOLOGY. The year has been exceptionally rich in general surveys of modern society. Herbert George Wells has collected his recent essays on many subjects into a single volume under the title *An Englishman Looks at the World*, containing among other discussions some remarkable forecasts of the character of modern war. Graham Wallas has produced in *The Great Society* a monumental study of the social mind in the present age. Of a general character are also *The Instinct of Workmanship and the State of the Industries*, an economic interpretation of civilization by Thorstein Veblen; *Interpretations and Forecasts*, by Victor Branford; *A Preface to Politics*, by Walter Lippmann; and Herbert Croly's *Progressive Democracy*. There are many studies of the conditions and characteristics of American politics: *American Public Opinion*, by James Davenport Whelpley; *American Citizenship*, by Charles Austin Beard and Mary Ritter Beard; *Party Government in the United States*, by William Milligan Sloane; *The Ameri-*

can Doctrine of Judicial Supremacy, by Charles Grove Haines; *The United States and Peace*, and *The Anti-Trust Act and the Supreme Court*, by William Howard Taft; *American Policy: The Western Hemisphere in its Relation to the Eastern*, by John Bigelow; and *American and English Studies*, by Whitelaw Reid.

The subjects which have attracted the particular attention of students of social science are the problem of immigration and racial relationship, and the problem of labor. *Jewish Life in Modern Times*, by Israel Cohen, and *Zionism*, by Richard Gottheil, are real contributions to the study of the Jewish people. The problems of immigration are treated in: *They Who Knock at Our Gates*, by Mary Antin; *The Old World in the New*, by Edward Alsworth Ross; *The American Japanese Problem*, by Sidney Lewis Gulick; and *Neighbors*, by the late Jacob August Riis. Noteworthy studies of modern labor questions are: *Work and Wealth*, by John Atkinson Hobson; *Wealth*, by Edwin Cannan; *Property and Contract in Their Relations to the Distribution of Wealth*, by Richard T. Ely; *Social Insurance*, by Isaac Max Rubinow; *Labor and Administration*, by John N. R. Commons; *Boycotts and the Labor Struggle*, by Harry Wellington Laidler; *Violence and the Labor Movement*, by Robert Hunter; *The Job, the Man, the Boss*, by Katherine Blackford and Arthur Newcomb; *The Psychology of Management*, by Lillian Moller Gilbreth. Socialism is discussed in *The Younger Generation*, by Ellen Key; *Socialism and Motherhood*, by John Spargo; and *Socialism, Promise or Menace?*, a debate by Morris Hillquit and the Reverend John Augustine Ryan.

RELIGION. The principal book of the year on religion is easily *Balder the Beautiful, The Fire Festivals of Europe and the Doctrine of the Eternal Soul*, by James George Frazer, the two volumes of which complete the monumental work in ten volumes entitled *The Golden Bough*, a most exhaustive study of primitive religion. Mrs. Elsie Worthington (Clews) Parsons (John Main, pseudonym) treats of a particular section of ethnology, dealing with the treatment of widows, in *Religious Chastity. Religious Ideas of the Old Testament*, by Henry Wheeler Robinson, is clear and adequate in its presentation of the religious views of the ancient Hebrews. *Hebrew and Babylonian Traditions*, by Morris Jastrow, is a scholarly and reverent discussion of the subject by a competent authority. *English Church Life from the Restoration to the Tractarian Movement*, by J. Wickham Legg, and *A History of the Church in Scotland*, by Alexander R. Macewen, are sober and judicial surveys. *Religion and Life*, by Elwood Worcester, prophesies a great religious revival imminent in America. *The Spiritual Message of Dante*, contains lectures delivered at Harvard by William Boyd Carpenter. The problem of determinism is debated in: *Religion and Free Will*, by W. Bennett, and *Fated or Free*, a Dialogue on Destiny, by Preston William Slosson. *Freedom and the Churches*, edited by Charles William Wendte, a compilation of ten addresses before a liberal religious congress held in Rochester, N. Y., each by a prominent representative of his church, discusses a different sort of freedom, a newly granted ecclesiastical one. There are many volumes on church history, a score on the English Church alone, and many more on personal religion which cannot be commented on here, but

which indicate an unflagging interest in religious customs, thought, and life. There is a valuable work by Crawford Howell Toy, *An Introduction to the History of Religions*. Other books in the same field are: *The History of Religions*, by George Fort Moore; *The Faith of Japan*, by Dr. Tasaku Haroda, president of the Doshisha University at Kyoto; *The Reformation in Germany*, by Henry Clay Vedder; *Roman Ideas of Deity in the Last Century Before the Christian Era*, by William Warde Fowler; and *The Freedom of Science*, by Joseph Donat, S.J., a defense of the Roman Catholic Church. *The Carpenter and the Rich Man*, by Bouck White, is an impassioned social protest. *Jesus and His Parables* is a fresh and vigorous presentation of the theme, by George Murray. Other works on some aspect of religion worthy of note are: *Faith and The Faith*, by Dean Samuel Hart; *The Working Faith of a Liberal Theologian*, by T. Rhondda Williams; *The Message of David Swing to His Generation*, edited by Newell Dwight Hillis; *Vital Problems of Religion*, by J. R. Cohn; *The Girl and Her Religion*, by Margaret Slattery; *Constructive Natural Theology*, by Newman Smyth; *The Spiritual Interpretation of Nature*, by James Y. Simpson; *Gospel Origins*, by W. W. Holdsworth; *The Theology of the Gospels*, by James Moffat; *The Prophets of Israel*, treating especially of Jeremiah; *The Ethical Implications of Bergson's Philosophy*, by Una Bernhard Sait; *What Men Live By*, by Richard C. Cabot, who names as essential to health and usefulness, work, love, play, and worship.

Other books of the year, especially those of a technical character, will be found in the special bibliographies attached to the articles on those subjects.

LIVESTOCK. See STOCK RAISING.

LOAN AND TRUST COMPANIES. These banking institutions which commonly go by the name of trust companies numbered 1564 on June 30, 1914. Their rapid increase is shown by the fact that in 1905 they numbered only 683, and only 1091 in 1910. Though still relatively not numerous, their banking importance is considerable. They were distributed as follows: New England, 208; Eastern States, 517; Southern States, 352; Middle Western States, 364; Western States, 61; and Pacific States, 62. Their aggregate resources were \$5,489,531,000. Of this, loans and discounts constituted \$2,901,748,000; and investments in stocks and bonds, \$1,261,345,000. Their individual deposits totaled \$3,939,807,000, of which 60 per cent were subject to check and 25 per cent were savings deposits. See also the article on BANKS AND BANKING.

LOCKWOOD, WILTON. An American portrait and flower painter, died March 21, 1914. He was born at Wilton, Conn., Sept. 12, 1861, and studied under John La Farge in New York, and for 10 years in Paris. He exhibited at the Carnegie Institute, Pittsburgh, Pa., in 1897; received the Temple Fund gold medal from the Pennsylvania Academy of Fine Arts for "The Violinist" (now at Skibo Castle, Scotland) in 1898; and for other exhibits he was awarded silver medals at the Paris (1900), Buffalo (1901), and St. Louis (1904) expositions. In 1904 also he exhibited abroad with success. His better known portraits include: "Frank Seabury"; "A. J. Cassatt"; "Mrs. Sweetser"; "Grover Cleveland"; "John La Farge" (Boston

Museum); "Jerome Wheelock" (Worcester Museum); and "Justice Holmes" (1912, Massachusetts Bar Association). Among his flower paintings those of peonies are especially known. Lockwood was elected a member of the National Academy in 1912.

LOCOMOTIVES. See RAILWAYS, under *Motive Power and Equipment*.

LONDON. See GREAT BRITAIN.

LONGEVITY. See MARRIAGE AND DIVORCE.

LOUISIANA. POPULATION. The estimated population on July 1, 1914, was 1,773,482. The population in 1910 was 1,656,388.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

	<i>Acreage</i>	<i>Prod. bu.</i>	<i>Value</i>
Corn 1914	2,000,000	88,600,000	\$28,950,000
..... 1913	1,900,000	41,800,000	32,186,000
Oats 1914	70,000	1,610,000	1,014,000
..... 1913	45,000	990,000	564,000
Rice 1914	886,500	10,802,000	10,046,000
..... 1913	405,500	11,760,000	9,878,000
Potatoes . 1914	24,000	1,680,000	1,630,000
..... 1913	25,000	1,750,000	1,680,000
Hay 1914	200,000	a 380,000	4,560,000
..... 1913	160,000	240,000	3,000,000
Tobacco . 1914	700	b 280,000	98,000
..... 1913	600	270,000	68,000
Cotton ... 1914	1,860,000	c 460,000	15,184,000
..... 1913	1,244,000	444,000	24,840,000

a Tons.
b Pounds.
c Bales.

MINERAL PRODUCTION. Since 1904 Louisiana has stood preëminently in the lead as a producer of sulphur, due to the development of the Frasch recovery process. The total marketed production of sulphur in the United States in 1913, was 311,590 long tons, most of which was from Louisiana. The figures of the State's production may not be published because of the necessity for maintaining the confidential character of individual reports. The quantity of sulphur actually produced was considerably in excess of that marketed in both 1912 and 1913. A large amount of petroleum is also produced in the State. The production in 1913 was 12,498,828 barrels, valued at \$12,255,931, compared with 9,263,439 barrels, valued at \$7,023,827, in 1912. During the 10 years of the production of petroleum in the State the activities have shifted from the southern to the northern part of the State, and at the present time the larger part of the production is from the Caddo district, in the northwestern part of the State, Acadia and Calcasieu parishes being the principal producers in the southwestern part. During the last two or three years there has been considerable development of natural gas and the production of this fuel in 1913 exceeded \$2,000,000. There is good reason to believe that Louisiana is underlaid by one of the greatest gas fields in the United States, but its development on a large scale must await the establishment of manufacturing industries which will provide for its utilization, or it must be transported by pipe lines to distant points for consumption. Louisiana is also an important producer of rock salt, in the value of which it ranks second among the States, and in the total production of salt, which includes the product from brine, Louisiana ranks sixth in value among the States. Other important mineral

products are clay, sand and gravel, stone, and mineral waters. The total value of the mineral products in 1913 was \$21,011,828, compared with \$15,357,841 in 1912.

TRANSPORTATION. The total mileage of all track operated by railways in the State in 1913 was 6897, of which 3889 miles was single track main line, 1343 branches and spurs, 1477 yard track and sidings, and 186 second track. The roads having the longest mileage are the St. Louis, Iron Mountain, and Southern, 462; Texas and Pacific, 339; New Orleans, Texas, and Mexico, 202; Louisiana Railway and Navigation Company, 303; Kansas City Southern, 245; Louisiana and Arkansas Railway Company, 198.

EDUCATION. The total school population of the State in 1914 was 526,268, the total enrollment was 288,972, and the average daily attendance was 199,103. The female teachers numbered 5491 and the males 1361. The average monthly salary of male teachers was \$80.87 and of female teachers \$58.70. The Legislature of 1914 passed several important measures, including a compulsory education law, relating to all cities of over 25,000 inhabitants (except the parish of Orleans). Parents of children between the ages of 8 and 14 years in such cities are required to send children to school at least four months in the year, provided that separate public schools for the races are open to receive such children for that time in each year. The parish board of school directors of any parish is given authority to call a special election for the purpose of submitting to the qualified electors a proposition to provide for the compulsory attendance of children in elementary and high schools.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the Institute for the Deaf and Dumb, the Institute for the Blind at Baton Rouge; Insane Asylum at Jackson; Soldiers' Home, Charity Hospital at New Orleans; Charity Hospital at Shreveport; and the State Penitentiary and convict farms. These farms are in West Feliciana parish and Iberia parish, where they have been in operation for several years with gratifying results.

FINANCE. The report of the State Treasurer for the fiscal year 1913 shows a cash balance in the treasury on Jan. 1, 1913, of \$850,025. The total receipts for the year amounted to \$8,203,465. The total disbursements amounted to \$7,365,208, leaving a balance on hand at the end of the year of \$1,062,174. Outstanding bonds to the amount of \$11,108,300 were due on Jan. 1, 1914, and these were retired in accordance with the public debt ordinance adopted by the constitutional convention of 1913.

POLITICS AND GOVERNMENT. The State Legislature met in 1914 as the sessions are biennial and are held in even years, but no measures were passed of general interest. The State elections in 1914 were for representatives in Congress only, as the term of Governor Hall does not expire until 1916. In the early part of September Colonel Roosevelt addressed large audiences in the State, applying Progressive principles to local problems. In the elections held on November 3 the Democrats elected representatives in all districts except one, the third, in which the Progressive candidate was successful. The total vote cast in this election was 50,901, compared with 79,372 cast in the presidential

election of 1912. As the State is overwhelmingly Democratic there is no particular significance in the decreased vote.

STATE GOVERNMENT. Governor, L. E. Hall; Lieutenant-Governor, T. C. Barrett; Secretary of State, Alvin E. Hebert; Auditor, Paul Capdeville; Treasurer, L. E. Smith; Attorney-General, R. G. Pleasant; Superintendent of Education, T. H. Harris; Commissioner of Agriculture, E. O. Bruner; Commissioner of Insurance, A. E. Hebert; Commissioner of Public Lands, Fred J. Grace—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, F. A. Monroe; Associate Justices, O. O. Provosty, A. D. Land, W. B. Sommerville, Chas. A. O'Neill; Clerk, Paul E. Mortimer—all Democrats.

STATE LEGISLATURE, 1915. Both Houses Democratic.

The State representatives in Congress will be found in the section *Congress*, article UNITED STATES.

LUCAS, REGINALD JAFFRAY. An English writer, died May 9, 1914. He was born in 1865, and was educated at Eton and at Trinity College, Cambridge. He served as member of Parliament from 1900 to 1906. His published writings include: a novel, *Felix Dorreen*; *George II and His Ministers*; *Colonel Saunderson, M. P.*; *A Memoir*; *Another Point of View*; and *The Measure of One's Thoughts*.

LUNACY. See INSANITY.

LURTON, HORACE HARMON. Associate justice of the United States Supreme Court, died July 12, 1914. He was born at Newport, Ky., in 1844, and was educated in the public schools of the neighborhood and in Douglas and Cumberland Universities. At the outbreak of the Civil War he enlisted, serving in the Thirty-fifth Tennessee Regiment as a sergeant-major. He was several times mentioned for bravery, but owing to ill health obtained a discharge from the army in 1862. After he had regained his health he enlisted and took part in the battle of Fort Donelson, when he was taken a prisoner and was sent to Camp Chase, from which he made his escape after two months' confinement. He again enlisted, this time in the Third Kentucky Cavalry, and while a member of Morgan's Raiders he was captured for a second time, remaining imprisoned until President Lincoln brought about his release near the close of the war. His health was shattered by his experiences, but he regained it and returned to his studies, receiving in 1867 the degree of bachelor of laws from Cumberland University, and in the same year being admitted to the bar. He took up the practice of his profession at Clarksville, Tenn., and soon attracted attention as a close student of law, a reputation which he held ever afterward. In 1874 he was appointed chancellor to fill a vacancy in the Sixth Chancery Division of Tennessee, and two years later was reelected without opposition for the full term, but in 1878 he resigned and returned to his law practice. He was elected a judge of

the Supreme Court of Tennessee in 1886 and Chief Justice of the State in January, 1893. Two months later President Cleveland appointed him a circuit judge for the Sixth Judicial Circuit of the United States, embracing Ohio, Michigan, Kentucky, and Tennessee. William H. Taft was at this time a circuit judge in the same circuit, and before he was appointed Governor of the Philippines in 1898, had become a close personal friend of Judge Lurton. In December, 1909, Judge Lurton was appointed by President Taft associate justice of the United States Supreme Court, and was assigned to the circuit embracing Vermont, Connecticut, and New York.

LUTHERANS. The Lutheran Church is the third largest Protestant denomination in the United States. In 1914 there were in the United States and Canada 2,444,970 communicants, 60 synods, 16,220 churches, and 9450 ministers. The value of church property was about \$100,000,000. No form of church government is considered essential, and the denomination is carried on under Congregational, Episcopal, and Presbyterian forms. There are four general church bodies: the General Council, founded 1867; General Synod, founded 1820; Synodical Conference, founded 1872; United Synod of the South, founded 1886; besides a number of independent synods.

GENERAL COUNCIL. Ministers, 1595; churches, 2377; communicants, 479,765; Sunday schools, 1032; officers and teachers, 29,725; scholars, 279,697; parochial schools, 620; teachers, 754; pupils, 26,818.

GENERAL SYNOD. Ministers, 1395; churches, 1847; communicants, 340,441; Sunday schools, 1735; officers and teachers, 28,353; scholars, 275,346.

SYNODICAL CONFERENCE. Ministers, 3046; churches, 4812; communicants, 850,772; Sunday schools, 692; officers and teachers, 2985; scholars, 154,660; parochial schools, 2812; teachers, 1500; pupils, 154,116.

UNITED SYNOD OF THE SOUTH. Ministers, 274; churches, 488; communicants, 52,188; Sunday schools, 415; officers and teachers, 4232; scholars, 36,875.

INDEPENDENT SYNODS. Ministers, 3140; churches, 6696; communicants, 721,804; Sunday schools, 2049; officers and teachers, 10,817; scholars, 181,159.

During 1914 the work of Christian education has been prosecuted with unusual energy. The interests of the General Council's Theological Seminaries have been advanced, their endowments and equipment having been strengthened; and new educational institutions were founded in the younger synods. Progress was made toward securing the \$500,000 educational fund for the Philadelphia Theological Seminary, and Muhlenberg College. It was also practically agreed among the church authorities in Pennsylvania that the minimum ministerial salary ought to be \$1000. The golden jubilee of the Philadelphia Theological Seminary was held in 1914. In the District Synod of Ohio a resolution was passed to endow the Synod's professorship in the Chicago Theological Seminary with the sum of \$50,000. At the same time it was resolved to aid in founding a tri-synodical college for the Middle West. Other educational institutions aided by increased endowments were Gustavus Adolphus College, St. Peter, Minnesota, and Bethany College, Kansas. In the Ontario Synod the Luth-

eran Theological Seminary at Waterloo was enlarged and improved. In the Manitoba Synod a new Lutheran College was opened at Saskatoon, Province of Saskatchewan. It has been decided to remove the Lutheran Seminary in the Pacific Synod from Portland, Ore., to Seattle. Abroad a great meeting of Lutherans was held at Heidelberg to protest against so-called "liberal" attempts to change or eliminate the apostolic creed, and similar meetings of protest were held in other parts of Germany. The Lutheran Church in France is maintaining itself vigorously under grave difficulties; in Spain slow but steady progress is being made. In Scandinavia "liberal" professors and preachers have done much to disturb orthodox believers. See also RELIGIOUS DENOMINATIONS AND MOVEMENTS.

LUXEMBURG. A central European grand duchy, neutral, and independent, bordered by Belgium, Germany, and France. The area is 2586 square kilometers, or 998 square miles, carrying a population Dec. 1, 1910, of 259,891, of whom 134,101 were males and 125,790 were females. There were 250,543 Roman Catholics, 4007 Protestants, 1270 Jews. The capital is Luxembourg, with 20,408 inhabitants. Iron is mined—1,728,973 metric tons in 1911 and 2,252,229 tons in 1912. The area under principal crops in hectares and the yield in quintals for two years are shown in the table below, with the yield per hectare in 1912-13.

	Hectares		Quintals		Qs. ha.
	1912-13	1913-14	1912-13	1913-14	
Wheat	10,886	11,180	175,857	166,950	16.1
Rye	10,888	10,600	173,961	159,000	16.7
Barley	1,536	1,200	25,206	17,400	16.4
Oats	31,254	31,200	528,288	592,800	16.9
Vines *	1,515	1,515	3,817	37,875	2.5

* Production in hectoliters.

Luxemburg belongs to the German customs union. There were 625 kilometers of railway in 1911. The revenue for 1914 was estimated at 22,017,337 francs (18,101,733 in 1913), and the expenditure at 23,440,531 (20,484,564). These figures include extraordinary. Debt, 12,000,000 francs; annuities, 493,150 francs. Grand Duchess in 1914, Marie Adelaide, born June 14, 1894, crowned June 14, 1912. Heiress-presumptive, Princess Charlotte, born 1896. See also WAR OF THE NATIONS.

HISTORY. Luxemburg was invaded by German troops on August 2. By refraining from armed resistance to this violation of its neutrality, Luxemburg avoided the calamities which overtook Belgium. Late in November the amount of the indemnity paid to Luxemburg by Germany, in consequence of the German invasion, was estimated at \$256,000. For information regarding the belligerent operations in the grand duchy, consult the article on the WAR OF THE NATIONS.

LYDECKER, GARRETT J. American soldier and engineer, died July 9, 1914. He was born at Englewood, N. J., in 1843, and after studying at the College of the City of New York, entered the United States Military Academy from which he graduated in 1864, being appointed first lieutenant of engineers in the same year. He was made captain in 1866, major in 1880, lieutenant-colonel in 1891, colonel in 1901, and brigadier-general and retired by operation of law in 1907. In 1865 he was brevetted captain for "gallant and meritorious services" at the

siege of Petersburg, Va. He was engaged in river and harbor work at Galveston, Michigan City, New Orleans, Chicago, Detroit, etc.

LYON, GEORGE ARMSTRONG. An admiral (retired) of the United States navy, died March 6, 1914. He was born in Erie, Pa., in 1837, and graduated from Dartmouth College in 1858, after which he studied law, and in 1861 was admitted to the bar. In the following year he abandoned his practice and was appointed assistant paymaster in the United States navy. He served throughout the Civil War and at its close had the rank of paymaster, being appointed pay-inspector in 1888, and in 1898 pay-director. In 1899 he was retired with the rank of rear admiral given him for services during the Civil War.

MACAO. A city on the Chinese island of Macao; a Portuguese dependency, with Coloane and Taipa. Area, 4 square miles, with 74,866 inhabitants.

MACBRIDE, THOMAS HUSTON. An American educator, elected in 1914 president of Iowa State University. He was born in Rogersville, Tenn., in 1848, graduated from Monmouth College in 1869, from 1870 to 1878 was professor of mathematics and modern languages at Lenox College, and from 1878 to 1884 assistant professor of natural sciences at the State University of Iowa, where from 1884 to the time of his election as president he held the chair of botany. He received the honorary degree of Ph.D. from Lenox College in 1895. Dr. Macbride is a member of several scientific societies and is the author of a textbook on botany; *North American Slime Moulds*; and many lectures and addresses.

McCASKEY, WILLIAM SPENCER. An American soldier, died Aug. 10, 1914. He was born in Lancaster Co., Pa., in 1843; educated in the public schools of that city; and was one of the first 75,000 men enrolled as volunteers in the Civil War. He served throughout the war and was honorably mustered out in 1865, having attained the rank of captain. In 1866 he was appointed first lieutenant in the Thirteenth United States Infantry; being promoted through successive grades he became colonel in 1900, brigadier-general in 1904, and major-general in 1907. He took part in the Cuban campaign in 1898 and was in the Philippines in 1899, and again in 1902. In 1902-03 he commanded at Fort Sheridan, Ill., and later commanded departments of the Colorado, Texas, and Dakota. He retired from active service in 1907.

McCLUNG, LEE. American public official, died Dec. 19, 1914. He was born in Knoxville, Tenn., in 1870, and was graduated from Yale in 1892. After extensive travel in Europe he became paymaster of the St. Paul and Duluth Railroad Co., becoming assistant to the second vice-president of the Southern Railway in 1901, and assistant manager of the road in 1902. In 1904 he was appointed treasurer of Yale University and served in that office until he was appointed Treasurer of the United States by President Taft, which post he resigned in 1912, on account of friction with Secretary MacVeagh. Mr. McClung was one of the most famous athletes ever graduated from Yale, being especially prominent in foot-ball and captain of the famous Yale team of 1892.

MAC CRACKEN, HENRY NOBLE. An American scholar and educator, elected president of

Vassar College on Dec. 15, 1914. He was born in Toledo, Ohio, in 1880, the son of Henry Mitchell MacCracken, chancellor emeritus of New York University, and brother of John Henry MacCracken (q.v.), president of Lafayette College. He graduated from New York University in 1900 and was for the three years succeeding instructor in English in the Protestant College in Beirut, Syria. Returning to the United States he took post-graduate courses and received the degree of M.A. from New York and Harvard Universities. From the latter university he received the degree of Ph.D. in 1907, and in 1907-08 was created a John Harvard fellow. He was for five years connected with the English department of the Sheffield Scientific School at Yale, as instructor and assistant professor. In 1913 he was chosen professor of English at Smith College and held this position at the time of his election as president of Vassar. Dr. MacCracken edited: *John Lydgate's Serpent of Division*; *Minor Poems of John Lydgate*; *The College Chaucer*, and has written several text books. He is a frequent contributor to educational journals.

MAC CRACKEN, JOHN HENRY. American educator, elected in 1914 president of Lafayette College. He was born in Rochester, Vt., in 1875, the son of Henry Mitchell MacCracken, for many years chancellor of New York University, and the brother of Henry Noble MacCracken (q.v.). He graduated from New York University in 1894 and in the year following studied at the Union Theological Seminary. After spending several years in study in Germany he was appointed A. Ogden Butler fellow in philosophy at New York University, where he was instructor in philosophy from 1896 to 1899 and assistant professor in the latter year. From 1899 to 1903 he was president of Westminster College, Mo., resigning this position in the latter year to become syndic and professor of politics at New York University, which chair he held at the time of his election as president of Lafayette College.

MCCUTCHEON, JAMES. An American merchant, died July 20, 1914. He was born in County Down, Ireland, in 1842, and removed to the United States in 1860. He started in the linen business with his uncle, John Milliken, at Broadway and Astor Place, New York City, and after his uncle's retirement became the proprietor of the store. From then until 1906 he enlarged his business and removed several times until finally he built a large store at the corner of Fifth Avenue and Thirty-fourth Street. Mr. McCutcheon was contemporaneous with a group of men from the north of Ireland, such as A. T. Stewart, Hugh O'Neill, and James McCreery, who for many years controlled the retail dry goods business in New York. He was director or official in many financial institutions and enterprises.

MAC DOUGALL, CLINTON DUGALD. An American soldier, died May 24, 1914. He was born in Glasgow, Scotland, in 1839, and early in life removed to the United States, graduating from Jordan Academy in 1853. In 1861 he was appointed captain of the 75th New York Infantry, and rose in rank until in 1865 he was brevetted brigadier-general of volunteers "for gallant and meritorious services"; commanding successively a brigade and division in the Army of the Potomac. In the grand review held in

Washington in May, 1865, he commanded the first division of the second army corps. From 1869 till 1873 he was postmaster at Auburn, N. Y., and from 1873 till 1877 was member of Congress, afterwards serving as United States Marshal of the Northern District of New York from 1877 to 1885. He declined the positions of consul-general at London and Paris tendered him by President Hayes, and also declined the treasurership of the United States, and positions of Commissioner of Internal Revenue and Commissioner of Patents. From 1901 to 1911 he again served as marshal of the Northern District of New York.

McGILL UNIVERSITY. An institution for higher education, founded at Montreal, Canada, in 1821. The students enrolled in all departments in the autumn of 1914 amounted to 1600. The faculty numbered 285. During the year Dr. A. Campbell Geddes was appointed professor of anatomy. Robert Warden, formerly of Oxford University, was appointed professor of Roman law and dean of the faculty of law. G. R. Mines, formerly of Cambridge University, was appointed professor of psychology. Professor Mines was accidentally killed in the laboratory while performing experiments. Dr. H. S. Birkett was appointed dean of the faculty of medicine. The noteworthy benefactions during the year included an endowment fund of \$25,000 from the heirs of the late J. Thomas Molson; \$22,920 from the estate of G. B. Cramp; and \$1,000,000 from the estate of James Ross. The endowment funds of the university amount to about \$8,207,000 and the annual income from all sources to about \$820,000. The library contains 184,000 volumes. The principal is W. Peterson.

McINTYRE, ROBERT. An American bishop of the Methodist Episcopal Church, died Aug. 31, 1914. He was born in Selkirk, Scotland, in 1851; in his youth worked as a mill worker and bricklayer; removed to the United States and became a student at Vanderbilt University in 1877. In the following year he was ordained into the ministry and served as pastor in churches in Charleston, Chicago, Denver, and Los Angeles. In 1908 he was elected bishop. He was the author of several volumes of poems including: *At Early Candle Light* (1899); and *A Modern Apollon*.

MC LEARY, JAMES HARVEY. An American jurist, died Jan. 6, 1914. He was born in Smith Co., Tenn., in 1845; from 1861 to 1865 he served in the Confederate Army, and after the close of the Civil War entered Washington and Lee University from which he graduated in 1868. He then studied law, taking the degree of LL.B. in the following year, and in 1868-69 he was assistant professor of English at Washington College. He practiced law at San Antonio, Texas, thereafter until 1898. From 1874 to 1877 he was a member of the Texas Legislature, and in 1881-82 was Attorney-General of that State. He was appointed justice of the Supreme Court of Montana in 1886, serving two years. During the war with Spain he acted as major and inspector-general of the United States Volunteers in Cuba. In the same year he was appointed alcalde at Santiago de Cuba. He served in this post until 1901, when he was appointed assistant secretary of Porto Rico. In the same year he received the appointment of associate justice of the Supreme Court

of Porto Rico, and he held this post until the time of his death. He was a member of several scientific societies.

MAC MILLAN (CROCKER LAND) EXPEDITION. See POLAR RESEARCH, *Arctic*.

MACNAB, ANGUS. A British ophthalmologist, died in the early part of November, 1914, as the result of a wound received on the battle line in the war in Europe. He received his medical education at Edinburgh, Moorfields, Freiburg, and Vienna. After the outbreak of the European War he was appointed medical officer of the newly formed London Scottish Regiment. He received his wound while aiding the wounded in the trenches. He was the translator of Axenfeld's *Bacteriology of the Eye* and of Lolunaun's *Disturbances of the Visual Functions*.

MADAGASCAR. A French colony off the east African coast, composed of a large island in the Indian Ocean and its dependencies, Diégo-Suarez, Nosy-Bé, and Ste. Marie. Antananarivo (Tananarive) is the capital, with 72,000 inhabitants.

The area of Madagascar is 585,300 square kilometers (225,984 square miles); with dependencies, 585,533 square kilometers. The population according to the census of 1911 was 3,104,881; with dependencies, 3,154,000—3,198,880 and 3,293,552 in 1913. The population of Madagascar as calculated Jan. 1, 1914, was 3,253,581—14,918 Europeans, 12,905 Asiatics and Africans, 3,225,758 aborigines; total population with dependencies, 3,351,481. With the exception of New Guinea (785,000 square kilometers) and Borneo (733,000), Madagascar is the largest island in the world. The Hova inhabit that portion of the central plateau now known as Imerina, anciently called Ankova—the country of the Hova. There is no doubt that the Hova are descendants of immigrants of the Malayo-Polynesian race. They are light colored, with regular features; extremely intelligent, assimilative, and laborious. The region south of Imerina as far as the northern frontier of the Bara is inhabited by the Betsileo—formerly called Andriambohitsombilahy, “lords of the mountain rich in beeves”; these people number about 500,000, and are indolent, drunken, and superstitious. The Bara, the Sakalava, and the Mahafaly are warlike tribes devoted to pillage. Malagasy is the language of the island, different tribes speaking different dialects. The Hova dialect is the written one. Rice is the most important native cultivation. From 1896 to 1900 the colony imported rice to the value of nearly 800,000 francs annually; in 1901 the import of rice was valued at 5,640,636 francs. From that date imports decreased annually until in 1912 only 20,000 francs were expended for this staple, while the export of rice for that year was 7420 tons, valued at 1,675,773 francs. Encouraged by the government, the cultivation of rice now extends over 396,130 hectares. Planted to manioc in 1912 were 184,220 hectares; corn, 42,000. The export of native peas was valued in 1912 at 2,687,657 francs; vanilla, 3,941,521; coffee, 348,984. The forests yield ebony, rubber, raffia, and wax. Cattle raising is carried on, and notwithstanding the primitive methods of the natives the natural conditions are so favorable to this industry that the herds increase enormously from year to year. A live-stock census is taken annually on account of the tax levied; in 1904, 2,342,792 cattle were re-

turned; in 1908, 3,812,671; in 1910, 4,492,131; in 1912, 5,722,735. These figures do not include calves; neither do they include wild cattle, which exist in great numbers in the western regions. The export of raw hides in 1912 was valued at 10,752,572 francs and the export of live animals and preserved meats at 1,008,685 francs. The mines yield gold, silver, iron, copper, lead, and zinc.

In the table below are shown imports and exports for three years:

	1900	1911	1912
Imports	40,470,813	44,768,892	50,034,848
Exports	10,623,369	47,535,361	59,844,294

The import of cotton textiles was valued at 22,768,330 francs in 1912; metal manufactures, 4,759,193; metals, 1,703,119; wines, 1,950,643; spirits, 995,391; iron manufactures, 1,563,953; coal, 92,852; etc. The export of raw hides in 1912 was valued at 10,752,572 francs; raw gold, 5,989,175; rubber, 5,181,431; vanilla, 3,941,521; raffia, 3,787,936; legumes, 2,807,575; wax, 1,696,760; cattle, 1,008,685; ebony, 425,000, etc. There entered at the ports in 1912 trade 10,937 vessels, of 1,736,764 tons. The chief ports are Tamatave (7026 inhabitants), Majunga (4600), and Diégo-Suarez. Fianarantsoa has about 7000 inhabitants. The budget for 1911 balanced at 31,153,000 francs; the debt stood, Jan. 1, 1912, at 98,220,000 francs.

Towards the end of 1914 the Antananarivo railway, that was being constructed between Antananarivo and Antsirabe, a distance of 107 miles, showed considerable progress. There was also under construction a branch line between Antananarivo and Tamatave, 81 miles north from Moramanga, which is 133 miles from Tamatave, to Lake Ahevava in the Ambatondrazaka district, which is a fertile country in the west of the province of Tamatave. These two extensions are intended to develop the commerce of the Central Plateau and the Ambatondrazaka country. There are 7192 kilometers of telegraph lines, with 12,297 of wire; telephone lines, 1381 kilometers. Post offices, 171.

For purposes of administration the colony of Madagascar is divided into 21 provinces, the commune of Sainte-Marie, and the autonomous districts of Ankazobe and Ambilobe. By the decree of March 31, 1914, the Comoro Archipelago was converted into a province of Madagascar. The Governor-General in 1914 was A. Picqué.

MAGRUDER, GEORGE LLOYD. An American physician, died Jan. 28, 1914. He was born in Washington, D. C., in 1848; graduated from Gonzaga College in 1868; studied medicine at Georgetown University, and received his degree in 1870. From 1870 to 1873 he was professor of chemistry at Gonzaga College, and at the same time acted as prosecutor to the professor of anatomy at Georgetown University. He was for a number of years professor of materia medica and therapeutics, and dean of the School of Medicine at the same university. For over ten years he was a member of the board of visitors at the University Hospital for the Insane; was consulting physician to several important hospitals, and a member of several political societies.

MAHAN, ALFRED THAYER. An American naval officer, an authority on sea power, died Dec. 1, 1914. He was born at West Point, N. Y., in 1840, and graduated from the United States Naval Academy in 1859. He served on the

ALFRED THAYER MAHAN
REAR ADMIRAL, UNITED STATES NAVY
DIED DECEMBER 1, 1914

1900

Congress for two years, and at the outbreak of the Civil War was commissioned lieutenant. Being appointed to the *Pocahontas*, he took part in the blockading of the Confederate ports on the Atlantic, afterwards serving on the *Seminole* and the *James Asgar*. At the conclusion of the war he was made a lieutenant-commander; in 1872 a commander. Until 1885 he served on the Atlantic and Pacific stations on various vessels, and in the latter year was appointed captain and assigned to the Naval War College. In the following year he was appointed president of that college, continuing until 1889, and again served as president in 1892-93. From 1893 to 1895 he was in command of the *Chicago*, and it was at that time that he obtained the first worldwide recognition of his fame as a writer on naval affairs. His first book, called *The Gulf and Inland Waters*, published in 1883, achieved a moderate success among readers of naval works, and encouraged by this he began work on another and more ambitious work which he called *Influence of Sea Power upon History, 1660-1783*; this, published in 1890, was given instant recognition. It was held in high regard, especially in England, where it was looked upon as epoch making, and studied by cabinet officers and members of the Admiralty, as well as by general readers. He visited England on the *Chicago* and was given the degrees of D.C.L. by Oxford and LL.D. by Cambridge University. On his return to the United States he was given honorary degrees by Yale, Harvard, Columbia, and McGill Universities. He again resumed his position at the War College, but soon found that he could not do his literary work while engaging in active service; and in 1896 was retired, at his own request, after 41 years' service. In 1906 he was advanced to the rank of rear admiral on the retired list. His second great book was published in 1892, and was entitled *Influence of Sea Power upon the French Revolution and Empire*. This was followed by *Life of Admiral Farragut* (1892); *Life of Nelson* (2 vols., 1897). The latter is regarded as one of the most comprehensive and discriminating biographies of Nelson, and was most cordially received in England. During the Spanish-American War Admiral Mahan was ordered to active duty on the Naval War Board, and in 1899 was a delegate to The Hague Peace Conference. In 1899 he published *Lessons of the War with Spain*. Previous to the breaking out of the war he had published *The Interest of the United States in Sea Power, Present and Future*, which, as a criticism of the American navy, was his most important book from the standpoint of the United States. Admiral Mahan was a consistent advocate of a larger navy, and he many times pointed out the importance to Great Britain of maintaining a preponderating superiority over the German fleet. His writings, the most important of which were for the purpose of showing the influence of naval affairs in the struggle of nations, were all dominated by the theme of the necessity of nations being prepared for war. In spite of this fact he was by no means a militarist, in the sense that he demanded at any time measures of aggression. Undoubtedly the foremost authority on naval history, his writings, in addition to the works already mentioned, include: *The Problem of Asia* (1900); *The South African War* (1900);

Types of Naval Officers (1901); *Retrospect and Prospect* (1902); *Sea Power in its Relations to the War of 1812* (1905); *From Sail to Steam* (1907); *Some Neglected Aspects of War* (1907); *Naval Administration and Warfare* (1908); *The Harvest Within* (1909); *Interest of America in International Conditions* (1910); *Armaments and Arbitration* (1912); and *Major Operations of the Navies in the War of American Independence* (1913). He was also a frequent contributor on naval subjects to newspapers and periodicals.

MAIL. See UNITED STATES, Post Office.

MAINE. POPULATION. The estimated population on July 1, 1914, was 762,787. The population in 1910 was 742,371.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

	Acreage	Prod. bu.	Value
Corn 1914	16,000	736,000	\$ 648,000
..... 1913	16,000	608,000	529,000
Wheat 1914	3,000	81,000	88,000
..... 1913	3,000	76,000	77,000
Oats 1914	141,000	5,781,000	8,295,000

..... 1913	1,194,000	1,194,000	16,597,000
a Tons.			

MINERAL PRODUCTION. The principal mineral product of the State is granite, in which Maine ranked third, being exceeded only by Vermont and Massachusetts. More than half the granite quarried is used in buildings and monuments, but considerable quantities are made into paving blocks and curbing. The total value of the stone production in 1913 was \$1,792,079, against \$1,810,590 in 1912. Maine is also one of the leading States in the production of slate, the output of which in 1913 was valued at \$323,998. In the value of feldspar produced Maine ranks first. The production in 1913 was 38,248 short tons, valued at \$348,499. Other commercial minerals produced in 1913 were mineral waters, sand and gravel, and a small quantity of gem material. The total value of the mineral production in 1913 was \$4,429,584, compared with \$3,925,526 in 1912.

EDUCATION. The total school population of the State in 1914 was 221,271. The total enrollment in the public schools was 146,620, and the average daily attendance was 113,056. The male teachers numbered 743 and the females 6328. The average yearly salary of male teachers in the common schools was \$459.67 and of female teachers \$356.52. In the high schools the average yearly salary of male teachers was \$971.68, and of female teachers \$561.18.

TRANSPORTATION. The total railway mileage in the State in 1914 was 2300. The railroads having the longest mileage were the Maine Central, 995; Bangor and Aroostook, 630; Canadian Pacific, 177; Boston and Maine, 139; and the Sandy River and Rangeley Lakes Railroad, 105. The total mileage of electric railways was 491. The only railroad construction during the year was that of the Portland and Interurban Railroad running from Lewiston to Portland, a distance of approximately 29 miles.

FINANCE. The total receipts for the fiscal year 1913 amounted to \$5,081,853 and the expenditures were \$4,889,678. There was at the beginning of the fiscal year a balance of \$457,128 and at the end a balance of \$649,303. The total bonded indebtedness of the State on Dec. 31, 1913, was \$569,000.

CHARITIES AND CORRECTIONS. A State board of charities and corrections was created by the Legislature of 1913 and its first report was made in 1914. The board has supervision over the State institutions and over municipal alms houses, town farms, hospitals, institutions for child-saving, etc. It also has general supervision of the correctional institutions. The charitable institutions include the State Hospitals at Augusta and Bangor, the Maine School for Feeble Minded, and the Bath Military and Naval Asylum at Bath. The correctional institutions include the Maine Industrial School for Girls at Hallowell, the State School for Boys at South Portland, and the Maine State Prison at Thomaston. The total expenditures for the support of these institutions is over \$1,000,000 annually. In the correctional institutions of the State, there were in 1913 an average of 1226 persons.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial and the last was held in 1913. Elections were held for State officers and four representatives in Congress. The Republicans renominated for Governor William T. Haines, the Democrats Oakley C. Curtis, mayor of Portland, and the Progressives Halbert P. Gardner. Elections in Maine for State officers and members of Congress are held in September instead of in November as in other States, and the results usually indicate the general trend in politics. The Republican party, nominally the predominating party in the State, had been divided in 1912 by the formation of the Progressive party. Although the Progressive strength fell off greatly from 1912 it was sufficient to defeat Governor Haines, the Republican candidate. Oakley C. Curtis was elected Governor with 62,039 votes, compared with 58,862 for Governor Haines and 18,225 for Gardner, the Progressive candidate. The total vote cast in this election was 141,592, compared with 141,940 in the September election, and 129,637 in the presidential election, of 1912. Thus, as is usually the case in Maine, a larger vote was cast in this election than in the preceding presidential election. The Republican vote was more than twice as great as in the presidential election of 1912, when it was 26,545. The Democratic vote showed an increase of about 10,000 from 1912, while the Progressive vote fell off about 30,000 from the vote for Roosevelt. The Republicans elected representatives in the first, third, and fourth districts, while the Democrats reflected D. J. McGillicuddy in the second district. In the September election, the vote in referendum established the Public Utilities Commission, which had been authorized by act of the Legislature of 1913.

STATE GOVERNMENT. Governor, Oakley C. Curtis; Secretary of State, J. E. Alexander; Treasurer, Joseph W. Simpson; Adjutant-General, Albert Greenlaw; Auditor, J. E. Sullivan; Attorney-General, Scott Wilson; Superintendent of Public Schools, Payson Smith; Insurance Commissioner, J. Wallace Blunt; Commissioner of Agriculture, John A. Roberts; Commissioner

of Public Lands, Blaine S. Viles—all Republicans except Governor and Auditor, who are Democrats. January 4, 1915, new election for Secretary of State, Treasurer, Attorney-General, and Commissioner of Agriculture.

JUDICIARY. Supreme Judicial Court: Chief Justice, Albert R. Savage, Republican; Associate Justices, L. C. Cornish, Republican; Albert M. Spear, G. E. Bird, Democrats; A. W. King, Republican; Geo. F. Haley, Democrat; and Geo. M. Hanson, Democrat; Warren C. Philbrook, Clerk. **STATE LEGISLATURE, 1915.**

	Senate	House	Joint Ballot
Democrats	14	77	91
Republicans	17	70	87
Progressives	—	4	4
Majority	Rep. 3	Dem. 3	—

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MAINE, UNIVERSITY OF. A State institution of higher education, founded at Orono, Me., in 1865. The university consists of the College of Agriculture, the College of Arts and Sciences, the College of Law, the College of Technology, and the Agricultural Experiment Station. In the College of Agriculture there were in 1914, 36 members of the faculty, in the College of Arts and Sciences, 47, in the College of Law, 11, in the College of Technology, 32, and in the Agricultural Experiment Station, 15, making a total of 150 members of the faculty. The total enrollment in all departments was 1196. The only gift of note during the year was the completion of the payment for the College of Law building by D. D. Stewart. The university has an endowment of a little more than \$200,000, and is supported chiefly by Federal and State appropriations. The library contains about 50,000 volumes. The president is Robert J. Ale, LL.D.

MALACCA. One of the Straits Settlements (q.v.).

MALARIA. A new malarial parasite in man was discovered by Dr. J. W. Stephens, of the University of Liverpool. The organism was first noticed in a blood slide from a native child of Central India. The new parasite, to which the name *Plasmodium tenue* has been given, is an extremely active ameba and the arrangement of the processes gives the parasite most irregular fantastic shapes. The cytoplasm is very scanty and the nuclear chromatin is disproportionately great.

Dr. Samuel Dixon, Commissioner of Health of Pennsylvania, called attention to the value of the duck as an enemy of the mosquito. After trying fish as destroyers of larvæ and pupæ of mosquitoes with indifferent success, Dixon built two dams near together on the same stream, so that each would have the same environment for the breeding of mosquitoes. Each body of water was about 1400 square feet in extent. In one pond, 20 mallard ducks, *Anas platyrhynchos*, were permitted to feed, while the other was entirely protected from water birds, but well stocked with American goldfish. The pond in which the ducks fed was entirely free from mosquitoes for several months, while that stocked with fish was always swarming with mosquitoes in various stages of development. Dixon then placed 10 well-fed ducks in the infested pond, and they soon turned their atten-

tion to the larvæ and pupæ of the mosquito, devouring them greedily in preference to any other food. At the end of 24 hours all pupæ had disappeared, and after 48 hours only a few larvæ survived. Dixon believes that while other birds, fish, spiders, and frogs and small reptiles are all enemies of the mosquito, none of them have the wide geographical range and the capacity to devour such large numbers of immature mosquitoes as the ducks. Both the mallard and spoonbilled duck can be employed for this purpose.

MALAY STATES. See **FEDERATED MALAY STATES.**

MALTA. An island in the Mediterranean, covering 91½ square miles and constituting, with the islands of Gozo (25½), Comino (1), Filifa, and Cominotto (mere islets), a British crown colony. The total population April 1, 1913, was estimated at 216,617; census of 1911, 211,564; census of 1901, 184,742. The natives are of Punic origin, and their speech is said to be derived from the Carthaginian and Arabic languages. The majority of the population are Roman Catholics. Education is not compulsory. The soil is under high cultivation, and besides products for home consumption potatoes, onions, oranges, etc., are exported. The chief town and capital is Valletta, with a population, April 2, 1911 (including the suburbs of Floriana, Sliema, St. Julian's), of 44,143 inhabitants. Citta Vecchia, the ancient capital, had with suburbs 8896 inhabitants. The Three Cities (Senglea, Cospicua, and Vittoriosa) have a population of 26,551.

Malta is a port of call for Mediterranean traffic, and an important coaling station. Valletta is the centre of a large transit trade. There are 7¾ miles of railway. Imports 1912-13, £2,614,566; exports £977,656. Total weight of goods transhipped, 13,464 tons. Revenue 1912-13, £442,035; expenditure, £427,581. Tonnage entered and cleared 10,398,948, of which 5,510,556 tons British. There is, strictly speaking, no public debt; there is no direct taxation. The Governor in 1914 was Gen. Sir H. M. L. Rundle, appointed 1909.

MAMMALS. See **ZOOLOGY.**

MAN, ANTIQUITY OF. See **ANTHROPOLOGY; GEOLOGY.**

MANCHURIA. A Chinese dependency, lying east of Mongolia and Chihli and between Korea and the Amur River, which separates it on the north from Siberia. The capital is Mukden.

Manchuria consists of three provinces, the total estimated area of which is 362,483 square miles. There exist widely varying estimates of population. The figure derived from the 1910 enumeration of households is 12,742,360. This does not include children under six years of age; including such children, the estimate is 13,104,000. The population is doubtless increasing at a rather rapid rate; from China proper there is a considerable immigration, attracted by Manchuria's exceptionally fertile soil and the rapid development of the very profitable soya bean culture. The three provinces of Manchuria, with area and total estimated population in 1910, are: Heilungkiang, in the north, 202,703 square miles, 1,607,000 inhabitants; Kirin, 105,019 square miles, 5,501,000 inhabitants; Shengking, in the south, 54,761 square miles, 5,996,000 inhabitants. The capital of Heilungkiang is

Tsitsihar, with an estimated population of 30,000; the capital of Kirin province is Kirin, whose population is variously stated, some estimates being as high as 100,000; capital of Shengking, Mukden, whose population has been estimated at 158,000. Other important towns are Antung, Kwangchengtze (Changchun), Harbin, Newchwang (Yingtze), at the mouth of the Liao River, and Newchwang City, 30 miles up the Liao.

In the southern part of Shengking is the Japanese leasehold of Kwantung (q.v.). From Kwantung the Japanese "sphere of influence" extends northward to Kwangchengtze. Here the Russian "sphere" begins and the Russian railway running south from Harbin connects with the Japanese railway from Mukden, Dairen, and Ryojun. Mukden is connected with China proper by a branch of the Chinese Imperial Railways, and with Antung by a Japanese line, which connects with the Korean railways. The Russian line to Vladivostok crosses Heilungkiang and Kirin provinces, passing through Harbin. The total length of railway in Manchuria at the beginning of 1912 has been reported at 2182 miles. The South Manchuria Railway maintained shops at Shahokou, which in 1914 were engaged in the building of locomotives for the company's lines, and were also considering the construction of locomotives for the Korean railways.

Important products of Manchuria are soy beans, millet, corn, Kafr corn, wheat, rice, and tobacco. There are valuable mineral resources, and some iron and coal are worked. The reports of foreign trade, including those of Kwantung, are included in the reports of the foreign commerce of China.

MANITOBA. A province of the Dominion of Canada. Area, 73,732 square miles with a population (1911) of 455,614. Area, including that portion of the Northwest Territories annexed to Manitoba in 1912, 251,832 square miles, carrying a population of 461,630. The capital is Winnipeg, with (1911) 136,035 inhabitants. The province is administered by a Lieutenant-Governor appointed by the Governor-General of Canada and acting through a responsible council. There is a unicameral legislative assembly of 41 members elected for four years. The Lieutenant-Governor in 1914 was Sir Douglas Colin Cameron, appointed Aug. 1, 1911. Premier in 1914, Sir R. P. Roblin. In the 1914 elections for the Manitoba Legislative Assembly, the Roblin government (Conservative) was returned with a narrow majority. See also the article on CANADA.

MARINE DISASTERS. See **SAFETY AT SEA.**

MARITAL CONDITION AND MORTALITY. See **MARRIAGE AND DIVORCE; and VITAL STATISTICS.**

MARKS, WILLIAM DENNIS. An American engineer and writer, died Jan. 7, 1914. He was born at St. Louis in 1849 and took engineering studies at Yale, from which he received the degrees of Ph.D., 1870, and C.E. in 1871. Until 1873 he was engaged in practicing engineering on various railways, gas works, and iron works, etc. In 1876 he became instructor in mechanical engineering at Lehigh University, and in

the following year was appointed Whitney professor of dynamic engineering at the University of Pennsylvania. In 1887 he became engineer and president of the Edison Electric Light Company of Philadelphia. He was the author of: *The Relative Proportions of the Steam Engine* (1880); *The Finances of Gas and Electricity Manufacturing Enterprises*, and many scientific reports and papers; and was also consulting engineer to many cities, including New York, Buffalo, Worcester, Minneapolis, Cleveland, and Chicago.

MARNE, BATTLE OF THE. See WAR OF THE NATIONS.

MARRIAGE AND DIVORCE. There was less public discussion of problems connected with marriage during 1914 than in the preceding year due doubtless to the absence of any important public report or action by any important public body. Discussion regarding the relation of marriage to length of life continued and considerable interest attached to the eugenics legislation of the preceding year. There was also evidence that the great volume of marital disputes which are brought before the courts was resulting in the creation of special judicial machinery for handling domestic troubles.

MATRIMONY AND DEATH RATE. Discussion of the relation of marriage to longevity was continued by statistics collected at Chicago showing that the death rate of bachelors was 30 per cent higher than that of married men and the death rate of maids was 40 per cent higher than that of married women. A writer in *American Medicine* attributed this difference not to the effects of marriage, but rather to selection for marriage. While inclined to attribute some slight effect to the more regular habits following marriage, an influence certainly less important in the case of women than men, the writer held that the principal factor was the selection of the stronger and more healthful for marriage mates. The physically weak or defective would therefore be found in larger proportion outside the married state than within. This interpretation had in fact been advanced some decades earlier by statistical writers.

DOMESTIC RELATIONS COURT. The first Court of Domestic Relations was established in Chicago in 1911 by the judges of the Municipal Court. Its establishment was due to the fact that cases involving domestic tangles were numerous, were different in nature from cases involving criminality, and hence made objectionable the mingling together of men and women seeking a solution of domestic troubles with common drunkards, rogues, street women, and other court habitués. There was a strong conviction that much domestic unhappiness and many failures to achieve success in the great adventure of marriage might be avoided by the wisdom of a trusted confessional and the authority of a respected public official. In the Chicago Court a woman with the title of social secretary was chosen as confessor. In the first year 2796 cases were disposed of. In only 61 of these were women defendants. In the second year 3699 cases were disposed of. In 2462, or two-thirds of these, no warrants were issued. In over 2000 nonsupport cases the husbands were brought into court; and deserting husbands were frequently followed up. The court has aided complainants in many ways, always with

splendid insight into human relations and with a view to the restoration of right conditions rather than punishment. Work is found for husbands accused of nonsupport. In the second year \$75,000 was paid by such men to the court and an equal amount directly to wives. The co-operation of outside agencies, such as settlements, district nurses, churches, and children's aid societies is secured. Experience has shown that liquor is the most frequent cause of separation. The second year's statistics showed that of every 100 separations 46 were due to drink; 12 to immorality of husbands; 2 to immorality of wives; 12 to venereal diseases of husbands; 8 to ill temper of husbands; 3 to ill temper of wives; 7 to interference of mothers- or fathers-in-law; 4 to youth; 3 to laziness of husbands; and 1 to sickness. The judges had become thoroughly convinced of the righteousness of divorce in various cases. Many cases of illegitimacy are also handled by the court; in the second year there were 499 bastardy cases, in about one-third of which the girl admitted that she was a delinquent.

The Ohio Legislature, acceding to the demand of Cincinnati social agencies, created a Court of Domestic Relations for Hamilton County as a branch of the Court of Common Pleas. It has its own judges elected on a nonpartisan ballot. It hears divorce cases and most nonsupport and failure-to-provide cases. Uncontested divorce cases are now investigated by probation officers, thus restricting the abuses due to agencies securing a divorce for a fee. Moreover the disregard of court orders in nonsupport cases is checked by special court officials.

EUGENIC MARRIAGES. A movement for eugenic marriage laws followed the recent awakening of general interest in venereal infection and demand for better safeguards against racial deterioration. The most advanced law was enacted in Wisconsin in 1913, effective January 1. This law required that any man seeking a marriage license must obtain a physician's certificate showing freedom of the blood from venereal germs. It fixed the physician's maximum fee at \$3. On account of the form of the certificate the physicians of Milwaukee held that a true statement could be made only after expensive laboratory tests for venereal infection. They were thus confronted with the alternatives of falsifying the certificates or of suffering financial loss, and consequently went on strike. The situation was eased slightly by an opinion of the Attorney-General that the law was intended to require only those methods of examination known to reputable physicians generally. The law, however, was brought before the courts in several cases and on January 20 the Circuit Court of Milwaukee declared it unconstitutional on the ground that it was unreasonable as regards the physician's fee and in the limitation of the right of matrimony. The court refused assent to the charge that the law was class legislation. Meanwhile a decision of the State Supreme Court holding that neither license nor certificate was necessary for marriage, but only a mutual agreement of two persons to accept each other as mates, was made the basis of a public announcement by a county register of deeds that he would record common-law agreements for 10 cents each. The law finally reached the Supreme Court of the State, which reversed the Circuit Court decision on June 17. The

chief argument against it, that it was discriminatory in signaling out the male sex, was dismissed by the court on the ground that such a classification was permissible. The court held that the law intended to require only such examination as an ordinary physician could make.

Eugenic marriages were enforced by numerous ministers throughout the country, the movement being led by Dean Sumner of Chicago. After a year's experience with rules requiring sanitary marriages he approved them. He required that parties seeking to be married should be baptized; should neither of them have a divorced wife or husband living; must establish their identity by witnesses; must arrange for the ceremony at least three days in advance; and must each present a certificate signed by a reputable physician that he or she has no incurable or communicable disease and is mentally sound. Instead of decreasing the number of applicants these requirements increased them. Many other ministers of various denominations adopted similar rules. Jewish rabbis pointed out that the sanitary marriage had long been a practice in Jewry. At the Central Conference of American Rabbis in July a committee was appointed to harmonize the civil and Mosaic laws in regard to marriage and divorce. Cardinal Gibbons found the movement to be in harmony with the ideals of the Catholic Church.

MARTIN, FREDERICK TOWNSEND. An American financier and writer, died March 8, 1914. He was born in Albany, N. Y., in 1849; educated at the Albany Boys' Academy, and studied law at the Academy Law School, receiving the degree of LL.B. in 1872. His parents possessed great wealth, and he, with his brother Howard Martin, became well-known for their entertainments in New York City. Mr. Martin also took an active part in the militia of the State and became judge and advocate with the rank of colonel. About ten years before his death he became interested in social work, and from that time devoted much attention to educating and instructing the poor, also lecturing on subjects connected with social questions. He wrote many articles for newspapers, dealing with social uplift work, and his first book, *The Passing of the Idle Rich*, in which he preached on the evils to society of idleness and extravagance, was published in 1911, and was followed by: *My Personal Experiences of Meeting Snobs*, in the same year; *Reminiscences of My Life* (1912); and *Things I Remember* (1913).

MARTINIQUE. A French colony; an island of the Lesser Antilles. Its area is 987 square kilometers (381 square miles), and its population in 1911, 184,084. Fort-de-France, with about 27,000 inhabitants, is the capital. Imports, 1912, 21,520,301 francs; exports, 30,523,455 francs. Vessels entered in the 1911 trade, 88, of 155,570 tons. The debt stood Jan. 1, 1912, at 4,510,876 francs. The Governor in 1915 was G. Poulet.

MARYLAND. POPULATION. The estimated population on July 1, 1914, was 1,341,075. The population in 1910 was 1,295,346.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	668,000	24,531,000	\$16,681,000
	1913	670,000	22,110,000	14,372,000
Wheat	1914	612,000	13,158,000	13,947,000
	1913	610,000	8,113,000	7,221,000
Oats	1914	43,000	1,161,000	604,000
	1913	45,000	1,260,000	605,000
Rye	1914	25,000	425,000	366,000
	1913	27,000	389,000	296,000
Barley	1914	5,000	165,000	109,000
	1913	5,000	145,000	98,000
Potatoes	1914	44,000	3,432,000	2,059,000
	1913	43,000	3,741,000	2,506,000
Hay	1914	890,000	a 448,000	6,854,000
	1913	890,000	491,000	7,463,000
Tobacco	1914	22,000 b	17,600,000	1,408,000
	1913	25,000	18,500,000	1,720,000

b Pounds.

MINERAL PRODUCTION. The mineral production of Maryland in 1913 was valued at \$11,292,723, compared with \$10,851,671 in 1912. The value of the coal mined constituted more than half the total. The total production of coal was 4,779,839 short tons, valued at \$5,927,046. This was less than the amount mined in 1912 by 184,199 short tons, but the value showed a gain of \$87,967 and exceeded that of any other year since 1907. In 1913, 5645 men were employed in the coal mines of the State. There were practically no labor troubles. The coal production of the State in 1914, according to the estimates of the United States Geological Survey, showed a decrease of about 500,000 tons. This was due chiefly to the approaching exhaustion of the Big Vein, which has supplied more than 95 per cent of the total coal produced in the State. Second in importance among the mining industries is clay-working. The clays of the State are widely distributed and suitable for a variety of uses. The total value of the clay products in 1913 was \$1,917,500. The third industry in importance is stone quarrying. The value of the output in 1913 was \$1,153,115, compared with \$1,032,022 in 1912. Other commercial products are sand, gravel, cement, feldspar, infusorial earth, mineral paints, mineral waters, sand-lime brick, silver, talc, and soapstone.

EDUCATION. The total school population of the State on July 31, 1913, was 415,908. Of these, 163,827 were in the city of Baltimore. The average number of pupils in the public schools in that year was 155,007. The total number of teachers was 5805, of whom 4899 were females and 906 males. The average yearly salary of teachers was \$533.17. There were in the State in that year 540 schools for colored persons, with 905 teachers and 43,757 pupils. The total value of school property in the State in 1913 was \$10,672,069. The total expenditures for school purposes was \$5,326,876.

FINANCE. The total receipts from all sources for the fiscal year ending Sept. 30, 1914, was \$12,600,566. The total disbursements amounted to \$12,999,561. At the beginning of the fiscal year there was on hand a balance of \$1,475,956 and at the end of \$1,840,256. The bonded debt of the State at the end of the fiscal year amounted to \$19,685,880, to offset which there were sinking funds amounting to \$5,966,304.

TRANSPORTATION. The railroad mileage in the State in 1914 was 1347. The principal railroads are the Pennsylvania, with a mileage of 418; the Baltimore and Ohio, with a mileage of 318; the Western Maryland, with 252; and the

Baltimore, Chesapeake, and Atlantic, with 131. The Baltimore and Ohio and the Western Maryland carried on considerable construction work during the year.

CHARITIES AND CORRECTIONS. The State institutions are the Maryland Hospital for the Insane, the Springfield State Hospital, the Maryland Asylum and Training School for Feeble-minded, the Maryland School for the Deaf and Dumb, and the Maryland Tuberculosis Sanatorium. There are also many hospitals and asylums, carried on under local and private auspices. The State institutions are under the direct control of the Board of State Aid and Charities.

POLITICS AND GOVERNMENT. The General Assembly or Legislature of Maryland met in 1914 as the sessions are biennial and the last was held in 1912. Many important measures were passed, among them the following: a measure to continue the system of good roads throughout the State and an appropriation of \$6,800,000 additional for the completion of the system that will connect all the county towns with each other and with the city of Baltimore; creation of a State Tax Commission to supervise and equalize the assessment of property and taxation; the granting of extraordinary powers to the State Board of Health and making a large appropriation to its use; the creation of an Advisory Board of Pardons and Parole, embodied in a so-called Penal Reform Act; a workmen's compensation act of very liberal terms, creating a commission to administer the law and making compensation for injuries or death compulsory; an amendment to the Haman Oyster Planting law, which was demanded by the oystermen who are opposed to oyster culture; an act providing for the nomination of candidates for the United States Senate upon what is called the "County Unit plan." Acts submitting four amendments to the constitution of the State were submitted to the voters as follows: an amendment which will give each county of the State the power to form a local legislative body to enact local laws and abridging the power of the General Assembly to enact such laws; an amendment adopting the referendum system for laws passed by the Legislature upon the presentation of a specified petition, and suspending the operation of laws upon which a referendum has been asked; an amendment giving the General Assembly power to enact laws for the suspension of sentence by a court in criminal cases, for indeterminate sentence and for the release of prisoners on parole. These four amendments will be voted on at the general election in November, 1915. An amendment relating to the term and compensation of the sheriff of the city of Baltimore was submitted and ratified at the election in November, 1914.

The term of the Governor is four years and that of the present Governor, Phillips Lee Goldsborough, will not expire until January, 1916. At the November election no State officials were elected, but elections were held for United States Senator and for representatives in Congress. The candidates for the Senate were John Walter Smith, Democrat, for reelection, Edward C. Carrington, Republican, and V. M. Reichard, Progressive. At the elections held on November 3 the Progressive party, which at the presidential election in 1912 had polled 57,786 votes, 3000 more than the Republican vote, almost dis-

appeared, the candidate for that party for the Senate receiving only 3697 votes. Senator Smith, Democrat, received 110,204; Carrington, Republican, 94,864. The Prohibitionists and Socialists also had candidates, but their vote was unimportant. The Democrats elected five candidates to the House of Representatives and the Republicans one. The Legislature defeated a woman's suffrage amendment to the constitution by a decisive majority.

In the closing weeks of the year 1914, during the deepest depression caused by the European War, an industrial survey of the city of Baltimore was made by experts employed by the Consolidated Gas Company in connection with the Merchants and Manufacturers Association and an advisory committee of the leading citizens. This showed that the value of manufactured products in the metropolitan district of Baltimore for the year in which the survey was made was \$353,000,000, and that 115,000 persons were employed in the factories. In September, 1914, the one hundredth anniversary of the defeat of the British at North Point, Baltimore, and the writing of the National anthem, "The Star Spangled Banner," by Francis Scott Key, was celebrated in Baltimore by elaborate ceremonies. See **CELEBRATIONS.**

STATE GOVERNMENT. Governor, Phillips L. Goldsborough, Republican; Secretary of State, R. P. Graham, Republican; Treasurer, Murray Vandiver, Democrat; Adjutant-General, C. F. Macklin, Republican; Attorney-General, Edgar Allan Poe, Democrat; Superintendent of Education, M. B. Stephens, Democrat.

JUDICIARY. Court of Appeals: Chief Justice, Andrew H. Boyd; Associate Justices, N. Chas. Burke, William H. Thomas, John R. Pattison, Hammond Urner, John P. Briscoe, Henry Stockbridge, and Albert Constable; Clerk, Caleb C. Magruder—all Democrats except Stockbridge and Urner, Republicans.

STATE LEGISLATURE, 1913.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MARYLAND, UNIVERSITY OF. A State institution for higher education at Annapolis and Baltimore, Md., founded in 1784. There were in all departments in 1914, 1200 students, with 211 members in the faculty. There were no noteworthy gifts received during the year and no notable changes in the faculty. The productive funds amount to about \$150,000 and the total income to about \$250,000. The library contains about 25,000 volumes. The president is Thomas Fell, Ph.D., LL.D.

MASSACHUSETTS. POPULATION. The estimated population on July 1, 1914, was 3,605,522. The population in 1910 was 3,366,416.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

	Acres	Prod. bu.	Value
Corn	1914 48,000	2,256,000	\$1,918,000
	1913 48,000	1,944,000	1,652,000

		Acreage	Prod. bu.	Value
Oats1914	9,000	338,000	186,000
	1913	9,000	315,000	170,000
Potatoes1914	27,000	4,185,000	2,971,000
	1913	27,000	2,835,000	1,921,000
Hay1914	480,000	a 634,000	13,631,000
	1913	475,000	575,000	12,132,000
Tobacco1914	6,800 b	11,550,000	2,044,000
	1913	6,100	9,455,000	1,986,000

b Pounds.

MINERAL PRODUCTION. The principal mineral products of Massachusetts, as in most of the New England States, are from the stone quarries and clay pits. More than half the total value of the mineral production is from the stone quarries, exclusive of the limestone burned into lime. The clay-working industries furnish approximately 25 per cent of the total production. The total value of the mineral products in 1913 was \$7,044,529, compared with a value of \$6,654,514 in 1912. The stone quarried was valued at \$4,096,372, compared with \$3,663,279 in 1912. About 60 per cent of the stone was granite. The granite quarried in the State is used chiefly for building and monumental purposes and for paving blocks. The lime-burning industry is centred in Berkshire County. The State produces no kind of mineral fuel, although numerous deposits of peat exist in swamps and bogs in the eastern and central portions. The metal production is confined to a small output of iron ore which is used in local furnaces. Other mineral substances are emery, fuller's earth, occasional gems, mineral waters, sand and gravel, sand-lime brick, silica, and talc.

TRANSPORTATION. The total mileage of main track in the State on June 30, 1914, was 2125. There were in addition 1081 miles of second, third, and fourth track, and 1720 miles of side track, making a total mileage of tracks of all kinds of 4927. This was an increase of about 35 miles from 1913. The railroads having the longest mileage are the New York, New Haven, and Hartford, 1833; Boston and Maine, 1967; and the Boston and Albany, 961. These roads formed practically one system, but provision was made in 1914 for the separation of the Boston and Maine Railroad from the New York, New Haven, and Hartford Company's roads. For an account of the details of this, see the article **RAILROADS**.

EDUCATION. The number of children in the State between 5 and 15 years of age on September 1, 1913, was 602,591. The average attendance of all the schools was 486,869. The female teachers numbered 15,604 and the male teachers 1863. The Legislature of 1914 passed several important measures relating to education. These included a resolution to provide for an investigation as to a more equitable method of supporting the public schools; an act to authorize the board of education to maintain classes for the training of teachers for State-aided, vocational, and continuation schools; an act relative to the right of women voters to vote for candidates for school committees; an act relative to annual returns of school statistics; an act amending the measures providing for the maintenance of public high schools; and an act providing for the maintenance of public evening schools and for regulating correspondence and other like schools.

FINANCE. The report of the State Treasurer shows a balance on hand on Dec. 1, 1913, of \$8,220,590. The receipts for the year amounted

to \$43,241,099 and the disbursements to \$43,386,668, leaving a balance on hand on Dec. 1, 1914, of \$8,075,020. The direct funded debt on Dec. 1, 1914, amounted to \$47,583,854 and the sinking funds for the same period to \$19,323,948, leaving a net direct funded debt of \$28,259,906. The net contingent funded debt on the same date was \$56,441,695, making the total net direct and contingent debt on that date \$84,701,602.

CHARITIES AND CORRECTIONS. Institutions under State supervision in 1914 were the State Infirmary at Tewksbury, the State Farm at Bridgewater, the Norfolk State Hospital, the Lyman School for Boys at Westborough, the Industrial School for Boys at Shirley, the State Industrial School for Girls at Lancaster, the Massachusetts Hospital School at Canton, the North Reading State Sanatorium, the Rutland State Sanatorium, the Lakeville State Sanatorium, and the Westfield State Sanatorium. Those who received care in these institutions in 1913 numbered about 20,000. The cost of maintenance was about \$1,500,000 yearly. A Board of Prison Commissioners controls the prisons of the State. These institutions included the State Prison in Boston, the Massachusetts Reformatory at Concord, the Reformatory for Women at Sherborn, Prison Camp and Hospital at Rutland, and the State Farm at Bridgewater. The prison population at the end of 1913 was about 6000.

POLITICS AND GOVERNMENT. The Legislature met in 1914 as the sessions are annual. The most important measure passed was one providing for the submission to the people of a constitutional amendment giving suffrage to women. An election to Congress was held in the twelfth district on April 7. James A. Gallivan, Democrat, was the successful candidate. Elections for State officers and representatives to Congress were held during the year. In the primary elections held on September 22 Governor Walsh was renominated by the Democrats, Samuel W. McCall, former representative in Congress, by the Republicans, and Joseph Walker by the Progressives. In the elections on November 3 Governor Walsh was re-elected with 210,442 votes, compared with 198,627 for McCall, Republican, and 32,145 for Walker, Progressive. Although the Democratic vote showed a considerable falling off from 1912 and the Republican vote an even larger increase, the Democrats were able, with the assistance of the Progressives, to overcome the Republican vote. The total number of votes cast in the election was 459,203, compared with 488,056 in 1912. The Democratic vote showed a falling off of about 30,000; the Republican vote an increase of nearly 50,000; and the Progressive a falling off of over 110,000. The Republicans elected representatives in the first, second, third, fourth, fifth, sixth, eighth, eleventh, thirteenth, fifteenth, and sixteenth districts and the Democrats in the others. At the November State election the Republicans were all elected for the minor State offices, defeating the Democrats who had held the offices the previous year. On January 13 James M. Curley, Democratic Congressman from the twelfth district, was elected mayor of Boston, defeating Thomas L. Kenny, his only opponent, by a large majority.

OTHER EVENTS. On July 29 the canal across Cape Cod was formally opened. This canal shortens by 70 miles the distance by water be-

tween New York and Boston and provides a safer route. (See CANALS.) On June 25 a fire in the city of Salem destroyed nearly half of that city. More than a thousand buildings were burned and 18,000 people were deprived of their homes. The loss was about \$12,000,000; two and possibly three lives were lost. The conflagration began at 2 o'clock in the afternoon in a leather factory, and spread quickly, as the water pressure was inadequate and one of the mains was broken. Nearly all the historic structures of the town were saved. These include Hawthorne's birthplace, the customhouse where he worked, and the reputed House of the Seven Gables. Among the buildings destroyed were part of the hospital, the orphan asylum, and a new church.

STATE GOVERNMENT. Governor, David I. Walsh, Democrat; Lieutenant-Governor, Grafton D. Cushing, Republican; Secretary of State, Albert P. Langtry, Republican; Treasurer, Charles L. Burrill, Republican; Comptroller, —; Auditor, Alonzo B. Cook, Republican; Adjutant-General, —; Attorney-General, Henry C. Atwill, Republican; Secretary of the Board of Agriculture, Wilfrid Wheeler, Democrat; Commissioner of Insurance, Frank H. Hardison, Democrat; Commissioner of Education, David Snedden, Democrat.

JUDICIARY. Supreme Judicial Court for the Commonwealth: Chief Justice, Arthur Prentice Rugg; Justices, James M. Morton, John W. Hammond, Henry Newton Sheldon, William C. Loring, Henry K. Braley, and Charles Ambrose De Courcy; Clerk of the Court, C. H. Cooper— all Republicans.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. An institution for technical education, founded in Boston in 1861. The students enrolled in all departments in the autumn of 1914 numbered 1811. The faculty, including professors, associate professors, and assistant professors, numbered 123. During the year Robert H. Richards, professor emeritus of mining engineering and metallurgy, Henry K. Burrisson, assistant professor of mechanical drawing and descriptive geometry, and S. H. Woodbridge, associate professor of heating and ventilation, retired. John Knox Taylor, professor of architecture, Harold Pender, professor of electrical engineering, Lewis E. Moore, associate professor of structural engineering, and Charles A. Kraus, assistant professor of physico-chemical research, resigned. Charles L. Adams, professor of drawing and descriptive geometry, died. There were a number of important additions to the faculty during the year, including Ralph Adams Cram, professor of architecture. The institute received gifts amounting to \$852,000 during the year. Its funds amounted at the end of the year 1913-14 to \$2,963,809, and the income to \$153,455. The library contains 100,000 volumes. Construction of new buildings for the

institute at Cambridge progressed during the year. The president was Richard C. MacLaurin.

MATTEI, TITO. An Italian composer, educator, and pianist, died March 30, 1914. He was born at Campobasso, Italy, in 1841, and at the age of five years gave his first musical concert, touring Italy a little later, and at 11 years of age becoming a professor of the Santa Cecilia Academy in Rome, and a member of the Philharmonic Society and many other musical organizations. On his return from concert tours throughout France and England in 1853, he played before Pope Pius IX and received from him a gold medal. After many successful tours over the continent, he removed to London in 1863 and from that time until his death made his home in that city, where he organized and conducted a season of Italian opera at the Lyceum Theatre in 1870. He was best known in Italy as a writer of popular songs and his melodies were familiar to nearly every household in that country. He wrote several operas, many songs, and hundreds of pieces for the piano.

MAUCHERITE. See MINERALOGY.

MAURITANIA. A civil territory of the French West African government-general, governed from Saint-Louis (Senegal) by a commissioner. The chief towns are Port-Etienne, Boutilimit, Aleg, Altar, Moudjeria, etc. The Moors, who constitute a large proportion of the population, are all nomads, except for a few groups rendered semisedentary by the necessity for tending the plantations of palms from which they obtain a livelihood. They are all Mohammedans; but Islam has been strongly tintured among them with Sufism. They live in encampments, driving their flocks from pasture to pasture as the water supply fails. Manual labor is considered dishonorable among the Moors. The negroes cultivate millet, barley, etc., gather gums, for export, and catch and dry fish. Salt exists in great abundance. Travel is by caravan, and distances are calculated by nights of travel. The exports are chiefly gums, salt, dates, ostrich feathers, and live animals. No trade statistics are available; the primitive method of barter obtains in the oases where commercial transactions are carried on. Lieutenant-Colonel Moret, who was appointed commissioner March 11, 1912, was obliged to carry on an intermittent warfare during 1913 and 1914 against pillaging nomad tribes. See FRENCH WEST AFRICA.

MAURITIUS. A supposedly volcanic island (720 square miles) in the Indian Ocean; a British crown colony. Total civil population (1911 census), 368,510; population inclusive of military, 370,393 (222,361 Indo-Mauritians, 35,526 other Indians, 3662 Chinese, 108,844 persons of European, African, or mixed blood). The natives of European race are in large part French creoles. Port Louis, the capital, had (1911) with suburbs, 50,060 inhabitants; Curepipe, 17,173; Mahébourg, 4068. The cultivation of sugar cane is the staple industry. There are seven lines of railway, all owned and worked by the government, and totaling 119.65 miles of standard gauge and 10 of narrow gauge. Imports 1912, Rs. 32,266,707 (Rs. 37,805,993 in 1911); exports, Rs. 37,184,189 (Rs. 41,204,854); revenue 1911-12, Rs. 10,435,648 (Rs. 11,129,988 in 1910-11); expenditure, Rs. 9,843,980 (Rs. 9,578,243). Total tonnage entered and cleared 1911-12, 773,092, of which 592,193 tons British. The Governor in

1914 was Sir J. R. Chancellor, appointed Nov. 13, 1911.

MAYO, JOHN C. CALHOUN. An American capitalist and politician, died May 11, 1914. He was born in Kentucky, and through the self-sacrifice of his parents who were very poor, he received a fairly good education; he afterwards taught school, and while still a young man engaged in the lumbering business in which he amassed a great fortune. Although he never held office he was one of the most powerful politicians in Kentucky. He left an estimated fortune of \$12,000,000. He was for several years a member of the Democratic National Committee from Kentucky.

MAYOTTE AND THE COMORO ISLANDS. A group of islands belonging to France, administered under the government of Madagascar. Total area, 2168 square kilometers (837 square miles); population in 1911, 97,750. Total imports, 1911, 1,293,386 francs; exports, 4,842,359. The Administrator in 1915 was M. Carton.

MEAT INSPECTION. See STOCK RAISING.

MEAT PRODUCTION. See STOCK RAISING.

MEDICAL PROGRESS in 1914. New and important discoveries were made in the domain of preventive medicine, and in the control of epidemic diseases during 1914. (See DIPHTHERIA, HOOKWORM DISEASE, OCCUPATIONAL DISEASES, PELLAGRA, POLIOMYELITIS [Infantile Spinal Paralysis], PUBLIC HEALTH SERVICE, RABIES, TYPHOID FEVER, SMALL-POX AND VACCINATION). Diseases peculiar to hot climates furnish an inexhaustible field for investigation, and many new facts were brought out and valuable data collected (see BERIBERI, INSECTS AND THE PROPAGATION OF DISEASE, LEPROSY, MALARIA, PLAGUE, SLEEPING-SICKNESS, TROPICAL DISEASES). The cause and cure of cancer still engaged the attention of scientists (see CANCER, RADIOTHERAPY), and tuberculosis occupied no less important a place (see TUBERCULOSIS, TUBERCULIN). Several new drugs were brought forward, among which may be mentioned AMPHOTROPIN, CEBOLIN, CYMABIN, and ELARSON. Some new departures in the administration of anesthesia were made (see ANESTHESIA, TWILIGHT SLEEP). Other medical items and statistics will be found under their respective captions.

MEDICAL SCHOOLS. See UNIVERSITIES AND COLLEGES

MEEK, SETH EUGENE. An American zoölogist, died July 7, 1914. He was born in Hicksville, Ohio, in 1859, and graduated from Indiana University in 1884, afterwards taking post-graduate studies at that university and at Cornell. In 1886-87 he was professor of natural science at Eureka College, and from 1887 to 1892 held the same position at Coe College. In the latter year he was appointed assistant professor of zoölogy and biology in the University of Arkansas which position he held until 1896, when he became assistant to the United States Fish Commission. From 1897 until the time of his death he was assistant curator of zoölogy in the Field Museum of Natural History in Chicago. He lectured on scientific subjects; explored streams of the Central and Western United States, Mexico, Guatemala, Nicaragua, Costa Rica, and Panama; and was a member of the Washington Academy of Sciences and other scientific societies. He was the author of *Fishes*

of Mexico North of the Isthmus of Tehuantepec (1904), and many papers on fishes and reptiles in the publications of scientific bodies.

MERCURY. See CHEMISTRY, INDUSTRIAL; QUICKSILVER.

MERCURY BOILER. A novel process to utilize energy available in thermal ranges above those which can be conveniently utilized with steam, namely, making use of the thermal properties of mercury, was presented at a meeting of the Schenectady section of the American Institute of Electrical Engineers, Dec. 16, 1913, and during 1914 was widely discussed on account of its novelty. It involved the use of mercury in a temperature cycle above that used with steam for the production of commercial power, and consisted of a method whereby mercury is vaporized in a boiler by a furnace of ordinary type. From this boiler mercury vapor passes at a pressure near that of the atmosphere, to the nozzles of a turbine, which drives a generator or other utilizer, where it condenses on the dry surface of tubes containing water, and this water in turn vaporizes by the heat delivered, and the steam thus produced is used to drive other turbines, or as desired. As the mercury vapor is much hotter than steam, the gases normally leave the mercury boiler at a higher temperature than they would have in a steam boiler, and this excess heat is utilized by conveying, first, through a heater, which raises the returning liquid almost to the boiling point, and secondly, through a superheater which superheats the steam delivered through the condensing boiler, and third, through an economizer which heats the feed water for the condensing boiler, and so reduces the gases to the lowest practicable flue temperature. While mercury possesses many advantages as a thermodynamic fluid for this purpose, yet it has disadvantages, chief of which are its cost and the fact that it is poisonous, and there also are difficulties in confining both the vapor and the liquid. An experimental installation of this method was made, as well as a plan of commercial application, whereby in a single unit occupying the same floor space as a 500-horsepower steam boiler, the steam output alone of the condensing boiler would equal that obtained from the 500-horsepower boiler. It was claimed that with efficient oil firing of boilers, a fuel economy very near to that obtainable by the Diesel engine would be obtained, and the machine itself would be more simple, and free from the probability of detonations characteristic of the Diesel engine. So novel was the proposition, that it was extensively discussed, and while no installation on a commercial scale had been admitted, yet it was deemed worthy of further consideration. The proposed method was suggested by Charles Bradley, and was studied by W. L. R. Emmet in an elaborate investigation, which may be found described in vol. xxxii of the *Transactions of the American Institute of Electrical Engineers*.

MERIT SYSTEM. See CIVIL SERVICE.

MERRIAM, GEORGE SPRING. An American author and editor, died Jan. 22, 1914. He was born in Springfield, Mass., in 1843, and graduated from Yale College in 1864; from 1866 to 1868 he was tutor at Yale, at the same time studying theology; from 1870 to 1875 he was office editor of the *Christian Union*, and the remainder of his life was devoted chiefly to study and writing. He was the author of: *A Living Faith* (1876); *The Way of Life* (1881); *Life*

and *Times of Samuel Bowles* (1885); *Noah Porter, a Memorial by Friends* (1893); *The Chief End of Man* (1897); *The Negro and the Nation* (1906); *The Man of To-day* (1911).

MERRITT, EDWIN A., JR. An American public official, died Dec. 4, 1914. He was born in Pierrepont, N. Y., in 1860, and graduated from Yale in 1884. He studied law, was admitted to the bar and at once engaged in active practice, but was also interested in manufacturing. His interest in politics began early in life, and in 1885 he was appointed deputy consul general at London. In 1902 he was elected to the New York State Assembly and served in that body continuously for eleven years. In 1908 he became the Republican leader of the assembly and served as such until 1912, when he was elected speaker of the assembly, which position he held up to the time of his election to Congress in 1912. He was afterwards reelected to the Sixty-third Congress. During his service in the New York Legislature Mr. Merritt served on important committees, including the commission to inquire into the operations of the gas companies in New York City; he drafted the public service laws of New York State, and was identified with much legislation relating to railways.

MESOPOTAMIA, ARCHAEOLOGY OF. See ARCHAEOLOGY.

MESOTHORIUM. See RADIOTHERAPY.

METALLURGY. Metallurgical progress in 1914 did not involve any striking discoveries or innovations in practice. With mining and the metal markets in either a quiescent or a chaotic state as the result of financial depression or war conditions, there was little incentive to indulge in extensive exploitation of new processes, although naturally the larger companies endeavored to secure greater economy and improvement of plants. The following paragraphs, indicating some of the more important features of the metallurgical work of the year, are based in large part on authoritative reviews of progress published in the annual statistical progress numbers of the *Engineering and Mining Journal* (New York) and the *Iron Age* (New York).

GOLD AND SILVER. In stamp milling no new developments of special interest were recorded during the year. Improvements in machinery were noted whereby heavy stamps run by electric motors, or otherwise, were installed, and a mill in North Carolina was built without stamps, the ore being first crushed and then rolled, the product being classified and then reground in a tube mill. The material was slimed, and the slimes cyanided, it being found that with the ore in use it was cheaper to install and operate rolls than to use stamps as preliminary crushing machines. Likewise, in Alaska a 6000-ton plant was about completed, but the preliminary working of the ore was done by jaw and gyratory crushers, the material then handled by rolls, and after being classified, sent to tube mills. This ore was to be concentrated, and probably the material would be sent to smelters. Certain improvements during the year were to be noted in cyanide practice. At Cobalt, Ontario, the Nipissing Mining Company was employing a new process for desulphurizing the rebellious silver minerals, which were treated in the low grade mill. Thus the high grade rebellious silver minerals were being treated directly by cyanide without concentration, amalgamation, roasting,

or any other process, and this seemed to indicate that the cyanide process was capable of further extension. In the Porcupine District a separate treatment process was introduced at the Dome Mill, where instead of making a total slime product and treating it by agitation, the new work involved treating the sands and slime each in a separate installation, the former being leached, while the natural slimes are separately treated. A process known as counter-current decantation was tried successfully in a number of mills in place of the filter, and the principle was being considered in connection with hydrometallurgy of copper slimes. The flotation process was also being operated during the year, though on the part of many companies the work was but experimental. It was estimated that nearly one million tons of ore were treated in North America in 1914 by the flotation process, and upwards of 150,000 tons of concentrates were produced, an amount, however, far below that of Australia, where considerable tonnage of floated blend concentrate was produced.

LEAD. The practice of lead and of silver lead smelting and refining was discussed by the August meeting of the American Society of Mining Engineers, held at Salt Lake City, Utah, and a number of valuable papers were presented, showing innovations in all branches of lead metallurgy. It was found that the blast roasting of lead-bearing mixtures had increased so that the older modes of oxidation had been rendered almost obsolete, and there were two leading methods, the Huntington-Heberlein Pot, and the Dwight-Lloyd Straight Line Machine and Sintering Machine.

COPPER. During the year a comprehensive work on modern copper metallurgy by Professor H. O. Hofman was published, which discussed modern methods in a field where constant developments have been in practice. The general tendency in the metallurgy of copper was a competition between flotation and leaching for the handling of concentration tailings. Leaching was having a thorough trial at a large number of mines. In the electrolytic treatment of copper, anodes of lead, carbon, and magnetite, with and without depolarizers, were being employed, and the difficulties encountered in soluble anodes were thought overcome. Concrete hearths were being used in the roasting furnaces of the Macdougall type, as they reduce the masonry repairs and permit easy removal of incrustations. This type of multi-deck furnace was found particularly favorable for the production of sulphur-dioxide gas from pyrites, and special blends of calcines from sulphur ores at smelting plants, and it was thought that it would be equally available for producing soluble oxides and sulphates, in leaching work, the muffle furnace, on account of the high fuel consumption, having not found as much favor as was at first anticipated. Various new types of furnaces of one kind or another were employed, and the rotary kiln at Chrome, N. J., was operating with considerable fuel economy. Fuel economy is an important consideration in many plants, and the Braden Copper Company was starting three kilns in Chile for work of this class. Coal dust firing was to replace the fuel oil firing in certain plants of reverberatory smelters, and this was an item to be considered in discussing the relative economy of blast and reverberatory furnaces. An interesting feature of the blast furnace operation of the year was

some experiments at the Copper Queen Plant of Douglas, Ariz., on the possibility of generating low pressure steam in a McKee boiler from the waste heat of blast furnace slag. Somewhat similar work had been tried on iron slag in England. The usual amount of work was being done to abate the smelter fume nuisance, and new flue installations were being equipped with suspended wires to collect the bulk of the solid material. Electrostatic precipitation was followed in this work, and the baghouse method was used to collect the whole of the remaining solid, but the high cost of installation was an objection. Improvements were also recorded during the year in refining furnace design, and changes in the shape and construction of furnaces for melting cathodes were attempted. Waste heat boiler installations were used in connection with the refining of copper, which aided in producing plant economy.

ZINC. Improvements in minor details were the rule in zinc smelting rather than radical innovations in practice. One important tendency of the year on the part of American smelters was to make retorts of greater tensile strength and durability, so that the previous distillation at very high temperatures could be carried on as was done in Germany and Belgium. The artificial treatment of American clays had made possible progress in this direction, and retorts made by one large smelter showed much longer life. Also considerable attention was being paid to the analysis of the reducing fuel, with the object of securing a better blending of ore reduction material, while the use of crude petroleum and coal dust in both roasting and distillation furnaces was undertaken experimentally, but further work, both experimental and practical, was considered necessary. Another important detail was the treating of residuum, and while in many cases the amount gained was not large, yet it was hoped that it could be increased. Charging machines were being extensively used in place of hand charging, but difficulties in machine charging were being experienced with the excessively fine flotation concentrates that were being handled by some zinc smelters. A retort discharging machine for mechanically discharging retort residues was developed during the year, and received an experimental trial. One of the new roasting furnaces made in Europe, and introduced into the United States in 1914, was the Spirlet multi-hearth turret furnace, in which the hearths themselves are revolved so that the projecting teeth from the bottom of one hearth rabbles the ore of the next hearth below. This furnace could be quickly dismantled for repairs, and was said to desulphurize the blend with the very low consumption of 10 per cent or less. Experiments with the hydrometallurgical process of zinc extraction were in progress at Bully Hill, California, Trail, B. C., Kellogg, Idaho, and elsewhere, several processes being tried on a considerable scale and experimental work being done. In Europe, electric smelting was reported as commercially successful in the Pyrenees, where zinc residues from the indigo dyeing industry were being treated, while experimental work was also being undertaken in Savoy and Belgium. The electric zinc smelting furnaces at Nelson, B. C., were discontinued during the year as the plant was of such small size, namely one ton daily capacity, that its operation was found to be a commercial impos-

sibility. The interesting work of Johnson, at Hartford, was continued during the year, and a company was organized to construct a commercial plant at Keokuk, Iowa, to include a furnace larger than had yet been built and operated.

IRON AND STEEL. During the year, steel metallurgists were interested in comparing the merits of the duplex process for making steel, with the open-hearth process in the United States, and also with the comparison of the duplex and the open-hearth, with the Talbot process in Germany. The reason that the Talbot process had never been developed in the United States, was doubtless due to the desire to secure a greater output by sacrificing silicon and carbon in the Bessemer process, instead of using them as a fuel for the reduction of iron ore in the Talbot or open-hearth process, and furthermore, the fact that the ores from the northern districts had a lower average of phosphorus than prevails in Europe was probably influential in deciding this matter. During the year was tried the Goldmerstein process for the removal of phosphorus and sulphur by the use of sesquifluoride of iron or manganese. This substance breaks up at a high temperature, and releases the fluorine, which attracts the sulphur and phosphorus, forming volatile fluorides, which pass off as a gas, and cannot be reintroduced by the reducing action of the furnace, as they can be from slag.

The various railway and inspection officials, as well as the metallurgists interested in the improvement of steel rails, were endeavoring during the year to secure a better product. The Lackawanna Steel Company developed a process for milling off the top and bottom surfaces of the rail bloom at a point between the running and finishing mills, the rail being passed by feed rollers between two milling cutters of high speed—steel, some 4 or 5 feet in diameter, running at a speed in excess of a mile a minute. The top and bottom surfaces of the rail bloom were cut off and seams, cracks, and roughnesses, which had been developed in the earlier process of rolling, as well as a large portion of the metal which had been decarbonized in the heat of the furnace was removed, so that metal of normal capacity and better capable of resisting wear than the decarbonized metal removed, is brought to the surface. The finished product thus obtained was considered superior to that manufactured by the ordinary process, and the number of seconds was reduced, so that this company was able to market improved rails at no advance in price over those not treated. The study of fissures in rails was also pursued during the year, and it was a question whether the various defects were due to bad mill practice, or to the severity of stress received in service.

Much work during the year was done on the quality and nature of steel; the micro-constituents and physical and magnetic properties were studied with greater interest than ever before, with the result that accurate investigations were in progress which seemed to promise considerable improvement in steel work.

An interesting apparatus was designed in England for generating steam for use in low pressure turbines. The slag, entering a closed vessel through a seal, was granulated and taken out by a bucket elevator, which discharged it into another elevator working outside the seal, by which the slag was delivered to cars for final disposal.

Inasmuch as corrosive gases, particularly hydrogen sulphide and sulphur dioxide, are produced from the sulphur in the slag, the steam generated in the sealed chamber cannot be used directly in the turbine, but passes into an evaporator, where it is condensed and an equal weight of steam produced from pure water. As the slag contains only about $\frac{1}{50}$ of the heat obtainable from the combustion of an equal weight of coal, and probably not over $\frac{2}{3}$ of this could be released, it was not believed that the power recovered would pay for the installation involved to carry on the operation.

ELECTRO-METALLURGY OF IRON AND STEEL. The electric steel industry in the five years since 1910, when 114 electric furnaces producing steel were in existence, had made wonderful progress, so that, on Dec. 31, 1914, there were some 213 furnaces distributed among the leading steel producing nations of the world. The Heroult Furnace found the widest application, and there were 56 such furnaces operating in the world, while 19 were building with a yearly capacity of 1,015,450 tons. In the United States alone 15 of such furnaces were in operation with a yearly capacity of 141,200,000 tons, while 3 were building. After the Heroult furnace came the Girod, of which 20 were operating throughout the world, with a capacity of 156,800 tons, while 8 were building. Of these the United States had 3 in operation, with a yearly capacity of 26,775 tons, while 3 were building. Various other furnaces were in use, all of which were, however, in Europe, and of the 213 referred to, 174 were of the arc type, 37 induction, and 2 combined arc and induction. Germany headed the list of electric furnaces, there having been 46 of six different types in use on Dec. 31, 1914. Germany was followed by the United States, with 41 furnaces, and this country in turn by Italy, where there were 22, then came Sweden, and Austria-Hungary with 18 each, France with 17, and Belgium with 16.

In the United States and Canada during 1913 and 1914 three types of furnaces had come into use, which were not operating in Europe. These were the Schneider, Hering, and the special furnace of the Moffett-Irving Steel Works, Limited, of Toronto, Ontario, where steel casts were made direct from the ore. The largest electric furnace plant in the United States to make steel in 1914, was one nearing completion at the plant of the American Iron and Steel Manufacturing Company, at Lebanon, Pa. This installation consisted of 2 20-ton induction furnaces for refining steel, from the new open-hearth department of this company. The electric furnace was useful not only for making steel, but for making pig iron direct from iron ore as at Heroult, Cal., and in Sweden, while the Heroult and other types of electric furnace have been found especially desirable for use in making special alloys and steels.

In France, the commercial production of electrolytic iron was being undertaken at Grenoble by the Compagnie le Fer, and the Cowper-Coles patents for producing sheets and tubes were put to work in England. This process involved using a revolving mandrel, and a neutral solution of iron salts made up from pig iron. This electrolytic iron was able to compete with the best Swedish iron in making special steels. In the United States there were being installed during the year, two large furnaces of the Frick type,

with a capacity of 20 tons each for refining steel. They were to operate at 5000 volts, 5 cycles single phase, consuming 1800 kilowatts each. One of the goals aimed at by electro-metallurgists has been to produce steel directly from iron ore in the electric furnace, and that this was possible was once more demonstrated by the tests reported to the Iron and Steel Institute, by Humbert Hethev. See **CHEMISTRY, INDUSTRIAL.**

METAPHYSICS. See **PHILOSOPHY.**

METEOROLOGY. At the beginning of the year the Blue Hill Meteorological Observatory adopted the use of dynamic units of pressure and absolute Centigrade degrees of temperature in its reports. Instead of being expressed in millimeters or inches of mercury, pressures were given in millibars (1000 millibars = 750.02 millimeters = 29.53 inches), although until Jan. 1, 1915, it was decided to retain both systems for purposes of comparison. The same units have been in use in the reports of the Meteorological Committee of England since March, 1913, and were also employed by the United States Weather Bureau in the weather maps of the Northern Hemisphere, which, beginning January 1, were published on the reverse side of the regular daily weather chart. This valuable series of maps was discontinued on August 6 on account of the lack of European weather reports due to the outbreak of war. Owing to the confusion arising from the employment of two units termed the "bar," the meteorological defined as above, and the chemical and physical "bar" which is only one millionth of the former, Professor McAdie proposed that the meteorologists should adopt the more rational and longer used unit of the chemists and physicists.

SMOKE IN CITIES. In an article on "The Meteorological Aspect of the Smoke Problem," which appeared in the *Monthly Weather Review* for January, Professor H. H. Kimball discussed the influence of smoke upon the weather of cities. His main conclusion is that the range of maximum and minimum temperatures is lessened, the maximum being lower and the minimum higher than in the surrounding country. He also found that fogs are of longer duration owing to the action of smoke pall in preventing the access of sunlight, and to the retardation of evaporation of the fog particles, due to their being coated with oil.

CLIMATE AND HUMAN EFFICIENCY. From an investigation of the wages of a number of workers on piece-work in Connecticut factories, Professor Ellsworth Huntington found that two periods of maximum efficiency, in December and May, were indicated, with minima in January and August. He concluded that maximum efficiency was associated with outdoor temperatures of about 58° Fahrenheit, and with wide variations of temperature on successive days.

DESICCATION OF THE EARTH. It has long been recognized that, in spite of the irregular and apparently capricious variations to which the weather is subject, there is a regular cycle of changes involving the climate of the whole globe. Just as in that far-off period of the past, known as the Glacial Period, the polar ice slowly but inexorably covered a great part of the Northern Hemisphere, and drove before it plants and animals, some of which have vanished altogether, so we are now in a period when the earth appears to be growing steadily drier. Between the Glacial Period and the present era of world-wide

desiccation, there intervened a period in which the melting of the glacial ice gave rise to huge lakes, and the climate was much moister than it is at the present time. These lakes have steadily decreased in size, and formerly swampy regions have become or are becoming arid deserts. Prince Kropotkin holds that these changes occasioned the great historic migrations of population, attributing the fall of the Roman Empire to the dwindling rainfall of central Asia, which drove the inhabitants to a nomadic life, and impelled them to seek the more fertile lands of Europe on account of the repeated failure of their crops. Others again have maintained that the repeated incursions into Egypt in ancient times were due to long-continued droughts in the surrounding countries. The three principal views of the situation are those held by Prince Kropotkin, Huntington, and Thirlmere. Prince Kropotkin believes that, on the whole, the climate of the globe is advancing slowly toward universal drought. On the other hand, Professor Huntington's researches in central Asia led him to modify this theory. While granting that the resultant tendency is toward greater aridity, he considers that the change is pulsatory, giving rise to an alternation of wet and dry periods, the differences between them being sufficient to have had political and economic results of far-reaching importance. Thirlmere holds the view that the climate varies in great cycles lasting several thousand years, and that our springs and summers are growing yearly shorter and colder.

In *The Climatic Factor*, issued by the Carnegie Institution of Washington, Professor Huntington discusses the evidence derived from a study of the physiography of Arizona, New Mexico, and southwestern North America, and the traces of ancient human occupation still to be found in that region, and concludes that the general climatic history of America shows pulsations of character similar to those in Asia, and having a periodicity of hundreds of years. He suggests that they may perhaps furnish a key to the pre-Columbian chronology of America, which, in the absence of written documents, is involved in uncertainty, and adduces evidence to show that the periods during which the southwest has been first relatively habitable and then relatively uninhabitable may be determined from the curves of growth of ancient trees.

The question of the desiccation of the earth was also examined by Professor Gregory in a paper entitled, "Is the Earth Drying Up?," which was published in the *Geographical Journal* for February and March. He concluded that, while there have been many widespread climatic changes in late geologic times, there has been none in historic times. There has been increased aridity in the regions studied by Huntington, but this is compensated by increased humidity in other regions of the globe, such as northwestern Europe, eastern North America, and parts of central and south Africa.

UPPER AIR RESEARCH. According to Van Bemmelen, the lowest air temperature ever recorded is -91.9°C . (-133.4°F .), which he obtained at a height of about 17 kilometers (10.6 miles) by a *ballon sonde* liberated at Batavia on Nov. 5, 1913. From this point upward an increase to -57.1°C . was recorded, being reached at a height of about 26 kilometers.

METHANOMETER. See CHEMISTRY, INDUSTRIAL.

METHODIST BROTHERHOOD. An organization of the Methodist Episcopal Church, formed in 1908 by the affiliation of two general brotherhoods, the Brotherhood of St. Paul and the Wesley Brotherhood. The aim of the brotherhood is to utilize and develop the features of the church relating to men, and to reach unchurched men and boys, and to provide them with a task commensurate with their powers and with the importance of the gospel ideal. Considerable literature has been created, consisting largely of four, six, and eight-page folders, each dealing with some aspect of men's work, and written for the express purpose of inciting other men elsewhere to similar efforts. In November, 1914, a coalition was formed between the Methodist Brotherhood and the Adult Bible Class movement.

The officers of the Brotherhood in 1914 were: president, Wilford M. Wilson; vice presidents, Christian F. Reisner, Frank Mason North, William Arnold Shanklin, Alfred E. Craig, and Ernest Gideon Bek; recording secretary, James R. Joy; and treasurer, Samuel McRoberts.

METHODIST EPISCOPAL CHURCH. The total church membership of this denomination in the United States in 1914 was 2,199,513. There were enrolled during the year, 177,760 members. There were 12,164 members of the ministry, and 6792 local preachers. The Sunday schools numbered 18,858, with 237,679 officers and teachers, and an enrollment of 2,432,098. There were 18,339 churches, with an estimated value of \$111,866,502. Throughout the world the total membership in 1914 was 2,246,899. There were in the United States and territories, 105 annual conferences, and in foreign countries, 24. In addition, there were 16 missions and mission conferences in the United States and Territories, and 12 in foreign countries. In the United States there are 17 Episcopal areas, each presided over by a bishop, and in foreign countries there are 5 special areas. During the year three bishops died. These were Bishop John Morgan Walden, Bishop Robert McIntyre, and Bishop Charles William Smith. Thomas Bowman, former bishop, also died during the year.

The total receipts from November, 1913, to October, 1914, amounted to \$1,170,258. The disbursements for all purposes amounted to \$1,170,098. The missions of the denomination are carried on throughout the world. There were in 1914, 187,144 members of the denomination in foreign countries. The baptisms made during the year numbered 41,186.

The work in Europe was seriously hampered by the war. The domestic missions are in the hands of the Board of Home Missions and Church Extension. The general education work of the denomination is in the hands of the Board of Education. There are 43 colleges and universities under its auspices, and in addition, a number of professional and theological schools. The social work of the denomination is carried on largely by the Methodist Federation for Social Service, organized in 1907. Social associations have been organized in various annual conferences. At the end of the year there were about 50 of these.

METHODIST EPISCOPAL CHURCH, SOUTH. There were in this denomination at the beginning of 1914, 1,196,877 communicants, 7203 traveling preachers, and 17,006 houses of worship, valued at \$53,683,291. In the Sunday

schools were 1,479,977 scholars, with 134,930 officers and teachers. In the Epworth League were 133,380 members. There were twelve active and two superannuate bishops in 1914. The official headquarters of the denomination are in Nashville, Tenn., where its publishing enterprises are carried on. Although the denomination has no social service organization, good work is being accomplished through a committee of the Woman's Missionary Council. This maintained 20 "Wesley houses," which are social settlements for the whites, and 3 "Bethlehem houses" for the negroes. About 50 deaconesses give their entire time to social service. Attention is being given to the needs of the negro, especially to home environment, his education, his treatment in the hands of the law, and to the fostering of mutual race respect.

METHODISTS, COLORED. The most important bodies of Colored Methodists are the African Methodist Episcopal Church and the African Methodist Episcopal Zion Church. There are also the Colored Methodist Episcopal Church, the Zion Union Apostolic Church, the Union American Methodist Episcopal Church, and the Reformed Methodist Union Episcopal Church. The African Methodist Episcopal Church has about 620,000 communicants, 6000 churches, and 5000 preachers; the African Methodist Episcopal Zion Church, about 570,000 communicants, 3200 churches, and 3600 preachers; and the Colored Methodist Episcopal Church, about 275,000 communicants, 3000 churches, and 3000 preachers. The larger denominations have their chief strength in the Southern States.

METROPOLITAN OPERA COMPANY, NEW YORK. See MUSIC.

MEXICO. A Federal republic lying between the United States and Central America; called in its official publications *Estados Unidos Mexicanos* and *República Mexicana*. The capital city is Mexico, in the Federal District (Distrito Federal). The statistical publications of the Mexican government are belated, presumably as a result of the continued civil war, so that in many cases statistics published in the last YEAR BOOK are still the latest available.

AREA AND POPULATION. The area of Mexico is officially stated at 1,987,201 square kilometers (767,258 square miles). The population increased from 12,632,427 in 1895 to 13,607,259 in 1900, and 15,160,369 in 1910 (census of October 27). The population, according to estimate, had increased to 15,501,684 in 1912. Of the total in 1910, males numbered 7,504,471, and females 7,655,898.

Only a small proportion of the population is of pure white race. In 1900, pure whites, and nearly pure, constituted about 19 per cent of the total; persons of mixed Indian and white blood, about 43 per cent; Indians, about 38 per cent. In respect of civil estate, the 1910 census returned 5,424,447 minors; the civil estate of 34,905 persons was not reported; of the remaining inhabitants—9,701,017—the unmarried numbered 4,682,490 (2,306,215 males, 2,376,275 females); married, 4,110,761 (2,056,806 males, 2,053,955 females); widowed (including divorced), 907,766 (248,129 males, 659,637 fe-

males). Persons of Mexican birth numbered in 1910, 15,043,842 (7,422,565 males, 7,621,267 females); persons of foreign birth, 116,527 (81,896 males, 34,631 females). Persons of Spanish birth in 1910 numbered 29,541 (22,899 males, 6642 females); Guatemalan, 21,434 (11,098 and 10,236); American, 20,639 (12,983 and 7656); Chinese, 13,203 (13,118 and 85); British, 5264 (3416 and 1848); French, 4604 (3232 and 1372); German, 3827 (2806 and 1021); Cuban, 3418 (1923 and 1495); Turkish, 2907 (1942 and 965); Italian, 2595 (1822 and 773); Japanese, 2216 (2037 and 179); Arabian, 1546 (1116 and 430); Danish, 613 (473 and 140).

The 1910 census returned Roman Catholics to the number of 15,033,176 (7,425,722 males, 7,607,454 females); Protestants, 68,839 (39,480 and 29,359); Greek Orthodox, 630 (370 and 260); Mohammedans, 602 (546 and 56); Buddhists, 6237 (6038 and 199); Jews, 254 (183 and 71); other religious adherents, 5605 (5121 and 484); without religion, 25,011 (16,169 and 8842); unknown, 20,015 (10,842 and 9173).

Spanish-speaking persons in 1910 were returned as numbering 13,143,372. Some of the other vernaculars were represented as follows: Amuzgo, 9224; Chinanteco, 21,745; Chol, 12,337; Chontal, 25,443; Chatino, 11,681; Huasteco, 52,063; Maya, 227,883; Mayo, 16,765; Mazahua, 65,928; Mazateco, 36,176; Nahuatl (Mexicano), 516,410; Mixe, 166,157; Otomi, 209,640; Popoloco or Chocho, 11,965; Tarahumar, 21,538; Tarasco, 37,173; Tepehua, 8441; Tejolabal or Chafñabal, 5521; Totonaco, 67,740; Tzendal, 46,960; Zapotec, 224,863; Zoque, 8470.

Mexico, the capital city, had 471,066 inhabitants in 1910, the increase over 1900 being 36.65 per cent.

Marriages reported in 1909 and 1910 respectively, 55,440 and 54,339; births, 509,666 and 484,744; deaths, 482,817 and 504,022. In 1909, the reported immigration was 80,748 and emigration 81,251; immigration in 1910, 86,909. The reported number of arrivals in the year 1911-12 was 97,576.

PRODUCTION. In proportion to the natural capabilities of the country, agricultural production is small. Farming methods are primitive. The important crops include corn, cotton, henequen, wheat, sugar cane, beans, coffee, and tobacco. Grazing is a profitable industry. Mexico is exceptionally rich in minerals, especially silver and gold; and petroleum, copper, lead, antimony, zinc, and other minerals are exploited. In the 35 years from 1877-78 to 1911-12, the gold output amounted to 395,904.7 kilogrammes, valued at 527,871,760 pesos; silver, 49,600,726.5 kilogrammes, valued at 1,973,394,124 pesos; total value of gold and silver, 2,501,265,884 pesos.

The approximate petroleum output in 1908 was 3,481,000 barrels; in 1909, 2,489,000 barrels; in 1910, 4,532,000 barrels; in 1911, 12,629,000 barrels; in 1912, 15,689,000 barrels. It is estimated that in 1913 petroleum production reached 26,000,000 barrels. The total value of Mexico's mineral output in the year 1911-12 was over 209,700,000 pesos.

The principal manufactures are cotton and other textile goods, tobacco (including cigars and cigarettes), sugar, and spirits. The mill consumption of raw cotton in the year 1910-11 was 34,568,212 kilogrammes, and the output of

1701

cotton goods and prints was 15,090,669 bolts and 2,766,973 kilogrammes of yarn; in 1911-12, the mill consumption was 33,153,636 kilogrammes, and the output 14,128,366 bolts and 3,020,569 kilogrammes of yarn. In 1910-11 tobacco manufacturing consumed 8,874,118 kilogrammes, and in 1911-12, 10,137,790 kilogrammes. In the former year, there were produced by 1543 distilleries 37,127,173 litres of spirits.

COMMERCE. Statistics of the Mexican foreign trade are not available for the fiscal year 1914. But while in the fiscal year 1913 there was an increase in both imports and exports, it is clear that in 1914 there was serious commercial depression, one of the results of the continued revolutionary movements in the republic. For the first nine months (ending March 31) of the fiscal year 1914, the imports were valued at 121,462,149 pesos, as compared with 148,370,758 pesos in the first nine months of the fiscal year 1913, the decline being 18.14 per cent. The exports in the same period of the fiscal year 1914 were valued at 185,666,115 pesos, as compared with 230,736,754 pesos in the corresponding period of 1913, the decline being 19.53 per cent. Classified imports for the first nine months of the fiscal years 1913 and 1914 respectively were as follows, in thousands of pesos: animal substances, 14,567 and 8001; vegetable substances, 24,860 and 19,758; mineral substances, 36,931 and 34,157; textiles and their manufactures, 19,486 and 14,508; chemicals and drugs, 9524 and 6825; beverages, 5129 and 3540; paper and its manufactures, 4115 and 3781; machinery and apparatus, 18,221 and 17,273; vehicles, 4313 and 3103; arms and explosives, 3101 and 4636; miscellaneous, 8123 and 5880; total, 148,371 and 121,462. Classified exports for the nine months ended March 31, 1913, and 1914, respectively, in thousands of pesos: mineral products, 146,625 and 89,279; vegetable products, 64,013 and 79,156; animal products, 15,092 and 13,621; manufactures, 2852 and 2484; miscellaneous, 1154 and 1126; total, 230,737 and 185,666. For the 1913 and 1914 periods respectively, the gold export amounted to 104,560 thousand and 61,233 thousand pesos; silver, 104,560 and 61,233; copper, 28,427 and 9437; petroleum, 8022 and 14,693; coffee, 6526 and 18,908; guayule, 5803 and 710; raw henequen, 23,301 and 33,113; cattle, 5598 and 3405; untanned hides, 8669 and 9228.

In fiscal years prior to 1914, imports, exports of merchandise, exports of silver and gold and their ores, and total exports have been valued as follows, in pesos:

	Total Imports	Exports		Total Exports
		Sil. & gold	Other	
1900	128,796,606	79,216,597	79,031,886	158,247,938
1905	178,204,968	98,885,527	114,684,924	208,520,451
1910	194,865,731	118,985,524	141,060,746	260,046,270
1911	205,874,273	142,958,367	150,795,273	293,753,640
1912	182,662,811	139,473,469	158,515,680	297,989,129
1913	195,772,339	130,885,000	169,521,000	300,405,617

In the year ending June 30, 1913, the leading exports were valued as follows, in thousands of pesos: silver, 91,297; gold, 39,591; copper, 36,522; raw henequen, 30,150; coffee, 11,264; hides, 11,172; rubber, 8376; live animals, 7552; guayule, 7235; chicle, 4930; lead, 4907; chick-peas, 4342; ixtle, 3646; woods, 3365; zacatón root, 1960; antimony, 1575.

Trade by countries in years ended June 30, in thousands of pesos:

	Imports		Exports	
	1911-12	1912-13	1911-12	1912-13
United States...	98,426	97,283	224,103	282,086
United Kingdom...	21,501	25,900	40,199	81,147
Germany	23,845	25,221	10,817	16,438
France	15,618	18,338	8,330	7,151
Spain	5,900	10,531	2,361	2,188
Belgium	3,279	2,803	6,355	5,121
Italy	1,949	1,884	157	94
Austria-Hungary...	2,091	1,901	208	7
Total, including other	182,662	195,772	297,989	300,406

In 1910-11, there were entered at the ports, in the foreign trade, 1998 vessels, of 3,727,519 tons, and cleared 1964 vessels, of 3,852,234 tons; in 1911-12, entered 2090 vessels, of 3,604,527 tons, and cleared 2059 vessels, of 3,714,742 tons. In 1911, the merchant marine included 32 steamers, of 16,648 tons net, and 50 sail, of 8712 tons net.

COMMUNICATIONS. The length of railway in operation increased from 24,717 kilometers (15,358 miles) in September, 1911, to 25,287 kilometers (15,713 miles) in 1912 and 25,398 kilometers (15,782 miles) in 1913. Of the length in 1913, 19,877 kilometers were controlled by Federal or State government. In 1913 there were 516 Federal telegraph offices, with 85,047 kilometers of line; other telegraph lines, 8337 kilometers; radiotelegraph stations, 24. Post offices (1913), 2911.

The political situation in Mexico naturally had its effect on the operation of the railways, and the different lines that comprise the national railways of Mexico at the end of the year were divided again into several sections, each of which was under the control of opposing political factions. The Cuernavaca division, extending from Mexico City to the Balsas River, was to be opened for through traffic for the first time in more than three years, as the territory occupied by General Zapata and his forces was merged with that under the control of General Villa. In the State of Morelos, in the month of December, the branch lines of the Interoceanic were opened to traffic after a long suspension, while on the other hand, General Carranza's forces were in control of some of the northern divisions running out of Monterey, Tampico, Laredo, Eagle Pass, and Saltillo, and a part of the Interoceanic running from Vera Cruz. The Carranzistas were also in charge of the National Tehuantepec line, and all of the Vera Cruz and Pacific, the latter being a part of the National Railways of Mexico. At the end of the year the chaotic condition was about as marked as at any

time since the revolutionary troubles started about 1910. In fact, an entire cessation of railway construction in Mexico was to be noted during 1914, and considerable destruction of track and interruption of operation, due to disturbed internal conditions, was the order.

FINANCE. The monetary unit is the peso, par value 49.846 cents. The unsettled political conditions have caused a great decline in the actual present value of the monetary unit. In March,

1913, the peso was worth 48.4 cents; in March, 1914, 31.03; toward the end of 1914, about 25. In the fiscal year 1910-11 revenue amounted to 111,142,482 pesos, and ordinary expenditures to 100,913,924 pesos; in 1911-12, revenue, 105,203,087 pesos, and ordinary expenditure, 96,985,953. The budget for 1913-14 showed estimated revenue of 122,000,000 pesos and estimated expenditure of 141,155,437 pesos. The larger estimated disbursements were: war and marine, 43,724,839 pesos; finance and public debt, 37,261,878; interior, 19,418,212; public instruction, 13,926,600; communications, 15,013,517.

Public debt, April 1, 1913: foreign, 313,062,190 pesos; internal, 134,217,875; floating, 4,072,700; total, 452,352,765. Charges on the external debt, 29,701,647 pesos; internal, 14,389,655; total charges, 44,091,302.

ARMY. Comment on the army of Mexico during the year 1914 is manifestly impossible, as it would be difficult to determine which forces should be so designated, for there had been considerable disintegration of the original national army, and the formation of various organized bands by the different leaders, not many of which were drilled and organized as a cohesive military force.

NAVY. At the beginning of 1914, the navy included: one gunboat (*Veracruz*, built in 1903), of 1000 tons; two gunboats (*Morelos* and *Bravo*, 1904), of 1200 tons each; one transport (*Progreso*); two corvettes (*Zaragoza* and *Yucatán*); three dispatch boats; and several small vessels of little value.

GOVERNMENT. The Mexican constitution bears date of Feb. 5, 1857, with amendments of various dates to April 25, 1912. The republic is a federation of States autonomous in local affairs. The legislative power is vested in a Congress of two houses, the Senate and the Chamber of Deputies. Senators, 56 in number, are elected by direct vote for four years, two for each State and the Federal District. The Deputies, 233 in number, are elected by direct vote for two years. The constitution provides that the President and Vice-President be elected by indirect vote for six years. The President is assisted by a Cabinet of eight members. Gen. Porfirio Díaz was President during 1877-80 and from 1884 until May 25, 1911, when he was forced to resign on account of the revolution headed by Gen. Francisco I. Madero. The Minister for Foreign affairs, Francisco León de la Barra, succeeded to the executive office as Acting President. In October, 1911, Madero was elected President, and on November 6 was inaugurated for the unexpired term (ending Nov. 30, 1916). The newly elected Vice-President was José Marino Pino Suárez. On Feb. 18, 1913, Gen. Victoriano Huerta proclaimed himself Provisional President, and on February 23, Madero and Pino Suárez were murdered. Huerta was succeeded as Provisional President by Francisco Carbajal, July 15, 1914; Carbajal was succeeded by Gen. Venustiano Carranza, Aug. 12, 1914; Carranza was succeeded by Eulalio Gutiérrez, Nov. 10, 1914; and Gutiérrez was succeeded by Roque González Garza, Jan. 16, 1915. The Constitutionalist party does not recognize the presidency of either Huerta, Carbajal, or Gutiérrez.

HISTORY

ELEMENTS OF UNREST. The spectacular events which transpired with such bewildering rapidity

in the distressed republic of Mexico, were not so much indicative of national unfitness for self-government as they were symptomatic of the complexity of national problems. (1) When Gen. Victoriano Huerta seized the reins of government in February, 1913, after assisting in the overthrow, and perhaps conniving at the assassination of President Madero, the issue was simply political—whether a “military despotism” * “stained by blood” should be allowed to usurp the place of constitutional government in Mexico. President Huerta’s *coup d’état* of Oct. 10, 1913, had accentuated the constitutional struggle. It was on this score that the President of the United States declined to recognize Huerta, and lent moral support to the “Constitutionalist” rebellion against the Mexico City dictator. (2) During the course of the year 1914, however, as it became increasingly clear that the conflict was not purely a political contest between democracy and despotism, a new issue became uppermost in the apologies of the rebels, as well as in President Wilson’s pronouncements. The new issue was the land. The Constitutionalist and the Zapata bandits claimed to be fighting for the right of each poverty-stricken peasant or peon to possess his own little plot of land. Mexico could never be pacified, they said, while a handful of enormously wealthy landed proprietors kept the rural population in poverty and virtual serfdom. It was, indeed, confusing to discover that the leader in this war against the landlords, Venustiano Carranza, was himself one of the largest landowners, and to learn that the abhorred Huerta despotism had actively undertaken agrarian reform; nevertheless the official opinion in Washington and public opinion in the United States generally, clung to the conviction that Carranza’s armies were fighting for the economic enfranchisement and the political liberties of the peon. (3) The situation was still further complicated by a religious question. While Huerta had never been a conspicuous protector of religion, at any rate he had not been its bitter enemy. The rebels, on the other hand, making no secret of their enmity for the Roman Catholic Church, openly persecuted the clergy and interfered with religious liberty. (4) Less open in its operation, but none the less potent, was the influence of foreign interests in Mexico. When it is borne in mind that most of the railway capital, most of the mining property, most of the oil business in Mexico, was owned in the United States; when it is remembered that the American investments in Mexico amounted to over a billion dollars, English investments to over \$300,000,000, and French investments to \$143,000,000; when it is realized that the average annual export of minerals from Mexico was about \$90,000,000—the importance may be appreciated of the foreign financial interests at stake. The assertion was frequently encountered that various financial interests in the United States and in Great Britain had given aid to one faction or another in Mexico, with the hope of obtaining concessions for new oil wells, mines, and railways, when the faction should find itself in power. (5) Finally, the element of personal ambition must be taken into account. To a man of forceful character and military ability, the anarchic condition of the country offered abundant opportunities. The “generals” and the soldiers who lived by plunder, free from the re-

* President Wilson’s words.

straints of civil life, were naturally averse to laying down their arms and earning a living by honest labor.

DECLINE OF HUERTA'S POWER. The announcement in January that the Mexican government could not pay the interest due on the public debt, and the consequent resignation of finance minister, Adolfo de la Loma, afforded positive proof that President Wilson's policy of non-recognition and "watchful waiting" had effectually prevented Huerta from securing foreign financial assistance, and had left him without the funds needed to conduct the administration, to pay the soldiery, to suppress the rebellion. He could, it is true, collect some money from domestic banks and from wealthy citizens; but in this respect he labored at a serious disadvantage as opposed to the rebels, who with free hand confiscated both ecclesiastical and private property, and exacted large sums from private individuals, under the justification of military exigency. In February, Huerta was made to feel the weight of President Wilson's displeasure in a new way. Hitherto the importation of arms into Mexico, across the American frontier, had been prohibited under a proclamation dating from Mr. Taft's administration; but on February 3 President Wilson lifted the embargo on arms. As the Constitutionalist rebels controlled the northern part of Mexico, the free importation of arms was obviously designed for their benefit. Immediately the Constitutionalists purchased large quantities of arms, ammunition, field-guns, and machine-guns in the United States, and the effect was soon registered in the increased activity of the Constitutionalist armies. While his position was thus being swiftly and surely undermined, President Huerta endeavored to restore confidence in his government by releasing the deputies who had been imprisoned in October, 1913, by convoking the regular session of Congress on April 1, and by undertaking popular reforms. In his message to Congress he proposed to reform the local government by establishing justices of the peace throughout the country. Even more important was his proposal for the imposition of "an equitable tax on all uncultivated land"; such a tax, it was believed, would be equivalent to levying a fine on the great landed proprietors, the *hacendados*, who withheld from cultivation vast tracts of fertile land. The Uncultivated Land Tax Bill was unanimously passed by the Chamber of Deputies on May 24, and was enthusiastically applauded as an important forward step in the solution of the agrarian problem. In order to ameliorate the condition of factory-workers, the government prepared a Labor Bill which provided that any textile-mill owner who would pay his employees on a scale approved by the government should have 50 per cent of his taxes refunded. Another bill, passed in June, contemplated the creation of two new Federal Territories in the State of Chihuahua, and the transformation of the State of Morelos into a Federal Territory. In a speech on May 28, Querido Moheno, Huerta's minister of commerce and industry, declared that the oil concessions which the Pearson interests had obtained from Porfirio Díaz were unjust, and that in the future the government must not abandon the national resources of Mexico to be exploited for the exclusive profit of foreigners. The policy enunciated by Moheno was borne out by the action of the Mexican Congress in June, granting to Mex-

ican citizens, Pedro Barrenechea and Gen. Francisco Romero, the right to develop oil lands in the States of Vera Cruz and Tamaulipas. The legislative activity of Huerta's government was, however, little more than a brave pretense. The Constitutionalist armies were steadily drawing nearer to Mexico City. In the face of impending disaster, one after another of the ministers dropped out of the Cabinet:—on May 1, foreign minister, Lopez Portillo y Rojas; on May 18, the minister of public works and communications, J. M. Lozano; on May 26, the minister of agriculture and colonization, Eduardo Tamariz; on July 3, the minister of industry and commerce, Querido Moheno. On July 5 a general election was held. Most of the members of Congress were returned to their seats, and Huerta was elected President, notwithstanding the fact that holding the provisional presidency at the time of the election rendered him constitutionally ineligible for the presidency. Neither the Catholic party nor the Liberal party participated in the election; in fact, so few votes were cast that the whole procedure was farcical. Such a sham election could not save a government which was already tottering to its fall.

POLICY OF THE UNITED STATES. The final collapse of the Huerta régime was in no slight degree due to the policy of the government of the United States. By refusing to recognize Huerta, President Wilson had made it almost impossible for the Provisional President to borrow money. By lifting the embargo on arms, the United States had afforded indirect but valuable assistance to the rebels. In a series of notable speeches, President Wilson had made it unmistakably clear that, while his policy was one of "watchful waiting," his sympathies were with the revolutionists. And in gratitude the rebel leader, Carranza, issued a manifesto, April 6, expressing his admiration for the people and the President of the United States, and recognizing the right of the United States to protect European interests in America. On April 7, 1914, some 700 Spaniards arrived in El Paso, Texas, having been expelled from their homes in Torreón, Mexico, and robbed of their possessions by Francisco Villa, one of the leading generals of the Constitutionalist revolution. According to the report of the British Consul at Galveston, Villa had also caused, on February 17, the murder of William S. Benton, a British citizen resident in Mexico. Only after irritating refusals and delays did Villa yield to the request that Benton's widow, together with American and British representatives, should be allowed to examine the body. Such incidents were embarrassing, but did not seriously affect the friendly relations existing between the Constitutionalists and the United States government. Against Victoriano Huerta, on the other hand, the hostile feeling in Washington grew steadily more pronounced, until in April the climax was reached with the "Tampico incident," and the occupation of Vera Cruz.

THE TAMPICO INCIDENT. On April 9, while the Constitutionalist and Federal armies were fighting for possession of Tampico, on the eastern coast of Mexico, a party of American bluejackets landed at the Iturbide bridge in Tampico, within the Federal lines, and were immediately apprehended by Federal soldiers. Within an hour and a half, after it had been explained that the Americans came on a peaceful errand to purchase

gasoline, they were released. Apologies were promptly offered by the Federal commander in Tampico, General Zaragosa, and by Provisional President Huerta. Huerta promised, moreover, that the officer responsible for the arrest, Colonel Hinojosa, should be properly disciplined. Not satisfied with these amends, the American Rear Admiral Henry T. Mayo demanded on April 10 that a salute should be fired to the American flag, since the Mexicans were held to have insulted the flag by arresting bluejackets from a boat on which the flag was displayed. The Mexicans refused to comply with Admiral Mayo's demand, on the ground that the incident was absurdly trivial, and that no intentional insult had been offered to the American flag sufficient to justify the firing of a salute. Yielding to the representations of the chargé d'affaires, Nelson O'Shaughnessy, Huerta consented to the salute, on condition that the United States should promise in writing to return the salute gun for gun. On April 13, the President's personal representative, John Lind, arrived in Washington to report the information he had obtained on the Mexican situation while residing in Vera Cruz. On April 14, practically the entire United States navy was ordered to Mexican waters. On April 18, President Wilson informed Huerta that the salute must be fired before 6 P. M. the following day, without any written agreement as to the return salute. As Huerta remained obdurate, President Wilson, on April 20, asked Congress to authorize the use of armed force. Explaining his insistence upon the salute, President Wilson said, "It was necessary that the apologies of General Huerta and his representatives should go much further, that they should be such as to attract the attention of the whole population to their significance, and such as to impress upon General Huerta himself the necessity of seeing to it that no further occasion for explanations and professed regrets should arise. I therefore felt it my duty . . . to insist that the flag of the United States should be saluted in such a way as to indicate a new spirit and attitude on the part of the Huertistas." Critics of the administration urged that the Tampico incident was too trivial to be used as a pretext for war. It was furthermore alleged that, since a salute was customarily demanded only as the official expression of a nation's regret for an affront to another nation, the United States could hardly demand such a salute from Huerta without recognizing him as the official representative of the Mexican nation. And how could the armed forces of the United States invade the territory of a neighboring nation to wage war upon a private individual? President Wilson, however, explained that, while he was sending the forces of the United States to fight the Huerta faction in Mexico, he had no intention of entering into a conflict with "the people of Mexico."

THE OCCUPATION OF VERA CRUZ. While the United States Congress was debating a resolution to authorize the employment of armed force in Mexico, President Wilson ordered the opening of hostilities—the seizure of the customs house at Vera Cruz, in order to prevent the Huertistas from receiving a large supply of guns and ammunition brought from Europe by the German steamer *Ypiranga*. The arms could not be seized on board the German ship, but by occupying the customs house, the United States could keep them from falling into Huerta's

hands.* Accordingly at 11:30 A. M. on April 21 a detachment of American marines was sent ashore from the *Prairie* and the *Florida* to seize the customs house, which was situated on a long pier. From nearby houses the Mexicans fired upon the landing party. With the aid of the *Chester's* guns, however, the Americans were able to clear the streets and buildings near the customs house, and to occupy also the railway terminals, and the postal telegraph, and cable offices. On the following day General Maas with several thousand Mexican troops withdrew, leaving the city in the hands of the Americans, who had been reinforced by the landing of 3000 more marines and sailors. Altogether the seizure of Vera Cruz cost the Americans 18 killed and 70 wounded; the Mexican losses amounted to 126 killed and 195 wounded. The seizure of Vera Cruz was fiercely resented in Mexico. At Monterey the American Consul-General, Mr. Hanna, was cast in jail and the American flag was trampled in the dust. There were demonstrations in Mexico City. Even Carranza was moved to issue an angry protest, notwithstanding the assurances he had received that the United States meditated no hostile action against the Constitutionalists. General Villa, however, wishing to remain on friendly terms with the American government, exercised a moderating influence upon his indignant chief. Vera Cruz became the haven of refugees of all descriptions—Americans who feared an anti-American uprising, foreigners who found residence in Mexico too exciting, priests who had been expelled from their parishes by the rebels, and nuns who feared the lawless Constitutionalist soldiers. In the city of Vera Cruz the collection of the customs duties, and the various municipal departments of finance, justice, education, and the post office, had been taken over by American officials. Robert J. Kerr of Chicago had been appointed civil governor of the city to improve sanitary conditions and to clean out the prisons. Undoubtedly much was accomplished in this respect. On April 30 the naval forces turned the city over to General Funston with 6000 soldiers of the regular army of the United States. General Funston, it was asserted, intended to seize a railway bridge 27 miles from Vera Cruz on the road to Mexico City; but his more ambitious military plans were halted by the State Department, and he was restricted to the prosaic task of surrounding Vera Cruz with entrenchments and supervising the civil government of the city. Peace negotiations had already been set on foot by the mediatory action of three South American nations.

THE "A B C" MEDIATION CONFERENCE. On April 25, just four days after the United States had inaugurated hostilities at Vera Cruz, the diplomatic representatives at Washington of the so-called "A B C" Powers—Argentina, Brazil, and Chile—offered to act as mediators in arranging a peaceful settlement of the quarrel between General Huerta and the United States of America. In accordance with the pacificatory proposals of the "A B C" mediators, President Huerta and President Wilson readily agreed to an armistice and a conference; but General Carranza refused to suspend hostilities, declining

* The *Ypiranga's* cargo was not landed at Vera Cruz, but was shortly afterwards delivered to the Huertistas at Puerto Mexico.

THE SOUTH AMERICAN MEDIATORS IN THE MEXICAN SITUATION OF 1914

FROM LEFT TO RIGHT : THE CHILEAN AMBASSADOR, SEÑOR EDUARDO SUÁREZ ; THE BRAZILIAN AMBASSADOR, SENHOR DOMICIO DA GAMA ; THE AMBASSADOR FROM ARGENTINA, SEÑOR ROMULO S. NAÓN

to abide by the result of diplomatic negotiation, and preferring rather to submit the Constitutionalist cause to the arbitrament of arms. Carranza was therefore not at first represented in the conference which met at Niagara Falls, Canada, on May 20. Mr. George Pearly, Canadian Secretary of State, welcomed the mediators and delegates in behalf of the Canadian government. The three mediators were diplomats of unquestioned distinction: the Brazilian Ambassador, Senhor Domicio da Gama; the Argentine Minister, Señor Romulo S. Naón; and the Chilean Minister, Señor Don Eduardo Suarez Mujica. President Huerta was represented by two eminent Mexican jurists—Licenciado Emilio Rabasa and Licenciado Augustin Rodriguez, a railway magnate—Senator Luis Elguero, Rafael Elguero, Manuel Martinez del Campo, and Rafael Capetillo. The delegates of the United States were Justice Joseph Lamar and Mr. Frederick W. Lehmann. The mediators speedily discovered that the Huerta-Wilson controversy could not be settled without arranging a settlement between the warring factions in Mexico, since President Wilson's delegates were disposed to insist that Huerta must be eliminated and land reform assured. Some surprise was occasioned by the announcement that Huerta was willing to retire if a neutral provisional government could be established which the United States would recognize. The mediators elaborated a plan involving the resignation of Huerta and the establishment of a provisional government by a commission of three persons—a Huertista, a Constitutionalist, and a representative of the "A B C" mediators. This project was vetoed by General Carranza. The prospect of peace had almost disappeared when on June 12 Carranza named three delegates to plead his case: Fernando Iglesias Calderón, the Liberal leader, and two Carranza sympathizers in Washington, Luis Cabrera and José Vasconcelas. The dispute now narrowed down to one point, whether the provisional government which the conference planned to establish should be impartial, as the Huerta delegates demanded, or Constitutionalist, as the Carranzistas and the American delegates required. On June 17 the Huerta delegates issued a manifesto pointing out that a Constitutionalist provisional government would be able to interfere with electoral freedom to such an extent as to secure a Constitutionalist victory in the projected elections; if, therefore, President Wilson insisted upon establishing a Constitutionalist instead of an impartial provisional government, he would in effect be utilizing the power of the United States to impose a Constitutionalist government upon Mexico. In reply to this complaint, the American delegates declared that the only way to assure peace in Mexico was to establish a government which would be acceptable to the Constitutionlists. After much argument, the Niagara Falls Conference agreed: (1) that a provisional government should be established by agreement between the Huertista and Constitutionalist delegates; (2) that without exacting indemnity or other satisfaction for the Tampico affair, the United States should immediately recognize the projected provisional government, amnesty being granted to all foreigners, and foreign claims for damages being adjusted by international commissions; (3) and that the "A B C" Powers should likewise accord prompt

recognition to the provisional government. The peace protocol was signed by the Huerta delegates on June 31, and by the Americans on the following day. The mediators then announced that the conference was suspended until further need should arise for mediatory action.

During the course of the negotiations, the *Ypiranga* had been allowed to land her cargo at Puerto Mexico, and a cargo of cartridges for the Constitutionlists had been conveyed by the steamship *Antilla* to Tampico, where two of Huertas gunboats would have intercepted it, had they not been deterred by the threatening presence of two larger American gunboats.

THE TORREON CONFERENCE. General Carranza informed the mediators that before he could accept their proposals for establishing a provisional government, he would be obliged to call a conference of his generals and consult their opinions. Accordingly the Constitutionalist generals were summoned to a conference at Torreon early in July. The conference refused to consider anything short of the unconditional surrender of the Huerta government. A most important feature of the Torreon meeting was the discussion of the differences between Carranza and Villa. As First Chief of the Constitutionalist forces, Carranza was nominally the superior of Villa, but as the most brilliant general of the revolutionary armies, Villa had more than once shown a sense of his own importance and a spirit of insubordination which threatened to disrupt the Constitutionalist movement. Certain of Villa's friends were repugnant to Carranza; Villa had asserted the right to issue paper money; he had confiscated large sums claimed by Carranza. These were assigned as the causes of the quarrel; but perhaps the fundamental cause lay still deeper, in the personal rivalry of the two men, and in the inherent absurdity of expecting an aristocratic land-baron like Carranza and a rough soldier-bandit like Villa to work harmoniously for the achievement of agrarian reforms. Outwardly, the breach was healed by the Torreon Conference, and Carranza was confirmed in his position as First Chief. The conference decided that directly upon becoming Provisional President, Carranza should summon the generals of the Constitutionalist armies, on the basis of one delegate for each 1000 soldiers, to a convention which would make all arrangements for elections. The conference resolved "to fight until the ex-Federal army shall disappear completely, to be supplanted by the Constitutionalist army; to establish a democratic form of government; to procure the enactment of wise laws for the protection of laborers; to effect the economic emancipation of the farmers by making an equitable distribution of the lands; as well as to adopt any resolutions which may solve the agrarian problem; to punish and exact responsibility from the Roman Catholic clergy who materially or intellectually assisted the usurper Huerta."

CONSTITUTIONALIST VICTORIES. The Torreon Conference affords a convenient point of vantage from which to survey the progress made by the Constitutionalist armies since the beginning of the year. After defeating the Federals in a hotly contested engagement at Ojinaga, Dec. 29, 1913-Jan. 11, 1914, General Villa's forces, 12,000 strong, moved southward against the important railway centre of Torreon.

Checked in its advance, March 17, General Villa's army rapidly returned to the attack, fought its way into Torreon, and after 11 days of stern fighting drove the last of General Velasco's Federal troops from the city on April 2. At General Villa's command, a number of captured Federals were shot, and six or seven hundred Spanish residents of Torreon expelled. Still southward Villa pursued Velasco's fugitive forces to San Pedro, where General Velasco, strengthened by reinforcements, turned to give battle. Over 3,000 Federals fell in the battle of San Pedro, April 9-10. Again Velasco retreated; while Villa's victorious army turned eastward toward Saltillo, in the southeastern corner of the State of Coahuila. Meanwhile Gen. Pablo Gonzales, the Constitutionalist commander in the east, had invested Tampico with 7000 men, and won a foothold in the outskirts of the town. The localities held by Gonzales's troops were bombarded by two Federal gunboats with such telling effect that an oil refinery and over 100 immense oil tanks, which happened to be located in the district under fire, were destroyed by bursting shells, while British, French, German, Spanish, and American warships played the part of passive spectators. It was during the course of the fighting at Tampico that the American bluejackets were arrested, April 9. When the "A B C" Powers proposed an armistice for mediation, April 25, the military position of the several Constitutionalist armies was so strong that the First Chief refused to suspend hostilities. The Constitutionalist commander in the east, Gen. Pablo Gonzales, captured Tampico on May 13. From Tampico General Gonzales marched against San Luis Potosi, 200 miles to the westward. In the extreme West, the Federal strongholds of Guaymas and Mazatlan were besieged, and Gen. Alvaro Obregon's forces captured Tepic, executing 35 captured Federal officers. San Blas, the seaport near Tepic, fell into Constitutionalist hands at the same time. From Tepic General Obregon moved against the second-largest city of the republic, Guadalajara, 140 miles to the south-east. There he won one of the greatest victories of the war, capturing 5000 prisoners, with much artillery and ammunition, and entering the city in triumph, July 9. In the meantime General Villa, who was conducting the campaign in the central part of Mexico, between General Gonzales on the east and General Obregon on the west, had captured Monterey, the capital of Nuevo Leon, on April 24. After defeating a Federal army at Paredon, he executed 32 captured Federal officers and proceeded against Saltillo. Saltillo was abandoned by the disheartened Federals without a struggle, May 21. Villa's next move was against Zacatecas, 100 miles to the west and 200 miles to the south from Saltillo. Panfilo Natera, one of Carranza's generals, had already met with disastrous failure in an attack on Zacatecas, June 10-14. But Villa was successful; according to his own report, he lost only 500 killed and 800 wounded in capturing Zacatecas, June 23, while he inflicted on the Federals a loss of 4000 killed, 2000 wounded, and 5000 captured, besides 6000 rifles and a quantity of stores.

HUERTA'S RESIGNATION AND CARBAJAL'S BRIEF GOVERNMENT. Warned by the irresistible advance of the Constitutionalist armies, Gen. Victoriano Huerta began to make preparations for

his departure from the capital. On July 8, Robert Esteve Ruiz, Acting Minister of Foreign Affairs, announced before the Mexican Congress that in obedience to the decree of the Niagara Falls Conference, Huerta was prepared to resign. Two days later, Chief Justice Francisco Carbajal was appointed Minister of Foreign Affairs; Salome Botello, Minister of Commerce and Industry; Arturo Alvarado, Minister of Communications; Carlos Rincon Gallardo, Minister of Agriculture. On July 15 Victoriano Huerta resigned the presidency, and a few hours later Francisco Carbajal took office as Provisional President, while Huerta began a journey which brought him ultimately to Spain. Carbajal closed all gambling places and liberated all political prisoners in the Federal district. He notified the authorities at Washington that his only desire was for peace, with (1) a general amnesty, (2) protection of the property of all classes, and (3) protection of lives. On July 20, Secretary Bryan announced that the United States would not recognize any loans or concessions contracted by Huerta since the *coup d'état* of Oct. 10, 1913. Carranza was not inclined to allow Carbajal's conditions, and the Constitutionalist armies pressed forward with exultant confidence to capture San Luis Potosi, July 17; Guaymas, July 18; Aguascalientes, July 22; Colima, July 23; Manzanillo, July 24; Guanajuato, July 28; Queretaro, July 31; Pachuca, Toluca, and Morelia, August 9-10; and Mazatlan, August 10. In the last-mentioned city, 15 captured Federal officers were executed. At last on August 13 a protocol was signed arranging for the peaceful capitulation of Mexico City. On August 15 General Obregon rode into Mexico City at the head of 15,000 men. Carranza's triumphal entry was made on August 20. Villa's day was yet to come.

VILLA'S REVOLT AGAINST THE CARRANZA GOVERNMENT. Although Carranza's entry into Mexico City had been effected without disorder, yet in a few days serious rioting and insurrection broke out in the capital, and Carranza embarked upon a career of arbitrary government in comparison with which the violent deeds of the exiled dictator paled into insignificance. On September 7 General Carranza issued a decree setting aside the restrictions on arbitrary arrest and confiscation of property. In the middle of September it was stated that over 1000 persons had been imprisoned in the penitentiaries for political reasons. Numerous executions were of no avail to prevent recurring mutinies. Zapata, the famous bandit leader, who had at first made peace with Carranza, in September resumed his lawless activities in the neighborhood of the capital, because the First Chief of the Constitutionlists would not carry out agrarian reforms according to Zapata's ideas as embodied in the "plan of Ayula." A counter-revolution against Carranza had been started in July at Aguascalientes by Gen. Pascual Orozco with 4000 followers. Late in August another counter-revolutionary movement was inaugurated near Puebla by some 20,000 former Federal soldiers under the leadership of Generals Almazan, Aguilar, and Argumedo; heavy fighting occurred in Puebla in September. In Sonora, moreover, the Constitutionlists had fallen to fighting among themselves, and it was necessary for Villa and Obregon to intervene to maintain Governor Maytorena's authority

against General Hill. But most discouraging of all was the dissension between Francisco Villa, Constitutionalist general in the North, and Venustiano Carranza, First Chief of the Constitutionalist forces. Villa's pride had been hurt by the fact that Obregon and Carranza had enjoyed the triumph of entering Mexico City as victors; Villa no doubt feared that Carranza would attempt to resign the provisional presidency in order to be eligible for election to the presidency; and Carranza had given just cause for discontent by inviting civil governors as well as military leaders to the convention, which, the Torreon Conference had agreed, was to be composed of military leaders exclusively. When Paul Fuller, as a personal emissary of President Wilson, visited Carranza in Mexico City on September 5 and hurried north to confer with Villa, some commentators believed that President Wilson was attempting to prevent a split. On September 9, however, President Wilson lifted the embargo on arms, which had been restored at the time of the occupation of Vera Cruz, and had remained in effect since April 21. Lifting the embargo at this juncture naturally favored Villa, who controlled the territory in contiguity with the United States. On September 15 the United States promised to withdraw its troops from Vera Cruz. Carranza was warned that in case of a split in the Constitutionalist ranks, the United States would adopt a neutral attitude. The long-threatened break came on September 23, when Villa declared war on Carranza. It was explained that Villa had arrested General Obregon after a heated dispute; Carranza, fearing trouble, had suspended railway service in Villa's territory; and Villa had replied with defiance. In the State of Sonora civil war broke out afresh, with Villa's friend, Governor Maytorena, arrayed against General Hill, who was closely besieged in the border town of Naco. Villa declared that he would not make peace unless Carranza was eliminated from candidacy for public office.

CARRANZA AGAINST THE CONVENTION. The conference of military delegates, one for each 1000 soldiers, which had been called to meet at Mexico City on October 1 for the purpose of arranging for elections, was necessarily rendered impossible by the Villa revolt against Carranza. The loyal military delegates, who came from the southern armies, and the provincial governors, whom Carranza had invited, held a brief session in Mexico City, and rejected Carranza's proffered resignation. A Peace Conference was then convened at Aguascalientes, October 10, and an armistice declared. In effect, the Peace Conference was none other than the convention for which the Torreon Conference had stipulated, containing one military delegate for each 1000 Constitutionalist soldiers. The convention arrogated to itself supreme power and sovereignty, and appointed a committee of five to take charge of foreign relations, war, justice, education, and finance. From the outset it was clear that Carranza was in disfavor. Gen. Eduardo Hay urgently demanded that Carranza should release his political prisoners. The party opposed to Carranza was greatly strengthened when on October 22 Zapata sent 28 delegates, who combined with Villa's following to dominate the convention. On October 25 Carranza issued a manifesto attempting to refute by *tu quoque* arguments the charges which

Villa had preferred against him. Each accused the other of inordinate personal ambition, of flagrant violation of the constitutional rights of citizens, of illegal executions, of barbarous attacks on the clergy, of the murder of foreigners. Carranza's agents at Washington, it may be noted in this connection, continued to heap abuse on Villa, alleging that Villa's real name was Dorotea Aranga, and that he was receiving active support from the Guggenheim and other interests which hoped to secure concessions in Mexico. Villa was likewise arraigned by General Obregon on charges of violence, immorality, dishonesty, and intrigue. To return to the convention, on October 27 General Carranza offered to resign on condition that Villa and Zapata would retire into private life. On October 30, the convention decreed the retirement of both Carranza and Villa, and on November 2 elected as Provisional President for 20 days Gen. Eulalio Gutierrez, an ex-grocer who had become a prominent leader in the revolution. Carranza, refusing to accept the decree of the convention, established himself at Puebla and prepared for trouble. On November 6, General Villa offered to resign his command if that were necessary to eliminate Carranza. On November 8 the convention served an ultimatum on the First Chief, giving him until 6 P. M., November 10, to make his submission. Again he defied the convention. Gutierrez took office as Provisional President on November 10. On the following day General Villa in the name of the convention and in behalf of Gutierrez, opened hostilities against Carranza in a battle at León, south of Aguascalientes. Secretary Bryan chose this moment to announce, on November 13, that inasmuch as both factions had given the necessary guarantees—that taxes and customs duties collected by American officials would not be re-collected, and that the safety of foreigners, clergy, and refugees in Vera Cruz would be assured—the United States troops would evacuate Vera Cruz on November 23. The 4000 American regulars and 2600 marines were accordingly withdrawn, and the Constitutionalist Gen. Candido Aguilar took possession of Vera Cruz with some 4000 men, November 23. General Carranza had offered to go into voluntary exile at Havana before November 25, if Villa would do likewise. But Villa was not at that moment meditating self-imposed exile. His armies were occupying Irapuato, Guanajuato, and Queretaro (November 18). Ten thousand Villista troops under the leadership of Gen. Felipe Angeles attempted unsuccessfully to wrest Guadalajara from the Carranzistas, November 24. On November 24 the Carranzista forces were withdrawn from Mexico City, leaving the capital a prey to the Zapatista bandits, who at once took possession of the city, and, it was alleged, robbed and murdered a number of Spaniards. General Villa joined Zapata in Mexico City on December 1. Two days later Provisional President Gutierrez was installed in the National Palace. Gutierrez had formed his cabinet in November as follows: foreign affairs, Fernando Iglesias Calderon; communications, Manuel Bonilla; war, José I. Robles; interior, De Silva; public works, José Vasconcelos; justice, Francisco Escudero; *Fomento*, Antonio Díaz Soto; treasury, Miguel Díaz Lombardo. Places in the cabinet were now given to two Zapatistas, so that the cabinet at the close of

the year was organized as follows: foreign relations, José Ortiz Rodríguez; war, Gen. José I. Robles; finance, F. F. Villareal; public works, Valentin Gama; education, José Vasconcelos; communications, José R. Cabo; agriculture, Gen. Manuel Palafoz. Meanwhile General Carranza, General Obregon, and General Alvarado had entered Vera Cruz, November 26, and made that city their headquarters. Carranza claimed dictatorial powers. Late in December the Conventionists boasted that in a great battle in the vicinity of Puebla, Generals Zapata and Angeles had inflicted a crushing defeat upon 20,000 Carranzista troops. The Conventionists also claimed Saltillo and Monterey. But the Carranzistas flatly contradicted the reports of their reverses. At the close of the year, then, the issue was undecided between Carranza, who with his loyal generals, Obregon, Gonzales, and Alvarado, controlled most of Southern and Eastern Mexico, and Villa, who dominated the Gutierrez government and controlled practically all of Mexico north of a line drawn from Matamoros on the eastern coast to Mazatlan on the western coast. In addition to the other minor insurrections which complicated the situation, a new rebellion was started in central Chihuahua by the former Federal Generals José Ynez Salazar and Emilio Campa. General Huerta, however, showed no intention of mixing in Mexican affairs again; from Barcelona, Spain, where he was living in modest retirement, the former Provisional President emphatically repudiated the allegation that he had offered to aid either "Villa, the jailbird," "Zapata, the bandit," or "Carranza, the four-flusher." One of the most unfortunate features of the Constitutionalist régime was the frequency of political executions. In the middle of December the Gutierrez government declared that it would henceforth execute no one without trial, and repudiated as unauthorized the numerous executions which had already taken place. Nevertheless a great number of executions were reported in Northern Mexico in the territory under Villa's sway. A hundred and forty persons were said to have been executed at Chihuahua City in one month, and 16 in one week in Mexico City. Another distressing circumstance was the conflict in the border town of Naco, where besieged Carranzistas and besieging Villistas were guilty of continual carelessness in allowing stray shots to inflict damage on the American side of the international frontier, much to the annoyance of the United States government.

THE CONSTITUTIONALISTS AND THE CLERGY. Alleging that the clergy had been unfavorable to the Constitutionalist revolution, the Constitutionalist leaders conducted a violent campaign against the Roman Catholic Church in Mexico. On July 27, for example, Antonio I. Villareal, as Constitutionalist Governor and military commander of the State of Nuevo León, forbade confession, ordered the expulsion of Jesuits and foreign priests, and prohibited the ringing of church bells except for patriotic celebrations and Constitutionalist victories. The Constitutionalist Governor of Chiapas not only prohibited confession, but forbade priests to celebrate more than one mass a week, ordered priests to dress as ordinary civilians, and closed all convents. In other cases, priests were compelled to ransom their lives. But the Constitutionalist soldiers sometimes went even further. They

confiscated and desecrated churches and subjected nuns to insult and outrage. If the Catholics resisted, they were summarily punished, and the leaders shot. To the Archbishop of Mexico and the hundreds of priests who had been expelled from Mexico, Pope Benedict XV on October 25 addressed a letter expressing the hope that their wrongs would be righted in the future; he also sent money to relieve their distress, regretting that his poverty did not permit him to send more.

MEZES, SIDNEY EDWARD. American educator, chosen in 1914 president of the College of the City of New York. He was born at Belmont, Cal., in 1863, and graduated from the University of California with the degree of bachelor of science in 1884, afterwards taking post-graduate work at Harvard University, receiving the degree of A.B. in 1890, A.M. in 1891, and Ph.D. in 1893. From Harvard he went almost immediately to Austin, Texas, to become adjunct professor of philosophy at the University of Texas. He served in this position from 1894 to 1897, as associate professor until 1900, as full professor until 1908, as dean from 1902 to 1908, and as president of the university from 1908 to 1914. His administration of the University of Texas was very successful, and in addition to his abilities as administrator, he became favorably known as a teacher and as one of the foremost scholars in philosophy and ethics. Dr. Mezes was chosen after a search of over a year for a man qualified to take the place of John H. Finley, who resigned as president of the College of the City of New York to become State Commissioner of Education. His published writings include: *The Conception of God* (part author, 1897); *Ethics, Descriptive and Explanatory* (1901); and articles on philosophy, ethics, and education, contributed to reviews.

MIAMI UNIVERSITY. An institution for higher education, founded at Oxford, Ohio, in 1809. The enrollment in all departments in the autumn of 1914 was 643, of which 381 were in the College of Liberal Arts and 262 in the Normal College. The faculty numbered 48. There were no noteworthy changes in the faculty during the year and no notable gifts were received. The productive funds amount to about \$110,000 and the income to about \$250,000. The library contains about 45,000 volumes. The president is Raymond M. Hughes.

MICHIGAN. POPULATION. The estimated population on July 1, 1914, was 2,976,030. The population in 1910 was 2,810,173.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	1,750,000	63,000,000	\$42,210,000
	1913	1,675,000	56,112,000	37,595,000
Wheat	1914	879,000	17,316,000	17,835,000
	1913	885,000	12,776,000	11,871,000
Oats	1914	1,515,000	50,752,000	22,888,000
	1913	1,500,000	45,000,000	17,550,000
Rye	1914	371,000	5,936,000	5,402,000
	1913	375,000	5,362,000	3,324,000
Barley	1914	90,000	2,340,000	1,521,000
	1913	85,000	2,108,000	1,265,000
Potatoes	1914	364,000	44,044,000	13,213,000
	1913	350,000	33,600,000	17,808,000
Hay	1914	2,352,000	3,011,000	36,132,000
	1913	2,400,000	2,520,000	33,012,000

MINERAL PRODUCTION. Michigan ranked eighth among the States in 1913 in the value of its mineral production. It owes this prominence as a mining State to two metals—iron and copper. In the production of iron ore the State ranks second, being surpassed only by Minnesota, and in the production of copper fourth, being surpassed only by Arizona, Utah, and Montana. As a result of labor troubles in the copper districts of the State during 1913, the output of the year was barely 60 per cent of that for 1912, the recoverable contents of the ores mined in the former year being estimated at 135,853,409 pounds, with a value of \$21,057,278. The production in 1912 was 218,138,408 pounds, valued at \$35,992,837. The production of iron ore, on the other hand, was uninterrupted by labor troubles and decreased only slightly, from 12,797,468 long tons in 1912, to 12,668,560 tons in 1913, while the value showed a decided gain from \$29,003,163 to \$33,479,954. The increase in the value of the iron ore was, however, less than one-third the decrease in the value of copper. A considerable quantity of coal is mined, and the production in 1913 was 1,231,786 short tons, valued at \$2,455,227, an increase over 1913 of 25,556 tons in quantity and \$55,776 in value. The production of coal in the State in 1914 was about the same as in 1913. There were no strikes during the year, and labor and transportation facilities were unusually good. Michigan is among the important States in the manufacture of cement. The production in 1913 showed a substantial increase over that of 1912. In the former year it was 4,081,481 barrels, valued at \$4,228,879, and in the latter year 3,651,094 barrels, valued at \$3,145,001. In the quantity and value of salt produced Michigan ranks first. The production in 1913 (exclusive of rock salt) amounted to 10,829,307 barrels, valued at \$3,054,532, compared with 10,271,715 barrels, valued at \$2,743,389 in 1912. Other commercial mineral products of the State are coke, clay products, gypsum, sand and gravel, limestone, gems, graphite, mineral waters, quartz, petroleum, and silver. The total value of the mineral products in 1913 was \$72,143,211, compared with \$80,062,486 in 1912.

EDUCATION. The total school population of the State in 1913 was 815,849. The total enrollment in the public schools was 595,725, and the average daily attendance was 486,013. The female teachers numbered 16,643 and the male 2857. The average monthly salary of male teachers was \$83.18 and of female teachers \$56.50. The total amount paid for teachers' salaries in 1913 was \$10,539,963. The per capita cost per year was \$23.02.

TRANSPORTATION. The mileage of single-track railroad in the State on June 30, 1914, was 8898.89. There were in addition 718 miles of second, third, and fourth track. A new line, Boyne City, Gaylord, and Alpena Railroad, opened for operation on December 7. This line is 30 miles long, running from Gaylord to Atlanta. The Michigan Railroad during the year was purchased by the Michigan Railway Company and was changed to an electric road. This company put in operation during the year a third-rail line from Bay City to Saginaw. A few other less important railways added mileage to their tracks. The mileage of interurban and suburban electric railways on June 30, 1914, was 702 and that of city lines was 205.

FINANCE. The report of the State Treasurer shows total receipts for the fiscal year ending June 30, 1912, of \$17,133,162, and disbursements of \$16,211,285. At the beginning of the fiscal year there was on hand a balance of \$9,249,408, and at the end a balance of \$10,171,285. The funded debt of the State consists in special debt obligations to public trust funds, these funds being derived from the sale of all lands given by the United States to the State for educational purposes. On June 30, 1913, this debt amounted to \$6,896,212. There was in addition on the same date a floating debt of \$192,880, composed of private trust funds in the form of various deposits. The per capita debt in 1913 was \$2.41.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State Board of Corrections and Charities are the Kalamazoo State Hospital, the Pontiac State Hospital, the Traverse City State Hospital, Newberry State Hospital, Ionia State Hospital, State Psychopathic Hospital, Home for Feeble-minded and Epileptic; Michigan State Prison, Michigan Reformatory, Branch Prison, Industrial School for Boys, Industrial School for Girls, State Public School, School for the Blind, Employment Institute for the Blind, School for the Deaf, Michigan Soldiers' Home, and the State Sanatorium. The total expenditures for these institutions amounts to about \$2,900,000 yearly.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial and the last was held in 1913. Elections were held for Governor and representatives to Congress. Governor Woodbridge N. Ferris, Democrat, was reelected by a plurality of 35.80 per cent over Chas. S. Osborn, Republican. The Republicans elected the balance of the State ticket by pluralities which averaged 74,955. The Legislature elected on the same day stands: Senate—Republicans, 29; Democrats, 3. House—Republicans, 127; Democrats, 5.

Democratic Congressmen were elected in the first and second districts. Republican Congressmen were elected in the other 11 districts, the National Progressives losing to the Republicans the tenth and twelfth districts which they carried in 1912.

The average Democratic vote for State candidates, Governor excepted, in 1914, was 6404 more than the Democratic vote for President in 1912. The average vote for the Republican State candidates, Governor excepted, was 42,780 more than the Republican candidate for President received in 1912. The National Progressive vote for their State ticket in 1914 was 134,352 less than in 1912. The total vote of the State in 1914 was 110,332 less than in 1912.

At the municipal and township elections in April, 1914, there was voting on the question of liquor licenses or no liquor licenses in 12 counties. Two of these counties changed from wet to dry and two from dry to wet, there being no change in the other eight. There are now 34 counties that are dry under the local option act and 49 that are wet. Counties can vote only at the April election to be wet or dry. There were serious labor troubles throughout the year in the copper districts of the State. (These will be found discussed in the article STRIKES.) On January 28 a "blue sky" law regulating corporations, passed by the Legisla-

ture in 1913, was declared invalid by the Federal Court of the Eastern District of Michigan.

STATE GOVERNMENT. Governor, Woodbridge N. Ferris; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, Coleman C. Vaughan; Treasurer, John W. Haarer; Auditor-General, Oramel B. Fuller; Attorney-General, Grant Fellows; Adjutant-General, _____; Superintendent of Public Instruction, F. L. Keeler; Commissioner of Insurance, John T. Winship—all Republicans, except Ferris and Winship.

JUDICIARY. Supreme Court: Chief Justice, Flavius L. Brooke; Justices, Aaron V. McAlray, John W. Stone, Franz C. Kuhn, Russell C. Ostrander, John E. Bird, Joseph B. Moore, Joseph H. Steere; Clerk, Charles C. Hopkins—all Republicans.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Republicans	29	127	156
Democrats	3	5	8
Republican majority	26	122	148

The representatives in Congress will be found under the section *Congress*, article UNITED STATES.

MICHIGAN, UNIVERSITY OF. A State institution for higher education, founded at Ann Arbor, Mich., in 1837. The enrollment in all departments of the university in the autumn of 1914 was 5522, divided as follows: academic, 2582; dentistry, 318; nonprofessional graduate school, 258; law, 499; medicine and surgery, 304; homeopathic medical college, 74; pharmacy, 110; engineering and architecture, 1492. During the summer session of 1914 there was an enrollment of 1594, making the total enrollment, with a deduction of 50 per cent for double registration in 1914, 6319. There were in addition 309 students enrolled in extension courses. These are regular courses given by members of the faculty on Saturday to teachers in Detroit and Saginaw public schools. The total number of university officers and faculty in 1914 was 535, including 30 nonresident lecturers and summer session appointees from other universities and colleges; 128 graduate assistants, and 23 administrative officials not elsewhere included. The productive funds of the university on June 30, 1914, were \$940,284, and the total income for 1913-14, including a balance of \$73,484 in July, 1913, was \$2,276,344. The library contains about 340,000 volumes. The president is Harry B. Hutchins.

MILBANK, JOSEPH. An American banker and philanthropist, died Sept. 7, 1914. He was born in New York City in 1848, the son of Jeremiah Milbank, who amassed a large fortune and organized and built the Chicago, Milwaukee, and St. Paul Railroad. As a comparatively young man Joseph Milbank became a director of this road and became connected with other important railroad enterprises. He was chiefly known, however, as a philanthropist. His first gift of magnitude was to the Teachers College in New York City, for which he erected a building known as Milbank Hall in memory of his father and mother. In 1905 he gave \$300,000 to the First Congregational Church of Jersey City for the erection and equipment of the People's Palace in that city. He gave large sums for charitable purposes, but these were distributed chiefly through religious agencies.

MILITARY PROGRESS. THE WAR IN EUROPE. To this colossal contest, which had been in active progress for some five months, students of military science and art naturally looked at the end of 1914 for applications of all modern means and resources relating to warfare. Undoubtedly in this time sufficient experience had already been had to furnish forth a body of doctrine under this head. Unfortunately there had been great difficulty in getting trustworthy news, and this because of the rigor of the censorship imposed. Indeed it may be said that this censorship was itself a marked feature of the present conflict. Foreshadowed in the Russo-Japanese War, it had by 1914 received universal application, and might be expected to prove the rule in future contests. Related to this matter was the disappearance of the war-correspondent: he simply ceased to exist at the front.

Recalling here the operations that have taken place in the East and in the West, two great facts stand out:

- (1) The enormous numbers engaged; hence, necessarily,
- (2) the enormous extension of continuous battle lines.

Never before in the recorded history of mankind have the numbers engaged been so great, the combat fronts so long. In respect of these matters, the expected happened. Military critics of the opening months of the war have to deal with certain features that have developed during the operations of 1914, and in so doing must distinguish between those of the two fronts.

Great numbers make excessive demands upon the service of transportation. Accordingly not only have the railroads been called upon, but motor transportation has been extensively used for the carriage of men and supplies. In these campaigns we shall probably discover that railways have not only strategic but tactical functions, and on a scale never before attained. Motor transport calls for no special remark, save that its use had long been foreseen and preparation made accordingly. The Western theatre with its many excellent roads naturally lent itself to this mode of conveying men and supplies. Powerful trucks were used to haul heavy guns and some automobiles were even so equipped with curved rods and a cutting edge in front, that they could, as it were, charge a barbed-wire entanglement or obstacle, cut through it and deflect the separated wires to the sides. More novel was the use of armored motor cars, carrying rapid-fire guns. More novel yet were motor batteries. According to the early press reports, these, of Austrian origin, consisted of 30.5 centimeter (12-inch) mortars, firing a shell weighing 385 kilograms and transported by 100-horsepower motor lorries on three trail wagons. It was said that these motor batteries were used at the siege of Namur and at Maubeuge.

The conflict in the West early took on a singular aspect. Checked on the Marne, and pushed back to the Aisne, the Germans successfully resisted every effort of the Allies to turn their right. The result at the end of 1914 was

SCENES FROM THE GREAT WAR

two armies at grips on a line over 250 miles long, and neither able to secure any significant advantage over the other. Both sides were most strongly entrenched, the lines at some points being only a few yards apart. So even was the struggle, up to this time, that an advance of a very few hundred yards, the capture of a few yards of trench, were regarded as successes of consequence. Each army was, as it were, besieging the other. Naturally in a conflict of this sort, resort was had, as was the case at Port Arthur, to mining and counter-mining. Machine guns and artillery played, and continued to play, a great part. In fact the contest may be said early to have become one of artillery, and the critic is forced to await the official reports before the influence of these elements can exactly be measured. At the end of the year it was known, however, or believed to have been known, that the French 75-millimeter gun had proved a most superior piece and that it was admirably handled. These results were expected. There seemed to be no doubt, however, that in the matter of heavy guns to accompany the armies in the field, the French were at the outset of the war overmatched by the Germans. These sprung a surprise not only on their adversaries but on the entire world, in their heavy artillery, or, more accurately, howitzers. If we were to believe the news persistently laid before the public, the largest of these howitzers had a calibre of not less than 42 centimeters, or nearly 16.5 inches. This piece, so it was reported, was used in reducing Liège, Maubeuge, and Antwerp, and under its fire, works that had been supposed to be able to hold out for weeks if not for months, fell in as many days. The strongest steel and concrete forts crumbled under its attack. According to some, this piece was of Austrian manufacture. The difficulties of transporting it with its ammunition though great are not insuperable. Motor transport, of course, was employed wherever possible; when this was not available as many as 40 horses were reported to have been used. This piece, if it was really brought into service, casts into the shade the employment of smaller calibres such as the 11-inch, itself no mean achievement. According to newspaper reports, the balance in the matter of heavy pieces at the end of the year was by way of being restored. The French had, or were soon to have, a 105-millimeter piece, and the English a 15-inch howitzer. If heavier or other pieces were to be furnished, no news of them had been allowed to reach the outer world. But it was only logical to assume that the Allies must devise some way of opposing the very effective heavy German guns.

The success of the German attack on permanent fortifications involved a thorough overhauling of the entire subject: the gun had proved more powerful than the fort. The textbooks required to be rewritten, as an entirely new point of view had been established.

The question may well be asked how it was that after five months' fighting no decisive results had been obtained in the West; in other words, how it could be that two gigantic armies should come to a state of deadlock. And especially is this question pertinent in view of the fact that at the outset one of the antagonists had the advantage of the offensive and had apparently almost gained his objective. There can

in our opinion be but one answer to this question: the introduction into warfare of air-scouting. Memorable as, for many reasons, this war will ever be, it will be especially notable as the first in which air-scouting was called upon to exert a dominating influence on operations. Hence surprises have proved impossible: if any concentration of troops or other preparation was made for assault or attack or operation at any particular point or region, warning was at once given to the opposing army by its air-scouts. Not only this, but the movements of troops at a distance, even great, could be and undoubtedly were reported, and their purpose neutralized almost before undertaken. Air-scouting, also, proved of especial value to the opposing artilleries in designating targets, making known the range, and correcting the fire.

Of the offensive employment of air craft, that is of their use to drop bombs or other projectiles, much less may be said. This is due partly to the censorship already mentioned, which could more easily conceal such employment than scouting proper; partly to the fact that the offensive use of air craft, and especially of the *aéroplane*, has been comparatively neglected; but mostly we imagine to the far greater value of air craft as instruments of reconnaissance than of destruction.

On the outbreak of the war air raids were undertaken by the French over German territory, but without result. Similarly the frequent flights made by the Germans over Paris, etc., have amounted to nothing. Greater success apparently befell the English, whose aviators were reported to have destroyed portions of the German establishments at Düsseldorf and Friedrichshafen. Some *aéroplanes* used a cannelured steel dart about 6 inches long; in other words, undertook to shoot arrows. It was found that these, when dropped from a considerable height, would penetrate a pine plank an inch thick; hence, they might conceivably be efficacious against troops in mass, especially cavalry.

Up to the end of 1914 the war had proved the value of the *aéroplane* rather than of the airship (*Zeppelin*, etc.), and in reconnaissance rather than in offense. Mr. Henry Woodhouse in *Flying* of September, 1914, made the following estimate of the strength in air craft of the chief nations engaged:

France: *Aéroplanes*, 1200 military, 500 added since by acquisition of private machines and output of factories. *Dirigibles*, 12 of close to 400 feet in length; 14 of less than 300 feet in length; 5 privately owned, or 31 altogether.

Germany: *Aéroplanes*, 600 military, 400 added since by acquisition and output of factories. *Dirigibles*, 12 *Zeppelins* of from 350 to 490 feet long; 23 dirigibles of other types, including those privately owned.

Russia: *Aéroplanes*, 800 military, 150 added since. *Dirigibles*, 16 of different types, but mostly under 250 feet in length.

England: 200 seaplanes; 300 army *aéroplanes*; 300 added since. *Dirigibles*, 15, mostly new, up-to-date machines acquired in the past 12 months.

Austria: *Aéroplanes*, 350, of which all but 100 have been acquired since the beginning of hostilities. *Dirigibles*, 10, mostly under 300 feet in length.

Belgium: *Aéroplanes*, 40, and 40 acquired

since the beginning of hostilities. Dirigibles, 2, one medium size, and one small.

Servia: Aëroplanes, 40; dirigibles none.

With the war in progress the British had cause to regret their persistent neglect of Lord Roberts's advice. Had they at the outbreak of the war been able to cross the Channel with 500,000 men, the war in the West would probably have been over. As it was, they were reported to have enlisted far more than 1,000,000 men, and to be endeavoring to train this enormous number to take the field in the spring of the year 1915. This particular task was made all the more difficult by the lack of officers competent to take charge. The mortality among the British officers at the front was very great, and the same may be said of the Germans and the French. Up to the end of 1914 the casualties of all sorts killed, wounded, and prisoners, of all the combatants are not far from 2,000,000; prisoners, of course, make up by far the greater part of this number. It was reported that the mortality from wounds is very low; the lowest that had ever occurred. Exact figures, however, can no more be given under these heads than under any other concerning the war at the time set for the period under review.

Of the theatre of war in the East, the news during the year was meagre and untrustworthy. Such reports as were furnished by the combatants themselves were not infrequently contradictory. However, it could be asserted of the operations in this quarter, that they were more old-fashioned, if that word be permissible, than those in the West. Railways were fewer; roads fewer and poorer: hence the deadlock characteristic of the struggle in the West had not yet occurred in 1914; there had been a wider field for strategy. The numbers engaged were, like those in the West, enormous, and therefore the fronts occupied much extended.

As already intimated, only approximate statements are possible with regard to the details of this war. In conclusion, a few remarks of a general character are, however, warranted. The war proved in some respects one of contrasts. The conception of two armies in the field each besieging the other was, in Europe at least, novel. The earliest example of this type of contest is furnished by Lee's and Grant's armies in the lines around Petersburg in 1864-65. The resulting processes necessarily were well known. For example, the bayonet was most efficaciously called into action, though it was not so many years ago that its abandonment was recommended by certain authorities. At the end of the year it was admitted that this war bids fair to be of long duration, thus contradicting the assertion so freely made in past years that all future wars would necessarily be short. The change in the assumed national traits of the French and the Germans deserves passing notice. The French exhibited strength on the defense not popularly expected of them. Fifty years earlier a retreat like that from Belgium to the Marne might have spelled final disaster. The Germans showed an ardor, a spirit, in the attack not usually assumed of them as a quiet, more or less plodding people. The two sides seemed to have exchanged qualities, without any loss of their traditional qualities. The matter is easily explained; the Germans have for years been trained in the belief that the assault carried through, no matter how costly, was the best

if not the only way to achieve victory. The French, since 1870, have been schooled in the great need of steadiness, and of patience.

Lastly, the great principle that victory comes from the conclusive defeat of the hostile armies, rather than from the capture of towns, fortresses, capitals, or provinces, early received full recognition.

UNITED STATES

MEXICAN RELATIONS. In the United States, a state of peace reigned during 1914. Vera Cruz, to be sure, was occupied by American forces on April 28, 1914, and evacuated by them about December 1, but this occupation led to no hostilities. The Mexican situation in general, however, continued to cause the administration anxiety, but to the end of the year led to no breach of peace. The entire Mexican border, 1703 miles, from Brownsville, Texas, to the neighborhood of San Diego, Cal., was observed and patrolled; on this duty over 20,000 men have been employed. Local conditions in the coal regions of Colorado necessitated the dispatch of United States troops to that State in April. United States troops were also sent, in September, to Butte, Mont., and in November to Fort Smith, Ark., to check local troubles of a serious character. On account of the pressing necessity for them elsewhere, the troops guarding the National parks have been withdrawn.

ABANDONMENT OF USELESS POSTS. No progress was made in relieving the United States War Department of the burden of maintaining isolated and useless posts. However important these, or some of these, may have been in times past, they are of no importance now. On the contrary, in so far as they prevent the proper concentration of troop units, they are hurtful. In spite of this fact, which ought to dominate the situation, local interests have proved to be more powerful than national interests, and Congress so far has admitted no remedial legislation.

NATIONAL DEFENSE. The European War has naturally directed attention to the question of national defense. A demand accordingly arose for an investigation of resources, with a view to correcting defects, and to setting in order the house of the American people against a possible day of trouble. Far as was this demand from connoting any intention of militarizing the nation, of converting the country into a military camp, yet it raised a loud protest in certain quarters. It was believed, however, that this protest would be in vain, and that common sense would be found ultimately to control the matter. The Chief of Staff [General Wotherspoon], in his report, recommended an army of 500,000 men, 205,000 to constitute the standing army proper, and the remainder the reserve. The Secretary of War's recommendation of what should be immediately done, "is to fill up the existing organizations . . . to their full strength. This would require 250,000 men. In addition . . . we should be authorized to obtain 1000 more officers." The Volunteer Army Bill passed the Senate April 20, 1914; it had passed the House Dec. 13, 1913. It provides for raising volunteer forces of the United States in time of actual or threatened war, and was regarded by the Secretary of War "as the most important piece of military legislation which has been dealt with by Congress for many years past." The question of proper cavalry organization was still be-

AÉRONAUTICS IN THE EUROPEAN WAR

ing debated at the end of the year. The War Department had published and issued new (experimental) drill regulations for this arm; on the whole they were not received with favor, objection being made to the double instead of the single rank formation. Nothing was done during the year to remedy the deficiencies in infantry and field artillery.

STUDENT'S CAMPS. Should the United States be called upon to engage in war, one of the great deficiencies which the people would immediately be called upon to face would be that of trained officers. Of the small number of regular officers, many, if not most, would be called to higher commands, and the wear and tear of conflict would soon reduce the remainder. The same remark is true of such officers of the National Guard as would be competent to take up the responsibilities of command. Hence much interest attached to an experiment, in its second year in 1914, whereby the country would have available, on the outbreak of war, a number of young men not wholly ignorant of the duties of a subaltern in campaign. The experiment consisted in the establishment of two "Students' Military Instruction Camps," in which young men between the ages of 18 and 30 in universities, colleges, and the graduating classes at high-schools should receive some instruction, both theoretical and practical, in the elements of the military profession. The great success of these camps of 1913, led to the establishment of four in 1914. As stated in Bulletin No. 1, series of 1914, War Department, "The object of the camps is to give the young men of the country opportunity for a short course in military training, the better to fit them to discharge their military duty should their country ever stand in need of their services. The summer vacation period is selected to enable students to attend with the least inconvenience and greatest instructional advantage." Among the subjects taught in 1914 were (a) the theoretical principles of tactics, including advance and rear guards, patrols, outposts, and combat; (b) military map making and road sketching; (c) the proper handling and use of the rifle; (d) physical drill, marching, camping, tent pitching, etc. (by practice); (e) use and duties of the different arms and branches of the service (infantry, field artillery, cavalry, engineers, signal troops, and the medical corps). It will be recognized at once that this programme was a tolerably comprehensive one; the idea has proved most popular, and the "plan meets with the approval of all university and college authorities heard from on the subject, among whom are the heads of the majority of the larger educational institutions in the country." In fact, the matter has passed the experimental stage; the camps will be continued in 1915.

AVIATION. The aviation service of the United States army received legislative sanction by an act approved July 18, 1914. This act created an aviation section, "which shall be a part of the Signal Corps of the Army," and is "charged with the duty of operating or supervising the operation of all military air-craft." Sixty officers, and two hundred and sixty men, of all grades, constitute the section, apart from such officers and men as may be authorized from the signal corps proper. Aviation officers are to be of two classes, junior military aviators, and military aviators; to these must be added so-called aviation students, who must be unmarried lieutenants of the

line of the army, not over 30 years of age. These three classes make up the 60 officers. Aviation officers are to be selected from lieutenants of the line of the army: students are attached to the section for a sufficient time, not to exceed one year; aviation officers shall serve as such for periods of four years, unless sooner relieved. Students receive an increase of 25 per cent of their pay; junior aviators are to have the rank, pay, and allowances of one grade higher than that of their line commissions, if not higher than first lieutenant, and while on duty requiring frequent and regular participation in aerial flights, an increase of 50 per cent of their line pay. The same rules apply to aviators, except that their increase of pay shall be 75 per cent. The military aviation meet at San Diego, in October, resulted in failure.

ORDNANCE AND ARTILLERY. During the year a number of 14-inch guns of increased power were completed and successfully tested. Some of these were to be mounted in turrets in the defenses of Manila Bay and of the Panama Canal. These guns would impart to a 1660-pound projectile a muzzle velocity of 2250 foot seconds, with a maximum range of about 18,000 yards, and a theoretical penetration of 11.2 inches on normal impact of the best armor, at 15,000 yards. Twenty-three of the latest type of mortar were completed during the year, and issued for the Panama Canal defenses. A new type of 3-inch field gun, and of 3.8-inch field howitzer was developed. A drop block was instituted for the swinging breech block heretofore used. Liberal appropriations had reduced the time for completing the project of field artillery guns and carriages, from 1925, to 1920, and for providing reserve ammunition, from 1929, to 1919. A new machine gun, water cooled, the Vickers, was tested for the army, and was likely to be adopted. It was objected to this gun that its fire was too rapid. Its retainer holds 250 cartridges, and it will therefore fire 250 rounds with one loading. In the hands of untrained troops this might lead to waste of ammunition. The press, towards the end of the year, reported a remarkable invention by John Hays Hammond, Jr. According to these reports, this invention consisted in the control from a wireless station of a torpedo. According to General Weaver, Chief of Coast Artillery, "Mr. Hammond . . . has worked out the details of radio control so as to apply it in the form of a spar torpedo to a motorboat. His further experiments point to a satisfactory solution of the problem of applying his equipment to a submerged torpedo under radio control from shore. The distance to which this control can be exercised is limited only to the distinctness of vision aided by telescopes." If it should prove successful, this new weapon would prove of extraordinary value to American coast defenses. Although not adopted by the United States, yet as being of American origin, it is proper here to draw attention to the great success of the Lewis gun in the hands of the Allies.

MILITARY TERRITORY OF THE NIGER. A territory of the French West Africa government-general. Zinder is the capital. The country is well adapted to agriculture and grazing; the Touaregs devote themselves to the raising of camels, and the Peuhls to the raising of cattle and sheep. The imports in 1912 were valued at 890,000 francs—cottons, 575,000; kola nuts, 78,000; sugar, 32,000, etc. Exports, 852,-

000 francs—live animals, 320,000; salt, 162,000, etc. There are no railways. Transport is by packed animals. A commandant (Colonel Venel, in 1914) administers the territory under the control of the Lieutenant-Governor for Upper Senegal and the Niger. See FRENCH WEST AFRICA.

MILITIA. The year 1914 was one of great activity in the Organized Militia, and more progress was made toward the creation of an efficient field force than in any other past year. The commissioned strength suffered considerable diminution, but this was partly due to the elimination of surplus staff officers, and to that extent represents a forward step in the progress of the Organized Militia. The enlisted strength owes its large increase partly to the existence at one period during the year of the anticipation of immediate active service. The National Militia Board held its annual meeting early in the year. Its meeting was held at the same time as that of the Association of Adjutants General of the Organized Militia, and constant communication was maintained between the two bodies to the benefit of both. Many important recommendations were made as a result of this meeting.

STRENGTH OF THE ORGANIZED MILITIA IN 1913 AND 1914, AS REPORTED BY INSPECTING OFFICERS, AND DETAILED STATEMENT OF GAINS AND LOSSES

* No Organized Militia (mustered out May 20, 1906).

These included a recommendation of change in the method of allotment of funds appropriated under the militia law; the enactment of rules to prevent abuse of Federal funds at target practice; legislation to make more effective the National Militia Board; legislation providing for leave of absence without loss of pay or time for Federal employees who are members of the Organized Militia.

During the year a bill was prepared and agreed upon by representatives of the War Department and the Organized Militia, to provide for the pay of militia. The bill met with the approval of the Secretary of War, and was sent to the militia committee in Congress. No final action had been taken on the bill at the end of the year.

The use of typhoid prophylactic was undertaken on a somewhat extended scale during the year. Sufficient serum was issued to inoculate nearly 30,000 members of the militia. During the year considerable progress was made in preparing the necessary forms and instructions for the induction of the Organized Militia into the service of the United States. It is believed that by the use of these forms the Organized Militia can be called out to Federal service within a reasonable time. The Chief of the Division of Militia Affairs points out in his annual report the importance of the creation of a reserve system. He declares that in the event of war in the lack of such a system, a delay in the training, arming, and equipping of troops would occur just at the time when the organizations were needed. In addition to this, there would be repeated the same unnecessary loss of life from preventable diseases which occurred in the Spanish-American War. He also emphasizes the importance of encampments and maneuvers to be held in connection with the regular troops. The table in the adjoining column shows the strength of the Organized Militia in 1913-14.

During the year, \$6,499,552 was disbursed from Federal appropriations for the support of the Organized Militia.

MILK. See CHEMISTRY, INDUSTRIAL; DAIRYING.

MILLER, DARIUS. An American railway official, died Aug. 23, 1914. He was born in Princeton, Ill., in 1859, and was educated in the common schools. In 1877 he began railway service as stenographer in the general freight office of the Missouri Central Railway. He rose rapidly, until in 1883 he was appointed general freight and ticket agent of the Memphis and Little Rock Railway, serving in this position until 1887, when he became general freight and passenger agent and traffic manager of the St. Louis, Arkansas, and Texas Railway. From 1890 to 1893 he was traffic manager of the Queen and Crescent route, and from 1893 to 1898 was traffic manager and vice-president of the Missouri, Kansas, and Texas Railway. In the latter year he was appointed second vice-president of the Great Northern, and in 1902 he became first vice-president of the Chicago, Burlington, and Quincy Railway, and president in 1910.

MINERALOGY. Apart from the usual routine investigations concerning the chemical, physical, and crystallographic properties of minerals, which are of interest chiefly to the specialist, the year's work included some researches of general importance, and the description of several new species. Allen, Crenshaw, and Merwin continued their researches into the conditions sur-

rounding the formation of iron and zinc sulphides, a subject they had discussed in an earlier paper that was reviewed in the YEAR BOOK for 1912. Their work has been carried on at the Carnegie Geophysical Laboratory, where the facilities for dealing with the problems of mineral genesis are absolutely unrivaled. The results of the recent study confirm the earlier data as to the mutual relations of these minerals. Pyrite and sphalerite represent the stable forms, deposited from heated alkaline solutions; the unstable compounds, marcasite and wurtzite, are the products of acid solutions at ordinary surface temperatures. The higher the temperature of the solution, other things being equal, the more the proportion of the stable to the unstable minerals, while increasing acidity of the solution, without change of other conditions, reverses the relations. It would appear, thus, that pyrite and sphalerite are formed by hot alkaline solutions, and their deposits indicate normally a considerable depth of origin, whereas marcasite and wurtzite accumulate under atmospheric conditions within the superficial zone.

The important ore of copper, bornite, according to Kraus and Goldberg, is not a definite chemical compound, although most authorities assign to it a specific formula. The discrepancies that exist between many analyses of the mineral, and the common formula, usually have been considered as anomalous or due to admixture, but a reexamination of some of the typical material, as well as of new specimens, shows that the variations can not be so explained. The copper sulphide molecule (Cu_2S) exists in widely different proportions, relative to the iron sulphide (FeS_2), from which a regular progression may be observed between the proportions demanded by the formula ($\text{Cu}_x\text{Fe}_y\text{S}_z$ to $\text{Cu}_{10}\text{Fe}_8\text{S}_{14}$). In the latter end of the series bornite approaches the composition of chalcocite, and in the former it approaches chalcopyrite; the three minerals, in fact, form a chemical and crystallographic group, although they crystallize in three different systems.

The formation of dolomite, and the conditions of stability of the minerals, calcite, dolomite, and magnesite during the process of their deposition, were discussed by R. C. Wallace, who applied the principles of physical-chemistry to the problems, a method of attack that has proved very informative in regard to many obscure questions of rock and mineral genesis. Dolomite originates in several ways: by the release of magnesium salts from decomposing algae, and permeation of calcareous deposits as they are in process of accumulation on the bed of the ocean; through evaporation of the waters of inland seas, when calcite will first be thrown out of solution, but after the magnesium ions attain a certain degree of concentration, dolomite is precipitated; by the percolation of magnesium-bearing waters through limestone beds, with, at first, solution of calcite, and later, precipitation of dolomite; and in many instances, perhaps, by the leaching of limestone beds by acid meteoric waters. In the three methods first noticed, calcite is primarily the stable, solid phase, and dolomite only forms after concentration of the magnesium ions to a point where the calcite becomes unstable and passes into solution. The three minerals form an isomorphous series of a somewhat restricted relationship; calcite is miscible to a limited extent with dolomite, and the latter with mag-

nesite. According to Foote and Bradley, who examined, chemically, specimens of calcite that had been formed in presence of dolomite, calcite may hold about 1 per cent of dolomite in solid solution. On the other hand, dolomite seems to possess the capacity of holding a considerable excess of calcite over the amount demanded by theory.

DIAMONDS. The discovery of a second locality for diamonds in North America, where these stones occur in their original surroundings, is of interest, although apparently the deposit has little commercial importance. The locality is in the Tulameen district, British Columbia, and was brought to light by a member of the Canadian Geological Survey. The diamonds are extremely small and are distributed through peridotite rock that is intrusive in strata containing little or no carbonaceous matter; it is thought that the carbon represents an original constituent of the igneous magma. In view of the rather wide distribution of diamonds in surface deposits, other deposits of the same type will doubtless be found.

NEW MINERALS. The following minerals, during 1914, were described as new species. *Temie-kamite* is a nickel arsenide, having four atoms of nickel to three of arsenic, metallic, silver white, not found in crystals. It comes from Elk Lake, Ontario. *Cobalt-nickel pyrite* is a compound of the two metals with iron and sulphur, isomorphous with pyrite, and steel gray in color. The locality is Müsen, Germany. *Epidesmine*, a hydrous lime-alumina silicate of the zeolite class, is from Schwarzenberg, Saxony. *Hodgkinsonite* is an addition to the long list of new species that have been unearthed at Franklin Furnace, N. J. It is a zinc-magnesium silicate of monoclinic habit. *Yukonite* contains iron and calcium united to arsenious acid. It comes from Tagish Lake, Yukon Territory. *Empressite* belongs to the silver tellurides, containing silver and tellurium in the atomic proportions of one to one. It is described from examples found in the Empress Josephine mine, Kerber Creek district, Col. *Scarlesite* is a sodium borosilicate, from Searles Lake, Cal. Its formula resembles that of analcite; but the alumina of the latter is replaced by boron. *Wilkeite*, a complex calcium salt of phosphoric, silicic, carbonic, and sulphuric acids, bears resemblance to members of the apatite mineral group. It is found at Crestmore, Riverside Co., Cal. *Maucherite* is a nickel arsenide, three atoms of nickel to two of arsenic, from Eisleben, Thuringia. A monoclinic modification of calcite, occurring in hair-like crystals without cleavage, is named *lublinite*.

MINERAL PRODUCTION OF THE UNITED STATES. Copper and gold showed decreased production in 1913 as compared with 1912. The decrease in the production of copper was due in part to labor troubles in the Lake Superior district, and to generally unfavorable trade conditions which depressed prices and restricted mining operations, while the decreased production of gold seems to be due to the failing supply in some of the old and large producing districts, to replace which, new territory has not yet been developed. The maximum production of copper was made in 1912 when the value of the metal was \$205,139,338, but declines in prices and smaller production in 1913 brought the value of the copper product down to \$189,795,035. The gold production also attained its maximum in 1912, amounting in that year to \$93,-

451,500, but the value of gold produced in 1913 was about \$4,000,000 less.

With pig iron the basis of iron values, and the refined metals (smelter production) the basis of values for gold, silver, copper, lead, zinc, etc., the total value of the mineral production of the United States in 1913 was \$2,445,805,017, compared with \$2,243,972,481 in 1912. The four leading States in 1913 as in 1912 were Pennsylvania, Ohio, Illinois, and West Virginia. With iron ore as the basis of iron production, and with the recoverable metallic contents of ores as the basis of other metal output, the total value of the mineral production in 1913, was \$2,103,739,388, compared with \$1,918,474,249 in 1912. The same four States remain at the head but in different order of precedence, all holding their rank because of their leading positions in the production of coal. Pennsylvania remains at the head, with West Virginia second, Illinois third, and Ohio fourth. These four States produced about 45 per cent of the total value of the mineral output of the United States in 1913. California, with no standing as a producer of pig iron, iron ore, or coal, is fifth in rank, and owes its position to its importance as a producer of petroleum and gold. Michigan was sixth in rank in 1912,

but because of the decrease in the production of and price of copper in 1913, dropped to eighth place, while Minnesota, as the most important producer of iron ore, advanced from ninth to sixth place, and Oklahoma, because of the increase in the production and the advance in the price of petroleum, advanced from twelfth place in 1912 to seventh in 1913. Michigan's production of iron ore increased in value in 1913, but this was not sufficient to overcome the large decrease in the value of copper. Arizona, which ranked eighth in 1912, fell to ninth place in 1913, and Montana, which held seventh place in 1912, dropped to tenth place in 1913, both of these being due to the decline in the copper production and value. Colorado, with gold, coal, and zinc as the principal products, ranked eleventh in both years, and Missouri, with lead and zinc as its chief products, fell from tenth to twelfth place because of the decline in the price of zinc. In the following table the States are arranged in the order of their rank as shown by the value of their mineral products in 1913, iron ore being taken as the basis of iron production, and the recoverable contents of the gold, copper, lead, zinc, etc., being taken as the basis of valuation of these metals:

RANK OF STATES IN VALUE OF MINERAL PRODUCTION IN 1912 AND 1913

State	Principal mineral products in 1913 (in order of value)	Rank 1912	Value 1912	Rank 1913	Value 1913
Pennsylvania	Coal, cement, clay products, natural gas	1	\$445,799,653	1	\$506,466,759
West Virginia	Coal, natural gas, petroleum, clay products	2	123,847,812	2	143,640,683
Illinois	Coal, petroleum, clay products, cement	3	123,068,867	3	131,825,221
Ohio	Coal, clay products, petroleum, natural gas	4	111,229,656	4	121,690,661
California	Petroleum, gold, cement, copper	5	98,219,149	5	100,791,369
Minnesota	Iron ore, clay products, stone	9	66,672,729	6	85,814,533
Oklahoma	Petroleum, coal, natural gas, zinc	12	53,614,180	7	80,168,820
Michigan	Iron ore, copper, cement, salt	6	80,062,486	8	72,143,211
Arizona	Copper, gold, silver, lead	8	67,497,838	9	71,429,705
Montana	Copper, silver, coal, zinc	7	71,620,873	10	69,307,056
Colorado	Gold, coal, zinc, silver	11	58,167,399	11	54,294,281
Missouri	Lead, zinc, coal, clay products	10	58,382,550	12	54,001,088
Utah	Copper, silver, lead, coal	13	51,004,942	13	53,606,320
Indiana	Coal, cement, clay products, stone	14	42,239,193	14	46,607,864
New York	Clay products, stone, cement, iron ore	16	38,431,910	15	41,594,052
Nevada	Copper, gold, silver, zinc	15	39,111,828	16	37,842,084
New Jersey	Clay products, zinc, cement, stone	17	37,195,940	17	37,271,129
Alabama	Coal, iron ore, clay products, stone	18	30,641,983	18	34,660,545
Texas	Petroleum, coal, clay products, cement	21	22,797,015	19	31,666,910
Kansas	Coal, cement, natural gas, petroleum	19	26,554,967	20	27,312,563
Kentucky	Coal, clay products, stone	23	22,477,530	21	26,845,579
Iowa	Coal, clay products, cement, gypsum	20	22,900,350	22	25,602,015
Idaho	Lead, silver, copper, gold	24	21,816,390	23	24,565,826
Tennessee	Coal, copper, stone, phosphate rock	25	19,862,209	24	21,052,931
Louisiana	Petroleum, sulphur, natural gas	26	15,357,841	25	21,011,828
Alaska	Gold, copper, silver, stone	22	22,732,947	26	19,636,213
New Mexico	Copper, coal, silver, zinc	29	14,391,355	27	17,862,369
Washington	Coal, cement, clay products, stone	27	15,847,313	28	17,579,743
Virginia	Coal, clay products, stone, iron ore	28	14,995,842	29	17,178,580
Wyoming	Coal, petroleum, iron ore, stone	31	13,374,088	30	13,682,091
Wisconsin	Zinc, stone, iron ore, clay products	30	14,192,287	31	12,452,480
Maryland	Coal, clay products, stone, cement	32	10,851,671	32	11,292,723
Florida	Phosphate rock, clay products, fuller's earth, stone	33	10,272,594	33	10,508,016
Vermont	Stone, slate, talc and soapstone	34	9,087,560	34	9,647,985
South Dakota	Gold, stone, silver	35	8,486,240	35	7,888,411
Massachusetts	Stone, clay products, lime, mineral waters	36	6,654,514	36	7,044,529
Arkansas	Coal, bauxite, clay products, stone	38	6,258,726	37	6,780,760
Georgia	Clay products, stone, cement, coal	37	6,306,140	38	6,525,792
Maine	Stone, lime, clay products, mineral waters	39	3,925,526	39	4,429,584
Connecticut	Stone, clay products, lime, mineral waters	40	3,715,480	40	3,795,297
North Carolina	Clay products, stone, mica	41	3,368,923	41	3,739,696
Oregon	Gold, clay products, sand and gravel, stone	42	2,553,549	42	3,563,919
New Hampshire	Stone, clay products	43	1,949,876	43	2,218,925
South Carolina	Clay products, phosphate rock, stone	44	1,606,989	44	1,464,150
Nebraska	Clay products, stone, sand and gravel	45	1,490,582	45	1,433,718
Mississippi	Clay products, sand and gravel	46	1,242,528	46	1,143,472
North Dakota	Coal, clay products	47	1,025,741	47	1,055,676
Rhode Island	Stone, clay products	48	942,842	48	813,952
Delaware	Stone, clay products, sand and gravel	49	425,860	49	541,542
Dist. of Col.	Clay products, sand-lime brick	50	300,336	50	246,582
Total			\$1,918,474,249		\$2,103,739,388

It must be remembered that in this table iron ore, not pig iron, is taken as the basis of iron valuation, and that in the case of other metals mine production (recoverable content of metals) is considered. With pig iron and the smelter figures for other metal production taken as the basis, in conformity with the usual custom, the total value of the mineral production of the United States in 1913 was \$2,445,805,017, against \$2,243,972,481 in 1912, the increase in the later year being \$201,832,536, or 8.99 per cent.

The States west of the Mississippi River, and especially those of the Rocky Mountain and Pacific coast divisions, are popularly considered as the mining States. It is interesting to note that of the ten leading States in 1913, five—Pennsylvania, West Virginia, Illinois, Ohio, and Michigan—are east of the Mississippi River; four—California, Oklahoma, Arizona, and Montana—are west of it; and one—Minnesota—is divided by the river. The combined production of all the States east of the Mississippi River, which aggregate less than 30 per cent of the total area of the country, exclusive of Alaska, is nearly two-thirds of the total; whereas the States west of the river, which aggregate about 70 per cent of the total area of the country, contribute more than one-third of the total value of the output.

The metal group in 1913 showed a particularly interesting comparison to 1912. Of the six important metals, three showed increases, and three decreases. The production of pig iron exclusively from domestic ore increased from 28,981,195 long tons, valued at \$402,378,453, to 29,145,034 tons, valued at \$439,633,768; copper production decreased from 1,243,268,720 pounds to 1,224,484,098 pounds, with a decrease in value from \$205,139,338 to \$189,795,035; the value of the gold decreased from \$93,451,500 to \$88,884,400; the production of silver increased from \$39,197,500 to \$40,348,100; the lead production (smelter output) increased from 415,395 tons, valued at \$38,385,550, to 436,430 tons, valued at \$38,405,840; and the output of zinc increased in quantity from 323,907 to 337,252 short tons, and declined in value from \$44,699,166 to \$37,772,224. The combined value of these metals in-

creased from \$822,251,507 to \$834,839,355, a gain of \$12,587,848, or 1.53 per cent. The three fuels—coal, petroleum, and natural gas—increased from \$944,383,275 in 1912 to \$1,085,456,850 in 1913, a total gain of \$141,073,575, or 15 per cent. By far the largest gain, both in amount and percentage of value, was in the output of petroleum. For a more detailed discussion of the quantity and value of metals, see the representative articles in their alphabetical order.

PRODUCTION OF GOLD IN THE UNITED STATES DURING 1914

State or Territory	Fine ounces	Value
Alabama	590	12,200
Alaska	766,744	15,850,000
Arizona	218,113	4,508,800
California	1,037,537	21,447,800
Colorado	961,748	19,881,100
Georgia	552	11,400
Idaho	51,568	1,066,000
Montana	190,361	3,985,100
Nevada	532,309	11,003,800
New Mexico	58,418	1,207,600
North Carolina	5,752	118,900
Oregon	77,134	1,594,500
South Carolina	295	6,100
South Dakota	353,621	7,810,000
Tennessee	285	5,900
Texas	498	10,800
Utah	153,842	3,180,000
Virginia	48	1,000
Washington	29,383	607,400
Wyoming	106	2,200
Philippine Islands	51,282	1,060,100
Porto Rico	150	8,100

Total 4,490,386 \$92,823,500

These figures compare with a production in 1913 of \$88,884,400, showing a gain in the gold product of \$3,939,100.

MINERAL PRODUCTS OF THE UNITED STATES Calendar Years 1912 and 1913

Product	1912		1913	
	Quantity	Value	Quantity	Value
METALS				
Pig iron (a) (spot value b).....long tons (2,240 lbs.)	30,180,969	\$420,563,888	30,888,935	\$458,842,845

Total value of metals	867,103,085	882,980,156
Estimated value of mineral products unspecified (s)	500,000	500,000
Grand total	2,243,972,481	2,445,805,017

a Marketed production of iron ore. 1912: 57,017,614 long tons; value at mines, \$107,050,158. 1913: 59,648,098 long tons; value at mines, \$130,905,558.

b By "spot" value is meant value at the point of production.

c Ferro-alloys include ferromanganese and spiegeleisen, ferro-silicon and ferrophosphorus, ferromolybdenum, ferrotitanium, ferrotungsten, and ferrovanadium. The ferro-alloys are made chiefly of foreign ores. Pig iron in 1910 included ferro-alloys valued at \$7,423,502.

d Average price per troy ounce in 1912, 61.5 cents; in 1913, 60.4 cents.

e Since 1905, coinage value, \$20.671834625323.

f The product from domestic ores only.

g Of 76½ avoirdupois pounds net; of 75 avoirdupois pounds net since June, 1904.

h Includes antimony smelted from imported ores, and also antimony contained in hard lead.

i Includes nickel in copper-nickel alloy, and in exported ore and matte.

j Included under unspecified products.

k In 1912, from Alaska. In 1913, from Alaska, South Carolina, and South Dakota.

l Including brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania. Coke, 1912: 43,983,599 short tons; value at ovens, \$111,805,113. 1913: 46,299,530 short tons; value at ovens, \$128,922,273.

m Value of clay mined and sold as unmanufactured clay. 1912: \$8,946,020. 1913: \$4,180,459.

n Includes limestone for iron flux, but not grindstones.

o Included under feldspar and silica (quartz).

p Includes metallic paint, mortar colors, ochre, umber, sienna, shale, ground slate; in 1912, also zinc oxide; in 1913, also zinc oxide, but no whitening nor zinc-lead.

r Estimated value of recoverable radium in ore when extracted.

s Unspecified products include nitrate of soda, carbonate of soda, sulphate of soda, and alum clays used by paper manufacturers, and also the various products noted under the respective years. The value was estimated at \$500,000 in 1913.

MINERAL SPRINGS. See HYDROTHERAPY; and SARATOGA SPRINGS.

MINER'S ANÆMIA. See HOOKWORM DISEASE.

MINES, BUREAU OF. See UNITED STATES, Bureau of Mines.

MINES, SUBMARINE. See NAVAL PROGRESS.

MINIMUM WAGE. The first American State to enact a minimum wage law was Massachusetts in 1912. It was followed in 1913 by California, Colorado, Minnesota, Nebraska, Ore-

gon, Utah, Washington, and Wisconsin. In 1914 the only legislation dealt with modifications in the Massachusetts' law; but various developments occurred. There were commissions of investigation at work in Indiana, Michigan, Missouri, New York, and Ohio.

The legislation in America was immediately due to the enactment in 1910 of a Trades Boards Act in England, which in turn had been due to the experience in Victoria with the minimum wage doctrine since 1897. The increased cost of

living has doubtless also been an important factor in stimulating such legislation. A fundamental principle put forward by its advocates is that every industry must be self-supporting, that is, must be able itself to pay its workers a living wage. Any industries so unfavorably situated economically as to make this impossible are considered socially undesirable. The minimum-wage laws therefore strike directly at the undue exploitation of women and children in industry. Numerous investigations of recent years, carried on in the different States and by the Federal Bureau of Labor, have shown that considerable numbers of even adult workers were employed at wages insufficient to maintain a minimum normal standard of living. (See *WOMEN IN INDUSTRY*.) This was found to be true not only in the sweated home industries, but also in various factory employments and department stores. It was believed to have a close connection with the problem of PROSTITUTION (q.v.). Investigations showed that there were most extraordinary variations in the wages paid in the same industries in the same State, indicating a lack of standardization, and undue power in the hands of the employer.

It is expected that the minimum wage laws will result in a standardization of wages by forcing all employers to pay a reasonable minimum. It is generally agreed by numerous investigators, that eight or nine dollars per week is the minimum for an adult woman who is self-dependant. The leveling up of wages will tend to decrease home work and thus reduce "sweating." Various petty abuses by unscrupulous employers will be checked. Minimum-wage laws will probably stimulate organization among unskilled workers. It is believed this will be accompanied by a sense of responsibility, which will diminish the hold of revolutionary labor movements.

On the other hand, some workers whose incapacity is below that required to earn the established minimum will be displaced. Business will be injured in some localities, especially by interstate competition between States with and without minimum-wage laws. Prices of certain products should increase with a consequent effect upon the cost of living.

STATE LAWS vary in the scope of their application, from a few designated industries, to all industries; some apply to women and minors under 18, others to women and minors under 21, the Utah law to females, and the Wisconsin law to women and minors. They are all administered by special commissions except those of Utah and Wisconsin, which are respectively in charge of the Commissioner of Labor and Statistics, and the Industrial Commission. These commissions, as a rule, are allowed expenses only, though California and Massachusetts pay \$10 per day for actual time. All commissions are given power to determine a living wage; and those of California, Oregon, and Wisconsin may determine maximum hours and other conditions of labor. They are uniformly given power to subpoena witnesses, administer oaths, and examine books. In California and Wisconsin they are authorized to enter premises. In Massachusetts, Minnesota, Nebraska, Oregon, Utah, and Wisconsin the commissions are given power to enforce those parts of the law relating to wages. The Utah law goes to the extent of fixing the following minima: for girls under 18 years, 75 cents per day; for women over 18 years, 90

cents per day as learners; for experienced adult women, \$1.25 per day. Penalties for employers range from publicity in Nebraska, and misdemeanor in Utah, to fine or imprisonment in California, Colorado, Minnesota, and Oregon.

California. On Jan. 1, 1914, the California Industrial Welfare Commission of five members was organized, its main function being to administer the minimum wage law of 1913. It had extensive powers of inquiry, and authority to fix minimum wages directly or with the assistance of a special wage board for the industry affected. It adopted the policy of cooperating with the better employers and stimulating them to maintain acceptable standards, and at the same time assist the commission in bringing the more stubborn and inefficient employers into line with the newer ideals of industry. Conferences were held with employers at San Francisco, Sacramento, and Los Angeles. Fruit canneries, vegetable canneries, department stores, laundries, and confectionery establishments cooperated with the Commission in inquiries into hours and earnings in their respective industries.

Maine. On November 23, the minimum wage law, passed by the Maine Legislature in 1913, was declared unconstitutional and a temporary injunction was given against members of the Minimum Wage Commission, in a suit brought by manufacturers of Winona. The law was held to be unconstitutional principally because it delegated legislative power to an appointed commission, and placed decision as to whether there should be a minimum wage or not in their hands. It was also held that there was no necessity for the minimum wage for the protection of safety, health, or morals of women workers. In the opinion of Judge Catlin of the Ramsey District Court, who rendered the decision, the working of the law would probably increase immorality, if morals are dependent upon wages, and that the wage commission became paternalistic so far as women and children workers were concerned. He further said that the law interfered with both employer and employee, and is in violation of the Constitution of the United States.

Minnesota. The Minnesota law of 1913 created a minimum-wage commission with authority to establish advisory boards to assist in determining the living wages of women and minors. One advisory board was established in 1914 for the mercantile, and one for the manufacturing concerns of St. Paul and Minneapolis, and one for both these industries in Duluth. In each case the board was composed of employers and employees, together with representatives of the public. After five or six months' deliberation the mercantile board of the Twin Cities recommended in October, by a vote of 11 to 9, that \$8.65 per week be considered the minimum cost of living for experienced female adult workers. Of this sum, \$2 was allowed for clothing, \$4.80 for board and lodging, and \$1.85 for miscellaneous expenses. The manufacturing board of these cities, by a vote of 9 to 4, recommended \$8.75 per week, while the Duluth board, by a vote of 16 to 2, recommended \$8.50 per week. The State commission was authorized to accept or reject these recommendations, since the wage boards are merely advisory. Early in November the commission issued an order establishing \$9 a week as the minimum wage in cities of the first class, \$8.50 in cities of the second, third, and fourth classes, and \$8 in all other places, for

women and minors employed in mercantile establishments, telephone and telegraph operations, and office work. For those engaged in manufacturing, laundries, and restaurants and hotels, rates of 25 cents less were fixed, except that the lowest rate permitted was \$8. About the same time employers sought an injunction to restrain the commission from giving effect to these orders, on the ground that the law was unconstitutional.

Oregon. The Oregon law of 1913 gave the Industrial Welfare Commission power to fix hours, wages, and other conditions of work so as to preserve the health and welfare of working women. Among its various orders it established a minimum wage of \$9.25 per week for store women, and \$8.64 per week for factory women. A box manufacturer, F. C. Stettler, applied for an injunction against this order. In November, 1913, this application was denied and the constitutionality of the law upheld by a State Circuit Court. Appeal was made to the Oregon Supreme Court, the appeal being based on the contention that the law took property without due process of law and denied freedom of contract in violation of the Fourteenth Amendment to the Federal Constitution. Various briefs were submitted in defense of the law, including an extensive one by Mr. Louis D. Brandeis and Miss Josephine Goldmark. This latter brief was remarkable in that it said practically nothing about legal precedent but gave extensive evidence as to the evil effects of low wages on health, morals, and efficiency. This evidence was gathered from numerous public reports both in the United States and abroad. It was shown that inadequate pay results in two damages to health, namely, inadequate nourishment and lack of medical care. Abundant evidence was brought forward to show that poorly paid women workers reduce their diet to the lowest possible point, in order to provide from a scanty wage, lodging and clothing. It was also shown that while under-payment may not be a primary cause of immorality, nevertheless low wages are an important contributory factor. The fallacy of the "pin money" theory was exposed. The benefits of the legal minimum wage to both employer and employee was shown by evidence from England and Australia. In March the State Supreme Court rendered a decision unanimously upholding the validity of the minimum-wage law. This decision was of great significance, because it was the first case in which the legality of a minimum wage statute was determined by a State Supreme Court. Appeal was taken to the United States Supreme Court, before which the case was argued on December 17.

On March 9 the Oregon Industrial Welfare Commission issued an order establishing a minimum wage of \$8.25 per week for experienced adult women in any industry in Oregon paid by time rates, and \$6 per week for inexperienced adult workers. It also declared that the maximum time such workers may be considered inexperienced is one year. Slightly higher minimum rates were made applicable to the city of Portland, namely, \$8.64 for factory women, and \$9.25 for store women.

LEGISLATION. The only minimum wage legislation in 1914 was the amendment of the Massachusetts law. The wage boards authorized may now be composed of equal numbers of employers and employees, instead of not less than six as formerly. The Minimum Wage Commission must

inform both employers and employees in the trade affected, of its intention to establish a wage board; and must request from both sides names of representatives from which the commission must select the wage board, provided such names are submitted within ten days. Publication of its findings and recommendations is required, not in one newspaper in each county as heretofore, but "at such times and in such manner as it may deem advisable." Employers must, in addition to records previously required, keep account of the weekly wages of each woman and minor. An employer not only must not discharge or discriminate against an employee who has testified or may testify in wage proceedings, but also must not discharge those who serve upon wage boards or give information regarding conditions of employment. Penalty ranges from \$200 to \$1000.

GREAT BRITAIN. In 1910 Great Britain established wage boards in the chain-making, lace-making, tailoring, and paper-box industries. In 1913 laws were passed, effective in 1914, establishing similar boards in each of the following industries: cocoa, chocolate, sugar, and confectionery; food preserving; shirt-making; hollow-ware, including the manufacture of tin boxes and canisters; the linen and cotton embroidery trade of Ireland; and the calendar and machine-ironing branch of the laundry industry. These added 150,000 to the previous 250,000 workers under the Trades Boards Act. The vast majority of these are women.

Official record showed that in the confectionery trade 40 per cent of the employees earned less than 10s., or \$2.50 per week. In the preserved food, jam, sauce, and pickle trades this percentage was 44. Moreover, great inequalities existed in wages for the same work; these were found in nearly every branch of these trades. Thus, for example, the weekly rate paid tea-packers was 10s. by one firm and 18s. by another using the same machines. In shirt-making the general level of wages was better, yet one-fourth of the Irish workers received less than 5½s. per week, and the majority of home workers were underpaid. In general, 21 per cent of all the women in this industry earned less than 10s.; and of the hand-sewers, one-third earned less than 10s. Wages in the tin box industry ranged from 10s. to 14s. per week. The worst examples of sweating and exploitation were found among the Irish embroidery workers where wages were reduced to one halfpenny, or a penny an hour, where hours were excessive, and eye strain most injurious. Among laundry workers the per cent earning less than 10s. was 32.

Experience during the past four years in England has shown that the fixing of a minimum rate is not only not impossible, but that a leveling up of wages toward the standard of better firms is feasible. In the affected trades, wages have been raised sufficiently to effect a considerable change in the economic conditions of the workers. This has been accompanied, as a rule, by a rise of prices to consumers. Moreover, since the rates are almost universally piece-rates, there has not resulted any considerable loss of employment by inefficient workers. See *FEMINISM, passim*.

MINING. See section so entitled under various countries.

MINING INDUSTRY. See *MINERAL PRODUCTION OF THE UNITED STATES*.

MINNESOTA. POPULATION. The estimated population on July 1, 1914, was 2,213,919. The population in 1910 was 2,075,708.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

	Acreage	Prod. bu.	Value
Corn 1914	2,600,000	91,000,000	\$47,320,000
..... 1913	2,400,000	96,000,000	50,880,000
Wheat 1914	4,050,000	42,975,000	43,834,000
..... 1913	4,200,000	68,040,000	51,711,000
Oats 1914	8,040,000	85,120,000	34,048,000
..... 1913	2,980,000	112,644,000	36,046,000
Rye 1914	279,000	5,245,000	4,668,000
..... 1913	300,000	5,700,000	2,736,000
Barley ... 1914	1,378,000	31,694,000	5,148,000
..... 1913	1,450,000	34,800,000	5,500,000
Potatoes .. 1914	270,000	30,780,000	9,850,000
..... 1913	275,000	30,250,000	15,730,000
Hay 1914	1,743,000	3,294,000	20,093,000
..... 1913	1,660,000	2,490,000	16,434,000
a Tons.			

MINERAL PRODUCTIONS. Minnesota far outranks all other States in the mining of iron ore, and during the four years from 1909 to 1913 contributed both in quantity and value considerably more than half the iron ore produced and marketed in the United States. In 1913 the total marketed production of iron ore in the United States was 59,643,098 long tons, valued at \$130,905,558. Of this Minnesota contributed 36,603,331 tons, valued at \$80,789,025. This may be compared with the production of 34,249,813 long tons, valued at \$61,805,017 in 1912. Because of its great wealth in iron ores and of their extended development, Minnesota ranks ninth among all the States in the total value of its mineral production. The value of the iron ore produced represents considerably more than 90 per cent of the total output. The only other important minerals are the products of stone quarries and clay pits. The total value of the mineral production of the State in 1913, exclusive of iron ore, was \$5,025,608.

TRANSPORTATION. The total mileage of main line railways operated in the State on June 30, 1914, was 9002 miles, an increase of 54 miles from the mileage of 1913. The increases consist chiefly of new mining and logging spurs.

FINANCE. The report of the State Treasurer shows a balance on July 1, 1913, of \$1,842,367. The receipts for the year amounted to \$22,680,208, and the disbursements to \$20,714,746, leaving a balance in the treasury on July 31, 1914, of \$3,807,830.

EDUCATION. The total enrollment in the public schools of the State in 1914, was 457,041. The average daily attendance was 376,929. There were 16,920 teachers receiving an average salary of \$59 per month.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions, under the supervision of the State Board of Control, with their populations on Nov. 30, 1914, are as follows: Anoka State Asylum, 740; Hastings State Asylum, 756; Fergus Falls State Hospital, 1573; Rochester State Hospital, 1025; St. Peter State Hospital, 1216; School for Feeble Minded, at Faribault, 1531; School for the Deaf, at Faribault, 252; School for the Blind, at Faribault, 75; Owatonna State Public School, 304; Red Wing Training School for Boys, 241; St. Cloud State Reformatory for young men, 562; Stillwater State Prison, 1119; State Sanatorium for

consumptives, at Walker, 152; Hospital for Crippled Children, at St. Paul, 92; Hospital for Inebriates, at Willmar, 112; Home School for Girls, at Sauk Centre, 175. The total expenditures for these institutions for the year ending July 31, 1914, was \$2,052,009.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial and the last was held in 1913. Elections were held for Governor and representatives in Congress. In the nominating primaries, held on June 16, Governor Eberhard was defeated for renomination by W. E. Lee. The Democrats nominated W. S. Hammond, and the Progressives, H. T. Halbert. In the election held on November 3, the Democrats elected their candidate for Governor with 156,304 votes, compared with 143,730 for Lee, the Republican candidate, and 3553 for Halbert, the Progressive candidate. The total vote cast in this election was 343,255, compared with 334,219 in the presidential election of 1912. The Democratic vote showed an increase of about 50,000; the Republican an increase of about 75,000; and the Progressive vote a falling off of over 120,000. Republican Representatives were elected in the first, second, third, fifth, sixth, seventh, eighth, ninth, and tenth districts. The Democrats elected their candidate in only one district. On August 12 the International Harvester Company was declared to be a monopoly in restraint of trade, and its dissolution was ordered by the United States District Court at St. Paul. See the article TRUSTS.

STATE GOVERNMENT. Governor, W. S. Hammond; Lieutenant-Governor, J. A. A. Burnquist; Secretary of State, Julius A. Schmahl; Auditor, J. A. O. Preus; Treasurer, Walter J. Smith; Attorney-General, L. A. Smith; Adjutant-General, Fred B. Woods; Superintendent of Education, C. G. Schulz; Commissioner of Insurance, J. A. Preus; Commissioner of Agriculture, —; all Republicans except Governor.

JUDICIARY. Supreme Court: Chief Justice, Calvin L. Brown; Associate Justices, Andrew Holt, G. L. Brunn, P. E. Brown, Oscar Hallam—all non-partisan. Clerk, I. A. Caswell, Republican.

STATE LEGISLATURE, 1915.

	Senate	House	Joint	Ballot
Republicans	42	90	132	
Democrats	20	26	46	
Republican majority	22	64	86	

The representatives in Congress will be found under the section *Congress*, article UNITED STATES.

MINNESOTA, UNIVERSITY OF. A State institution for higher learning, founded at Minneapolis in 1869. The enrollment in all departments of the university in the autumn of 1914 was 3950. The faculty numbered 496. There were no notable changes in the faculty during the year, and no noteworthy benefactions were received. The endowment of the university in 1914 amounted to \$1,605,356, and the income to \$3,033,891. The library contains 185,000 volumes. The president is George E. Vincent, LL.D.

MINOT, CHARLES SEDGWICK. American anatomist and educator, died Nov. 19, 1914. He was born in West Roxbury, Boston, in 1852, and graduated from the Massachusetts Institute of Technology in 1872, taking post-graduate work at the Universities of Leipzig, Paris, and Würz-

burg, from 1873 to 1876. In 1880 he was appointed lecturer on embryology and instructor in oral pathology and surgery at the Harvard Medical School, becoming later instructor in histology and embryology (1883), assistant professor (1887), and professor in 1892. In 1895 he was appointed James Stillman professor of comparative anatomy, and in 1912 became director of the Anatomical Laboratories, being Harvard exchange professor at the Universities of Berlin and Jena in 1912-13. His published writings include: *Human Embryology* (1892); *Bibliography of Vertebrate Embryology* (1893); *A Laboratory Text-Book of Embryology* (1903); *Age, Growth and Death* (1908); *Modern Problems of Biology* (1913). He was a member of foreign and American scientific societies.

MINTO, GILBERT JOHN MURRAY KYNYNMOND ELLIOT, fourth Earl of. An English nobleman and administrator, died Feb. 28, 1914. He was born in 1847, and was educated at Eton and at Trinity College, Cambridge. In 1867 he was appointed to the Scots Guards, but retired in 1870, and in 1877 served with the Turkish army, later taking part in the Afghan War of 1879. Two years later he was private secretary to Lord Roberts at the Cape, and in the following year took part in the Egyptian campaign as a volunteer. In 1883 he became military secretary to the Marquis of Lansdowne, then Governor-General of Canada, and after holding this post for two years was appointed chief of staff in the Northwest Canada rebellion of 1885, later serving from 1898 to 1904 as Governor-General of Canada. From 1905 to 1910 he was Viceroy of India, and in the year 1909 three attempts were made to slay him with bombs. He received the degree of LL.D. from Toronto University, and he was Lord Rector of Edinburgh University.

MISSISSIPPI. POPULATION. The estimated population on July 1, 1914, was 1,901,882. The population in 1910 was 1,797,114.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

		Acreage	Prod. bu.	Value
Corn1914	8,150,000	58,275,000	\$42,541,000
1913	8,150,000	63,000,000	48,510,000
Oats1914	160,000	3,680,000	2,392,000
1913	140,000	2,800,000	1,764,000
Rice1914	1,000	30,000	26,000
1913	1,500	42,000	29,000
Potatoes	..1914	12,000	960,000	912,000
1913	12,000	960,000	960,000

b Bales.

MINERAL PRODUCTION. The entire mineral industry of the State is comprised in its clay resources, in the digging of sand and gravel, and the sale of some commercial mineral waters. The total value of the products in 1913 was \$1,143,472, compared with \$1,242,528 in 1912.

FINANCE. The report of the State Treasurer for the biennial period 1911-13 showed total receipts for the fiscal year ending Oct. 1, 1913, of \$4,501,447. The expenditures for the same period amounted to \$4,426,591. At the beginning of the fiscal year there was a balance of \$572,047, and at its close, a balance of \$325,855. The to-

tal debt of the State on Sept. 30, 1912, was \$4,460,519. Of this, \$2,341,671 was a special debt obligation to public trust funds. The funded debt consisted, in addition to the debt to trust funds, of several series of bonds, amounting to \$1,506,899. The floating debt consisted of outstanding warrants and a temporary loan of \$600,000. The per capita debt on the date given above was \$2.41.

TRANSPORTATION. The total railway mileage in the State on Oct. 30, 1913, was 4350. The chief railroads, with their mileage, are as follows: Illinois Central, 389; Yazoo and Mississippi Valley, 314; Mobile and Ohio, 272; New Orleans, Mobile, and Chicago, 334; Mississippi Central, 164. The mileage of electric railways in the State on Jan. 1, 1913, was 107. There were 12 companies operating such railways in that year.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the State Charity Hospital at Jackson, the State Charitable Hospital at Vicksburg, the State Charity Hospital at Natchez, Beauvoir Home at Beauvoir, the State Insane Hospital at Asylum, the East Mississippi Insane Hospital at Meridian, and the Penitentiary at Jackson.

POLITICS AND GOVERNMENT. The Legislature met early in January, 1914, and remained in session until late in March. An act of general importance was the adoption of a State bank law providing for an inspection system and a tax on banks to provide a fund for paying depositors of failed banks. The State has heretofore lived under the appointive judicial system, but under a constitutional amendment previously adopted, district judges and chancellors were elected at the popular election in November. An amendment adopted at the 1914 session of the Legislature and submitted to the people at the same election, providing for the election of the Supreme Court judges also, was carried. These judges were increased from three to six. Other constitutional amendments were submitted by the Legislature and adopted at this election. One of these provided for the initiative and referendum, another reapportioned the senatorial districts. All the Congressmen were reelected.

STATE GOVERNMENT. Governor, Earl Brewer; Lieutenant-Governor, Theo. G. Bilbo; Secretary of State, J. W. Power; Treasurer, P. S. Stovall; Auditor, D. L. Thompson; Superintendent of Education, W. H. Smith; Attorney-General, Ross A. Collins; Adjutant-General, D. M. Scales; Land Commissioner, M. A. Brown; Commissioner of Agriculture, H. E. Blakeslee; Commissioner of Insurance, T. M. Henry—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, S. Smith; Associate Justices, S. C. Cook and R. F. Reed; Clerk, George C. Meyers—all Democrats.

STATE LEGISLATURE, 1915. The State Legislature is wholly Democratic.

The representatives in Congress will be found under the section *Congress*, article UNITED STATES.

MISSISSIPPI, UNIVERSITY OF. A State institution for higher education, chartered in 1844 at Oxford, Miss. There are seven undergraduate courses, partly elective, leading to the bachelor's degree in arts, science, pedagogy, philosophy, mining and civil and electrical engineering. The university also maintains a law school, a medical department and a summer school, and confers the degrees of M.A. and Ph.D. The students in all departments in 1914 numbered 528,

and there were 35 members of the faculty. The library contains about 25,000 volumes. The president is Joseph N. Powers, LL.D.

MISSISSIPPI FLOOD PREVENTION. See FLOOD PREVENTION.

MISSOURI. POPULATION. The estimated population on July 1, 1914, was 3,372,886. The population in 1910 was 3,293,335.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only:

	Acreage	Prod. bu.	Value
Corn ... 1914	7,200,000	158,400,000	\$107,712,000
1913	7,375,000	129,062,000	95,506,000
Wheat ... 1914	2,549,000	43,838,000	42,466,000
1913	2,315,000	39,586,000	33,252,000
Oats ... 1914	1,200,000	25,800,000	11,352,000
1913	1,250,000	26,500,000	11,925,000
Rye ... 1914	17,000	238,000	207,000
1913	16,000	240,000	180,000
Barley ... 1914	5,000	120,000	78,000
1913	5,000	110,000	66,000
Potatoes ... 1914	87,000	8,915,000	2,858,000
1913	85,000	8,230,000	3,004,000
Hay ... 1914	2,600,000	a 1,820,000	24,752,000
1913	3,000,000	1,800,000	26,100,000
Tobacco ... 1914	4,100	b 4,920,000	640,000
1913	5,100	3,315,000	421,000
Cotton ... 1914	122,000	c 75,000	2,386,000
1913	112,000	67,000	3,697,000

a. Tons. b Pounds. c Bales.

MINERAL PRODUCTION. Missouri leads all other States in the production of two important metals, lead and zinc, and in the production of two relatively unimportant minerals, barytes and tripoli. The State also ranks second in the production of mineral paints. Based on the metallic content the total production of lead and zinc in 1913 was valued at \$29,494,064, compared with \$34,820,248 in 1912. The decrease in 1913 was almost entirely due to a smaller output of zinc ores, with a marketed decline in price. The mining of coal is third in importance among the mineral industries of the State. The coal output decreased from 4,339,856 short tons, valued at \$7,633,864 in 1912, to 4,318,125 tons, valued at \$7,468,308 in 1913. Missouri ranks seventh among the States in the total value of its clay products and second in the manufacture of fire brick, which is the principal clay product of the State. The total value of the clay products in 1913 was \$6,602,076. The production of Portland cement is another important industry and the quarries produce large quantities of limestone. Other important mineral products are sand and gravel, lime, copper, iron ore, mineral paints, natural gas, petroleum, silver, and tripoli. The total value of the mineral products in 1913 was \$54,001,008, compared with \$58,332,550 in 1912.

EDUCATION. The total school population in 1913 was 954,699, with an enrollment of 690,484 and an average daily attendance of 494,309. The female teachers numbered 14,148 and the male 4706. The average salary of male teachers was \$497.60 a year and of female teachers \$485.44. On June 1, 1914, there were 167 first-class high schools, 49 second-, and 125 third-class, making a total of 341 approved high schools. Improvement in the high schools has been specially rapid in recent years.

FINANCE. The latest available reports of the State Treasurer are for the biennial period 1911-12. The total receipts during that period

were \$9,998,292, and the disbursements \$6,518,122, leaving a balance in the treasury on Jan. 1, 1913, of \$537,829. The State debt on that date was \$4,398,839.

TRANSPORTATION. The total mileage of steam railways in the State in 1913 was 8147. There were in addition 847 miles of electric railways. There was practically no construction of new railroad mileage during 1914.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions are under the supervision of the State Board of Charities and Corrections and include hospitals at Fulton, St. Joseph, Nevada, and Farmington; the Industrial School for Girls at Chillicothe; Training School for Boys at Boonville; Colony for Feeble-minded and Epileptic at Marshall; Missouri School for the Deaf at Fulton; Missouri School for the Blind at St. Louis; Federal Soldiers' Home at St. James; Confederate Soldiers' Home at Higginsville; State Sanatorium at Mt. Vernon; and the State Penitentiary at Jefferson City. Cities of 500,000 or more inhabitants are permitted to create a board of children's guardians to manage public institutions of the city for delinquent, dependent, or defective children. In counties with a population of 50,000 or more, juvenile courts for children under 17 are established.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914 as the sessions are biennial and the last was held in 1913. Elections were held in 1914 for United States Senator and for representatives in Congress. Senator Stone, whose term practically expired March 4, 1915, was a candidate for reelection and he was renominated in the nominating primaries held on August 4. The Republicans nominated T. J. Akins and the Progressives A. N. Sager. In the elections of November 3 Senator Stone was reelected with 311,573 votes, Akins received 257,056, and Sager, Progressive, 27,614. The total vote cast was 618,194, compared with 698,562 in 1912. The Democratic vote showed a falling off of about 10,000; the Republican an increase of about 50,000; and the Progressive a falling off of nearly 20,000. The Republicans elected a representative in the tenth and twelfth districts and in the other districts the Democrats were successful. On June 19, L. C. Dyer, Republican representative to Congress, was unseated on the ground of fraud in connection with his election and his seat was given to Michael Gill, his Democratic opponent. A prohibition amendment to the constitution was defeated in the election of November 3. The vote against the amendment was about 4 to 1 in the cities and nearly 3 to 1 in the rural districts. On April 7, Henry L. Jost, Democratic Mayor of St. Louis, was reelected, defeating a nonpartisan ticket pledged to a commission form of government. On July 1 the voters of St. Louis adopted a new charter, centralizing power in the mayor and comptroller and providing for the recall of elective officials.

STATE GOVERNMENT. Governor, Elliott W. Major; Lieutenant-Governor, W. R. Painter; Secretary of State, Cornelius Roach; Auditor, John P. Gordon; Treasurer, E. P. Deal; Attorney-General, John T. Barker; Superintendent of Education, Howard A. Gass—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Henry Lamm, Republican; Associate Justices: Walter W. Graves, Democrat; A. M. Woodson,

Democrat; H. W. Bond, Democrat; C. B. Faris, Democrat; R. F. Walker, Democrat; John C. Brown, Republican; Clerk, J. D. Allen, Democrat.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Democrats	26	76	102
Republicans	8	65	73
Progressive	0	1	1
Democratic majority..	18	10	28

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MISSOURI, UNIVERSITY OF. A State university for higher education, founded at Columbia, Mo., in 1839. The total number of students enrolled in the autumn of 1914 was 2605. The faculty numbered 262. During the year Herbert J. Davenport was appointed dean of the school of commerce; Elmer J. McCaustland, dean of the school of engineering; and Eldon R. James, dean of the school of law. No noteworthy benefactions were received during the year. The productive funds of the university amount to about \$1,280,000, and the approximate annual income from all sources was \$1,100,000. The library contains 165,000 volumes and pamphlets. The president is Albert R. Hill, LL.D.

MISTRAL, FRÉDÉRIC. A French poet, died March 25, 1914. He was born at Maillane, near St. Remy, Sept. 8, 1830, and practically all his life was spent in a peasant's cottage in the same town. He was educated at a boarding school in Avignon, and afterwards studied law, but soon abandoned it for literature. He was first attracted to the charm of the Provençal dialect by the songs which his mother sang, although in his boyhood, Provençal was used only in comic speech and writing. One of the teachers at the school in Avignon was Roumanille, who was the first of the Rhone poets to realize that the ancient tongue of the country was beautiful, and with him Mistral worked for years to raise the speech to the dignity of a literary language. At the age of 17, five years before he had graduated in law at Aix University, Mistral began a poem in four cantos, entitled "Li Meissoun" ("The Home"). After his graduation his father gave him the privilege of choosing a career, and he at once decided to devote his life to revealing the beauties of the Provence language. In 1854 he, with six other poets, founded the society which became famous as the Felibrige, for the purpose of restoring among the people of the Rhone valley a love of ancient customs, language, and traditions. They began by starting an annual publication, the *Armena Prouvencau*, which appeared regularly from 1855.

The Felibrige expanded into a great society with Mistral as its first president, and had great influence and effect throughout all Southern France. Floral games were founded, patriotic enthusiasm ran high, and the name of Mistral was linked with Petrarch when the latter's centenary was celebrated at Avignon in 1874.

In 1859 Mistral completed the long rustic poem entitled "Mireio"; a simple tale of a poor girl and a rich lover, into which Mistral wove descriptions of Provençal life, scenes, and character. This poem is generally considered to be his best work and it immediately made him famous, being crowned by the Academy, and turned into the opera *Mireille*, by Gounod.

After laboring for seven years Mistral produced in 1866, "Calendau," which was his own favorite among all his poems, but compared with "Mireio" it lacked spontaneity. In the interval between "Mireio" and "Calendau" he published many shorter poems, which in 1875 were combined under the title *Lis Isclo d'Or* ("The Golden Islands").

Mistral's third long poem, "Nerto," was published in 1884, and received the Prix Vitet from the French Academy. After its publication he was induced to go to Paris, where he was welcomed by President Grévy, and literary societies of the city competed in a series of banquets in his honor. Mistral soon wearied of these festivities and returned to his cottage, where four years later he completed *Lou Tresor dou Felibrige*, a dictionary of all the dialects of the *langue d'oc*, which contained every word and phrase, proverb and legend that the poet had gathered through many years. His only dramatic work, *La Reino Jano*, appeared in 1890, and his last long poem, "Lou Poemo dou Rose" ("The Poem of the Rhone"), in 1897. The latter work, in which Mistral used blank verse for the first time, was a narrative of former barge life on the river, interspersed with many legends. In 1904 he again went to Paris and reluctantly accepted the Nobel prize for literature, the proceeds of which he used in helping to establish a museum of Provençal history. In 1897 he was privately informed that he would be elected to the French Academy if he would present himself, but he declined to go to Paris for this purpose.

Until a serious illness overtook him in 1912, Mistral was of most impressive personal appearance; his great form and handsome face were as notable as his lack of affectation and his simplicity of life. He was one of the few persons to whom a statue was erected during their lifetime. He was one of the most popular of all living Frenchmen. In a great many French towns streets are named after him, and Mistral societies in France are almost without number. Lamartine gave to him the title, "The Homer of Provence." He made his last great public appearance in the Felibrige in May, 1913, at the festival of Saint Estelle at Aix-en-Provence. The festival was held at this place because it was near enough to Maillane to enable Mistral to spend a day there without too much fatigue. He was given an extraordinary reception, and when he sang his "Song of Our Ancestors," his audience was deeply moved.

MITCHELL, SILAS WEIR. An American neurologist, novelist, and poet, died Jan. 4, 1914. He was born in Philadelphia in 1829, and was educated in the grammar school of that city, and at the University of Pennsylvania; he did not, however, graduate from the latter institution because of illness during his senior year. His medical studies were taken at the Jefferson Medical College, Philadelphia, where in 1850 he received the degree of M.D. He at once began the practice of his profession in Philadelphia, and at the same time pursued special studies on medical topics and wrote papers on the results of this work. Devoting particular attention to snake venoms and their chemical nature, in 1860 the Smithsonian Institution published his volume entitled *Researches Upon the Venom of the Rattlesnake*. In his leisure moments the young physician had begun the writing of verses which

he collected in 1856. Shortly after their publication he visited Oliver Wendell Holmes in Boston, who advised the younger physician to withdraw the verses and to reconsider them when he had reached the age of 40, and also urged Dr. Mitchell to follow either medicine or literature, but not to attempt to combine the two. Accepting this advice, Dr. Mitchell returned to Philadelphia and for a time devoted himself to his medical practice, becoming in 1862 an army surgeon, and assuming special charge of soldiers suffering from nervous disorders and injuries which directly affected the nerves. In this work he spent three years in the Turner's Lane Hospital in Philadelphia, and induced Surgeon-General Hammond to establish wards for nervous diseases, said to have been the first of the sort in the United States. Experiences during this work he described in his novel, *In War Time*, and the technical results of his studies in the hospital appeared in 1864 under the title, *Gunshot Wounds and Other Injuries of the Nerves*. At the close of the war, determining to devote himself to neurology, he first developed the "rest cure," which became known as the "Weir Mitchell treatment" for nervous disorders, and found great favor among physicians both in the United States and in Europe.

His inclination for the writing of fiction led him to use for a short story, material which he had gathered in the hospital. The story was the result of a discussion with other physicians regarding the effects on a man's individuality of the loss of members. He wrote out, without intending it for publication, a history of an imaginary case in which the patient had had both arms and legs amputated. This manuscript was shown by a friend to Dr. Edward Everett Hale, who was at that time connected with the *Atlantic Monthly*. Dr. Hale obtained permission to publish it, and it was printed in the *Atlantic* under the title of "The Case of George Dedlow." The story aroused great interest; its readers assumed that it was a narrative of real life, and many subscriptions were sent for the aid of the unfortunate "Dedlow." For the next twenty years Dr. Mitchell's writings were connected almost entirely with his medical studies. In 1873 he published *Wear and Tear*; in 1875, *Rest in the Treatment of Disease*, explaining in detail his "rest cure"; and he also made a more extensive study of snake poisons, the results of which were published in 1886. A succession of medical volumes relating chiefly to nervous disorders, concluding with *Rest Treatment and Psychic Medicine*, were published in 1908. In the late seventies Dr. Mitchell had attained a place in his profession which he considered entitled him to indulge his desire to write fiction and verse as a recreation. In 1880 he published two books, *Hephzibah Guinness* and *Thee and You*. From that time until the year of his death he wrote novels and juveniles at intervals of a year or two, with short stories between. In 1896 he again collected his poems and this time published them, forty years after he had been advised by Dr. Holmes to reconsider his earlier efforts after he became more mature. Dr. Mitchell first attained popular success with *Hugh Wynne, Free Quaker* (1897), which is considered by many the best historical novel ever written by an American. Dr. Mitchell was 68 years old at the time of its publication, and

from this time he occupied a leading place among contemporaneous American novelists. Other books were: *The Adventures of François* (1899); *Dr. North and His Friends* (1900); *The Autobiography of a Quack* (1901); *The Wager* (1900); *Constance* (1901); *Pearl* (1901); *Comedy of Conscience* (1902); *Little Stories* (1903); *Youth of Washington* (1904); *Constance Trescott* (1905); *A Diplomatic Adventure* (1905); *The Mind Reader* (1907); *A Christmas Venture* (1907); *The Red City* (1907); *The Comfort of the Hills* (1909); *John Sherwood, Ironmaster* (1911); *Westways* (1914); *Complete Poems* (1914). All this writing was done in the summer at Dr. Mitchell's seashore place at Bar Harbor, the greater part of the remainder of the year being occupied by his profession. Dr. Mitchell was one of the most notable social figures in Philadelphia, and at his home he entertained many foreign and American persons of distinction. He received the degree of LL.D. from Harvard, Edinburgh, Princeton, and Toronto Universities, and from the Jefferson Medical College, also an honorary degree of M.D. from the University of Bologna. He was a member of many medical, scientific, and literary societies.

MOGULESKO, ZIGMUND. A Jewish comedian, died Feb. 4, 1914. He was born near Moscow in 1859, and while still a very young man went on the stage, becoming, at 22 years of age, leading man in a Yiddish stock company in Odessa. The plays given by the company displeased the government, and while the company was on tour in the Balkans, its theatre in Odessa was torn down. As he was unable to continue his work in Russia, Mogulesko removed to the United States in 1886. There was at that time no Yiddish theatre in New York, and his first task was to arouse interest in such an undertaking. He finally succeeded, became the leading character actor in the new field, and was perhaps the most popular Hebrew actor in America at the time of his death. He was also a composer and a poet, and composed many of the Yiddish songs sung in the United States. All his work was done in Yiddish—in fact he never learned English.

MOLTKE, HELMUTH VON. See WAR OF THE NATIONS.

MONACO. A hereditary constitutional monarchy (constitution of Jan. 8, 1911) covering 1.5 square kilometers and having a population of 19,121. The town of Monaco has 2410 inhabitants, La Condamine 6218, Monte Carlo 3794. There is no cultivation. The revenue, principally derived from the gambling concession at Monte Carlo, is disbursed largely for improvements. Reigning Prince (1914), Albert, born 1848, succeeded to the throne 1889. Heir-apparent, Prince Louis, born 1870.

MONEY. According to the report of the Treasurer of the United States the monetary stock of the country on June 30 was \$3,738,288,000. Of this \$1,890,656,000 were gold coin and bullion; \$565,833,000, silver dollars; \$182,006,000, subsidiary silver; \$346,681,000, United States notes (greenbacks); \$2,439,000, Treasury notes (Sherman notes of 1890); \$750,671,000, National Bank notes. Of the metallic money \$1,796,686,000 was in the Treasury; of this more than two-thirds was gold coin and bullion. On the other hand nearly all of the notes were in circulation. Moreover the metal-

lic money in the Treasury was offset by gold certificates to the amount of \$1,026,149,000 and silver certificates to the amount of \$478,601,000 in circulation. The total money in circulation was \$3,402,015,000, or \$34.35 per capita. Of this sum nearly \$834,986,000 was in the form of metal, and the remainder in notes or certificates. The average cost of maintaining this paper, including the making, issue, and redemption was computed at \$61.04 for every 4000 notes. The average lifetime of the greenback is computed to be 3.25 years, of the silver certificate 1.28 years, and of the National Bank notes 2.76 years.

The Federal Reserve Act of Dec. 23, 1913, modified the Aldrich-Vreeland Act by extending it to June 20, 1915, and otherwise. Under this large amounts of emergency currency were held in the various subtreasuries, with the result that on August 3 following the outbreak of hostilities in Europe sufficient currency was at once issued to meet the unusual situation. The Secretary of the Treasury had informed the public on July 31 that \$500,000,000 of the emergency notes were ready for issue. The country was at once organized into 44 national currency districts and associations. New York City banks during August, September, and October issued \$141,228,000 of emergency currency. During the same period other national banks issued \$228,330,000 of such notes. The only States in which emergency currency was not issued were: Maine, Vermont, Rhode Island, Delaware, South Dakota, Montana, Wyoming, Idaho, Nevada, and Arizona. See **BANKS AND BANKING**; **COINS**.

MONGOLIA. See **CHINA**.

MONOPLANES. See **AERONAUTICS**.

MONROE DISASTER. See **SAFETY AT SEA**.

MONTANA. POPULATION. The estimated population on July 1, 1914, was 432,614. The population in 1910 was 376,053.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	50,000	1,400,000	\$11,064,000
	1913	28,000	882,000	679,000
Wheat	1914	910,000	18,856,000	16,704,000
	1913	870,000	20,673,000	18,644,000
Oats	1914	530,000	18,550,000	7,234,000
	1913	500,000	21,750,000	6,960,000
Rye	1914	10,000	210,000	147,000
	1913	10,000	210,000	116,000
Barley	1914	70,000	2,135,000	1,132,000
	1913	60,000	1,860,000	898,000
Potatoes ...	1914	37,000	5,180,000	3,315,000
	1913	36,000	5,040,000	3,377,000
Hay	1914	700,000	1,750,000	15,225,000
	1913	660,000	1,188,000	11,405,000

a Tons.

MINERAL PRODUCTION. Montana ranks tenth among the States in the total value of its mineral products, and its chief mineral industry is the mining and smelting of copper. As a producer of this metal Montana ranks second among the States, Arizona being first. Montana's total production of copper from the time mining first began exceeds that of any other State. The output to the close of 1913 amounted to nearly 6,200,000,000 pounds, somewhat more than one-third of the total production of the United States. In 1913 the production showed a considerable decrease. In that

year it was 287,828,699 pounds, valued at \$44,613,448, compared with 309,738,873 pounds, valued at \$51,106,914 in 1912. Montana is essentially a metal-producing State, the values of its copper, gold, silver, zinc, and lead representing in 1913 over 89 per cent of its total production. The mining and smelting of zinc ores in Montana showed a marked increase in 1913, compared with previous years, and zinc became third in importance among the metallic products of the State. The recoverable contents of zinc in the ores mined in 1913 amounted to 44,337 tons, valued at \$4,965,693, compared with 13,459 tons, valued at \$1,857,403 in 1912. The production of gold in 1913 was valued at \$3,492,432, compared with \$3,625,235 in 1912. The production of silver in 1913 was 13,819,201 ounces, compared with 12,731,638 ounces in 1912. The lead production increased from 7,446,749 pounds in 1912, to 10,935,827 pounds in 1913. The output of the mines of the State in 1914 was seriously affected by the conditions of the copper market due to the European War, as Montana is primarily a copper producer. The value of gold, silver, copper, lead, and zinc in the mines of the State, according to the estimates of the United States Geological Survey, decreased from nearly \$62,000,000 in 1913, to about \$48,000,000 in 1914. The decrease in copper was large, and that of silver was notable, but there were considerable increases in gold, lead, and zinc. The value of the silver and copper yield was greatly reduced on account of the great decline in prices of these metals in 1914. The copper output decreased from 287,828,699 pounds, to about 238,000,000 pounds, or over 17 per cent. The gold output increased over 14 per cent; silver decreased about 13 per cent; lead increased from about 11,000,000, to about 15,000,000 pounds; and zinc increased nearly 23 per cent. The production of coal in 1913 was 3,240,973 short tons, valued at \$5,653,539. This is a record figure for the industry in the State. The production of coal in the State, according to the estimates of the United States Geological Survey, decreased from 3,365,712 short tons in 1913, to 2,938,671 tons in 1914. The total value of the mineral products showed a decrease from \$71,620,873 in 1912, to \$69,307,056 in 1913, the increase in other products not being sufficient to overcome the decrease in the output of copper.

EDUCATION. The total number of persons of school age in the State in 1914 was 126,417, the total enrollment being 85,517, and the average daily attendance 60,972. There were 3763 teachers employed, and the average salary of male teachers was \$106.85 per month and of female teachers \$87.24 per month.

FINANCE. The report of the State treasurer shows a cash balance on Nov. 30, 1913, of \$1,039,794. The receipts for the fiscal year 1914, were \$5,550,909, and the disbursements \$5,207,011, leaving a balance at the end of the year of \$383,646.

TRANSPORTATION. On Nov. 1, 1914, the steam railways of the State had a total mileage of 4783. During the year 395 miles of track were constructed by the Great Northern, the Chicago, Milwaukee, and St. Paul, the Northern Pacific, the Minneapolis, St. Paul, and Sault Ste. Marie, and the Billings and Central Montana railways. The Great Northern has the longest mileage, 1012; the Northern Pacific, 993; and the Chi-

cago, Milwaukee, and St. Paul, 748. These figures are for main track only.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the supervision of the State Board of Charities include the State Prison at Deer Lodge; the State Industrial School at Miles City; a home for orphans, foundlings, and destitute children at Twin Bridges; a Soldiers' Home at Columbia Falls; the State Hospital for the Insane at Warm Springs; and the State School for the Deaf and Blind and Feeble-minded at Boulder.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. There was little of political interest in the State aside from the relation of the State government to strikes. The election held on November 3 was for representative-at-large. The Democrats were successful in electing their candidate with 37,012 votes, compared with 26,046 for the Republican candidate and 6166 for the Progressive. The total vote cast was 81,502, compared with 79,826 cast in 1912. The Democratic vote showed a falling off of about 10,000; the Republican an increase of about 8000; and the Progressive a falling off of about 16,000. A prohibition amendment was carried in this election. On September 6, Mayor Lewis J. Duncan, of Butte, was removed from office after trial in the District Court for neglect of duty in connection with miners' riots.

STATE GOVERNMENT. Governor, Sam. V. Stewart, Democrat; Lieutenant-Governor, W. D. McDowell, Democrat; Secretary of State, A. M. Alderson, Democrat; Attorney-General, D. M. Kelly, Democrat; Treasurer, W. C. Rae, Democrat; Auditor, W. Keating, Democrat; Superintendent of Public Instruction, H. A. Davee, Democrat.

JUDICIARY. Supreme Court: Chief Justice, Theo. Brantley, Republican; Justices, Sydney Sanner, Democrat; Wm. L. Holloway, Republican; Clerk, John T. Athey, Republican.

VOTE OF THE STATE SINCE 1904.

	Dem.	Rep.	Soc.	Proh.	Plu.	
1904 Governor.	35,377	26,957	8,431	...	8,420	D
1908 President.	29,326	32,388	5,955	827	8,007	R
1908 Governor.	32,282	30,792	6,112	...	1,490	D

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

MONTANA, UNIVERSITY OF. A State institution for higher education, founded at Missoula, Mont., in 1893. The total enrollment in all departments in 1914 was 861, and the faculty numbered 80. The university includes departments of literature, science and the arts, schools of law, pharmacy, forestry, journalism, music, domestic science, commerce, accounting, and education; there is also a department of correspondence study, a university extension department, and a bureau of public information. The annual income amounts to about \$200,000 and the value of property is about \$350,000. The library contains about 25,600 volumes. The president is Edwin B. Craighead, LL.D.

MONTEFIORE HOME. See ARCHITECTURE, section on *Hospitals and Homes*.

MONTENEGRO. A European hereditary constitutional monarchy; one of the Balkan States. Area, previous to the wars in the Balkans, 9080 square kilometers, or 3506 square miles. By the treaty of Nov. 12, 1913, the new

Serbo-Montenegrin frontier was defined. It is separated on the west from the Adriatic by the strip of Austrian territory forming the extremity of Dalmatia, excepting in the recently acquired districts of Antivari and Dulcigno, where it possesses a seaboard extending about 28 miles. The new area is estimated at 5603 square miles. The original population numbered about 285,000, that of the new territory roughly estimated at 150,000. Cetinje, with 5300 inhabitants, exclusive of military, is the capital. Other towns are Podgoritsa, with 10,053 inhabitants; Dulcigno, 5081; Nikšić, 4972; Antivari, 2371; Diakovitsa, in the new territory, has 14,050 inhabitants.

Montenegro is a mountainous, wooded country with cultivable tracts where agriculture is carried on; considerable herds roam the mountain pastures. Cereals are grown, as well as tobacco, potatoes, and vines. There are reported to be in the country about 500,000 sheep and goats, 60,000 cattle, etc. Imports and exports for the year 1911 were valued at 8,167,000 and 2,392,000 kronen respectively. The export of hides was valued at 380,000 kronen, wool at 259,000, horses 275,000, cattle 211,000, olive oil 333,000, and sheep 108,000, etc. Austria-Hungary is the most important country of import, with Turkey second, and Italy third. Estimated revenue 1912, 3,609,000 kronen; expenditure, 4,187,126. The public debt amounts to 9,500,000 kronen at 5 per cent. Reigning sovereign Nicholas I, born 1841, succeeded to the throne 1860. Heir-apparent, Prince Danilo, born 1871. The Prime Minister in 1914 was Gen. Janko Vucotich, appointed May 8, 1913; Minister for Foreign Affairs, M. Plamenatz.

ARMY. Military service in Montenegro is compulsory, and each able-bodied citizen is liable from 18 to 62 years of age, of which 33 years are spent in the active army and 10 years in the reserve. The active army is in reality a national militia, where the constituent units are grouped by tribes and districts, and the recruits joining at 18 years of age for two years have 60 days of instruction and 15 days of maneuvers a year, unless for financial reasons the amount of service has to be reduced or war is in progress. In the active army the men are from 20 to 52 years of age, and the annual period of service is from 10 to 15 days, while the second class is made up of men unavailable for the first and serving four days a year. The approximate effective strength of the army was given as 37,000 men, the field army previous to the Balkan wars being at most from 40,000 to 44,000 men, 146 guns, and 44 machine guns. The army is organized into 4 divisions, each comprising 2 or 3 brigades, 1 battery of field artillery, 1 battery of howitzers, 1 company of engineers, and 1 platoon of couriers. Montenegro participated with the Balkan allies in the war of 1912, and in August, 1914, having declared war on Austria and Germany, was able to have 4 divisions available for the field. The various battalions which numbered originally in all about 62, were grouped in 4 districts as follows: Cetinje, 17 battalions; Podgoritsa, 13 battalions; Nikšić, 14 battalions; and Kolaschine, 18 battalions. This number doubtless was increased with the new territory resulting from the Balkan War and with the forces put into the field in 1914, whose strength was estimated at a maximum fighting force of 50,000.

The battalion varied in strength from 400 to 800 men, and usually there were 4 guns or machine guns to a battery or section. The guns and other weapons were of various makes.

By their strong sympathy with Serbia, and by their national ambitions, the Montenegrins were drawn into the War of the Nations (q.v.), declaring war on Austria-Hungary, August 8, and on Germany, August 12.

MONTESSORI METHOD. The widespread interest that exists regarding the educational method of Dr. Maria Montessori, docent in the University of Rome, dates from the appearance of certain popular magazine articles in the fall and winter of 1911-12. At about the same time The House of Childhood was incorporated in New York for the purpose of manufacturing and selling the apparatus required by the method, and shortly afterward the American edition of *The Montessori Method* was published. During 1913 a national association, composed of many persons of prominence in educational and social work, was organized for the purpose of extending the knowledge of the method. During the past three years, many American teachers and parents have visited Rome for the purpose of studying the method, and there have been few educational meetings that have not given the subject some place on their programmes. So pronounced has been the interest of laymen that several popular magazines have printed articles bearing upon Madam Montessori's work.

The use of the method in the United States is still in the experimental stage. In general only private schools have adopted it, and among these, few attempt to follow completely the methods advocated by Madam Montessori. The supply of teachers who are qualified to use the method is very limited, because there is no authorized institution for the training of such teachers, except the Institute that Madam Montessori has conducted in Rome. The influence of this method, however, must not be judged by the number of teachers who claim that they are using it. Madam Montessori's writings and lectures have served to focus attention upon some of the fundamentals of education from a new point of view, and this constitutes her chief contribution.

Madam Montessori's training and experience had been such as to lead her to consider a "new and scientific pedagogy." She was the first woman ever granted the degree of Doctor of Medicine from the University of Rome. She was for a time Assistant Doctor in the Clinic of Psychiatry, and for two years prior to 1900 she conducted a school for feeble-minded children. In 1906 she was invited to take charge of the educational work in certain of the poorer sections of Rome, where a Real Estate Institute was attempting to reform conditions. In this position she worked with normal children, and here it was that she attracted the attention of educators in Europe and America. In all of her efforts she maintained a scientific attitude toward the problems of education.

In the scientific pedagogy that Madam Montessori attempts to establish, the activity of the child is regarded as the phenomenon that is to be observed and interpreted. In order that the child's activities may be of scientific value, he must be free to act in a natural manner. She says, "If a new and scientific pedagogy is to

arise from the *study of the individual*, such study must occupy itself with the observation of *free children*." The duty of the teacher both as regards discipline and instruction is to observe rather than to direct. Concerning discipline, she says, "The liberty of the child should have as its *limit* the collective interest; as its *form*, what we universally consider good breeding. We must, therefore, check in the child whatever offends or annoys others, or what tends toward rough or ill-bred acts. But all the rest—every manifestation having a useful scope—whatever it be, and under whatever form it expresses itself, must not only be permitted, but must be *observed* by the teacher."

In order that children may properly direct their own activities, Madam Montessori provides them with a variety of materials which she permits them to use only for the one purpose for which it was designed. Since these materials take the place of the old-time teacher, they are called "didactic materials," or teaching materials. Among the first of these materials that are given to the children are wooden blocks in which there are holes of varying sizes and depths. Cylinders are fitted to these holes. All of the cylinders are removed and the child is encouraged to replace them. If he fails to place each cylinder in its proper opening, his mistake will become evident to him. "The didactic material *controls every error*. The child proceeds to correct himself." The use of the material in the way indicated "provokes auto-education." From time to time the children are given different pieces of the didactic material which they use in the prescribed way, until they become very skillful in its manipulation.

In dealing with feeble-minded children, Madam Montessori, in common with others, found that sense education for such children was essential. She, however, goes further than any other teacher in the belief that sense education is equally valuable for normal children. She insists upon a systematic, even formal, education of the senses, and she accomplishes this by means of the didactic material. The sense discrimination shown by children in the Montessori schools seldom fails to make a marked impression upon the visitor.

The schools in which Madam Montessori first tried her method with normal children were a part of a social improvement effort. Accordingly much emphasis was placed upon those school activities that might be helpful in the home. The children learned to button and lace their clothes, to wash and carry dishes, and to prepare and serve their lunches in the school-room. Since such activities are well adapted for exercises in muscular control, they are of value for children of all classes, and they, therefore, form an important feature of the method.

The distinctive features of the Montessori method are its insistence upon muscular training and sense education. The part of the method which has received greatest attention, however, is that which relates to the teaching of the school arts. Credit for the ease with which children are said to learn to write and to read is given to the use of the didactic material. The actual methods employed in teaching these subjects do not differ greatly from those in common use, except in the case of writ-

ing, in which subject there is direct preparation by the use of the didactic material.

A number of books and articles dealing with the Montessori method have been published, among them: Maria Montessori, *The Montessori Method*; Dorthy Canfield Fisher, *A Montessori Mother*; S. A. Morgan, *The Montessori Method, An Exposition and Criticism*; Ellen Yale Stevens, *A Guide to the Montessori Method*; William H. Kilpatrick, *The Montessori Method Examined*.

MONTSERRAT. A West Indian island; a presidency of the Leeward Islands colony (q.v.). The island is covered with forested mountains, and is considered to have the most healthful climate found in the Antilles. An attempt is being made to revive the coffee and cacao industries. The cultivation of cotton has superseded that of sugar, the export in 1912 amounting to 289,234 pounds of lint, valued at £19,356. The principal product for export is limejuice; there are about 12,000 acres planted to lime trees. In 1912 there were exported 128,857 gallons of raw and 4527 concentrated limejuice, and 34 tons of citrate of lime; total value, £42,052. Total imports 1912, £40,526 (£44,795 in 1911); exports, £42,053 (£55,930). Revenue 1912-13, £11,932 (£12,945 in 1911-12); expenditure, £10,556 (£10,030). Public debt Dec. 31, 1912, £11,100. Customs revenue, 1912-13, £8376. Commissioner 1914, Lieut.-Col. Wilfred B. Davidson-Houston. Plymouth, the capital, has 1534 inhabitants. See **LEEWARD ISLANDS**.

MORATORIUM. See **FINANCIAL REVIEW**.

MORAVIAN CHURCH. See **MORAVIANS**.

MORAVIANS, also called **UNITED BRETHREN** (*Unitas Fratrum*), and the **MORAVIAN CHURCH**. There are two bodies of Moravians in the United States, but only one of numerical importance. The smaller body is called the Union Bohemian and Moravian Church. It numbered in 1914, 1000 communicants, 21 churches, and 4 ministers. The main denomination numbered in the same year 19,463 communicants, 122 churches, and 142 ministers. Missions are maintained in nearly all parts of the world, and the educational institutions under the control of the Moravians have a high reputation for efficiency. The latter include the Moravian College and Theological Seminary, the Moravian Parochial School for Boys and Girls, and the Moravian Seminary for Girls at Bethlehem, Pa.; Linden Hall Seminary for Girls at Lititz; Nazareth Hall for Boys at Nazareth, Pa.; and an academy for girls at Salem, N. C. Moravians are strongest in Pennsylvania.

MOROCCO. An African sultanate under French protection by virtue of the treaty of March 30, 1912; the largest of the Barbary States. The area of the French protectorate is given at 416,800 square kilometers, with an estimated population of 3,000,000. The Spanish concessions cover about 21,800 square kilometers, with about 404,000 inhabitants; Tangier, which is to be internationalized, has 600 square kilometers, and 60,000 inhabitants. Fez is the capital, with 101,820 inhabitants; Morocco (Marakesh), 60,034; Rabat, 47,144; Tangier, 46,270. The inhabitants are chiefly Berbers, Bedouins, and Mued Arabs and Tuaregs, and belong to the Malekite sect of the Sunnite Mohammedans.

The principal industries are agriculture and

grazing. The mineral resources are undeveloped. There is a limited manufacture of carpets and slippers. The principal products and exports in 1912 were barley, 19,332,000 francs; legumes, 7,113,000; wheat, 6,579,000; eggs, 6,125,000; flax, 5,005,000; hides and leather, 4,764,000; almonds, 4,127,000; cattle, 2,327,000; wool, 1,580,000; corn, 1,201,000; canary seed, 1,224,000; slippers, 1,078,000; total export, 75,047,000 francs. Total import, 152,497,000 francs. Vessels entered in the 1912 trade, 3679, of 2,921,000 tons.

Reigning Sultan, Mulai Yussuf, proclaimed at Fez, Aug. 17, 1912, upon the deposition of his brother, Mulai Abd-el-Hafid. There is a French resident commissioner-general; a Spanish high-commissioner resides at Tetuan.

HISTORY

FRENCH MILITARY OPERATIONS. The French forces in the French Moroccan Protectorate energetically pushed forward the building of telegraphs, roads, and bridges, and at the same time carried on a series of vigorous military operations against the restless native tribes. The most important event of the year was the occupation of Taza. A glance at the map will show that Taza, lying to the north of the Middle Atlas region, commanded the narrow strip of "unpacified territory" which still separated the French occupied zones of the west and of the east. From Algeria the French gradually had been extending their power westward into the heart of the Moroccan mountain country; while from the western coast of Morocco, where in 1908 France held only isolated posts at Mogador, Mazagan, Casablanca, and Rabat, a similar advance had been made, bringing Fez (1911), Tadia, Marakesh, and Demnat under French rule. At its narrowest point, at Taza, the unoccupied strip of territory was only 30 miles wide. The practically bloodless capture of Taza on May 9, 1914, by a rapid and stealthy march of General Baumgarten's column from Mçoun, was the culmination of the French campaign, for it opened up communication between the eastern and western spheres of occupation. It would now be possible to fill up the gap between the railway which led from Casablanca and Rabat on the Atlantic Coast eastward by way of Fez and the railway which joined Mçoun with Algeria and Tunis to the eastward. Fifteen miles northwest of Taza, General Baumgarten was met, on May 16, by General Gouraud, who had approached Taza from the opposite direction, that is, from the west. The Berber tribesmen of the Zaaian Confederation so bitterly resented the French occupation of Taza, and manifested such an alarming spirit of hostility, that the French in June sent out three armies against them. The capture of the Zaaian stronghold of Khenifra by the French forces seemed to quiet the tribes for a time; but in November the garrison which the French had left in Khenifra was fiercely assailed by Moha Ou Mamou and might have been compelled to surrender but for the timely arrival of Brigadier General Henry with 7000 troops from Fez, and Colonel Duplessis with 3500 troops from the territory of Zeedla.

In December despatches from London stated that the British government had formally recognized the French protectorate over Morocco as

formulated in the Franco-Moroccan treaty of 1912.

SPANISH ZONE. Early in February the Spanish General Bereger led a column of native troops out from Tetuan on a punitive expedition; in returning he was so violently attacked by a party of Moors that he effected his escape only with the greatest difficulty, after losing 21 killed and 26 wounded. In March General Marina, the Spanish commander, and General Lyautey, the French commander, met in consultation, presumably with a view to concerted action in the pacification of Morocco. In March also France and Spain jointly relinquished their privilege of consular jurisdiction over their nationals in Morocco, who were henceforth to be tried by ordinary courts. In April a Spanish officer by the name of Del Valle was seized and detained by Moors of the Anjera tribe. Recurrent reports of Moorish insurrectionary activities indicated that the work of "pacification" was not being prosecuted with the same vigor in Spanish as in French Morocco.

MOUNT HOLYOKE COLLEGE. An institution for higher education of women, founded at South Hadley, Mass., in 1837. The students enrolled in all departments of the college in the autumn of 1914 was 797. The faculty numbered 90 and the administrative staff 43. There were no notable changes in the faculty during the year and no noteworthy benefactions were received. The productive funds of the college in 1914 amounted to \$1,311,271, and the income to \$61,502. There were 56,000 volumes in the library. The president is Mary E. Woolley, M.A.

MUIR, JOHN. American naturalist and writer, died Dec. 24, 1914. He was born in Dunbar, Scotland, in 1838. When he was eleven years of age he came with his parents to the United States and went with them into the Wisconsin woods, where he helped his father clear the land, and here began the studies of nature which he continued throughout his life. During these early years he showed unusual talent for invention and turned out many ingenious contrivances made of wood, including a clock, safety lock, and other articles. In 1860 he took his wooden inventions to be exhibited at the State fair in Madison, where they attracted much attention and were described in the newspapers, but he would not reveal his identity, as his father had warned him against the evil effects of praise. While at Madison he learned that for \$1 a week he could study at the State University, and for four years he worked there, supporting himself by labor in the fields and school teaching. At this time an accident almost deprived him of the sight of his right eye, but as

the eye grew stronger and he was able to read, he started on a long tramp, sleeping in the open and gathering plant specimens, walking through Kentucky, Tennessee, Georgia, and Florida. From the latter State he went to Cuba intending to extend his trip to South America, but changed his plans and went to California by way of the Isthmus of Panama, landing almost penniless in San Francisco in April, 1868. Here he saw for the first time the giant crests of the Sierra Nevada Mountains, where he was destined to spend many years of his life. On foot he followed the Diablo foothills along the San José Valley, over the Diablo Mountains to the valley of San Joaquin, and finally to the big trees and the Yosemite.

The following years were devoted to a tireless study of the Yosemite Valley and the surrounding country, tramping over the mountains and tracing the course of glaciers. The minute knowledge which he obtained in this careful study enabled him to demonstrate the theory of glacial formation of the Yosemite region, a formation which eminent scientists had held to be due to a great cataclysm of nature which had split the valley and dropped its bed 3000 feet. These men laughed at Muir's theory, but he lived to see every scientist in the world declare that he was right and they were wrong. His love for the valley, which he was the first to describe, won him the name of "The Father of the Yosemite." In 1889 he interested Robert Underwood Johnson, then associate editor of the *Century Magazine*, in the need for national control of the valley, and to their joint efforts was largely due the success of the movement to make the Yosemite a national reserve.

In order that he might increase his knowledge of the deserts and mountain ranges beyond the Sierras, Muir in 1876 joined the United States Coast and Geodetic Survey, and for three years he worked with the survey in Nevada and Utah. His study of glaciers took him finally to Alaska, where he explored the region north of Fort Wrangel and discovered Glacier Bay and the great Muir glacier. In 1881, as a member of the Corwin expedition he joined in the search for DeLong and the lost *Jeannette*, and was thus enabled to continue his investigations of glaciers along the coast of Siberia and Bering Sea. He studied most of the ice rivers of North America and then went abroad in 1893 to compare the conditions with those in Norway and Switzerland. In 1903-04 he traveled nearly around the world to study the forests of Russia, Siberia, India, the Philippines, Australia, and New Zealand, and during this journey he traveled far up the Amazon. He then sailed for Cape Town and went inland 1300 miles to the Victoria Falls and the Zambezi. After this he went to Australia because he had heard that the eucalyptus trees of that country were the largest in the world. He came to the conclusion, however, that they were not as large as the big trees in California. Mr. Muir wrote much on subjects connected with natural history and geology. His published writings include: *The Mountains of California* (1894); *Our National Parks* (1901); *My First Summer in the Sierra* (1911); *The Yosemite* (1912); and the *Story of My Boyhood and Youth* (1913). He also contributed about one hundred and fifty articles to magazines, newspapers, etc., on the natural history of the Pacific Coast,

Alaska, etc., and edited *Picturesque California*. He was a member of the American Academy of Arts and Letters and of several learned societies. From Harvard he received the degree of A.M., from the University of Wisconsin and the University of California, LL.D., and from Yale University, Litt.D.

MÜLLER, KARL VON. See WAR OF THE NATIONS.

MUMFORD, JAMES GREGORY. An American physician and surgeon, died at Clifton Springs, N. Y., Oct. 19, 1914. He was born in Rochester, N. Y., Dec. 3, 1863, and in 1885 graduated at Harvard University. For 12 years thereafter he practiced his profession in Boston, serving on the surgical staff of the Carney and the Massachusetts General Hospital. He was made assistant in surgery in 1895, and in 1902 instructor in surgery in the Medical Department of Harvard University. He was physician-in-chief of the Clifton Springs Sanatorium and Hospital in 1912-14. Dr. Mumford served as surgeon to the Naval Brigade, Massachusetts Volunteer Militia (1892-93), and later was appointed first lieutenant in the medical reserve corps, United States army. He was a Fellow of the American Medical Association and of the American College of Surgeons, and a member of many surgical and medical societies in the United States and abroad. He published: *Surgical Memoirs* (1908); *Practice of Surgery* (1910); *One Hundred Surgical Problems* (1911); and *A Doctor's Table Talk* (1912), besides many contributions to medical journals. He also edited Harrington's *History of the Harvard Medical School*.

MUN, ADRIEN ALBERT MARIE, COUNT DE. A French scholar and public official, died Oct. 6, 1914. He was born in 1841 and received a military education at the Academy of Saint Cyr. From 1862 to 1867 he served in Algiers as a lieutenant. He took a part also in the Franco-Prussian War, receiving the decoration of the Legion of Honor for gallant conduct at Metz. In 1872 he became a captain of dragoons and in 1875 resigned from the army. He took an active part in political life and was at one time Minister of Foreign Affairs. He represented one of the districts of Finistère in the Chamber of Deputies. In his later life he became well-known as a journalist and writer. His published writings include several works on patriotic and social themes. He was a member of the French Academy. Count de Mun was a prominent Roman Catholic and was for many years the mouthpiece of the Catholics in the Chamber of Deputies. He contributed to the *Echo de Paris* after the outbreak of the European War of 1914 a remarkable series of articles which were a special feature of French political life in that period. In these articles he urged the loyal support of the government by French Catholics.

MUNICIPAL BUILDINGS. See ARCHITECTURE.

MUNICIPAL GOVERNMENT. Outstanding features for the year 1914 were a greatly enlarged choice between various forms of municipal government in New York State, permissive legislation and the adoption of a commission-plan charter in Buffalo, N. Y., the adoption of home-rule (locally framed) federal-plan charters by St. Louis, Mo., and Columbus, Ohio, a relatively slow spread of the commission plan throughout the country, and the rapid extension

of the city-manager plan. Before taking up these four matters in some detail a few points in the annual review of Clinton Rogers Woodruff, Secretary of the National Municipal League, before the meeting of the League at Baltimore in November, may be noted. The bicameral council now exists in only nine of the 50 largest cities—Philadelphia, Baltimore, Kansas City, Providence, Louisville, Atlanta, Worcester, Richmond (Va.), and Cambridge. It seems safe "to predict," Mr. Woodruff said, "that five years hence not one of the larger cities will be risking its business and its future to the evils of a form which affords such abundant opportunities for inefficiency, and waste, and mismanagement." A significant advance in municipal finance has been contributed by New York City by adopting what will soon become a pay-as-you-go plan of meeting the cost of public improvements. Such bonds as are authorized for these improvements will run for only 1 to 15 years, and will be met from the tax levy as they fall due. Improvements already authorized but not financed on the adoption of the plan were to be paid for wholly by bonds. Subsequent improvements will be paid for, three-fourths by bonds and one-fourth out of the tax levy, in the first year, then changing to cash payment by one-fourth per year until finally no bonds are issued. Another significant movement noted by Mr. Woodruff is the increase in the number of cities which have social or public welfare departments. These now include Kansas City (one of the earliest), Chicago, Denver, Duluth, Grand Rapids, Los Angeles, Cleveland, and St. Joseph.

CHARTER CHANGES IN NEW YORK STATE. Under "The Optional City Government Law" of New York (Chapter 444, approved April 16, 1914, and in effect July 15, 1915), second and third class cities choose any one of six plans or varieties of government and third class cities may place themselves under the existing law governing second class cities, the latter except for a salary modification. The six plans fall under three main types, as regards the distribution of legislative, executive, and administrative functions, as follows: the commission plan, the commission-manager plan, and the federal or separate legislative and executive plan. Variations in the commission plan are a choice between a commission with administrative duties divided among the members and a commission with collective administrative supervision. Variations in the federal plan are in the number of councilmen and in whether they shall be selected at large or by wards. In general, the small council principle is followed and with the single exception noted, elections are at large. A city of the second or third class may vote on the adoption of any of the first six plans if voters to the number of 10 per cent of the votes cast at the last general election petition for an opportunity to vote on a single specified plan. In cities of more than 20,000 population, 2000 signers are sufficient to call an election. A majority of all the votes cast for or against a plan decides. Notable provisions common to any of the plans will first be mentioned. The terms of mayor and councilmen are for four years. The act provides that "all appointments, promotions, removals, and changes in status in the civil service of the city shall be made in accordance with the provisions of the civil service

law." The council in commission or in commission-manager cities and the mayor in other cities appoints a civil service commission of three members, for terms of six years. A commissioner may be removed by the unanimous vote of the council, but only on written charges and after a hearing. The board of education and educational funds are not affected by the adoption of any of the plans.

Taking up now the various plans. A and B vest all legislative, executive, and administrative powers in a council composed of a mayor and four councilmen, except that places of less than 25,000 population may choose between five and three members. The mayor has about the same powers as the other members of the council, but in addition it is his duty to inform himself as to the conduct of each city department, and report the results to the council from time to time, with recommendations. Under A, the yearly salaries of the four councilmen range from \$400 for places of less than 8000, to \$4500 for places of 100,000 or more, and the mayor receives one-fourth more salary than the councilmen. Under B, the salaries range \$300 a year in places of less than 10,000, to \$1200 in places of 100,000 or more, and no difference in the salary of the mayor is specified. Under C, the council has legislative powers, only, and all executive and administrative powers, including the appointment and removal of officers and employees, are vested in a manager, appointed by the council, holding office during its pleasure and receiving such compensation as the council may fix. In second class cities under C, the council shall consist of a mayor and six councilmen, and in third class cities, of four councilmen and a mayor. The mayor is substantially on a par with the other members of the council. The salaries paid the mayor and the other councilmen under C are the same as have been stated for B. Plans D, E, and F provide for the complete separation of the legislative and executive powers of the city. Under D, the council consists of five or three members, who elect one of their number as president. The mayor is the chief executive officer and may make all appointments. No council ordinance or resolution becomes effective without his signature, unless passed over his veto by all the members of a council of three, and four of the five members of a council of five. The salaries of councilmen under D are one-half of those under A, and of the mayor three times that of the councilmen. Plan E is the same as D, except that there are nine councilmen, and plan F is also the same as D, except that the councilmen are elected by wards instead of at large, and that there is one councilman for each ward. By an apparent oversight the number of votes to override the veto of the mayor is omitted from plans E and F. Plan G simply authorizes cities of the third class to adopt all the provisions of the existing second-class cities law (Chapter 53, Consolidated Laws of New York), except that where the second class cities act specifies cities, third class cities adopting it shall pay salaries two-thirds of those stipulated for cities of less than 75,000.

At the November elections, C, or the commission-manager plan, was rejected by Mt. Vernon, Cohoes, and Lockport, and adopted by Niagara Falls. Auburn rejected B, or the commission plan with the whole commission responsible for

administrative acts. At the same election Buffalo adopted a special charter authorized by the Legislature (outlined just below). Earlier in the year Olean, N. Y., rejected a special legislative charter on the commission-manager plan.

The Buffalo Charter. After a struggle of many years and several legislative defeats, advocates of commission government for Buffalo, N. Y., secured the passage of a commission-plan charter by the legislature of 1914. The mayor of Buffalo vetoed the charter, under a constitutional provision which submits all legislation affecting only one city in New York State to the mayor of that city for approval or disapproval. The Legislature overrode the veto. At the November election the charter was adopted by a popular vote of 36,362 to 20,891. The new charter was to go into effect Jan. 1, 1916. It provides for a council or commission, elected at large on a nonpartisan ballot, consisting of a mayor elected as such at \$8000 a year, and four other commissioners at \$7000 a year. The term of office is four years. The mayor heads the department of public safety. The council decides which of the other members shall be head of the departments of (2) finance and accounts, (3) public affairs, (4) public works, (5) parks and buildings. The duties falling by statute upon the board of health will be performed by the commission unless and until it delegates them to either the mayor or a commissioner of health. Provision is made for the referendum on ordinances passed by the council but not for the initiative nor for the recall.

THE ST. LOUIS CHARTER. St. Louis, Mo., adopted a federal-plan charter framed, under the Missouri home rule law, by a board of freeholders. The legislative body consists of 28 aldermen, one from each ward of the city, but elected at large until constitutional amendments permit election by wards. The mayor is the chief executive officer, with a salary of \$10,000 a year. The mayor appoints the assessor, register, city counselor, city marshal, city court judges, and clerks, president of the board of public service, and directors of public utilities, streets and sewers, public welfare, and public safety, the five last named constituting the board of public service. Each member of this board is paid \$8000 a year. The president and the directors of public utilities and of streets and sewers must be "engineers of technical training, of at least 10 years' experience, and qualified to design as well as direct engineering work." The president of the board of public service, and each of the four directors, appoints all heads of divisions in his department, and the heads, in turn, appoint all officers and employees therein, and also manages his division. The mayor, comptroller, and president of the board of aldermen comprise a board of estimate and apportionment, and there is a complaint board of three members to hear and investigate all complaints against officials and employees of the city, and against public utility corporations. The civil service is administered by an efficiency board of three members, appointed by the mayor. The unclassified service (employees not subject to examination), includes all officers elected by the people, all heads of departments, offices, and divisions, all members of boards appointed by the mayor to serve without pay, and various secretaries and stenographers, besides various

officers requiring exceptional scientific or educational attainments. The officers last named need not be residents of the city. The existing municipal assembly was to be continued in office until April, 1915, and various existing administrative officers until their terms expired. The charter provides for the initiative, and the referendum, and also for the recall of all elective officers. The mayor may remove non-elective officers.

THE COLUMBUS CHARTER. Another federal-plan home-rule charter which may be outlined, is the one framed by a charter commission of 12 members. The commission was elected by popular vote on May 6, 1913, and reported on March 3, 1914. The charter was adopted by popular vote on May 5, 1914, but except for minor provisions was not to go into effect until Jan. 1, 1916. In contrast to the St. Louis charter, the Columbus charter provided for only seven councilmen, elected at large. There are also elected a mayor, city attorney, and auditor. All elective officers serve for four years, but the terms are so arranged that only five offices will be filled at any one election. To reduce still further the total number of candidates there is a primary election of candidates for councilmen. Voters express first, second, and third choice for mayor, attorney, and auditor. Provision is made for the initiative, referendum, recall, civil service, a public defender (for the indigent), a public welfare division, and a board of purchase. Councilmen are paid \$1000 a year, subject to a deduction of two per cent for non-attendance at any regular meeting, and forfeiture of office for being absent at eight consecutive regular meetings without excuse from the council. The mayor is paid \$5000 a year. His vetoes may be overridden by the same number of votes as were required to pass the original measure. He appoints the directors of public service and public safety outright. With the concurrence of the council he appoints sinking fund trustees, civil service commissioners, four members of the board of health, and members of any advisory commissions created by the council. The fifth member of the board of health is the superintendent of public welfare, who heads a corresponding division in the department of public safety. The mayor is president of the board of health, but has no vote in that body.

OTHER CHARTER ADVANCES. The country over, charter making and amending was perhaps not so active in 1914 as in the few preceding years, although the sum total would have been held as remarkable a dozen years earlier. There was considerable activity in Ohio, where several cities adopted the new charters, some including the city-manager plan, while Toledo adopted a federal-plan charter. A California constitutional amendment authorized cities of that State of from 2500 to 3500 population to frame their own charters, a privilege already enjoyed by larger cities in that State. Most of the charter changes are to the commission plan, under which all legislative and administrative powers are vested in a single small commission, or council, elected at large. Many of the new charters or charter amendments departed radically from the simon-pure commission plan by vesting all executive functions in a city manager appointed by the council. A few cities reverted to the old federal plan, with a mayor as

chief executive, who appoints all department heads and approves or vetoes all council regulations or ordinances. It appeared that in a majority of cases the city-manager plan was combined with the commission plan. Whichever of these three types is adopted almost invariably the council is small, generally five members, sometimes three in the smallest places, and now and then seven or nine. The out-and-out commission plan generally carries with it the initiative, the referendum, and the recall.

THE COMMISSION PLAN. Exactness in stating the number of cities which have adopted the commission plan in a given year or all told is impossible. The best records obtainable show that 41 cities adopted the plan in 1914, making a total of 426. (See accompanying table for 1914 accessions, and 1913 YEAR BOOK for list of commission-plan cities up to the close of 1913.) The most notable addition to this list was Buffalo (see paragraph above), which, with its population of 423,715 in 1910, is much the largest which has yet adopted the plan. Others in excess of 100,000 population (1910), are as follows: New Orleans, 339,075; Jersey City, 267,779; Denver, 231,381; St. Paul, 214,744; Portland, 207,714; Oakland, 150,174; and Birmingham, Memphis, Omaha, Dayton, Nashville, Lowell, and Spokane, in the order named. Aside from Buffalo and San Antonio, the cities which adopted the plan in 1914, were all below 32,000 (see accompanying table). The 1914 accessions were also fewer in number than those of any of the three previous years. The growth of the commission plan by years, as accurately as it can be given, was as follows:

1901	1	1911	96
1905	1	1912	67
1907	7	1913	112
1908	5	1914	41
1909	23	Not given	7
1910	66			
Total					426

In Canada, the commission plan does not seem to be in favor as yet. So far as can be stated here it was in use at St. Johns, N. B., and Lethbridge, Alberta, only.

TENTATIVE LIST OF CITIES WHICH HAD ADOPTED THE CITY-MANAGER PLAN UP TO DEC. 31, 1914

(Based in part upon records of the National Short Ballot Organization)

	Population	Date
Niagara Falls, N. Y.	30,445	1914
Titusville, Pa.	8,533	1913
Charlottesville, Va.	6,765	1913
Staunton, Va.	10,604	1908

THE CITY-MANAGER PLAN. When the commission plan was sweeping over the country, one of its most winning claims was that it places all the governmental powers of the city in a single small body, just as the affairs of a private corporation are lodged in a board of directors. Although the parallel was largely true it deviated in this vital respect: the city commissioners exercise both policy-determining or legislative, and policy-executing or executive, functions, and under the commission plan there are a number of coordinate administrative heads, while successful private corporations have a separate policy-determining and policy-executing function, and a single but powerful executive head, subject only to the board of directors. Strangely enough, the way to completing the parallel between the municipal and private corporation was not led by a city which was primarily seeking that end but by one which wished to adopt the commission plan but was stopped by a constitutional bar, and so created the office of general manager. This office was assumed at Staunton, Va., by Charles E. Ashburner, a civil engineer, on April 2, 1908, thus beginning a new era in city government. In 1912, the Legislature of South Carolina authorized Sumter to adopt either the commission plan or what is now known as the commission-manager plan. The latter was

chosen the same year by a heavy majority, and after public advertisement Sumter chose M. M. Worthington, a civil engineer, as manager. He took office in January, 1913. Unless the action in 1912 of Norwood, Mass., in combining in one the offices of town engineer, superintendent of public works, and director of the water and lighting systems be called the adoption of the manager plan, then no more cities adopted it until 1913. In that year and in 1914, it appears that the plan was adopted by 34 cities, divided about equally between the two years, making a total of 34 cities to the close of 1914. The exact figures and dates are somewhat uncertain as has been explained for commission-plan cities under that heading, but the best figures available are given in the accompanying table. It will be seen that as with the commission plan, so here, most of the cities adopting the manager plan, and all of the early ones, were small, the largest being Dayton, Ohio (116,577), Springfield, Ohio (46,921), Jackson, Mich., and Niagara Falls, N. Y. (each about 30,000). On June 30, 1914, Seattle voted down the city-manager plan by a large majority. In December, 1914, eight city managers gathered at Springfield, Ohio, and with six others who had expressed their interest by letter or telegram formed the city managers association. In the course of a paper presented at that meeting by Henry M. Waite, city manager of Dayton, Mr. Waite said that although in many cities the most important problems to be solved are of an engineering character the city manager need not be an engineer. He must be an executive; must know how to handle men; must be fair and just, firm and polite; and must have the courage of his convictions. Mr. Waite was chosen president, and Ossian E. Carr, Cadillac, Mich., was made secretary of the new association. Most of the city-manager cities have the commission form of government as well.

MUNICIPAL LEAGUE, NATIONAL. The twentieth annual meeting of the National Municipal League was held in Baltimore, Nov. 18, 19, and 20, 1914. The city manager form of government and efficiency in municipal affairs attracted wide attention, as did likewise the social phases of the problem.

The principal address on the city-manager form of government was made by City Manager Henry M. Waite, of Dayton, Ohio, and the leading address on administrative officials in municipal government was made by President Lowell of Harvard University. Reports were presented from the Committees on Civic Education, Political Methods, Municipal Courts, The Liquor Problem, Franchises, Municipal Reference Libraries and Archives. Among the social ques-

tions considered were: "The Relation of the City to its Food Supply," Prof. Clyde L. Ling of the University of Pennsylvania, chairman of the League's special committee on the subject; "The Children of Our Cities," Mrs. Florence Kelley; "Women's Work for the City," Mrs. Charles A. Beard; and an address by Jane Addams of Chicago, on "Social Phases of City Life." Miss Frances A. Kellor of New York outlined a municipal programme for dealing with unemployment.

The Committee on Municipal Programme through its chairman, the Hon. William Dudley Foulke, presented a partial report in the form of sections of a model charter dealing with the city manager, council, civil service, and efficiency branches, and constitutional provision. The committee unanimously reported in favor of the city-manager form of government and of extending the merit system to the highest possible offices. This committee consists of William Dudley Foulke, chairman, Richmond, Ind.; M. N. Baker, Montclair, N. J.; Richard S. Childs, New York City; Mayo Fesler, Cleveland, Ohio; Prof. John A. Fairlie, University of Illinois; Dr. Herman G. James, University of Texas; Dr. A. Lawrence Lowell, Harvard University; Prof. William E. Munro, Harvard University; Robert Treat Paine, Boston, Mass.; Dr. Delos F. Wilcox, New York City; and Clinton Rogers Woodruff, Philadelphia, Pa.

President Foulke's address dealt with evolution in city charter making, and Secretary Clinton Rogers Woodruff's address dealt with the present phases of the municipal situation with special reference to the effect of the European War on American city thought and action. In connection with the meet, there was a conference of civic secretaries presided over by Addison L. Winship of the Boston City Club, which formulated some interesting suggestions for the work of voluntary civic bodies.

The present officers were reelected, and President Frank J. Goodnow of Johns Hopkins University added to the list of vice-presidents. Four new volumes in the National Municipal League are to be published during 1915: *The Lower Cost of Living in Cities*, by Dr. Clyde L. King; *Women's Work for Municipalities*, by Mary Ritter Beard; *Satellite Cities*, by Graham Romeyn Taylor; *The City Manager*, by H. A. Toulmin, Jr. The officers of the league are: President, William Dudley Foulke, Richmond, Ind.; treasurer, George Burnham, Jr., Philadelphia, Pa.; secretary, Clinton Rogers Woodruff, Philadelphia, Pa.; chairman of the executive committee, M. N. Baker, Montclair, N. J.

MUNICIPAL OWNERSHIP. Progress towards municipal ownership of water-works at San Francisco was continued by the taking of testimony in condemnation proceedings to acquire the works of the Spring Valley Water Company. About the middle of the year it was announced as probable that a purchase price of \$34,500,000 would be fixed by mutual agreement. Early in the year Denver, Colo., voted 12,640 to 6953 in favor of \$3,000,000 bonds as a contribution towards building a 6-mile tunnel through the Continental Divide for the Denver and Salt Lake Railroad (the "Moffatt Road"), the tunnel to accommodate a water-supply conduit from the headwaters of the Grand River. The Colorado Supreme Court afterwards declared the proposed bond issue illegal because it was an

evasion of a constitutional prohibition of using public funds to aid a private corporation. Other water-supply plans were under consideration by the Denver Public Utility Commission, established by a charter amendment in 1910 to acquire and operate water-works for Denver. Des Moines, Iowa, voted three times in 1914 on acquiring the property of the Des Moines Water Works Company at an appraised valuation. There was a good numerical majority in favor of the purchase each time, but not so heavy a majority as the law required at the first and second elections, and technical points were raised as to the majority at the third election. All the largest and the major part of all the cities of the United States own their water-works.

The new municipal street railway system for San Francisco, for which \$2,020,000 bonds were voted in December, 1909, and \$3,500,000 in August, 1913, was expected to be in use in its entirety at the close of the year. An east and west line extends from the Market Street ferry to the ocean, and north and south lines from the Mission and Protero districts to the Exposition Grounds, and other northern points. Construction was begun in 1911, and a part of the system was completed in June, 1913. Detroit voted bonds for municipal street railways in April, 1913, following which the mayor appointed a board of street railway commissioners. A valuation of the private street railway system was being made by experts for the commissioners in 1914, preparatory to an expected purchase. In Canada a few of the smaller cities owned street railways; Toronto was preparing to take over the system there; and a "hydro-radial" electric railway scheme is projected jointly by various municipalities and the Hydro-Electric Power Commission of Ontario. On Oct. 19, 1914, 11 of the 13 municipalities included approved the project by popular vote. Two lines were proposed; one from Toronto to Newmarket, 25 miles, and another from Toronto to Port Perry, 35 miles in length. Construction, it was said, must await a provincial appropriation.

A new municipal electric light plant at Cleveland, Ohio, was opened during the year. It had three new 7500-kilowatt steam-turbine-driven generators, which with an old 2500-kilowatt unit bring the total capacity up to 25,000 kilowatts. The maximum rate for current, 3 cents per kilowatt-hour, attracted much attention because of its lowness. The discussion brought out the fact that the same maximum rate has been charged since October, 1911, by the municipal plant of Winnipeg, Manitoba. See *Engineering News*, July 30, 1914, and Sept. 24, 1911, for discussion of rates, also a paper describing the plant presented before the December meeting of the American Society of Mechanical Engineers by F. W. Ballard, commissioner of light and heat, Cleveland, Ohio, and engineer of construction.

MURRAY, SIR JOHN. A British oceanographer, died March 16, 1914. He was born at Coburg, Ont., in 1841, and when he was 17 years of age went to Scotland to complete his education at the University of Edinburgh, where he devoted himself especially to literature. In 1871-72 he took a large part in the organization and equipment of the *Challenger* expedition, which from 1872 to 1876 penetrated into nearly all the seas of the globe. Mr. Murray

accompanied the expedition and devoted himself to the study of deep sea deposits, and he had charge of all the collections which were sent home during the expedition or brought back with the ship. The examination and working-up of these collections and the other results formed a stupendous task, and lasted much longer than the expedition itself. In 1880 and in 1882, he took part in the exploration of the Faroe Channel, and between the years of 1883 and 1894 he continuously explored the coasts and lochs of the east and west coasts of Scotland in his steam yacht the *Medusa*; he also established marine laboratories on the shores of the Forth at Granton, and on the Clyde at Milport. For many years he was a scientific member of the Scottish Fishery Board. He was also a strong advocate of the renewal of Antarctic exploration, and it was partly through his efforts that the National Antarctic Expedition was fitted out. To the end of his life he was constantly traveling in various parts of the world, taking an active part in promoting the sciences to which he was devoted, and in encouraging and assisting young men to devote themselves to scientific works.

MUSEUM OF ART. See ARCHITECTURE; and PAINTING AND SCULPTURE.

MUSIC. Following an established custom, a brief summary of the principal events of the last five years precedes the account of the musical happenings of 1914. The keen rivalry between the Metropolitan and Manhattan Opera Houses brought about an operatic war, which resulted in the payment of exorbitant prices to the principal artists, so that both institutions closed their season with a considerable deficit. Boston opened its own opera house with a company of the first rank. The New York Philharmonic Society was completely reorganized under Gustav Mahler (1909). The enormous expenditures incurred through the production of many new operas caused Mr. Hammerstein to withdraw from the operatic field, and to sell all his interests to his rival. The greater part of the Manhattan company was formed into a new organization, the Chicago Opera Company, under Andreas Dippel. In order to prevent the recurrence of conditions leading to financial ruin, the three great opera companies of New York, Boston, and Chicago apportioned the territory among themselves, and adopted a plan for the mutual exchange of their principal artists (1910). This agreement being strictly observed resulted not only in the elimination of unnecessary expense, but also created a spirit of unity which effectively broke up the Opera Trust controlled by Ricordi of Milan. Taking advantage of the rivalry between the Metropolitan and Manhattan companies the Trust, which monopolized almost the entire operatic production of Italy, had become more and more exorbitant in its demand of royalties. At last matters had come to such a point that the policy of American managers was practically dictated by Milan. The failure of Puccini's *Girl of the Golden West* became the signal for revolt. Chicago eliminated all works by Puccini; New York and Boston greatly curtailed the number of both works and performances (1911). This concerted action resulted in an adjustment of the differences between the American managers and Ricordi. Operas by American composers were produced, and a movement toward the production of opera

in the vernacular was rapidly gaining ground. In Europe the year was notable for the discovery of a number of manuscript scores of Beethoven, Bach, Liszt, and Schumann (1912). The movement in favor of opera in the vernacular took definite shape in the establishment of the City Club, through whose efforts the Century Opera Company was founded in New York. In the concert world a reaction manifested itself against excessive production of novelties of little value usurping the place of works of acknowledged worth. Throughout the world the year was marked by elaborate celebrations in honor of the centennials of the birth of Wagner and Verdi. The application of the heirs of Wagner for an extension of the copyright of *Parsifal* was refused by the Reichstag (1913).

GENERAL NEWS. For the effects of the great European War upon the musical conditions of Europe, see the subdivisions *Germany*, *England*, *France*. As a result of this unsettled state of things a greater number of world-famous artists visited the United States than ever before in one season, and, despite all complaints about hard times, found liberal support. Nor were the activities of native artists and organizations curtailed to any appreciable degree. Mr. Hammerstein was definitely restrained by the courts from violating the agreement into which he had entered with the Metropolitan Opera Company in 1910. On February 13 the American Society of Composers, Authors, and Publishers was incorporated in New York. Its object is the same as that of the French Société des Auteurs, Compositeurs, et Editeurs. (Consult NEW INTERNATIONAL YEAR BOOK, 1911, MUSIC.) Fixed fees are collected on all performances of works by members, and the amount collected is equally divided between composer and publisher. The society is administered by a board of directors consisting of six authors, six composers, and six publishers. For the purpose of enabling talented young artists to secure public hearing, the Music League of America was established in the spring. A committee of artists of acknowledged reputation passes upon the qualifications of aspirants, and the league secures engagements for the successful candidates. In order to stimulate the ambition of native composers, the city of Los Angeles offered a prize of \$10,000 for the best opera. At the same time a guarantee fund of \$50,000 was raised to ensure its adequate production during the musical festival to be conducted in connection with the Panama Exposition of 1915. A little later the committee announced its intention of making this prize a quadrennial one on condition that the American Federation of Musical Clubs would hold every fourth of its annual conventions at Los Angeles. The prize this year was won by Horatio Parker with *Fairyland*. At Chicago a "National Pianists' Contest" was held for a prize of \$200 for the best performance of MacDowell's *Concerto in A minor* by a young pianist who had received his or her entire musical training in the United States. The winner was Pasquale Tallarico of Wilton, N. H.

THE UNITED STATES

ARTISTS: INSTRUMENTALISTS. The year presented an unusual number of great pianists. Owing to a nervous breakdown, Paderewski was obliged to cancel a number of engagements on

the Pacific Coast, but recovered in time to finish his spring tour, scoring his customary phenomenal success. However, a renewed attempt to win laurels as a composer failed when he played his own piano concerto with the Boston Symphony Orchestra. Katherine Goodson played the same work, but both public and critics declined to accept it. Harold Bauer again gave a superb rendering of Brahms's colossal piano concerto, of which almost all pianists seem to be afraid, for outside of Bauer only Ansgore and Joseffy have played it in the United States. After several years of absence, Mme. Olga Samaroff reappeared in recital and with orchestra, and proved herself a matured artist of the first rank. Ethel Leginska, who made a decided impression the year before, challenged comparison with the greatest masters of the keyboard by her magnificent interpretation of an all Chopin programme which included all the études. Leonard Borwick, practically a newcomer, proved to be the sensation of the season. Three years before he had played two or three recitals at the end of a busy season, and had passed almost unnoticed. Now he comes unheralded, known only to a very few, and reveals himself as one of the giants of the piano. Jan Sickses, a Dutch pianist whose recitals many years ago held out much promise, returned to show that he has joined the ranks of the masters. Nor must David Sapirstein be forgotten while speaking of the younger artists who have amply fulfilled early promises. Michael Zadara was heard again after an absence of several years, but proved erratic and unreliable. Sometimes his playing was truly great, at other times it savored of charlatanism. Entirely new to the American public were Eleanor Spencer, a native of the United States, and Karl Friedberg, a German. Very favorable reports of her European successes had preceded Miss Spencer, which the emphatic success of her American début justified. She is a splendidly equipped artist in all respects. Mr. Friedberg was accepted as the equal of the acknowledged favorites. Among the most illustrious pianists whose art is familiar to all lovers of music, were: Bachaus, Gabrilowitsch, Godowsky, Hofmann, Ganz; Fanny Bloomfield-Zeissler, Yolando Merò, Teresa Carrefio, Tina Lerner, and Germaine Schnitzler.

At the début of the Hungarian violinist, Carl Fleisch, with the New York Philharmonic Society, enthusiasm ran so high that the strict rule forbidding encores had to be suspended. His large tone, flawless technic, and impeccable intonation disarmed all criticism, and his fiery temperament fairly carried away the listeners. Arrigo Serato, who for several years past has been regarded as the greatest violinist of Italy, proved that he need not fear comparison with the greatest living masters of any nationality. Manuel Quiroga, a Spaniard, showed himself possessed of splendid technical equipment and genuine temperament, but created the impression that he is a brilliant rather than a profound artist. Alexander Bloch, an American, introduced himself as a violinist of sterling merit. Another American, Frank Gittelson, though only a youth of 18, revealed himself as nothing less than a genius of the violin. Even now he must be judged only by the highest standards. A most successful tour of the French violinist Jacques Thibaud was unfortunately cut short by the sudden death of his

father. The reappearance of Fritz Kreisler after his participation in the war was made the occasion of tumultuous demonstrations, the spontaneous expression of sincerest rejoicing over the preservation of this rare artist. His playing showed not the slightest effect of the terrible hardships he had undergone. Other famous violinists that were heard were: Elman, Kubelik, Macmillen, Spalding, Yaaye, Zimbalist, Kathleen Parlow, and Maud Powell.

The cello had a larger number of representatives than it has had for many years past. Since his last appearance here 10 years ago the Spanish cellist Pablo Casals has come to be regarded by many as the greatest master of his instrument in Europe, and, naturally, expectation was keen. The general verdict was that his superior had not been heard here. Other artists heard were: Gérardy, Schulz, Malkin, Van Vliet, and Beatrice Harrison.

VOCALISTS. Not a single vocalist of the first rank made an American début during the past year. Yet the appearance of Clara Gabrilowitsch (contralto) was watched with unusual interest; in the first place, because she is the daughter of Mark Twain, and secondly, because she is the wife of one of the world's greatest pianists. As a singer she made no very deep impression, being almost overshadowed by her husband's superb accompaniment at the piano.

After a short interruption of her professional career for the purpose of studying with Mme. Sembrich in Berlin, Mme. Alma Gluck made her reappearance as a song recitalist. No change was noticeable either in the natural beauty of her voice or the mechanical method of tone production. The benefit of her study with that unsurpassed queen of song manifested itself, however, on the interpretative side in a heightened command of all those means that make for artistic expression. The very favorable impression made the previous year by Ottilie Metzger at the two concerts of the Philharmonic Society was entirely confirmed in her recitals. She is particularly great when portraying tragic emotions. Of the famous operatic stars the following were also heard in recital: Slezak, Fremstad, Schumann-Heink, Eames, Alda, Gerville-Réache, Gadaki, Melba, Tetrazzini, and Titta Ruffo made triumphal concert tours from coast to coast. Those who devoted themselves entirely to the concert platform and recital included: Culp, Butt, Bispham, Werrenrath, Hamlin, McCormack, and Rogers.

ORCHESTRAS. When about three years ago the Boston Symphony Orchestra announced a programme dispensing with the attraction of a solo artist, such radical departure from custom caused general comment and speculation. But the overwhelming success of the experiment justified the faith of the conductor in the intelligence and seriousness of the music-loving public. The next organization to put its audience to a similar test was the New York Philharmonic Society with a result equally gratifying. During the past year almost all the great symphony orchestras offered one or more such programmes without a soloist. The New York Symphony Society (Walter Damrosch) gave a Beethoven Festival lasting six days, when the master's most important works, including, of course, all the nine symphonies, were performed. The so-

loists were Julia Culp, Kathleen Parlow, Josef Hofmann, and Oscar Seagle. A generous offer from Mr. Henry H. Flagler to assume, after May 1, 1914, personal responsibility for the annual deficit, which generally varied between \$50,000 and \$80,000, places the organization on a sound financial basis, and permits Mr. Damrosch to concentrate his energy upon the attainment of still higher artistic standards. The total number of concerts given approximated 100 (62 in Greater New York). After the conclusion of its regular season the Chicago Symphony Orchestra (Frederick Stock) gave three additional concerts at popular prices with immense success before sold-out houses. At one of its regular concerts the Philadelphia Symphony Orchestra (Leopold Stokowsky) brought out one of its members, Paul Rahmig, as a soloist on the double bass. Probably not one in the audience had ever heard a bass virtuoso. The composition itself, a concertstück by Stein, though rather uninteresting, gave an excellent idea of the possibilities of the instrument, and showed Mr. Rahmig as a consummate artist. The organization also visited New York, playing a very exacting programme (the principal numbers being Brahms's *First Symphony*, and Strauss's *Tod und Verklärung*), and met a most cordial reception from both public and critics. The Cincinnati Symphony Orchestra (Ernst Kunwald) increased the number of its regular subscription concerts from 24 to 32.

Under the auspices of the New York *Evening Sun*, Julius Hopp arranged a "Wage Earner's Carnival," which lasted six days, and for which the Russian Symphony Orchestra under Modest Altschuler was engaged. Ysaye, Fremstad, Ober, Constantino, and Pilzer were the soloists. Each evening was devoted to composers of a certain nationality. In order to provide good music at nominal prices to the masses, the Boston Philharmonic Society, an organization of 60 performers under the direction of Charles Frank, gave a very successful series of concerts on Sunday afternoons. An important factor in the movement for the popularization of good orchestral music was the series of 63 concerts given in New York by Henry T. Fleck, professor of music at Hunter College, with an orchestra of 60 performers. The Board of Education granted for this purpose the sum of \$10,000 and the free use of its buildings.

To meet the ever increasing demand for experienced orchestral players, Christian Kriens of New York founded the "Kriens Symphony Club," where young men and women may acquire the necessary routine. The first public concert, given in April, showed that among the 100 young performers constituting this orchestra there was some really excellent material. Many members of the orchestras of the Boston and Chicago Opera Companies who, owing to the cancellation of the operatic seasons, found themselves without employment, flocked to New York, where, under the leadership of Julian Carillo, they formed themselves into the American Symphony Orchestra. Just why that name was chosen did not become apparent at the first concert in December, when the principal number on the programme was a *Symphony in D* by the conductor. From St. Paul came the news of the disbanding of the excellent local Symphony Orchestra, of which Walter Rothwell had been the conductor. Because of the war, the

management found it impossible to raise the necessary guarantee fund of \$50,000.

NOVELTIES. The Boston Symphony Orchestra (Karl Muck) brought out a new tone poem, *Samson*, by Rubin Goldmark, which contains passages of real beauty and effectiveness. A *First Symphony* by Philip Clapp made little impression, because the themes, though good in themselves, were developed in fragmentary fashion. E. von Reznicek's symphonic poem, *Schlemihl*, suffered from too heavy instrumentation, and was a rather open and superficial imitation of Strauss. Nor was a symphonic poem by Florent Schmitt, *La Tragédie de Salomé*, remarkable. Arnold Schönberg's *Fünf Stücke für Orchester*, which upon its American première in Chicago the year before was received with laughter and hisses, met a similar fate in Boston. More fortunate in its choice of novelties was the Chicago Symphony Orchestra (Frederick Stock). A *Symphony in D* by Eric Delamarter showed considerable inventive and constructive power. Frederick Stock's overture, *Life's Spring-Tide*, fairly carried away the audience with its exuberant spirit and brilliant instrumentation. Florent Schmitt's *Rhapsodie Viennoise* proved to be heavy, cumbersome, and extremely impressionistic—anything but what its title suggested. Erich Korngold's *Sinfonietta* was heard with considerable interest. It is really a full fledged symphony, and in all respects an astonishing work for a 17-year-old composer. In a *Symphonic Suite*, Adolf Weidig presented in genuine romantic style a series of mood pictures of rare beauty, drawn with a master's hand. The New York Philharmonic Society (Josef Stransky) presented a symphonic study by Guy Ropartz, *La Chasse du Prince Arthur*, a work showing solid workmanship without striking originality. The same composer's *Fourth Symphony in C* also lacked the individual note, and contained no message of special importance. Yet it was good, effective music, which derived a special significance from the fact that a distinguished exponent of French hypermodernism worked out clearly defined themes in one of the classical forms. The offerings of the New York Symphony Society (Walter Damrosch) consisted of a *Symphonic Suite* by Victor Kolar, in which the composer had adopted Dvorák's idea of using negro melodies as thematic material; and a symphonic fragment, *Daphnis et Chloe*, by Maurice Ravel, a typical hypermodern work, full of so-called "atmosphere" and entirely devoid of any tangible idea. The Russian Symphony Orchestra (Modest Altschuler) introduced two unknown works by famous Russian masters. The *Piano Concerto in C# Minor* by Rimski-Korsakov (played by Eleonora Spencer) is interesting and contains some fine themes, but is lacking in logical development, and rather rhapsodical in character. The *First Symphony in E minor* by Ippolitov-Ivanov is frankly melodious and of great sensuous charm, quite typical of the composer's style. The contribution of the Cincinnati Symphony Orchestra (Ernst Kunwald) was Erich Korngold's *Overture zu einem Schauspiel*, the work of a boy of 14. The themes are somewhat reminiscent of Wagner, their treatment and orchestration of Strauss. The Philadelphia Symphony Orchestra (Leopold Stokowsky) produced a new *Violin Concerto in D minor* by Jean Sibelius (played by Thaddeus Rich), which can

hardly be considered as among the best works of that composer. One of the most impressive new works heard during the year was brought out by the Minneapolis Symphony Orchestra (Emil Oberhoffer), a *Suite for Orchestra*, by Ernst von Dohnanyi. It is a work of sustained power and serene beauty.

CHAMBER MUSIC. Four or five years ago the appearance of two famous solo performers in a joint recital of chamber music was a decided novelty and something of an event. To-day such joint recitals belong to the established order of things. The artists thus heard during the past year were Hofmann-Elman, Bauer-Thibaud, Bachaus-Parlow, Leginska-Caslova, David and Clara Mannes. Quite an unusual event, however, was the joint appearance in a Beethoven Trio of the three giants, Ysaye, Géraldy, and Godowsky. Yet the artistic result was a disappointment because of the lack of proper ensemble. At one of their concerts the Flonzaleys introduced to America the *Quartet in D minor* by Arnold Schönberg, which aroused considerable discussion and comment, but none favorable. On one point all critics were agreed: the music never appealed to the emotions. Georges Barrère, whose organization of woodwind instruments, "The Barrère Ensemble," occupies a foremost place in the field of chamber music, appeared at the head of two new organizations, the "Trio de Lutèce" (flute, harp, cello), and "The New York Little Symphony" (strings, woodwind, horn). With the latter combination he produced such rarely heard works as Wolf-Ferrari's *Kammersymphonie*, and Saint-Saëns's *Septuor*. The Kneisel Quartet began their fall season with Samuel Gardner as second violin in place of Hans Letz, who had been called to the colors. But before the end of the year Mr. Letz was released, and returned none the worse for his exciting experience.

CHORAL SOCIETIES. Although all the choral associations throughout the land were very active, there is not much to be chronicled. A great number of new works were brought out, but very few of them seem likely ever to be repeated again. The New York Oratorio Society (Louis Kommenich) by request repeated Schumann's *Ruth*, which the year before had been received with extraordinary enthusiasm. It also gave a splendid performance of Beethoven's difficult and seldom heard *Missa Solemnis*. The Columbia University Chorus (Walter Henry Hall) seems to follow the policy of bringing out one new work every year. This year it was Hamilton Harty's *Mystic Trumpeter*, a very difficult and extremely modern composition. Handel's *Acis and Galatea* was given in concert form, but failed to make any impression; it sounded hopelessly dull and antiquated. Two novelties that were heard with real interest were produced by the Schola Cantorum (Kurt Schindler). Zandonai's *Padre Nostro* shows the composer in a far more favorable light than his opera *Conchita*. Verdi's *Stabat Mater*, one of the master's last works, is in the same style as his *Mansoni Requiem*, full of intensely dramatic moments; rather theatrical than religious. Another novelty, Balfour Gardiner's *News from Whydah*, did not deceive the discriminating listener with its enormous technical apparatus as to the real poverty of the musical ideas. From Chicago came the news of the resignation of the Rev. William J. Finn as director of the Paulist

Choristers, who under his direction have become world-famous.

FESTIVALS. The twenty-first biennial Cincinnati May Festival, under the direction of Ernst Kunwald, was the most successful in the history of the association. The works performed were Bach's *Mass in B minor*, Berlioz's *Damnation de Faust*, Verdi's *Requiem*, and Beethoven's *Ninth Symphony*. The work chosen for performance at the ninth annual Bach Festival at Bethlehem, under Dr. Wolle, was the master's *Mass in B minor*. A radical departure from tradition was the rendering of all solo passages by the full chorus. The presence of the distinguished Finnish composer, Jean Sibelius, gave a special significance to the twenty-eighth festival of the Litchfield County Choral Union, held at Norfolk, Conn. Sibelius conducted nine of his own compositions, among them the symphonic poem *Aalottaret*, specially composed for the occasion. Other novelties were Henry K. Hadley's symphonic poem *Lucifer* (after Vondel's poem), Coleridge-Taylor's *The Prairie*, and the overture to Wagner's early opera *Die Feen*. At the sixth North Shore Festival, held at Evanston, Ill., a chorus of 1000 voices, assisted by the Chicago Symphony Orchestra, under Frederick Stock, rendered Haydn's *Creation*, Pierné's *St. Francis of Assisi*, and Harty's *Mystic Trumpeter*. The thirty-fourth festival of the North American Sängerbund was held at Louisville. Louis Ehrgott of Cincinnati directed the monster chorus of 3000 male voices, assisted by a chorus of 2000 children's voices. The fifty-seventh annual Worcester Festival was held under the direction of Arthur Mees and Gustav Strube. The principal numbers were Mendelssohn's *Elijah* and Wolf-Ferrari's *Vita Nuova*. Strube scored a decided success with his new symphonic poem *Lorelei*. The American Union of Swedish Singers held their sixth quadrennial festival at Minneapolis. Fifty-four societies were represented. The festival conductor, Hjalmar Nilsson, directed a chorus of more than 1000 singers, supported by the Minneapolis Symphony Orchestra. The programme consisted exclusively of works by Scandinavian composers.

OPERA. At the Metropolitan Opera House of New York, 163 performances were given from a repertory of 39 operas by 22 composers. According to nationality these were divided as follows: German, 16 works by 7 composers totaled 65 performances; Italian, 16 works by 8 composers totaled 74 performances; French, 5 works by 5 composers totaled 15 performances; Russian, 1 work totaled 6 performances; American, 1 work totaled 3 performances. Wagner, represented by 9 works, led with 34 performances. Next in order came Puccini, of whom 5 works achieved 29 performances. Third ranked Verdi with only 3 works and 17 performances. The work most frequently given was Strauss's *Der Rosenkavalier*, 9 times. Next came Verdi's *Aida*. Puccini's *Madama Butterfly*, and Leoncavallo's *Pagliacci*, each 8 times. Wagner's *Walküre*, Puccini's *La Bohème*, and *Tosca* were each given 7 times. Four novelties were produced.

Montemezzi's *Amore dei tre Re* (January 2) with Bori, Ferrari-Fontana, Amato, and Didur in the principal rôles, under Toscanini, was received with marked enthusiasm; and very deservedly so. The text of Sem Benelli deserves the highest praise. The language is forceful

and poetic; the intensely dramatic situations are led to logical and powerful climaxes; each character is drawn with a few masterly strokes, and stands out in bold relief. The music is characterized by power of thematic invention, sincerity, and distinction. Everywhere it follows the dramatic situation faithfully and expressively. Some half dozen themes are employed as typical phrases, but they are not developed nor transformed like Wagner's motives. The instrumentation reveals a remarkable and unerring instinct for orchestral color as a means of expression, and the master's restraining hand is felt even in passages delineating violent emotions. It is only to be hoped that the composer will continue in this path, which leads directly away from the brutal verity of Puccini and his contemporaries, back to the healthy and artistic realism of the immortal composer of *Otello* and *Falstaff*.

Victor Herbert's *Madeleine* (January 24) with Alda, Sparkes, and Althouse, under Polacco, was an unqualified failure. The music is so light, that the work is better called an operetta. But even so, it might have achieved some success, if the score did not bear the earmarks of having been put together hastily without a trace of inspiration. To make the fiasco more complete, this anæmic work was directly followed by Leoncavallo's intensely dramatic *Pagliacci*. This mistake was rectified at the only two repetitions, when *Madeleine* and the equally colorless *Don Pasquale* filled the evening.

Neither did the next novelty, Charpentier's *Julien* (February 26) with Farrar and Caruso, under Polacco, repay the energy expended upon its production. The librettist seems to have no clear idea as to the boundary line between realism and vulgarity. In a labored effort to follow the text faithfully, the music becomes fragmentary and incoherent. The leading motives are commonplace. In a few well constructed climaxes the music completely fails to rise to the height of the dramatic situation. The whole score lacks individuality and distinction. In spite of magnificent stage setting and a splendid artistic performance the work made no impression.

Wolf-Ferrari's *L'Amore Medico* (March 25) with Bori, Alten, and Cristalli, under Toscanini, proved to be a charming work, a real opera buffa of the old style, but with vital, modern music. It has the grace, lightness, and melodic charm of Rossini combined with German earnestness and thoroughness. The public received the work cordially. The production of *Carmen* with Farrar and Caruso, under Toscanini, aroused a frenzy of enthusiasm. It seems that at last people begin to realize that *Carmen*, even without Calvé, is, and promises to remain for many years, one of the masterpieces of operatic literature.

One of the most emphatic successes scored by the management was the revival of Weber's *Euryanthe* (December 19). The principal rôles were in the hands of Hempel, Ober, Sembach, and Weil, while Toscanini occupied the conductor's chair. In spite of the fact that some portions sounded old-fashioned, the greater part of the music proved still sufficiently vital to rouse the audience to demonstrations of real enthusiasm. To the present generation of opera-goers *Euryanthe* is practically a novelty, for no performances of it have been heard in New York since 1887.

Of the new artists Lucrezia Bori, who had been heard only in smaller parts, revealed herself as a star of the first magnitude when her opportunity came in Montemezzi's new opera. Rudolf Berger, the much-heralded tenor of the Berlin Opera, proved only an acceptable artist, but Edoardo Ferrari-Fontana, Luca Botta, and Johannes Sembach were recognized as tenors of the first rank. The list of established artists included Mmes. Gadski, Destinn, Hempel, Farrar, Alda, Homer, Matzenauer, and Ober; and Messrs. Caruso, Urlus, Jörn, Martinnelli, Althouse, Cristalli, Braun, Goritz, Weil, Witherspoon, Schlegel, and Rothier. The conductors were Toscanini, Hertz, and Polacco.

The Chicago-Philadelphia Opera Company achieved its greatest success with a superb production of *Parsifal* (January 4) under Campanini. Two novelties, Giordano's *Fedora* (January 6) and Gnecci's *Cassandra* (February 26), met a lukewarm reception. A tour of the West, undertaken after the close of the regular season, ended disastrously. Owing to the outbreak of the war the season 1914-15 was canceled. The Boston Opera Company scored its principal success with Wagner's *Meistersinger*, which was added to its repertory on January 23. On the whole, the season was remarkable more for the triumphs of individual artists than for excellence of ensemble. The season 1914-15 was also canceled because of the war.

When the Century Opera Company closed its first season, somewhat earlier than had been originally intended, there still remained a number of unfulfilled promises. Chief among these was the projected cycle of Wagner's works. But after the inadequate production of *Lohengrin*, which disclosed some serious defects of the organization, it was the part of wisdom not to attempt the more difficult dramas. At the reopening in the fall it was at once evident that the shortcomings had been effectively remedied. Especially the new conductors, Ernst Knoch and Agide Jacchia, did excellent work with the improved chorus and orchestra. Yet the public failed to respond. During the month of December the company played in Chicago—before empty houses, although all the critics were unanimous in their praise of the excellence of the performances. As the year ended word was received that the Chicago engagement was brought to a close two weeks earlier than had been agreed, and rumor had it that the entire organization was to disband.

EUROPEAN COUNTRIES

GERMANY. Upon the activities of the more important organizations of the larger cities the war seems to have had little influence beyond a slight reduction in the size of orchestras. The almost complete absence of novelties on the programmes seems to have been felt rather as a welcome relief than a hardship by the audiences that were as numerous and appreciative as under normal conditions. The stress of the times, however, manifested itself in a material sense in a general reduction of salaries and prices of admission. Many of the lesser artists found themselves without engagement. In Berlin the unemployed orchestral players formed themselves into the Freie Orchester Vereinigung for the purpose of giving concerts for the benefit of needy musicians, and this undertaking proved

highly successful, thanks to the generous co-operation of the foremost conductors, who gave their services gratuitously. All the greatest artists, such as Lehmann, Culp, Hempel, Wüllner, Slezak, Busoni, Burmeister, Scharwenka, and a host of others, gave concerts for the Red Cross and the War Relief Fund. The famous Berlin Philharmonic Chorus, under Siegfried Ochs, gave its usual four concerts, and turned over all receipts to the Relief Fund. In Bayreuth 400,000 marks had been paid for tickets when the war interrupted the festival. The holders of tickets unanimously refused the return of their money, and requested that the entire sum be donated to the Relief Fund. To what length mistaken patriotic zeal, when carried into the cosmopolitan and neutral domain of art, will go, was unhappily illustrated by the dissolution of the famous Internationale Musikgesellschaft of Leipzig. Since its foundation in 1899 the publications of this society have been of far-reaching influence through the dissemination of the results of musical research on the part of the world's foremost scholars.

New Year's Day witnessed the performance of Wagner's *Parsifal* on almost every operatic stage throughout the Empire. According to all accounts no pains had been spared to meet to the fullest extent the composer's intentions. Everywhere the work was received with profound reverence, and had many repetitions before crowded houses. Munich, however, postponed the local première till May 22, Wagner's birthday. The ninetieth Nether-Rhenish Music Festival was held at Düsseldorf under Karl Panzner. For some years past these famous festivals have suffered through the growing rivalry between the two cities of Cologne and Düsseldorf. Matters came to a climax this year when Cologne not only refused to cooperate, but even arranged an independent Beethoven Festival on the same days, with the result that both festivals closed with a considerable deficit. Of the few novelties Humperdinck's opera *Die Marketenderin* had a rather unusual fate. On its initial production at Weimar, in May, it was received with little favor; but after the outbreak of the war it vied in popularity with Wagner's *Meistersinger*. This sudden success of *Die Marketenderin*, in spite of its colorless music, is due entirely to the text with the idolized Blücher as the central hero. At Dessau Christian Sinding achieved a genuine success with his latest opera, *Der Heilige Berg*, while the favorable reception accorded Weingartner's *Kain und Abel* at Darmstadt is to be attributed rather to the personality of the great conductor than to the intrinsic merit of the music. In the field of instrumental music the honors were carried off by two American composers, Leslie Loth (*Symphony in A*) and Edgar Stillman-Kelly (*New England Symphony*). Throughout Germany the fiftieth anniversary of the birth of Richard Strauss (June 11) was observed by performances of his works.

FRANCE. In no other country was the musical life so completely paralyzed by the war as in France. An event of prime importance in the history of the Grand Opéra was the first performance in France of *Parsifal* under the direction of André Messager (January 2). Eighty rehearsals had been held; the scenic effects were of unparalleled splendor; the receipts of 50,000 francs established a record for any single night

in the history of the institution. Yet the critics missed the full effect of the musical climaxes and the real spirit. From April 25 to June 19, Henry Russell, with the Boston Opera Company, gave a season of grand opera at the Théâtre des Champs Elysées. The opening work was Montemezzi's *Amore dei Tre Re*, which a few weeks before had scored such emphatic success in America. It met with a decidedly cool reception. Wolf-Ferrari's *Il Segreto di Suzanna*, a novelty for Paris, proved a complete failure. The unquestionable artistic triumph of the season was largely due to the inspired performances, under Weingartner, of Wagner's works. Under the personal direction of the composer Richard Strauss's *La Légende de Joseph* had its world-première at the Grand Opéra, and was received with tumultuous applause. Several French critics not only praised the exquisite melodies and splendid climaxes, but proclaimed certain portions as the most inspired music yet written by the German master. At Monte Carlo Massenet's posthumous *Cléopâtre* proved a great success.

ENGLAND. The activities of the larger organizations were little affected by the war. The usual fall seasons of opera at Covent Garden and Drury Lane, however, had to be abandoned because of their entire dependence upon foreign artists. London did not hear *Parsifal* until February 2. According to all reports the work made a profound impression. The spring season at Covent Garden was of unusual interest and excellence. After 20 years of undeserved neglect Verdi's *Falstaff* was revived with immense success. Under Nikisch the Ring dramas were given with entirely new and splendid scenery. Albert Coates, a pupil of Nikisch, alternated with his master in the direction of the Wagner works, and made a particularly deep impression in *Tristan und Isolde*. An American singer, Maude Fay, a member of the Munich Opera, attracted special attention in the rôles of Elsa and Sieglinde. Montemezzi's *Amore dei tre Re*, the only novelty, made no impression. Sir Thomas Beecham gave a successful season of Russian opera in English at Drury Lane. *Dylan*, the second part of Holbrooke's ambitious trilogy, was produced for the first time on July 4, but failed to win favor. Scriabine made his first visit to England, playing his own works in recitals to very appreciative audiences. On the other hand, the works of Leo Ornstein, an extreme futurist, were received with most emphatic disapproval. Richard Strauss was present at the initial performance of his *Legend of Joseph*, and also conducted a concert of his own works, scoring a veritable triumph. Before an enthusiastic audience Patti gave a concert in Albert Hall for the benefit of the Red Cross.

Bibliography. Among the important books published during the year are the following:

Biographical. L. Vuillemin, *G. Fauré* (Paris); F. Cellier and C. Bridgeman, *Gilbert and Sullivan and Their Operas* (London), rather anecdotal than strictly biographical or critical; Lilli Lehmann, *My Path Through Life* (New York), a translation of the famous singer's book, *Mein Weg*, by Alice B. Seligman; O. Huckel, *Wagner: The Man and His Work* (New York), compact, yet no essentials are omitted; E. Newman, *Wagner as Man and Artist* (New York), brief, clear, appreciative.

History of Music. P. Aubry, *Trouvères and*

Troubadours (New York), in translation by C. Aveling; J. Combarieu, *Histoire de la musique des origines jusqu' à la mort de Beethoven* (Paris), vol. ii, covering the seventeenth century to 1827, completes the work, an authoritative and detailed reference book; G. Cucuel, *La Pouplinière et la musique de chambre au dix-huitième siècle* (Paris), full of valuable information regarding the early history of public concerts; *Id.*, *Les créateurs de l'opéra comique français* (Paris), an authoritative and critical analysis of the different styles with full bibliography; A. H. Fox-Strangways, *The Music of Hindustan* (Oxford), an exhaustive history of both the art and theory with numerous examples in notation; M. A. deW. Howe, *The Boston Symphony Orchestra* (Boston), a valuable contribution to the development of musical taste in America; E. Istel, *Das Libretto* (Berlin), philosophical rather than historical; C. Maclaure, *Histoire de la musique européenne* (Paris), confines itself to the period 1850-1914, a clear and critical exposition of modern tendencies and styles; M. Montagu-Nathan, *A History of Russian Music* (London), superficial and uncritical, but as yet the only book in English dealing with the subject; R. Newmarch, *The Russian Opera* (New York), a good and accurate account based on independent and painstaking investigation; H. Prunières, *L'Opéra Italien en France avant Lulli* (Paris); B. Selva, *La Sonate* (Paris), very complete and authoritative—also in abridged form under title: *Quelques mots sur la sonate*; William G. Rice, *Carillons of Belgium and Holland* (New York), the result of painstaking and careful original investigation, deriving additional value from the fact that perhaps many of the towers and sets of carillon bells described have been destroyed by the war.

Theory and Criticism. C. Forsyth, *Orchestration* (London), very full with numerous illustrations from the scores of the greatest modern masters; J. Hofmann, *Piano Playing with Piano Questions Answered* (New York), eminently practical, covers every conceivable phase of the subject; L. Peralté, *L'Esotérisme de Parsifal* (Paris), a remarkably able and sympathetic study of the drama and its sources; A. M. Richardson, *The Choir Trainer's Art* (New York), deals with the question of voice training and practical questions of management.

MYER, ALBERT LEE. American soldier, died July 17, 1914. He was born in Troy, N. Y., in 1846, and at 19 years of age enlisted as a private in the Eleventh Infantry in 1865. In 1868 he was appointed second lieutenant, and was successively promoted, in 1886 captain, in 1899 major, in 1901 lieutenant-colonel, and in 1903 colonel of the Seventeenth Infantry. He became a brigadier-general in 1907, and in 1910 retired, having reached the age limit. General Myer held every noncommissioned and commissioned rank up to that in which he was retired. In his long service he fought against the Indians on the plains, was conspicuous in the war with Spain, and later in the Philippine insurrections, and also was many years in service on the Texas border.

NATAL. One of the four original provinces of the Union of South Africa (q.v.). Pietermaritzburg is the headquarters of the provincial government, with 29,980 inhabitants, exclusive of military. Durban is the largest town and only port. The European population of the

province has increased threefold since 1879. Of the total population in 1911 (1,194,043), 98,114 were European, 962,490 were natives, 133,439 were Indians and other Asiatics. Total males, 564,648; females, 629,395. Population of the borough of Durban, 69,187; Pietermaritzburg, 30,555. Primary education is controlled by the provincial administration. The aggregate number of European pupils in government and inspected schools was 16,297 in 1911. The 231 government-aided schools for natives had an enrollment of 17,852; there were 34 schools for Indian children, with an enrollment of 3532.

At the end of 1911 there had been alienated 8311 acres of land, besides 2,203,000 conditionally alienated. Throughout the province fruits, vegetables, black wattle, and cereals are grown. There are large plantations of sugar and tea on the coast and in Zululand. The output of corn in 1911 totaled 1,805,745 muids (of 200 pounds); tea, 5,007,090 pounds; sugar, 79,633 tons; tobacco, 2,685,037 pounds. In 1911 there were in the province 75,567 horses, 456,087 cattle, 1,519,268 sheep, 989,274 goats, 110,332 swine, 15,602 mules, 28,011 asses, and 4111 ostriches. There are extensive and valuable mineral deposits. At Durban a whaling industry is carried on. The number of whales killed and landed in 1911 was 992 humpbacks, 2 blue, 7 shad, 3 herring, 2 right, 12 rorquals. C. J. Smythe was provincial administrator in 1914. See SOUTH AFRICA, UNION OF, for area, population, and other statistical details.

NATIONAL ACADEMY, EXHIBITIONS OF. See PAINTING AND SCULPTURE.

NATIONAL BANKS. This article contains only statistics of resources, liabilities, and circulation. An account of the establishment of the new Federal Reserve system will be found under **BANKS AND BANKING**. Other matters relating to national banks is included in the article on **FINANCIAL REVIEW**. See also **MONEY; COINS**.

STATISTICS. According to the report of the Comptroller of the Currency on Sept. 12, 1914, there were 7538 national banks in the United States, with total resources of \$11,483,529,000. This was an increase of nearly \$600,000,000 during the year. Total loans and discounts amounted to \$6,400,767,000. Other items of resources were: United States bonds, \$791,419,000; other bonds and stocks, \$941,723,000, not including \$392,663,000 of miscellaneous securities deposited to secure circulation. Gold coin and certificates, \$503,059,000; other specie, \$243,139,000; legal tender notes, \$157,508,000.

Among the liabilities the principal item was \$5,043,531,000 of individual deposits subject to check. Other items were: Capital stock paid in, \$1,060,332,000; surplus, \$724,138,000; undivided profits, \$287,343,000; national bank notes outstanding, \$918,270,000; and \$1,095,550,000 of certificates of deposit and certified in cashiers' checks.

NAVAL PROGRESS. The normal develop-

ment of the navies of the world in 1914 was upset by the great war. And all possible secrecy was thrown over naval affairs for many months after the war's outbreak. So far as could be ascertained at the end of the year, each of the belligerents was pushing work as rapidly as possible on the ships building or provided for at the beginning of hostilities. Submarines and aircraft were being constructed as fast as possible, but the particulars were not obtainable. The following tables are from the official statement of the United States Office of Naval Intelligence:

WARSHIP TONNAGE

of the various powers on July 1, 1914:

Tonnage Completed		Tonnage Completed and Building	
Great Britain...	2,157,850	Great Britain...	2,714,106
Germany	951,718	Germany	1,306,577
United States ..	765,133	France	899,915
France	688,840	United States ..	894,889
Japan	519,640	Japan	699,916

Total tons built and building	..	699,915	678,818

The following vessels are not included in the tables: Ships over 20 years old from date of launch, unless they have been reconstructed and rearmored within 5 years; torpedo craft over 15 years old; ships which have not actually been begun or ordered, even if authorized; transports, colliers, repair ships, torpedo depot ships, or other auxiliaries; vessels of less than 1500 tons, except torpedo-craft; torpedo-craft of less than 50 tons. Vessels undergoing trials are considered as completed.

BRITISH NAVY. At the outbreak of the war the active fleets of the British navy were:

A. First Fleet (8 squadrons—44 fighting ships)

27 dreadnoughts
1 predreadnought
4 battlecruisers
8 armored cruisers
4 light cruisers

B. Second Fleet (4 squadrons—24 fighting ships)

16 predreadnoughts
8 armored cruisers

C. Third Fleet (8 squadrons—40 fighting ships)

16 predreadnoughts
24 cruisers of various kinds

D. Mediterranean Fleet (3 squadrons—11 ships).

^a Battleships having a main battery of all big guns. (11 inches or more in calibre.)

^b Battleships of (about) 10,000 or more tons displacement, whose main batteries are of more than one calibre.

^c Includes smaller battleships and monitors.

^d Armored cruisers which have main battery guns of the same calibre as the heavy guns of contemporary battleships and are capable of taking their place in line of battle with the battleships. They have an increase of speed at the expense of carrying fewer guns in main battery and a decrease in armor protection.

^e All unarmored, or very lightly armored, warships of more than 1500 tons are classed as cruisers. Scouts are considered as cruisers in which battery and protection have been sacrificed to secure extreme speed. The word "protected" has been omitted because all cruisers except the oldest and smallest have protective decks.

^f Colonial vessels included.

^g Includes 8 submarines authorized in 1918; contract for fourth not yet awarded.

^h Does not include *Idaho* and *Mississippi*, recently sold, or ships of current programme for which contracts have not been awarded.

^k Exclusive of submarine tonnage.

Since July 1, 6 new battleships and 1 battle-cruiser were completed, and 6 others were to be finished in the first six months of 1914. Two battleships (*Sultan Osman I*, and *Reshadieh*), building in England for the Turkish navy, were taken over and renamed *Agincourt* and *Erin*. Two very large destroyers building for the Chilean navy, and 3 small river monitors completed for Brazil also were taken or purchased. On July 1 there were approximately 31 destroyers and 24 submarines building. Some of these (perhaps one-half) were at the end of the year completed, and others had been commenced. In addition to the vessels of the active fleet, many old battleships and cruisers in reserve and on the list for sale or breaking up were put in order, placed in commission, and were being utilized in the blockade and special service. The command of the British grand fleet was given to Admiral Sir J. R. Jellicoe.

GERMAN NAVY. The German active navy on Aug. 1, 1914, consisted of the High Seas Fleet composed of three battleship squadrons; one cruiser squadron (4 battlecruisers, 8 light cruisers); seven destroyer flotillas of 12 boats each; and three submarine flotillas of 7 boats each. The battleship squadrons consisted of 13 dreadnoughts and 8 predreadnoughts. The Reserve Fleet consisted of 12 predreadnought battleships, 6 armored cruisers, 16 light cruisers, 40 to 50 destroyers, and about the same number of torpedo boats. Of the ships building at the end of the year, 3 dreadnought battleships and 1 battlecruiser were practically completed and soon joined the fleet. Of the 12 destroyers and 12 or more submarines building at the outbreak of war there was no information by the end of the year, but it was presumed that many had been completed, and work on the others was pushed as fast as possible. On foreign stations there were: In the Mediterranean, the battlecruiser *Goeben* (22,600 tons) and light cruiser *Breslau* (4500); in the Pacific, the armored cruisers *Scharnhorst* and *Gneisenau* of 11,400 tons, and the light cruisers *Emden* (3600), *Königsberg* (3350), *Nürnberg* (3400), and *Leipzig* (3200); in the Atlantic, the light cruisers

Karlsruhe (4800) and *Dresden* (3600). In various parts of the world there were some old gunboats and small cruisers of old type and no fighting value.

FRENCH NAVY. At the beginning of the war the French navy, which had been greatly improved in the previous eight years, was chiefly concentrated in the Mediterranean. Including ships in the first reserve, there were available 4 dreadnoughts, 23 predreadnoughts, 20 armored and heavily protected cruisers, 11 light cruisers, 84 destroyers, 153 torpedo boats (fit for harbor and coast service only), and 70 submarines. Some of the cruisers were on foreign stations. Three dreadnought battleships which were building were practically ready for service at the end of the year, and two others were to be ready in six months.

RUSSIAN NAVY. The Russian navy had not recovered from the Japanese War. In the Baltic there were available on July 1, 1914, 4 predreadnought battleships, 14 armored and protected cruisers, 2 light cruisers, 80 destroyers, 24 submarines. Four dreadnought battleships were probably completed at the end of the year, but were not to be sent out against superior German forces. Four battlecruisers were laid down two years before, but had not been launched so far as known. Of the 44 destroyers and 19 submarines building six months ago, a considerable number should have been completed, but no information concerning them leaked out. In the Black Sea the Russian naval force consisted of 6 predreadnoughts, 2 large cruisers, 16 destroyers, 16 torpedo boats, and 5 submarines.

AUSTRIA-HUNGARY. At the outbreak of the war Austria-Hungary had almost as many tons of war-vessels under construction as the United States. There were ready for service, 3 dreadnoughts, 9 predreadnoughts, 5 coast defense vessels, 2 armored cruisers, 12 light cruisers (including 3 building but practically completed), 19 destroyers, 11 submarines, and 58 torpedo boats (mostly of about 200 tons and launched 1905-10). One dreadnought had been completed since July, and four more were to have

been commenced, but reports at the end of the year stated that no work had been done on them.

JAPAN. The condition of the Japanese navy is shown in the foregoing tables. Two new battlecruisers could be finished in a short time, as could two of the battleships, but funds were said to be lacking.

NAVAL OPERATIONS OF THE WAR

At the outbreak of the war, the British fleet at once moved to blockade the German navy in its own harbors. The German High Seas Fleet retired to the Baltic and the Kaiser Wilhelm Canal. The battlecruiser *Goeben*, the armored cruisers *Scharnhorst* and *Gneisenau*, the light cruisers *Emden*, *Königsberg*, *Nürnberg*, *Leipzig*, *Karlsruhe*, *Dresden*, and *Breslau*, and several gunboats and small old cruisers were barred out of German home ports by the cordon the British fleet drew about them. The gunboats and old cruisers retired to neutral ports and were interned. The light cruisers entered upon a career of commerce destroying varied by attacks upon inadequately defended British naval stations. In this they were assisted by several German merchant ships which were hastily transformed into auxiliary cruisers. The career of the German vessels was spectacular, but in most cases comparatively brief. The *Goeben* and *Breslau*, which were in the Mediterranean, were forced to the eastward by the French and British squadrons, and on August 11 entered the Dardanelles. Shortly afterward they were sold to Turkey. This sale was objected to by the British, French, and Russian governments, but before the question was settled, Turkey joined in the war as an ally of Germany and Austria.

The armored cruisers *Scharnhorst* and *Gneisenau* were each of 11,400 tons, carrying eight 8.2-inch guns, and six 5.9-inch, four 8.2-inch in turrets—one forward, one aft—and two 8.2-inch on each beam in single casemates. These vessels in appearance, battery, and armor, closely resembled the United States armored cruiser *Brooklyn*. They were in the Pacific when the war broke out, and did some damage to British commerce and to one or two naval and supply stations, but their first move of importance consisted in effecting a junction with the light cruisers *Nürnberg* (3400 tons—24 knots speed—10 4.1-inch guns), *Leipzig* (3200 tons—23 knots—10 4.1-inch), and *Dresden* (3600 tons—24.5 knots—10 4.1-inch), in the latter part of October. On November 1, the squadron thus formed, under command of Admiral Count von Spee, met a British squadron under Vice-admiral Sir Christopher Cradock, and consisting of the armored cruisers *Good Hope* (14,100 tons—2 9.2-inch guns in turrets, 16 6-inch guns in casemates—23 knots speed), *Monmouth* (9800 tons—14 6-inch—22.5 knots), the light cruiser *Glasgow* (4820 tons—2 6-inch, 10 4-inch—25 knots), and the merchant steamer *Otranto*, which had been fitted with a light armament. The sea was very rough, many guns of the British armored cruisers were mounted so low as to be useless in rough weather, while the other guns were ridiculously small in calibre or number for the size of the ships. The German force won with ease, sinking the *Good Hope* and *Monmouth*, and injuring the others, but not to an extent to prevent their escape. No German ships were damaged, none of their men were killed, and

only six wounded. This victory enormously increased German prestige and stimulated German naval enthusiasm. Unfortunately Admiral von Spee did not live to reap the reward of his executive ability and fighting capacity. The crushing defeat of Cradock's squadron was a blow to British pride. Moreover, the existence of the German vessels threatened British seaborne trade. Very quietly the Admiralty despatched a strong force in search of the conquerors. This consisted of two battle cruisers, the *Invincible* and *Invincible* (17,250 tons, 26 knots speed, 7-inch belt and turrets, and 8 12-inch guns); three armored cruisers, the *Carнарvon*, *Cornwall*, and *Kent*—the last two being sister ships to the *Monmouth*, the other a little stronger; an old, weakly armored battleship, the *Canopus* (13,000 tons, 6-inch belt, 8-inch turrets, 18 knots speed, 4 12-inch guns, and 12 6-inch), two light cruisers, the *Bristol* and *Glasgow* (4820 tons, 26 knots speed, 2 6-inch guns, and 10 4-inch). This squadron (partly made up of vessels already in American waters) met Von Spee's near the Falkland Islands on December 8. The action appeared to have been a running fight; but, as the British had an enormous superiority in force, and a little in speed, the German squadron was destroyed, only the *Dresden* escaping.

The light cruiser *Königsberg*, after three months of fairly successful commerce destroying, was bottled up on October 30 in a South African river (the Rufiji), by blocking the channel. The most successful of the light cruisers was the *Emden*. In a little more than three months she sank 23 British merchant vessels valued at \$10,000,000, a Russian light cruiser, and a French destroyer, besides destroying oil and supply depots at Madras and Penang. On November 9 she was driven ashore on North Keeling Island (Cocoa Group), and destroyed by the Australian light cruiser *Sydney* (5400 tons). At the end of the year the *Karlsruhe*, *Dresden*, and one or two converted merchant steamers were the only German vessels still at large.

The operations in the Baltic and North Sea began with the laying of mines by the Germans, covering all approaches to their coast, and extending far out into adjacent waters. This procedure led the British to practically close the channel entrance to the North Sea by mine fields.

The main German fleet, including all important vessels of the German navy, remained in the Kaiser Wilhelm Canal or behind the fortifications, broad mine fields, and torpedo defense of the German harbors. It was presumed that they were awaiting some more favorable opportunity than occurred during the year, in which to risk a battle with the British forces which were so greatly superior. Until some definite move was made by them or against them, the existing conditions were likely to be maintained, the British fleet submitting to frequent losses of vessels—most unimportant—but protecting British seaborne commerce and preventing all contraband trade with Germany. The various engagements and losses in this theatre of war are too numerous to mention in detail, the most important being the engagement off Heligoland on August 28, the sinking of the armored cruisers *Hogue*, *Cressy*, and *Aboukir*, and of the battleships *Audacious*, *Bulwark*, and

Formidable. The Heligoland fight was at first between destroyer flotillas and the light cruisers supporting them, but the battle cruiser squadron came up and made the British force overwhelming. No British vessels were sunk, though some destroyers were severely injured. The German light cruisers *Ariadne*, *Koln*, and *Mainz*, and two destroyers were sunk. The armored cruisers *Hogue*, *Cressy*, and *Aboukir* (each of 12,000 tons) were sunk on the evening of September 22 by the German submarine *U-9*, the time from the firing of the first torpedo to the sinking of the third ship being one hour and thirty minutes. The cause of the sinking of the *Audacious* (new dreadnought battleship—24,000 tons), on October 27, was not disclosed during 1914; it was either a torpedo from a submarine, or a mine. She was at the time off the north coast of Ireland. The *Bulwark* (predreadnought battleship—15,000 tons) was sunk in Sheerness Harbor, only 35 miles from London, on November 26. It was supposed that her magazines blew up from some unexplained cause, but the Germans claimed that she was torpedoed by one of their submarines.

The operations in the Mediterranean, in the Atlantic, and in the Far East were not very important, but a noteworthy submarine attack took place near Constantinople. A British submarine entered the Dardanelles, dove beneath a mine field consisting of four or five lines of mines and, rising to the surface beyond them, torpedoed and sank the *Mesudieh* (10,000 tons), a Turkish battleship of old type which had recently been reconstructed and rearmored.

A tabulated list of vessels lost by the warring powers shows that 10 (possibly 12), had been sunk by submarines, 25 by mines, 36 by gun fire, 2 by torpedoes from large ships, and a number by foundering and accidents. Six and possibly 8 submarines had been destroyed; 1 was rammed, 2 were sunk by mines, 1 foundered, 1 (and possibly 3) was sunk by gun fire. If the battleships *Audacious* and *Bulwark* were sunk by them, the vessels destroyed by submarines form a very impressive list, and conclusively establish their importance in naval war. But it must not be forgotten that the condition of affairs in the North Sea was very favorable to their operation, so that instead of wondering at the measure of success attained, we might properly be surprised that they had not achieved more, and to expect that they will do so. (See SUBMARINES.)

Destroyers and surface torpedo boats did little in the way of destructive warfare but doubtless were of great service in scouting and acting as screening forces for the larger ships. Their value and the actual service performed by them can only be justly estimated when the full detailed history of the operations is made known.

The destructive power of the modern torpedo was greatly augmented. Few battleships or large cruisers would be sunk by a single torpedo of the types in service five years ago. But the general increase in size to a diameter of about 21 inches, has enabled much larger explosive charges to be carried, for a greater distance, and at a higher speed. Up to the end of 1914 the greater range (8000 yards) and higher speed (50 knots) of the new torpedoes had not been made use of; or if attempts to do

so had been made, they failed. The fact that submarines must approach within a short distance of the enemy in order to operate successfully leads to the conclusion that two types of torpedoes are required—one with long range and high speed for use on battleships, heavy cruisers, and surface torpedo craft, and the other of less range but carrying much heavier charges for equipment of submarines.

NAVY. See BATTLESHIPS; NAVAL PROGRESS; and the section *Navy* under various countries.

NEBRASKA. POPULATION. The estimated population on July 1, 1914, was 1,245,873. The population in 1910 was 1,192,214.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	7,100,000	173,950,000	\$92,194,000
	1913	7,610,000	114,150,000	74,198,000
Wheat	1914	3,668,000	68,116,000	64,710,000
	1913	3,475,000	62,325,000	44,251,000
Oats	1914	2,175,000	69,600,000	27,840,000
	1913	2,250,000	59,625,000	22,658,000
Rye	1914	122,000	1,952,000	1,444,000

Hay	1914	1,500,000	2,585,000	17,492,000
	1913	1,250,000	1,675,000	14,572,000

a Tons.

MINERAL PRODUCTION. Nebraska's only contribution to the total mineral production of the country is from its clay deposits, its sand and gravel, its stone quarries, the manufacture of sand-lime brick, and the production of volcanic ash or pumice. In the production of the last-named mineral the State holds an almost entire monopoly, less than three per cent of the total production being from other States. The total value of the mineral products in 1913 was \$1,433,718, compared with \$1,490,582 in 1912.

TRANSPORTATION. The total railway mileage in the State on June 30, 1914, was 6176. The roads having the longest railway mileage are the Chicago, Burlington and Quincy, 2850; Union Pacific, 1185; and the Chicago and North Western, 1070. There was practically no new construction in 1914.

EDUCATION. The total school population of the State in 1914 was 383,882. The enrollment in the public schools in the same year was 288,369, and the average daily attendance was 214,152. The male teachers numbered 1449, and the female 10,569. The average monthly salary of male teachers was \$84.23, and of females \$58.70.

FINANCE. The report of the State treasurer showed a balance on Dec. 31, 1913, of \$640,401. The receipts for the year ending Nov. 30, 1914, amounted to \$6,451,742, and the disbursements to \$6,346,034, leaving a balance on Nov. 30, 1914, of \$746,108. The chief expenditures are for education, State officers, and State institutions. The State has no bonded debt.

POLITICS AND GOVERNMENT. The Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. Elections were held for Governor and representatives to Congress. The Democrats renominated Morehead, the Republicans nominated R. B. Howell,

and the Progressives H. E. Sackett. At the elections held on November 3 Governor Morehead was reelected with 120,206 votes, compared with 101,229 for Howell, Republican, and 8655 for Sackett, Progressive. The total vote cast was 238,717, compared with 249,481 in 1912. The Democratic vote increased about 10,000, the Republican about 50,000, while the Progressive vote fell off about 65,000. The Democrats elected their candidates for Congress in the second, third, and fifth districts, and the Republicans in the other districts. An amendment providing for woman suffrage was voted upon at this election and was defeated. (See WOMAN SUFFRAGE.) Amendments to the constitution providing for an increase in the Governor's salary, to permit five-sixths of a jury to return a verdict in all but capital criminal cases, and to provide for a new revenue system that would permit the adoption of the single tax system were also voted on and defeated. These three propositions were referred to the voters by the Legislature; the woman's suffrage amendment was initiated by petition. Three acts of the Legislature were submitted to the referendum by petition. One, the workmen's compensation law, was endorsed by the voters; the others, one an appropriation for an armory and the other for the removal of the State university to a new campus, were defeated. Conrad G. Hollenbeck was elected to be chief justice of the Supreme Court, defeating Manoa B. Reese, the election being nonpartisan, the nominations by petition.

STATE GOVERNMENT. Governor, John H. Morehead; Lieutenant-Governor, James Pearson; Secretary of State, C. W. Pool; Treasurer, G. E. Hall; Auditor, W. H. Smith; Attorney-General, W. E. Reed; Superintendent of Education, A. O. Thomas; Commissioner of Insurance, —; Commissioner of Public Lands, Fred. Beekman—all Democrats, except Thomas and Beekman, Republicans.

JUDICIARY. Supreme Court: Chief Justice, Manoa B. Reese; Justices, Chas. B. Letton, Francis G. Hamer, Jacob Fawcett, William B. Rose, John B. Barnes, and Samuel H. Sedgwick; Clerk, H. C. Lindsay—all Republicans.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Democrats	20	61	81
Republicans	18	39	52
Democratic majority	7	22	29

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEBRASKA, UNIVERSITY OF. A State university for higher education, founded at Lincoln, Neb., in 1869. The enrollment in all departments in the autumn of 1914 was 4133, and the faculty contained 283 members. There were no notable changes in the faculty during the year and no noteworthy benefactions were received. The university is supported by State appropriations. The productive funds amount to about \$775,000 and the annual income to about \$1,000,000. The library contains 111,000 volumes. The president is Samuel Avery, Ph.D.

- * Potter, William Bleeker. American mining engineer.
- * Powell, Sir Francis. English artist. Died October; born, 1838.
- * Price, Vincent C. American chemist; inventor of baking powder. Died July 15; born, 1832.
- * Pugno, Raoul. French pianist.
- * Quales, Niles Theodore. American physician.
- * Raisuli, Mulai Ahmed ben Mohammed. Moroccan chieftain and bandit.
- * Rankin, Arthur M'Kee. American actor.
- * Ramsay, Francis Munroe. Rear admiral (retired) of the United States navy.
- * Raub, Michael W. American naturalist. Died August 8; born, 1836.
- * Rayner, Sir Thomas Crossley. Chief Justice of British Guiana. Died May 22; born, 1860.
- * Reclus, Paul. French surgeon.
- * Reed, Mrs. Sylvanus Gallup. American educator. Died November 17; born, 1832.
- * Revoil, Paul. French diplomat.
- * Reyburn, John Edgar. American public official.
- * Reymond, Emile. French surgeon, aviator, and senator.
- * Richard, Ernst D. American lecturer and peace advocate.
- * Richardson, James Daniel. Former Congressman from Tennessee.
- * Richardson, Rufus Byam. American archaeologist and educator.
- * Richardson, William. Representative in Congress from Alabama.
- * Riis, Jacob Augustus. American civic reformer and journalist.
- * Rios, Eugenio Montero. Spanish statesman. Died May 12; born, 1832.
- * Roberts, Earl (Frederick Sleigh Roberts, first Earl of Kandahar, Pretoria, and Waterford). English soldier.
- * Robeson, Henry Bellows. Rear admiral (retired) of the United States navy.
- * Rockhill, William Woodville. American diplomat.
- * Rohan, Alain Charles Louis, Duc de. French nobleman. Died January 6; born, 1845.
- * Rojas, Pedro Ezequiel. Venezuelan diplomat, minister to the United States.
- * Rosenbusch, Karl Heinrich Ferdinand. German mineralogist. Born, 1836.
- * Rosenweig, Gerson. Jewish writer. Died February 14; born, 1862.
- * Rotch, Thomas Morgan. American physician and educator.
- * Roujon, Henry Francois Joseph. Permanent secretary of the French Academy of Fine Arts. Died June 1; born, 1853.
- * Russell, James. American comedian. Died January 31; born, 1864.
- * Rutan, Charles Hercules. American architect. Born, 1851.
- * Ryan, Thomas. American diplomat.
- * Sales, Pierre de. French writer. Died April 9; born, 1854.
- * Salinas, Antonino. Italian archaeologist. Died March; born, 1841.
- * San Giuliano, Marquis di. Italian statesman.

Saunders, William. Canadian entomologist. Died September 18; born, 1836.
 Sawyer, James Estcourt. American soldier. Died May 29; born, 1846.
 * Scadding, Charles. American Protestant Episcopal Bishop of Oregon.
 * Scarborough, John. American Bishop of the Protestant Episcopal Church.
 Schenk, Carl Alvin. American forester. Born, 1868.
 * Schuch, Ernst von. German operatic conductor.
 * Schuyler, Montgomery. American art critic and journalist.
 Sears, Richard W. American merchant. Died September 28; born, 1863.
 Séché, Léon. French writer. Died May 4; born, 1858.
 Seidl, Gabriel von. German architect. Born, 1848.
 * Sgambati, Giovanni. Italian pianist.
 * Shallenberger, William Shadrach. Former member of Congress from Pennsylvania.
 * Shelby, David Davie. American jurist.
 * Sheldon, Andrew Flint. American physician and soldier.
 * Sherman, Samuel Sterling. American educator.
 Shields, John A. American public official. Died July 7; born, 1839.
 * Sickles, Daniel Edgar. American soldier.
 Simpson, John. American soldier. Died October 30; born, 1840.
 * Simpson, William Kelly. American laryngologist and otologist.
 Sinclair, Henry Harbison. American hydroelectric engineer. Died August 31; born, 1858.
 * Sion, Alix Marie Adelaide de. French actress.
 Smith, Augustus. Oldest graduate of Yale University. Died July 27; born, 1815.
 * Smith, Charles William. American Methodist Episcopal bishop.
 * Smith, John Butler. American public official, former Governor of New Hampshire.
 * Smith, Joseph. President of the Reorganized Church of the Latter Day Saints.
 * Smith, Sir William Alexander. Scotch philanthropist.
 Snyder, John. American Unitarian clergyman and author. Died August 12; born, 1842.
 * Spitzka, Edward Charles. American neurologist.
 * Steele, Daniel. American clergyman, educator, and author.
 * Sterrett, John Robert Sitlington. American scholar and educator.
 Steuart, John C. American railway official. Died March 4; born, 1861.
 * Stevens, Lillian M. N. American temperance advocate.
 * Stevenson, Adlai Ewing. Former Vice-President of the United States.
 * Stevenson, Fannie (Van de Graft) Osbourne (Mrs. Robert Louis Stevenson). American writer and artist.
 Stockton, Louise. American writer and social worker. Died June 18; born, 1839.
 Stokes, Robert Henry Simpson. English vice admiral. Died April 24; born, 1855.
 * Storer, Francis Humphreys. American chemist and educator.
 * Strong, Elnathan Ellsworth. American clergyman of the Congregational Church.
 * Strout, Sewell Cushing. American jurist.
 * Stubbs, Joseph Edward. American clergyman and educator.
 Suess, Edward. Austrian geologist and seismologist. Died April; born, 1831.
 * Sullivan, James Edward. American athlete, official, and publisher.
 * Suttner, Baroness Bertha von. Austrian peace advocate and writer.
 * Swan, Sir Joseph Wilson. English inventor.
 Swift, Samuel. American music and art critic. Died July 21; born, 1878.
 Swinburne, Sir John. English naval officer. Died July 15; born, 1831.
 * Teller, Henry Moore. American public official formerly United States Senator from Colorado.
 * Tenniel, Sir John. English cartoonist.
 * Thomas, Brandon. English playwright and actor.
 * Thomson, James William. Rear admiral (retired) of the United States navy.
 Ticknor, Benjamin Holt. American publisher. Died January 17; born, 1843.
 * Tieghem, Philippe van. French botanist.
 * Tombo, Rudolf, Jr. American scholar and educator.
 * Torney, Henry. American surgeon.
 * Townsend, Stephen. English surgeon and author.
 * Tucker, Alfred Robert. Formerly Bishop of Uganda.

* Tyrrell, Robert Yelverton. Irish educator and literary critic.
 * Upton, Winslow. American astronomer and educator.
 Uriburu, José Evaristo. Former Acting President of Argentina. Died October 25.
 * Vanderbilt, George Washington. American capitalist and scholar.
 Vaudremer, Emile. French architect. Died February 6; born, 1829.
 * Villiers, John Henry, Baron de. Chief Justice of the Union of South Africa.
 * Visconti-Venosta, Emilio, Marquis. Italian statesman and diplomat.
 * Voelkers, Karl. German ophthalmologist.
 Volkmar, Charles. American art potter. Died February 6.
 * Voorhees, Willard Penfield. American jurist.
 * Vroom, Garret Dorset Wall. American jurist.
 Wagner, Clinton. American throat specialist. Died November 25; born, 1839.
 * Wagner, Louis. American banker and soldier.
 * Wainwright, Charles S. American physician.
 * Walden, John Morgan. American Methodist Episcopal Bishop.
 Walker, Henry. American soldier and public official. Died December 20; born, 1835.
 Wallace, Rush Richard. American naval officer. Died June 12; born, 1835.
 * Warman, Cy. American poet and writer.
 * Washburn, Francis. American clergyman and writer.
 * Watson, Eugene Winslow. American naval officer.
 Weightman, Richard Cox. American writer. Died February 17; born, 1845.
 Welles, Edgar Thaddens. American capitalist. Died August 22; born, 1843.
 * Welsh, Charles. American author and literary critic.
 * Wemyss, Francis Charteris, tenth Earl of. English nobleman.
 * Werns, Francis Xavier. Twenty-ninth General of the Society of Jesus.
 * West, William Stanley. American public official.
 * Westinghouse, George. American inventor and financier.
 * Weyerhaeuser, Frederick. American lumberman and capitalist.
 * Whistler, Garland Nelson. American soldier.
 * Whitney, Sir James Pliny. Canadian statesman.
 Whittaker, Thomas. American publisher. Died December 26; born, 1822.
 Whyte, Sir William. German statesman and railway official. Died April 14; born, 1844.
 * Wilbour, Charlotte Beebe. American woman suffrage leader.
 * Wilbur, Henry W. American editor and author.
 Wilkinson, Thomas Edward. Church of England Bishop. Died October 28; born, 1837.
 * Willard, Charles Andrew. American jurist.
 * Williams, Job. American educator.
 * Williams, Morgan Branaby. English engineer and railway builder.
 * Wilson, Ellen Louise (Axson). Wife of President Woodrow Wilson.
 * Wilson, James Grant. American soldier and writer.
 Wimborne, Ivor Berie Guest, first Baron. English nobleman and capitalist. Died February 22; born, 1835.
 * Winchell, Newton Horace. American geologist.
 Winslow, Edward. American soldier and engineer. Died October 24; born, 1837.
 * Winslow, Herbert. American naval officer.
 Wolffsohn, David. President of the Zionist organization. Died September 15.
 * Woodbury, John McGaw. American physician and public official.
 Woodward, Horace Bolingbroke. British geologist. Born, 1848.
 Wormser, Isidor. American financier. Died June 24.
 * Wright, Marie (Robinson). American author.
 * Young, James Scott. American jurist.
 Zimmerman, Eugene. American capitalist. Died December 20; born, 1845.

NEGRI SEMBILAN, The (Nine States). A federation of states composing a state of the Federated Malay States protectorate (q.v.).

The native Malay population numbers 71,350, and is mainly agricultural. They inhabit the Kuala Pilah and Tampin districts, and cultivate rice, etc., for their own use. The cultivation of coffee has been replaced by that of rubber. Area

under rubber in 1912, 88,082 acres; rice, 28,000; coconuts, 20,595. The state forests contain valuable timber. The chief rivers are the Muar and the Linggi. The Chinese own and exploit the alluvial tin fields; the more extensive workings are capitalized by Europeans. The land alienated for mining in 1912 covered 26,188 acres. Seremban is the capital; other towns are Port Dickson, Kuala Klawang, Kuala Pilah, and Tampin. The capital is connected with Port Dickson by rail. The F. M. S. Railway passes through the state by way of Seremban and Tampin. There are 397 miles of metaled, and 24 unmetaled wagon roads, besides 246 miles of bypaths. The native rulers are Tungku Mohammed, Yang di Pertuan of Sri Menanti, and dominant chiefs. The British resident in 1914 was A. H. Lemon.

NEOSALVARSAN. See SALVARSAN.

NETHERLANDS, THE (or HOLLAND, KINGDOM OF). A constitutional monarchy of western Europe, lying between Germany and the North Sea. The Hague is the capital.

AREA AND POPULATION. The total area, including the rivers of Zeeland and South Holland, the Zuider Zee, the Dollart, and the Wadden (the shallow extending along the shores of Friesland and Groningen as far as the Dollart), based on a low-tide planimetric calculation, is 40,828.71 square kilometers (15,764 square miles). The land area by provinces, the population according to the census of Dec. 31, 1889, together with the population as calculated Dec. 31, 1912, and the density per square kilometer in 1912, are given in the table below.

	Sq. km.	1889	1912	D.
North Brabant .	4,972.84	509,628	649,806	127
Gelderland . . .	5,024.40	512,202	662,260	180
South Holland .	2,931.00	949,641	1,471,761	489
North Holland .	2,762.01	829,489	1,156,162	414
Zeeland	1,831.75	199,284	236,149	132
Utrecht	1,868.21	221,007	298,867	216
Friesland	8,220.25	335,558	366,805	111
Overijssel	8,854.50	295,445	397,841	119
Groningen	2,288.52	272,786	336,741	143
Drenthe	2,662.09	130,704	181,501	68
Limburg	2,194.68	255,721	358,409	163
Total	82,600.25 *	4,511,415	6,114,802	185

* 12,587 square miles.

Of the total population in 1912, 3,030,505 were males, and 3,083,797 were females. The total population in 1909 was 5,858,175. Of these, 5,788,193 were Dutch, 37,534 German, 18,338 Belgians, etc. The majority of the population are Protestants. There were 46,163 marriages in 1912 (43,248 in 1911); 170,269 living births (166,527); stillbirths, 6640 (6638); deaths, 74,647 (86,782). The emigrants numbered, in 1912, 2155 (of whom 1150 adult males, 504 adult females); in 1911, 2638 (of whom 1426 adult males, 604 adult females). A few of the great cities (communal population as calculated Dec. 31, 1912) follow: Amsterdam, 587,876; Rotterdam, 446,897; The Hague, 294,693; Utrecht, 122,853; Groningen, 78,276; Haarlem, 70,491; Arnhem, 64,823; Leiden, 59,207; Nimeguen, 58,390; Tilburg, 53,498; Dordrecht, 48,295; Maastricht, 38,611; Apeldoorn, 38,475; Leeuwarden, 37,897; Bois-le-Duc, 36,029; Enschede, 35,495; Delft, 34,634; Schiedam, 33,882; Zwolle, 33,712; Hilversum, 32,938; Emmen, 31,076; Deventer, 28,627; Breda, 27,512.

EDUCATION. The Dutch system of education is peculiar in that the State encourages and

subsidizes private primary instruction in preference to maintaining public schools, though these are provided by local taxation in the districts where other schools are inadequate. Primary instruction is compulsory between the ages of 7 and 13. The average attendance is 95 per cent. Secondary instruction is not free. There are excellent special schools. The total number of private schools at the end of 1911 was 5434, with 31,221 teachers, and 932,754 pupils, of whom 479,684 were boys. The University of Leiden had 1196 students in 1911-12; Utrecht, 1095; Groningen, 579; Amsterdam, 1134; the free university, 176.

PRODUCTION. In 1912 the productive area was divided as follows: 877,157 hectares in arable lands, 1,216,059 hectares in pasture, 49,991 in gardens, roots, truck crops, etc., 30,338 in orchards and nurseries, 260,141 in forests—a total of 2,433,686 hectares. In the table below are shown area in hectares and production in quintals of great crops in 1912-13 and 1913-14, with yield per hectare in 1912-13; figures for 1913-14 are subject to slight revision.

	Hectares		Quintals		Qs.
	1912	1913	1912	1914	ha.
Wheat	57,147	58,567	1,882,916	1,464,175	24.2
Rye	228,194	226,678	4,227,163	3,717,487	18.5
Barley	26,833	21,201	679,478	698,879	25.3
Oats	140,728	189,945	3,065,186	2,896,861	21.8
Flax *	14,650	8,198	75,328	5.1
Beets **	60,800	61,911	16,658,400	276.2
Potatoes	170,000	168,885	25,026,947	147.2

* Fibre production.

** Sugar beets.

There were in the country June, 1913, 334,445 horses, 2,096,599 cattle, 842,018 sheep, 232,478 goats, 1,350,204 swine, 7,182,287 fowls, and 69,707 beehives.

There are grown for export great quantities of bulbs, shrubs, trees, vegetables, and fruits; bulbs, shrubs, and trees exported in 1911 were valued at 15,156,141 guilders, vegetables 56,700,000, fruits 2,546,000.

From the state coal mines (mostly in Limburg), 1,725,394 metric tons were produced in 1912, valued at 12,044,500 guilders. The North Sea fisheries products (herring) were valued at 10,763,841 guilders in 1912; oysters, 2,937,832 kilos. There were reported in 1912, 418 distilleries, 11 sugar refineries, 27 beet-sugar refineries, 33 salt works, 427 breweries, and 64 vinegar factories.

COMMERCE. The Netherlands is practically a free trade country. The few duties levied have rather a fiscal than a protective object. The total imports for consumption and exports of domestic produce are seen below for three years (precious metals included), in guilders (1 guilder = 40.2 cents):

	1910	1911	1912
Imports	8,265,200,000	8,383,200,000	8,613,000,000
Exports	2,632,300,000	2,732,300,000	3,113,100,000

In the following table are given the principal articles of the special trade for two comparative years, with values in thousands of guilders:

	Imports		Exports	
	1911	1912	1911	1912
Iron and steel	422,484	311,734	296,040	238,849
Textiles	126,788	199,866	128,199	161,343
Cereals & flour	573,630	518,771	857,409	883,300
Coal	113,560	125,838	47,480	52,260
Rice	100,457	99,576	64,879	60,229

	Imports		Exports	
	1911	1912	1911	1912
Mineral oil	15,088	13,374	216	218
Coffee	57,784	51,150	39,099	36,083
Butter	2,789	2,103	80,170	39,149
Margarine	23,218	19,522	48,718	59,885
Sugar	34,908	32,980	76,166	85,523
Cheese	98	816	18,063	20,314
Gold and silver .	17,453	45,628	19,883	18,256
Wood	107,388	126,347	67,571	65,314
Skins	43,070	53,463	52,225	45,986
Indigo	10,853	13,159	5,323	7,728
Copper	194,277	169,860	174,508	151,603
Paper	9,319	10,673	80,782	86,301
Fats	16,137	20,627	7,987	13,316
Saltpeter	780	1,854	1,183	2,647
Zinc	22,832	25,608	21,442	24,628
Tobacco	18,814	13,506	11,551	12,276
Tin	49,191	27,749	85,147	26,060
Dyes	26,154	29,059	23,881	22,488
Oil seeds	42,510	48,804	23,269	23,823

The principal countries of origin and destination follow with the value of their trade in thousands of guilders: Germany, imports 973,700, and exports 1,454,800; Dutch East Indies, 495,900 and 154,300; United States, 362,000 and 135,500; Great Britain, 354,400 and 604,700; Belgium, 343,600 and 370,800; Russia, 291,800 and 25,100; British India, 87,400, imports; Hamburg, 66,500 and 55,900; France, 30,700 and 25,100; Italy, 23,500, exports.

Vessels entered in the 1912 trade, 17,000, of 17,367,594 tons; cleared, 17,150, of 17,267,058 tons. The merchant marine in 1912 included 1413 sailing vessels, of 40,636 tons, and 367 steamers, of 576,678 tons.

COMMUNICATIONS. There were in operation Jan. 1, 1913, 3256 kilometers of railways, all operated by private companies. State telegraph lines, 7738 kilometers; wires, 38,242 kilometers; stations, 1553 (of which, 1166 state). Urban telephone wires, 204,973 kilometers; interurban, 77,418. Post offices, 1525.

FINANCE. The monetary unit is the guilder, worth 40.2 cents. In the table below are shown revenue, including extraordinary, and expenditure for three successive years, in guilders:

	1910	1911	1912
Rev.	200,092,324	205,602,748	212,837,754
Expend. . . .	208,947,097	209,949,466	226,218,873

The budget for 1913 returned 209,531,459 guilders revenue and 231,219,968 guilders expenditure. The 1914 budget estimated the revenue at 228,415,617 guilders (62,340,000 excise, 30,860,000 indirect taxes, 18,475,000 posts, 16,680,000 import duties, 15,615,000 land tax, 12,975,000 personal tax, 12,140,000 income tax, 10,600,000 tax on capital, 1,379,000 domains, etc.); and the expenditure at 253,345,818 (43,629,556 public works, 41,458,135 interior, 39,449,016 finance, 38,593,113 debt, 34,965,377 war, 20,847,769 marine, 16,733,752 agriculture, etc., 11,757,929 justice, 2,701,273 colonies, etc.).

The nominal capital of the funded debt stood (1914) at 1,148,379,900 guilders. Annual interest on funded debt, 31,783,704 guilders; floating debt, 600,000; annuities, 62,909; sinking fund, 6,121,500.

ARMY. The army of the Netherlands is a national militia in which every citizen is liable for service without substitution. Six years is spent in the active militia, five years in the landwehr, and then up to the age of 40 in the landsturm. The recruits for the militia, which is maintained at about 22,000 men on a peace basis, are obtained by lot and they serve for

a training period of from 8½ to 24 months, depending upon the time of year and the arm of the service. Permanent cadres are maintained and the law provides an annual contingent of 23,000 men, who are embodied in the various organizations as required. Normally the field army is organized into four divisions, each of which could be immediately filled to a strength of about 19,000, and could be duplicated upon mobilization. On a war basis the military strength of the Netherlands is estimated at about 200,000 men. During the year a larger force than usual was under arms in view of the European War, and the possibility of attempts to violate the neutrality of the kingdom.

NAVY. The Netherlands fleet is engaged in the protection both of Dutch waters and coasts, and of the East Indian possessions. The East Indian possessions contribute to the maintenance of the fleet. Four destroyers built at Flushing, two completed in 1911, and two in 1912, were for the East India service; their displacement is 515 tons, speed 30 knots, range 6200 miles. The 4 under construction in 1914 are also for the East India service. They will displace 480 tons, and have a speed of 30 knots. Eight torpedo boats building, authorized in 1913, will displace 200 tons, and have a speed of 26 knots. Three gunboats building will displace 540 tons, and have a speed of 16 knots. Four submarines are building, 2 of which, of 350 tons submerged displacement, are for the East India service, and 2, of 200 tons submerged displacement, are for home waters. In their report of July, 1913, the commission of naval defense recommended the construction of 9 dreadnoughts, of 21,000 tons, 6 torpedo cruisers, of 1200, 8 destroyers, 44 torpedo boats, and 22 submarines.

The effective fleet at the end of 1913 included 9 armored and 6 protected cruisers, of 66,430 aggregate tons; 4 mine-layers, of 1880 tons; 38 torpedo boats, 4 torpedo boat destroyers, and 5 submarines.

GOVERNMENT. The executive authority is vested exclusively in the sovereign acting through a responsible ministry; the legislative power devolves upon the states-general, divided into the upper or first chamber of 50 members, and the second chamber of 100 deputies directly elected. The reigning sovereign in 1914 was Wilhelmina, born Aug. 31, 1880; succeeded under the regency of her mother Nov. 23, 1890; attained her majority Aug. 31, 1898; married Duke Henry of Mecklenburg-Schwerin Jan. 7, 1901. Heiress-apparent, Princess Juliana Louisa Emma Maria Wilhelmina, born April 30, 1909.

The cabinet since August, 1913, is as follows: foreign affairs, Dr. Jkhr J. Loudon; interior, Dr. P. W. A. Cort van der Linden; justice, Dr. B. Ort; navy, Capt. J. J. Rambonnet; finance, Dr. M. W. L. Treub; war, Col. N. Bosboom; public works, Dr. C. Lely; agriculture, etc., F. E. Posthuma; and colonial, Dr. Th. B. Pleyte.

HISTORY. On January 30 the Dutch submarine No. 5 sank at Flushing, with the loss of one man. In June the government asked parliament to approve the construction of three dreadnoughts of 24,000 tons each, in addition to a number of cruisers and torpedo boats, for the defense of the Dutch East Indies. The outbreak

of the War of the Nations and the German invasion of Belgium made it seem advisable for the Dutch government to mobilize its army, and to establish border patrols for the maintenance of strict neutrality. To defray the mobilization charges six of the richest men in the Netherlands offered to contribute one-tenth of their fortune. So heavy was the burden of maintaining the army on a war footing, that in December a loan of \$100,000,000 was floated. In regard to the measures taken to prevent the re-shipment of food from the Netherlands to Germany, consult the article on the WAR OF THE NATIONS. See also INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

NEURASTHENIA. See OCCUPATIONAL DISEASES.

NEUTRALITY. See UNITED STATES, section Administration.

NEVADA. POPULATION. The estimated population on July 1, 1914, was 98,726. The population in 1910 was 81,875.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Wheat	1914	45,000	1,332,000	1,266,000
	1913	39,000	1,081,000	887,000
Oats	1914	13,000	678,000	372,000
	1913	11,000	473,000	307,000
Barley	1914	13,000	611,000	397,000
	1913	12,000	492,000	443,000
Potatoes	1914	12,000	1,560,000	1,092,000
	1913	11,000	1,760,000	1,197,000
Hay	1914	247,000	803,000	8,665,000
	1913	235,000	646,000	7,106,000

a Tons.

MINERAL PRODUCTION. Nevada is essentially a metal-producing State, metallic products constituting more than 98 per cent of the total value of the State's mineral output. Though Nevada is at present of much less relative importance as a mining State than it was in the days of the famous Comstock lode, it continues to rank first in the production of silver, which is third among its mineral products. The most important product of the State is copper, in the production of which it ranks fifth. The production of copper was 90,693,751 pounds in 1913, compared with 86,477,494 pounds in 1912. There was a decline in value, however, from \$14,468,787 in 1912, to \$14,057,531 in 1913. Copper mining is one of the new industries of the State. It did not begin on an important scale until 1908, with the development of the Ely district in White Pine County. The output of gold in the State decreased from 650,943 fine ounces, valued at \$13,456,880 in 1912, to 570,589 fine ounces, valued at \$11,795,130 in 1913. The production of silver increased from 14,369,063 ounces, valued at \$8,836,974 in 1912, to 16,090,083 fine ounces, valued at \$9,718,410 in 1913. The lead output of the State decreased from 19,500,100 pounds in 1912, to about 15,300,000 pounds in 1913, or about 21 per cent. The output of recoverable spelter from zinc ores sold or treated increased from 13,322,988 pounds in 1912, to 15,137,000 pounds in 1913. The metal output of the State in 1914 decreased over 22 per cent, according to the estimates of the United States Geological Survey. This was due chiefly to the influence of the European War in

lowering the price of the baser metals, especially copper. The estimate for 1914 was \$28,800,000, compared with about \$37,000,000 in 1913. Gold decreased about 4 per cent, silver about 5 per cent, copper over 30,000,000 pounds, and lead nearly 16 per cent. The production of zinc ores decreased nearly 10 per cent. The total value of the mineral products of the State in 1913 amounted to \$37,842,084, compared with \$39,111,828 in 1912.

FINANCE. There was a balance in the treasury on Jan. 1, 1914, of \$449,404. The receipts for the year amounted to \$881,538, and the disbursements to \$1,073,114, leaving a balance on hand on Dec. 3, 1914, of \$257,828.

EDUCATION. The latest reports available for educational statistics are for 1911-12. The total number of school age in the State in 1912 was 12,695. The enrollment was 11,098, and the average daily attendance 8190. There were 529 teachers, receiving an average monthly salary of \$87.57. The total amount expended for schools in that year was \$625,562. There were 16 public high schools in the State.

TRANSPORTATION. The total railway mileage in the State in 1914 was 2416, compared with 2328 in 1913. The longest lines are the Central Pacific, 746 miles; the San Pedro, Los Angeles and Salt Lake Railroad, 267; and the Western Pacific Railway, 427. The Southern Pacific Company owns no mileage in Nevada, but operates the Central Pacific.

CHARITIES AND CORRECTIONS. The institutions under State control include the State Prison, the Nevada Hospital for Mental Diseases, and the Orphans' Home, all at Carson City, and the Nevada School of Industry at Elko. The latter is under construction at the present time. The Crittenden Home for Girls, located at Reno, is not under State control, but receives aid from the State.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. Elections were held for Governor, Senator, and representative to Congress. In the nominating elections the Democrats renominated F. G. Newlands for Senator, and nominated E. D. Boyle for Governor. The Republicans nominated S. Platt for Senator, and renominated T. L. Oddie for Governor. At the elections on November 3, Mr. Boyle, the Democratic candidate, was elected, with 9623 votes, compared with 8530 votes for Governor Oddie. The Socialists had a ticket in the field and cast 3391 votes for Governor. For United States Senator, Senator Newlands was reelected with 8078 votes, compared with 8038 for the Republican candidate, and 5451 for the Socialist candidate. The Republicans elected the representative to Congress. An amendment providing for woman suffrage was adopted at this election. See WOMAN SUFFRAGE.

STATE GOVERNMENT. Governor, Tasker L. Oddie; Lieutenant-Governor, G. C. Ross; Secretary of State, George Brodigan; Treasurer, William McMillan; Comptroller, Jacob Eggers; Superintendent of Public Instruction, J. E. Bray; Attorney-General, Geo. B. Thatcher—all Democrats, except Oddie, Eggers, and McMillan, Republicans.

JUDICIARY. Supreme Court: Chief Justice, G. F. Talbot, Democrat; Justices, P. A. McCarran, Democrat; Frank H. Norcross, Republican; Clerk, Joe Josephs, Democrat.

STATE LEGISLATURE, 1913.

	Senate	House	Joint Ballot
Democrats	12	32	44
Republicans	8	19	27
Independent	1	1	2
Socialists	1	1	2
Democratic majority	2	11	18

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEVADA, UNIVERSITY OF. A State institution of higher education, founded at Reno, Nev., in 1886. The total enrollment in all departments of the university in the autumn of 1914 was 340, and the faculty numbered 50. The most notable change in the faculty during the year was the appointment of A. W. Hendrick as president of the university to succeed Joseph David Stubbs; F. C. Lincoln was appointed new head of the Mining School, and F. W. Wilson new head of Animal Husbandry. The yearly income from all sources is about \$200,000. The library contains 39,200 volumes.

NEW BRUNSWICK. A maritime province of the Dominion of Canada. Area, 27,985 square miles, with a population (1911) of 351,889. The capital is Fredericton, with (1911) 7208 inhabitants. The province is administered by a Lieutenant-Governor, appointed by the Governor-General of Canada, and acting through a responsible executive council. There is a unicameral Legislative Assembly of 46 members popularly elected for four years. The Lieutenant-Governor in 1914 was Josiah Wood, appointed March 6, 1912. Premier in 1914, G. J. Clarke. See CANADA.

NEW CALEDONIA. A French Melanesian colony. Area, with Loyalty Island, 19,823 square kilometers, with 50,680 inhabitants. Of this total the Wallis Archipelago occupies 96 square kilometers, and contains 4500 inhabitants; Fortuna and Aloi, 159 square kilometers, with 15,000; Chesterfield Islands 0.8 square kilometers. Nouméa, with 6968 inhabitants, is the capital. There are 16 kilometers of railway. Imports 1912, 15,316,755 francs; exports, 13,934,715 francs. Vessels entered in the 1911 trade, 117, of 188,612 tons. The export of minerals in 1911 was valued at 7,351,000 francs. Debt, Jan. 1, 1912, 10,361,591 francs. The Governor in 1914 was M. Aug. Brunet.

NEWFOUNDLAND. An island colony of Great Britain on the northeast side of the gulf of St. Lawrence. It covers 42,734 square miles, and had, in 1911, 242,619 inhabitants—245,137 in 1912. Administratively attached to Newfoundland is a portion of the coast of Labrador, comprehended between Hudson Strait and Blanc Sablon, including the Hamilton basin. St. Johns, the capital, had 32,292 inhabitants in 1911. Fishing, agriculture, mining, and lumbering are the chief industries. The majority of the settlements are on or near the coast. Paper and pulp mills have been established at Grand Falls, and at Bishop's Falls. Copper, iron pyrites, asbestos, and hematite iron are worked. Cod is the chief export; about 300,000 quintals are consumed annually in the home market, and the export in 1911-12 was 1,388,178 quintals. Total imports 1911-12, \$14,733,490 (\$13,383,910 in 1910-11); exports, \$13,874,809 (\$11,975,747). The total customs revenue in 1911-12 was \$3,142,491. Revenue 1911-12 \$3,736,456 (\$3,527,126 in 1910-11); expendi-

ture, \$3,524,653 (\$3,354,747). Total tonnage entered and cleared, 2,194,103, of which 1,369,367 tons British. Total railway lines with branches, 638 miles. Branch lines are under construction to Trinity, Bonavista, Hearts' Content, Trepassay, Fortune Bay, and Bonne Bay—about 300 miles. There are 4225 miles of telegraphs. The Governor in 1914 was W. E. Davidson.

The Governor in his speech at the opening of the Legislative Assembly, on January 15, declared that the prosperity of the colony during the past year had been absolutely unprecedented. Measures of local interest—such as water supply, railway development, ferries, and whale fishing—occupied the legislative session. Early in April a bitter blizzard inflicted terrible losses upon the Newfoundland sealing fleet; 170 men of the *Newfoundland's* crew were swept away on ice floes, and of this number only 50 survivors were rescued; the *Southern Cross* was reported lost, with all hands. To relieve the misery of the bereaved families, public and private generosity contributed, and the Dominion of Canada gave \$25,000 as a mark of its sympathy. Another storm early in June destroyed many fishing smacks, and exacted a toll of perhaps 100 lives. As Newfoundland's share of the burden of war, the government proposed to equip and maintain 500 soldiers with a salary of \$1 a day, to serve in Europe throughout the war; and the proposal was ratified by the Legislature, which met in special session, September 2.

NEW GUINEA. The largest of the East Indian islands. See DUTCH EAST INDIES; GERMAN NEW GUINEA; PAPUA.

NEW HAMPSHIRE. POPULATION. The estimated population on July 1, 1914, was 438,662. The population in 1910 was 430,572.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acres	Prod. bu.	Value
Corn	1914	21,000	966,000	\$ 792,000
	1913	22,000	814,000	659,000

	1913	100	165,000	80,000

a Tons.
b Pounds.

MINERAL PRODUCTION. New Hampshire, like the other New England States, depends chiefly upon its stone quarries for its inclusion in the list of mineral producers. In 1913, when the total value of products amounted to \$2,218,925, quarries contributed two-thirds, or \$1,482,771. The only stone quarried on a commercial scale is granite, which is used chiefly for building and monumental purposes. The clay products are second in importance. The less important mineral products are fluorspar, garnet, occasional gems, mica, mineral waters, sand and gravel, scythestones, and a small quantity of zinc. The total value of the mineral products in 1913 was \$2,218,925, compared with \$1,949,876 in 1912.

TRANSPORTATION. The total railway mileage of the State in 1914 was about 1260 miles.

There was practically no construction during the year.

EDUCATION. The school population of the State in 1914 was 73,480; the attendance, 50,000; and the enrollment, 63,004. The women teachers in schools under high schools numbered 2491, and the men teachers 89. The average monthly salary of women teachers was \$42.18, and of men teachers \$65.91.

FINANCE. The report of the State Treasurer for the fiscal year ending Aug. 31, 1914, shows a cash balance at the beginning of the year of \$503,902. The total receipts were \$4,025,125, and the disbursements \$3,283,195, leaving the cash on hand at the end of the year \$741,930. The net indebtedness of the State on Sept. 1, 1913, was \$1,235,202; this was decreased by the amount of \$269,699 during the year, leaving the net indebtedness on Sept. 1, 1914, \$965,503.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions receiving relief from the State are the County Farms, State Sanatorium for Tubercular Patients, State Hospital for the Insane, New Hampshire Soldiers' Home, New Hampshire Orphans' Home, and the New Hampshire School for Feeble-Minded. The penal institutions are the New Hampshire State Prison, county jails, and county houses of corrections, and the State Industrial School.

POLITICS AND GOVERNMENT. The Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. Elections were held for Governor, Senator, and representatives in Congress. The Republicans nominated for Governor Rollin H. Spaulding, the Democrats A. W. Noone, the Progressives H. D. Allison, and the Socialists, J. P. Burke. For United States Senator J. H. Gallinger was renominated by the Republicans, and R. B. Stevens was the Democratic nominee. In the election on November 3, the Republicans succeeded in electing their Governor with a vote of 46,415, compared with 33,674 for Noone, Democrat, 2572 for Allison, Progressive, and 1423 for the Socialist candidate. For Senator, Gallinger, Republican, received 42,111 votes; Stevens, Democrat, 30,382; Greer, Progressive, 1938; and Wilkins, Socialist, 1089. The total number of votes cast in the election was 84,082, compared with 87,961 in the presidential election of 1912. The Republicans gained about 12,000 votes, the Democrats about 1000, while the Progressives lost about 15,000. The Republicans elected two representatives to Congress. One of these was C. A. Sulloway, who had previously served several terms in Congress.

STATE GOVERNMENT. * Governor, R. H. Spaulding, Republican; Secretary of State, Edward N. Pearson, Republican; Treasurer, George E. Farrand, Democrat; Auditor, Guy H. Cutter, Democrat; Adjutant-General, Herbert E. Tutherly, Republican; Attorney-General, J. P. Tuttle, Republican; Superintendent of Public Instruction, Henry C. Morrison, Republican; Commissioner of Insurance, R. J. Merrill, Republican.

JUDICIARY. Supreme Court: Chief Justice, Frank N. Parsons, Republican; Associate Justices, Reuben E. Walker, Republican; John E. Young, Republican; Robert J. Peaslee, Democrat; William A. Plummer, Democrat; Clerk, Arthur H. Chase, Republican.

* Governor elected by Legislature which convened Jan. 1, 1913; November, 1912, election not conclusive.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot

Democrats	6	158	159
Progressives	1	5	6
Republican majority	10	98	103

The representatives in Congress will be found in the section *Congress*, under the article UNITED STATES.

NEW HEBRIDES. A group of Melanesian islands jointly administered by France and Great Britain through the French and English high commissioners for the Pacific. Vila, in the island of Efate, is the seat of government. A large proportion of the natives are cannibals. Late in December, 1913, and on Jan. 1, 1914, volcanic eruptions of considerable magnitude disturbed Ambryn Island, in the New Hebrides group, changing the whole face of the island, pouring streams of boiling lava into the sea, and causing the death of several hundreds of natives. Throughout the early part of 1914 there was much discussion of the possibility that Australia might purchase the French rights to the New Hebrides; the suggestion, it was affirmed, had emanated originally from Sir Edward Grey, the British Foreign Minister, and was considered in the French Chamber of Deputies in March. At that time M. Doumergue stated that the Anglo-French condominium in the New Hebrides would be preserved and perfected. In June a conference was held in London to consider a revision of the Anglo-French Convention of 1906, under which the islands had hitherto been jointly governed by France and Great Britain. Concerning the work of the London Conference, no further report was available, owing perhaps to the sudden outbreak of the War of the Nations.

NEW JERSEY. POPULATION. The estimated population on July 1, 1914, was 2,815,663. The population, according to the census of 1910, was 2,537,167.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	272,000	10,472,000	\$7,959,000
	1913	275,000	10,862,000	8,146,000
Wheat	1914	79,000	1,422,000	1,550,000
	1913	80,000	1,408,000	1,352,000
Oats	1914	67,000	1,948,000	1,049,000
	1913	70,000	2,030,000	954,000
Rye	1914	70,000	1,295,000	1,062,000
	1913	70,000	1,260,000	1,008,000
Potatoes	1914	92,000	9,986,000	6,061,000
	1913	94,000	8,980,000	7,323,000
Hay	1914	861,000	4,487,000	2,496,000
	1913	861,000	4,692,000	2,911,000

a Tons.

MINERAL PRODUCTION. The chief mineral products of the State are clay products, zinc, and Portland cement. The value of the clay products in 1913, was \$19,705,378. The clay products include every variety of brick, tile, and pottery produced in the United States. Of the total value of the clay products in 1913, \$10,866,833 represented brick and tile, and \$8,838,545 pottery. New Jersey is an important producer of zinc, and in the quantity of zinc contained in the ores mined, ranks next to Mis-

souri, and second among all the States. The zinc content of the ores mined increased from 69,755 short tons in 1912, to 84,122 tons in 1913, but on account of the decline in the prices of spelter the estimated value of this product declined from \$9,626,191 to \$9,421,664. Another important mineral industry is the manufacture of Portland cement, the production of which decreased from 4,490,645 barrels in 1912 to 4,255,015 barrels in 1913, but the value increased from \$3,052,098 to \$3,638,755. Other mineral products in New Jersey are trap rock, limestone, granite, sandstone, building and molding sand, iron ore, mineral paints, mineral waters, sand-lime brick, slate, and talc. The total value of the mineral products of New Jersey in 1913 was \$37,271,129, compared with a value of \$37,195,940, in 1912.

TRANSPORTATION. The total railway mileage in the State on Dec. 31, 1913, was 5775, of which 2424 was first track, 929 second track, 166 third track, 149 fourth track, and 2105 sidings.

EDUCATION. The total enrollment in the schools of the State during the fiscal year 1912-13 was 516,256, the average daily attendance being 377,366. The male teachers numbered 769, the female teachers 14,275, and the average cost per pupil for current expenses for the year ending June 30, 1913, was \$40.81. The average yearly salary of teachers, including principles and superintendents, was \$816.38. The total expenditure for maintaining the public schools in the year 1912-13 was \$15,427,182. There were 472 school districts in the State with 2111 school buildings, carrying an appraised valuation of \$53,044,978. In the high schools of the State were 33,142 pupils, and the approved high schools numbered 154. The Legislature of 1913 amended the compulsory attendance law, which provides for the employment of compulsory attendance officers.

FINANCE. The report of the State Treasurer for the fiscal year ending Oct. 31, 1914, shows a balance on hand on Nov. 1, 1913, of \$1,727,992. The net disbursements during the year amounted to \$9,678,727 and the net receipts to \$9,036,340, leaving a balance on hand Oct. 31, 1914, of \$1,085,606.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include State Hospitals for the Insane at Morris Plains and Trenton; State Home for the Feeble-Minded at Vineland; New Jersey State Home for Epileptics, New Jersey State Prison, New Jersey Reformatory, State Home for Boys, State Home for Girls, Soldiers' Home at Kearney; Soldiers' Home at Vineland; and the Sanatorium for Tuberculous Diseases. In these institutions, there were on Oct. 31, 1914, 17,706 inmates, an increase of 1518 over 1913.

POLITICS AND GOVERNMENT. The State Legislature met in 1914 as the sessions are annual. Except for the passage of revenue raising bills to meet the financial needs of the State there were no measures of unusual interest. The two most important bills passed provided for a direct inheritance tax and a bank stock tax. Efforts made to amend the election laws failed, with the exception of a measure providing for preferential voting in cities operating under commission government, thus doing away with primary elections in the selection of officials in

that class of municipalities. Both the Senate and the House adopted resolutions, which if re-adopted in 1915 will submit to the people constitutional amendments for woman suffrage, home rule, election of assemblymen by districts, easier methods of amending the Constitution, and permitting excess condemnation. On April 7 an election was held in the seventh congressional district to fill a vacancy caused by the death of Congressman Robert Bremner (q.v.). The Democrats nominated James J. O'Byrne, and the Republicans Dow H. Drukker. Mr. Drukker was elected, receiving nearly twice as many votes as were cast for Mr. O'Byrne. The vote in general showed a falling off in the Democratic vote from 9900 to 5380, and in the Progressive vote from 4746 to 619; the Republican vote on the other hand showed a gain of about 4000, and the Socialist vote increased from 1650 to 5053. The district is normally a Republican one, but Mr. Bremner was elected by the Democrats in 1912 on account of the divided opposition in the Republican party. There were no elections for Governor or United States Senator in 1914. The elections in November were for representatives to Congress and for minor State officers. Primary elections were held by all the political parties on September 22. The only contest of general interest was between the followers of Governor Fielder and those of H. Otto Wittpenn in the struggle to nominate a county ticket in Hudson County. Wittpenn succeeded in nominating only three county candidates. All the political parties held conventions on September 29, for the formulation of party platforms. As a result of the elections held on November 3 Republican representatives were elected in the first, second, fourth, seventh, eighth, ninth, and tenth districts, and Democrats in the others. The total vote cast in the election was 389,889, compared with 432,534 in the presidential election of 1912. The Republicans elected a majority in both branches of the Legislature for the first time since 1910.

OTHER EVENTS. The home-rule act passed by the Legislature, affording to cities under a commission form of government greater latitude in the administration of local affairs, was held to be unconstitutional by the Supreme Court on May 22. On February 20 indictments against 14 officials of Atlantic City, charging frauds (bribery and conspiracy) in the elections of 1909 and 1910 were dismissed. There were severe forest fires in several portions of the State in the latter part of the year.

STATE GOVERNMENT. Governor, James F. Fielder, Democrat; Secretary of State, D. S. Crater, Democrat; Treasurer, Edward E. Grosscup, Democrat; Comptroller, Edward I. Edwards, Democrat; Attorney-General, John W. Wescott, Democrat; Adjutant-General, Wilbur F. Sadler, Jr., Republican; Commissioner of Education, Calvin N. Kendall, Democrat; Commissioner of Insurance, G. M. La Monte, Democrat.

JUDICIARY. Supreme Court: Chief Justice, William S. Gummere, Republican; Associate Justices, C. G. Garrison, Democrat; F. J. Swayze, Republican; T. W. Trenchard, Republican; Charles W. Parker, Republican; James J. Bergen, Democrat; J. F. Minturn, Democrat; Samuel Kalisch, Democrat; Charles C. Black, Democrat; Clerk, William C. Gebhardt, Democrat.

MINERAL PRODUCTION. Large gains were made in the production of gold, silver, copper, lead, and zinc in the mines of the State in 1913. The production of gold showed an increase of \$97,480 over the output of 1912, which was \$784,446. Silver showed an increase of 94,572 ounces over the production of 1,536,701 ounces in 1912; lead, a decrease of 1,547,654 pounds from the yield of 5,494,018 pounds in 1912; copper, an increase of 22,277,742 pounds over the yield of 34,030,964 pounds in 1912; and zinc, an increase of 2,956,524 pounds over the output of 13,566,637 pounds in 1912. Despite lower average yearly prices for copper and zinc, the total value of the output was \$11,694,002, an increase for 1913 of \$3,166,047. New Mexico is one of the most important of the Western States in the production of coal. The output in 1913 surpassed the output of any previous year, being 3,708,806 short tons, with a value of \$5,401,260. In 1912 there were mined 3,536,854 short tons, valued at \$5,036,824. The number of men employed in the coal mines of the State increased from 3928 in 1912, to 4329 in 1913. In October an appalling disaster causing the death of 261 persons, occurred in Mine No. 2 of the Stag Cañon Fuel Company, at Dawson. The coal production of the State in 1914, according to the estimates of the United States Geological Survey, showed an increase of from 15 to 20 per cent. Internal troubles in Mexico were partly responsible for the decreased production of coke. The coal production of the State is estimated at 4,450,000 tons, against 3,708,806 tons in 1913. The quantity of coke made in 1913 was 467,945 short tons, valued at \$1,548,536, a maximum record both in quantity and value. The total value of the mineral products increased from \$14,391,355 in 1912 to \$17,862,369 in 1913. The figures for 1913 are more than double those of two years ago, the increase being due principally to activity in the production of copper.

The total output of the mines of the State in 1914 was estimated by the United States Geological Survey to be valued at \$12,070,000, com-

pared with a value of \$11,694,002 for the output of 1913. The estimates indicate a yield of \$1,172,000 in gold, 1,720,000 ounces of silver, 1,340,000 pounds of lead, 65,600,000 pounds of copper, and 18,300,000 pounds of zinc. These figures show increases of \$290,000 in gold, 90,000 ounces of silver, 9,300,000 pounds of copper, and 1,800,000 pounds of zinc, and a decrease of 2,600,000 pounds of lead.

EDUCATION. There were in 1913-14, 1016 school districts in the State in which were 102,068 pupils of school age; of these, 67,147 were enrolled in the public, elementary, and high schools, and 49,823 were in average daily attendance. The teachers numbered 1692, of whom 531 were men and 1161 women, the average monthly salary of teachers being \$58.65 for women and \$62.39 for men. There were 52 district high schools, 28 of which have four-year courses, and in addition there are 14 county high schools. The total disbursements for education in 1914 amounted to \$1,346,402.

TRANSPORTATION. The total railway mileage in the State in 1913 was 3060. The lines having the longest mileage were the Atchison, Topeka, and Santa Fe, 1194; the El Paso and Southwestern, 635; the Atchison, Topeka, and Santa Fe coast lines, 242; the Denver and Rio Grande, 217; the Southern Pacific, 167; and the Chicago, Rock Island, and Pacific, 152. None of the steam railroads carried any new construction during the year 1914.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State included the Deaf and Dumb Asylum, and New Mexico State Penitentiary at Santa Fe; New Mexico Institute for the Blind at Alamogordo; New Mexico Insane Asylum at Las Vegas; New Mexico Reform School at Springer; and Miners' Hospital of New Mexico at Raton.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. There was no election for Governor or United States Senator. The elections on November 3 were for representative to Congress, for a member of the State corporation commission, and members of the House of the Legislature, as well as one district judge and one district attorney, besides minor officers. Hugh H. Williams, Republican, was elected corporation commissioner. The House of the Legislature consists of 33 Republicans, 1 Progressive, 1 Socialist, and 14 Democrats. Three amendments to the State Constitution were also voted upon and carried, one providing that State and county officials may succeed themselves, the second that the terms of State and county officials be reduced from four to two years, and the third repealing the clause on taxation in the Constitution and eliminating the State Board of Equalization. The Republicans were successful in electing their candidate, B. C. Hernandez, by 23,812 votes, compared with 19,805 for H. B. Ferguson, Democrat, and 1695 for F. C. Wilson, Progressive. The total vote cast was 46,421, compared with 49,370 in the presidential election of 1912.

STATE GOVERNMENT. Governor, William C. McDonald, Democrat; Lieutenant-Governor, E. C. de Baca, Democrat; Secretary of State, Antonio Lucero, Democrat; Treasurer, O. N. Maron, Democrat; Auditor, William G. Sargent, Republican; Attorney-General, Frank W. Clancy,

Republican; Superintendent of Education, Alvan N. White, Democrat.

JUDICIARY. Supreme Court: Chief Justice, Clarence J. Roberts, Republican; Associate Justices, Richard H. Hanna, Progressive, and Frank W. Parker, Republican; Clerk, José D. Sena, Republican.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NEW SOUTH WALES. A State of the Commonwealth of Australia, in the southeastern part of the continent between Queensland on the north and Victoria on the south. The area is estimated at 309,460 square miles. The census of April 3, 1911, returned the population at 1,646,734, exclusive of full-blooded aborigines. The capital is Sydney, the largest city of Australia (population, in 1911, with suburbs, 629,503). Governor in 1914, Sir Gerald Strickland (appointed 1912); Lieutenant-Governor, Sir William Portus Cullen; Premier, W. A. Holman. See AUSTRALIA.

It was announced during the year that the government railways of New South Wales, Australia, had been forced to increase freight rates by 10 per cent, and passenger fares from 5 to 50 per cent, which would produce a total new yearly revenue of \$1,750,000, or more than 5.3 per cent of gross operating revenues in 1913.

HISTORY. Returning to power after the December (1913) elections, with a strong Labor backing in the Legislative Assembly, the State Premier, Mr. Holman, pressed forward with redoubled vigor to realize his socialistic programme. In addition to the bold irrigation schemes which the State had already undertaken, Mr. Holman's Labor ministry confidently engaged upon numerous other public enterprises in the realm of industry, such as a State dairy, State boiling-down works, a State fishery, a State flour mill, and a State bakery. This last, Mr. Holman explained, was not to enter into general competition with private bakers, but was instituted to provide bread for government employees and public establishments, because the estimates handed in by private bakers showed an unjustifiable increase of 28 per cent over the previous year. When the New South Wales Parliament was opened at Sydney on March 3, 1914, Governor Sir Gerald Strickland announced that the government would bring in measures for the imposition of a super-tax on land, for the amalgamation of the Savings Banks with the Government Savings Bank, and for the further provision of government-owned model workmen's cottages. The budget statement, made by Mr. Holman on March 12, was remarkable for the large place it gave to appropriation for the development of railways. On March 25 the government submitted income-tax proposals, increasing the rate of the tax and lowering the exemption. In May, speaking before the Trades and Labor Council, Mr. Holman still further outlined his policy of enlarging the field of government enterprise, building model suburbs, set-

ting up a fair rent court, and working for the 44-hour working week, the universal Saturday holiday, and the recognition of rural workers. During the same month, a new ministerial department was created for the better protection of public health, and Mr. Flowers was appointed as the first chief of the new department. As opposed to the increasingly socialistic trend of the dominant political party, one of the most interesting developments of the year was the formation of a new parliamentary group, the Country party. As a result of the solidarity gained by the Farmers' and Settlers' Association conference, ten members of the Legislative Assembly, representing rural districts, seceded from the Liberal party and formed a separate organization; they were careful to announce, however, that in combating the socialistic schemes of the ministry they would still cooperate closely with Mr. Wade, leader of the Liberal Opposition. The men who formed the new party claimed that in past years the urban Liberals, by giving insufficient consideration to rural interests and by attempting to dictate rural nominations, had estranged many of their former supporters, whereas the new Country party, by appealing directly to the farmers, would prove more effective as the ally than as an integral part of the Liberal organization.

NEWTON, RICHARD HEBER. An American clergyman and lecturer, died Dec. 19, 1914. He was born in Philadelphia, in 1840, graduated from the University of Pennsylvania in 1862, and for the year following he studied at the Episcopal Divinity School in Philadelphia. He was ordained priest of the Protestant Episcopal Church in 1866, and in the same year became rector of St. Paul's in Philadelphia, having previously served as assistant in several other parishes. His mental gifts quickly placed him in the front rank as clergyman, and in 1869 he became rector of the Anthon Memorial Church, afterwards called All Souls Church in New York City, where his sermons immediately attracted attention and his congregation rapidly increased. He preached a series of sermons on the right method of studying and interpreting the Scriptures, in which the radical nature of his views led to much discussion, and charges of heresy were made against him. These were presented to Bishop Potter, who after laying them aside for a year dismissed them, but asked to have the sermons discontinued. This was done, although afterwards they were printed in book form. As a result of ill health and an offer from Leland Stanford University he resigned the rectorship of All Souls in 1902. After becoming preacher at the university he devoted most of his time to psychical research, and in 1905 delivered an address before the American Institute for Scientific Research in which he declared that he believed in spiritualism. Dr. Newton did a great amount of charity work and was interested in social reform. He was the author of many theological works, including: *The Children's Church* (1870); *The Morals of Trade* (1876); *Studies of Jesus* (1880); *Right and Wrong Uses of the Bible* (1883); *The Book of the Beginnings* (1884); *Social Studies* (1886); *Christian Science* (1898); and *Parsifal* (1904).

NEW YORK. POPULATION. The estimated population on July 1, 1914, was 9,899,761. The population in 1910 was 9,113,614.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

	<i>Acres</i>	<i>Prod. bu.</i>	<i>Value</i>

a Tons.	b Tons.		

MINERAL PRODUCTION. The clay-working and quarrying industries furnish products of chief mineral value. New York, lying entirely outside of the coal-bearing formation, produces no solid mineral fuel, but has a considerable production of both natural gas and petroleum, each of which had an output exceeding \$2,000,000 in 1913. The one primary metal product of commercial importance is iron, but the larger part of the pig iron made in the State is from Lake Superior ores. The output from the blast furnaces amounted in 1913 to 1,967,449 long tons, valued at \$30,203,673, compared with 1,973,090 long tons, valued at \$28,059,058 in 1912. The value of pig iron is not included in the total value of the mineral production. There were mined in the State in 1913, 1,420,889 long tons of iron ore, valued at \$3,100,235, compared with 1,167,405 tons, valued at \$2,933,024, in 1912. The clay products in 1913 were valued at \$11,469,476, compared with \$12,058,858 in 1912, the decrease being due to a falling off in the output of common brick, the chief clay product of the State, in the Hudson River region. The output of the quarries is second in importance among the mineral products, the value of the stone production in 1913 being \$7,185,293, compared with \$6,415,015 in 1912. New York ranks third in the total value of quarry products, being exceeded only by Pennsylvania and Vermont. Cement is third among the mineral products, the marketed production of which in 1913 amounted to 5,354,129 barrels, valued at \$4,918,119, compared with 4,857,960 barrels, valued at \$3,610,365 in 1912. The only other important mineral products are gypsum, in the production of which New York ranked second, sand and gravel, natural gas, petroleum, and aluminum. The total value of the mineral products in 1913 was \$41,594,052, compared with \$38,431,910 in 1912.

TRANSPORTATION. The total mileage of steam railroads in the State on June 30, 1914, was 8473. Lines having the longest track were the New York Central, 2690; Erie, 948; Lehigh Valley, 659; Delaware and Hudson, 728; New York, Ontario, and Western, 477; Long Island, 398; Pennsylvania, 347. The mileage of electric roads was 2074. There were about 8 miles of first main track constructed during the year and 24 miles of second track.

FINANCE. The report of the State Comptroller shows a balance on hand on Sept. 30, 1913,

of \$10,436,004. The receipts for the fiscal year 1914 amounted to \$50,642,716, and the disbursements to \$53,563,355, leaving a balance on hand at the end of the fiscal year of \$13,025,721. The total State debt on Sept. 30, 1914, was \$159,260,660; of this, \$101,000,000 was for canals, \$55,000,000 for the general fund, \$2,500,000 for the contingent fund, and \$760,000 from bounty debt.

EDUCATION. The total school population of the State for the school year ending July 31, 1912, was 2,208,675. The total enrollment in 1913 was 1,485,706, and the average daily attendance 1,182,656. The number of teachers in the day schools was 45,359. The number of teachers for any portion of the year was 5231 males, and 42,638 females, the average salary of teachers being \$935.70 a year.

POLITICS AND GOVERNMENT. The State Legislature, which meets annually in New York, passed a large number of measures, but none of first importance. A measure providing for a proposed amendment to the Constitution relating to taxation was enacted. Certain amendments were made to the labor laws, and cities of the second and third class were authorized to adopt a simplified form of government, there being seven optional forms of charter, among them "government by limited council with collective supervision," "government by limited council with appointive city manager," "government by limited council with division of administrative duties," "government by means of separate executive and legislative departments." Several amendments were made to the charter of New York City. There were elections during the year for Governor, United States Senator, and members of the National House of Representatives. Governor Glynn, who became Governor on the removal of Governor Sulzer in 1913, was a candidate for reelection on the Democratic ticket, being opposed for the nomination by John A. Hennessy, who took a prominent part in the campaign of 1913, and whose revelations of corruption were largely responsible for the overwhelming Tammany defeat of that year. Governor Glynn had the support of the Democratic organization in the State. There were three candidates for the Republican nomination—Charles S. Whitman, District Attorney of New York City, Harvey D. Hinman, a prominent member of the Assembly, and Job E. Hedges, a well-known lawyer and a former candidate for Governor. An effort was made to bring about an endorsement of Mr. Whitman's nomination by the Progressive party, but this failed largely as a result of the opposition of Theodore Roosevelt, who asserted that Mr. Whitman was a tool of the State machine, and had in addition received favors from Tammany Hall. Mr. Hinman was the candidate of the Progressive wing of the Republican party. Mr. Hedges ran on an Independent ticket. The Progressive candidates for Governor were Frederick M. Davenport and William Sulzer, former Governor. The primary elections for nomination were held on September 21. Mr. Glynn was nominated by the Democrats by a vote of 175,772 to 68,387 for Hennessy, his opponent. Mr. Whitman was nominated by the Republicans, receiving 120,073 votes to 61,952 for Hinman, and 43,012 for Hedges. Mr. Davenport received the Progressive nomination, defeating William Sulzer by a vote of 18,643 to 14,366. The candidates for

United States Senator in these primaries were Democrats, James W. Gerard, ambassador to Germany, Franklin D. Roosevelt, Assistant Secretary of the Navy, and James S. McDonogh; and Republicans, James W. Wadsworth, Jr., William M. Calder, and David Jayne Hill. The successful Republican and Democratic nominees were, respectively, Mr. Wadsworth and Mr. Gerard. These primary elections were held under the new primary law passed in 1913. William Sulzer, who was defeated for the Progressive nomination, announced his candidacy on an Independent ticket. The campaign was a very aggressive one, and there was a general impression that the Democrats would carry the State, as it was generally assumed that the Progressive vote would be large enough to materially weaken the Republican strength. The results of the election of November 3 came, therefore, as a general surprise. Mr. Whitman, the Republican candidate, was elected, receiving 686,701 votes, compared with 541,269 for Glynn, Democrat, 45,586 for Davenport, Progressive, and 126,270 for Sulzer, Independent. Mr. Sulzer's vote was surprisingly large, considering the fact that he had the support of no important party. The Republicans also succeeded in electing a United States Senator. Mr. Wadsworth received 639,112 votes, Gerard 571,419, Bainbridge Colby, Progressive candidate, 619,977. The total number of votes cast in the election was 1,439,969, compared with 1,587,983 cast in the presidential election of 1912. The Republican vote showed an increase of over 230,000, the Democratic vote a decrease of over 100,000, and the Progressive vote a decrease of nearly 350,000.

On April 7 a small majority of the voters of the State agreed to a revision of the State Constitution to begin in April, 1915. At the election held in November delegates to this convention were elected. All the delegates-at-large were Republicans, and the list included such well-known Republicans as Seth Low, Lewis Marshall, Edward Parsons, Senator Root, Jacob G. Shurman, Henry L. Stimson, and George W. Wickersham.

A strong effort was made on the part of Governor Glynn to economize the administration of the State, and this was to a large extent successful. He had some difficulty in getting certain measures through the Legislature, and was obliged to call a special session to pass necessary appropriation bills. Investigations were carried on in several State departments during the year, including the Highway Department, and revelations of inefficiency and dishonesty were made. The State Treasurer, John J. Kennedy, committed suicide on February 15, on the eve of testifying in regard to his knowledge of graft in the State departments.

NEW YORK CITY. On Feb. 2, 1914, Joseph Cassidy, the Democratic leader of Queens Borough, was convicted of selling a nomination for the Supreme Court in 1911, and with him was convicted William Willett, who had paid to Cassidy \$25,000 for the nomination. Mayor Mitchell introduced into the Legislature several bills designed to give additional power to city authorities in the administration of the police force. He had secured the provisional promise of Colonel Goethals to take charge of the police department if such bills were passed, but the measures were defeated in the Assembly by a

vote of 94 to 49. There were disturbances in the city throughout the year resulting from the agitation of the Independent Workers of the World. Members of this body invaded churches and other buildings, demanding food and work. Several of their leaders were arrested and sentenced to prison. On April 17 an attempt was made to assassinate Mayor Mitchell by an insane man named Michael P. Mahoney. Mr. Mitchell escaped without injury, but a companion was wounded in the hand. On April 13 the four gunmen convicted of the murder of Herman Rosenthal in 1912 were electrocuted.

STATE GOVERNMENT, 1915. Governor, Charles Seymour Whitman; Lieutenant-Governor, Edward Schoeneck; Secretary to Governor, William A. Orr; Secretary of State, Francis M. Hugo; Comptroller, Eugene M. Travis; State Treasurer, James L. Wells; Attorney-General, Egbert E. Woodbury; State Engineer and Surveyor, Frank M. Williams; Superintendent of Insurance, Frank Hasbrouck; Superintendent Banking Department, Eugene Lamb Richards; Superintendent State Prisons, John B. Riley; Superintendent Public Works, W. W. Wotherspoon; State Fire Marshal, Thomas J. Ahearn; Commissioner of Education, John H. Finley.

NEW YORK UNIVERSITY. An institution for higher education, founded in 1831 in New York City. The enrollment in the various departments in 1914 was as follows: University College, 298; School of Applied Science, 261; Washington Square College, 419; School of Commerce, Accounts, and Finance, 2290; University and Bellevue Hospital Medical College, 446; School of Pedagogy, 434; Graduate School, 396; Veterinary College, 13; University Law School, 676. The faculty numbered 450. The university lost from its faculty by death during the year Professors Bryant, Le Fevre, and Gillett. There were received during the year \$10,000 for establishing the Egbert LeFevre Deanship. The productive funds amount to \$1,379,721, and the income in 1913-14 was \$60,557. The president is Elmer Ellsworth Brown.

NEW ZEALAND, DOMINION OF. Three principal and four smaller islands in the South Pacific, which with the annexed groups of small islands and islets, constitute an autonomous British dependency. Capital, Wellington.

AREA AND POPULATION. In the table below will be seen the area of the principal islands, with the European population for comparative census years, with the Maori population in 1911:

	Sq. m.	Pop. 1901	Pop. 1911	Maoris
North Island ..	44,468	390,571	568,729	46,632
South " ...	58,525	381,661	444,120	2,681
Stewart " ..	665	272	857	63
Total N. Z. ..	103,658	772,504	1,008,206	49,376

	<i>Sq. m.</i>	<i>Pop. 1901</i>	<i>Pop. 1911</i>	<i>Maoris</i>
Chatham Islands	875	207	258	219
Kermadec	18	8	4	*249
Total	104,046	772,719	1,008,468	49,844

* Maori wives as European (enumerated in European census) scattered among the various islands.

Annexed islands, 1903 square miles, containing 12,340 inhabitants; making a total of 104,751 square miles, and 1,021,066 inhabitants, exclusive of 49,844 Maoris. Total population with Maoris, 1,070,910. Wellington had 64,372 inhabitants in 1911 (70,729 with suburbs); Auckland, 40,536 (102,676); Christchurch, 53,116 (80,193); Dunedin, 41,529 (64,237); Invercargill, 12,782 (15,858); Wanganui, 10,929 (14,702); Napier, 10,527 (11,736).

EDUCATION. Primary education is free, secular, and compulsory. The primary schools numbered, in 1912, 2323, with an enrollment of 170,958, inclusive of 9607 children of Maori or mixed race. In addition there are 108 village schools, with an enrollment of 4694, mostly Maori. Government expenditure in 1912-13 for primary instruction, £1,034,842. Provision is made for secondary education, and the government expenditure amounted in 1912 to £113,788. There are excellent special schools, and the University of New Zealand has four affiliated endowed colleges, which specialize in various subjects.

The State supports no creed. Protestants are greatly in the majority, and of these the predominant church is the Church of England, with 443,842 adherents, or 41.14 per cent of the whole.

PRODUCTION. The area of land under occupation for agricultural purposes in 1910-11 totaled 40,238,126 acres, divided as follows: 1,015,822 acres under cereals and pulse; 713,682 under green crops; 5,000,226 under sown grasses on plowed land, and 9,214,515 on land not plowed; 23,972,236 under natural grasses and unimproved land; 209,973 acres fallow; and 780 in vineyards. In the table below will be found the acreage under main cereals, with the yield for two years, and the yield per hectare in 1912-13 (figures for 1913-14 are subject to revision):

	<i>Hectares</i>		<i>Quintals</i>		<i>Qs.</i>
	<i>1912-13</i>	<i>1913-14</i>	<i>1912-13</i>	<i>1913-14</i>	<i>ha.</i>
Wheat ..	76,836	76,889	1,409,687	1,469,664	18.3
Barley ..	15,170	14,164	812,442	272,160	20.6
Oats	163,356	161,872	3,478,326	2,653,500	21.3
Corn	1,895	2,428	56,419	101,604	29.8

Total live stock returned in 1911: 404,284 horses (99,859 in 1874), 2,020,171 cattle (494,917), 23,750,153 sheep (11,704,853). Of the foregoing, 486,922 sheep, 61,300 cattle, and 48,222 horses were owned by Maoris.

The wool export for 1912 amounted to 188,361,790 pounds, valued at £7,105,483 (1,772,344 pounds, valued at £93,104, in 1855). Frozen meat takes second place among export products, the amount shipped in 1912 being 2,573,238 hundredweight, valued at £3,909,569. Frozen fish, preserved meats, salt meats, smoked ham, etc., are exported, as well as dairy products. There are extensive coal mines and gold fields. The annual gold production is valued at about two million pounds sterling.

COMMERCE, ETC. In the following table are shown trade and finance statistics for comparative years:

	<i>Imps.</i>	<i>Exps.</i>	<i>Rev.</i>	<i>Expend.</i>
1909-10	£15,674,719	£19,661,996	£9,288,917	£8,990,922
1910-11	17,051,583	22,180,209	10,297,028	9,843,106
1911-12	19,545,879	19,028,490	11,032,544	10,340,368
1912-13	20,976,574	21,770,581	11,784,271	11,082,038

Trade figures are for calendar, and finance figures for fiscal years. The gross public debt stood March 31, 1913, at £90,060,763; accrued sinking fund, £2,603,642; net public debt, £87,457,121. Customs revenue, 1912-13, £3,407,538, not including duty on beer, amounting to £124,223. Total tonnage entered and cleared, 1912-13, 3,340,722, of which 3,215,501 tons British.

The government controls the majority of the important public works. Thousands of miles of highways have been constructed, and many are still maintained by the government. The public works of the dominion, including both railways and roads, but not buildings, are largely carried on under the coöperative system, the government providing all material and letting the construction to private corporations under fixed rates, and with a prescribed scale of wages.

The mileage of the government railways of New Zealand opened for traffic on March 31, 1914, was 2863, and the average length of line operated, 2861 miles. The capital represented by the opened line was £32,355,087, an average of £11,309 per mile. The receipts for the year were £4,043,328, expenditure £2,880,323, leaving a profit of £1,163,005, the percentage of net receipts to capital being 3.61, and of expenditure to receipts, 71.24. There were 14,176 employees. There are 12,508 miles of telegraph lines, and 41,892 of wires. The Pacific cable traffic is transmitted across the Atlantic by the Anglo-American and Commercial Telegraph Companies. The line was opened for traffic to Australia and Fiji in the spring of 1902, and completed to Vancouver Island in the following October; it has been open for international traffic since December 8 of that year.

ARMY. Compulsory military training is required by the Defense Act of 1909, involving a training for the cadets and territorial soldiers, the former serving from 12 to 18 years of age, while the territorial soldier serves from the age of 19 to 25, putting in a certain number of drills, parades, and tours in camp. The strength in 1914 was approximately as follows: Territorial forces, 30,000, senior cadets (15 to 18), 40,000, members of rifle clubs, 25,000. The forces of the dominion were in command of Maj.-Gen. A. J. Godley, C.B., and there was a dominion section of the Imperial General Staff, with Lieut.-Col. E. S. Hurd in charge of military training and staff duties. Sixteen other British officers were serving in the dominion. In 1914 New Zealand offered for war service one brigade each of mounted riflemen, field artillery, and infantry, besides 200 Maoris for service in Egypt. A force of 53 officers and 1351 men sailing from Wellington, escorted by three small cruisers and later by the Australian squadron, captured German Samoa and raised the dominion flag at Apia. Various New Zealand officers were attached to the Imperial army, and one of them was appointed to command a regular brigade in the expeditionary force.

NAVY. New Zealand is a party to the agreement between the Commonwealth of Australia and the imperial government which provides for the maintenance by the British admiralty

board of a naval force in Australasian waters. New Zealand contributes £40,000 annually. The battlecruiser *New Zealand*, completed early in 1913, was built for the Imperial navy at the cost of the dominion. She left Portsmouth, Feb. 6, 1913, on her maiden voyage to New Zealand, returning in November to England.

GOVERNMENT. A Governor, aided by an executive council, administers the country. There is a legislative council and a house of representatives. The electoral act of 1893 extended to women the right to register as electors, and to vote at the elections for members of the house of representatives. In 1865 the administrative headquarters were removed from Auckland to Wellington. The Governor in 1914 was Arthur Foljambe, Earl of Liverpool.

HISTORY. When the Earl of Liverpool opened the New Zealand Parliament, June 25, 1914, he intimated that measures would be proposed for the regulation of the high cost of living, for the regulation of the use of the Bible in the schools, for the introduction of the referendum, and for the reform of the Legislative Council. The Legislative Council Reform Bill, presented in 1913 by Mr. Massey's "Reform" government, was discussed in the last YEAR BOOK, and it is necessary here only to recall that the bill provided for the election of the Legislative Council by popular suffrage with proportional representation, the Council having been hitherto appointed by the government. Repeatedly in past years the Legislative Council had resisted similar proposals, but this time the government was able to pass the bill by appointing eleven new councillors who were pledged to vote for the measure. With much justification it was expected that the result of this reform would be to facilitate radical legislation which had frequently been vetoed by the undemocratic upper chamber. New Zealand's naval policy was a second topic of interest in 1914. Since Mr. Allen's budget speech of August, 1913, the future attitude of the dominion toward imperial defense had been much in discussion and much in doubt, for it was uncertain just where New Zealand would strike the compromise between her old policy of contributing funds to the imperial naval authorities, which was repugnant to local patriotism, and the Australian policy of building up a local fleet unit, which would be costly, impracticable, and well-nigh impossible for a colony of New Zealand's relatively small resources. Much importance was therefore attached to a speech made by the Premier in February, 1914, at Tearoha, wherein he announced that his government had requested the Home authorities, in accordance with the 1909 agreement, to station two cruisers of the *Bristol* class in New Zealand waters within the next year and a half; New Zealand would then be willing to add \$250,000 to her annual naval contribution. Believing, as he did, that the Pacific Ocean would be the storm centre of the future, the premier was extremely anxious to uphold the naval supremacy of the Empire in Australasia, and he declared that, in case the petition of his government should be refused, he would ask Parliament for permission to build one or more cruisers in British shipyards. Frequent allegations were made that a controversy had arisen between the dominion and the mother country, although in February, Colonel Allen, as Minister of Defense, took especial pains to state that the New Zea-

land government was in perfect harmony with the British admiralty. In answer to New Zealand's request for two *Bristol* class cruisers, Mr. Winston Churchill, First Lord of the Admiralty, announced on March 12 that two light cruisers were being retained in the New Zealand division, and would be manned as far as possible by New Zealanders; H. M. S. *Philomel*, in addition, would be transferred to the control of the New Zealand government. But it soon appeared that this settlement would not give complete satisfaction, especially after Mr. Churchill's speech commending the Australasian colonies to the protection of Japan, England's Asiatic ally. Many New Zealanders resented the fact that the dreadnought *New Zealand*, presented by the dominion to the empire, was not allowed by the admiralty to remain in Australasia; and the New Zealand *Herald* undoubtedly voiced widely-felt sentiments when it accused the British admiralty of violating the 1909 agreement, and added: "In less than four years we are told that dreadnoughts are not needed here, that *Bristol* cruisers are not needed here, that we are safe from all molestation under the protection of Japan. . . . We, who are British, are told to rely on Japan; for better or for worse, we must rely on our own." Summing up the situation in April, Mr. Allen said: "New Zealand is faced by this problem. Should it continue to pay the Motherland a certain sum yearly and have no voice in the expenditure of the money, no representation on questions of peace or war? No self-respecting people could tolerate such a condition of affairs. . . . Instead of subsidizing the Admiralty, the money could be utilized in training New Zealanders; so that in time they would be able to serve not only New Zealand, but the Motherland as well." Thus in New Zealand, as in Australia, the growing sentiment of local patriotism had thrown the colonial government out of harmony with the British admiralty's policy of concentrating the naval forces in European waters; and behind the technical question as to the disposition of the fleet lay the vital question whether the power of the Empire or the conscious security of the dominion came first in the mind of New Zealanders. As far as land defense was concerned, however, no such occasion for controversy existed, and a most cordial welcome was extended to Sir Ian Hamilton, who, as Inspector General of Overseas Forces, heartily complimented the colony upon the results of its scheme of compulsory military training, and suggested several practical improvements.

The approach of war in July and the first few days of August banished as if by magic the jealousies and contentions which had marred New Zealand's loyalty to the British Empire. Amidst the acclamation of all parties, Mr. Massey on July 31 declared—and his declaration was supported by Sir Joseph Ward, leader of the Opposition—that if necessary New Zealand would send her utmost quota to support the Empire. War sentiment ran high. On August 3, although war had not yet been declared, proclamations were published, placing the New Zealand naval forces under the control of the British government, and calling up the Royal Naval Reserves. With enthusiastic loyalty New Zealand raised, drilled, and equipped an expeditionary force of 8000 men for the mother country. The colony, moreover, was soon able

to boast a victory; for on August 29 an expeditionary force from New Zealand, covered by the warships *Australia* and *Melbourne*, landed at Apia in German Samoa, and on August 30 declared that territory annexed to the British Crown.

NICARAGUA. A Central American republic. The capital is Managua.

AREA AND POPULATION. The area is estimated at 128,340 square kilometers (49,552 square miles). The number of inhabitants is not known with accuracy, but is roughly estimated at 600,000. There is a very small proportion of pure whites in the country, the bulk of the population being Indian and Mestizo. The larger towns are: León, with about 63,000 inhabitants; Managua, 40,000; Granada, 25,000; Matagalpa, 16,000; Masaya and Bluefields, 15,000 each; Chinandega, 12,600. Illiteracy is prevalent. Most of the people profess Roman Catholicism.

PRODUCTION AND COMMERCE. Nicaragua has valuable timber and mining resources, and the country is capable of considerable agricultural development, but the instability of political conditions discourages foreign investments, and the native population is lacking in industrial initiative. There is some exploitation of mahogany and other valuable woods. Mining is almost limited to a few gold workings. Grazing is of importance. There are three leading crops—coffee, bananas, and sugar. Coffee is grown in the western districts, on plantations controlled by Americans and Germans; bananas are cultivated chiefly in the Bluefields region; sugar cane is raised more or less throughout the country. Other crops are corn, cacao, beans, and tobacco.

Imports and exports have been valued as follows:

	1909	1910	1911	1912
Imps. ..	\$2,583,257	\$2,856,305	\$5,724,695	\$4,966,820
Exps. ..	3,989,428	4,545,075	6,579,414	3,861,516

Leading imports in 1911 and 1912 respectively, in thousands of dollars: cotton goods, 1961 and 1260; iron and steel manufactures, 570 and 659; flour, 314 and 469; rice, 60 and 240; beverages, 171 and 228. The most important exports in 1911 and 1912 were valued as follows, in thousands of dollars: coffee, 4291 and 1773; gold, 933 and 907; bananas, 339 and 423; hides and skins, 173 and 249; rubber, 577 and 165; woods, 42 and 121; sugar, 11 and 26; cotton, 5 and 26. The coffee export in 1911 amounted to 7,647,850 kilos, valued at \$4,290,506; in 1912, 6,162,711 kilos, valued at \$1,773,105. Trade by countries, in thousands of dollars:

	Imports		Exports	
	1911	1912	1911	1912
United States	2,755	2,549	2,057	1,767
United Kingdom	1,412	939	528	515
Germany	648	604	1,075	702
France	448	256	2,619	626
Italy	217	122	76	48
Total, including other ..	5,725	4,967	6,579	3,862

COMMUNICATIONS. A railway connects the Pacific port, Corinto, with Chinandega, León, Managua, Masaya, Diriamba, and Granada. With short branches it has a total length of 171 miles. There are in addition some 20 miles of private railway. Steamers ply between Granada, on Lake Nicaragua, and San Juan del Norte, on

the Caribbean. Telegraphs in 1912, 148 offices, with 4095 kilometers of wire; telephones, 23 offices, with 1259 kilometers of wire; post offices, 151.

FINANCE. Revenue and expenditure amounted in 1909 to 12,994,275 and 18,639,308 paper pesos respectively; in 1910, 15,182,852 and 34,573,125 (of which 22,520,277 extraordinary on account of the 1909 revolution). In these years the paper peso, of fluctuating value, was worth about 16 cents. The foreign debt at the end of 1913 is stated at £1,191,560. A conversion plan has been undertaken, and in 1912 a new monetary unit was introduced, the gold córdoba, equivalent to the American dollar. In the latter part of 1913, paper money amounting to 37,551,654 pesos had been burned since the beginning of the monetary conversion, and 9,478,805 pesos paper were still in circulation.

GOVERNMENT. Under the constitution bearing date of April 5, 1913, the legislative power is vested in a Congress of two houses, the Senate and the Chamber of Deputies. Deputies, 40 in number, are elected for four years by direct vote. The President is also elected by direct vote, and for four years. The President, elected for the term beginning Jan. 1, 1913, is Adolfo Díaz. Vice-President, Fernando Solórzano.

HISTORY. By the terms of a law which the Congress passed for the promotion of education, a tax of 15 centavos was to be levied on every liter of spirits, 28 centavos on every liter of pure alcohol, and 4 centavos on every pound of tobacco; two-tenths of the resultant revenue was to be expended on normal schools, three-tenths on other educational institutions, and five-tenths on various charities. More than once during the course of the year American marines were landed in Nicaragua to protect American interests, and incidentally the government of President Adolfo Díaz, against ominous insurrectionary disturbances. With regard to Nicaraguan relations with the United States, see UNITED STATES. See also INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

NICHOLAS, GRAND DUKE. See WAR OF THE NATIONS.

NIGER, MILITARY TERRITORY OF. See MILITARY TERRITORY OF THE NIGER.

NIGERIA, COLONY AND PROTECTORATE OF. A British possession in West Africa, composed of the old protectorates of Northern Nigeria and Southern Nigeria. On the first of January, 1914, the order in council of Nov. 22, 1913, providing for this union, came into operation. Another order of the same date defines the boundary of the colony of Nigeria; the protectorate, divided into two or more portions, is to be administered immediately by lieutenant-governors. The colony is to be under a governor and commander-in-chief, and provision is made for executive and legislative councils. The three divisions of Southern Nigeria are effaced. The railways, customs, marine, judicial and legal departments, and the treasury have been amalgamated, posts and telegraphs to follow. A site for the capital is to be selected on the river Kaduna; and in the meantime the administrative headquarters will be at Lagos. There will be an annual grant-in-aid of £100,000 for five years, dating from April, 1913.

The old names are retained in the paragraphs below, since the statistics given are for years prior to the amalgamation.

NORTHERN NIGERIA. The former protectorate of Northern Nigeria, lying to the north of the protectorate of Southern Nigeria, covers an estimated area of 256,200 square miles, and comprehends the empire of the Fulani, with its nominal dependencies of Kano, Nupe, Illorin, Muri, Zaria, Adamawa, and Bauchi, together with Idah and the pagan countries of Borgu to the west of the Niger, Bornu in the northeast toward Lake Chad, and the belt of pagan tribes inhabiting the country between the Benue and the northern boundary of Southern Nigeria. Lokoja, at the junction of the Niger and the Benue, the former military headquarters, is the principal station and garrison with the exception of Zungeru, near the Kaduna. Jebba, the capital until 1902, is at the head of the river navigation. Included in the British sphere is the emirate of Sokoto. The Hausa States of the Fulani empire are densely populated; a rough estimate gives about 8,000,000, mainly Mohammedans, of pastoral habit. Pagan tribes inhabit the Kabba country, and people the northern and eastern banks of the Niger.

The products are rubber, hides, ground nuts, shea butter, ivory, chillies, and medicinal herbs. In the Bauchi region tin is mined. The deposits extend over some 16,000 square miles; 199 enterprises were in operation in 1913, and the exports for 1912 were 2611 tons of cassiterite. There are duties on imports only, and these are collected at the coast. Imports and exports by commercial firms by way of Idah amounted in 1912 to £264,078 and £465,360, respectively. The local revenue from April to December, 1912, was £528,993; grant-in-aid, £95,000; expenditure, £710,531.

SOUTHERN NIGERIA. The former colony and protectorate of Southern Nigeria extended from the Northern Nigerian boundary to the Gulf of Guinea, and from Dahomey to the Kamerun country. Its area was 79,880 square miles, and its population, in 1911, 7,857,983. For purposes of administration it was divided into three provinces—the Western, or Lagos, including the old colony and protectorate of Lagos, with headquarters at the town of Lagos; the Central, or Niger, with headquarters at Warri; and the Eastern, or Calabar, with headquarters at Calabar. The former protectorate was composed of the two latter provinces.

The country has an evil climate which renders it uninhabitable by Europeans. Agriculture is practiced by the natives, who raise cotton, cacao, corn, cassava, yams, etc. From the Niger delta come the palm oil and palm kernels, which constitute the main exports. The forests also yield rubber and mahogany. In 1912 the export of palm kernels was 184,625 tons, valued at £2,797,411; palm oil, 1,539,883 hundredweights, £1,654,933; rubber, 1,579,199 pounds, £125,022; cacao, 7,593,711 pounds, £130,542; cotton lint, 39,043 hundredweights, £102,931; cotton seed, 4058 tons, £10,030; mahogany, 15,565 logs, £78,006; corn, 157,979 hundredweights, £28,713. The total imports were valued in 1912 at £6,430,601, of which £4,398,368 were from the United Kingdom; exports, £6,089,706, of which £2,850,683 to the United Kingdom. Total tonnage entered and cleared, 1,656,913, of which 925,611 tons British. Revenue, 1912, £2,235,412; expenditure, £2,110,498.

Railways. On Jan. 1, 1913, the amalgamation of the Lagos and the Baro-Kano railways was

accomplished. The Lagos Railway was opened in March, 1901, and extended from Iddo Island (the southern terminus, connected by bridges with the mainland and with Lagos Island) to Ibadan, a distance of 123½ miles; further construction extended the line to Jebba in Northern Nigeria, a distance of 182¾ miles. The line was extended from Jebba to Minna, a point about 25 miles beyond Zungeru, a distance of 145 miles. There it connects with the Baro-Kano Railway, which was constructed from Baro on the Niger to Kano, a distance of 356 miles, by the Northern Nigeria government, and opened to traffic March 29, 1911. In 1911 a narrow-gauge road was begun from Zaria to the Bauchi region, and was completed as far as Rahama in March, 1912, a distance of 88¾ miles. The Nigerian railways had a prosperous year in 1913 with increased earnings and traffic. This made necessary additional rolling stock and orders for new locomotives were placed.

Administration. The office of governor and commander-in-chief of the colony was constituted by letters patent of the 29th of November, 1913; and provision was made for executive and legislative councils. The executive council will have consultative powers regarding both colony and protectorate; the legislative council, with power to establish ordinances subject to veto by the Governor, has jurisdiction in the colony alone. Governor-General and Commander-in-Chief in 1914, Sir F. J. D. Lugard; political secretary and personal assistant to the Governor, Maj. E. J. Lugard.

NILES, WILLIAM WOODBRUFF. An American Bishop of the Protestant Episcopal Church, died March 31, 1914. He was born in Hatley, Quebec, in 1832, and graduated from Trinity College in 1857, afterwards studying theology, and graduating from the Berkeley Divinity School in 1861. In the following year he was ordained priest. After serving from 1861 to 1864 as rector at Wiscasset, Me., he became professor of Latin language and literature at Trinity College. From 1868 to 1870 he was rector at Warehouse Point, Conn., and in the latter year was consecrated Bishop of New Hampshire. For a time he was joint editor of the *Churchman* and was a member of the commission for revising the prayer book, revising marginal readings in the Bible, and for revising the lectionary of the Church. He received degrees of S.T.D. and LL.D. from Trinity College, D.D. from Dartmouth College, and D.C.L. from Bishops College, Quebec.

NISBET, JOHN. A British forester, died in London in 1914. He was born in Edinburgh, Scotland, on Oct. 2, 1853, was educated at the Edinburgh Institution and University, and at Munich University, where he studied forestry and took the degree of doctor in national economy. He entered the Indian forest service in 1875; was appointed conservator of forests, Burma, in 1895, and retired in 1900. After returning to England, Nisbet was appointed lecturer in forestry at the West of Scotland Agricultural College, was professor of forestry therein in 1908-12, and in 1912 became forestry adviser to the Board of Agriculture for Scotland. He made a thorough study of British and Continental forestry, and did much to arouse popular British interest in the subject. In 1903 he was decorated at the Delhi Durbar with the Kaiser-i-Hind gold medal for public service in

India. He published: *British Forest Trees* (1893); *Protection of Woodlands* (1893); *Essays on Sylvicultural Subjects* (1893); *Studies in Forestry* (1894); *Burma Under British Rule* (1901); *The Forester* (1905); *Our Forests and Woodlands* (1908); and *The Elements of British Forestry* (1911).

NITROGEN. See FERTILIZERS.

NIXON, SIR CHRISTOPHER JOHN. An Irish physician and educator, died July 19, 1914. He was born in Dublin in 1849 and educated at Trinity College, Cambridge. He was at various times president of the Royal College of Physicians of Ireland, professor of medicine at the Catholic University, member of the General Medical Council, honorary fellow of the British Institute of Public Health, vice-chancellor of the Royal University of Ireland, and also first president of the Royal Veterinary College of Ireland. His published writings on medical subjects include: *Handbook of Hospital Practice and Physical Diagnosis*; various papers on *Diseases of the Heart and Nervous System*, etc. He was created a knight in 1895 and baronet in 1906.

NOBEL PEACE PRIZE. See INTERNATIONAL ARBITRATION AND PEACE.

NOBEL PRIZES. See INTERNATIONAL ARBITRATION AND PEACE, section *The Nobel Prize for 1914*.

NORDICA, LILLIAN (LILLIAN NORTON YOUNG). An American prima donna, died May 10, 1914. She was born in Farmington, Me., in 1857, and while she was still a young girl her voice gave such promise that her parents felt justified in sending her to Boston where her first lessons in singing were taken at the New England Conservatory of Music; here she received instruction in oratorio singing, a field of music in which she always excelled. In 1875 she secured a position as soprano in Grace Church in Boston, and two years later she filled a corresponding place in a church in Roxbury. Her first public appearance was made in 1876 at a pupils' concert in Boston, and in the same year she had made progress enough to be included with such well-known singers as Myron W. Whitney and Matilde Phillips. In 1878 she was engaged by Patrick Gilmore as a soloist for his band, which she accompanied to Europe where she sang in Paris at the Trocadero. It was at this time that she first determined to become an opera singer and went to Milan, then the centre of operatic study for American girls, where she spent two years under San Giovanni. She then made her operatic debut under the management of Chevalier Scovel, the American tenor, who was the impresario as well as leading tenor in a small theatre in Brescia. On this occasion she sang the part of Violetta in *La Traviata*, which became one of the best rôles of her earlier period. Later in the same period she appeared as Marguerite in *Faust*, in Genoa, and as Alice in *Robert le Diable*, in Novaro. Following this she went to Russia for a season and sang for two years in succession, appearing in secondary parts in performances given by an Italian opera company.

In 1883 she was in the company at the Opera in Paris, and there was heard by Colonel Mapleson, who engaged her to come to the United States in 1885. She sang in New York at the Academy of Music, but she was not well enough

known to make a deep impression upon American audiences, and after a few appearances she returned to Europe. In the same year she was married to Fred Gower, who was killed in a balloon accident several years later. After singing at Covent Garden in London, she was engaged by Maurice Grau to appear with Tamagno, and she also sang much in concert and oratorio. In 1891 she returned to the United States and sang several times at the Metropolitan Opera House, although not as a regular member of the company. Among other rôles she filled was that of Elsa, and in this she made so favorable an impression that in 1892 she went to Bayreuth and studied the rôle with Mme. Wagner. She sang this rôle at Bayreuth with great success. She had been gradually dropping the colorature rôles from her repertoire, but it was not yet evident that her greatest triumphs were to be not only as a dramatic soprano, but as a Wagnerian singer. This was made secure when on Nov. 27, 1895, she appeared for the first time as Isolde at Munich at the opening of the new opera house; her triumph on this occasion being one of the most remarkable in the history of the opera. She later added other Wagnerian rôles to her repertoire with equal success. During the season of 1896 she sang in the United States in concerts but was not a member of the Metropolitan Opera Company, on account of differences with Maurice Grau, at that time the director. They were afterwards reconciled and she remained in the Metropolitan Opera Company during his management, and later sang under Heinrich Conried. Among important rôles performed during her engagement with Mr. Conried was Kundry in *Parsifal*.

On the establishment of the Manhattan Opera House in New York City she became a member of the company, but she and Oscar Hammerstein, the director, were not able to agree, and they parted. Following this she made one appearance at the Metropolitan Opera House in *Tristan und Isolde*, and in Berlin, Boston, and Chicago in the same opera. In 1913 she made a tour of Australia and New Zealand, and on Dec. 28, 1913, the steamer *Tasman*, on which she was a passenger, went ashore off Thursday Island. From exposure incurred at this time Madame Nordica contracted pneumonia, from which she died at Batavia, Java. In 1897 she was married to Zoltan Doehme, a young Hungarian, but divorced him in 1906 and in the same year married George W. Young, a banker in New York City.

NORTH CAROLINA. POPULATION. The estimated population on July 1, 1914, was 2,339,452. The population in 1910 was 2,206,287.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	2,835,000	57,500,000	\$49,493,000
	1913	2,835,000	55,282,000	48,648,000
Wheat	1914	611,000	7,382,000	8,578,000
	1913	605,000	7,078,000	7,503,000
Oats	1914	250,000	4,375,000	4,844,000
	1913	230,000	4,485,000	2,736,000
Rye	1914	46,000	460,000	482,000
	1913	46,000	475,000	465,000
Rice	1914	150	4,000	8,000
	1913	800	7,000	6,000

	1913	1,576,000	793,000	47,608,000

a Pounds.
b Bales.

MINERAL PRODUCTION. The mineral production of the State in 1913 was valued at \$3,739,696, an increase of \$370,773 over 1912. North Carolina is the leading producer of mica, which is chiefly used in the manufacture of gas lamp shades and for glazing heating stoves. The mica produced in 1913 was valued at \$267,913, compared with \$256,549 in 1912. Other mineral products of the State are monazite, clay products, granite, limestone, marble, sandstone, gold, copper, lead, silver, zinc, iron, talc, barytes, mineral waters, sand and gravel, and silica.

TRANSPORTATION. There were on Jan. 1, 1913, 4799 miles of steam railroad in the State. The Raleigh, Charlotte, and Southern Railway was absorbed during the year by the Norfolk Southern.

EDUCATION. The total school population in the school year 1913-14 was 778,283, of which 525,107 were white and 253,276 colored. The enrollment in the schools for white children was 409,728 and for colored children 189,919, the average daily attendance for white children being 288,834 and for colored children 119,630. There were 10,082 white teachers and 3173 colored teachers. The average annual amount paid to each white teacher was \$271.36 and to each colored teacher \$153.57. The total value of all school property was \$9,078,703, and of this, the school property for white children was valued at \$8,056,966 and for colored children at \$1,021,736. There were 5427 rural white schools and 2318 colored rural schools. The total number of rural high schools was 212, in which there were 406 teachers and an enrollment of 8316 pupils. The total expenditures for schools in 1914 was \$5,566,992, an increase of \$1,488,872 over 1912.

CHARITIES AND CORRECTIONS. There were under the control of the State in 1914 the following institutions: Hospitals at Morganton, Raleigh, and Goldsboro; at Raleigh, Epileptic Colony, School for the Blind, School for the Colored Blind and Deaf, Soldiers' Home, and the State Prison; School for the White Deaf at Morganton; Jackson Manual Training and Industrial School at Concord; and Orphanage for White Children, and Orphanage for Colored Children at Oxford.

FINANCE. The report of the State Treasurer shows a balance on Dec. 31, 1913, of \$337,678. The total receipts for the fiscal year were \$5,150,107 and the disbursements \$4,980,305, leaving a balance at the end of the year of \$169,802. The total bonded debt of the State on Dec. 31, 1914, was \$8,673,600.

POLITICS AND GOVERNMENT. There was no meeting of the State Legislature in 1914, as the sessions are biennial and the last was held in 1913. Senator Overman, whose term expired on March 4, 1915, was a candidate for reelection and was nominated at the State convention held on June 4. At this convention an effort was made to incorporate an initiative and referendum plank in the platform, but the committee refused to do this and was upheld by the con-

vention. For the first time in the history of the State a suffrage resolution was offered in the State convention, but it was supported only by the delegate who introduced it. A plank favoring State-wide primaries was voted down by 572 to 268. The Progressive element of the party appealed for the adoption of the plank, urging that it was supported by Mr. Bryan, Josephus Daniels, and President Wilson, quoting a letter written by the latter in which he lamented the lack of a primary law in the State. The Republicans nominated for United States Senator A. A. Whitener, but the Progressives had no candidate. In the election of November 3, Senator Overman was reelected, receiving 121,241 votes to 87,095 for Whitener, Republican. The Democrats elected representatives to Congress in all districts but one. The total vote cast in the election was 208,336, compared with 243,918 in 1912. The Democratic vote showed a falling off of about 20,000, and the Republican an increase of about 20,000. Some comment was caused in the United States Senate in June by the introduction of letters, in favor of a gold-mining scheme in North Carolina, written on the stationery of the United States Senators from that State, and practically identifying them with the exploitation of the mine, but on investigation Senators Chilton and Overman were exonerated from all blame.

STATE GOVERNMENT. Governor, Locke Craig; Lieutenant-Governor, E. L. Daughtridge; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacy; Auditor, W. P. Wood; Attorney-General, T. W. Bickett; Superintendent of Education, J. Y. Joyner; Commissioner of Agriculture, W. A. Graham; Commissioner of Insurance, J. R. Young—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark, Democrat; Justices, George H. Brown, Democrat; William A. Hoke, Democrat; William R. Allen, Democrat; P. D. Walker, Democrat; Clerk, L. Seawell, Democrat.

STATE LEGISLATURE, 1915.

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NORTH CAROLINA, UNIVERSITY OF. A State institution for higher education, founded at Chapel Hill, N. C., in 1793. The total enrollment in all departments of the university in the autumn of 1914 was 981, divided as follows: Graduates, 58; undergraduates, 692; law, 111; medicine, 81; pharmacy, 55. There were 85 members in the faculty. The most notable change in the faculty during the year was the election of E. K. Graham as president of the university, to succeed F. P. Venable, resigned. A new athletic field was given by Isaac Emerson, of Baltimore, Md. The productive funds amount to \$181,300, and the annual income to about \$140,000. The library contains 70,000 volumes.

NORTH DAKOTA. POPULATION. The estimated population on July 1, 1914, was 686,966. The population in 1910 was 577,056.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are

from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	500,000	14,000,000	\$8,120,000
	1913	375,000	10,800,000	5,616,000
Wheat	1914	7,285,000	81,592,000	82,408,000
	1913	7,510,000	78,855,000	57,564,000
Oats	1914	2,318,000	64,904,000	24,014,000
	1913	2,250,000	57,825,000	17,348,000
Rye	1914	131,000	2,240,000	1,882,000
	1913	125,000	1,800,000	810,000
Barley	1914	1,450,000	28,275,000	12,724,000
	1913	1,275,000	25,500,000	10,200,000
Potatoes	1914	70,000	7,630,000	8,205,000
	1913	60,000	5,100,000	2,856,000
Hay	1914	400,000	a 580,000	8,016,000
	1913	340,000	388,000	2,250,000

a Tons.

MINERAL PRODUCTION. North Dakota has little importance as a mineral producer. The total value of the mineral output in 1913 was a little more than \$1,000,000, nearly three-fourths of which was the value of lignite coal, and the other one-fourth was largely made up by the value of the clay products. The lignite has been found to make excellent fuel for industrial purposes, and it can be used as a domestic fuel in the form of briquets. The only mine operated by the United States government is on one of the lignite beds of North Dakota. The area underlain by lignite is larger than the total coal area of any other State, with the exception of Illinois and Montana. The production decreased from 499,480 short tons, valued at \$765,105, in 1912, to 495,320 short tons, valued at \$750,652, in 1913. The total value of the mineral products in 1913 was \$1,055,676, compared with \$1,025,741 in 1912.

TRANSPORTATION. In 1914 the total railway mileage of the State, including main lines, secondary main lines, and branch lines was 6141. The roads having the longest mileage of main track are the Northern Pacific, 377; Great Northern, 426; Minneapolis, St. Paul, and Sault Ste. Marie, 361; and the Chicago, Milwaukee, and St. Paul, 102. During 1913-14 the Minneapolis, St. Paul, and Sault Ste. Marie extended its track to the Montana State line, a distance of 28 miles. The Great Northern constructed a branch from Snowden, Mont., to Fairview, N. Dak., and thence to Watford, a distance in North Dakota of 45 miles. The Northern Pacific branch, north from Mandan, reached Killdeer, a distance of 98 miles from Mandan, in the fall of 1914.

EDUCATION. There were in the State on June 30, 1913, 171,872 children of school age, the total enrollment being 142,434, and of these 72,552 were boys and 69,882 were girls. There were 1974 organized school districts, containing 464 graded schools, the total number of schools in the districts being 5298. There were 222 high schools. The total number of men teachers was 1267 and of women teachers 6624, the average monthly salary of men teachers being \$71.30 and of women teachers \$54.20.

FINANCE. The report of the State Treasurer for the fiscal year ending June 30, 1914, shows a balance on hand at the beginning of the year of \$1,983,675. The total receipts for the fiscal year were \$5,387,226, and the total expenditures were \$5,737,485, leaving a balance on hand on June 30, 1914, of \$1,633,417; on the same date the total funded debt of the State was \$662,300. In 1912 the indebtedness was \$937,300. The funded debt consists of several series of negoti-

able bonds. One issue of \$106,000 represents territorial bonds, assumed as North Dakota's portion of the territorial debt of Dakota under the provision of the joint commission's report, which was adopted by the people of North and South Dakota.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the State Penitentiary, State Hospital for the Insane, State Industrial School, State Institutions for Feeble-Minded, School for the Deaf, State Reform School, and the State School for the Blind. These institutions are under the management of the State Board of Control with headquarters at Bismarck. The Soldiers' Home at Lisbon is not under the control of this board.

POLITICS AND GOVERNMENT. There was no session of the State Legislature in 1914 as the sessions are biennial and the last was held in 1913. Elections were held for Governor and for United States Senator. Governor Hanna and Senator Gronna were both renominated in the primaries held on June 24. The Democrats nominated for Governor F. O. Hellstrom, and for United States Senator W. E. Purcell. The Progressives nominated for Governor H. H. Asker, and for Senator S. Serungard. In the elections held on November 3 the Republicans were successful, reelecting Governor Hanna by a vote of 44,278 to 34,746 for Hellstrom, Democrat, and 4263 for Asker, Progressive. Senator Gronna was reelected with a vote of 48,732, compared with 29,640 for Purcell, Democrat, and 2707 for Serungard, Progressive. The total vote cast was 89,306, compared with 86,580 in the presidential election of 1912. The Republican vote showed an increase of about 4500, the Democratic vote an increase of about 3500, and the Progressive vote a loss of about 5000. The Republicans elected all representatives to Congress.

STATE GOVERNMENT, 1915. Governor, L. B. Hanna; Lieutenant-Governor, J. H. Fraine; Secretary of State, Thomas Hall; Treasurer, John Steen; Auditor, Carl O. Jorgenson; Attorney-General, H. J. Linde; Superintendent of Education, E. J. Taylor; Commissioner of Agriculture, Robert F. Flint; Commissioner of Insurance, W. C. Taylor—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, B. F. Spalding; Justices, Chas. J. Fisk, E. T. Burke, E. B. Goss, A. A. Bruce, R. D. Hoskins—all Republicans, except Fisk.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Republicans	44	103	147
Democrats	6	8	14
Republican majority	38	95	133

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

NORTH DAKOTA, UNIVERSITY OF. A State institution for higher learning, founded at Grand Forks, in 1883. The total enrollment in November, 1914, was 740, of whom 258 were in the college of liberal arts, 157 in the school of education, 81 in the engineering colleges, 59 in the school of medicine, 87 in the school of law, 6 in the graduate school, and 92 in the model high school. The faculty numbered 80. During the year Melvin Brannon, formerly dean of the college of liberal arts, resigned to become

president of the University of Idaho. He was succeeded by Professor Vernon P. Squires. Dean Robert L. Henry, Jr., of the law school has been superseded by Dean George F. Wells. The productive funds of the university amount to about \$1,705,761, and the income to about \$230,000. The library contains 55,000 volumes. The president is Frank L. McVey, Ph.D., LL.D.

NORTHERN NIGERIA. See NIGERIA, COLONY AND PROTECTORATE OF.

NORTHWESTERN UNIVERSITY. An institution for higher education, founded at Evanston, Ill., in 1851. The total number of students enrolled in all departments of the university in the autumn of 1914 was 5100, and the faculty numbered 503, including 41 trustees and 33 officers of administration. There were several notable changes in the faculty during the year. These included the addition of William Bebb, professor of comparative anatomy; Elmer Ellsworth Jones, Ph.D., professor of education; Frederick James Murphy, athletic coach; Joseph Ezekiel Pogue, Ph.D., associate professor of geology and mineralogy; and the resignation of Dr. George Amos Dorsey, professor of comparative anatomy. There were several noteworthy benefactions received during the year, including a gift of \$1,000,000 to Wesley Hospital and Northwestern University Medical School by James Deering, and one of \$250,000 from Norman W. Harris for a Hall of Political Science. The productive funds of the university in 1913-14 amount to \$4,438,132, and the annual income from all sources, including student fees, amounts to \$1,389,521. The library contains 184,000 volumes. The president is A. W. Harris, LL.D.

NORTHWEST TERRITORIES. See CANADA, section *Area and Population*.

NORWAY. A constitutional monarchy of northern Europe, occupying the western portion of the Scandinavian peninsula.

AREA AND POPULATION. In the table below are given land area, total area including fresh waters, rural population (*de facto*), according to the census of Dec. 31, 1910, and total population:

	Sq. km.	Sq. km.	R. pop.	T. pop.
Smaalenene	3,869.51	4,144.14	108,904	150,690
Akershus	4,908.11	5,285.80	126,660	129,323

* 119,549 square miles.

† 124,675 square miles.

The total (*de jure*) population Dec. 31, 1910, numbered 2,391,782; 1912, 2,427,331. Of the total (*de facto*) population in 1910, 1,123,160 were males and 1,334,630 were females. Engaged in agriculture and allied industries were 898,259; fisheries, 134,685; mines, furnaces, etc.,

247,077; manufactures, 238,722. The marriages in 1912 numbered 14,800 (14,826 in 1911), living births, 60,900 (61,468), deaths, 32,100 (31,278). In the following list of cities the (*de facto*) population is given, with the (*de jure*) population in parentheses. Christiania, 242,850 (241,834); Bergen, 75,888 (76,867); Trondhjem, 46,256 (45,335); Stavanger, 36,621 (37,261); Drammen, 24,937 (24,895); Fredrikstad, 15,481 (15,597); Christiansand, 15,408 (15,291); Christiansund, 15,891 (13,201); Aalesund, 14,785 (13,858); Skien, 12,099 (11,856); Fredrikshald, 12,023 (11,992); Sarpsborg, 10,018 (9846).

EDUCATION. Primary schools are maintained by local taxation assisted by state grant. Instruction is compulsory between the ages of 6 or 7, and 14. There are state, communal, and private secondary schools, and special, technical, and industrial institutions; there is a university at Christiania.

The majority of the people are Lutherans (2,329,229 in 1910 belonging to the state church and 15,277 to the Free Lutheran); Methodists numbered 10,986. With the exception of Jesuitism, all creeds are tolerated.

PRODUCTION. Of the total area, only about one-thirtieth is fit for cultivation; about one-third is under forest; the remainder is uncultivated pasture, barren table-lands, and uninhabitable mountains. There is a large import of cereals and meats for home consumption, as the home supply does not meet the demand. In the table below are shown areas devoted to the principal crops and production for two years, with yield per hectare in 1912-13 (figures for 1913-14 are subject to revision):

	Hectares		Quintals		Qs.
	1912-13	1913-14	1912-13	1913-14	ha.
Wheat	5,061	5,024	88,212	17.6
Rye	15,055	15,068	246,970	16.4
Barley	35,917	36,182	733,534	20.4
Oats	106,279	109,105	1,984,827	18.7
Potatoes	41,114	42,021	7,042,401	171.1

The 1912 hay crop was 3,129,768 tons, valued at 140,839,600 kroner. The total cereal crop

for 1912 was valued at 47,328,200 kroner, potatoes, 48,324,500 kroner; the total value of all crops was given at 236,492,300 kroner. The import of wheat in 1912 was 95,617 metric tons; of rye, 268,106; barley, 91,912; oats, 15,522; peas and beans, etc., 4091; corn, 32,794.

The 1910 live stock census on farms returned 167,714 horses, 1,133,613 cattle, 1,398,383 sheep, 287,686 goats, and 333,709 swine. Reindeer (1907), 142,623, fowls, 1,391,347, ducks, 8230, geese, 9670, turkeys, 2961, beehives, 20,223. There were (1910) 742 cheese and condensed milk factories and creameries, employing 1021 men and 1710 women; production of butter, 3,707,231 kilos, and of cheese, 7,796,739 kilos.

Employed in the cod fisheries in 1912 were 21,211 boats and 94,281 fishermen. Production of cod, 99,303,000; of livers, 224,267 hectoliters; of roe, 55,198 hectoliters. Total value of output from cod fisheries, 26,718,000 kroner. Total output of the herring fisheries, 2,720,000 hectoliters, valued at 12,502,000 kroner.

The mines employed 6246 persons in 1910, and 5987 in 1911; value of output from the mines, 1911, 12,829,000 kroner. At the end of 1911 there were 6077 industrial establishments, employing 136,025 work people and 779,840 horsepower.

COMMERCE. The imports and exports for three successive years are given below in kroner:

	1910	1911	1912
Imports	429,228,800	495,749,100	560,804,100
Exports	309,730,400	325,406,900	370,741,500

Exports of Norwegian produce amounted to 267,856,800 kroner in 1910, to 288,684,100 in 1911, and to 324,622,600 in 1912. The table below gives imports for consumption and exports of domestic produce by great classes for two comparative years, in thousands of kroner.

	Imports		Exports	
	1911	1912	1911	1912
Live animals	2,818,200	2,840,700	213,800	203,600
Animal products	18,141,000	12,583,300	103,978,800	109,069,300
Cereals	66,649,400	62,512,900	3,690,400	2,511,000
Col. products	40,590,400	40,118,700	156,500	471,800
Fruits and vegetables	9,723,500	10,968,400	257,100	234,200
Beverages	8,207,100	9,347,300	154,200	139,200
Textiles	13,664,600	13,293,700	584,800	701,400
Yarns, etc.	11,990,200	12,837,100	556,600	718,300
Fabrics	37,437,400	43,520,600	711,400	778,100
Animal by-products	19,339,500	23,726,700	19,208,000	26,957,400
Animal, other products	1,481,800	2,094,800	306,100	355,600
Oils, etc.	29,459,000	36,370,900	12,773,500	14,992,100
Other fats	2,973,400	3,554,200	534,200	717,300
Timber	12,280,900	12,149,500	34,188,200	32,262,500
Wooden wares	1,484,800	2,520,000	43,870,400	54,518,500
Dyestuffs	2,734,500	3,283,100	510,800	646,200
Other vegetables	10,094,000	10,297,300	280,700	430,800
Paper, etc.	2,815,600	3,137,800	21,042,600	25,866,200
Various	1,158,900	1,290,700	58,800	44,800
Minerals	41,085,100	58,527,900	12,775,300	17,458,400
Mineral mfrs.	5,454,000	6,048,300	13,274,000	16,769,600
Metals	27,200,600	35,016,900	10,657,500	12,563,900
Metal mfrs.	29,726,600	37,237,600	2,226,500	2,100,900
Machinery, etc.	68,178,700	71,154,100	5,562,100	5,657,900
Unclassed	9,005,800	10,353,700	1,116,800	773,600
Total	468,695,000	525,735,200	288,684,100	324,622,600
Transit	27,054,100	35,068,900
Grand total	495,749,100	560,804,100	288,684,100	324,622,600

Some of the principal countries of origin and destination follow, with the value of their trade in 1912 in thousands of kroner: Germany, 167,956 imports and 75,019 exports; United Kingdom, 147,994 and 94,832; Sweden, 70,401 and 21,434; Russia, 21,602 and 11,803; Finland, 1846 and 1006; United States, 33,807 and 33,432; Denmark, 26,995 and 8441; France, 14,075 and 14,687; Netherlands, 20,382 and 18,155; Belgium, 16,233 and 13,334; Spain, 5141 and 11,364; Italy, 3666 and 9875; Austria, 1727

and 1247; Hungary, 179 and 130; Rumania, 5302 and 255.

Total vessels entered at Norwegian ports in 1912, 11,059, of 5,426,162 tons; cleared, 10,971, of 5,379,888. The merchant marine included Jan. 1, 1913, 1106 sail, of 632,989 tons; steam and motor, 2126, of 1,085,617 tons—a total of 3232 vessels, of 1,718,606 tons.

COMMUNICATIONS. Total length of railways open to traffic in 1913, 3097 kilometers. State telegraph lines, 11,622 kilometers, with 22,519 kilometers of wire and 1786 stations. Telegraph receipts for 1912-13, 7,278,197 kroner; expenditure, 5,307,776 kroner. Post offices, 3562. Postal receipts for 1912-13, 10,272,561; expenditure, 9,331,148 kroner.

FINANCE. The unit of value is the kroner, worth \$0.268. In the table below are shown revenue and expenditure somewhat detailed for four successive years, in thousands of kroner:

Revenue:	1908-9	1909-10	1910-11	1911-12
Direct taxes ...	8,712	9,357	9,767	10,312
Indirect taxes ..	67,615	56,529	59,610	62,954
Other taxes.....	59,251	50,291	53,958	61,604
Total	144,588	122,244	128,279	140,730
Expenditure:				
Defense	22,029	19,508	19,270	21,098
Debt	19,920	15,462	15,374	17,176
Public works ..	41,205	34,416	35,855	41,634
Other	54,114	47,365	50,406	53,029
Total	137,268	116,751	120,905	132,932

Total revenue and expenditure for 1911-12 amounted to 140,730,210 and 132,932,368 kroner respectively; for 1912-13, 160,675,487

boat destroyers, 1100; torpedo despatch boat, 410; 10 first-class torpedo boats, 1020; 27 second-class torpedo boats, 1840; 1 third-class torpedo boat, 30; 1 submarine, 200. There were building in 1913, 4 submarines, a torpedo boat destroyer, and 1 torpedo boat.

ARMY. The Norwegian army consists of 3 lines, the *ligné* or active army, in which there is a period of 12 years' service, and the *landvaern*, or second line, with 8 years' service, and the *landsturm*, in which citizens are enrolled until 50 years of age. Service is universal and compulsory, but the annual contingent is not sufficiently large to make the service onerous, and the actual service varies from 144 days for the infantry to 198 days in other branches of the service. The active army is maintained on a skeleton or *cadre* basis, so that while 9000 or 10,000 men are under arms, except at training seasons, yet men may be called to the colors so that a field army estimated at 30,000 may be available for service beyond the frontier at short notice. A total armed strength of 70,000 could be mobilized and the machinery for so doing involves the division of the kingdom into 10 divisions for recruitment, at the head of which are retired officers, and each division in turn is specially divided so that each special division can furnish from 3 to 6 battalions.

GOVERNMENT. The King is the executive, acting through a council of state, whose members are responsible heads of departments. The legislative body is the representative *Storting*, made up of the *Lagthing* and the *Odelsting*. The reigning King in 1914 was Haakon VII, son of the late King Frederick VIII of Denmark. Heir-apparent, Prince Olaf, born July 2, 1903.

HISTORY. The budget, presented to the *Storting* in January, called for an extraordinary expenditure of 15,081,000 kroner (\$4,041,708), in addition to the ordinary expenditure of 154,900,000 kroner (\$42,513,200). The ordinary expenditures alone showed an increase of 12,880,000 kroner, of which 1,000,000 kroner was absorbed by the army and 700,000 by the navy. A National Exposition was opened at Christiania on May 15 in commemoration of the centenary of the Constitution. A bill to deprive the King of the right to propose a successor to the throne in the absence of a direct heir, was defeated in the *Storting*, receiving only 41 votes. Early in August Gen. H. V. D. Keilhau resigned his post in the cabinet as minister of defense, alleging that his feeble health would not stand the increased strain of arduous duties which the outbreak of the War of the Nations naturally imposed upon the defense department of even a neutral country. Gen. C. T. Holtfodt succeeded to the portfolio of defense. In November a loan of \$4,000,000 was issued to cover the extraordinary military expenses. With regard to the neutrality agreement with Sweden and Denmark, see SWEDEN. See also INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOVA SCOTIA. A maritime province of the Dominion of Canada. Area, 21,428 square miles, with a population (1911) of 492,338. The capital is Halifax, with (1911) 46,619 inhabitants. The executive authority rests with a Lieutenant-Governor, appointed by the Gover-

nor-General of Canada and acting through a responsible executive council. A Legislative Council of 21 appointed members, and a House of Assembly of 38 elected members, compose the Legislature. The Lieutenant-Governor in 1914 was James Drummond McGregor, appointed Oct. 18, 1910. Premier in 1914, G. H. Murray.

A bill to prohibit the sale of liquor in the city of Halifax was defeated by one vote in the Legislature, after Mr. Murray, the Premier, had argued that prohibition would only make matters worse in the city. The question as to how far a legislature may go in maintaining its privileges was brought to the fore in a sensational manner when, on May 1, the Provincial Legislature of Nova Scotia committed W. R. McCurdy, editor of the *Halifax Herald*, to imprisonment for 48 hours, because he refused to divulge the name of an anonymous correspondent whose letter, alleging that the assembly had been bribed to pass a certain bill, was printed in the *Halifax Herald*. The indignant mayor of Halifax, however, taking the ground that the Legislature was violating the freedom of the press, addressed a large meeting in favor of McCurdy, and a band of the Royal Canadian Regiment, flying the Union Jack, serenaded the editor in jail. See also the article on CANADA.

NUTS. See HORTICULTURE.

NYASSALAND PROTECTORATE, THE. A British protectorate in central Africa, extending from German East Africa to Portuguese East Africa, and from Northeastern Rhodesia to Lake Nyassa. It covers an area of 39,801 square miles, containing a population, according to the estimate of March 31, 1913, of 758 Europeans, 356 Asiatics, and 1,020,537 natives. The capital is Zomba; the chief town is Blantyre, in the Shire Highlands. The cultivation of coffee, once the principal product for export, has declined, and cotton has taken its place, the export in 1912-13 being 8093 bales of 400 pounds. Tobacco cultivation is increasing, the export in 1912-13 being 2,262,545 pounds. Three-quarters of the trade is with the United Kingdom. Imports and exports, exclusive of goods in transit, were valued for 1912-13 at £276,989 and £228,140 respectively. The local revenue for 1912-13 amounted to £128,273; grant-in-aid, £5000; loan, £50,000; expenditure, £166,361. There is a railway from Port Herald to Blantyre, a distance of 113 miles. An extension from Port Herald to the Zambezi is under construction, and other branches to Beira and to Zomba and Fort Johnston are projected. The Governor, in 1914, was G. Smith, appointed September, 1913.

OATS. A general review of the world oats crop, published by the United States Department of Agriculture, calls attention to the fact that of the estimated world area of 144,000,000 acres, upward of 85 per cent is in northern and central Europe, the northern United States, and Canada. The area devoted to oats annually in Europe is about 85,000,000 acres, in the United States 38,500,000, and in Canada 10,500,000. Of the 85,000,000 acres in Europe, 43,000,000 are in Russia, 11,000,000 in Germany, 10,000,000 in France, 5,000,000 in Austria, 4,000,000 in the United Kingdom, 3,000,000 in the Scandinavian countries, and 1,000,000 in Belgium and the Netherlands combined. Asia reports an annual acreage of less than 7,000,000, mainly in Asiatic Russia, and South America devotes yearly

only a little over 3,000,000 acres to oats, which is practically all produced in Argentina, Chile, and Uruguay. In Argentina and in fact in entire South America, the province of Buenos Aires is the principal producer. Since 1908 the acreage in this province increased from less than 1,000,000 to over 3,000,000 acres, and the production from 38,000,000 bushels to 69,000,000 in 1912, and to 116,000,000 in 1913. This province, now ranking second only to Russia in exports of oats, exported 61,000,000 bushels in 1912, and 59,000,000 in 1913. In Africa, oats culture is confined to the northern and southern portions of the continent, and in Australasia only a little more than 1,000,000 acres are grown annually.

Viewed from the standpoint of world production, the oats crop of 1914 was the most deficient among the cereals, and was less than 90 per cent of the record crop of 4,672,000 bushels of 1913. Although the production was reduced to this extent as compared with the preceding year, it was nevertheless above the decennial average for 1903-1912, as in the case of wheat, rye, and barley. The crop of 1914 in European Russia was estimated at 850,000,000 bushels, and in Asiatic Russia at 120,000,000 bushels, or a total of 970,000,000 bushels, in Prussia at 410,000,000, the United Kingdom 193,200,000, Hungary 90,500,000, Sweden 58,300,000, Belgium 49,750,000, and in Denmark at 46,450,000 bushels. The oats yield of Canada in 1914 was reported at 327,732,000 bushels, or 76,000,000 bushels less than in 1913.

The production of oats in the United States for the year, as reported by the Department of Agriculture, reached 1,141,060,000 bushels grown on an area of 38,442,000 acres, the average yield per acre being 29.7 bushels. The value of the crop based on a bushel value of 43.8 cents, the average price received by farmers December 1, was \$499,431,000, the highest ever recorded. In 1913 the production was 1,121,768,000 bushels, the area 38,399,000 acres, the average yield 29.2 bushels per acre, and the total value \$439,596,000. As reported by the American Agriculturist, Iowa and Illinois were the leading States with 162,327,000, and 108,000,000 bushels respectively.

OBERLIN COLLEGE. An institution for higher education, founded at Oberlin, Ohio, in 1833. The students enrolled in all departments in the autumn of 1914 were 1607, and the faculty numbered 157. There were no notable changes among members of the faculty during the year. The noteworthy benefactions included gifts of \$50,000 from Dr. Dudley P. Allen and Mr. John L. Severance of Cleveland, toward a new art building; \$25,000 from Mr. C. M. Hall, of Niagara Falls, N. Y., and Mr. F. N. Finney, of Pasadena, Cal., for a new pipe organ in the college chapel; and \$35,000 from Mr. C. M. Hall, for campus improvement. The productive funds of the college amounted, at the end of the collegiate year, to \$2,606,056, and the income to \$124,353. The library contains about 145,000 bound, and 131,000 unbound volumes. The president is Henry C. King, D.D.

O'BRIEN, PETER, first BARON. An Irish jurist, died Sept. 7, 1914. He was born in Dublin in 1842 and was educated at Trinity College. In 1865 he was called to the bar, rapidly acquired a large practice, and was made second sergeant in 1885. He took part in many of

the most important prosecutions in the difficulties following the organization of the Irish Land League. Although a Liberal in politics, he was unable to follow Mr. Gladstone in the latter's support of home rule, and when Mr. Balfour became Chief Secretary for Ireland in 1887 he offered to Mr. O'Brien the position of solicitor-general. In the following year he was promoted to be attorney-general and in 1889 became Lord Chief Justice of Ireland.

OBSERVATORIES. See **ASTRONOMY**, *New Observations*.

OCCUPATIONAL DISEASES. Lead poisoning in most of its phases is now recognized as one of the most widespread of occupational disorders. It has not, however, been suspected as a factor in the production of neurasthenia. But Hirsch, in a study based on considerable personal experience and the records of two painters' organizations, found that neurasthenia was a fairly common effect of chronic lead poisoning. He gives details of seven cases out of a large number in which lead was responsible for affections of the central nervous system, consisting mostly of subjective disturbances. Violent and long continued headache was the chief symptom in four cases, and morning vomiting in three. Patients become depressed, irritable, and timid. In some cases violent abdominal pains occur, which differ from lead colic.

The danger of asphyxia among workers in silos had become sufficiently important to obtain notice in agricultural bulletins. Sudden deaths had heretofore been attributed to heart failure, apoplexy, and the like, whereas the probable cause of death was asphyxiation from carbon dioxide. The first American silo for the preservation of fodder was built by Dr. Manly Miles in 1875. Since then the number of silos throughout the country has increased enormously and a great number of workers are in danger, unless certain precautions are taken. Hayhurst, Director of the Division of Occupational Diseases in the Ohio State Board of Health, and Scott cite four cases of sudden death in a single silo at one time. The victims were inmates of the Athens (Ohio) State Hospital, and had ascended the ladder on the outside of the silo to an open door about 12 feet from the top and jumped in one after the other. Within five minutes it was discovered by other workers that these four were unconscious, and in spite of hurried removal and prompt medical attention all attempts at resuscitation failed. Examination of the gases collected from the silo showed 38 per cent of carbon dioxide. According to Rambousek, 10 per cent of carbon dioxide in the air causes asphyxia. The remedy consists in thorough ventilation before workers, whose business it is to tramp down the silage, enter the silo and a free admission of air during their stay in it.

Poisoning from wood alcohol is not specifically mentioned as a hazard in the new employers' liability laws. Yet it is known to cause death or blindness, whether absorbed externally or inhaled. According to Tyson, in 1910, over 8,000,000 gallons were manufactured in the United States, and about 2,000,000 people are using it in various trades. According to 1904 census, the following industries and trades were using methyl alcohol. Painters, glaziers, and varnishers, 278,000; launderers,

386,000; boot and shoemakers, 208,000; barbers, 131,000; printers and lithographers, 155,000; woodworkers, piano and furniture polishers, 112,000 workers. In addition there are about 500,000 artisans who use wood alcohol, divided among dyers, brass-workers, cabinet-makers, gold and silver workers, harness-makers, hat-makers, leather-workers and tanners, metal-workers, photographers, book-binders, chemists, etc. The manufacturers assert that though commercial wood alcohol is poisonous, the refined product known as Colonial or Columbia Spirits is not; but investigators have proved that the refined spirit is as dangerous as the crude product. See ALCOHOL; PELLAGRA.

LEGAL STANDING. A new phase of the problems of labor as considered by the American public during the past few years, is the subject of diseases accompanying certain occupations. The American association for labor legislation has lead in the education of public opinion and in the scientific studies regarding such disease. As yet the result is that in 1911 and 1912 considerable legislation was enacted, increasing the safeguards of workers in those industries especially dangerous to health. The only phase of the subject affected by labor legislation in 1914, was the enactment by the province of Ontario providing compensation for diseases contracted during employment, as described below. Occupational diseases are due primarily to harmful substances, such as dusts, fumes, gases, vapors, acids, and organic germs; to the condition of the atmosphere, such as compressed or rarefied air, extremes of temperature or humidity; excessive or deficient light; or unusual fatigue. They are coming to be regarded as closely akin in their social aspects to industrial accidents, and therefore as a fit field for insurance. Under **WORKMEN'S COMPENSATION, Proposed Federal Law**, will be found a description of the latest United States' plan for meeting the evils of industrial diseases.

ONTARIO LAW. The first law enacted in America providing workmens' compensation for diseases contracted in the course of employment was enacted in the province of Ontario, Canada, in the spring of 1914. This law covered poisoning from lead, phosphorous, mercury, and arsenic, anthrax, and the miners' disease known as ankylostomiasis. This law had been preceded many years by similar legislation in Germany, Switzerland, and England.

FATIGUE. Much attention has been given in the last few years to the relation of fatigue to physical and mental disorders. In the United States Louis D. Brandeis and Miss Josephine Goldmark have compiled several volumes of evidence regarding the various effects of overstrain. These were used as the bases of briefs in connection with notable judicial decisions by courts in Oregon, Illinois, and New York, and the United States Supreme Court, testing the legality of laws restricting the working hours of women. Recent European students have extended the scope of occupational diseases to include numerous nervous disorders such as paralysis, atrophy, neuritis, neuralgia, spasms, neurasthenia, hysteria, and sciatica, when due to overspeeding, excessive hours, or monotony. To be sure, occupation is only one of numerous causes of such disorders, which include low pay, inadequate training and consequent low standards of living. Overspeeding, noise, long

hours, monotony, and the fatigue resulting from all of these create a predisposition to disease by reducing the power of resistance of the body. Hence there results greater susceptibility to ordinary colds, grippe, pneumonia, tuberculosis, and other infectious diseases. Seasonal trades also, such as the clothing industry, millinery, fruit and vegetable canning, have their rush periods in which hours of labor are most extreme. There results, especially for women employees who are often most numerous in such seasonal occupations, a lowering of vitality and mental alertness.

JUDICIAL DECISIONS. The workmens' compensation law of Massachusetts gave the Industrial Accident Board considerable discretion in determining the cases for which compensation should be given. In the course of the activities this Board decided that a worker afflicted with incapacity as the result of poisoning contracted in lead grinding, and another worker suffering from total blindness due to the breathing of poisonous gases, were entitled to compensation. These decisions were later upheld by the Supreme Court of the State.

In Ohio the Industrial Commission held that lead poisoning did not constitute "personal injury" within the meaning of the compensation law, since it was not due to an industrial accident. This view was reversed by the courts, however, on the ground that in law the term "personal injury" is used to indicate injury to the human body as opposed to injury to property.

OCEANOGRAPHY. See **EXPLORATION**, section *Oceanography*.

OFFICE BUILDINGS. See **ARCHITECTURE**.

OHIO. POPULATION. The estimated population on July 1, 1914, was 5,026,898. The population in 1910 was 4,767,121.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		<i>Acreage</i>	<i>Prod. bu.</i>	<i>Value</i>
Corn ...	1914	3,650,000	142,175,000	\$87,056,000
	1913	3,900,000	146,250,000	92,188,000
Wheat ..	1914	1,975,000	36,588,000	88,865,000
	1913	1,950,000	35,100,000	81,590,000
Oats	1914	1,650,000	50,325,000	22,646,000
	1913	1,800,000	54,360,000	21,744,000
Rye	1914	95,000	1,615,000	1,808,000
	1913	97,000	1,600,000	1,104,000
Barley ..	1914	85,000	875,000	516,000
	1913	40,000	960,000	557,000
Potatoes.	1914	150,000	14,250,000	7,552,000
	1913	160,000	10,240,000	8,704,000
Hay	1914	2,812,000	a 3,178,000	42,585,000
	1913	2,960,000	8,848,000	49,254,000
Tobacco ..	1914	86,800	b 78,120,000	6,875,000
	1913	81,900	61,425,000	7,002,000

a Tons. b Pounds.

MINERAL PRODUCTION. Ohio ranks fourth among the States in the value of its mineral production, which in 1913 was \$121,690,661, compared with \$111,229,656 in 1912. Ohio is the first State in the value of clay products and in the manufacture of grindstones and pulpstones; it ranks seventh in quantity and sixth in value in the production of petroleum; and in the manufacture of pig iron is surpassed only by Pennsylvania. The production of coal in 1913 amounted to 36,200,527 short tons, valued at \$39,948,058, the output both in quan-

tity and value being the maximum of the State. The coal production of the State in 1914 is estimated by the United States Geological Survey at 20,000,000 tons. On April 1, all the coal miners in the State went on strike over the wage scale, the matter in dispute being whether wages should be paid on a mine-run basis, as provided by recent legislation. This condition accounts in a large measure for the considerable decrease in the production of 1913. The production of petroleum, which stands third among the State's mineral industries, decreased slightly in quantity from 8,969,007 barrels in 1912 to 8,781,468 barrels in 1913, while the value increased about 45 per cent over the previous year, or from \$12,085,998 to \$17,538,452. The value of the natural gas produced in 1913 was \$10,416,899, compared with \$11,891,299 in 1912. The principal quarry product is limestone, of which there was a large quantity and a great variety in the State. The total value of the stone produced in 1913 was \$6,261,338, of which the limestone quarries contributed \$4,945,310, and the sandstone quarries \$1,316,028. Three other products of the State have a value exceeding \$1,000,000. These are cement, salt, and sand and gravel. The output of coke also exceeds \$1,000,000, but the coal obtained for its manufacture comes chiefly from West Virginia. Other commercial mineral products of the State are bromine, calcium, chloride, ferro alloys, gypsum, iron ore, mineral waters, oilstones, pyrite, sand-lime brick, and sulphuric acid.

TRANSPORTATION. The total mileage of single-track railroad operating in the State in 1913 was 4900. There were in addition 956 miles of second track, 220 miles of third and fourth track, and 3239 miles of yard track and sidings, making the total miles of track 9253.

EDUCATION. The total school population of the State on Aug. 31, 1914, was 1,271,443, the total enrollment being 895,167, and the average daily attendance 720,440. The teachers numbered 30,358, of whom 22,173 were women, and 8185 were men. The average yearly salary for teachers was \$527. The total expenditure for educational purposes in 1914 was \$36,455,334.

FINANCE. The report of the State Treasurer for the fiscal year ending Nov. 15, 1914, showed a balance in the treasury at the beginning of the year of \$5,535,698. During that period the receipts amounted to \$20,544,539, and the disbursements to \$18,345,251, leaving a balance at the close of the year of \$7,734,955. The State has no bonded debt.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions under the control of the State Board of Charities include the Athens State Hospital, Cleveland State Hospital, Columbus State Hospital, Dayton State Hospital, Longview Hospital, Massillon State Hospital, Toledo State Hospital, Ohio Hospital for Epileptics, the Madison Home, Ohio Soldiers' and Sailors' Home, Ohio Soldiers' and Sailors' Orphans' Home, State School for the Blind, State School for the Deaf, Institution for Feeble-Minded, State Sanatorium, State Penitentiary, State Reformatory, Boys' Industrial School, Girls' Industrial School, and the Lima State Hospital. The Reformatory for Women is now under construction. A new site of 1500 acres was purchased for a penitentiary. All sentences to State Reformatory and to State Penitentiary are now indeterminate. The juv-

enile court law is enforced in the State and its operation has been very satisfactory.

POLITICS AND GOVERNMENT. The Legislature did not meet in regular session in 1914, as the sessions are biennial and the last was held in 1913, but there were two special sessions. The first of these convened in January and adjourned late in February, being called by Governor Cox largely for the purpose of supplementing the work done in the regular session of the year previous. The session of 1913 had followed the adoption of the new State constitution in the summer of 1912, and there was a great amount of legislation required to carry out the mandates of the new organic law. Most of these mandates were carried out in the winter of 1913, but several important ones were omitted on the general understanding that the Legislature would be called into special session in 1914. Among the important acts of the first special session of 1914 were those reorganizing the agricultural interests of the State and putting them under control of an agricultural commission; reorganizing the common school system of the State along plans approved by a special commission which had made an exhaustive survey; establishing a new method of computing wage scales for soft coal miners; and authorizing the establishing of conservancy districts as a flood-prevention measure. The second special session of the Legislature, which lasted only one day, was called in June for the purpose of reducing the State tax levy.

Elections were held in November for State officers and for United States Senator. Senator Burton's term expired March 4, 1915, and he early announced he would not be a candidate for reelection. Opposed for the Republican nomination for Senator were former Senator Joseph B. Foraker, Warren G. Harding, former Lieutenant-Governor and a well-known politician, and Ralph D. Cole, former Congressman. All these candidates made aggressive speaking campaigns and the result was in doubt until the primary elections August 11, when Mr. Harding was successful. The Democrats nominated for United States Senator Timothy S. Hogan, Attorney-General of the State, and the Progressive nominee was Arthur L. Garford, a wealthy manufacturer of Elyria. For Governor the Republicans nominated Frank B. Willis, Congressman; the Democrats renominated James M. Cox; and the Progressives nominated James R. Garfield, son of the former President, and a member of the Roosevelt cabinet. In the elections on November 3 the Republicans elected Willis by a vote of 524,625, compared with 493,367 for Cox and 60,971 for Garfield. Mr. Harding was elected to the Senate by a vote of 526,115, compared with 423,742 for Hogan and 67,509 for Garford. The total vote cast for Governor was 1,130,651, compared with 1,033,557 cast for President in 1912. This represents a Republican gain of 247,559, a Democratic gain of 70,215, and a Progressive loss of 168,356. The Republicans also elected the entire State ticket, excepting chief justice of the Supreme Court, as follows: Lieutenant-Governor, John H. Arnold; Treasurer of State, Rudolph W. Archer; Secretary of State, Charles Q. Hildebrandt; Attorney-General, Edward C. Turner. The Democratic candidate for chief justice, Hugh L. Nichols, was elected. The newly elected Legislature is Republican in both branches.

At this election the people also voted on four amendments to the State constitution. The amendments providing for woman suffrage and for prohibition were overwhelmingly defeated. The two largest cities of the State, Cleveland and Cincinnati, voted against prohibition by about 50,000, Columbus, the third city, voting for prohibition by a small majority. An amendment put forward by the wet interests, as a counter move to the prohibition proposal, was adopted by a majority of about 9000. This amendment wipes out county local option and establishes the township and municipality as the unit for local option. It had the immediate effect of turning 45 dry counties back into the wet column. The fourth amendment related to taxation and was defeated. The Republicans elected representatives to Congress from the first, fourth, fifth, sixth, seventh, tenth, eleventh, fourteenth, fifteenth, sixteenth, eighteenth, nineteenth, and twenty-second districts, the Democrats being successful in the others. Among the interesting results of the congressional elections was the election of Nicholas Longworth for the first district. Mr. Longworth is the son-in-law of Theodore Roosevelt and a former member of the House.

All the coal mines in the State shut down on April 1 as the result of failure of negotiations of agreement as to a new basis of payment enforced by a legislative act passed in January. The strike continued all the rest of the year, involving great suffering among the miners and great losses to the industry. (See STRIKES.) By a decision of the United States Supreme Court in November Cleveland gains possession of a tract of lake-front land, worth several million, which railroads have occupied for half a century. At the November election Cuyahoga County (Cleveland) voted to build a third high-level bridge across the river valley at a cost of \$5,000,000.

STATE GOVERNMENT, 1914. Governor, James M. Cox; Lieutenant-Governor, W. A. Greenlund; Secretary of State, Charles H. Graves; Treasurer, J. P. Brennan; Auditor, A. V. Donahey; Attorney-General, Timothy S. Hogan; Adjutant-General, G. N. Wood; Commissioner of Insurance, Edmond H. Moore; Superintendent of Education, Frank W. Miller—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Hugh L. Nichols, Democrat; Associate Justices, James G. Johnson, Democrat; John A. Shauck, Republican; Maurice H. Donohue, Democrat; J. F. Wilkin, Democrat; O. Newman, Democrat; R. M. Wanamaker, Progressive; Clerk, Frank McKean, Democrat.

OHIO FLOOD PREVENTION. See FLOOD PREVENTION.

OHIO STATE UNIVERSITY. An institution of higher learning, founded at Columbus, in 1870. The total enrollment in all departments of the university in the autumn of 1914 was 4466, and there were 423 members in the

faculty. On July 1, Starling-Ohio Medical College (including a college of dentistry) became a part of Ohio State University. The university also established a College of Homeopathic Medicine. There were no noteworthy benefactions received during the year. The productive funds amount to \$1,300,553. The library contains 138,101 volumes. The president is W. O. Thompson, D.D., LL.D.

OHIO UNIVERSITY. An institution for higher education, founded at Athens, Ohio, in 1804. The attendance in all departments in the autumn of 1914, was 2276, and the faculty numbered 85. During the year four high-grade instructors, giving all time to conducting extension classes, were added to the faculty. The productive funds of the university amount to about \$150,000, chiefly land endowment. The total receipts in 1913-14 amount to \$289,566. The library contains 47,000 volumes. The president is Alston Ellis, Ph.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for higher education, founded under the auspices of the Methodist Episcopal Church at Delaware, in 1842. The total number of students enrolled in the several departments of the university, in the autumn of 1914, was 1126, divided as follows: College, 963; Academy, 25; Music, 125; Art, 13. The faculty numbered 66. During 1914 there were added to the faculty professors of education and home economics. No noteworthy benefactions were received during the year. The amount of productive funds is \$1,070,000, and the present income from all sources is \$125,000. The library contains 66,210 volumes. The president is Herbert Welch, D.D.

OIL, CRUDE. See PETROLEUM.

OIL ENGINES. See INTERNAL COMBUSTION ENGINES.

OKLAHOMA. POPULATION. The estimated population on July 1, 1914, was 2,026,534. The population in 1910 was 1,657,155.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn	1914	4,000,000	50,000,000	\$82,000,000
	1913	4,750,000	52,250,000	87,620,000
Wheat	1914	2,525,000	47,975,000	44,187,000
	1913	1,750,000	17,500,000	14,350,000
Oats	1914	1,100,000	30,250,000	12,402,000
	1913	1,030,000	18,540,000	8,843,000
Barley	1914	7,000	175,000	93,000
	1913	7,000	63,000	50,000

	1913	3,009,000	840,000	45,827,000

^a Tons. ^b Bales.

MINERAL PRODUCTION. The coal mined in Oklahoma in 1913 amounted to 4,165,770 short tons, valued at \$8,542,748, this being, both in quantity and value, the maximum record for the State. Oklahoma, more than any other of the coal-producing States in the Mississippi Valley and the Rocky Mountain region, was benefited by the labor troubles in Colorado as is shown by the increase in production over 1912, amounting to 490,352 tons, or 13.34 per cent. The value of the product increased

\$675,417, or 8.6 per cent, and there was, in 1913, an average of 9044 men employed, compared with 8785 in 1912. The State produced important quantities of lead and zinc, the value of the silver, lead, and zinc produced in 1913 being \$1,855,217, compared with \$1,101,042 in 1912. The increased yield of lead and zinc in 1913 was due entirely to operations in the Miami field. The total value of the mineral products of the State in 1913 was \$80,168,820, compared with \$53,614,130 in 1912. Of the 1913 total the production of petroleum amounted to \$59,581,948. Oklahoma now ranks second in quantity among the petroleum-producing States, California being first, but in 1913 the value of the Oklahoma production exceeded that of California by nearly \$14,000,000.

CHARITIES AND CORRECTIONS. The correctional and charitable institutions of the State include the Oklahoma State Home at Pryor, the Oklahoma School for the Blind at Fort Gibson, the Industrial Institute for the Deaf, Blind, and Orphans (colored), the Confederate Soldiers' Home at Ardmore, State School for the Deaf at Sulphur, the Oklahoma State Training School at Paul's Valley, the Sanatorium Company Hospital at Norman, the State Penitentiary at McAlester, and the State Reformatory at Granite.

TRANSPORTATION. The total railway mileage in operation in the State in 1914 was 6356 miles. During the year there were constructed in Carter and Jefferson Counties 30 miles of road, known as the Oklahoma, New Mexico, and Pacific Railway. There was also under construction a road from Jennings, extending south through Drumright and the oil country for about 22 miles.

EDUCATION. The total school population of the State in 1914 was 575,021, the total enrollment in the public schools being 496,908, and the average daily attendance 322,117. The male teachers numbered 3214, and the female teachers 7604. The average yearly salary paid to teachers was \$447.83.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. Elections were held for Governor and for United States Senator, Senator Gore being a candidate for reelection. Unusual interest was given to the campaign for the nominations for Governor by the candidacy of two former convicts, George W. Crompt, Jr., and Al. Jennings. The latter, who was at one time a famous train robber, and served a term in the Federal prison, made his campaign on the Reform platform. In the primaries held on August 4, R. W. Williams was nominated by the Democrats, John Fields by the Republicans, and J. P. Hickman by the Progressives. For United States Senator, T. P. Gore was nominated by the Democrats, John H. Burford by the Republicans, and W. O. Cromwell by the Progressives. In the election of November 3 the Democrats succeeded in electing their candidate for Governor, Mr. Williams, by a vote of 100,567, compared with 95,859 for Fields, Republican, and 4186 for Hickman, Progressive. Senator Gore was reelected with 119,214 votes, compared with 73,153 for Burford, Republican, and 3962 for Cromwell, Progressive. The Socialists' candidates for both governor and senator received each over 50,000 votes. The total vote cast in the election was

253,581, compared with 254,380 in the presidential election of 1912. The Democrats showed a loss of about 20,000 votes, and the Republicans an increase of about 5000. There was no Progressive vote cast in the presidential election of 1912. The Democrats elected their representatives to Congress in all districts except the eighth.

STATE GOVERNMENT, 1915. Governor, Lee Cruce; Lieutenant-Governor, J. J. McAlester; Secretary of State, Ben. F. Harrison; Treasurer, Robert Dunlop; Auditor, J. C. McClelland; Attorney-General, Charles West; Commissioner of Insurance, A. L. Welch; Commissioner of Education, R. H. Wilson; President Board of Agriculture, G. T. Bryan; Adjutant-General, F. M. Canton—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, John B. Turner; Associate Justices, Mathew J. Kane, Robert L. Williams, Jesse J. Dunn, and Samuel W. Hayes; Clerk of the Court, W. H. L. Campbell—all Democrats.

STATE LEGISLATURE, 1913.

	Senate	House	Joint Ballot
Republicans	8	19	27
Democrats	36	80	116
Democratic majority...	28	61	89

The representatives in Congress will be found in the section *Congress*, under the article **UNITED STATES**.

OLD AGE PENSIONS. There were no important developments in the old age pension movement during 1914. In Massachusetts, however, a bill was passed requiring the director of the Bureau of Statistics to collect data in connection with the census of 1915 as to the number of persons over 65 years of age, the number of dependents in State and other institutions, and kindred facts, so as to present information to the Legislature on this matter. The subject of old age pensions was introduced into the Canadian House of Commons last spring, but was shelved by the government. Those favorable to the bill contended that while assistance is given railways and other companies, and a considerable amount is paid out for housing the poor, yet no provision is made for the aged. The finance minister, on the other hand, maintained that there was "no great body of pronounced sentiment calling for action."

As yet there has been no legislative action taken in the United States upon the subject. But at present many of the great corporations have retirement pensions, and civil pensions are now quite common. On grounds of efficiency from the productive standpoint, most of the railroads in the country provide for the retirement of their employees at ages ranging from 60 to 70.

Many countries have made public provision for the aged. Such systems exist in Austria, Australia, Belgium, Denmark, Finland, France, Germany, Great Britain, Ireland, New South Wales, New Zealand, Sweden, Victoria, and to a modified extent in Spain. The most elaborate of these and the only universal law is that of Sweden passed in 1913.

OMAN. An independent Mohammedan State in Southeastern Arabia under a sultan subsidized by the government of India, which retains a political agent at his court with the right to restrain the cession of territory to any power

other than Great Britain. Area, about 82,000 square miles, carrying a population estimated at 500,000. Muscat, 25,000 inhabitants, is the capital. The total imports, 1912-13, Rs. 6,953,363—rice, Rs. 879,251; coffee, Rs. 301,467; sugar, Rs. 236,983; piece goods, Rs. 1,027,904; silk and silk goods, Rs. 41,760; twist and yarn, Rs. 202,210; cereals, Rs. 109,356; arms and ammunition, Rs. 2,760,865. Total exports, Rs. 4,522,163—dates, Rs. 1,469,485; fruit, Rs. 57,769; fish, Rs. 118,733; limes, Rs. 100,950; pearls, Rs. 18,400; mother-of-pearl, Rs. 39,250; cotton goods, Rs. 261,100; hides and skins, Rs. 48,830. The statistics cover oversea trade, but there is also a large unrecorded caravan trade with the interior. The reigning Sultan, Seyyid Timor bin Feysal, was born in 1886, and succeeded his father to the throne Oct. 5, 1913. British agent and consul in 1914, Maj. S. G. Knox.

ONTARIO. A province of the Dominion of Canada. Area, 260,862 square miles, with a population (1911) of 2,523,274. Area, including that portion of the Northwest Territories annexed to Ontario in 1912, 407,262 square miles, carrying a population of 2,527,292. The capital is Toronto, with (1911) 376,538 inhabitants—after Montreal the largest city in Canada. The province is administered by a lieutenant-governor, appointed by the Governor-General of Canada and acting through a responsible executive council. There is a unicameral legislative assembly of 106 members elected for four years. Sir James P. Whitney, provincial Premier, died Sept. 25, 1914. His successor was W. H. Heart. See also CANADA.

OPAL. See GEMS AND PRECIOUS STONES.

OPERA. See MUSIC.

OPIUM HABIT. See COCAINE AND OPIUM HABIT.

OPIUM TRADE. See CHINA.

OPTOMETRY. An important development in this field during the past year has been the establishment of a chair of optometry in Ohio State University. Similar action is contemplated in several States, the optometry course in the department of physics, Columbia University, having proved highly successful. A notable achievement, accomplished through the coöperation of leading magazines, national organizations for public welfare, and prominent citizens, has been the prevention of the sale at the Panama-Pacific and Panama-California Expositions of "spectacle concessions," or privileges granted for a stipulated sum to sell or fit glasses.

The position of optometry as a special art is becoming more firmly established as a result of amendments improving the laws at present in force in a majority of the States.

The well-nigh universal need for glasses makes it imperative that all reasonable safeguards should surround the practice of fitting them.

ORAL HYGIENE. See DENTISTRY.

ORANGE FREE STATE. One of the four original provinces of the Union of South Africa. Of the total population in 1911 (528,174), 277,518 were males and 250,656 were females. White males numbered 94,488, white females 80,701; colored males 183,030, colored females 169,955. The provincial capital is Bloemfontein, with 14,720 white, 12,205 native and other colored inhabitants in 1911; a total population of 26,925. There are about 800 government and government-aided schools, with a total enrollment of some 25,000 pupils.

The province is adapted to grazing and agriculture. Stock farms are numerous, but in the eastern districts grain raising is growing in favor. The number of horses in 1911 was 220,725, cattle 1,286,234, sheep 8,587,638, goats 1,048,571, swine 162,656. The output of wheat for 1911 was 232,591 muids (of 200 pounds); oats, 633,289 muids (of 150 pounds); corn, 1,788,294 muids (200 pounds); barley, 18,930 (160 pounds); potatoes, 199,791 (150 pounds). Dr. A. E. W. Ramsbottom was provincial administrator in 1914. See SOUTH AFRICA, UNION OF, for area, population, and other statistical details.

ORCHESTRAS. See MUSIC.

ORDNANCE. See MILITARY PROGRESS.

ORE DEPOSITS. See GEOLOGY.

OREGON. POPULATION. The estimated population on July 1, 1914, was 783,239. The population in 1910 was 672,765.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acreage	Prod. bu.	Value
Corn1914	22,000	660,000	\$ 541,000
1913	21,000	598,000	419,000
Wheat1914	799,000	16,604,000	16,936,000
1913	750,000	15,717,000	11,788,000
Oats1914	864,000	12,740,000	5,783,000
1913	860,000	15,228,000	5,787,000

a Tons.

MINERAL PRODUCTION. The mine output of gold, silver, copper, and lead in Oregon in 1913 was valued at \$1,746,402, compared with a value of \$849,886 in 1912, an increase of more than 100 per cent. With the exception of copper, all these metals showed an increase in production. The gold yield for 1913 was \$1,627,710, of which \$1,177,082 was derived from deep mines, and \$450,628 from placers of various kinds. The yield of silver aggregated 179,036 fine ounces, valued at \$108,139, an increase of 121,955 ounces in quantity and \$73,034 in value over that of 1912. The mine production of copper in 1913 was 43,330 pounds, valued at \$6176, a decrease of 217,099 pounds in quantity and \$36,255 in value from that of 1912. There were produced in 1913, 87,207 pounds of lead, valued at \$3837, compared with 39,317 pounds, valued at \$1769 in 1912. Other important mineral products of the State are clay products, sand and gravel, stone, coal, gems, gypsum, mineral waters, and platinum. The total value of the mineral products of the State increased from \$2,553,549 in 1912, to \$3,563,919 in 1913.

The production in the mines of the State in 1914, according to the estimates of the United States Geological Survey, was less than that of 1913. The gold yield was about \$1,600,000, the silver 126,000 ounces, copper 5000 pounds, and lead 41,000 pounds.

TRANSPORTATION. The total length of main railway line operated in the State on June 30, 1914, was 2039. There were, in addition, 991 miles of branches and spurs. The roads having

the longest mileage were the Oregon-Washington Railroad and Navigation Company, 537; Southern Pacific, 436; Oregon Trunk Line, 156; and the Corvallis and Eastern, 140. There were 426 miles of electric railroads in the State on the same date.

EDUCATION. The total school population of the State in 1914 was 202,389, the total enrollment being 137,640, and the average daily attendance in the public schools 115,205. The male teachers numbered 1101, and the female 4650. The average monthly salary paid to male teachers was \$85.59, and to female \$62.95. The total expenditures for school purposes during the year amounted to \$7,199,471.

FINANCE. The report of the State Treasurer for the biennial period 1912-14, showed a balance on hand on Oct. 1, 1912, of \$993,736. The receipts for the two years amounted to \$10,226,773, and the disbursements to \$10,652,592, leaving a balance on hand on Oct. 1, 1914, of \$567,917.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State, under the supervision of the State Board of Control, with their populations on Sept. 30, 1914, are as follows: Oregon State Hospital, at Salem, 1576; Eastern Oregon State Hospital, at Pendleton, 346; Oregon State Penitentiary, 413; State Institution for Feeble-Minded, 289; Oregon State Training School, 81; Oregon State Tuberculosis Hospital, 60; Oregon State School for the Blind, 32; Oregon State School for the Deaf, 82; Oregon State Industrial School for Girls, 18. There is also the Oregon State Soldiers' Home at Roseburg. The total expenditures for these institutions for the biennium ending Sept. 30, 1914, was \$1,689,733.

POLITICS AND GOVERNMENT. The State Legislature did not meet in 1914, as the sessions are biennial, and the last was held in 1913. Elections were held for Governor and for United States Senator. The Republicans nominated for Governor James Withycombe, and the Democrats C. J. Smith. For the United States Senate Senator Chamberlain was renominated by the Democrats, and R. A. Booth by the Republicans. In the elections held on November 3, the Republicans elected their candidate for Governor, Withycombe, with 121,037 votes, compared with 94,591 for Smith, Democrat, 6123 for Gill, Progressive, 14,284 for Smith, Socialist, and 10,493 for U'Ren, Independent. For United States Senator, Senator Chamberlain was re-elected with 111,748 votes, compared with 88,297 for Booth, Republican, 26,220 for Hanley, Progressive, and 10,666 for Ramp, Socialist. The total vote cast was 248,043, compared with 137,040 in 1912. The Republican vote showed an increase of about 85,000, the Democrats a decrease of about 45,000, the Progressives a decrease of about 30,000, and the Socialists an increase of about 1000. In this election a Prohibition amendment to the Constitution was adopted by a large majority of 36,000. In the same election the people, by a very small majority, adopted a constitutional amendment abolishing capital punishment.

STATE GOVERNMENT, 1915. Governor, James Withycombe, Republican; Secretary of State, Benjamin W. Olcott, Republican; State Treasurer, Thomas B. Kay, Republican; Superintendent of Public Instruction, J. A. Churchill, Republican; Adjutant-General, W. E. Finzer,

Democrat; Attorney-General, George M. Brown, Republican; Commissioner of Insurance, J. W. Ferguson, Democrat.

JUDICIARY. Supreme Court: Chief Justice, Robert Eakin; Justices, Thomas A. McBride, Frank A. Moore, Henry J. Bean, George H. Burnett, Lawrence T. Harris, and Henry L. Benson; Clerk, J. C. Moreland—all Republicans.

STATE LEGISLATURE, 1913.

	Senate	House	Joint Ballot
Republicans	28	48	76
Democrats	2	5	7
Republican Progressive...	0	6	6
Democrat Progressive	0	1	1
Republican majority ...	26	36	62

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

OREGON, UNIVERSITY OF. A State university for higher education, founded at Eugene in 1876. The students enrolled in all departments of the university in the autumn of 1914 were 1765, and the faculty numbered 125. There were several changes in the faculty during the year, among which were the appointment of H. D. Sheldon, dean of the School of Education; H. B. Miller, director of the School of Commerce; E. F. Lawrence, director of the School of Architecture; and W. F. G. Thacher, professor of English. The most noteworthy benefaction received during the year was a gift to the Medical School, by the Oregon-Washington Railroad and Navigation Company, of land valued at \$100,000. The productive funds amount to about \$190,000, and the annual income to about \$300,000 from the State, plus \$10,000 from endowment. The library contains 53,000 volumes. The president is Prince L. Campbell, LL.D.

ORNITHOLOGY. The ornithological societies continued their campaign for bird protection during the year, with, on the whole, satisfactory results. Miller reported that large numbers of Rhea skins are being imported from South America, for use in the manufacture of feather dusters. The law classifies this as an ostrich, and hence its feathers may be admitted to this country.

The influence of birds on insect life was the subject of investigation in a number of western United States. Kalmbach gave a list of 45 native birds who are feeding on the alfalfa beetle, which has gained a footing in Idaho, Utah, and Wyoming. He thought that birds are the only efficient enemies of this beetle, and regards the English sparrow as ranking high in efficiency in this respect. He was, however, doubtful if in view of the other habits of the bird, it should be encouraged. In California, Bryant thought that 120,453 grasshoppers per day is a fair estimate of their destruction by birds. The largest number found in the stomach of any one individual was 84, taken from the burrowing owl. Anthony's green heron, the Western meadow lark, and Bullock's oriole were each credited with over 40 per day. Bryant also reported on the economic importance of the Western meadow lark, and found that farmers were about equally divided in their opinion as to whether it does more harm than good. Bryant thought the balance was in favor of the bird. In the stomachs he found many so-called protectively colored insects, but these may have been taken while flying and thus easily seen.

The last known passenger pigeon died on Sept. 1, 1914, in the Zoölogical Garden of the University of Cincinnati.

Huxley reported on the courtship of the great crested grebe, and decided that there is a "mutual selection," for each seemed to stimulate the other, thus a real process of sexual selection. Courtship proper began after pairing, and had no real connection with coition.

The influence of environment on birds was treated in papers by Beebe and by Wetmore. Beebe kept scarlet tanagers and bobolinks in a darkened room with an abundance of food, and under these conditions the season of autumnal molting passed without any shedding of feathers. In the spring they were gradually brought into normal conditions, when on molting they reassumed summer plumage. There is thus no predetermined series of changes in color. Wetmore found that in the euphonias, who feed only on the outer gelatinous covering of mistletoe seeds, the stomach shows very decided modifications from the condition found in other members of the family, in being merely a thin transparent membrane. This degeneration of the muscular tissue is a result of feeding on this soft material, which does not need a muscular stomach for digesting.

In the Adèle penguins, Levick stated that the female selects the nesting site in early spring and waits there for the male. There are contests for the possession of the females, and the final nesting is for the season. After two eggs are laid, one bird leaves and may remain away for as many as 10 days, after which it returns and its place is taken by the other. The eggs hatch in 32 days, and the young grow very rapidly. Later they are herded into crèches, where they are cared for by some old birds, while the others play. This is an unusual development of the social instinct.

ORB, ALEXANDER ECTOR. An American financier and philanthropist, died June 3, 1914. He was born in Strathbane, Ireland, in 1831. When he was 19 years of age he visited the United States in the course of a journey taken for the benefit of his health, and in the following year returned to make a permanent home. He studied for a short time in Philadelphia and then removed to New York where he obtained a position in a shipping and commission house. In 1858 he was employed by David Dows & Co., which through his efforts became one of the largest grain and commission houses in the United States, and in 1861 he became a member of the firm. He took a great interest in municipal affairs and particularly in matters connected with transportation in New York City. On the creation of the Rapid Transit Commission in 1897 he was made its chairman and guided the progress of the work of this commission until it was superseded by the Public Service Commission. He took a leading part for many years in the work of the Chamber of Commerce in New York City and served as its president; he also became president of the New York Life Insurance Company in 1905, but resigned in 1907. In politics he was active and independent. He was associated with John Bigelow and others in the Canal Commission (appointed by Governor Tilden in 1875), which exposed the canal ring frauds and led to the placing of State canals under the State superintendent of public works. He was for a time

civil service commissioner in Brooklyn and during his entire career was identified with many civic financial and charitable organizations.

PAHANG. A State (the easternmost) of the Federated Malay States protectorate (q.v.). It is the largest State of the federation, and borders on the east upon the China Sea. It is watered by the Pahang (and its tributaries), the Kuantan, the Rompin, and the Endau Rivers. Agriculture is practiced, and rice, coconuts, and tapioca are under cultivation. Gold is worked. But the chief industry of the State is tin mining, principally in the Raub and Kuantan districts. Kuala Lipis is the administrative headquarters, but the Sultan and the regent (Tungku Besar) reside at Pekan, the old capital. Roads are under construction between the principal points. A railway line from Gemas in the Negri Sembilan to Kuala Semantan in Central Pahang (70 miles), completed in June, 1911, is being extended to the Kelantan border. The native ruler is Sir Ahmad Maitham Shah bin Almerhum Ali. The British resident was E. J. Brewster in 1914.

PAINTING AND SCULPTURE. The immense popular and artistic success of the large International Exhibition held in 1913, under the auspices of the American Association of Painters and Sculptors, may account for a certain inactivity, from an exhibition point of view, of the more advanced group of American artists during 1914. This so-called advanced group is made up largely of the men affected by the influences which have set in since the reign of Manet, Monet, and their followers, that is to say, the influences which have sprung from Cézanne, Van Gogh, and Gauguin. Apparently the fear of not repeating the sensation caused by what has come to be known as the Armory exhibition, has restrained the leaders of the anti-academic group from holding another exhibition.

In the year 1914 they broke up into many smaller groups and relied on smaller exhibitions to present their work to the public. At least two new dealers' galleries have been created by the interest in new work, while one long recognized conservative gallery has from time to time made a point of holding radical exhibitions. Meanwhile here and there a rebel has crept in among the more decided conservatives, and found room in their larger and smaller groups. The final result has been that although "modernism" is discussed more and more, and taken more to heart by a larger number of artists, the American public has had no such sweeping evidence of its effect as was presented last year.

In general, Cubism and the more abstract movements have taken little or no hold of the artists—with one important exception. But what is generally termed Post-Impressionism is beginning to bear fruit that is worth while. As it is abroad, so it is with us; the new movement has become in a sense the fashion, so that in addition to those men who have found in its really significant manifestations a genuine inspiration, there are, as is always the case with art movements, a crowd of imitators who are either starting out in accordance with the fashion, or have turned turtle and changed to the fashion. And yet, in spite of the effect of the new movement

the well established official men still hold the balance of power, and dominate the large exhibitions, through their positions as jurymen and as officers of one kind and another.

A movement is on foot to break down the official control, and to establish more liberal exhibitions through an extension of the self-organized group system, which has been successful on a small scale at the MacDowell Club in New York, at the Plastic Club in Philadelphia, and in one or two other places. While these exhibitions have so far been distinctly minor, their liberality has attracted such influential men as Robert Henri and others, who hope to give the system such a wide-spread test that the artist will be able to present his work to the public, and permit it to be judged by the public without the artificial obstacles set in his path by unsympathetic juries, and the usual internal politics of powerful art organizations.

Taking up the large exhibitions in the order of their time, the first to be considered is the Architectural League's exhibition which opened at the Fine Arts Building in New York in February. In addition to the usual extensive and somewhat confused display of architectural drawings and photographs, there were sketches for decoration and sculpture, and among those who gave a fresh note to the exhibition may be mentioned Robert V. Chanler, Howard Cushing, Henry Reuterdeuhl, Arthur Crisp, and Bertram Hartmann among the decorators, and Albin Polasek, Karl Bitter, and Sherry Fry among the sculptors, while, either through the medium of photographs or models, a number of works of sculpture for the Panama-Pacific exposition by Robert Aitken, Charles Cary Rumsey, and others were to be seen. The exhibition was more than usually satisfactory in its general arrangement, but under present conditions it is at best a make-shift, as comparatively few decorations or works of sculpture can be shown in their final form, owing to lack of space.

The one hundred and ninth annual exhibition of the Pennsylvania Academy of Fine Arts equaled the standard already set by these occasions. In fact the tendency of the large annuals to repeat each other is due to the habit of maintaining a list of artists whose pictures are invited year after year. This question of the "invited" picture has come to be a matter of discussion and debate, and much correspondence on it has appeared in the papers during the year. It is kept a secret how many, and which, pictures are invited by the management, and artists sending their pictures before the jury have no idea how much space is left for the uninvited, while the public is left equally in the dark. Perhaps some day the Pennsylvania Academy will set the fashion to the other managers of largely invitation exhibitions, which pose as purely jury exhibitions, by labeling each picture that is invited. The spirit of discovery was entirely lacking in the exhibition, and even in cases where pictures very much off the beaten track appeared, they were canvases that had already been accepted by other important exhibitions, and by men whose names are known. In fact, most of the well-known men were represented. There were unmistakably characteristic works by such officially recognized painters as Lydia Emmet, Frank Benson, Cecilia Beaux, Joseph DeCamp, Robert Henri, George Bellows, Gardner Symons, and many others equally prominent in the public

eye. Pictures of exceptional merit which gave distinction to the display were sent by Alden Weir, whose delicately decorative portrait of a lady, called "The Orchid," and pastoral landscape, "Pan and the Wolf," are composed with fine, subtle, well-considered relation of tones. Both have the invaluable quality of an appeal that grows deeper on further acquaintance. Of great beauty, too, were several canvases by Childe Hassam, notably "The Yachts and the Swimmer: Appledore," while Ernest Lawson's "Weeds and Willows" was in every sense worthy of his extraordinarily personal art. William Glacken's city scene, "The Green Car," a picture saturated with rich, glowing light, was one of the exceptional contributions, as was also the beautiful "Emerald Pool" by Putnam Brinley. Other pictures of unusual artistic appeal were those sent by Arthur B. Davies and George Luks, while an entire gallery was devoted to Jonas Lie's paintings of Panama, showing various striking aspects of the canal while it was in process of making. The sculpture was limited for the most part to small pieces, and many of the highly successful small bronzes by Paulanship, which have won favorable comment on many other occasions, were shown. Among the sculptors by whom one or more pieces were shown which added interest to the exhibition were Adolpho de Nasti, Janet Scudder, Giuseppe Donato, Chester Beach, and others. Much of the sculpture had been shown before.

The 1914 Spring Exhibition of the National Academy opened on March 21, and showed in several examples, which the jury had accepted, something like a willingness to meet a few of the "outsiders" half way. This was especially apparent on looking at two pictures by E. Varian Cockcroft, which, to say the least, were sufficiently "modern" to indicate a more liberal spirit on the part of an academic jury. They were vigorous, decorative works, courageous in the breadth of their attack, but not sufficiently sustained in concentration; in other words, good ideas, but only partially realized. A full-length portrait of a man by George Bellows dominated the exhibition, on account of its large dignity of pattern, and splendid set-up, and the vitality with which the bulk and poise of the figure had been grasped.

A portrait by Alden Weir was another important contribution, and Eugene Speicher, in very different vein, showed skill in his painting of John Nelson Cole. A portrait which had caught the charm of the subject, and was engaging and likeable, was the somewhat informal picture called "A Woman Pensive," by Adolphe Borie. Gifford Beal was represented by a clever, effective portrayal of a crowded city street, and Elmer Schofield sent one of his vigorous, straightforward landscapes, which are so telling in exhibition galleries as to appear almost intentionally so. Ben Foster sent his "In the Connecticut Hills," which was bought by the Metropolitan Museum at the close of the exhibition.

A jewel-like canvas of great beauty was Ernest Lawson's "Tulip Tree," which had been previously seen in the altogether delightful one-man show of this gifted painter's work, which was held earlier in the year. There were an unusual number of snow pictures, most of which were by artists who have specialized in such subjects, and who, like Gardner Symons and E. W. Redfield, seem to go on painting snow pic-

tures because they have such workable recipes. Certainly their present work is anything but impulsive or fresh in its sense of enjoyment of the subject. And several pictures which added to the scope of the exhibition were early works by Thomas Eakens, which showed how consistently this conscientious and extremely sincere painter has struggled to master the solid truths of realism. There were comparatively few pieces of sculpture, and again Paulanship was one of the contributors whose adept modeling and thoroughly studied archaistic formula was well exemplified by a capable study of a baby, which fully realized the form and character of the head, and was decorative in quality, if perhaps over deliberate. Mahonri Young and Abstenia Eberle contributed small figures, character studies of every-day types.

The next most important of the large exhibitions which opened before summer closed the art season temporarily, was the International Exhibition at the Carnegie Institute in Pittsburgh. Whether the Armory show is responsible or not, the fact remains that here again a wave of protest has set in against the timidity with which the management has sought, above all things, to choose work by artists with names, and particularly work which should not shock a conservative public. A group of enthusiastic followers of art is growing up in Pittsburgh, who are making their voices felt against the timid outlook of the annual exhibition. The Carnegie Institute exhibition appears to be entirely dominated by the official powers both here and abroad, and the exhibition has come to be almost entirely chosen from the regular exhibitors at the Paris, London, and American official exhibitions. Although an opportunity is given to Pittsburgh to see the work of a great many well-known men of great artistic interest, both here and abroad, the doors are shut tight against anything in the least revolutionary. Among the Americans the same names already noted recur again. E. W. Redfield, George Bellows, Elmer Schofield, Gardner Symons, Gifford Beal were but a few of the constantly recurring exhibitors whose work proceeds from exhibition to exhibition all over the country, like a never ceasing procession. In the foreign work, the department that makes this exhibition somewhat different from the others of its type, there was almost nothing to give a real idea of the main current of æsthetic thought, which is stronger in Europe than here. There was plenty of capable work by Germans, such as Max Clarenbach, and the immensely clever Leo Putz, and such prominent Frenchmen as Carodellville, Emile Blanche, Le Sidaner, Henri Martin, La Touche, and Aman-Jean were duly represented. One solitary little picture gave some idea of what the younger men are thinking about in Europe, a well-organized landscape by the Canadian, James Wilson Morrice, who lives in Paris.

A whole group of capable, official Englishmen, expert exhibitors who appear again and again, and who are not likely to frighten the public or make any one laugh, were among the foreign exhibitors. There was a finely designed landscape, small in dimensions, but simple and large in feeling, by Alfred Withers, and one or two other examples to relieve the level of cool, knowing craftsmanship that characterized the foreign work in general. On the whole, it was just such an exhibition as a cautious, timid management

would evolve, to please the public, and had little enough of the type of work which, through its very innovations, leads people to be shaken out of their accepted ideas, and to refresh their point of view through interested argument and discussion, and through coming into contact with artistic work which they have not yet learned to label.

An exhibition, which is purely national in character, is the large one which is held every two years in the Corcoran Art Gallery in Washington. The gallery removes its permanent collection to make room for its biennial exhibition, which opened this year on December 17. Admitting the conservative viewpoint of the exhibition, it is on the whole very representative. This year the exhibition was easily dominated by the fine things, some of them already noted in referring to other earlier exhibitions, which were submitted by George Bellows, Arthur B. Davies, and William Glackens. Bellows's portrait called "Geraldine Lee No. I" is as fine as anything he ever painted, and the large figure composition by William Glackens, though not fully satisfying as to drawing, was a magnificent piece of color. Another artist who has come steadily to the front in America in the last three years, is Hayley Lever, who has a remarkable sense of line composition and movement in his landscapes, one of which added greatly to this occasion. The distinguished art of Mary Cassatt was also seen to great advantage, and the brilliant virtuosity of John Sargent.

Maurice Prendergast is a name not associated with official art, and one of his delightful, beautifully balanced color patterns added zest to the exhibition. Among the younger painters, Josephine Paddock, E. Varian Cockcroft, and Mountford Coolidge were the authors of freshly painted and individual canvases, and the recognized men in various parts of the country were presented favorably.

The winter exhibition of the National Academy was particularly noteworthy for the number of comparatively unknown men whose work was seen, to the great advantage of the exhibition. Among artists whose work is not familiar at the general exhibitions was Harry Berlin, whose decorative figure arrangement was much the best figure composition, and should have taken the prize for this type of picture. There were also good works by the comparatively unknown painters, Ferol Sibley, Joel Levitt, who contributed a still life that was swimming in light and one of the most refreshing pictures shown, Waldo Pierce, and Stephen Haweis. Meanwhile the prize for the best picture in the exhibition was for once properly awarded to a Cornish landscape by Hayley Lever. Leopold Seyffert showed some clever Spanish subjects, and Alden Weir continued his long established habit of showing one of the most distinguished paintings.

It is not necessary to go into detail concerning the yearly exhibition at Chicago, or the summer exhibition held at the Albright Gallery in Buffalo, as nearly all the work was seen in other large gatherings of pictures. But two smaller exhibitions are deserving of note. One of them was a comparatively small group of work by the more modern or radical men which first appeared in Pittsburgh, under the auspices of the Pittsburgh Art Society. The group consisted of Arthur B. Davies, the one important artist who has been affected by the Cubists, Walt Kuhn

who has become affected by Matisse, William Glackens, Allen Tucker, a painter of great gifts who is rapidly becoming recognized at his true worth, Elmer MacRae, Maurice Prendergast, Charles R. Scheeler, and several others, among whom were several merely imitative sensation-alists. The exhibition, however, aside from the beautiful things that it contained, was a complete declaration of a principle, as necessary to the development of art as to the development of civilization in general, namely, the principle of freedom of speech.

After upsetting Pittsburgh, and creating a small whirlpool of discussion, it came to New York and was shown at a prominent dealer's, and again argument, anger, and discussion set in. Meanwhile at the National Arts Club another similar exhibition was installed, and between the two some idea could be obtained of how much of a creative result the vaguely termed "New Movement" was beginning to achieve. It was as might have been expected. A few men stood on their own feet, invigorated by the new freedom, but not keeled over by it. There were some clever imitators, and the groups tailed off to the men who changed to the new fashion simply because they had already proved themselves incapable when using more traditional forms of expression.

The spring and summer, which interrupt the exhibition season in America, are active periods in Europe. Before war was declared the usual large organized exhibitions took place in London, Paris, and Berlin. Probably the most noteworthy artistic event in Europe, however, was none of these, but rather the installation of the Count Comando collection in the Louvre. For with the entrance of this bequest within the galleries, the gods of modern art entered the doors of the Louvre, to the joy of some and the scandalized protest of others. The Louvre now contains fine specimens of Cézanne, including a wonderful still life, of Van Gogh and of Degas. With this same collection, which occupies space set apart for it, are some rare Manets, including "The Fifer," the portrait of Lola Montez, a beautiful moonlight of Dieppe Harbor, and fine specimens of the work of Toulouse-Lautree and Sisley, while a notable work of the Renaissance in the same collection is "The Crucifixion," by Donatello, a work of extreme beauty.

An exceptional occurrence in Paris, which was interrupted by the war, was an exhibition of the work of two American painters, Bryson Burroughs and Ernest Lawson, both of whom met with success, while Lawson was hailed by some of the most appreciative French connoisseurs as a painter of strikingly personal and native quality.

With war, all art activities stopped abroad, except the furious activities of the dealers in transporting their pictures to safe hiding either within the boundaries of the countries at war or outside if possible. Galleries, private and public, were active in safeguarding their treasures. In America the winter season opened with war relief exhibitions, which have continued to increase in number. These in most cases were quite as interesting from a charitable as from an artistic viewpoint.

As to the museums, all other acquisitions in this country were overshadowed by the installation of the Benjamin Altman collection, which brought to the Metropolitan Museum thirteen

Rembrandts, not all of them agreed upon by the experts as to their validity, while others are works of the first order. There are, too, splendid primitives by Memling, Holbein, Fra Angelico, Botticelli, Dirk Bouts, Hans Maler, and paintings by Titian, Giorgione, Velasquez, Hals, Ruydael, Vermeer, and Van Dyck, as well as a collection of rare porcelains, some fine examples of French and Italian sculpture, a few beautiful Persian rugs, and a number of pieces of furniture, together with one or two cases of exceptional enamels, and other objects of art. The museums are rapidly increasing in number, in the size of their collections, and in the scope of their activities throughout the country. Perhaps no other art museum is so closely allied to the surrounding population in the living interest it inspires as the Chicago Art Institute.

The year has been notable for the number of interesting smaller exhibitions, which have included one-man exhibitions by many prominent foreigners and native painters and sculptors. In the latter group should be mentioned Sara Morris Greene, who proved by her exhibition to possess a vigorous sense of large generous modeling. It is to be noted, too, that the year's exhibitions were wider in scope than ever before, including an extraordinarily varied field of artistic endeavor illustrating the present and the past. There were, for example, splendid exhibitions of Mohammedan miniatures, and of Chinese paintings (one of which was of the new acquisitions in this department at the Metropolitan Museum); and a very exceptional exhibition of old Chinese potteries, loaned by Charles Freer, Samuel Peters, and other collectors, was one of the events which particularly interested both painters and sculptors, because the exceptional examples were so splendid in form and color.

Meanwhile during the year, preparations have gone on for the most noteworthy exhibition for the year 1915, namely, the Panama-Pacific, which is to be held in San Francisco, and which will probably prove very representative of American art, particularly as the space expected to be filled by foreign art will have large vacancies on account of the war. A great deal of American sculpture will be seen, and the work of decorators will be shown to advantage. All of these works have been under way during the present year, and some of them have been shown.

PANAMA. A republic between Costa Rica and Colombia. Formerly a department of Colombia, it declared its independence Nov. 3, 1903. The capital is Panama.

AREA AND POPULATION. The area of the republic has been estimated at 87,480 square kilometers (33,776 square miles). This figure will be somewhat reduced if the award of Chief Justice White of the United States Supreme Court, arbitrator of the boundary dispute with Costa Rica, becomes established in fact. The Costa Rican boundary has been a subject of controversy for over 80 years. The arbitration of the dispute was brought about through the good offices of the United States, both Costa Rica and Panama agreeing to this mode of settlement in the Porras-Anderson treaty of 1910. Chief Justice White accepted the office of arbitrator, and in the autumn of 1914 rendered his decision, which was unfavorable to Panama. The decision was not acceptable to either the people or the government of Panama, and the latter, it was reported in January, 1915, notified

the American Department of State that it regarded the award as null, void, and not binding upon Panama. It was contended by the Panamanians that the Chief Justice went beyond the scope of the agreement for arbitration, giving to Costa Rica more territory than it asked for.

The 1911 census returned a population of 426,928, including the inhabitants of the Canal Zone. The Canal Zone census of January, 1912, disclosed a population of 62,810. According to the 1911 census, whites numbered 51,323, mestizos 191,933, negroes 48,967, Mongolians (chiefly Chinese) 2313, and Indians 14,128; uncivilized Indians were estimated at 36,138. The city of Panama had in 1911 37,505 inhabitants; Colón, 17,748; David, 15,079; Bocas del Toro, 9759. In 1911, the reported number of marriages was 774, births 6155, deaths 4957, immigrants 54,906, emigrants 42,656.

The Canal Zone, over which the United States has sovereign rights, in virtue of the treaty of Nov. 18, 1903, is a strip of territory extending to width of five miles on either side of the middle of the Panama Canal, but excluding the cities of Panama and Colón. The independence of Panama was recognized by Colombia in a treaty with the United States, signed at Bogotá April 6, 1914; this treaty in 1914 was ratified by Colombia, but not by the United States.

The reported number of government public schools in 1912 was 364. In 1911, the National Institute (high school, college of commerce and language, and normal school) was opened in the city of Panama.

PRODUCTION, COMMERCE, ETC. Only a small part of the country is under tillage. The leading crop is bananas, and other products include sugar cane, cacao, corn, rice, yams, coffee, tobacco, and sweet potatoes. There is at present little exploitation of the country's mineral resources; the manufactures are unimportant.

Imports (exclusive of nondutiable supplies for the Panama Canal) and exports have been valued as follows:

	1909	1910	1911	1912
Imps. .	\$8,756,808	\$10,056,994	\$9,896,988	\$9,871,617
Exps. .	1,502,475	1,769,330	2,863,425	2,064,648

The largest classified imports in 1912 were: vegetable products, \$2,923,934; textiles, \$1,666,355; animal products, \$1,661,268; mineral products, \$1,000,249; liquors and mineral waters, \$473,447; chemicals and drugs, \$419,800. Classified exports in 1911 and 1912 respectively: vegetable products, \$2,550,450 and \$1,829,336; animal products, \$228,483 and \$229,245; mineral products, \$83,255 and \$6066; miscellaneous, \$1238 in 1911. The export of bananas in 1912 was valued at \$1,154,442; ivory nuts, \$254,264; coconuts, \$136,713; rubber, \$107,164.

The Panama Railway, which belongs to the United States government, extends across the isthmus from the city of Panama to Colón, 48 miles. In the region around Bocas del Toro, light railways, chiefly for the banana industry, aggregate about 150 miles. A national railway, 271 miles in length, has been projected to connect the cities of Panama and David. In 1914, the government contracted for 51 miles of railway in the western province of Chiriquí, and construction was begun. One section of this line, 23 miles, will extend from the Pacific coast town of Pedregal to La Concepción, via David, and the other section, 28 miles, will be

an extension from David to Boquete. Telegraph and post offices number about 40 and 100 respectively.

FINANCE. The monetary unit is the balboa, equivalent to the American dollar. In 1910, revenue amounted to \$3,370,511; in 1911, \$3,366,470. In the latter year, the expenditure was \$3,359,588. For 1913, revenue was reported at \$3,842,214. For the two-year fiscal period 1913 and 1914, the budget balanced at \$7,682,428; of the total estimated revenue, customs accounted for \$3,300,000.

GOVERNMENT. The executive authority is vested in a President elected for four years by direct vote and ineligible for the succeeding term. The legislative power devolves upon the unicameral National Assembly (32 members elected by direct vote). There are three *designados*, elected by the Assembly to succeed, in order, to the presidency in case of vacancy. The President in 1914 for the term ending Oct. 1, 1916, was Belisario Porras. First *designado*, Rodolfo Chiari; second, Ramón Valdés; third, Aristides Arjona. Each of the seven provinces of the republic is administered by a Governor appointed by the President.

HISTORY. A bill empowering the Executive to deport naturalized foreigners who attacked public authorities or institutions through the medium of the press, was strenuously opposed by certain sections of the press, but was favorably considered by the National Assembly. On December 8 Panama ratified the boundary convention with the United States, which was negotiated in September by Ernesto Lefevre, the Panama secretary of foreign affairs, and William J. Price, the American minister. The new agreement gave the United States control of the waters of Colón and Ancon, two small islands in Ancon Harbor, and the site of Battery Hancock on the water front at Colón. See the UNITED STATES; also INTERNATIONAL ARBITRATION AND PEACE, Bryan-Wilson Treaties.

PANAMA CANAL. The middle of 1914 saw the work on the canal advanced to such a stage as to justify regular traffic, which was commenced on August 15.

In this article the technical details of the work throughout the fiscal year will be largely omitted. The chief interest in the canal in 1914 was centred in the opening and traffic.

On January 27 President Wilson signed an executive order establishing a civil government in the canal zone, beginning April 1. As a result of this order, a Governor took the place of the commission of seven members on that date. The President, on June 30, nominated Colonel Goethals to be the first Governor of the Panama Canal, and on April 1 the permanent form of government went into effect. Under this organization there were created a department of operation and maintenance, a purchasing department, a supply department, an accounting department, a health department, an executive office, and a Washington office. The department of operation and maintenance was placed in charge of the Governor, and in the administration of the affairs of the department he is assisted by an engineer of maintenance and a superintendent of canal transportation. To provide for the remaining construction work, as well as the maintenance and operation of the canal, the department was organized with the following divisions:

The division of terminal construction, which

embraces charge of the design, inspection and construction of dry docks, shops, coaling and fuel-oil plants, floating cranes, docks, and other terminal facilities, construction transportation by rail, road, street, and sewer work in the new town of Balboa, and the breakwater construction at the Atlantic terminal; the division of erection; the electrical division; the division of municipal engineering; the dredging division; fortification division; and mechanical division. The remaining construction work, consisting of sluicing in the vicinity of Gold Hill, completion of Naos Island Breakwater, excavation in the dry to relieve side pressure in the vicinity of Culebra, and grading and filling at the locks and dams, was combined in a general construction division.

The division of lighthouses was abolished June 16, 1914, and the office engineer with his forces was placed under the engineer of maintenance.

The division of canal transportation, under the supervision of a superintendent of transportation, is charged with the safe conduct of vessels through the canal. The port captains, the board of local inspectors, the pilots, and the admensurers of vessels, the care and operation of lights and beacons, are directly in charge of the superintendent of transportation. Colonel H. F. Hodges, U. S. A., was appointed engineer of maintenance, Mr. H. H. Rousseau, U. S. N., was appointed engineer of terminal construction, and Capt. Hugh Rodman, U. S. N., superintendent of transportation.

The quartermaster's department and the subsistence department were consolidated to constitute the supply department, which was placed in charge of Capt. R. E. Wood as chief quartermaster. Other departments are the accounting department and the health department. The latter is under the supervision and direction of Lieut.-Col. Charles F. Mason, U. S. A. This department has charge of all matters relating to maritime sanitation and quarantine in the ports and waters of the Canal Zone and in the harbors of the cities of Panama and Colón, and with land sanitation in the Canal Zone and sanitary matters in the terminal cities.

The civil functions of the zone are in charge of an executive secretary, who has supervision of all matters relating to the keeping of the time of employees; to post offices, customs, taxes, and excises, excepting the collection thereof; police and prisons, fire protection, land offices, schools, etc.

By an executive order of May 20, 1914, a committee of six members was created to arrange and provide suitable ceremonies for the formal and official opening of the canal. This committee is composed of persons who were members of the Isthmian Canal Commission.

The most important excavation work carried on throughout the year was in Culebra Cut, where a series of slides occurred in the latter part of 1913.

The date originally set for the opening of the canal for commerce was May 10, 1914, but the actual opening, however, was delayed until August 15. The official announcement issued by Secretary Garrison for the opening on that date was as follows: "The Panama Canal will be open for commerce to vessels not needing more than 30 feet of water, on and after Aug. 15, 1914. The official opening of the canal, as heretofore

announced, will be in the month of March, 1915. An appropriate announcement will be made when a greater depth of water than 30 feet has been secured. On August 15, Colonel Goethals will inaugurate the commercial service by sending a government boat through the canal. There will be no ceremonies incident to the occasion, but American newspapers which may desire to have representatives present may do so."

On the date mentioned, therefore, the government steamship *Ancon* made a trip through the canal in approximately nine hours, well within the previously estimated time for the passage of a ship through the canal. There were no unlooked for delays. The *Ancon* carried, as guests of the Secretary of War, about 200 people, including President Porras of Panama and his cabinet and other officials of the government of Panama. On the following day, August 16, a large number of commercial vessels passed through the canal. The first vessel of war made a passage on this date. This was the Peruvian torpedo destroyer *Teniente Rodriguez*. The first foreign cargo steamer passing through the canal was the *Daldorch*, of Glasgow, which made a passage on August 22. Prior to the passage of the *Ancon*, a number of barges had passed through the canal. The tolls collected in July prior to the official opening amounted to about \$8000.

In spite of conditions caused by the war in Europe and the consequent falling off in sea-carried commerce, traffic through the canal exceeded anticipations even during the first months of its operation. From August 15 to October 1, 81 vessels passed through the canal, and from August 15 to October 1 the total net tonnage, carried from the Atlantic to the Pacific, was 144,343 tons, while from the Pacific to the Atlantic the tonnage was 153,312, making a grand total of 297,655 tons. The total tolls collected in this period amounted to \$369,706.

On October 14 occurred a slide in the Culebra Cut which filled a thousand feet of the channel with a great mass of trap rock and loose earth, preventing the passage of ships through the canal for some time. At the time the slide occurred there were two or three ships waiting passage; two days later 14 were at the terminals ready to enter the canal. The slide made it necessary to carry on dredging operations for several months before the full width of 300 feet and depth of 45 feet could be regained. The slide was 2100 feet long, occurring in a part of the bank formerly involved in the east Culebra slide, and it is designated as the new Culebra slide. The channel was cleared sufficiently by October 20 to allow the passage of seven vessels which had been delayed at the south end of the canal. A further movement at the base of this slide on October 31 caused a second suspension of canal traffic which lasted until November 4. The total canal tolls from August 15 to November 1 amounted to \$746,793. The first cotton taken through the canal was carried on the steamship *Penrith Castle*, which made the passage on October 22-23 with a cargo of 3270 tons. Grain for Europe, from north Pacific ports of the United States, formed by far the largest single item of cargo carried through in the first months of operation. In the two months and a half of operation ending November 1, the canal was used by 17 eastbound vessels in this traffic, and 8 vessels passed through from the At-

1950

lantic to the Pacific in ballast, to return with grain. The next largest single item of cargo handled in the same period was nitrates, principally from Chile. The tolls collected to December 1 amounted to \$1,135,205. During this time 120 vessels eastbound and 137 westbound vessels passed through the canal, and of these, 227 were laden, and 30 were in ballast.

The receipts for the month of December, 1914, aggregated \$411,895. The total collections from the opening of the canal to December 31, 1914, amounted to \$1,547,100. During that time, 177 eastbound vessels, and 179 westbound passed through the canal. Of these, 319 were laden and 36 were in ballast. December marked the passage of vessels from the Far East to the Atlantic coast of the United States for the first time.

On November 17, the Panama Railroad Company ceased to act as a co-carrier in connection with steamship lines operating to the Isthmus. In order, however, to take care of the through freight brought to the Isthmus in vessels that do not use the canal, the Panama Railroad Steamship Line, on October 30, established a fortnightly service between New York and Balboa.

The Fifth United States Infantry arrived at Cristobal on November 25, and went into permanent quarters at Empire. This regiment will attend to the policing of the Canal Zone. President Wilson, on November 13, issued a proclamation declaring the neutrality of the Panama Canal Zone, and setting down rules and regulations governing the use of the Panama Canal by vessels of belligerents. At the same time an agreement between the United States government and Panama in regard to the occupation of the waters of the Republic of Panama by belligerent vessels was made public. In the main, the rules of neutrality governing the canal are the same as those in force in all neutral countries.

The actual working force of the canal on Nov. 25, 1914, was 23,113, a decrease of about 500 compared with the previous month. The gold force, composed almost exclusively of white Americans, was 3973. There was a steady decrease in the number of laborers during the year, resulting from the completion of different sections of the canal. The total expenditure for the canal from July 30, 1909, to June 30, 1914, was \$332,956,264. Of this sum, \$211,295,071 was expended by the department of construction and engineering, \$17,270,494 by the department of sanitation, \$8,793,089 by fortifications, and \$90,374,263 for general items, the remainder being expended by departments of civil administration and the department of law. Work was continued during the year on the gun and mortar batteries provided for the defense of the canal, and by June the concrete work was practically completed. For a discussion of the Panama Tolls Controversy and its results see the article below. See PANAMA.

PANAMA CANAL TOLLS. The Panama Canal Bill passed in 1912, providing for the operation of the canal, contained the provision that American vessels engaged in coastwise trade should be exempted from paying tolls. At the time of its passage this provision met with strong opposition in Congress and outside. It was also opposed in a more or less formal way by Great Britain, as being in contravention of treaties between the American and British governments. The measure, however, was defended by President Taft and became a part of the law.

Early in 1913 an agitation was begun to repeal that provision of the bill relating to the exemption of coastwise vessels. President Wilson made no formal statement of his views during the first year of his administration, but it was generally believed that he was in favor of repealing the section. His first statement in regard to the matter was made public in February, 1913. Senator O'Gorman, coming from a conference with the President, expressed the opinion that no action would be taken in 1914. These remarks were given to the press and were brought to the attention of the President, who, on the following day, said emphatically that he desired the repeal of the exemption, and that Senator O'Gorman could not have received from any conversation with him an impression that he was in favor of delay. He declared that he expected that action would be taken by Congress at this session and that he preferred repeal to the two years' suspension proposed in the Adamson resolution. On the same day, in a letter to William L. Marbury, of Baltimore, he said: "With regard to the question of Panama Canal tolls, my opinion is very clear. The exemption constitutes a very mistaken policy from every point of view. It is economically unjust; as a matter of fact, it benefits for the present, at any rate, only a monopoly; and it seems to me to be in clear violation of the terms of the Hay-Pauncefote treaty."

At a joint session of the Senate and the House on March 5, President Wilson read a brief message urging the repeal of the provision exempting coastwise shipping from the payment of tolls. This message was as follows:

"I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. No communication I have address to the Congress carried with it graver or more far-reaching implications to the interest of the country, and I come now to speak upon a matter with regard to which I am charged in a peculiar degree, by the Constitution itself, with personal responsibility.

"I have come to ask for the repeal of that provision of the Panama Canal Act of Aug. 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls, and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

"In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the Canal concluded on Nov. 18, 1901. But I have not come to you to urge my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a nation to interpret with too strained or refined a reading of words our own promises just because we have power enough to give us leave to read them as we please.

"The large thing to do is the only thing we can afford to do, a voluntary withdrawal from a position everywhere questioned and misunderstood. We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and the redemption of every obligation without quibble or hesitation.

"I ask this of you in support of the foreign policy of the Administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure."

On March 6 the House committee reported by a vote of 14 to 3 a bill repealing the exemption clause.

The report was accompanied by a minority report from the committee in which the assertion was made that the proposed repeal would compel the United States government to pay tolls on battleships and revenue cutters. This was answered by Representative Adamson, chairman of the committee, who pointed out that the tolls, if paid, would be received by the government itself.

Debate on the bill was begun in the House. The advocates of the bill introduced a resolution limiting debate, which was opposed by Speaker Clark and other prominent members of the House, but was carried by a vote of 200 to 172. This was considered to be a test vote and a forecast for the passage of the bill. In this initial vote, 57 Democrats opposed the bill limiting debate, and 8 Republicans voted for it. In the debate on the bill which followed, much bitterness was shown, Speaker Clark being severely criticised by several representatives for his opposition to the President, it being alleged that this opposition was the result of ill-feeling on the part of Mr. Clark as a result of his defeat by President Wilson in the nominating convention in 1912. The leader of the House, Mr. Underwood, spoke against the repeal. In the Senate also, debate was carried on at the same time. Senator Owen of Oklahoma spoke at some length for repeal and was opposed by Senator O'Gorman of New York and Senator Chamberlain of Oregon.

Debate on the measure concluded in the House on March 31, when the bill was passed by a vote of 247 to 162. For the bill, 220 Democrats, 25 Republicans, and 2 Progressives voted. Against it were 52 Democrats, 17 Progressives, and 93 Republicans. On the last day of the debate, more than 40 speeches were made, among which the most dramatic and interesting was that of Speaker Champ Clark, who made an impassioned address in which he defended his course in opposing the measure and attacked the provisions of the bill.

On April 29, by a vote of 8 to 6, the Senate Committee on Inter-oceanic Canals reported to the Senate, without recommendation, favorable or otherwise, the House bill repealing the act exempting American coastwise shipping from the payment of tolls. With it was reported, also without recommendation, an amendment proposed by Senator Simmons, saying that "neither the passage of this act, nor anything therein contained, shall be construed or held as waiving, impairing, or affecting any treaty or other right possessed by the United States." Of the members of the committee, 5 Democrats and 3 Republicans voted for a favorable report, while 3 Democrats and 3 Republicans voted in the

negative. A motion to report with a recommendation that the bill be rejected, was defeated by 5 to 9. At the beginning of the debate on the bill in the Senate, Mr. Norris, of Nebraska, offered an amendment providing that the question should be submitted for arbitration at The Hague. Senator Borah of Idaho offered a resolution reciting the declarations of party platforms and presidential candidates in the campaign of 1912, and providing for a postponement of action on the bill until after the Congressional elections. This, he said, would give the voters of the country an opportunity to make a final decision.

On June 11, the Exemption Bill was passed by the Senate by a vote of 50 to 35. In its original form, as it came from the House, the bill was very brief, providing merely for repeal of the words: "No tolls shall be levied upon vessels engaged in the coastwise trade of the United States." The Senate, however, added, first by a vote of 50 to 24, and later by a vote of 57 to 30, the amendment proposed by Senator Simmons, referred to above. This amendment is as follows:

"Provided, that the passage of this act shall not be construed or held as a waiver or relinquishment of any right the United States may have under the treaty with Great Britain, ratified Feb. 21, 1902, or the treaty with the Republic of Panama, ratified Feb. 26, 1904, or otherwise, to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said Canal, or as in any way waiving, impairing, or affecting any right of the United States under said treaty, or otherwise, with respect to the sovereignty over, or the ownership, control and management of, said Canal, and the regulation of the conditions or charges of traffic through the same."

With this amendment attached, the bill was returned to the House, where it was accepted by a vote of 216 to 71. The bill was then sent to the President for his signature. It was known that he was not favorably inclined toward the amendment, but he signed the bill.

PAN-AMERICAN CONFERENCE. At a meeting in Washington on October 7 the Board of Governors of the Pan-American Union decided to postpone indefinitely the fifth Pan-American Conference, which was to have been convened at Santiago de Chile in November, 1914. A resolution introduced by the Chilean Minister, Señor Suarez, was adopted by the Board of Governors, expressing the desire of the governments of the Pan-American Union to see peace speedily restored in Europe.

PAPER. The paper and pulp industry throughout the world naturally was seriously affected by the great European War. Exports from Germany and Austria ceased. Ordinarily such exports to Great Britain alone average annually over \$6,000,000, while, in addition, Germany had a colonial and neutral nation trade averaging \$18,000,000, and Austria-Hungary ex-

ported annually about \$4,000,000 to such countries. Belgium was unable to manufacture paper, and in France and England the demand was materially lessened. Everywhere in Europe the decline was being felt, even in Norway and Sweden, which should have benefited by the curtailment of the supply of raw material and finished product from other countries. In Norway the production of cellulose in 1914 was 320,000 tons, of which 265,000 tons was sulphite bleached and unbleached, and 55,000 tons was sulphate, an amount about 14 times that of 1891, when the industry was becoming prominent with a production of 22,550 tons. The lack of water in Norway and Sweden affected manufacturing conditions during the year, and in Norway alone, at the end of 1914, there was a depression, due largely to the fact that English demands were less than anticipated, and other markets were cut off. In England scarcity of colors for colored papers and various chemicals used in the industry was felt, and like other industries depending on German chemicals, methods were discussed to relieve this condition. The Dutch paper makers were profiting from the German inability to supply the English market, while in Germany prices were advancing for both raw material and the finished product. On the 4th of December, 1914, Australia promulgated an order that news paper should pay an import duty of 10 per cent, with a single exception in favor of the product coming from Great Britain. The Dominion of Canada objected to this as interfering with a legitimate market, and in addition, proposed to levy a 10 per cent additional tax on imports.

In the United States, conditions in the American paper trade were not good, markets being restricted and the profits small. Imports of raw material either ceased altogether or decreased and, in the case of rag stock, it was proposed to use flax straw in combination with rag stock, and experiments to that end were being undertaken in various research laboratories. As regards imports, there was an increase in the imports of news print paper in 1914 over 1913 and also an increase in ground wood imported. Chemical unbleached pulp showed increased imports, while about the same amount of pulp wood was used as in the previous year. The exports of print paper showed a gain, while wrapping paper held its own in the export market, and writing paper and envelopes showed no increase. The printing and publishing business in 1914 was considerably less than in the previous years, and this naturally had its effect on the paper industry. Foreign trade, in the main, was satisfactory, but there was a decrease in the domestic markets. The American Paper and Pulp Association, which includes in its membership the great majority of the paper manufacturers, reported that of an ordinary production capacity of its members of 1,244,588 tons, there was actually produced 1,134,486 tons of news print paper, and, of this amount, 1,122,912 tons were shipped. As regards tissue paper, the same association reported that of a normal production of 81,226 tons, 76,506 tons were actually made, and, of this amount, 75,423 tons were shipped. Of wrapping paper 619,446 tons represented the normal capacity, while the actual production was 551,542 tons, and, of this amount, 545,547 tons were shipped. In board the normal production for the year was 952,691 tons, and, of this

amount, 786,490 tons were made, and 780,561 tons were shipped.

As regards the writing paper business, both orders and production were about 80 per cent of normal, and all things considered, especially the financial depression and uncertain conditions due to the war, this section of the paper industry might be considered good. A difficulty was manifested in securing raw material, and stock, both imported and domestic, was in demand. The same condition held good in the cover industry.

In Wisconsin, safety first work was being done in the paper mills, and considerable investigation and legislation, bearing on the industry, was in progress. In New York, the State College of Forestry, at Syracuse, was maintaining a paper and pulp course, and it was proposed to have a forest products laboratory, which, in a building which had 14,000 square feet of floor space, would be devoted to experimental laboratories. This would be such a laboratory as the one maintained by the U. S. Department of Agriculture in Wisconsin.

In Canada, the pulp and paper industry was less disturbed than in other nations, and the production and price were maintained above the normal. Two new large mills, the Abitibi Mills at Iroquois Falls, in Northern Ontario, with a capacity of 230 tons a day, and the Doncona Mills on the northern shore of the St. Lawrence were the only additions to the manufacturing capacity of Canada in news print of 1914. Other mills, however, were in process of construction, notably that of the Bathurst Lumber Company at Bathurst, New Brunswick, which was to be opened in July, 1915. The total news print production of Canada had developed to a point where it exceeded 1600 tons a day, and when the mills in course of construction were completed, would be about 2000 tons a day, or practically half of that of the United States. It was estimated that the capital invested in the pulp and paper manufacture in Canada, in the decade ending 1914, had increased from \$20,000,000 to \$60,000,000, and the value of the product, from \$9,000,000 to \$28,000,000. The amount of pulp manufactured into news prints in Canada per annum, was estimated at 480,000 tons, and about 600,000 tons gross of pulp wood were annually consumed.

Among the items of interest in the paper trade was the fact that Japan sent to France paper linings for military uniforms, and also that the manufacturing of thin Oxford paper, which once was confined exclusively to England, was now made in other countries. It was stated that such a product could be made from 80 per cent best bleached white linen, 10 per cent best white bleached cotton, 5 per cent of bleached straw pulp, 2 per cent of the finest white loading, i.e., talc, and 3 per cent of waste, the process involving the boiling of the rags with 1 to 2 per cent of soda, at a pressure of 3 atmospheres, and then carefully washing and boiling with 1 to 2 per cent of chlorine until snow white.

PAPUA, TERRITORY OF. (Formerly BRITISH NEW GUINEA.) A dependency of the Commonwealth of Australia, consisting of the south-eastern part of the island of New Guinea together with various small islands (Woodlark, D'Entrecasteaux, Louisiade groups, etc.). The total area is estimated at 90,540 square miles. It has been generally assumed that the native population is upwards of 400,000 in number,

though recent estimates place it at a lower figure, e.g., 271,000. The white population in 1912 was 1064. The seat of administration is Port Moresby, with about 1600 native, 425 white, inhabitants. The principal industry in which the whites are engaged is alluvial gold mining. Gold declared at the customhouse for export in the year 1907-08 was valued at £52,837, in 1908-09 £54,969, in 1909-10 £59,427, in 1910-11 £68,706, in 1911-12 £49,316. Cultivated products include coconuts, rubber, and sisal hemp. The natives are compelled by the government to plant coconuts for food. There are many indigenous products of great economic possibilities. Local revenue, imports, exports, and shipping entered and cleared (in tons) have been as follows, in fiscal years:

	Rev.	Imps.	Exps.	Tons
1902-08	£19,107	£62,867	£62,891	50,890
1907-08	26,019	94,061	80,616	183,772
1909-10	34,822	120,177	100,599	256,286
1910-11	45,972	202,910	117,410	253,123
1911-12	51,084	235,869	99,990	275,803
1912-13	48,346	218,323	128,016	306,478

Besides Port Moresby, the ports of entry are Samarai, Bonagai (in Woodlark Island), and Daru. Expenditure in 1911-12 amounted to £81,172 and in 1912-13 to £85,170. Lieutenant-Governor in 1914 (and since 1908), John Hubert Plunkett Murray, who acted also as chief judicial officer.

PARAGUAY. An interior republic of South America, bounded by Bolivia, Brazil, and Argentina. Capital, Asunción.

AREA, POPULATION, ETC. The country regarded as Paraguay proper lies between the Paraguay and Upper Paraná rivers. In addition Paraguay lays claim to a large area in the Chaco region, between the Paraguay and Pilcomayo rivers, but the claim is disputed by Bolivia. In 1913 a territorial status quo was agreed upon by Paraguay and Bolivia, pending a treaty in settlement of the dispute or submission of the case to a court of arbitration. The disputed boundary gives rise to widely varying estimates of area; the extent of territory which seems to be undoubtedly Paraguayan is stated at 253,100 square kilometers (97,722 square miles). The population cannot be stated, even approximately, with assurance. An estimate of 1911 placed it at 800,000; some observers are inclined to think that this figure is too large. The population is largely a mixture of Guarani, Spanish, and negro. There are also many persons of pure, or nearly pure, Guarani blood. The largest town is Asunción, whose population has been estimated at 84,000 (in 1914 it was said to be "rapidly approaching 100,000"); Villa Rica, about 90 miles southeast of Asunción, is supposed to have some 30,000 inhabitants; Concepción, about 135 miles north of Asunción, 25,000; Carapeguá, 15,000; Luque, 15,000. Immigration is small, though there appears recently to have been an increase. Immigrants from 1882 to 1910 are reported to number 18,286; in 1910-11, 418; in 1911-12, 605.

EDUCATION is free and nominally compulsory. There are reported about 800 public schools, with over 50,000 pupils. In addition, there are a few private schools, some of which are subsidized by the government. At Asunción is a national college, with over 500 students. Roman Catholicism is the State religion.

PRODUCTION AND COMMERCE. Soil and cli-

mate favor the production of various tropical and all the important subtropical crops, but economic progress has been retarded by internal conflicts and by the alienation of large blocks of land to foreign capitalists and syndicates. Grazing is an important industry, but might be developed much beyond its present proportions; an estimate published in 1914 places the number of cattle at 4,000,000. The leading products of the soil are yerba maté, tobacco, corn, beans, alfalfa, manioc, and various fruits, especially oranges. Cotton and sugar cane are also cultivated. Mining and manufacturing are little developed.

The reported values of imports and exports have been as follows, in thousands of pesos (peso = 96.47 cents):

	1908	1909	1910	1911	1912	1913
Imports	4078	3788	6248	6479	5283	5351
Exports	3732	5137	4785	4829	4211	5631

The largest imports are cotton goods, food-stuffs, and hardware. Leading exports in 1912 are reported as follows: hides, 1,082,646 pesos; woods, 877,037; yerba maté, 500,998; fresh fruits, 1,283,962; tobacco, 442,440. There is also a considerable export of quebracho extract. In the import trade of 1912, Germany stood first, the United Kingdom second, and Argentina third; in the export trade, Argentina first (over one-half), Germany second, and Uruguay third—exports to other countries are comparatively unimportant. However, the exports accredited to Argentina and Uruguay in large part are finally forwarded to Europe and the United States.

COMMUNICATIONS. The length of railway in operation in 1913 was 468 kilometers (291 miles). Asunción, the capital, is connected by rail with Buenos Aires, the capital of Argentina. The first through train left Buenos Aires Oct. 3, 1913, on a 50-hour schedule. The distance by rail between the two cities is 1518 kilometers, of which a distance of 376 kilometers is over the Paraguay Central Railway, 598 kilometers over the Northeastern Argentine Railway, 443 kilometers over the Entre Ríos Central Railway, and 101 kilometers over the Central Railway of Buenos Aires. Between the river towns of Zárate and Ibiquy, in Argentina, trains are transported across the Paraná on ferry boats, and again, across the Upper Paraná, from the Argentine town of Posadas to the Paraguayan town of Encarnación. During 1914 a branch of the Paraguay Central Railway was under construction eastward from Borja, a town a short distance south of Villa Rica; it is planned to extend this railway to a point on the Upper Paraná opposite the Brazilian town of Iguassú. There are about 2500 miles of telegraph line and 385 post offices.

FINANCE. The budget for 1913 showed estimated revenue of 3,248,000 pesos gold and 21,688,200 pesos paper, and estimated expenditure of 1,862,582 pesos gold and 48,301,645 pesos paper; for 1914, estimated revenue of 3,859,500 pesos gold and 28,185,400 pesos paper, and estimated expenditure of 1,767,961 pesos gold and 67,090,242 pesos paper. The gold peso is worth 96.47 cents; the paper peso was worth about 7 cents in 1913 and about 5 cents in 1914. For 1914, import duties were estimated at 2,616,000 pesos gold; export duties, 837,000 pesos gold; direct taxes, 20,093,400 pesos paper. Public

debt as reported for Dec. 31, 1913: foreign, 3,914,138 pesos gold; internal, 349,120 pesos gold and 67,744,260 pesos paper (including outstanding paper money); floating, 695,515 pesos gold and 13,996,890 pesos paper.

GOVERNMENT. The legislative power is vested in a Congress of two houses, the Senate and the Chamber of Deputies. Senators (13 in number) are elected for six years and Deputies (26) for four years by direct vote. Constitutionally the President and Vice-President are elected for four years by indirect vote. There is a cabinet of five members. The President in 1914, for the term ending Aug. 15, 1916, was Eduardo Schaerer; Vice-President, Pedro Bobadilla.

At the close of the year Col. Patricio A. Escobar led an insurrection against the government and made a prisoner of the President, Dr. Eduardo Schaerer; but the rebellion speedily collapsed, and Dr. Schaerer was restored to power. PARK, ROSWELL. An American surgeon, died Feb. 15, 1914. He was born in Pomfret, Conn., in 1852 and was educated in private schools, at Racine College, and Northwestern University, taking the degree of M.D. from the latter in 1876. From 1877 to 1879 he was demonstrator of anatomy at the Woman's Medical College at Chicago, and from 1879 to 1882 was adjunct professor of anatomy at the Northwestern University. From 1883 to the time of his death he was professor of surgery at the University of Buffalo, and was surgeon to the Buffalo General Hospital. When President McKinley was shot on Sept. 7, 1901, Dr. Park, who was then recognized as one of the world's greatest surgeons, was among the first called. He was the author of: *Lectures on Surgical Pathology* (1891); *History of Medicine* (1897); *Text Book of Surgery* (1896); *Principles and Practices of Modern Surgery* (1907).

PAYNE, SERENO ELISHA. Representative in Congress from New York, died Dec. 11, 1914. He was born in Hamilton, N. Y., in 1843, and graduated from the University of Rochester in 1864, being admitted to the bar two years later and beginning the practice of law at Auburn. From 1867 to 1871 he was city clerk of that city and was supervisor in 1871-72. From 1873 to 1879 he was district attorney of Cayuga Co., and from 1879 to 1882 president of the board of education at Auburn. His interest in politics was aroused while he was still a young man, and, with the exception of two years, he held office from 1868 down to the time of his death. He was elected (1883) to the Forty-eighth Congress and was reelected to every succeeding Congress, with the exception of the Fiftieth. He was one of the foremost authorities on questions connected with the tariff, and as-

sisted in formulating every Republican tariff bill which was undertaken during his term in the House. As Chairman of the Ways and Means Committee of the House he had charge of the so-called Payne-Aldrich Tariff Bill in that body. Mr. Payne was one of the House leaders while the Republicans were in power, and had great influence in the shaping and passing of legislation. He was a conservative Republican and was never affected by any of the reform movement in his party. He received the unusual honor of a State funeral in the House.

PEABODY MUSEUM. In the year 1914 the University Museum building, popularly known as the Agassiz Museum, was completed by the erection of the last section of the south wing. The structure now forms three sides of a hollow square as designed by Louis Agassiz in 1859. The new addition belongs to the Peabody Museum and more than doubles its exhibition space, besides adding new laboratories, new offices, storage and work rooms, and many other improvements.

The titles of the officers in the Museum have in several cases been changed, as follows:

Dr. A. M. Tozzer, Curator of Middle America.

Dr. A. V. Kidder, Curator of North American Archaeology.

Dr. E. A. Hooton, Curator of Somatology.

Mr. S. J. Guernsey, Assistant Curator of Archaeology and Ethnology.

Mr. R. F. Carroll, Assistant Librarian and Assistant Secretary.

Mr. Orric Bates has been appointed Curator of African Archaeology and Ethnology.

The researches in the field have been as follows:

Dr. Tozzer spent the winter in Mexico as Director of the International School of Archaeology and Ethnology. He was accompanied by Mr. Clarence L. Hay, Harvard Fellow. The greater part of the time was spent in the excavation of a temple and house site near Mexico City.

Dr. R. E. Merwin, Field Director of the Central American Expedition of 1913-14, was accompanied by Mr. C. W. Bishop, Harvard Fellow. Explorations were made along the eastern coast of Quintana Roo, Mexico, and the ruins of four ancient cities, previously unknown, in the Peten District of Guatemala, were investigated.

Mr. F. H. Sterns has continued his investigations of the prehistoric sites in Nebraska. This season he has explored a series of habitation sites which are much older than the prehistoric sites heretofore discovered and seem to belong to a different people.

Mr. Ernest Volk has had unusual opportunities during the past year for the continuation of his researches in the glacial deposits about Trenton, N. J. The renewed interest in this research, from a geological and archaeological point of view, is of great importance to the much discussed question of glacial man in America.

Dr. A. V. Kidder was accompanied by Mr. S. J. Guernsey on his two-months' trip to northern Arizona where a group of seven cliff-houses, two burial caves, and a small cemetery were explored. Plans and photographs were made and a good collection representing the archaeology and ethnology of the region was secured for the Museum.

Dr. Charles Peabody made a reconnaissance

trip in Palestine and Syria. In July he examined sites near Jerusalem, notably Mt. Skopus, and later continued his work in the neighborhood of Beirut. Excavations were made in the caves of the Dog River and of Antelias. Specimens of flint were numerous and good and there were in place numerous contemporary shells and animal bones, not always in a state of good preservation. After August 16, he was forced by the disturbance caused by the European War to discontinue researches in this region. During the month of September he carried on investigations of the sites in Suffolk, Kent, Sussex, Surry, Wilts, and Dorset in England. Among the more important single sites, the famous paleolithic station of Knowle Farm, Savernake Forest, near Marlborough, was especially rich in specimens. The collections brought to the Museum by Dr. Peabody are of great importance to the European exhibit and furnish the first large collection from Palestine.

Dr. E. A. Hooton was sent to England on a special expedition for the Museum, and remained there for a month, when he was forced to discontinue the work on account of the disturbed condition of the country. While there he succeeded in examining a group of barrows, eight of which were round barrows dating from the late Bronze Age, and one long barrow excavated contained fragmentary remains of skeletons in addition to a quantity of Neolithic potsherds. From a neighboring gravel pit, Knowle Pit, Savernake, Wilts, a series of River Drift implements was obtained. Dr. Hooton was assisted by Mr. O. G. S. Crawford and by Mr. A. W. Carpenter.

Mr. Oric Bates, during the winter, was searching for Libyan remains in the littoral of the desert west of Egypt, where he found a distinct and hitherto unknown group of archaeological objects. He has sent to the Museum a small collection of Sudanese material, a representative collection of Fayum flints and a collection of Libyan objects secured by his excavations.

The Museum has been very fortunate in its gifts of money, collections, and books during the year. Its special library is becoming more and more useful to students in anthropology. See ANTHROPOLOGY; ARCHAEOLOGY.

PEACE. See INTERNATIONAL ARBITRATION AND PEACE.

PECK, HARRY THURSTON. An American scholar, educator, and writer, born in Stamford, Conn., Nov. 24, 1856, died March 23, 1914. He was educated in private schools and at Columbia College, graduating in 1881 after a brilliant undergraduate career, during which his literary and editorial gifts had already attracted wide notice. After graduation he was appointed tutor in Latin and for a time in Semitic languages at Columbia, succeeding to the professorship of the Latin Language and Literature on the death of Prof. Charles Short in 1886, and to the Anthon professorship in 1904, retiring in 1910.

As a Latinist, Dr. Peck was distinguished by a rare familiarity with the content of Latin literature, in the interpretation of which his wide range of knowledge made him a stimulating instructor. In this field he published: *The Semitic Theory of Creation* (1886); *Latin Pronunciation* (1889); *Suetonius* (1889); *Roman Life in Latin Prose and Verse* (with R. Arrowsmith, 1895); a sympathetic translation of Petronius, *Trimalchio's Dinner* (1899); and

A History of Classical Philology (1911). He was also editor-in-chief of *Harper's Classical Dictionary*, and co-editor of the *Students' Series of Latin Classics* and *Columbia University Studies in Classical Philology*. In addition to his professional works, his versatility, a strong journalistic bent, and a style of unusual brilliance brought him wide recognition in more general fields as critic, editor, essayist, poet, historian, and prolific contributor to periodicals. He was the first editor-in-chief of the *Bookman*, to which he contributed the *Letter Box*, and continuously a member of its staff from 1895 to 1906; editor of the *International Cyclopædia* and co-editor of the *NEW INTERNATIONAL ENCYCLOPÆDIA*; editor of Appleton's *Atlas of Modern Geography* (1892); co-editor of the *Library of the World's Best Literature*, and of *Masterpieces of Literature*; literary editor and editorial writer on the *New York Commercial Advertiser* (1897-1901); and editorially associated with *Munsey's* and with several works of reference. In 1889 he published, under the name of Rafford Pyke, a remarkable child's story book, *The Adventures of Mabel*, and a similar collection, *Hilda and the Wishes*, in 1907. He also published two volumes of essays, *The Personal Equation* (1899) and *What is good English* (1899); *Greytone and Porphyry*, collected poems (1899); *The Life of Prescott* (1905); *Twenty Years of the Republic* (1906), a notable collection of political personalia covering the period from the first term of President Cleveland to 1905; *Literature and Studies in Several Literatures* (1909); and *The New Baedeker* (1910), a work of keen insight and fresh point of view. His magazine and newspaper articles, covering many fields, aroused wide popular interest through their originality and forceful style, and gave rise to much discussion. Dr. Peck was fearless as a controversialist and impatient of educational or literary pretense, against manifestations of which he wrote with vigor and effect. During his last years his powers were gradually obscured by disease which resulted in his death at Stamford in 1914.

PÉGU, CHARLES PIERRE. A French author and editor, killed on the battle line in France in October, 1914. He was born in 1873 in Orleans. In 1900, after he had settled in Paris, he founded and became the managing editor of *Cahiers de la Quinzaine*, a supposedly fortnightly periodical, in which he wrote as a religious mystic, although admitting to his columns contributions from widely different points of view. He soon became one of the leaders in the new reactionary school of French poetry, the school in whose literary background figured the Church and the monarchy, though the latter was implied rather than distinctly avowed. Pégu's polemical articles were mainly protests against any departure from religious principles as the life and ruling power of society. The temperament which turned him toward the Christian examples of mystic faith and singleness of devotion surely served him well in the choice and mission of his later prose and poetry. He found a ready response to their appeal. His books were rapidly sold. The eagerness with which they were read was not the least notable of the many literary proofs that the traditional Catholic France still lived in the popular heart and was strong to assert its spiritual power against social license and the denial of religion.

His best-known works are: *Le porche du mystère de la deuxième vertu* (1911); *La tapisserie de sainte Geneviève et de Jeanne d'Arc* (1912); *Le mystère de Jeanne d'Arc*, written in luminous, rhythmic prose; *Le mystère des saints innocents* (1912); *L'argent suite* (1913); and the poem *Eve* (1914). Pégué sometimes wrote under the pen names of Pierre Deloire and Pierre Baudoin. He was a laureate of the French Academy. On the outbreak of the European War in 1914 he promptly responded to the appeal of his country and went to the front.

PEIRCE, BENJAMIN OSGOOD. An American physicist and educator, died Jan. 14, 1914. He was born in Beverly, Mass., in 1854; graduated from Harvard College in 1876, and for several years following studied at Leipzig and Berlin. Returning to the United States he taught in the Boston Latin School in 1880-81, and in the latter year was appointed instructor in mathematics at Harvard University. He became assistant professor of mathematics and physics in 1884 and Hollis professor of mathematics and philosophy in 1888, holding the latter chair until the time of his death. He was a member of many American and foreign scientific societies, and published writings on mathematical subjects including: *Theory of the Newtonian Potential Function*; *Table of Integrals* (1899); and *Experiments in Magnetism*.

PELLAGRA. The first report of the Thompson Pellagra Commission was published in 1914. The commission was supported by funds donated by Col. Robert M. Thompson, of New York City, and its work undertaken in association with the Bureau of Entomology and the officers of the United States Public Health Service. Eight hundred and forty-seven cases were studied, at or near Spartanburg, S. C. The commission found that pellagra occurred in the cotton-mill-village population at a rate of 104 per ten thousand, as against 19 per ten thousand for the remainder of the country, and 16 per ten thousand for the rural districts alone. There was an excessive prevalence among farming classes in townships which have a relatively large mill-village population. The white population of the county had 45 cases per ten thousand, the negro only 9.5 per ten thousand. Even excluding the mill-village population, which is practically all white, the remaining whites still have a rate of prevalence of two and a half times that of the negro. The incidence among females was about three times as great as among males in mature life, but in children under 10 years of age, and adults over 45, the rate is about the same. The most significant fact in regard to occupation is the marked prevalence of pellagra among women doing housework. The excessive prevalence in the mill-village population occurs largely among women and children at home during the day. Among actual mill-workers the prevalence in the two sexes is about equal. Climatic conditions appear to influence the development of symptoms. If during the spring months the rainfall is high, the temperature low, and the number of rainy days greater than normal, the appearance of acute symptoms is delayed. It was also brought out that the disease was of a less virulent type than in former years; symptoms were quite mild and sometimes were confined almost entirely to the skin. A history of illness immediately preceding the development of symptoms was found in 59 per cent of the cases. As to diet, the most striking defect in the gen-

eral dietary of the working classes appears to be the limited use of fresh meats; salt pork, especially bacon, being used as a substitute. The question of hygiene and sanitation, of house screens and flies, disposal of excreta, and the methods of food preparation, were all investigated without eliciting any new facts. From the standpoint of entomology, ticks, lice, bedbugs, cockroaches, horse flies, fleas, mosquitoes, buffalo gnats, house flies, and stable flies were considered in regard to their possible activities as carriers. The stable fly only, from its seasonable activities, wide distribution and abundance, in the rural districts, especially, seems to be the most likely offender. It is relatively long-lived, travels long distances, and bites only by day. The commission does not regard the evidence of transmission by blood-sucking insects as at all conclusive. They reject the maize theory and consider that pellagra is in all probability a specific infectious disease communicable by means at present unknown.

In almost direct opposition to these findings are the recent experiments in Rhodesia. Funk relates that when whole cornmeal was used as food there was no pellagra, while it was liable to develop when bolted meal was eaten. Nightingale's experience with 1210 cases confirmed this, although he calls the malady "zeism," not venturing to classify it as true pellagra. Funk advises the avoidance of bolted meal, dependence on whole grain and potatoes, and a diet rich in vitamins. He says that in the potato zone pellagra does not occur. Sambon still clings to his theory of insect transmission, and incriminates two species of gnats, the *Simulium* and the *Ceratomyxozoon*. Pellagra, he says, like malaria, has certain defined zones, and he can find no instance of direct transmission of the disease from one individual to another. Persons who go to live in a pellagra district contract the disease usually in the first year, while others, who work in the pellagra zone in the winter and leave it in the spring, escape infection. In Mississippi, during the first nine months of 1913, 3734 cases of pellagra were reported, with a mortality of 795 for the entire year. The cases among colored people were greatly in excess of those among the white population, but this is accounted for by the great preponderance of the former in this State. It will be seen from the above paragraphs that the broad question, as to whether pellagra was to be classed as a dietary or a communicable disease, had not been definitely answered.

PENANG. One of the Straits Settlements (q.v.).

PENNSYLVANIA. POPULATION. The estimated population on July 1, 1914, was 8,245,967. The population in 1910 was 7,865,111.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		Acres	Prod. bu.	Value
Corn	1914	1,463,000	62,178,000	\$45,390,000
	1913	1,463,000	57,057,000	41,081,000
Wheat	1914	1,812,000	23,747,000	24,697,000
	1913	1,826,000	21,862,000	19,894,000
Oats	1914	1,078,000	32,190,000	16,417,000
	1913	1,154,000	35,774,000	16,456,000
Rye	1914	280,000	5,040,000	4,188,000
	1913	280,000	4,900,000	3,626,000

		Acreage	Prod. bu.	Value
Barley1914	7,000	196,000	\$137,000
1913	7,000	182,000	129,000
Potatoes	...1914	268,000	28,140,000	16,821,000
1913	265,000	23,320,000	18,656,000
Hay1914	3,141,000	a 4,020,000	58,290,000
1913	3,141,000	4,146,000	61,775,000
Tobacco	...1914	38,100	b 47,995,000	4,080,000
1913	38,900	46,680,000	3,501,000

a Tons. b Pounds.

MINERAL PRODUCTION. Pennsylvania so far exceeds all other States in the value of its mineral products as to stand almost alone. Exclusive of the value of pig iron, coke, and other derived or secondary products not included in the total, the value of the mineral production is nearly one-fourth that of the entire country; and in 1913 it equaled the combined production of West Virginia, Illinois, Ohio, and California, the next four States in the value of their mineral product. Pennsylvania derives its mineral wealth almost entirely from nonmetalliferous mining operations. Except for a small amount of copper, it produces none of the precious or semiprecious metals, and the only other metal which figures in the total production of the State is iron, of which less than 500,000 tons of ore were produced in 1913. In addition, however, to its being the first State in the production of coal, Pennsylvania leads also in the manufacture of cement, the burning of lime, and the production of mineral paints, sand, slate, and stone. It is second in the value of clay products and natural gas, and sixth in the production of petroleum. Although not an iron-ore State, Pennsylvania is by far the leading producer of iron, which is obtained from the Lake Superior ores. The production in 1913 was 12,871,349 long tons, valued at \$197,726,314. If the value of the pig iron made in Pennsylvania were added to the value of the other products of the State, the total value for 1913 would have exceeded \$700,000,000, which is more than one-fourth of the value of the total mineral production of the United States.

There was more coal mined in the State in 1913, both anthracite and bituminous, than in any previous year in its history. The production reached the enormous total of 265,306,139 short tons, valued at \$388,220,933. Of this 91,524,927 tons were anthracite, with a value of \$195,181,127, and 173,781,217 tons were bituminous, valued at \$193,039,806. The total tonnage broke the previous record for 1912 by 19,079,053 short tons, or nearly 8 per cent. The proportionate increase was about the same for both bituminous and anthracite. The gain in the value of anthracite, however, was \$17,558,501, or about 10 per cent, over 1912 and in bituminous coal \$23,669,309, or 14 per cent. There were employed in the anthracite mines in 1913, 175,745 men and in the bituminous mines 172,196 men. According to the estimates of the United States Geological Survey, the production of anthracite coal in 1914 was about the same as that of 1913. Second in importance among the mineral industries in the State was the manufacture of Portland cement, which is closely followed by the clay-working industry. The production of cement in 1913 was 28,060,495 barrels, valued at \$24,268,800, compared with 27,625,340 barrels, valued at \$18,945,835 in 1912. The value of the clay products, exclusive of raw clay mined and sold, increased from \$21,537,221 in 1912 to \$24,231,482 in 1913. The production

of natural gas is fourth in importance. Pennsylvania was first in the production of this mineral until 1910, when it was surpassed by West Virginia. The value of the natural gas produced in 1913 was \$21,695,845, compared with \$18,539,672 in 1912. Up to 1894 Pennsylvania was the leading State in the production of petroleum, but it has since been surpassed by West Virginia, Texas, California, Illinois, and Oklahoma. On account of the higher grade of Pennsylvania's oil, however, it still ranks fifth in value of production. The output of petroleum in 1913 was 7,963,282 barrels, compared with 7,837,948 barrels in 1912. The value increased from \$12,886,752 in 1912, to \$19,805,452 in 1913. The production of limestone is the principal factor in placing Pennsylvania first as a producer of stone, though it is also first in the production of slate, sand and gravel, and lime. In 1913 the total value of the stone quarried, exclusive of slate and limestone made into lime, was \$10,117,469, compared with \$9,144,214 in 1912. The total value of the mineral products of the State, exclusive of pig iron, increased from \$445,799,653 in 1912, to \$506,466,759 in 1913.

TRANSPORTATION. The total railway mileage in the State in 1913 was 8339. The roads having the longest mileage include the Baltimore and Ohio, 632; Pennsylvania Railroad, 1048; Pennsylvania and Reading Railway, 603; New York Central and Hudson River, 496; Erie Railroad, 464; Lehigh Valley, 328. Of the total mileage, 5250 was mileage of 20 companies operating in the State but having their lines also outside the State, and 3089 was the mileage of independent roads entirely within the State.

EDUCATION. The total enrollment in the public schools of the State in 1914 was 1,401,325. The average daily attendance was 1,124,951, and the teachers numbered 39,596. The average salary paid to male teachers was \$68.06, and to female teachers, \$49.44.

FINANCE. The report of the State Treasurer for the year ending Nov. 30, 1914, shows a balance in the beginning of the year of \$7,564,269. The total receipts for the year were \$31,441,050 and the disbursements \$31,578,111, leaving a balance at the end of the year of \$7,427,208. The bonded debt of the State at the end of the year was \$651,110. Against this there was in the sinking fund \$811,733.

CHARITIES AND CORRECTIONS. The correctional and charitable institutions include the Eastern Pennsylvania State Institution for the Feeble-minded and Epileptic at Spring City; Home for the Training in Speech of Deaf Children Before they are of School Age at Philadelphia; Homeopathic State Hospital for the Insane at Allentown; Pennsylvania Industrial Reformatory at Huntingdon; State Hospital for the Criminal Insane at Fairview; State Hospital for the Feeble-minded of Western Pennsylvania at Polk; State Hospital for the Insane at Warren; State Hospital of the Northern Anthracite Coal Region at Scranton; and the Western Penitentiary at Pittsburgh. Under the control of the State charities are also the various county almshouses and jails. Semi-State institutions include a great number of hospitals and smaller institutions in various cities.

POLITICS AND GOVERNMENT. Although the Legislature did not meet in 1914 the year was

a very important and interesting one in politics. Chief interest centred about the efforts to prevent the reelection of Senator Penrose, whose term expired March 4, 1915. Mr. Penrose has long been in control of the Republican machine in the State and has been held up as the type of the objectionable political leader; he was, however, renominated in the primary elections held on May 19. In the same elections Martin Brumbaugh was nominated by the Republicans for Governor. The Democrats nominated Congressman Palmer for United States Senator and Vance McCormick for Governor. Gifford Pinchot and William Draper Lewis received Progressive nominations for Senator and Governor, respectively. In addition to being a candidate on the Republican ticket Mr. Brumbaugh was candidate also of the Keystone and the Personal Liberty parties. Mr. McCormick, in addition to being a candidate on the Democratic ticket, was also a candidate for the Washington party. The Progressives were divided into the Bull Moose and the Roosevelt Progressive parties, in addition to which there was also an Industrialist party. All candidates made active and aggressive campaigns. Mr. Roosevelt took part in supporting Mr. Pinchot for the Senate and Mr. Lewis for Governor, making his first speech of the campaign at Pittsburgh on June 30, the most notable feature of his address being a talk on the Democratic administration's policies. On September 8, William Draper Lewis, nominee of the Progressive party for Governor, withdrew from the contest in order that the opponents of the Republican machine might unite on one candidate. In the elections held on November 3, the Republicans elected their candidate for Governor, Mr. Brumbaugh, by a vote of 590,701, compared with 452,882 for McCormick, Democrat, and 40,115 for Allen, Socialist. For United States Senator Senator Penrose was reelected with 519,830 votes, compared with 266,436 for Palmer, Democrat, and 269,175 for Pinchot, Progressive. The total vote cast was 1,112,202, compared with 1,219,751 in the presidential election of 1912. The Republicans showed a gain of over 300,000 votes, the Democrats a gain of about 50,000 votes, and the Progressives a loss of about 150,000 votes. Mr. Brumbaugh carried the city of Philadelphia by about 100,000 votes and Senator Penrose carried the city by about 75,000 votes. The factors favoring the reelection of Senator Penrose included the operation of a Democratic tariff, the liquor interests, and the disaffection existing in the Democratic party. Mr. Brumbaugh ran considerably ahead of Penrose in many sections, indicating his personal popularity. He is a well-known educator, was the organizer of Porto Rican schools, and was for many years superintendent of the public school system of Philadelphia. The Republicans elected 26 members to Congress and the Democrats 5.

STATE GOVERNMENT, 1915. Governor, Martin G. Brumbaugh, Republican; Lieutenant-Governor, Frank B. McClain, Republican; Secretary of the Commonwealth (to be appointed); Treasurer, Robert K. Young, Progressive; Auditor-General, A. W. Powell, Progressive; Adjutant-General, Thomas J. Stewart, Republican; Attorney-General (to be appointed); Superintendent of Public Instruction, N. C. Schaeffer, Democrat; Insurance Commissioner, Charles

Johnson, Republican; Secretary of Agriculture (to be appointed).

JUDICIARY. Supreme Court: Chief Justice, D. Newlin Fell; Associate Justices, J. Hay Brown, Wm. P. Potter, John Stewart, Robert von Moschizsker, S. L. Mestrezat, and John P. Elkin—all Republicans, except Mestrezat. Prothonotary, Eastern District, James T. Mitchell; Prothonotary, Middle District, William Pearson; Prothonotary, Western District, George Pearson.

STATE LEGISLATURE, 1915.

	Senate	House	Joint Ballot
Democrats	11	41	52
Republicans	38	164	202
Progressives	1	1	2
Socialists	0	1	1
Republican majority....	26	121	147

The representatives in Congress will be found in the section *Congress*, article UNITED STATES.

PENNSYLVANIA, UNIVERSITY OF. The total enrollment in all departments of the university in the autumn of 1914 was 7308. The faculty numbered 560. (For an account of the gifts received during the year see the article GIFTS AND BEQUESTS.) Beginning with the academic year in 1914-15, a School of Education was added to the university and it is believed that this school will play an important part in the curriculum. (For further notes in regard to the university during 1914 see UNIVERSITIES AND COLLEGES.) The library contains about 450,000 volumes. The provost is Edgar F. Smith, Ph.D.

PENNSYLVANIA ACADEMY, ANNUAL EXHIBITION OF. See PAINTING AND SCULPTURE.

PENNSYLVANIA STATE COLLEGE. An institution of higher learning at State College, Pa., founded in 1855. The number of students enrolled in the several departments in the autumn of 1914 was 2245, and the faculty numbered 241. The notable changes in the faculty during the collegiate year included the appointment of L. W. Rapeer, professor of education; Richard Ernesti, associate professor of industrial art; J. T. Marshman, professor of public speaking; Peal McDonald, instructor in home economics extension; and A. O. Vorse, *College News* editor. The gifts received during the year included scholarships in home economics from the Pennsylvania Federation of Woman's Clubs and from the Pennsylvania Daughters of the American Revolution. Scholarships were also received from J. G. White, of New York. The productive funds on June 30, 1914, amounted to \$427,290, and the income for the same year amounted to \$680,851. The library contains about 75,000 volumes and pamphlets. The president is Edwin E. Sparks, LL.D.

PENOLOGY. PRISON REFORM. Prison methods are undergoing a virtual revolution. There has been an evolution of the theories of criminology from those which laid extreme emphasis upon individual responsibility, and the consequent necessity of punitive and revengeful measures through certain forms of retributive justice, to the modern viewpoint which holds that the criminal is a product of social conditions. This viewpoint therefore is steadily modifying the whole attitude of society and prison officials toward methods of prison management. It has also brought forward various reforms for the care of delinquents outside of prison. The criminal is now viewed as a human being who has

been deprived of normal human and social inheritance, and consequently must be put through a process of gradual rehabilitation. The new ideas have found expression in the honor system as applied to road-building in Colorado and various other States; in the doctrine of the golden rule in Kentucky; in the baseball league plan of California; in the classes in domestic science, sewing, cooking, and general housework in the Illinois Women's State Prison; in the fishing and berrying parties in New York; and the bond and card system of rewarding meritorious conduct in Ohio. Thus in various prisons one or more of the following reforms have been introduced: Abolition of stripes and punishment by dark dungeons; the abolition of head shaving; the retention of true names; free letter writing; healthful sports; no prison garb whatever; small daily wage; indeterminate sentence; and the parole system. Moreover it is seriously advocated that the ideal is no specific term of sentence and no penal institutions, but the application of reform methods by competent, well-trained men. The new methods were illustrated by the appointment of a psychiatrist by the Boston Municipal Court to assist in an intelligent classification and disposition of cases.

Among the recommendations for prison reform by the National Committee on Prison Labor are the following: More frequent omission of sentence for first offenses on slight charges, such as petty larceny; shortening of the term of imprisonment for good conduct; a modified indeterminate sentence; sanitary and comfortable accommodations within the prison; abolition of bars and appearance of forcible restraint; the reform or the abolition of the contract labor system; great extension of the resort to farm labor for convicts; segregation into classes of convicts according to degrees of guilt; payment to the prisoner for labor; and assistance in getting a position at the time of discharge. Along with the abolition of the contract labor system is advocated the substitution of the "State use" system or "State account" system. This latter system is well exemplified by the Minnesota binder twine plant, which is the best equipped factory for binder twine in the United States, and has the third largest output. This plant not only pays the expenses of the prison, which was pronounced by a recent commission from the German government as the best prison in Europe or America, but it credits every convict with a small daily wage. Such a wage not only gives the prisoner a certain economic independence on his release if he be single, but makes it possible for the prisoner, if he be married, to contribute to the support of his family during his incarceration.

New York. The recommendations of the New York State Committee on Prison Reform, of which Mr. Thomas M. Osborne was chairman, included the following: The conversion of Sing Sing prison into a receiving station for the observation and study of all convicts sentenced to a State prison, including medical examination and treatment, and a special effort to weed out all mental and physical defectives; the establishment of a Court of Rehabilitation; the extension of the indeterminate sentence to all convicts. The women's department of the National Civic Federation early in March outlined a large legislative programme which included the abolition of Sing Sing, the acquisition of industrial farms,

the development of farms at Auburn, Clinton, Valatie, the latter for women. It also favored the indeterminate sentence, probation and parole, more self-government, educational labor systems, and the payment of prisoners. That the Sing Sing methods have responded very slowly to the newer ideals was revealed by the fact that in August a Saturday afternoon was for the first time devoted to sports, and in September the prisoners had their first "Sunday dinner" in place of the customary solitary meal. In the Auburn prison was organized, among the inmates, a mutual welfare league, which has brought about a large degree of self-government and personal freedom. This league was organized by Thomas M. Osborne who had imposed upon himself a week's imprisonment at Auburn; the story of this voluntary imprisonment is told in Mr. Osborne's book, *Within Prison Walls*. In November Mr. Osborne was appointed warden of Sing Sing prison from December 1. He at once introduced numerous reforms, including moving pictures on Sunday afternoons and a court of inmates to try fellow prisoners for infractions of rules. He granted 13 of 15 requests of the prisoners for various privileges, with the result that for the first time in the history of the prison no rules were broken in twenty-four hours.

Michigan. The State prison at Jackson, Mich., inaugurated an extension work department with the following objects: to keep young men out of prison; to aid paroled prisoners to meet the terms of their paroles; to prevent discharged prisoners from coming back. This work was suggested by the extension work of a State University. It was planned for the prison chaplain and others to go on lecture tours throughout the State to disseminate modern viewpoints on criminology and to organize local branches for the purpose of study and coöperation. These local branches were expected to be particularly valuable in relation to the young people and paroled prisoners.

Canada. One of the most modern and intelligent efforts to solve aright the problem of the care of prisoners is that of the latest Canadian prison, the Central Prison Farm at Guelph. This farm comprises 800 acres and will ultimately contain provision for 700 men. There is no enclosure to prevent the escape of prisoners, and the prison guards go unarmed. Nevertheless, the proportion of escapes per year equals only 1.5 per cent of the population. The prisoners themselves are performing 75 per cent of the building operations involved in constructing kitchen, dining hall, several dormitories, cell and administration buildings, officers' quarters, and other buildings, besides roads, bridges, aqueducts, and other improvements. The up-to-date sanitary condition of the cell buildings is shown by the southern exposure for each cell, and the provision of 800 cubic feet in each cell. This latter contrasts sharply with the 200 cubic feet of air space at Sing Sing. The prisoners, in addition to general farming, are taught a variety of city trades, including dairying, carpentry, shoe making, and work in a woolen mill, a machine shop, and a tile factory. Recreation of many forms is encouraged, including fishing, swimming, and baseball. In addition should be mentioned the controlling principle of the warden, which is that successful prison management means, first of all, successful supervision.

NATIONAL CONFERENCE. At the National Conference of Charities and Corrections (see CHARITIES) a session was devoted to Corrections. The report of the committee dealt with misdemeanants and showed that about 500,000 of them are every year committed to county and city prisons in the United States; that these jails are training schools for crime; that the fee system has many abuses; that idleness in jail is demoralizing; that the police are dominated by politics; and that prison reform has neglected the misdemeanor in favor of the felon. The programme of advance pointed to the humanizing of the courts by the newer penology; granting prisoners a chance to earn money to pay their fines; release on probation; the colony or farm system of outdoor employment; the indeterminate sentence; and parole. All of these reforms are in practice here and there; they should be extended over the entire country. Judge James A. Collins showed that considerate treatment had reduced jail and workhouse commitments in Indianapolis by 50 per cent without increasing the number of repeaters. The greatest interest attached to the descriptions of the prison farms at Ocoquan, D. C., and Guelph, Ontario. Outdoor employment for women prisoners is being undertaken in Massachusetts and other Eastern States. Maj. J. B. Woods, Superintendent of the Virginia Penitentiary, declared that his experience in that State in employment of convicts on public roads, while of financial advantage, did not result in reforming the prisoners.

The aims of present prison reform as developed by this section were: more perfect police with a broader social viewpoint; prompt hearings for every one arrested; juvenile courts in all places; care and detention of juvenile delinquents outside of jail; probation system for adults as well as juveniles; separate trials for women; modification of the fining system so as to eliminate discrimination between rich and poor; classification of prisoners; separate individual confinement, and separation of sexes in county jails; abolition of fee systems; State control of all minor prisoners; industrial farms for convicted misdemeanants; release of misdemeanants on parole under supervision; and abolition of contract labor.

PROBATION. The sixth annual conference of the National Probation Association met at Memphis early in May with 81 delegates present. Round table discussions and papers dealt with defective delinquents both juvenile and adult; probation for adult offenders; juvenile courts, especially their lack outside of large cities; the separation of the social and the judicial functions of courts; social legislation suggested by probation work. The fact was emphasized that the criminal courts are no longer exclusively in the hands of the police and prosecutors, but are coming more and more under the scrutiny and control of a more informed public. A special committee was appointed to study the rural community and to report at the next meeting the advisability of engaging a field representative to direct research and education on need of probation for such communities.

THE NATIONAL COMMITTEE ON PRISONS AND PRISON LABOR, which is the new name of the National Committee on Prison Labor, met in June at Ardsley, N. Y. An executive committee was formed from experienced members in each State

to determine the policy of the Committee in the different States. Special committees, whose chairmen with Adolph Lewisohn and E. Stagg Whitin constitute the council of management, were elected as follows: on Federal prisons, George Gordon Battle, chairman; on law, Prof. George W. Kirchwey; on social hygiene, James Bronson Reynolds; on organized labor, Collis Lovely; on honor men, Charles Henry Davis; on education, Mrs. John H. Flagler; on jails, Hastings H. Hart. The executive offices are at Columbia University under the direction of Julia K. Jaffray and Joseph D. Sears.

PENSIONS. See OLD-AGE PENSIONS; and UNITED STATES, *Pensions*.

PENSIONS FOR MOTHERS. For several years past agitation has been carried on for the pensioning of poor widows with minor children. This has been put forward as an alternative to direct outdoor relief by private or public charity, or to the separation of children and mothers, and the location of the former, either in children's homes and asylums, or in private homes of strangers. From this point of view the main argument for the pension plan was that the care of children by their own mothers was distinctly superior to their care by any other means. The urgency of this scheme was increased by the rapid progress of child labor legislation. This had the effect of throwing out of employment numbers of children, of ages 12 to 16, who were contributing something to the support of fatherless families. By 1912, 5 States had enacted pension laws; and by the close of 1913, 17 States and 2 cities had provided widows' pensions. These States were: California, Colorado, Idaho, Illinois, Iowa, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Jersey, Ohio, Oregon, Pennsylvania, South Dakota, Utah, and Washington; and the cities, Milwaukee and St. Louis. No new States enacted mothers' pension laws in 1914.

In *Colorado* an appropriation of \$4800 was made in 1913, and \$10,000 in 1914. During 1913, 26 families including 97 children were cared for. The average expenditure during the month of January, 1914, was \$8.07 per child. The *Colorado* law, like those of several other States, applies to any parent unable to support a child; it sets no age limit to eligible children; and no maximum to the amount of pension. The *Pennsylvania* law became effective January, 1914. It provided \$200,000 to be divided among the counties of the State, on condition that each county raise an amount equal to its gift from the State. The law applies to dependent mothers as well as widows; and fixes the legal working age, 14 years, as the pensionable limit. The scale of pensions is as follows: for mother and one child, \$12 per month; mother and two children, \$20; mother and three children, \$26; and for each additional child, \$5 additional.

The *Michigan* law applies to mothers only; it fixes the age limit at 17 years; and provides that the pension shall not exceed \$3 per week for each child. In Wayne County in June, 1914, 65 mothers with 240 children were receiving an average of \$1.39 per week per child. About 28 per cent of these children had been deserted by their fathers; about 60 per cent of the mothers were suffering from tuberculosis.

In *Massachusetts* the law became effective Sept. 1, 1913. During the first year 2967 mothers with 9229 children under 14 were given

aid. The mothers included 2151 widows, and 816 others, of whom one-half were deserted wives. The law provides for a State appropriation equal to one-third of the total expenditures by towns and cities as approved by the State Board of Charity. In 1914 the State expense amounted to about \$175,000, making a total of about \$500,000 for the commonwealth. The average relief was \$6 per week per family. It was estimated that the State's share in 1915 would be \$250,000. The law, locally administered by overseers of the poor, has had the effect of stimulating them to constructive relief work.

In Ohio the 1913 law authorized pensions for widows, and mothers whose husbands were permanently disabled, imprisoned, or deserted for at least three years, provided there were minor children. State funds, however, were not made available until 1915; but in 1914 the county commissioners were authorized to transfer money to mothers' pension funds. Hamilton County (Cincinnati) thus appropriated \$63,000. An advisory committee was formed, and sixty social workers cooperated in investigating the 1300 applicants. By November, there had been granted 358 pensions. In addition considerable constructive work was undertaken in the way of housing, health, domestic economy, recreation, reading, education, etc., for applicants.

The Pennsylvania law became effective February 1. Up to June 1 there had been 1369 applications, of which 431 were set aside, 759 were registered, and the remainder were under investigation. Most of those registered were identified with other agencies. In July, 77 families were receiving average pensions of \$22 per month.

ROCKEFELLER FOUNDATION. In September the Rockefeller Foundation made a grant of \$20,000 a year for ten years to the New York Association for Improving the Condition of the Poor, this fund to be used in providing pensions for dependent widows with families. This sum was sufficient to pension fifty families and provide \$1200 for a family visitor. The association was then engaged in an effort to raise \$100,000 with which to pension all of the five hundred dependent widows with children under its care. The pensions will be paid in weekly installments for not more than six months at a time; families pensioned must have been known to the association for six months; the cooperation of relatives, churches, and other agencies is to be secured.

This grant was the result of a special study of the effects of widows' pensions made for the Foundation by Mr. William H. Matthews, director of the Department of Family Welfare of the association. The association had adopted the "pension policy" on a rather extensive scale in 1913. Mr. Matthews then selected forty-three cases where adequate pensions had been given, and made a detailed study of the preceding and subsequent conditions. He found that the pension gave opportunity for education, health, and development, and a return in "the way of healthy, vigorous, red-blooded workers," and that the pension "is an insurance against under-vitalized, stunted, inefficient bodies, against the wreckage and wastage of future citizenship, against an increase in that part of our juvenile population that ever keeps busy the machinery of juvenile courts, truancy schools, reformatories, and other like institutions." Whether the benefited mothers did some work outside of

their homes or worked at home, the pension system showed most beneficent results in better health and a better tone to family life. The study was strengthened by a comparison of 431 widows with dependent children also under the care of the association but not pensioned. Of these, 44 per cent worked away from home as against 17 per cent of the pensioned mothers. Many of the children were in reformatories; many others were in institutions for restoring health. There was frequent lack of food, shelter, and clothing, and an extensive amount of debility and degradation.

ARGUMENTS FOR AND AGAINST. The principal reasons advanced in favor of mothers' pensions are the following: There is great need of more adequate provision for working mothers with minor children, with no male breadwinner. The efforts of such mothers to keep their children at home results in overwork at low pay, running into debt, lack of proper nourishment and housing, and juvenile delinquency. The solution of the problem by placing children in institutions, or in private homes, is unsatisfactory. Social insurance cannot meet the situation because of the long time necessary to get it into effective working, and because desertion of fathers cannot be thus obviated. Pensioning mothers meets the situation; it is a just measure; it prevents family separations; it relieves relatives of unfair burdens; and mothers earn pensions by their services to the State. Pensions, moreover, are socially advantageous, since they result in better citizens, raise standards of living, and make child labor unnecessary. They are an advantage economically, because they are the cheapest way to care for both mothers and children, and they eliminate much of the expense of crime and delinquency. It is further argued that pension systems should be public rather than private, because of the paramount interest of the State in its future citizens; because adequacy and regularity are essential; and because private relief is believed to be more demoralizing than public.

Against. It is argued that the pension idea is wrong in principle since money will not make good homes. The need is grossly exaggerated. Pensioning mothers will prove harmful socially, because it will lessen the interest of private charities, friends and relatives, and thus destroy helpful personal relationships. Moreover, pensions are more degrading to self-respect than private aid. They would increase desertions and divorce; would take from mothers an interest in outside work which is often salutary; would discriminate against the provident in favor of the improvident. They are anti-eugenic in that they would increase the multiplication of the poorest stocks. The wide adoption of the pension policy would hinder the advance of various worthy reforms, such as industrial education, social insurance, and workmen's compensation. This policy will prove expensive as a result of investigations, administration, and a rapidly increasing class of dependents. Private charity is less costly; more efficient and personal in administration; and does not involve danger of restoring the long-since discredited system of extensive out-door relief.

PERAK. A State (the most northerly) of the Federated Malay States protectorate (q.v.). Perak is one of the oldest states in the peninsula, and since the appointment of a British resident in 1874 it has made considerable progress. It is

watered by the Perak, the Kinta, Batang Padang, Bidor, Sungkai, Krian, Kurau, and Bernam rivers, with their tributaries. An extensive irrigation scheme has been completed in the Krian district, which renders 70,000 acres available for rice cultivation. Coconuts are grown, but the chief exports are tin and rubber. The chief mining districts are Larut, Kinta, Batang Padang, and Klian Intan. The production of tin ore in 1912 was returned at 22,640 tons; metal, 5767; value, £5,757,893. The State is traversed by the main railway line from Penang. The total mileage of completed roads is 751 of metaled, and 60 of unmetaled wagon roads, besides 871 miles of byways. Taiping is the capital, and Ipoh the commercial centre. The chief port is Teluk Anson. Other towns are Kuala, Kangsar, Kampar, and Tapah. The State now includes the whole watershed of the Perak River. This territory, formally ceded to Perak by the Anglo-Siamese treaty of July 16, 1909, exceeds 1000 square miles in area and includes the tin mines of Klian Intan. The population of the new territory in 1909 was estimated at about 3000. The native ruler is Sir Idris Merisid-el-Azam Shah. The British Resident in 1914, was R. G. Watson.

PERIM. A dependency of Aden (q.v.).

PERKINS, GEORGE DOUGLAS. An American editor and public official, died Feb. 3, 1914. He was born in Holly, N. Y., in 1840, but in his early boyhood removed to the West. He learned the printer's trade at Baraboo, Wis., and with his brother started the *Cedar Falls Gazette* in 1860. In 1862-63 he served as a private in the Thirty-first Iowa Regiment. From 1869 until his death he was editor of the *Sioux City Journal*. From 1874-76 he was a member of the Iowa Senate and was United States marshal for the Northern District of Iowa from 1882-85. He also served as a member of Congress from 1891 to 1899, and was delegate-at-large from Iowa to the Republican National Conventions in 1876, 1880, 1888, and 1908.

PERRY, JAMES HILLHOUSE. An American naval officer, died Dec. 5, 1914. He was born in 1842 in Troy, N. Y., and served in the Union navy throughout the Civil War. He retired from naval service at the close of the war, but at the outbreak of the Spanish War he reentered the service and was made chief engineer on the battleship *Oregon*. He served until the close of the war, when he again retired from active service. Until August, 1904, he served on the advisory board of the bureau of steam engineering in Washington. He was chief engineer of the *Oregon* at the time of the famous voyage of that ship from San Francisco to the coast of Cuba.

PERSIA. An Asiatic monarchy lying between the Caspian Sea and the Gulf of Oman. Capital, Teheran. Estimated area, 1,645,000 square kilometers, or 635,135 square miles, carrying a population of about 9,000,000, of whom about 2,500,000 (Arabs, Kurds, Turks, and Leks) are nomads. There are about 8,000,000 Mohammedans of the Shi'ah sect and 800,000 of the Sunni sect. Teheran has about 280,000 inhabitants, Tabariz 200,000, and Ispahan 80,000.

PRODUCTION AND COMMERCE. The chief products for export, together with the imports for consumption, are shown in the table below, with values in the 1912-13 trade in thousands of krāns:

Imports	1000 Kr.	Exports	1000 Kr.
Cottons	186,190	Fruits	47,457
Sugar	188,978	Carpets	60,892
Tea	33,043	Cotton	98,843
Gold & silver bars		Fish	8,245
& coins	79,123	Rice	42,309
Petroleum	8,389	Gold & silver coins	27,428
Yarn	14,584	Gums	18,902
Flour	15,377	Opium	34,916
Woolens	19,392	Wool	11,800
Indigo, etc.	3,084	Cocoons	11,786
Haberdashery	6,667	Skins	12,675
Rice	3,610	Animals	8,385
Spices	3,217	Silk stuffs	6,639
Wool	3,761	Cottons	2,160
Animals	1,804	Hides	11,359
Matches	3,539	Silk	1,792
Silks	6,576	Wheat and barley	8,319
Tin, etc.	1,354	Pearls	3,540
Tobacco	2,569	Woolens	2,265
Copper and nickel	6,455	Drugs	3,638
Iron and steel ...	3,754	Timber	1,095
Mfrd. iron & steel	8,963	Tobacco	2,487
Timber	2,388	Dyes	1,820
Silkworm eggs ...	3,401	Eggs	1,299

The countries of origin and destination in the 1912-13 trade, values in thousands of krāns: Russia, 328,980 imports and 300,878 exports; United Kingdom, 86,382 and 34,328; British India, 66,799 and 22,270; Turkey, 23,389 and 37,927; Germany, 31,288 and 2928; France, 11,031 and 4829; Austria-Hungary, 8042 and 567; Belgium, 7929 and 408; Afghanistan, 4360 and 2443; Italy, 2738 and 8004; Oman, 1047 and 7378; China, 789 and 3474; United States, 947 and 6375; other, 2481 and 2376. The sea-borne trade passes chiefly through the ports of Bushire, Bunder Abbas, and Mohammerah, and by way of Bagdad. The British practically control Persian Gulf Shipping.

Traveling is mostly by caravan and transport by pack animals. There are eight miles of railway open.

FINANCE AND GOVERNMENT. The revenue, about half of which is derived from taxes levied in kind or in cash upon the laboring classes, fluctuates between 70,000,000 and 100,000,000 krāns. Other sources of revenue are land tax, customs, opium, salt, and lease of monopolies. No statement of expenditure can be made, except that it regularly exceeds the income. The collection and expenditure of all revenue is under supervision by a European treasurer-general. The Russian debt of 1900 amounted to 22,500,000 rubles at 5 per cent, payable in 75 years, and guaranteed upon the customs receipts other than those of the province of Fars and of the Persian Gulf ports; debt of 1902, 10,000,000 rubles at 5 per cent; British loan of 1911, £1,250,000 at 5 per cent. Floating debt, 104,870,000 krāns; annuities, 14,000,000 krāns.

The country is divided into 33 provinces administered by Governors-General appointed by the Shah; but the nomad tribes are ruled by their own chiefs, so far recognized by the central government as to be held responsible for the collection of the tribal revenue. In June, 1909, under British and Russian coercion, the then ruler, Mohammed Ali, restored the constitution and signed a new electoral law, by which law the election, subsequent to his abdication, was conducted. The national council (Mejliss) consists of 120 deputies. Each constituency elects three times the number of persons entitled to represent it in the Mejliss and these appoint the deputies. Elections were held in the autumn of 1913, for the first time since the dissolution of the council in December, 1911.

HISTORY. On July 21, 1914, the sixteen-year-old Sultan, Ahmed Shah, crowned himself as *Shahinshah* of Persia, thus ending the regency which had existed since the dethronement of his father, Mohammed Ali, some five years before. One of the ceremonies observed was the taking of a formal oath before the Mejliss (Parliament) to observe the Constitution. Since the deputies recently elected to that body had not yet arrived at the capital, 68 members of the former Mejliss heard the young prince with trembling voice take the oath: "I, Sultan Ahmed Shah, Emperor of Persia, swear on the Holy Word of God (the Koran) that unto my life's end I will be true to the terms of the Constitution and to the People, and will maintain the independence of my country; and this I will do with all my strength." In the afternoon, surrounded by the Diplomatic Corps and before many distinguished guests, Sultan Ahmed mounted the famous Peacock throne and gravely placed upon his own head the magnificently jeweled crown, while a Ulema chanted the opening *Surah* of the Koran, and outdoors a salute of 123 guns was fired.

Shortly after the coronation of Sultan Ahmed Shah, a Cabinet crisis was precipitated by the resignation of M. Mornard, the (Belgian) treasurer-general, who had become exasperated beyond all measure by the opposition which his fiscal policy had met with from the Russians in the province of Azerbaijan. Consequently in August a new Cabinet was formed with Mustaufel-Mamalek as grand vizier, Ala-es-Sultaneh as minister for foreign affairs, Moleshan-es-Sultaneh as treasurer, and Mukbir-es-Sultaneh as minister of justice.

A discussion which took place in the British House of Commons in May revealed the significant fact that Russian peasants were immigrating in large numbers into Northern Persia and converting the region into something very much like a Russian colony. About the same time it was stated that the Russian garrisons in Northern Persia aggregated over 12,000 men, and that Azerbaijan was completely under Russian control. The activity of the British in Persia was of a different nature. In May the British government decided to purchase 2,000,000 shares and £2,000,000 debentures in the Anglo-Persian Oil Company (which was formed in 1909 to work a concession covering about 500,000 square miles of Persian territory). By this step the government acquired a controlling interest in the company, with the object of providing the British navy with an ample supply of oil from the rich wells of Persia.

Early in November the Persian government declared its neutrality in the War of the Nations. See also **INTERNATIONAL ARBITRATION AND PEACE, Bryan-Wilson Treaties.**

PERU. A South American republic, on the Pacific coast between Ecuador and Chile. The capital is Lima.

AREA AND POPULATION. Neither the territorial extent of Peru nor the number of its inhabitants can be definitely stated. There are unsettled boundaries involving many thousands of square miles. Pending the settlement and delimitation of these boundaries, one estimate of the area is 1,769,804 square kilometers (683,335 square miles); another estimate is 1,833,916 square kilometers (720,816 square miles). There is also reported a planimetric calculation showing the area at 1,137,000 square kilometers

(438,996 square miles); this evidently excludes large areas of disputed territory, and, as much of this territory has long been in actual occupation by Peru, the figure is doubtless far below that which eventually will represent the republic's extent. The population, according to the 1876 census, was 2,624,872 (exclusive of the population of Tacna department, which now appears to be definitely attached to Chile). An estimate of 1896 placed the number of inhabitants at 4,559,550, and an estimate of 1913, at 5,800,000; there is reason to believe, however, that the present number is not greater than the 1896 estimate. Probably more than one-half of the population is Indian, and the larger part of the remainder mestizo. Lima is supposed to have about 150,000 inhabitants; Arequipa, 35,000; Callao, 34,500; Cuzco, 30,000; Ayacucho, 20,000; Iquitos, 20,000.

EDUCATION. Elementary education is nominally compulsory, but apparently the majority of children do not attend school, and illiteracy is prevalent. Public primary schools in 1913 are reported at 2253, with 3063 teachers. The attendance is about 150,000. In 1911, there were 27 national "colleges," with 4674 students enrolled, of whom 2077 were in preparatory courses. There are also a few high schools, private schools of various grades, and several institutions for technical or special instruction. At Lima is the University of San Marcos, founded in 1551, with faculties of law, medicine, theology, philosophy and letters, mathematics and science, and political and administrative science. There are also universities at Cuzco, Arequipa, and Trujillo.

PRODUCTION AND COMMERCE. Agricultural products of commercially greatest importance are sugar and cotton. In the northeastern districts are gathered large quantities of rubber, which constitutes one of the chief exports. Other products are rice, coffee, cacao, wheat, corn, tobacco, and cocoa. In 1911 and 1912 respectively the reported sugar output was 178,533 and 192,754 metric tons; alcohol and rum from sugar cane, 2,050,968 and 2,404,354 gallons; cotton, 38,389,535 and 37,565,130 pounds; cotton production in 1913, 52,344,640 pounds. Peru's mineral deposits have been its principal source of wealth. Copper and silver are the chief metals mined; to some extent gold, lead, coal, petroleum, and other minerals are exploited. The output of fine copper in 1912 was about 27,840 metric tons, and in 1913 about 27,940 tons.

Imports and exports have been as follows, in libras:

1908	1909	1910	1911	1912
<i>Imports—</i>				
5,311,973	4,298,627	4,980,697	5,488,247	5,157,686
<i>Exports—</i>				
5,478,941	6,192,671	7,074,076	7,416,028	9,438,581

Some of the principal imports in 1910 and 1911 were valued as follows, in libras: Metals and manufactures thereof, 449,200 and 1,001,592; cotton textiles and manufactures, 588,031 and 745,807; comestibles and condiments, 734,465 and 684,680; earthenware, glass, earthen, coal, etc., 122,092 and 408,728; wool and manufactures, 213,387 and 321,119. The value of leading exports in 1910 and 1911, in libras: Sugar, 1,389,312 and 1,559,200; copper and silver bars,

1,236,694 and 1,210,903; cotton, 1,014,823 and 1,028,254; rubber, 1,278,674 and 537,087; straw hats, 121,078 and 441,318; wool, 409,143 and 405,288; guano, 181,582 and 278,388; gasoline, 7408 and 224,489; petroleum, 109,615 and 174,531; hides and skins, 124,498 and 143,196. The total mineral export in 1909 is reported at 1,663,424 libras, and in 1910, 1,922,460 libras. The table below shows for 1911 and (subject to revision) for 1912, imports and exports by principal countries, in thousands of libras:

	Imports		Exports	
	1911	1912	1911	1912
U. Kingdom	1,720	1,199	2,466	2,517
United States	1,249	1,106	2,096	2,038
Germany	946	821	578	508
France	290	269	391	772
Italy	199	254	8	1
Belgium	384	245	102	106
Chile	77	196	1,843	895

The share of the principal ports in the imports and exports of 1911, was as follows, in thousands of libras: Callao, 3416 and 3189; Molendo, 625 and 623; Iquitos, 455 and 496; Paita, 286 and 1210; Salaverry, 276 and 891; Eten, 166 and 514; Pisco, 126 and 260.

COMMUNICATIONS. In September, 1912, the length of railway in operation was 2766 kilometers (1719 miles). Railway under construction was reported at 5400 kilometers, but this figure includes projected lines, on some of which actual construction may never be begun. Telegraphs in 1912: lines, 15,000 kilometers; wire, 57,900 kilometers; offices, 317, of which 285 belonged to the State. There is a radiotelegraphic system, with stations at Iquitos, Masisea, Puerto Bermúdez, Lima, Callao, Pisco, Chala, and Ilo. Post offices in 1912, 781.

FINANCE. The standard of value is gold. The monetary unit is the libra, or pound, equivalent to the British pound sterling (\$4.86656); it is divided into 10 soles. Revenue and expenditure in 1910 are reported at 2,795,775 and 2,685,322 libras respectively; in 1912, 3,425,543 and 3,493,629. The estimated revenue for 1914 was 3,547,836 libras, and estimated expenditure, 3,109,836 libras. Of the total estimated revenue, 1,505,112 libras were credited to customs. The estimated disbursements were apportioned as follows: finance and commerce, 888,224 libras; war and marine, 832,386; administration, 510,613; justice and public instruction, 481,345; public works, 200,511; legislative, 107,943; foreign affairs, 88,814. The public debt recognized by the government, Jan. 1, 1913, was 4,023,006 libras.

ARMY. While military service between the ages of 20 and 50 is obligatory, and an active army, a first reserve, a second reserve, and a national guard are maintained, yet in actual practice the small standing army is recruited by voluntary enlistment or by recruits selected by lot, 2 years being served with the colors, and then 7 years in the first reserve, or until 30 years of age. The peace strength of the army is estimated at from 6500 to 8000 men. On a war basis this number might be increased to 40,000 men, and some authorities put the number as high as 100,000. All arms of the service are represented in the organization, which at one time was being reorganized by French officers.

GOVERNMENT. According to the constitution, the executive power rests with a President, who is elected by direct vote for four years, and is ineligible for the following term. There are two

Vice-Presidents. The President is assisted by a Cabinet of six members. The legislative power devolves upon a Congress of two houses, the Senate and the House of Representatives. Senators (52 in number) and Representatives (116) are elected by direct vote for six years. On Sept. 24, 1912, Augusto B. Leguia was succeeded as President by Guillermo Billinghurst, for the four-year term; first Vice-President, Roberto Leguia.

HISTORY.

OPPOSITION TO PRESIDENT BILLINGHURST. President Guillermo E. Billinghurst, the Mayor of Lima, who had been elected to the presidency in 1912, famous both for his interest in the nitrate business and for his radical ideas of social reform, had aroused the most bitter opposition by his ruthless disregard of the constitution. From the beginning of his presidency he had been confronted by a hostile Congress, and instead of conciliating the congressional opposition, had goaded it to fury by repeated acts of violence. In July, 1913, he had not scrupled to use intimidation in order to secure the election of one of his protégés to the presidency of the Senate. He had promulgated the budget without sanction from Congress. When he attempted to bring about a new general election on the pretext of the illegality of the former election, the Liberals and the Democrats strongly protested. In reply, Billinghurst suspended *La Prensa*, the Opposition organ, and arrested some of his leading antagonists, including Don Carlos Leguia, brother of the ex-president. This arbitrary act was more than Congress could tolerate.

FEBRUARY COUP D'ÉTAT. With the approval, if not actually at the invitation of Congress, Col. Oscar Benavides, Señor Durand, and other military leaders utilized their control of the army to strike a *coup d'état* on February 4. At five o'clock in the morning President Billinghurst's residence was surrounded by troops; the President himself was made a prisoner, forced to resign, and later deported. Gen. Enrique Varela, the Premier, was killed while resisting the insurgents. About 50 other casualties occurred. Colonel Benavides immediately proclaimed himself head of the Provisional Executive, and assumed the portfolios of war and marine; the department of home affairs was taken over by Arturo Osores; justice, Rafael Grau; finance, José Balta; public works, Benjamin Boza; foreign affairs, J. M. Manzanilla. As the revolutionary government was accepted generally by the judiciary, the primates, the corporations, the army council, and the officers of the army and navy, recognition was promptly granted by the United States.

TRIUMPH OF BENAVIDES. Vice-President Roberto Leguia, however, not only refused to recognize the revolutionary junta as a legal government, but asserted that as Vice-President of the republic, he alone was entitled to succeed Billinghurst. In his anxiety to crush all opposition, Colonel Benavides was guilty of such unconstitutional conduct that two of his ministers resigned in protest, Señor Rafael Grau surrendering the portfolio of justice, and Señor José Balta the portfolio of finance. When Congress met on May 15 it elected Benavides President. But Leguia claimed that a majority of the members of Congress assembled at his residence and elected him President. There were thus two men claiming

to be the legally elected President of Peru. Benavides triumphed, however, and obtained recognition from the Supreme Court, from the United States, and from the "A B C" powers. His Cabinet was reorganized as follows: president of the council, minister of war and of marine, General Muniz; foreign affairs, Don Fernando Gazzani; interior, Don Hildebrando Fuentes; justice, Don Luis Julio Menendez; finance, Don Luis Felipe Villaran; public works; Don Joaquin Capelo. The WAR OF THE NATIONS (q.v.) occasioned a financial stringency in Peru, and a thirty-day moratorium was declared, August 8. A Cabinet crisis ensued, with the result that a new ministry was constituted, on August 22, as follows: president of the council and minister of justice, Don Aurelio Souza; foreign relations, Don Fernando Gazzani; interior, Don Fernando Fuchs; treasury, Don J. F. Tudela y Varela; war and marine, Col. Augusto Bedoya; public works, Francisco A. y Paz Soldau. The Souza Cabinet offered its resignation early in November, but President Benavides refused to

in any year until 1880, and the output of 1913 equaled the total production of the United States for the first 25 years of the industry. The value of the product in 1913, was \$237,121,388, compared with a value of \$164,213,247 in 1912. In spite of the greatly increased production in 1913, the average price in that year was 95.4 cents a barrel, compared with 73.7 cents a barrel in 1912.

The great gains in production came from the Mid-Continent field and from California. The normal decline in the oil fields of New York and Pennsylvania was changed to a slight increase under the spur of greatly increased prices. The production of West Virginia and Ohio declined, but slightly. In Indiana the decrease was less than normal because of new developments in the western border of the State. In Illinois the decline was decided, and reflected the inability of the producers to continue the development of new pools. The following table gives the production in each of the States in 1912-13, with the quantity and average price per barrel:

TOTAL QUANTITY AND VALUE OF PETROLEUM PRODUCED IN THE UNITED STATES AND THE AVERAGE PRICE PER BARREL IN 1912 AND 1913, BY STATES, IN BARRELS

State	1912		Average price per barrel	1913		Average price per barrel
	Quantity	Value		Quantity	Value	
Alaska	(a)	(a)	(b)	(b)
California	c 87,272,598	c \$89,824,501	\$0.454	97,788,525	\$45,709,400	\$0.467
Colorado	206,052	199,661	.978	188,799	174,779	.926
Illinois	28,601,308	24,332,605	.851	23,898,899	30,971,910	1.296
Indiana	970,009	885,975	.913	956,095	1,279,226	1.337
Kansas	1,592,796	1,095,698	.688	2,375,029	2,243,283	.947
Kentucky	484,868	424,842	.877	524,568	675,748	1.288
Louisiana	9,263,439	7,023,827	.758	12,498,828	12,255,931	.981
Michigan	(d)	(d)	(b)	(b)
Missouri	(b)	(b)
New Mexico	(b)	(b)
New York	874,128	1,401,880	1.604	902,211	2,169,857	2.404
Ohio	e 8,969,007	e 12,085,998	1.347	8,781,468	17,538,452	1.997
Oklahoma	51,427,071	84,672,604	.674	63,579,324	59,581,948	.937

Texas	11,735,057	8,352,718	.754	15,009,478	14,675,593	.978
West Virginia	12,128,962	19,927,721	1.643	11,567,299	28,828,814	2.492
Wyoming	1,572,306	798,470	.507	2,406,522	1,187,232	.493
Other States	f 10,843	f 19,263	1.777
Total	222,935,044	164,213,247	.737	243,446,230	237,121,388	.954

a Included in California.

b Included in other States.

c Includes Alaska.

d Included in Ohio.

e Includes Michigan.

f Includes Alaska, Michigan, Missouri, and New Mexico.

accept the resignation. In December, Colonel Abril held the post of war minister for two short weeks, but on December 31 he resigned, along with Fernando Fuchs, the minister of the interior.

In February it was announced that Peru and France would refer to The Hague Arbitration Court, the claims of certain French capitalists against Peru. A treaty of arbitration was signed with Venezuela. The Standard Oil Company, through a Canadian subsidiary, acquired a dominant position in the Peruvian oil industry. See also INTERNATIONAL ARBITRATION AND PEACE, *Bryan-Wilson Treaties*.

PETROLEUM. The petroleum production in the United States in the calendar year 1913, reached a total of 243,446,230 barrels, compared with 222,935,044 barrels in 1912. Although the product of 1912 exceeded all previous records, the yield of 1913 surpassed it by the greatest gain in any year since 1910. In fact, the increase of 1913 over 1912—more than 25,000,000 barrels—was greater than the total production

The rank of the three great producing States—California, Oklahoma, and Illinois—remained the same in 1913 as in 1912, and there were few changes in the States of lower rank, though the increased production in northern Texas and northern Louisiana advanced those States above West Virginia. In the less productive States, Wyoming exceeded Kansas by a small margin, and both States showed increased production.

The phenomenal increase which has characterized the growth of the petroleum industry in the United States during the last eight years, was more than maintained in 1914. The amount produced, according to the estimates of the United States Geological Survey, approximated about 292,000,000 barrels in that year. The production in 1913-14 is shown in the following table:

State	1914	1913
California	103,000,000	97,788,525
Oklahoma	98,000,000	63,579,324
Illinois	21,000,000	23,898,899
Texas	20,000,000	15,009,478
Louisiana	15,000,000	12,498,828

State	1914	1913
West Virginia	11,000,000	11,567,299
Ohio	7,500,000	8,781,468
Pennsylvania	7,000,000	7,968,232
Wyoming	4,600,000	2,406,522
Kansas	2,700,000	2,875,029
Indiana	700,000	958,095
New York	800,000	902,211
Kentucky	500,000	524,568
Colorado	150,000	188,799
Other States	50,000	10,848
	292,000,000	248,446,280

FUEL OIL. The use of oil as a fuel continued to increase in 1913. Oil as a fuel is used widely where either of two conditions prevail. First, where oil is the most efficient source of heat and power, because of the absence or inadequate supply of cheaper fuel; and second, where the use of oil as fuel represents a means of disposing of excess accumulation of crude oil, residues, or distillates, for which no market is at hand. The first condition is found chiefly on the Pacific coast and the second in the newer fields. Oil is also beginning to be used as fuel by vessels of the navy and the merchant marine. It is estimated that the quantity of crude oil used as fuel in California in 1913 was 63,000,000 barrels. The use by railroads of oil from other fields than California, and the fuel oil furnished from imported Mexican crude, brought the total quantity of fuel oil consumed in the United States in 1913, to 83,000,000 barrels.

WORLD PRODUCTION. The total world production in 1913 was 381,508,916 barrels. Countries other than the United States produced as follows: Russia, 60,935,482 barrels; Mexico, 25,696,291 barrels; Rumania, 13,554,768 barrels; Galicia, 7,818,130 barrels; India, 7,600,000 barrels; Dutch East Indies, 11,966,857 barrels; Japan, 1,942,009 barrels.

PHARMACY, SCHOOLS OF. See UNIVERSITIES AND COLLEGES.

PHELAN, JAMES DUVALL. An American public official, elected on Nov. 3, 1914, United States Senator from California. He was born in San Francisco, in 1861, and was educated at St. Ignatius College and at Santa Clara College, after which he studied law at the University of California, but did not actively practice. From his earliest manhood he took an interest in public affairs and was a member and vice-president of the World's Columbian Commission. In 1896 he was elected Mayor of San Francisco and held this position until 1902, several times receiving a complimentary vote for United States Senator in the California Legislature. Following the earthquake and fire of 1906, he was designated by President Roosevelt's proclamation to receive funds and use the United States Mint as a depository. As one of the foremost citizens of San Francisco he was active in bringing about reforms in municipal conditions following the fire. He served as a member of the park and library commissions of the city; was a member of the board of regents of the University of California, and was also an official and director in several important financial institutions. Mr. Phelan is a Democrat; was nominated at the direct primary election in 1914, and after a very close vote was elected United States Senator, although the Progressives succeeded in electing the Governor and other important State officials. See CALIFORNIA.

PHILIPPINE ISLANDS. POPULATION. No

census of the Philippines has been taken since 1903, when the population was 8,265,348. An estimate by the United States Census Bureau places the population on July 1, 1914, at 8,650,937.

AGRICULTURE. The chief efforts for the development of the islands have been related to the problem of extending its agricultural possibilities. Six governmental agencies giving instruction in agriculture or engaged in agricultural development, are the Bureau of Agriculture, the Bureau of Education, the College of Agriculture, the Bureau of Forestry, the Bureau of Science, and the College of Veterinary Medicine. The Bureau of Agriculture creates agricultural knowledge through its experimental work and its field studies. The Bureau of Education teaches agriculture in its schools. The work of the other organizations are sufficiently indicated by their titles. In 1914 there was published a summary of the results of special investigations, in the development of the Philippines, made by Henry Jackson Waters, president of the Kansas State Agricultural College. He finds conditions in the main favorable to agricultural development, but emphasizes the importance of coördinating the agencies for giving instruction in agriculture, and points out the waste in the present methods especially in the sugar industry, declaring that the sugar producers cannot hope to compete successfully with those of other countries while permitting 35 per cent of the sugar contained in their cane to be lost in the process of milling. He also points out the importance of providing a suitable and ample food supply for the people of the Philippines, and declares that this would be possible if all the possibilities of development were taken advantage of.

The agricultural conditions in 1914 are indicated in the table of commerce on the following page. The rice crop was considerably smaller than in 1913, while the sugar exports were practically the same. The copra crop was much smaller in 1914 than in 1913, and exports of cigars also showed a large decrease. The leaf tobacco exports, however, showed an increase of about \$2,000,000. The exports of hemp decreased from 142,292 long tons in 1913 to 130,774 tons in 1914.

COMMERCE. Customs returns of the Philippine Islands for the year ending June, 1914, show a satisfactory condition in the import trade, but a reduced value in exports, as compared with the year ending June, 1913. Imports amounted to \$56,011,570, and, though slightly below those of the previous year, there was a substantial increase in the general import trade of the islands, the smaller total being due to greatly reduced foreign purchases of rice following larger local production. Exports were valued at \$51,238,048, and were about two and a half million less than the exceptionally large value reached in 1913.

There was a marked increase in imports of iron and steel, among which sugar machinery took a prominent place, while larger values of structural iron and steel, rails for railways, corrugated roofing and cement also testified to growing activity in the development of the islands. The \$8,000,000 trade in cotton cloths was increasing with the United States, American textiles representing about 75 per cent. A larger value in cotton yarns and knit goods than

heretofore recorded was characterized by the distinct lead credited to Japanese products.

The reduced export total reflected the continuing effect of the drought and typhoons of 1912 on the production of copra and Manila hemp, and a reduced American demand for the Philippine cigar.

The quantity of hemp exported was the smallest since 1908, but the monopoly of the Philippines in the production of this fibre has in the past two years furnished full compensation for declining output in advancing prices, and the reduced exports of 1913 and 1914 yielded the largest values during American occupation.

Copra did not fare so well, and, though prices have been generally upward with diminishing production, the export shrinkage from the maximum of 166,667 long tons in 1912 to 70,392 in 1914 resulted in a value of only half the \$16,000,000 total of that year. Estimates and the latest returns, however, point to the recovery of the hemp and coconut plantations from the disasters of two years ago.

Exports of sugar amounted to 209,606 long tons, and, slightly exceeding the previous high record of 1913, were the largest since the Spanish period. There was a resumption of activity in shipments to the United States in the closing months, after a period of reduced purchases which had forced the bulk of exports into the oriental market of former years prior to free trade.

The American demand for the Philippine cigar suffered its second serious reaction during 1914, and, though it was not so serious as that of 1911 following the first rush of free trade, exports to the United States were only about half the maximum quantity reached in 1913. The decline in the value of the cigar trade was consequently serious in spite of well-maintained shipments to other countries. Exports of leaf tobacco, on the other hand, were the largest recorded during American occupation.

Among minor exports coconut oil took the lead with a \$2,000,000 value. This is a practically new export, the product of a factory recently installed at Manila, and is a factor to be considered in the reduced copra exports.

Trade with the United States continued to increase and constituted over half of all imports and 43 per cent of all exports.

The following table shows trade conditions in the fiscal years 1913 and 1914.

TRANSPORTATION. During the year the Manila Railroad Company actively extended its lines in Luzon, and communication will soon be established between the most important points of the islands. The Philippine Railroad Company completed its construction work in the islands during the year. The year 1914 was on the whole the most successful year in the history of these two railroads.

IMMIGRATION AND EMIGRATION. The total arrivals in the islands in 1914 numbered 17,556, compared with 18,365 in 1913. The departures numbered 19,180, compared with 21,436 in 1913. The total number of immigrants was 4049 and the emigrants 1782.

POSTAL SAVINGS BANK. The number of offices on Dec. 31, 1913, were 437; number of accounts 42,271; net deposits Dec. 31, 1913, P2,822,132.77; number of depositors 42,271, of whom 35,162 were Filipinos, or 83.18 per cent of total.

The number of accounts standing open on June 30, 1914, 45,518; net deposits, 2,833,824.82; number of offices 436.

EDUCATION. There were in 1914 36 school divisions, with 257 supervising districts, 3924 primary schools, 278 intermediate schools, and 44 secondary schools, making a total of 4246 schools, against 2934 in 1913, an increase of 1312. The total enrollment was 618,478, the average monthly enrollment 501,379, and the average daily attendance 436,857. There were 18 trade schools, 24 provincial shops (intermediate), 121 municipal shops (intermediate), and 215 municipal shops (primary).

The total number of American teachers was 609; total number of Insular Filipino teachers, 1236; total number of municipal teachers, 7559; total number of aspirantes, 72.

The Philippine Normal School building, Manila, was completed at a cost of P436,000. Nearly 1000 prospective teachers are annually receiving instruction here along the lines of advanced academic work, basketry, hat-making, fine needlework, lace-making, and domestic science and economy.

The Philippine School of Arts and Trades, Manila, is the largest trade school in the Philippine Islands, and annually sends out a number of skilled and experienced workmen. Instruction is given in automobile repairing, carpentry, wheel-wrighting, furniture-making, ceramics, blacksmithing, designing, and molding. Practical shop work naturally receives

		Year ending June	
		1913	1914
Rice production	Kilos	625,000,000	500,000,000
Rice imports		\$7,940,857	\$2,800,884
Sugar exports	Kilos	212,540,468	212,970,607
Sugar exports		\$9,491,540	\$9,457,982
Copra exports	Long tons	111,269	70,392
Copra exports		\$11,647,898	\$8,297,429
Cigar exports	Number	207,896,000	164,065,000
Cigar exports		\$8,356,748	\$2,528,540
Leaf tobacco exports	Pounds	29,060,665	31,605,508
Leaf tobacco exports		\$2,005,667	\$2,018,294
Total tobacco exports		\$5,454,056	\$4,671,700
Manila hemp exports	Long tons	142,292	180,774
Manila hemp exports		\$28,044,744	\$22,875,106
Total imports		\$56,827,533	\$56,011,570
Total exports		\$58,683,326	\$51,238,048
Total foreign commerce		\$110,010,909	\$107,249,618
Imports from United States		\$25,387,085	\$28,571,821
Exports to United States		\$19,848,885	\$22,047,105
Total commerce with United States		\$45,235,970	\$50,618,926
United States percentage of total foreign commerce...		41	47

most emphasis, yet regular academic work through intermediate grades is also given.

The Philippine School of Commerce offers a four-years course in business and clerical subjects. The requirement for admission is completion of the intermediate course. Stenography, typewriting, bookkeeping, commercial arithmetic and geography, and business correspondence are thoroughly taught. The Philippine School for the Deaf and Blind, Manila, provides for an education for children too deaf and blind to be properly instructed in the common public schools. Courses in the regular academic subjects, lip reading and finger speech, as well as certain industrial subjects, are taught. The School of Household Industries, Manila, is to train adult women in certain selected home industries. Instruction is given in fancy needlework, embroidery, and lace-making. The complete course requires six months, classes being graduated semiannually. Upon returning to their home towns, graduates establish working centres for the production of high-grade needlework.

The Central Luzon Agricultural School has dormitory accommodations for the pupils and operates a large farm.

The expenditures for school purposes amounted to ₱3,868,400.96.

FINANCE. The latest available statements for the complete fiscal year are for 1913. The balance at the beginning of the year amounted to \$8,239,312, the total revenues to \$13,489,700, and the total expenditures to \$14,745,201. The bonded indebtedness of the Philippine government in 1914 was \$16,125,000.

POLITICS AND GOVERNMENT. In October a bill for the government of the islands was passed in the United States House of Representatives by a vote of 211 to 59. The bill virtually promises independence to the islands "as soon as a stable government shall have been established." The measure provides for an elective Senate, thus making both branches of the Legislature elective, gives a qualified veto power to the Governor-General, and an absolute veto power to the President. The bill was not taken up in the Senate during the Sixty-third Congress.

In 1913 upon the recommendation of the Governor-General and the Commanding General in the Philippine Islands, and with the approval of the Secretary of War, it was decided to take another step in the development of the civil government in the Moro Province by making the Governor a civil officer. The first appointment to this important office was Mr. F. W. Carpenter, well known for many years for his able administration of the office of Executive Secretary in Manila. By Act No. 2308, passed Dec. 20, 1913, the name of Moro Province was changed to the Department of Mindanao and Sulu, and the Province of Agusan was placed under the jurisdiction and control of the Governor of said Department. On July 23, 1914, the Philippine Commission passed a new Organic Act (Act No. 2408) for the government of the Department of Mindanao and Sulu, as it is now called. The act retains the Legislative Council of five, appointed by the Governor-General, but elevates the districts to the dignity of provinces governed by a Governor and Secretary appointed by the Department Governor, and a third member who is elected. Municipal governments modified to suit the varying degrees of advancement

of their inhabitants are to be organized, consisting of a president appointed by the Provincial Governor, an elected vice-president, and a councilor for each barrio.

HISTORY. Disturbances on the part of malcontents in the latter part of December were frustrated by the prompt action of the police and constabulary. For some time previous officers of the army had been warned that several thousand Filipinos living in or near Manila were preparing for a revolutionary attack upon the authorities. News of the plot came from members of the constabulary who had joined secret societies whose members were followers of Artemio Ricarte, a fugitive revolutionist living in Hongkong. As a result of this knowledge careful preparations were made, especially in the strongly fortified island of Corregidor, in which garrison two companies of scouts were disarmed. American residents in isolated places were supplied with rifles and ammunition. The threatened attack was begun on December 24, when followers of Ricarte fired upon the Manila police in the Botanical Gardens, but these insurgents were soon subdued and placed in prison. At Navotas, six miles north of Manila, an unsuccessful attack was made upon the municipal buildings and guards, and here 25 prisoners were taken. It was indicated by press reports that documents had been found which proved the existence of a widespread conspiracy, and that 30,000 Filipinos had for some time been drilling in anticipation of an uprising.

LEGISLATION. The Third Philippine Legislature held its second session from Oct. 16, 1913, to Feb. 3, 1914, and a special session from Feb. 6, 1914, to Feb. 28, 1914. Among the many acts passed the following are some of the more important:

An act creating five additional companies of constabulary; an act authorizing the Governor to sell or lease the buildings and other property known as the Insular Cold-storage and Ice Plant; an act creating a board of public utility commissioners and prescribing its duties and powers; an act changing the name of the Moro Province to the Department of Mindanao and Sulu, placing the Province of Agusan under the jurisdiction and control of the Governor of said province; an act abolishing the office of supervising railway expert, and transferring the duties of said office to the board of public utility commissioners; an act revising and consolidating the laws relative to internal revenue; an act providing for the reorganization of the courts of First Instance and of the Court of Land Registration; an act providing for the taking of a census of the Philippine Islands; an act providing for the sale of the land known as the San Lazaro Estate, in the city of Manila; an act providing for the inspection, grading, and baling of Abaca (Manila hemp), maguay, sisal, and other fibres.

In its final session a reply was made to statements published in the public press by Dean C. Worcester, former Secretary of the Interior for the Islands, as to slavery or peonage. The reply asserted that investigation had shown that slavery, in the legal sense of the word, did not exist in the archipelago. The Assembly granted to the Marconi Company a franchise for the erection of 40 wireless stations, with a provision authorizing the Philippine government to take over the system in time of war. Governor-Gen-

eral Harrison, in a message to Secretary Garrison, said that harmony in the local government was indicated by the passage of a general appropriation bill, by which more than \$1,000,000 of annual expenditure would be saved without any impairment of efficiency. To the Bureau of Health and Education were given substantially the amounts recommended by their directors. Mr. Harrison in his message stated that the receipts of the bureaus hereafter would revert automatically to the general treasury, instead of allowing chiefs to spend such sums in their discretion for purposes not specifically authorized. The salaries were reduced, but this was confined entirely to higher officials. No salaries of \$3000 or under were cut. Salaries between \$3000 and \$5000 were cut 5 per cent; salaries of over \$5000 were cut 10 per cent. The bill providing for these decreases passed both Houses unanimously. In the Upper House of the Legislature, formerly controlled by Americans, was in 1914 a majority of natives.

OFFICERS. The Philippine Commission in 1914 was composed of the following members: Governor-General and President of the Commission, Francis Burton Harrison; Vice-Governor and Secretary of Public Instruction, Henderson S. Martin; Secretary of Finance and Justice, Victorino Mapa; Secretary of Commerce and Police, Clinton L. Riggs; Secretary of the Interior, Winfred T. Denison. Members: Rafael Palma, Vicente Singson, Jaime C. de Veyra, Vicente Ilustre.

The vacancy of Associate Justice of the Supreme Court, created by the appointment of Victorino Mapa as a member of the Philippine Commission, was filled by the appointment of Manuel Araullo, who was at that time president of the code committee. See **HYGIENE**; **VITAL STATISTICS**.

PHILOLOGY, CLASSICAL. The *Loeb Classical Library* (see **YEAR BOOK** for 1911, 1912, 1913) was enlarged by translations of Cicero, *De Officiis* and *De Finibus*; Dio Cassius (two of the promised nine volumes); Horace, *Odes* and *Epodes*; Julian, volume ii; Plato, (one volume); Suetonius (complete in two volumes); Tacitus, *Dialogus*, *Agricola*, and *Germania*; and Xenophon, *Cyropædia*. A fine translation of the *De Architectura* of Vitruvius, the Roman engineer, by the late Professor M. H. Morgan, of Harvard University, appeared. To the *Oxford Library of Translations* were added volume ix of the important translation of Aristotle, covering the *Eudemian Ethics* and the *De Virtutibus et Vitiis*, and a version of Aristotle's *Magna Moralia*.

Of the articles in periodicals, extremely varied in scope, and for the most part highly technical or devoted to matters not of wide general interest, only a very few can be mentioned. However, to indicate the tendencies of American classical scholarship, the articles which appeared in the leading American classical periodicals may be noted in some detail. In *The American Journal of Philology*, edited by B. L. Gildersleeve, were published "Notes on Plautus and Terence," C. Knapp; "Some Greek, Roman, and English Tityretus," W. B. McDaniel (a discussion of the semi-respectable street roisterer, and a suggestion that the name "Tityretu," given to modern roisterers, was derived from *tityrus*, a satyr: there is no direct connection between the term and the words *Tityre tu*, with which Vergil's *Eclogues* begin);

"A Rejected Poem and a Substitute," T. Frank (a suggestion that Catullus meant to suppress 68 A, and to keep 68 B. He failed, however, to destroy the former poem; his posthumous editor, finding it among Catullus's papers, published it, as prefix to 68 B); "The Archetype of our Iliad and the Papyri," G. M. Bolling; "Varoniana," E. W. Fay; "The Participle in Livy," R. B. Steele; "Studies in the Syntax of Early Latin," C. Knapp (a summary and criticism of part of Bennett, *The Syntax of Early Latin*, vol. ii—*The Cases*); "The Duration of the Trojan War," B. O. Foster; "Two Homeric Personages," J. A. Scott; "Cæsar, Cicero, and Ferrero, I," E. G. Sihler; "Spanish Inscriptions," H. Martin; "Aristarchas of Samos," W. A. Heidel. Two reviews in this Journal, by K. F. Smith, deserve attention. One deals with Magnus's monumental text-edition of the *Metamorphoses* of Ovid, the other with Schevill's *Ovid and the Renaissance in Spain* (the latter work traced the influence of Ovid in Spain, with special reference to the development of types of narrative literature in the modern world). Norden's *Agnostos Theos*, noticed last year, was discussed in *The American Journal of Philology*, by R. H. Tukey and B. L. Gildersleeve.

From *Classical Philology*, edited by P. Shorey, may be noted "Dramatic 'Satura,'" B. L. Ullman; "The Formation of the Chalcidic League," A. B. West; "The 'Continuation' of the Odyssey," A. Shewan; "Representative Government in the Macedonian Republics," T. Frank; "Studies in the Exclamatory Infinitive," A. R. Anderson; "The Form of the Early Etruscan and Roman House," Margaret C. Waites; "Documentary Frauds in Litigation at Athens," G. M. Calhoun; "Greek and Latin Etymologies," F. A. Wood; "A New Fragment of the Decree of Chremonides," K. K. Smith; "The Unity of the Enclitic 'Ne,'" A. R. Anderson; "Gens, Familia, Stirps," M. Radin; "Attic Archons from 294 to 262 B. C.," A. C. Johnson; "The Historical Infinitive," J. J. Schlicher; "Apprentice Contracts and the Apprentice System in Ancient <= Roman > Egypt," W. L. Westermann; "Plato's *Laws* and the Unity of Plato's Thought. I," P. Shorey; "Athenian Interpolations in Homer. Part II. External Evidence," J. A. Scott; "Notes on Attic Inscriptions," A. C. Johnson.

In Volume 44 of *The Transactions of the American Philological Association* we find the following papers, among others: "The Conclusion of Cicero's *De Natura Deorum*," A. S. Pease; "Repudiative Questions in Greek and Latin," A. R. Anderson; "A Study of the Social Position of the Devotees of the Oriental Cults in the Western World, Based on the Inscriptions," D. N. Robinson; "The Story of the Strix: Ancient," S. G. Oliphant (a study of ancient tales of the woman-bat); "The Genitive and Dative Singular of the Latin Pronominal Declension," E. H. Sturtevant; "The Site of Dramatic Performances at Rome in the Times of Plautus and Terence," Catharine Saunders; "The Plot of the *Querolus* and the Folk-Tales of Disguised Treasure," D. P. Lockwood.

Though *The Classical Journal* and *The Classical Weekly* are devoted primarily to the pedagogical side of Latin and Greek studies rather than to research, some articles from them may be mentioned here. In *The Classical Journal* appeared "The Presentation of Classical Plays," D. D. Haines (an interesting discussion of per-

formances in modern times of ancient plays), and "The Old and the New in Metrics," R. W. Husband (a useful statement of the positions taken by divergent schools with respect to Greek and Roman metrics). The newer school is represented by J. W. White's *The Verse of Greek Comedy*, noticed in the YEAR BOOK for 1912. For discussions of Professor White's book see *Classical Philology*, viii, 99-104, 214-220. From *The Classical Weekly* we may note, besides many excellent reviews, "Roman Comedy," W. A. Oldfather, and "The Abuse of Fire," W. B. McDaniel (a study of fire "miracles" in ancient religion and magic).

Under the auspices of various universities—California, Columbia, Cornell, Harvard, Leland Stanford, Michigan, Nevada, Wisconsin, Yale—are published studies in classical philology. From *Harvard Studies* for 1913 we may name "The Latin Epyllion," C. N. Jackson; "Lucilius: The Ars Poetica of Horace and Persius," G. C. Fiske; and "Cicero's Judgment on Lucretius," H. W. Litchfield, a discussion of the famous passage, *Ad Quintum Fratrem* 2.9 (11), in which Cicero pronounced judgment on the poetry of Lucretius. In *Harvard Studies* for 1914 (vol. xxv) appeared "National Exempla Virtutis in Roman Literature," H. N. Litchfield; "Medieval Versions of the Posterior Analytics," C. H. Haskins; "Molle Atque Facetum," C. N. Jackson (a discussion of the well known passage, Horace *Sermones* 1.10.44); "Hippocratea," W. A. Heidel (a very elaborate discussion of the text in many passages of Hippocrates). The Leland Stanford University press issued *The Birds of the Latin Poets*, E. W. Martin. In the *University of California Publications in Classical Philology* appeared "Ovid and the Renaissance in Spain," R. Schevill (see the second paragraph of this article). The important *Humanistic Series* of the University of Michigan was made even more valuable by the publication of "Athenian White Lekythoi, With Outline Drawing in Matt Color on a Dark Ground," A. Fairbanks, and "East Christian Paintings in the Freer Collection," C. R. Morey, two sumptuous and richly illustrated volumes. "De Rinuccio Aretino Græcarum Litterarum Interprete," D. P. Lockwood in *Harvard Studies*, for 1913, deals with a writer of the humanistic period. Here may be named an edition of *The Piscatory Eclogues of Jacopo Sannazaro*, by W. P. Mustard, who in 1911 edited the *Eclogues of Baptista Mantuanus*. The Yale University press published E. G. Sihler's *Cicero of Arpinum*, an elaborate biographical study of Cicero.

Some works which aim to give control of publications in the field of classical philology may be named: *The Year's Work in Classical Studies* (vol. viii, covering 1913, appeared in 1914); *Bursian's Jahresbericht*, in its forty-second year (in each year there are elaborate articles which enumerate and appraise the contributions within a given period, sometimes many years in length, to a given field of classical study); *Bibliotheca Philologica Classica*, a quarterly supplement to the *Berliner Philologische Wochenschrift* (the *Wochenschrift* itself consists mainly of reviews of books and articles on classical subjects, in part, however, of summaries of other classical periodicals). Very useful is *Bibliographie Pratique de la Littérature Grecque*, P. Masqueray, published in 1914. Helpful also are the summaries of the contents of various classical period-

icals which are given in each number of *The Classical Quarterly*.

Of "Greek Inscriptions from Sardes," by W. H. Buckler and D. M. Robinson, noted in the YEAR BOOK for 1912 and 1913, installments IV and V appeared in *The American Journal of Archaeology*. The latter deals with a very elaborate record, on a large stone, which relates, among other things, to a certain Menogenes, who, among various claims to honor, served as a member of a committee sent by Sardes to Rome to congratulate Augustus on the coming of age of his son, Gaius Julius Cæsar, and to "discourse with Augustus concerning the common interests of Asia and of the City." Sections A and B of Divisions II and III of the *Publications of the Princeton University Archaeological Expeditions to Syria in 1904-5 and 1909* were issued; these dealt with "Ancient Architecture in Syria," and "Greek and Latin Inscriptions in Syria." W. Larfeld's authoritative work, *Griechische Epigraphik*, the best in its field, reached a third edition. R. Cagnat's *Cours d'Épigraphie Latine*, the best available general treatment of Latin epigraphy, reached its fourth edition. H. Dessau's *Inscriptiones Latinae Selectae* was enlarged by the publication of vol. III, part I, containing "Nachträge" and "Indices." New parts appeared also of *Inscriptiones Græcæ ad Res Romanas Pertinentes*, and of *Sammlung der Griechischen Dialekt-Inschriften*. Other important books in this field are *Das Rheinische Germanien in den Antiken Inschriften*, A. Riese; *Die Römischen Inschriftsteine der Hofbibliothek Wien*, E. Groag; *Mélanges d'Archéologie et d'Épigraphie Byzantines*, O. Jaraffi. A serviceable collection of inscriptions for use in schools is *Inscriptiones Græcæ*, O. Kern, volume 7 of the *Tabulae in Usum Scholarum*, published at Bonn. An important publication of 1913, not noticed last year, was the beginning of Kirchner's revision of part of *Inscriptiones Græcæ*: for the light thrown by the documents there given on Athenian state-history see K. K. Smith in *The Classical Weekly* 8.50-55.

In paleography, the most important work of the year is *The Beneventan Script: A History of the South Italian Minuscule*, E. A. Loew; in a review in *The American Journal of Philology* 35.340-343, C. U. Clark describes this book as "the most important recent paleographic investigation in any language." Volume x of the invaluable *Oxyrhynchus Papyri*, by Messrs. Grenfell and Hunt, was issued. For an account of the contributions to our knowledge of Greek literature through these and other papyri finds see "New Greek Literature," C. W. Peppler, in *The South Atlantic Quarterly* for April, 1914. Important also are *Exempla Codicum Litteris Minusculis Scriptorum Annorumque Notis Instructorum: Volumen Alterum, Codices Petropolitani*, edited by G. Ceretelli and S. Sobolevski, published in 1913; "Papiri Greci e Latini, II," in *Pubblicazioni della Società Italiana per la Ricerca dei Papiri Greci e Latini; Veröffentlichungen aus der Papyrus-Sammlung der K. Hof- und Staatsbibliothek zu München, I: Byzantinische Papyri*, edited by A. Heisenberg and L. Wenger; *Papyri Iandanae: Fasciculus IV*, edited by G. Speiss, containing "Instrumenta Græca Publica et Privata"; *Heroulanensium Voluminum quæ supersunt Collectio Tertia. Tomus I* (containing Greek works, by Philodemus). In-

teresting is an inaugural lecture by A. C. Clark, *Recent Developments in Textual Criticism*.

Dr. E. Zeller's *Grundriss der Geschichte der Griechischen Philosophie* reached its eleventh edition, at the hands of F. Lortzing. The ninth edition of Ritter and Preller's valuable *Historia Philosophiae Graecae* appeared in 1913. J. Burnet published *Greek Philosophy. Part I: Thales to Plato*. A. W. Benn's *The Greek Philosophers* reached a second edition. In the kindred field of religion we may notice, first, that the revised edition of Frazer's monumental work, *The Golden Bough*, was completed. The revised portions published during the year include "Balder the Beautiful" and "Adonis, Attis, and Osiris." Other important works are *Zeus: A Study in Ancient Religion*, vol. i; *Zeus, God of the Bright Sky*, A. W. Cook (with 42 plates, 566 figures); *Roman Ideas of Deity in the last Century Before the Christian Era*, W. W. Fowler; *Les Mystères d'Eleusis*, P. Foucart; "Principii di Religione Dionisiaca," C. Lanzani, in the Italian *Athenaeum* (an effort to show that Dionysus was "in later times a solar god in his earthly manifestations . . . paralleled by Apollo as the solar deity of the heavens, and by Orpheus the sun-god as man"). Much important work in the field of philosophy and religion appears in the periodicals, especially in the *Archiv für Religionswissenschaft*. One article by O. Waser, entitled "Ueber die äussere Erscheinung der Seele in den Vorstellungen der Völker, zumal der alten Griechen," dealt with the forms under which the soul was represented, such as birds, the bat, the bee, the fly, the serpent, and the butterfly. An important article, copiously illustrated, giving ingenious and often convincing explanations of magic formulæ, by A. Delatte, in the *Musée Belge*, dealt with studies in Greek magic.

In the *Revue des Etudes Grecques* F. Greif wrote elaborately on ancient music, criticising the views of Hermann, Rosbach, and Westphal. For the "new metric" as applied to Greek and Latin, see the fifth paragraph of this article. Parts II and III of C. Zander's *Eurythmia, vel Compositio Rythmica Prose Antiquae* appeared: Part II deals with the "Eurythmia Ciceroni." In a review of the first part of this work, in *Classical Philology*, vi. 494-497, P. Shorey, a competent critic, urged caution in accepting the views of Zander. Th. Zielinski, the well-known pioneer in the renewed modern study of rhythm in ancient prose, gave further evidence of researches in this field by his *Der Constructive Rhythmus in Ciceros Reden*.

In the field of Greek and Latin grammar and linguistics we note first that the revised (second) edition of Kühner's *Ausführliche Grammatik der Lateinischen Sprache* (see YEAR BOOK for 1912) was completed by the publication of part II of vol. ii. Prof. C. E. Bennett issued the second volume of his great work, *The Syntax of Early Latin* (see YEAR BOOK for 1910 and 1911): this volume deals with the cases (see the second paragraph of this article). An important periodical in this field is *Glotta*; in the fourth part of this, for 1913, in the section on syntax, there was a report, covering 40 pages, on the extraordinary amount of work recently done in Latin syntax. Part IV of vol. v of this periodical, for 1914, contains a very valuable report of the linguistic work, including articles, of 1911. In *Glotta* again, in 1914

(vol. vi), appeared a long article, by R. Methner, on the development of the qualitative ablative in Latin. Reference may be made also to "The Grammatical Chapters in Quintilian 1.4-8," F. H. Colson, in *The Classical Quarterly*; *De l'Aspect Verbal en Latin Ancien*, D. Barbalet; *The Semantic Variability and Semantic Equivalents of -oso and -lento*, E. W. Nichols (a Yale University dissertation); *The Dative of Agency: A Chapter of Indo-European Syntax*, A. Green (a Columbia University dissertation, 1913); and *Vom Mittelalter und von der Lateinischen Philologie des Mittelalters*, P. Lehmann. On the Greek side we have a new and enlarged edition of a valuable work, Hirt's *Handbuch der griechischen Laut- und Formenlehre*; an elaborate article on "Der Ursprung des griechischen Bereichsakkusativs," that is, on the origin of the accusative of specification in Greek, by R. Blümel, in *Indogermanische Forschungen*. Professor A. T. Robertson published *A Grammar of the Greek New Testament in the Light of Historical Research*, an elaborate work. In *The Classical Quarterly* A. Thumb, author of a very valuable work, *Handbook of the Greek Vernacular* (see the YEAR BOOK for 1913), published "On the Value of Modern Greek for the Study of Ancient Greek."

Early in the summer, before the European War began, it was announced that for various reasons the publication of *Epitome Thesauri Latini* (noticed in the YEAR BOOK for 1912) had been discontinued. The revised edition of Forcellini's *Lexicon Totius Latinitatis* made progress in 1914, as in 1913. In an interesting paper in *The Classical Weekly*, 5.34-36 (1911), Prof. C. E. Bennett showed conclusively that this lexicon was prepared by Forcellini, not, as current accounts had declared, by Faciolati. Volume ii of the "Onomasticon" of the great *Thesaurus Linguae Latinae*, dealing with Latin proper names that begin with C, was published. Part VII of G. Lodge's *Lexicon Plautinum*, covering *Fabula* to *Herole*, appeared; pp. 1-672 have now been completed. From the Harvard University Press issued the third edition of E. A. Sophocle's *Greek Lexicon of the Roman and Byzantine Periods* (from B.C. 146 to A.D. 1100). Part III of Passow's *Wörterbuch der Griechischen Sprache* appeared (see the YEAR BOOK for 1913). Lübker's *Reallexikon des Klassischen Altertums* reached its eighth edition.

In the fields of Greek and Roman history and life we have an elaborate work by T. Frank, *Roman Imperialism*, whose aim is "to analyze, so far as the fragmentary sources permit, the precise influences that urged the Roman republic toward territorial expansion"; translations of two works by G. Ferrero, *Ancient Rome and Modern America* and *Between the Old World and the New: A Moral and Philosophical Contrast*; *Histoire de l'Antiquité. Tome III. La Macédoine, Carthage et Rome (330-107)*, E. Cavaignac; *Histoire de la Gaule. Tome IV: Le Gouvernement de Rome, Jullian*; *Histoire Ancienne de l'Afrique du Nord, I, St. Geell*; *Spain under the Roman Empire*, E. S. Bouchier. For a review of books on Graeco-Roman Egypt, see *The Classical Review*, 28.198-201. A pretentious work is A. E. P. Weigall's *The Life and Times of Cleopatra*: for a severe review of it, however, see *The Nation* (New York) for October 29. Pöhlmann's *Griechische Geschichte*

und Quellenkunde reached its fifth edition. Artur Ledl, in *Studien zur älteren Athenischen Verfassungsgeschichte*, discussed questions relating to constitutional government at Athens: for a summary and criticism of the book by A. T. Olmstead, see *The Classical Weekly*, 8.78-80. An interesting book is A. W. Pickard-Cambridge's *Demosthenes and the Last Days of Greek Freedom*. The student of the Ægean or Minoan civilization may consult R. Dussaud, *Les Civilisations Préhellénique dans le Bassin de la Mer Egée*, second edition, entirely revised, and H. R. Hall, *Ægean Archaeology*. Note also *The Auxilia of the Roman Imperial Army*, G. L. Cheeseman. *Roman Provincial Administration*, by W. T. Arnold, reached a third edition, by E. S. Bouchier. In the United States much activity has been shown in the publication of source-books of Greek and Roman history. Prior to 1914 such books had been issued by G. W. Botsford and H. Webster. In 1914 appeared W. S. Davis's *Readings in Ancient History: Greece and Readings in Ancient History: Rome*; and Ida C. Thallon's *Readings in Greek History: From Homer to the Battle of Chæronea*.

Works on kindred themes are: B. Laum, *Stiftungen in der Griechischen und Römischen Antike: Ein Beitrag zur Antiken Kulturgeschichte*, in two volumes, of which the first gives the facts, the other discusses the sources; E. Ziebarth, *Aus dem Griechischen Schulwesen*; J. Kromayer, "Die Wirtschaftliche Entwicklung Italiens im 2. Jahrhundert vor Chr.," in *Neue Jahrbücher für das klassische Altertum*, an elaborate and illuminating study of the social, economic, and imperial conditions which fostered the *latifundia*, or huge landed estates, and of the efforts made to check the development of such estates. Books at once popular and authoritative are *Days in Attica*, Mrs. R. C. Bosanquet, and *Ancient Greece*, H. B. Cotterill, a sketch of the art, literature, and philosophy of Greece, viewed in connection with its external development, from the earliest times to the age of Alexander the Great.

Some works dealing with the science of the ancients deserve mention: W. Capelle, "Die Nilschwelle," in *Neue Jahrbücher für das klassische Altertum*, a learned article setting forth ancient observation and theory about the rising of the Nile, examined in the light of modern knowledge; Th. Kopfner, *Der Tierkult der alten Ägypter*; O. Keller, *Die Antike Tierwelt*, vol. ii, dealing with birds, reptiles, fishes, insects, etc.; R. Wolfgang, *Das Nachrichtenwesen des Alterthums mit besonderer Rücksicht auf die Römer*; H. Diels, "Wissenschaft und Technik bei den Hellenen," in *Neue Jahrbücher für das klassische Altertum*, a discussion of applications of science to art and affairs, from Thales to Archimedes; M. Besneer, *Lexique de Géographie Ancienne*; E. E. Sikes, *The Anthropology of the Greeks*.

Works dealing with Roman law are: *History of Roman Private Law: Part II*, E. C. Clark, an account of Roman jurisprudence; and *Etudes d'Histoire Juridique offertes à P. Fr. Girard par ses élèves*, in two volumes.

In the field of Greek and Roman literature we may notice that the first half of vol. iv of M. Schanz's *Geschichte der Römischen Literatur* reached its fourth edition: this deals with Latin literature from Constantine to the time of the Codex Justinianus. Friedrich Leo,

whose untimely death in January, 1914, robbed classical scholarship of the conclusion of his great *Geschichte der Römischen Literatur* (see YEAR BOOK for 1913), published in *Hermes* an article, "Die Römische Poesie in der Sullanischen Zeit," which was to be a chapter of vol. ii of his great work. Valuable is "Kritik und Hermeneutik," Th. Birt, part of the much-needed revision, now under way, of vol. i of Müller's *Handbuch der Klassischen Altertumswissenschaft*. Special works worthy of mention are: "Nerone Poeta e i Poeti intorno a Nerone," C. Morelli, in the Italian *Athenaeum*, a study of the literary circle that gathered about Nero, with special reference to Seneca as its dominant figure and inspirer of the other members; *The Origin of Attic Comedy*, F. M. Cornford; "Die Ionische Novellistik," A. Hausrath, in *Neue Jahrbücher für das klassische Altertum*, a study of the development of the shorter forms of ancient prose fiction, from the logographers who preceded Herodotus to Petronius and Apuleius. E. Rohde's *Der Griechische Roman und Seine Vorkäufer* reached its third edition. Several collections of the shorter, scattered writings of deceased classical scholars were published or extended: Th. Mommsen, *Gesammelte Schriften*, vol. viii, dealing with epigraphical and numismatical themes; H. Usener, *Kleine Schriften*, vol. iii; W. Skutsch, *Kleine Schriften*.

An important event was the publication, in the Oxford Classical Text Series, of Part I of a new critical text-edition of Livy: this covers books i-v. Other important texts are in *Corpus Agrimensorum Romanorum*, vol. i, part I (see *The Classical Review*, 28.108-109). A *Corpus Medicorum Graecorum*, in 12 volumes, has been planned, to be published by B. G. Teubner, in Leipzig: part of vol. v, dealing with Galen, appeared in 1914.

Of works on special authors there is space to mention only R. T. Elliott, edition of the *Acharnians* of Aristophanes; L. Cooper, *Aristotle and the Art of Poetry*, a new and useful translation; T. R. Holmes, edition of *Cæsar, De Bello Gallico*; E. G. Sihler, *Cicero of Arpinum* (see the sixth paragraph of this article); E. Bethe, *Homer, Dichtung und Sage: Erster Band*; A. Roemer, *Homerische Aufsätze*, reviewed, together with other Homeric books, by A. Shewan, in *The Classical Review*, 28.128-132; G. Finster, *Homer: Der Dichter und seine Welt*, second edition; K. Rothe, *Die Odyssee als Dichtung und ihr Verhältniss zur Ilias*, reviewed by J. A. Scott in *The Classical Weekly*, 8.62-64; J. K. Thompson, *Studies in the Odyssey*; Magnus, elaborate text-edition of the *Metamorphoses* of Ovid (see the second paragraph of this article); A. Gudeman, editio maior of the *Dialogus* of Tacitus, in the second, German edition; W. R. M. Lamb, *Clio Enthroned. A Study of Prose-Form in Thucydides*; A. Boucher, a valuable French edition of the *Anabasis* of Xenophon; T. F. Royds, *The Beasts, Birds, and Bees of Virgil*; W. G. D. Butcher, "The Cæsura in Virgil and its Bearing on the Authenticity of the Pseudo-Virgiliana," in *The Classical Quarterly*, 8.123-131; P. Rasi, *Bibliografia Virgiliana*, for 1910-1911. Mr. Butcher holds that his study makes it probable that the *Culex* and the *Moretum* are genuine pieces of Virgil, but that the other poems commonly included in the Pseudo-Virgiliana were not written by Virgil. This is an interesting contribution to the discussion

of the authenticity of these pieces noted in the last YEAR BOOK (last paragraph).

PHILOLOGY, MODERN. The study of philology is at present undergoing a process of transformation which will probably mark a new and important era in its development. The self-styled "Back to Nature" school, founded some 30 years ago by the Germans under the leadership of Schuchardt, believed they could arrive at general laws, applicable to all possible cases, by means of studies of dialects. Their preferred method, *Sprachmischung*, or the mutual penetration of two dialects, has been found wanting, because of the numerous historical factors and variable accessory circumstances which had to be taken into consideration. The new French school, with the brilliant Meillet at its head, rejects entirely the esoteric philology which isolates linguistic facts from all contact with life, and attempts to interpret linguistics by the social movements of civilization—in a word, to recognize in the development of languages the result of political and social actions. Such a doctrine necessarily implies the subordination of theory to fact and the restoration of the written language to its former place of supremacy. It will be interesting to note the development of the new doctrines, though, in view of the present conditions, no vital change can be expected for several years to come.

If the above is true concerning the study of philology, in regard to grammar on the contrary a reaction is noticeable against the study of the history of languages in favor of the general principles of the theory of language. Jespersen's *Modern English Grammar On Historical Principles* (part ii, syntax, vol. i, Heidelberg) * represents to a certain extent an effort to revive the teaching of grammar which has only slightly shown the effects of the progress of linguistics during the course of the century just passed.

Among the works of a more or less general character which have recently appeared, the following deserve to be noted: Bloomfield, *Introduction to the Study of Language* (New York); Flagstad, *Psychologie der Sprachpädagogik* (Leipzig, 1913); Blümel, *Einführung in die Syntax* (Heidelberg); a new edition of Bréal's well-known *Essai de Sémantique* (Paris, 1913), which laid the foundations of the new science of semantics; Pinloche, *La nouvelle pédagogie des langues vivantes*, and Bossert, *L'enseignement des langues vivantes* (Paris), both of considerable interest to teachers; Bradley's *On the Relations Between Spoken and Written Language With Special Reference to English* (Oxford), which is, in spite of its title, of equal importance to the study of language in general; Wyplel, *Wirklichkeit und Sprache* (Vienna), having as its subtitle *eine neue Art der Sprachbetrachtung*; Bally, *Le langage et la vie* (Geneva, 1913); and Bravetta, *I disturbi del linguaggio* (Pavia, 1913). Handschin's report on *The Facilities For Graduate Instruction In Modern Languages In the United States* (Oxford, Ohio) gives a fairly complete list of all the graduate courses in these subjects offered in the United States, the names of the professors, and the works, including articles, published by them up to that date. The tables at the end of the volume contain the number of students attending

* When no date is given it means that the work was issued during the year 1914.

these courses in the different institutions of learning, the number of volumes in the libraries, and the number of advanced degrees granted from 1908 to 1913.

INDO-EUROPEAN. Among the most important works in this field we may mention Fay, *Indo-European Verbal Flexion Was Analytical* (Austin, Texas, 1913), in which the author attempts to prove the old theory of Bopp, the founder of philology; Feist, *Indogermanen und Germanen* (Halle); de la Grasserie, *Du verbe comme générateur des autres parties du discours* (Paris), which seeks to prove that the verb is the generator of all parts of speech in the Indo-European, Semitic, and Ural-Altaic languages, by showing that many nouns are derived from verb-roots, a thesis impossible to sustain; Green, *The Dative Of Agency* (New York, 1913), a very valuable contribution to the study of case-syntax; Hirt, *Fragen des Vokalismus und der Stammbildung im Indogermanischen* (Straassburg); Hagen, *Die Indogermanen* (Gütersloh); and finally Brandstetter, *Indonesisch und Indogermanisch in den Lautgesetzen* (Lucerne, announced for 1915).

INDO-IRANIAN. The productions in this field have become less numerous of late. Probably the most important translations appearing during the past two years are those of Hillebrandt, *Lieder der Rigveda* (Leipzig) and Fritze, *Nala und Damayanti, Savitri* (Berlin). Other works of importance are Hertel, *Pancatantra*; Mrs. Rhys-Davids, *Psalm of the Early Buddhists* (London, 1913); Garbe, *Indien und das Christentum* (Tübingen); Jouveau-Dubreuil, *Archéologie du sud de l'Inde* (2 vols., Paris); Rapson, *Ancient India* (Cambridge); Vidyabhusana, *The Study of Sanskrit* (Bombay, 1913); Zimmermann, *Die Quellen der Mahānārāyaṇa-Upaniṣad* (Leipzig, 1913); Gauthiot, *Essai de grammaire sogdienne (groupe iranique)* (Paris); Moulton, *Early Zoroastrianism* (London, 1913); Jackson, *Catalogue of the Collection of Persian MSS. Presented to the Metropolitan Museum of Art by A. S. Cochran* (New York); and Bloomfield, "The Character and Adventures of Mula-deva," in the *Proceedings of the American Philological Society* (vol. lii, 1913).

Among the modern dialects of India we may note Chatterjee, *Manual of Colloquial Hindustani and Bengali* (Calcutta). In the **ALBANIAN** group, which, though independent, show some elements of kinship to Slavic, Weigand, already well-known for his *Albanesische Grammatik* (Leipzig, 1913), published an *Albanesisch-deutsches, deutsch-albanesisches Wörterbuch* (Leipzig).

Among the works on other dialects not belonging to the Indo-European family we may mention Winstedt, *Malay Grammar* (Oxford, 1913) and *English-Malay Dictionary* (part I, Singapore); Macalister, *Language of the Nawa or Zutt, the Nomad Smiths of Palestine* (London); Martha, *La langue étrusque* (Paris, 1913), containing grammar, texts, and etymological dictionary of Etruscan, which the author believes to be related to the Ugro-Finnish group, contrary to the opinion usually held that it belongs to the Indo-European or Semitic families; Trebitsch, *Baskische Sprach- und Musikaufnahmen* (Vienna), treating a language—Basque—that is now absorbing considerable attention; Ray, *The Languages of Borneo* (Singapore, 1913); Homburger, *Etude sur la phonétique historique du Bantou* (Paris), which concerns the

Bantu dialects of Central and South Africa; Setälä, *Väinämöinen und Joukahainen, eine wort- und mythengeschichtliche Studie in Finno-Ugrian* (Helsingfors); and Madan, *Lala-Lamba-Wisa and English Dictionary* (Oxford, 1913), a useful book for the dialects of Congo-Rhodesia.

SLAVIC. Among the many important works which have appeared in this field the following may be noted: Berneker, *Slavisches etymologisches Wörterbuch* (vol. 1, A-L, Heidelberg, 1908-13); Agrell, "Intonation und Auslaut im Slavischen" in the *Archives d'études orientales* (Upsala, 1913); Vondrák, *Altkirchenslavische Grammatik* (2d ed., Berlin); and Ilešić, *Die Aussprache des Slovenischen* (Berlin, 1913). In Ruthenian, Smal-Stocky and Gartner's *Grammatik der ruthenischen (Ukrainischen) Sprache* (Lemberg, 1913) and the former's *Ruthenisch-deutsches Gesprächsbuch* (Berlin) deserve mention. In syntax, Mazon's *Emploi des aspects du verbe russe* (Paris) is of interest. In Czech, which belongs to the northwestern group of the Slavic languages, there are Smetánka, *Tschechisch-deutsches Gesprächsbuch* (Berlin); as well as his *Tschechische Grammatik* (Berlin). Though Hungarian does not belong to the Indo-European group, we may nevertheless mention Simonyi, *Syntax der Attribute* (Vienna) and Tolnai, *Ungarisches Lesebuch mit Glossar* (Berlin, 1913).

CELTIC. Scholars continue the activity that has already been noted in the past in these columns. The 4th volume of Jullian's *Histoire de la Gaule* (Paris), which treats of the government of Rome, is probably the most noteworthy contribution of the year. Thurneysen's *Die Kelten in ihrer Sprache und Literatur* (Bonn) is an interesting discourse delivered in honor of the Kaiser's birthday. Braungart maintains in *Die Südgermanen* (Heidelberg) the theory, which, it behooves us to say, is very difficult of acceptance, that "die Bojer, Vindilizer, Räter, Noriker, Taurischer usw. waren nach all ihren landwirtschaftlichen Geräten und Einrichtungen keine Kelten, sondern Urgermanen höchst wahrscheinlich das Stammvolk aller Germanen." Such chauvinism is unfortunately detrimental to scholarship. Toward the close of the year 1913 the National Library of Ireland issued its *Bibliography of Irish Philology and of Printed Irish Literature* (Dublin). The main defect of this work, as well as of the *Bibliotheca Celtica* of the National Library of Wales (Aberystwyth, 1913), is a complete absence of method. On account of this great defect these bibliographies can be of little use to others than the initiated. The same can be said of Pokorný's *Concise Old Irish Grammar* (Dublin), containing phonetics and accidence, which could be very useful were it more popular in tone. Besides this defect it contains no information whatever on the derivation of nouns or verbs, or constitution of the sentence. Coffey's *The Bronze Age in Ireland* (Dublin) and Kuno Meyer's *Ueber die älteste irische Dichtung, II, rhythmische alliterierende reimlose Strophen* (Berlin, 1913) deserve to be mentioned. In the field of Welsh, the 5th edition of Spurrell's *Welsh-English Dictionary*, edited by Rev. J. B. Anwyl and Sir E. Anwyl (Carmarthen), is a most welcome production, inasmuch as an up-to-date work of this kind was greatly needed. Fynes-Clinton, *The Welsh Vocabulary of the Bangor District* (Oxford, 1913) is also an important lexicographical contribution. In Welsh literature we may note the following: Peralte,

L'Esoterisme de Parsifal, la vieille légende celtique du cycle d'Artus (Paris), an unsatisfactory work from many points of view; Weston, *The Quest of the Holy Grail* (London, 1913); Kinross, *Tristram and Isolt* (New York, 1913); and Sommer, *The Structure of Le Livre d'Artus and Its Function in the Evolution of the Arthurian Prose-Romances* (London). Finally the pamphlet of Oriou, *Des Celtes-Bretons et des Gallo-Bretons* (Vannes, 1913), and Jaffrennou, *Dictionnaire français-breton de poche* (Carhaix), containing 25,000 words, complete the list.

GERMANICS. The efforts of Germanic philologists have been directed for many years mainly to the study of dialects with more or less satisfying results. As we have already indicated above the main objection to these studies is that the men, being mostly candidates for the doctor's degree, are not sufficiently prepared to undertake them. The result is that the studies vary considerably according to the talents of the author. In general linguistics we must first note Krieg's study on Fritz Mauthners *Kritik der Sprache* (Munich), which he characterizes as *eine Revolution der Philosophie*; as well as Sperber's *Ueber den Affekt als Ursache der Sprachveränderung* (Halle). In old Germanic we have Classen, *On Vowel Alliteration in the Old Germanic Languages* (Manchester, 1913); Wessén, *Zur Geschichte der germanischen N-Deklination* (Upsala); Meller, *Die deutsche Namensabstammung am Riesengebirge* (Leipzig); Wesle, *Die althochdeutschen Glossen des Schlettstadter Codex zu kirchlichen Schriften und ihre Verwandten* (Strassburg); Weller, *Die frühmittelhochdeutsche Wiener Genesis und Quellen* (Berlin); Naumann, *Althochdeutsche Grammatik und Althochdeutsches Lesebuch* (Berlin); Loewe, *Germanische Pflanzennamen* (Heidelberg, 1913); Braune, *Abriß der althochdeutschen Grammatik* (5th ed., Halle, 1913); Riese, *Das Rheinische Germanien in den antiken Inschriften* (Leipzig); Wilhelm, *Denkmäler deutscher Prosa des 11. und 12. Jahrhunderts* (Munich); Gutmacher, *Der Wortschatz des althochdeutschen Tatian in seinem Verhältnis zum Altsächsischen, Angelsächsischen und Altfrisischen* (Berlin, 1913); and Köhler, *Lateinisch-althochdeutsches Glossar zur Tatianübersetzung* (Paderborn). Among the grammars the most important are Schulz, *Abriß der deutschen Grammatik* (Strassburg); Curme, *First German Grammar* (New York); Matthias, *Sprachleben und Sprachschöden* (Leipzig); Classen, *Grammar of the German Language* (New York); and Heyse's *Deutsche Grammatik* (28th ed., by Scheel, Hanover). Further studies on the modern language are Franke, *Grundzüge der Schriftsprache Luthers* (2d ed., Halle); Schneider, *Zur Ausgestaltung der deutschen Sprache* (Leipzig); Blümel, *Die Haupttypen der heutigen neuhochdeutschen Wortstellung im Hauptsatz* (Strassburg); Diekhoff, *The German Language* (New York); Wagner, *Einführung in das Studium der deutschen Sprache* (Leipzig); and Winter, *Die Sprache als Mutter meiner Weltanschauung* (Leipzig). Dialectal studies are as usual very numerous. A selection of works is invariably difficult to make because it often happens that an important dialect is not as well treated as a more insignificant one. A work of incalculable value is Müller-Fraureuth's *Wörterbuch der obersächsischen und erzgebirgischen Mundarten*, which has just been completed (Dresden). Vol. viii of the *Schwei-*

serisches Idiotikon, containing stems in *sch* to *sutz*, was also a noteworthy publication (Frauenfeld). Other works deserving mention are Schoof, *Die Schwäbmer Mundart* (Halle); Feller, *Das Fürwort in der Mundart von Gerolzhofen*, a syntactical study of an East Frankish dialect (Würzburg); Schollen, *Aachener Sprichwörter und Redensarten* (2d ed., Aachen, 1913); Stammerjohann, *Die mundart von Burg in Dithmarschen* (Kiel); Berndt, *Die Verba reflexiva in den deutschen Mundarten* (Giessen); Kaupert, *Die Mundart der Herrschaft Schmalkalden* (Marburg); Neuse, *Studien zur niederrheinischen Dialektgeographie in den Kreisen Rees, Dinslaken, Hamborn, Mülheim, Duisburg* (Marburg); Streiff, *Der Vokalismus der Glarner Mundarten* (Zurich); Hanke, *Die Wortstellung im Schlesischen* (Breslau, 1913); Schmidt, *Der Konsonantismus der Bonnländer Mundart* (Giessen); Dose, *Ein Besuch der deutschen Sprachinseln Südtirols* (Leipzig); Kloeke, *Der Vokalismus der Mundart von Finkenwärder bei Hamburg* (Hamburg, 1913); Schneider, *Der Wortschatz der Bamberger Mundart von 1880-1910* (Speyer); and Groeger, *Schweizer Mundarten* (Vienna). Finally the following lexicographical works should be noted: Grimm, *Deutsches Wörterbuch* (Bd. 4, 1. Abt., 4 Tl., 2 Lfg.; Bd. 11, 2. Abt., 1. Lfg.; Bd. 11, 3. Abt., 2 Lfg.; Bd. 12, 1. Abt., 11 Lfg., ed. by Leopold; Bd. 14, 1. Abt., 3 Lfg., ed. by Götze; Bd. 15, 1 Lfg., Leipzig); Kluge, *Etymologisches Wörterbuch der deutschen Sprache* (8th ed., 1st part, Strassburg); Fischer, *Schwäbisches Wörterbuch* (46 Lfg., Tübingen); Goldingham, *Dictionary of Modern Naval Technical Terms: German-English and English-German* (London); and Caspar's *Technical Dictionary: English-German and German-English* (Milwaukee). In Low German and Dutch we note only the following works: Lasch, *Mittelniederdeutsche Grammatik* (Halle); *Woordenboek der Nederlandsche Taal* (vol. iii, 21st fasc.: *Drafdruken by Knuttel*; and vol. xiii, fasc. 1: *Riantriet by Van der Maulen*, The Hague); van Ginneken, *Handboek der Nederlandsche Taal* (part 1: *De sociologische structuur der Nederlandsche Taal*, Nymegen, 1913); Overdiep, *De vormen van het aoristisch praeteritum in de midde nederlandse epische poësie* (Leiden); and *Beatrijs, A Middle Dutch Legend*, Edited With a Grammatical Introduction, Notes and a Glossary by Barnouw (London). For Frisian we call attention to Brandt, *Die nordfriesische Sprache der Goesharharden* (Halle).

SCANDINAVIAN. Among the Scandinavian group of languages, which have received considerable attention during 1914, the following works in Old Norse first deserve mention: Noreen, *Nordiska ortnamn* (Upsala), consisting, as its title indicates, of a study of place-names; the ninth and tenth volumes of Thule's *Altnordische Dichtung und Prosa* (ed. by Niedner, Jena); the 1st part of the second volume of *De norsk-islandske Skjaldedigtning*, consisting of texts and notes, published under the supervision of Jónsson (Copenhagen); Egilsson, *Lexicon poeticum antiquae linguae septentrionalis, ordbog over det norsk-islandske skjaldesprog* (ed. by Jónsson, 1st heft, *a-fyr*, Copenhagen); Neckel, *Edda, Die Lieder des Codex regius nebst verwandten Denkmälern* (Heidelberg); the 1st part of the collection entitled *Norges Kongesager* (ed. by Storm and Bugge, Christiania); and Thorkelsson, *Anmærkninger til J. Fritseners Ordbog over det gamle norske Sprog*

(Reykjavik). As for Icelandic we should mention first Heusler, *Die Anfänge der isländischen Saga* (Berlin); Wenz, *Die Friðþófs saga*, being a critical edition with a complete introduction (Halle); Hermannsson's two contributions, the much desired *Catalogue of the Icelandic Collection Bequeathed by Willard Fiske*; and "The Story of Gríseida in Iceland" in vol. vii of *Islandica* (both published at Ithaca); also two works by the assiduous Jónsson, the *Rímnaasfn: Samling af de ældste islandske Rimer* (Copenhagen) and *Carmina scaldica*, a study of the forms of Skaldic verse (ib., 1913); Niedner, *Vier Skaldengesichten* (Jena); Mossé, *La Laxdæla Saga, Légende historique islandaise*, translated into French with introduction and notes (Paris); and Brate, *Sämunds Edda översatt från isländskan* (Stockholm, 1913); a Swedish translation. In Swedish we have Kock's *Umlaut und Brechung im Altschwedischen* (Lund); Larsson-Högsby, *Temporal satsföroing i fornsvenskan* (Lund, 1913); Söderwall, *Ordbok öfver svenska medeltidspråket* (Lund, 1913); Olson, *Studier öfver pronomenet 'den' i nyvenskan* (Lund); Noreen, *Vårt Språk*, a complete exposition of Modern Swedish grammar (19th heft, Lund); Pollak, *Proben schwedischer Sprache und Mundart* (Vienna, 1913); Elmquist, *Elementary Swedish Grammar* (Chicago); and finally the Swedish Academy's *Ordbok öfver svenska språket*, of which the 48th heft has appeared (Lund). As for Danish we must note Wimmer, *De danske runemindesmærker* (ed. by Jacobsen, Copenhagen); Neuhaus, *Modernes Dänisch* (Halle); and Dahl and Hammer's *Dansk Ordbog for Folket* (38 heft: *velmagtsstand-vor*, Copenhagen).

ENGLISH. The contributions to this field of philology have been numerous and valuable, especially from the grammatical and lexicographical point of view. In regard to Beowulf we note several interesting works, such as Müller, *Das Kulturbild des Beowulfepos* (Halle); and Gering's translation of *Beowulf nebst dem Finnaburg-Bruchstück* (2d ed., Heidelberg). Köhler has just completed his new edition of Grein and Holthausen's *Sprachschatz der angelsächsischen Dichter* (Heidelberg, 1912-14); and Williams, *Gnomic Poetry in Anglo-Saxon* (New York) should not be omitted. In Old and Middle English we note Funke, *Die gelehrten lateinischen Lehn- und Fremdwörter in der altenglischen Litteratur*, which comprises the period from the middle of the tenth century to 1066 (Halle); Jensen, *Die I. und II. Ablautreihe in der altenglischen Wortbildung* (Kiel, 1913); Janus, *Der syntaktische Gebrauch des Numerus im Frühmittelenglischen* (Kiel, 1913); and David, *Zur Syntax des adnominalen Genitivs in der frühmittelenglischen Prosa* (Kiel, 1913). The origin and history of place-names have received considerable attention during the past few years in England, with the result that we have several useful monographs devoted to this subject. Among them we may note two works on the place names of Gloucestershire, one by Boddeley (London) and the other by St. Clair (London, 1913); Mutschmann, *Place-names of Nottinghamshire* (Cambridge); and Roberts, *The Place-names of Sussex* (Cambridge). In this connection we must not fail to mention Weekley's excellent *Romance of Names*, giving in a popular way the history of some 3500 English family names. In the modern language we have some

interesting studies devoted to special periods of its history, such as Delcourt, *Essai sur la langue de Sir Thomas More d'après ses œuvres anglaises* (Paris); Horten, *Studien über die Sprache Defoes* (Bonn); and Müller, *Englische Lautlehre nach James Elphinston 1765, 1787, 1790* (Heidelberg); as well as special studies like Miss Pound's *Blenda*, with especial reference to English word formation (Heidelberg). More attention than formerly has been given to dialectology, where efforts are being made to clear up some of the mysteries of many of these diversifications of forms. Among these studies we may note Elizabeth Wright's *Rustic Speech and Folk-lore* (Oxford, 1913), which is based immediately upon Wright's *English Dialect Dictionary*; Klein, *Der Dialect von Stokesley in Yorkshire, North-Riding* (Berlin); Heuser, *Alt-London* (Strassburg), which contains some observations on its dialect; Brilioth, *Grammar of the Dialect of Lorton (Cumberland)* (Upsala, 1913), a historical study containing an appendix on the Scandinavian element and a glossary; Angus, *Glossary of the Shetland Dialect* (London); and Dölle, *Zur Sprache Londons vor Chaucer* (Halle, 1913). But it has been in grammar and lexicography that the most important contributions have been made. We have, for example, Jespersen's *Modern English Grammar on Historical Principles*, which is being published simultaneously in English and Danish, and of which the second part, dealing with syntax, is being issued (Heidelberg and Copenhagen); Wendt, *Syntax des heutigen Englisch*, though inferior to Jespersen's work, is nevertheless of value (part II, Heidelberg); Luick, *Historische Grammatik der englischen Sprache*, of which the first and second *lieferungs* have appeared, is divided into two volumes, of which the first contains phonology and the second morphology (Leipzig); Poutsma's *Grammar of Late Modern English*, of which part II, containing the parts of speech, is now appearing, is especially intended for the use of Dutch and other Continental students (Groningen); Krüger's *Schwierigkeiten des Englischen* has now reached syntax (2d ed., part II, Dresden); the same author's *Englische Ergänzungsgrammatik und Stilistisches* was republished in Dresden (1913, 2d ed.). We called attention in our last report to the marked progress made in recent years in development of English lexicography. On that particular point we should note Vizelet's *Development of the Dictionary of the English Language* (New York) which treats the question in full. Of the Murray Dictionary, the sections *shastri-shyster* by Bradley (vol. viii), *sorrow-speak* by Craigie (vol. ix), and *traik-trinity* (vol. x) were issued during the past year (Oxford). Other works deserving mention are Fernold, *Comprehensive Standard Dictionary of the English Language* (New York); Chambers, *English Dictionary* (London), an enlarged edition with supplement; Skeat, *Glossary of Tudor and Stuart Words*, edited with additions by Mayhew (Oxford), prepared especially for dramatists; Price and Peck, *British Empire Universities Modern English Dictionary* (New York); Roget's *Thesaurus*, revised by Mawson (New York), a new edition of a much-used work; Born, *Nachträge zu The Oxford English Dictionary* (part III, Schöneberg); Bumpus, *Dictionary of Ecclesiastical Terms* (London); Torrens and Parker, *English Idiomatic and Slang Expressions Done Into German* (Strassburg); and

Schröder, *Neuenglisches Aussprachwörterbuch mit besonderer Berücksichtigung der wichtigsten Eigennamen* (Heidelberg, 1913).

ROMANCE. The continued activity of scholars in this field bespeaks the immense wealth of material at the disposal of the philologist. Among the important general works on these languages the very useful *Romanisches etymologisches Wörterbuch* of Meyer-Lübke (Heidelberg), which bids fair to supplant its worthy predecessor, Körting, has now reached *tabella*. Thus far 8509 words have been treated. Other works of interest are Jud, *Probleme der altromanischen Wortgeographie* (Halle); Grandgent, *Introduzione allo studio del latino volgare*, an Italian translation of the useful little manual (Milan); Zauner, *Romanische Sprachwissenschaft* (3d ed., Berlin); Schneegans, *Romanische Philologie* (Berlin), an address delivered on the occasion of the Kaiser's birthday; Noggler, *Romanische Familiennamen in Oberrheinischgau* (4th part, Meran, 1913); Richert, *Die Anfänge der romanischen Philologie und die deutsche Romantik* (Halle); and Voretzsch, *Die romanische Philologie und das Studium des Französischen* (Halle). In Old French it is to be noted that Bédier's great *Légendes épiques*, which was completed in 1913, is now undergoing revision in a second edition of which the first volume has appeared (Paris). Foerster, in collaboration with Bruere, has issued an etymological dictionary to the complete works of Chrestien de Troyes (Halle). Other publications deserving mention are Gerhard, *Beiträge zur Kenntnis der prähistorischen französischen Synkope des Pänultima-vokals* (Halle, 1913); Mündler, *Der Uebergang von der Assonanz zum Reim im altfranzösischen Volksepos* (Halle); Foulet, *Le Roman de Renard* (Paris); and Schwarz, *Der Gebrauch der Präpositionen 'a' und 'en' im altfranzösischen Rolandsliede* (Greifswald). In French dialectology the most important contribution is Terracher's *Etude de géographie linguistique: les Aires morphologiques dans les parlers populaires du nord-ouest de l'Angoumois (1800-1900)* (Paris), a model of critical acumen. The first and second fascicles of the supplement to Gilliéron and Edmont's masterly *Atlas linguistique de la France*, which has often been mentioned here, are devoted to Corsica (Paris). Gilliéron himself has issued *L'Aire Clavellus d'après l'Atlas linguistique de la France* (Neuveville). Among numerous other works we may mention Juret, *Glossaire du patois de Pierrecourt (Haute-Saône)* (Halle, 1913); Bruneau, *Enquête linguistique sur les patois d'Ardenne* (vol. i, Paris); Tapolet, *Die alemannischen Lehnwörter in den Mundarten der französischen Schweiz* (1st part, Strassburg); Merian, *Die französischen Namen des Regenbogens* (Halle); Pastre, *Le sous-dialecte bas-languedocien de Clermont-l'Hérault* (Perpignan, 1913); Brod, *Die Mundart der Kantone Château-Salins und Vic in Lothringen* (Strassburg, 1913); Daniel, *Dictionnaire français-périgourdin* (Périgueux); and Perrenot, *Etudes de toponymie franc-comtoise* (3d fasc., Besançon). Among the contributions to the study of the modern language we may note Glauser and Curtius, *Die französische Sprache der Gegenwart*, the first part being devoted to phonology (Heidelberg); Ricken, *Das Studium des Französischen und Englischen* (Leipzig); Peron-Cabus, *Le participe présent dans le français ancien et moderne* (Bologna); Mönch, *Die Ver-*

wendung des Gerundiums und des Participiums *Præsentis im Französischen* (Göttingen); Gohin, *La langue française* (Paris, 1913) which won the prize of eloquence of the French Academy; Schmidt, *Die spanische Elemente im französischen Wortschatz* (Halle); Soltmann, *Syntax der Modi im modernen Französisch* (Halle); Bergmann, *Idioms: Gallicismes-Germanismes* (Magedeburg, 1913); Lenz, *Zur Lautlehre der französischen Elemente in den schottischen Dichtungen von 1500-1550* (Marburg, 1913); Soave, *Locutions familières de la langue française* (Verona); Lerch, *Das invariable Participium præsens des Französischen (une femme aimant la vertu)* (Erlangen, 1913); Lorck, *Passé défini, Imparfait, Passé indéfini* (Heidelberg); and Rose, *Germanische Lehnwörter im Französischen* (Leipzig). As for general works on historical grammar we can only mention the most important, which are Nyrop, *Grammaire historique de la langue française* (vol. i, 3d ed., Copenhagen); Bourciez, *Précis historique de phonétique française* (4th ed., Paris); Schwan-Behrens, *Grammatik des Altfranzösischen* (10th ed., Leipzig, 1913); Staaff, *Etude sur quelques problèmes de phonétique française* (Upsala); and finally the Among the practical dictionaries there are: text-book, Laftte, *French Grammar* (London). Beaux, *Deutsch-französisches und französisch-deutsches Wörterbuch für Elektrotechniker* (Berlin, 1913); Charbot and Blanchet, *Dictionnaires des patois du Dauphiné* (Grenoble); Sabersky, *Pocket Dictionary of the English and French Languages* (London); and a *French Nautical Phrase Book and Reader* by the U. S. Naval Academy (Annapolis). In Provençal we have the 33d heft of Levy, *Provenzalisches Supplement-Wörterbuch (sezilholam)* (Leipzig); Ronjat, *Essai de syntaxe des parlers provençaux modernes* (Macon, 1913); Hubschmied, *Die Bildung des Imperfekts im Frankoprovenzalischen* (Halle); Gerig, *Die Terminologie der Hanf- und Flachskultur in den frankoprovenzalischen Mundarten* (Heidelberg), in which the author pretends that these words are of Celtic or Germanic origin; Portal, *Grammatica provenzale (lingua moderna) e dizionario provenzale-italiano* (Milan); and Zanders, *Die altprovenzalische Prosanovelle* (Halle, 1913).

Italian philologists have been more productive than usual during the past year. Among their contributions the following deserve mention: Battisti, *Testi dialettali italiani* (Halle), giving a selection of texts of the northern dialects; Kupech, *Formenlehre des Altund Neusizilianischen Dialektes* (Bonn, 1913); Bertoni, *Per la storia del dialetto di Modena* (Turin); Garzia, *Il vocabolario dannuziano* (Bologna), a study in the evolution of the modern language, considering especially the neologisms introduced by D'Annunzio; Terracini, *La lingua delle canzoni popolari piemontesi* (Turin); the same author's *Il parlare d'Usseglio* (Turin, 1913). A few dictionaries should also be noted: Petroschi, *Piccolo Dizionario della Lingua italiana* (new ed., Milan); *Vocabolario degli Accademici della Crusca* (5th ed., vol. xi, fasc. 1, Florence); Nicotra d'Urso, *Nuovissimo dizionario siciliano-italiano*, containing words and phrases in Sicilian that differ from Italian; Pecorella, *Vocabolario numerico siciliano-italiano per la interpretazione dei sogni* (Milan); Enenkel and McLaughlin, *New Dictionary of the English and Italian Languages* (Paris); Premoli, *Vocabo-*

lario nomenclatore illustrato (Milan; 2 vols.); Levi, *Vocabolario etimologico della lingua italiana* (Leghorn); Orsat-Ponard, *Vocabolario delle idee* (Milan); and Darchini, *Dizionario tasabile italiano-francese* (Milan). Finally, the following grammars should not be omitted: Roscigno, *Grammatica della lingua italiana* (Turin, 1913); and Bottigioni, *Nuova grammatica italiana* (Palermo).

In Retho-Romance, Decurtina, *Rätoromanische Chrestomathie* (vol. x, lief. 1, Erlangen); Battisti, *Die Mundart von Valvestino*, and Ettmayer, *Die geschichtlichen Grundlagen der Sprachenverteilung in Tirol* (Vienna) are the only works of note. The Rumanian Academy has issued parts of vols. i and ii of the *Dictionarul limbii române* during the past year (Bucharest). Among other publications treating of that language there is the well-known *Histoire de la langue roumaine* by Densusianu, of which the part of vol. ii devoted to the language of the sixteenth century has just appeared (Paris); as well as Popovici, *Dialectele române*, being vol. ix which treats of the dialects of Istria (Halle). Other works are Teutsch, *Rumänisches Sprachbuch* (2d ed., Kromstadt, 1913); Axelrad, *English-Rumanian and Rumanian-English Translator and Dictionary* (Milwaukee); Auerbach, *Die Verbalpräfixe im Dakorumänischen* (Leipzig, 1913); Schuffert, *Die Verbalsuffixe im Dakorumänischen* (Leipzig, 1913); Rizo, *Nouveau vocabulaire français-roumain* (Paris); and Bogdan, *Altä ortografie* (Bucharest).

The contributions to Spanish philology, though not as numerous as those in other fields, are nevertheless interesting. Garcia de Diego's *Elementos de gramática histórica castellana* (Burgos) is a popular work. Vogel's *Einführung in das Spanische für Lateinkunde* (Paderborn) is useful for those who will approach Spanish from the classical point of view. Among the dialectical studies we have Román, *Diccionario de chilenismos y de otras voces y locuciones viciosas* (vol. iii, Santiago, 1913); Sanchez, *Spanish and Indian Place-names of California* (San Francisco); Selva, *Acepciones nuevas: ensayo de semántica argentina* (Buenos Aires); Halse, *Dictionary of Spanish-American, Portuguese and Portuguese-American Mining and Allied Terms* (2d ed., London); Molina Nadal, *Vocabulario argentino-español y español-argentino* (Madrid, 1913); and Verdulla, *Elementos de ciencia gramatical de la lengua hispano-americana* (Barcelona). Other works to be noted are Hahn, *Diccionario alemán-español de términos de medicina* (Madrid); Martínez Mier, *Método de ortografía española* (Madrid); and Galocha y Alonso, *Gramática fundamental de la lengua castellana* (Madrid).

In Portuguese, Taunay, *Lexico de lacunas* (Tours); Basto, *Nótulas ao 'Novo Dicionário' (Viana-do-Castelo, 1913)*; Teschauer, *Apostillas ao 'Dicionário de Vocabulos Brasileiros' (Petropolis)*; and Basset, *Notes sur la langue de la Guiné au xve siècle* (Coimbra, 1913) are only a few that are worthy of mention. During the year 1914 the *Butlletí de dialectologia catalana* was founded at Barcelona for the purpose of studying all the dialects of the Catalan language. The first number of this quarterly review is characteristic. Before leaving this interesting language we should note Rovira i Virgili, *Diccionari català-castellà y castellà-català*

(Barcelona, 1913), one of the first practical dictionaries we have of Catalan.

PHONETICS. There have been a number of revisions of standard works in phonetics during the year 1914. Among them we note Nyrop, *Manuel phonétique du français parlé* (3d ed., Copenhagen), an accurate and useful work; Passy, *The Sounds of the French Language* (London); and the Michaëlis and Passy, *Dictionnaire phonétique de la langue française* (2d ed., Hanover). Other works of interest are: Keraval, *Petit précis de prononciation française à l'usage des étrangers* (Paris, 1913); Jones, *Outlines of English Phonetics* (Leipzig); Klinghardt, *Artikulations- und Hörübungen* (2d ed., Cöthen); Egan, *German Phonetic Reader* (London, 1913); Panconcelli-Calzia, *Einführung in die angewandte Phonetik* (Berlin); Castellazzo, *Manuale di ortografia francese* (Leghorn); Johnston, *Phonetic Spelling* (Cambridge, 1913), a proposed universal alphabet; Gómez, *Ortografía ideal* (Madrid), an effort to reform Spanish orthography; Biaggi-Gradenigo and Stefanini, *Studi italiani di fonetica sperimentale* (Padua); and Wild, *Sounds and Signs* (London), a criticism of the alphabet with suggestions for reform.

PHILOSOPHY. NEW TENDENCIES. We have pointed out, in preceding volumes of the YEAR BOOK, a marked opposition in contemporary thought to the rationalistic and idealistic system of philosophy which developed in Germany after the time of Immanuel Kant and gradually gained the ascendancy in the leading countries of Europe and America in the course of the nineteenth century. Within the last decade or so, the traditional school has been subjected to severe criticism as to its methods and results, and many antagonistic sects have sprung up—the most conspicuous in the United States, England, and France—which single out various phases of its doctrine for attack. For some thinkers the old idealism is too intellectualistic or rationalistic; they accuse it of ignoring the legitimate demands of the feelings and the will, and seek to construct theories which shall secure for the individual a dignified place in the scheme of things. Idealistic positivists, pragmatists, Bergsonian intuitionists, value-philosophers, and mystics discredit the human intellect as an absolute truth-teller and conceive it as a fashioner of fictions, symbols, or conventions, or as an instrument in the service of the human will, or they concede to it only a limited scope as a function of knowledge. Bergson and his followers, while agreeing in part with the pragmatists, restrict the intelligence to the world of dead matter and call to its aid the faculty of "intuition," which alone can interpret life and consciousness. This antirationalistic temper has received support from the ranks of natural science itself—from those who look upon scientific concepts and theories either as mere descriptions of the facts of experience (sensations), or as useful symbols, conventions, or working-hypotheses. According to some of the opponents of the old philosophy, the incompetence of human reason makes metaphysics illusory or necessitates its relegation to the realm of poetry or religion; while others, seeking a surer source of knowledge in other functions of the human soul—in feeling, belief, immediate or pure experience, will or intuition—find through these a way of escape from skepticism, mechan-

ism, determinism, atheism, and all the discouraging doctrines to which rationalism is supposed to lead, and against which the free individual revolts. Another group of thinkers, the neo-realists, oppose the antirationalistic tendencies of the times, and see in the scientific method the only hope for a sound philosophy. But they repudiate the idealistic theory of internal or organic relations, and regard the method of analysis, which Hegelians as well as pragmatists and Bergsonians condemn as inadequate, as the only genuine instrument of truth. In opposition to idealistic monism, however, neo-realism teaches pluralism and realism, conceiving these doctrines as the logical outcome of the analytic method. (Consult Thilly, *History of Philosophy*, pp. 562 ff.)

It is not to be wondered, under the circumstances, that problems of the nature and method of knowledge (theory of knowledge or epistemology) form so large a portion of the philosophical literature of recent years. Nor is it remarkable that ethical questions, questions concerning human values, which form the underlying motif of so many of our new philosophies, should receive the attention they are receiving to-day. The American Philosophical Association devoted a considerable number of its sessions at the Christmas meeting of 1913 to the discussion of the problem of value; and since that time many articles on the subject have appeared in our American philosophical periodicals. A further reason for the widespread interest in ethical questions is to be sought in the social unrest of the day and in the demand for political, economic, and social reforms. In April, 1914, a meeting of the Conference on Legal and Social Philosophy was held at the Law School of the University of Chicago, in coöperation with the Western Philosophical Association, at which questions were discussed dealing with the borderland of ethics, jurisprudence, politics, economics, and sociology. (Consult Report of the Proceedings of this Conference in *International Journal of Ethics*, October, 1914.) The editorial staff of the *International Journal of Ethics* has been reorganized with a view to giving "especial prominence to the principles of justice and of law as the agency of justice." The programme of the Joint Meeting of the American and Western Philosophical Associations, held at Chicago, Christmas, 1914, was almost entirely given over to questions of ethics, politics, law, and the like. The General Topic of the meeting was: "What Can Philosophy Contribute to Conceptions of Justice?"; the subject of the joint session of these societies with the American Political Science Association and the Conference on Legal and Social Philosophy was: "Constitutional and Political Guarantees."

RECENT LITERATURE OF THE CONTENTING SCHOOLS. One of the most welcome additions of the year to the literature of idealism is the translation from the Italian of Croce's *What is Living and What is Dead of the Philosophy of Hegel*. In this able work the greatest Italian student and follower of Hegelianism has given perhaps the clearest interpretation and sanest criticism of Hegel's philosophy that have yet been offered. The English Neo-Hegelian, F. H. Bradley, aims to define and defend his metaphysical system against pragmatism in *Essays on Truth and Reality*, a collection of papers already published separately, most of them in

Mind. The October number of *Mind* contains a sensible article by Professor Ladd on "A Defense of Idealism," in which the author reaches the following conclusion: "Pragmatism and the new realism may serve for a day or two to prune away some of the inconsistencies and exaggerations of the current forms of idealism. But when the time of its pruning and chastening is past—and it soon will be past—a new and improved idealism will come to the fore." In his new book, *What Can I Know?* the same writer offers "an inquiry into truth, its nature, the means of its attainment, and its relations to practical life" which will prove useful to students of pending problems. Another interesting and important work is the translation from the Italian of Aliotta's *Idealistic Reaction against Science*, in which the author shows that the recent reactionary movements are in the right against an extreme scientific and mathematical intellectualism that makes of mechanism the sole method of knowledge, but that they fail against a genuine intellectualism, one that upholds the supremacy of intelligence over imagination and will. He points out that such an extreme scientific intellectualism always produces a more or less mystical idealistic irrationalism as a reaction; we find it, according to him, in German and French neo-criticism (Riehl and Renouvier), in the empirio-criticism of Mach and Avenarius, in English Neo-Hegelianism, in the intuitionism of Bergson, in the Anglo-American pragmatism of James, Dewey, and Schiller, in the philosophy of value and historicism of Rickert, Croce, Münsterberg, and Royce. As examples of exaggerated intellectualism he mentions Schuppe's philosophy of immanence, Cohen's idealism of pure knowledge, Nelson's neo-Friesian school, Meinong's and Höfler's *Gegenstandstheorie*; and he might properly have added contemporary English and American neo-realism.

The appearance of the second edition of Vaihinger's *Die Philosophie des Als-Ob*, a book which belongs to the anti-intellectualistic camp, has provoked much discussion in German philosophical journals. Many articles for and against pragmatism, Bergson, and neo-realism are appearing, particularly in American, English, and French periodicals. Among the books in these fields we mention: PRAGMATISM—Knox, *Philosophy of William James*; Father Tyrrell, *Essays on Faith and Immortality*; Kallen, *William James and Henri Bergson*; Stebbing, *Pragmatism and French Voluntarism*; Bloch, *Der Pragmatismus von James und Schiller*; Papini, *Sul pragmatismo*. BERGSON—Carr, *The Philosophy of Change*; Ruhe and Paul, *Henri Bergson*; B. Russell, *Philosophy of Bergson*; Lovejoy, *Bergson and Romantic Evolutionism*; Wilm, *Henri Bergson*; Sait, *The Ethical Implications of Bergson's Philosophy*; Höfding, *H. Bergson's Filosofi*; Maritain, *La philosophie bergsonienne*; Asty, *Lucidité et intuition*; Florian, *Der Begriff der Zeit bei Bergson*. NEO-REALISM—B. Russell, *Our Knowledge of the External World as a Field for Scientific Method in Philosophy*; S. Alexander, "Basis of Realism" (*Proceedings of the British Academy*, vol. vi); E. B. Holt, *The Concept of Consciousness*. A critical study of realism is given by Broad in his *Perception, Physics, and Reality, An Inquiry into the Information that Physical Science Can Supply about the Real*.

METAPHYSICS. One of the most interesting contributions to this field is a translation from the Italian of Varisco's *The Great Problems*, to which attention was called in the YEAR BOOK of 1912. Father Coffey offers in his *Ontology or the Theory of Being* a metaphysical theory based on the philosophy of Thomas Aquinas, the official system of the Catholic Church. From the scientific side we have books by the chemist Ostwald on *Moderne Naturphilosophie* and the biologists Haeckel, *Good-Natur*, and Uexküll, *Bausteine zu einer biologischen Weltanschauung*. Other works are: F. B. Jevons, *Philosophy: What it is*; Rashdall, *Philosophy and Religion*; Windelband, *Einleitung in die Philosophie*; Cellarier, *La métaphysique et sa méthode*; Geyser, *Die Seele*; Kostyleff, *Le mécanisme cérébral de la pensée*; Soedberg, *Die Materie*; Bartoli, *Scienza cosmica*. Of interest to the philosopher are the following: the translations of the German neo-vitalist Driesch's books, *The Problem of Individuality*, and *History and Theory of Vitalism*; Johnstone, *Philosophy of Biology*; Schmucker, *Meaning of Evolution*; Lanessan, *Transformisme et créationisme*; Gramont-Lesparre, *Les inconnus de la biologie*; Cohen-Kysper, *Die mechanistischen Grundgesetze des Lebens*; Planck, *Neue Bahnen der physikalischen Erkenntnis*; Volterra and other scholars, *Poincaré*; articles by A. Rey on the electron in *Revue philosophique*, November and December, 1913, April and May, 1914; also Stout, *Manual of Psychology*, 3d edition; Ogden, *Introduction to General Psychology*; Münsterberg, *Psychology: General and Applied*; Kleinpeter, *Einführung in die Psychologie*.

LOGIC AND THEORY OF KNOWLEDGE. The literature in this field is, as usual, very large, the number of articles in the philosophical journals exceeding that of any other subject. Husserl, the leader of a new movement in Germany which he calls "phenomenological philosophy," presents his view in a long essay (323 pages), entitled "Ideas on a Pure Phenomenology and Phenomenological Philosophy," in the first volume of a new journal, *Jahrbuch für Philosophie und phänomenologische Forschung*, conducted by him in coöperation with a number of his followers (consult review of this volume by Bosanquet in the October number of *Mind*). Other important books (besides those mentioned under *Recent Literature of the Contending Schools*) are: translation of Enriques, *Problems of Science* (treatment of problems of scientific methodology); translation of Boutroux, *Natural Law in Science and Philosophy*; translation of Couturat, *The Algebra of Logic*; Cohen, *Logik der reinen Erkenntnis*, 2d edition; Silberstein, *Principle of Relativity*. We mention also: Griffin, Dunlap, Lovejoy, *Current Philosophical Questions*; Hartmann, *A New Conception of Relativity and Locke*; Walter, *Nature and Cognition of Space and Time*; Switalski, *Der Begriff vom Denken und Erkennen*; Ziehen, *Zum gegenwärtigen Stand der Erkenntnistheorie*; König, *Neue Grundlage der Logik, Arithmetik und Mengenlehre*; Sternberg, *Zur Logik der Geschichtswissenschaft*; Borel, *Le hasard*; Bachelier, *Le jeu, la chance, le hasard*; Ranzoli, *Il caso nel pensiero e nella vita*; A. Sidgwick, *Elementary Logic*; L. J. Russell, *Introduction to Logic from Standpoint of Education*.

ETHICS. We have already called attention, in our opening section, to the great activity in the

field of ethics and to the wide interest of this science in the practical questions of the day, social, political, legal, and economic. Characteristic of the new tendencies in modern ethical thought is the college textbook of Drake, *Problems of Conduct*, which is divided into four parts, discussing, respectively, the evolution of morality, the theory of morality, personal morality, and public morality. Works largely concerned with the principles of morality are: Rashdall, *Is Conscience an Emotion?*; Heymans, *Einführung in die Ethik*; Scheler, *Der Formalismus in der Ethik*; Vecchio, *Il nuovo problema della morale*; Rensi, *La transcendenza: studio sulle probleme morale*; Juvalta, *Il vecchio e il nuovo problema della morale*; Valli, *Il valore supremo*; Nelson, *Die Theorie des Interesses*; Lessing, *Studien zur Wertaxiomatik*; Vinet, *Philosophie morale et sociale*; G. Cohn, *Ethik og sociologi*; Paulhan, *La morale de l'ironie*; Gay, *L'honneur*; Werner, *Problem der menschlichen Willensfreiheit*. Of practical interest: Michels, *Sexual Ethics*; F. Gaultier, *Les maladies sociales*; Maxwell, *Le concept social du crime*; Blondel, *La conscience morbide*; Juquelier et Vinchon, *Les limites du vol morbide*; Boigey, *Introduction à la médecine des passions*; Koch, *Wesen und Wertung des Luzus*; Squillace, *La moda*. The student of ethics will find Shand's *Foundation of Character* a valuable help.

HISTORY OF ETHICAL THEORY AND PRACTICE, ETHICAL PROGRESS, SOCIAL REFORM, ETC. Navarro, *Historia de la eticas*; Hennebicq, *L'idée du juste dans l'Orient Grec avant Socrate*; Makarewicz, *Grundproblem der Ethik bei Aristoteles*; Limentani, *La morale della simpatia* (Adam Smith); Dugas, *Penseurs libres et liberté de pensée* (Montaigne, Descartes, Mill, Gosse); Stadler, *Spencer's Ethik*; Lachmann, *Protagoras, Stirner, Nietzsche*; Görland, *Ethik als Kritik der Weltgeschichte*; Finot, *Progrès et bonheur*, 2 vols.; Cornill, *Culture of Ancient Israel*; Richard, *La question sociale et le mouvement philosophique du xix siècle*; Weinell and Widgery, *Jesus in the Nineteenth Century and After*; Eucken, *Can We Still be Christians?*; Eucken, *Zur Sammlung der Geister*; J. Cohn, *Sinn der gegenwärtigen Kultur*; Berolzheim, *Moral und Gesellschaft des 20. Jahrhunderts* (an excellent account of present ethical and social conditions by an eminent German jurist); Draghicesco, *L'idéal créateur: essai psycho-sociologique sur l'évolution sociale*; Chapin, *Introduction to the Study of Social Evolution* (prehistoric period); Verroques, *L'histoire de la famille*; Hartley, *Position of Women in Primitive Society*; Mallock, *Social Reform*; Wallas, *The Great Society*; Cunningham, *Christianity and Economic Science*; Kohler, *Der unlautere Wettbewerbs*.

LEGAL AND POLITICAL PHILOSOPHY. Ihering, *Law as a Means to an End* (translation of the able work of the celebrated Austrian jurist); Vinogradoff, *Common Sense in Law*; Kohler, *Recht und Persönlichkeit in der Kultur der Gegenwart*; Radbruch, *Grundzüge der Rechtsphilosophie*; Calò, *Saggi critici: filosofia del diritto*; Consentini, *Filosofia del diritto*; Miceli, *Principi di filosofia del diritto*; Lewkowitz, *Die klassische Rechts- und Staatsphilosophie* (from Montaigne to Hegel); Day, *Catholic Democracy: Individualism and Socialism*; Schmitt, *Der Wert des Staates und die Bedeutung des Einzelnen*; Lowell, *Public Opinion*; Dicey, *Law*

and Public Opinion in England during the Nineteenth Century; Bauer, *Die öffentliche Meinung*; Halbwachs, *L'homme moyen: essai sur Quetelet et la statistique morale*.

HISTORY OF PHILOSOPHY. Thilly, *History of Philosophy*; Weber, *Histoire de la philosophie européenne*; Burnet, *Greek Philosophy*, part I: Thales to Plato; Dilthey, *Weltanschauung und Analyse des Menschen seit Renaissance und Reformation*; Merlant, *De Montaigne à Vauevargues*; Jones, *Spiritual Reformers in the Sixteenth and Seventeenth Centuries*; Zanta, *La renaissance du Stoicisme au xvi. siècle*; Ueberweg, *Geschichte der Philosophie der Neuzeit* (to end of eighteenth century), 11th edition; Löwenheim, *Die Wissenschaft Demokrits*; M. Wundt, *Plato's Leben und Werke*; Natorp, *Plato's Ideenlehre*; Jaeger, *Nemesius von Emesa*; Schmekel, *Die positivistische Philosophie* (Isidor of Seville); *Beiträge zur Geschichte der Philosophie des Mittelalters*, ed. by Baumecker; Horten, *Einführung in die höhere Geisteskultur des Islams*; Roger Bacon *Essays*, ed. by Little; Knox, *Life of Henry Suso*; Troilo, *La filosofia di Giordano Bruno*; Bailey, *Milton and Jacob Boehme*; Scholz, *Die Religionsphilosophie des Herbert von Cherbury*; Heimsoeth, *Die Methode der Erkenntnis bei Descartes und Leibniz*, part II; Huan, *Le Dieu de Spinoza*; Bohrmann, *Spinoza's Stellung zur Religion*; Cassirer, *Berkeley's System*; De Morgan, *Essays on the Life and Work of Newton*; Roretz, *Diderot's Weltanschauung*; Whitney and Fogel, *Introduction to Kant*; Chamberlain, *Kant*; Köster, *Der junge Kant*; Kroner, *Kant's Weltanschauung*; Galli, *Kant e Rosmini*; Trivero, *Nuova critica della morale kantiana*; Medicus, *Fichte's Leben*; Weinell, *Fichte*; Hedvall, *Fichte's filosofi*; Hirsch, *Fichte's Religionsphilosophie*; Loew, *Ethik Schleiermachers und Kant*; Valette, *Maine de Biran: critique et disciple de Pascal*; M. Schinz, *Die Anfänge des französischen Positivismus*, vol. i; Ostwald, *A. Comte*; Uhde-Bernays, *Feuerbach*; Kormann, *Schopenhauer und Mainländer*; Crespi, *Meditazioni spenceriane*; Tillett, *Spencer's Synthetic Philosophy*; C. L. Morgan, *Spencer's Philosophy of Science*; Brandes, *Nietzsche*; Carus, *Nietzsche*; Flemming, *Nietzsche's Metaphysik*; Gorgicas, *Nietzsche's Stellung zur Philosophie*; Mamelet, *Le relativisme: philosophie de G. Simmel*.

REPRINTS, NEW EDITIONS, ETC. PHOTOGRAPHY. Reports from the European War during the latter part of the year

1914 demonstrated the wide and ever-increasing adaptability of photography to military uses, particularly in reconnoitering. A British aeroplane was provided with a camera adapted to take a series of pictures of the country over which the plane was passing, which pictures later could be enlarged as desired. Exposure could be started, stopped, and regulated by the pilot by means of a small lever conveniently located, and the film was wound on two reels like those in a kinetoscope, deriving their motion from a small propeller, which was set in motion by the air current flowing past the plane. The camera was so arranged that at every exposure the aneroid barometer and compass were simultaneously photographed, so that when developed, the pictures on the film could be identified as to elevation and direction. It was stated that satisfactory photographs were made at as great an elevation as 4000 feet. Another ingenious device for obtaining photographic records of an enemy's position or fortifications was reported to be in use by the French army. A small camera made of the lightest possible materials and weighing only $2\frac{1}{2}$ ounces, was fastened to the breast of a carrier pigeon. The exposure was regulated by a shutter arranged to operate by clockwork at a definite time after the bird was released, and means were provided for taking eight successive pictures. The well-known habit of certain kinds of pigeons to return to the locality of their "cote," insured the bird's return within a reasonable time, and it was reported that many successful pictures were secured.

One of the most important inventions of the year was that of the autographic kodak film, for which the Eastman Kodak Company paid the inventor, Henry J. Gaisman, \$300,000. A specially prepared tissue used in connection with a thin red paper, was applied to the back of the film, and through an opening in the camera case provided with a hinged cover, the date, exposure, or locality of the subject could be recorded by means of a stylus or hard point pencil. The inscription, which was made on the tissue paper, when exposed to the light for a few moments made a negative on the edge of the film. This when developed in the usual manner furnished a permanent record of any particulars desired by the photographer.

Experiments in the photography of objects under water, mentioned in the 1913 YEAR BOOK, were continued during 1914, and by means of a cinematograph camera a number of excellent films were secured of plants, fish, rocks, sunken objects, etc., which were widely exhibited in moving-picture theatres. The apparatus was improved in the respect of providing a convenient working chamber that could be lowered to depths as great as 60 feet by means of a collapsible steel tube. While for many cases an artificial illumination provided by powerful mercury vapor lamps was employed, a number of successful films were secured without this aid, on account of the transparency of the water in the southern latitudes off the Bahama Islands, where the best pictures were obtained.

During the year a careful investigation was made of the adaptability of gas-filled tungsten lamps for photographic purposes. It was found that for certain classes of work the tungsten lamp was superior to the mercury-vapor lamp, because the small size of the filament made it

possible to concentrate the light more readily. On the other hand the actinic radiations of the tungsten lamp not being so powerful as those of the mercury vapor unit, there was little prospect that the latter would be replaced by the newer illuminant, to more than a limited extent. In ortho-chromatic photography it was found that gas-filled tungsten lamps, in connection with suitable color-screens, made a satisfactory substitute for daylight. Highly interesting and instructive moving pictures were made of the Aurora Borealis by Carl Störmer at Bossekop in Lapland. This observer secured three satisfactory films of this phenomenon, by giving an unusually slow motion to the film so that each exposure had a duration of between one-half and one second. A new flash-light powder was invented for use in place of the commonly used magnesium, to overcome the objectionable feature possessed by the latter of giving off an excessive smoke when ignited. The new powder, which was called "Excelsior," was composed of magnesium and peroxide of lanthanum, combined with some of the rare earths used in the making of Welsbach mantles. On ignition a scarcely perceptible amount of smoke was produced.

Some progress was reported during the year in color photography by C. E. Kenneth Mees and John G. Catstaff, who announced a modification of the Ives three-color process. Only two colors, red and green, were used, however. By means of a special camera or an ordinary camera provided with color-screens, two negatives were taken. These negatives were treated with dyes of such composition that they replaced the silver on the film. The plates thus became their own positives. It was reported that this process gave satisfactory reproductions of colors both for portraits and for fabrics as well, but was open to the objection that the picture must be viewed by transmitted light as the two plates had to be superimposed and mounted in a frame with a suitable electric lamp behind them when exhibited.

The most important event of the year in connection with litigation was the decree handed down in the case of the Goodwin Film and Camera Co. vs. the Eastman Kodak Co., sustaining the validity of the film patent 610,861, issued to Hannibal Goodwin, Sept. 13, 1898. The patent granted was based on the means of providing a transparent film for use in cameras and having nitrocellulose dissolved in nitrobenzol as its principal ingredient. This was the fundamental invention of the kodak film. The case was interesting not only on account of its importance in technology, but also because of the long delays in the patent office and in the courts. The original application was filed in May, 1887, patent granted Sept. 13, 1898, and 10 years and 8 months elapsed after an infringement suit was brought, before a decision was handed down. The inventor died in the meantime, 1900.

PHYSICS. As was to be expected from the very fruitful results in 1913 from the work on X-rays and crystals, the year 1914 witnessed rapid progress along this very fascinating line of investigation. Partly as a result of the work with X-rays, much attention was devoted to the theory of atomic structure and several researches have been carried out primarily because of their bearing upon this subject. From

the mass of conflicting opinions and suggested theories some rather definite results emerged which seemed to have been accepted at least tentatively by the leaders in this work. As the development of this theory seems to be the most important feature of the work for the year, an attempt will be made in this review to give a résumé of the fundamental ideas involved in it as was done in the 1913 YEAR BOOK with the work on X-rays and crystals.

In the literature for 1914 special attention should be called to the further work of Wood and his associates on resonance spectra; the additional data on the radioactive substances; the work on photo-electric phenomena; the investigations, both theoretical and experimental, of thermionic currents; the contributions to theoretical physics in relativity, and quantum theory; and the continued work by Kamerlingh Onnes and his associates on phenomena at very low temperatures. Among other investigations which are not so closely connected with the reviews of past years was the work by Michelson on the elastic constants of the earth. Not the least of the lamentable consequences of the European War was its effect upon productive scientific work, especially in the English and German universities.

ATOMIC STRUCTURE. Few more attractive subjects of study and speculation can be imagined than the search for a satisfactory theory of the ultimate constitution of matter. In the 1911 YEAR BOOK brief outlines were given of three different theories of atomic structure each of which had advantages in explaining certain accepted experimental results. The theory suggested in 1911 by Rutherford assumed that the atom consisted of a central nucleus of positive electricity surrounded by one or more rings of electrons. The experiments of Geiger, Marsden, and others on the scattering of α and β particles in passing through matter were the immediate cause of the formulation of this theory. In order to account for the results of these experiments Rutherford showed that the dimensions of the positive nucleus must be very small in comparison with those of the atom itself. He calculated that the radius of the nucleus must be less than 3×10^{-12} cm. while the radius of the atom is about 1×10^{-8} cm. He also concluded that the central charge for any given element must be numerically equal to the charge on an electron multiplied by approximately half the atomic weight of the element.

In the latter half of 1913, Dr. N. Bohr published three papers dealing with the theory of such a "planetary" atom. His assumptions include the idea that practically the entire mass of the atom is due to the positive nucleus. The internal structure of this nucleus has no influence on the chemical and physical properties of the substance; these are due only to its mass and total charge. But any radioactive properties must find their explanation in the nuclear structure.

According to Rutherford's theory, the amount of scattering of α particles per atom divided by the square of the charge on the positive nucleus should be constant. Later experiments by Geiger and Marsden (1913) showed that this was not exactly true on the assumption that the nuclear charge was proportional to the atomic weight. For a series of elements ranging from copper to gold they found a sys-

tematic variation of this value from 3.82 to 3.25. In November, 1913, Van der Broek showed that if the number giving the place of element in the periodic table were used instead of the atomic weight, the results of Geiger and Marsden gave a real constant. This suggestion is in line with Rutherford's earlier idea since the "atomic number" is roughly half the atomic weight.

The papers mentioned in the preceding paragraphs have furnished the ideas from which a more or less tentatively accepted theory of atomic structure has been evolved. Naturally many of the contributions have been somewhat controversial in character. In particular, Nicholson and Lindmann have criticised certain features of Bohr's theory and the interpretation of some of Moseley's experimental results in terms of this theory. It is entirely beyond the scope of the present article to review all the phases of this discussion, and to give proper credit to each contributor is well nigh impossible. Without attempting either of these tasks, the theory as it stands at the end of 1914 will be outlined.

If the elements are written down in the order of ascending atomic weight, as is done in the "Periodic Table," we assign to each element a number giving its position in this list. Hydrogen is No. 1, helium, No. 2, etc. For shortness, this number is referred to as the "atomic number" of the element. The nuclear charge of an atom is supposed to be made up of positive charges (+e) and electrons (−e), the sum of the positive charges exceeding the sum of the negative charges by an amount just equal to the atomic number. That is, the atomic number signifies the excess of the positive charges over the negative charges in the nucleus. Since the atom is electrically neutral, the nucleus must be surrounded by a number of electrons equal to the atomic number. Among other properties, the chemical valency of the atom is determined by the stability with which these outer electrons are bound to the nucleus. "On this theory the excess positive charge (the algebraic sum of the charges) on the nucleus is the *fundamental* constant which determines the properties of the atom." This nuclear charge increases by one as we go from element to element. "The atomic weight, while it follows approximately the order of the nucleus charge, is probably a complicated function of it, depending on the detailed structure of the nucleus." This is practically Rutherford's theory of 1911 with the addition of the idea of "atomic number," and the interpretation of this atomic number in terms of the nuclear charge. It is interesting to note that though Bohr's atomic model has been attacked, Van der Broek's suggestion seems to have been almost universally accepted.

Since the α particle carries two units of positive electricity while the β particle carries one unit of negative electricity, if the positive nucleus is the source both of α and β particles the emission of an α particle diminishes the nuclear charge by two, while the emission of a β particle increases it by one. Hence, in the case of radioactive transformations, any change accompanied by the loss of a single α particle must give a product whose atomic number is two less than that of the parent substance. Also, any transformation accompanied by the emission of a single β particle must result in a prod-

uct whose atomic number is one higher than that of the parent. Thus, the successive expulsion of two β particles and one α particle in three radioactive transformations in any order would result in a product of the same "atomic number" as that of the parent. Rutherford and Soddy have called attention to radioactive transformations which must take place in just this way. To quote from Rutherford: "It is clear on the nucleus theory that the physical and chemical properties of the ordinary elements are for the most part dependent entirely on the charge of the nucleus, for the latter determines the number and distribution of the electrons upon which the chemical and physical properties must mainly depend. As Bohr has pointed out, the properties of gravitation and radioactivity, which are entirely uninfluenced by chemical or physical agencies, must be ascribed mainly, if not entirely, to the nucleus, while the ordinary physical and chemical properties are determined by the number and distribution of the external electrons. On this view, the nucleus charge is a fundamental constant of the atom, while the atomic mass of an atom may be a complicated function of the arrangement of the units which make up the nucleus. . . . If the nucleus is supposed to be composed of a mixture of hydrogen nuclei with one charge, and of helium nuclei with two charges, it is a priori conceivable that a number of atoms may exist with the same nucleus charge but of different masses. The radioactive evidence certainly supports such a view, but probably only a few such possible atoms would be stable enough to survive for a measurable time." (*Philosophical Magazine*, vol. xxvii, pp. 497-498.) Also in harmony with this view are the results obtained by Richards and Lemberg on the atomic weight of lead from radioactive sources. They found that the atomic weight of such specimens was sometimes as much as 0.75 of a unit lower than that of "ordinary" lead.

Rutherford further argues that the nucleus rather than the outer rings is the source of β as well as α particles since (1) the β like the α ray transformations are uninfluenced by external chemical or physical conditions and (2) the energy of the β ray and γ ray transformations is much greater than we would expect to be stored in the external electronic system. The considerable fraction of β rays which come from the external electrons are primarily due to the disturbance produced in these configurations when a β particle from the nucleus passes through them. In a later paper by Rutherford and Andrade it is shown that the soft γ rays from Radium B have the same spectrum as the "characteristic X-radiation" of the "L" type of lead. On the theory of the nucleus atom it was calculated that lead and radium B should have the same atomic number, though the structure of the two nuclei are not identical, and their atomic weights are 207 and 214 respectively. The identity of their X and γ ray spectra is wonderfully conclusive evidence in favor of this whole theory.

The work of Moseley on the High Frequency spectra of the elements has furnished other very strong arguments in favor of the idea of the atomic number. He determined the characteristic X-ray spectrum for a number of elements ranging in atomic weight from aluminum (27) to silver (108). Each of these spectra

consisted of two sharp lines and from these he determined the frequency of the characteristic radiation. While plotting atomic weight against the square root of frequency did not give a satisfactory result, he obtained an accurately straight line when *atomic number* was plotted against the square root of the frequency. To obtain this result, however, it was necessary to assign to cobalt (atomic weight 59) an atomic number one *less* than that of nickel (atomic weight 58.7), making the order cobalt, nickel, copper, instead of nickel, cobalt, copper. But both its chemical properties and its behavior in experiments on radioactivity indicate that nickel should be placed between cobalt and copper in the periodic table.

In such an alluring subject as this, the temptation to let one's imagination run riot is very strong at times. However, in Rutherford's article quoted above (*Phil. Mag.*, vol. xxvii, pp. 488-498, March, 1914), Darwin's article which immediately follows it, and the later paper of Rutherford and Andrade (*Phil. Mag.*, vol. xxvii, pp. 854-868, May, 1914), the lines are sharply drawn between what has been actually established and what is still in the domain of conjecture. Undoubtedly the next few years will see long strides toward the final solution of this fundamental problem of both physics and chemistry.

X-RAYS AND CRYSTALS. As already indicated, the connection between the work on theories of the atom and the investigations on X-rays and crystals is very close. The 1913 YEAR BOOK contains a rather detailed account of the earlier work in this line. During 1914 many investigators worked in this fascinating field and the amount of data accumulated was surprising. A paper by Bragg (*Science*, Dec. 4, 1914) gave an excellent résumé of the whole field from the original investigations of Laue and his associates to the middle of the current year. One of the most prolific of the contributors was M. de Broglie. By various devices he succeeded in producing several effects which were exact analogues of well known phenomena in optics. He devised a method by which the reflecting crystal was slowly rotated about a vertical axis, the reflected rays falling on a photographic plate. In this way a continuous record across the plate was obtained. This is crossed at certain points by dark bands, giving much the appearance of the photograph of an ordinary line spectrum. This spectrum he found to be characteristic of the element used as antikatode. By allowing the reflected beam to fall upon a second crystal, de Broglie and Jacot showed that the beam of X-rays after the second reflection is polarized in a manner analogous to the polarization of ordinary light by reflection. De Broglie and Lindemann found that by substituting a very sensitive fluorescent screen for the photographic plate, they were able to *observe* these spectra. By using an absorbing screen of platinum with rays from a platinum antikatode, an effect similar to the "reversal" of spectrum lines was observed. The results of de Broglie's experiments with copper and iron antikatodes are in good agreement with those observed by Moseley.

One of the most striking of de Broglie's experiments was made by studying the *secondary* X-rays given off when a beam of primary rays falls on any substance. As was to be expected,

the spectrum of the secondary rays was found to be characteristic of the material from which they originated. Thus, if pieces of several metals were put into a bag, it was possible by studying the spectra of the secondary rays from it to determine its contents. This suggests many possibilities in the way of delicate and accurate analysis of mixtures of substances.

Some of the most important work in this field was done by Darwin and Moseley. Darwin's papers (*Phil. Mag.*, vol. xxvii, pp. 315-333, February, 1914, and pp. 675-690, April, 1914) give a theoretical treatment of the problem of Roentgen Ray reflection by crystals and he compares his tentative conclusions with the experimental results obtained by W. H. and W. L. Bragg, Moseley, and others. While the theory was by no means complete, it was at least very suggestive as a guide for future work.

Reference has already been made to the work of Moseley. His two papers on "High Frequency Spectra of the Elements" (*Phil. Mag.*, vol. xxvi, pp. 1024-1034, December, 1913, and vol. xxvii, pp. 703-713, April, 1914), were extremely important for their bearing both on the theory of atomic structure and on the nature of the action between X-rays and crystals. The experimental details of these investigations are too involved to be described in this review. An idea of the comprehensiveness of the work may be gathered from the statement that the characteristic radiations of either the "K" or the "L" type, were studied for more than 30 elements, while for a few of these it was found possible to study both types. To quote a part of the summary of his second paper (page 713):

"1. Every element from aluminium to gold is characterized by an integer N which determines its X-ray spectrum. Every detail in the spectrum of an element can therefore be predicted from the spectra of its neighbors.

"2. This integer N , the atomic number of the element, is identified with the number of positive units of electricity contained in the atomic nucleus.

"3. The atomic numbers for all elements from aluminium to gold have been tabulated on the assumption that N for aluminium is 13.

"4. The order of the atomic numbers is the same as that of the atomic weights, except where the latter disagrees with the order of the chemical properties.

"5. Known elements correspond with all the numbers between 13 and 79, except three. There are here three possible elements undiscovered."

Comment on the importance of these conclusions, especially the latter part of number 5, is superfluous.

As indicated in the 1913 YEAR BOOK, two of the leaders in this line of work were Professor W. H. Bragg and his son, W. L. Bragg. Their later work was largely along the lines previously outlined in the review for 1913. By perfecting and especially by improving the precision of the X-ray spectrometer, they have been able to attack more complicated problems. For example, such crystals as quartz and sulphur were studied. Some idea of the complexity of these may be gained from the statement that the crystals of ordinary orthorhombic sulphur are made up of eight interpenetrating lattices. In the study of the diamond by rays from a

rhodium antikathode, an effect similar to selective absorption was observed.

Since increase of temperature means an increase of molecular and atomic motion, and as this must disturb somewhat the arrangement in the "planes rich in atoms," it is to be expected that a rise in temperature of the crystal would influence the pattern or spectrum produced by it. Attention was first called to this point by Debye. He showed theoretically that the intensity of the interference spots in a Laue photograph should decrease with increase of temperature and that the effect should increase in going to spectra of higher orders. These conclusions were confirmed in a general way by experiments by Bragg, Laue, and Van der Linzen, and others. These investigations were especially interesting because of the insight which they promised to give into the nature of the thermal agitation of molecules and atoms in solids. The work of Bragg on the structure of crystals was confirmed by investigations by Ewald, using photographs made by Laue's method. Born worked out in detail a mathematical theory which fits in well with Bragg's results.

It would be expected that changes affecting the orientation of the atoms and molecules of a substance would produce changes in its X-ray spectrum. Haga and Jaeger have used photographs, made by Laue's method, to investigate the nature and arrangement of the crystals of boracite at temperatures above and below its inversion point. The investigation is of considerable interest because the optical behavior of boracite at ordinary temperatures is anomalous. When, however, a crystal of it is heated to its inversion point, about 300°C., a rearrangement of the molecules occurs by which the optical behavior becomes just what we would expect from its external form. The photographs gave direct evidence of this molecular rearrangement. Of a somewhat similar nature are some experiments of Owen and Blake on copper. They carefully annealed one-half of a lump of copper, and studied the photographs obtained by transmitting a beam of X-rays through each half. The annealed half showed the Laue spots though the patterns were not symmetrical, showing that the minute crystals were not arranged regularly. The unannealed portion gave negative results. Such investigations as these may prove of value in metallurgical work. An attempt by Forman to detect a change in the opacity of iron to X-rays due to magnetization gave negative results although his method was very sensitive.

The phenomena of the scattering of X-rays by metals has been studied for several years. H. A. Wilson has recently suggested an explanation on the assumption that there are very small crystals distributed throughout the metal. By assuming that half of the electrons are in these crystals and half of them scattered at random throughout the metal, his calculated results are brought into fair agreement with the values obtained experimentally by Crowther for aluminium.

The investigations mentioned above are only a part of the work which was done in this field. In a recent lecture Professor Bragg described the value of this method of studying the nature of X-rays by saying "... we are in the same position as we should have been in respect to

light if our only means of analyzing light had been by the use of colored glasses, and we had then been presented with a spectrometer, or some other means of measuring wave length exactly." Yet this is only one of the lines of study to which these results apply and he would be bold indeed who would venture to predict the goals to which they may lead in the next few years.

THERMIONS, CONDUCTION, AND IONIZATION IN GASES, AND PHOTOELECTRIC EFFECT. As mentioned in previous YEAR BOOKS, Richardson's general theory of thermionic emission has been attacked by Pring, Parker, and others. Pring in particular held that his latest experiments showed that practically all the thermionic current from heated carbon is in reality due to chemical action between the hot carbon and the residual gas. Richardson replied by pointing out that if this were true it would follow that the results with carbon dioxide as the residual gas would be of a very different order of magnitude from those observed with other gases. The experimental results do not support this. In the case of Pring's experiments, the heating current was large—approximately 80 amperes. Richardson has shown that the magnetic effect of this current would produce sufficient deflection to keep any of the electrons emitted by the carbon from reaching the collecting electrode. Richardson is also supported by the work of Dushman in the Research Laboratory of the General Electric Company. This confirms Langmuir's conclusions (see 1913 YEAR BOOK), on the effects of space charge and residual gases. Dushman's experiments show that there is a pure electron emission from heated metals which is not due to the presence of gases and that this is a function of the temperature only.

The subject of ionization by collision has received considerable attention during the past year. The work of Franck and Hertz was mentioned in this review last year. The currents due to ionization by collision are greater in helium than in hydrogen, though the minimum energy which an electron must possess in order to ionize a molecule of hydrogen corresponds to that gained on falling through only 11 volts while for helium it corresponds to 20.5 volts. Franck and Hertz explain this by assuming that the collisions between electrons and molecules are elastic in the case of helium but inelastic in the case of hydrogen. In the case of mercury vapor they have shown that the collisions are elastic up to a critical velocity of the electrons corresponding to a fall of potential through 4.9 volts. This corresponds to the energy quantum of the line $\lambda = 2536$ in the resonance spectrum of mercury. This indicates that the collisions are elastic until the kinetic energy of the electron reaches the amount of the energy quantum. Then at a subsequent collision this quantum is transferred, part of it producing ionization and part of it producing light of the wave length just mentioned.

Bergen Davis has published several papers dealing with the general theory of ionization by collision. His theory considers the possibility of both elastic and inelastic collisions. It is too mathematical to be outlined here, but in general it may be said that his theoretical deductions are in excellent agreement with the accepted experimental results.

As mentioned in an earlier topic, Rutherford

some years ago suggested a theory to explain the scattering of α and β particles. In this theory he assumed that the atom was so large and heavy in comparison with the colliding particle that it was almost unaffected by its collision. While this is true in many instances, it obviously is not the case when an α particle collides with an atom of hydrogen or helium. A general theory to cover all possible cases has been given by Darwin in a recent paper (*Phil. Mag.*, vol. xxvii, pp. 499-506, March, 1914), and Marsden's experiments on hydrogen gave results confirming the deductions from this theory. (See *Phil. Mag.*, vol. xxvii, pp. 824-830, May, 1914). For example, Darwin's theory indicates that in the case of an "end on" collision between an α particle and an hydrogen atom, the hydrogen particle should have a range about four times that of the α particle. Marsden found some hydrogen particles which traveled at least three and a half times as far as the α particles. And the number of these was in fair agreement with the value computed on Darwin's theory.

In the 1912 YEAR BOOK, mention was made of Wood's suggestion of an "electron atmosphere" around a metal. While the idea certainly is attractive, later experiments have failed to lend it any support. It will be recalled that Wood's suggestion was based on experiments indicating conduction between metallic surfaces separated by 20 or 30 wave lengths of sodium light. F. C. Brown, from some experiments with condenser plates, separated by only 10 wave lengths, concluded that conduction did not extend as much as two wave lengths beyond the mechanical surface. In a published note, Englund called attention to some of his earlier experiments in which he found that the spark potentials between electrodes separated by distances as small as half a wave length of sodium light were constant. These results are strong evidence against the existence of an electron atmosphere.

In working with the ultra-microscope and colloidal solutions of the precious metals, Ehrenhaft has claimed to find evidence of electric charges smaller than the charge of an electron. The existence of such "sub-electrons" is certainly not contemplated by most of our present theories. It will be interesting to see whether Ehrenhaft's deductions are confirmed by future work.

Recent studies of photoelectric phenomena divide themselves into two classes, those the subject of which is to discover the exact nature of the phenomena, and those which are directed toward perfecting a cell which can be used in very delicate photometric work. In the latter class may be mentioned the work of W. F. Schulz in applying the photo-electric cell to a study of the intensities of certain stars.

The work of Fredenhagen and Kustner indicates that the photo-electric effect is primarily due to the presence of gas with which the metal reacts. Their experiments with fresh surfaces of zinc prepared in the highest vacua show less than $\frac{1}{1000}$ the "normal" effect. Wiedmann and Hallwachs explain the exceptional activity of potassium as due to the large amount of gas which it absorbs. On the other hand, Hallermann concluded from his researches that temperature has no influence on the photoelectric effect, while later experiments by Fredenhagen

showed that a potassium cell is or is not influenced by temperature, according to its previous treatment. With such conflicting claims it is clear that there is much room for further investigation in this field.

Wood, Dunoyer, and others have continued the study of resonance spectra, mentioned in some detail in the YEAR BOOKS of 1911 and 1912. These investigations included a photometric study of the fluorescence in iodine vapor and considerable work on sodium vapor. Among other interesting results was the discovery that the resonance lines in sodium vapor are about four times as narrow as the exciting lines, and that each of the two components of the sodium spectra excites only its own frequency in the resonance spectra.

WORK AT VERY LOW TEMPERATURES. For a number of years Kamerlingh Onnes and his associates had been using the facilities of the low temperature laboratory at Leyden for investigations along several different lines. The YEAR BOOKS of 1911 and 1912 contained brief accounts of some of these. More recent investigations included the study of the vapor pressure of carbon dioxide down to a temperature of -183°C . The results were found to be in substantial agreement with those deduced from Nernst's formula. With the assistance of Madame Curie, some experiments were carried out upon radium. It was found that keeping radium at the temperature of liquid hydrogen (-253°C .) for an hour and a half did not cause a change in the γ radiation of as much as one part in 1000. Since temperature deals essentially with molecules while radioactivity is ascribed to the atomic nucleus, this result was to be expected. In some investigations on the magnetic susceptibility of solid oxygen it was observed that the solid oxygen exists in two forms. Above -235°C . it is blue-gray in color, but below this temperature it has a transparent and vitreous appearance. The magnetic susceptibility, which follows Curie's Law at higher temperatures, departs widely from this law at such low temperatures.

Perhaps the most fascinating of these low temperature researches are those dealing with the effects on electrical resistance of metals. In the case of solid mercury it was found that resistance follows the ordinary laws of change with temperature down to about 4.2° Absolute (-268.8°C .). But here a very sudden change occurs. Between 4.21°A . and 4.19°A . the resistance decreases enormously and the metal becomes "superconductive." At 3.6°A . the resistance is less than four *ten million-millionths* (4×10^{-10}) of its resistance at 0°C ., and at 2.45°A . the resistance is less than half this amount. An applied potential difference of 0.56 *microvolt* gave a *current density* of 1024 *amperes per sq. mm*. This enormous value is almost inconceivable. Lead and tin showed similar changes in resistance. With tin the superconducting state was reached at about 3.8°A ., while in the case of lead it occurred between 14°A . and 4.3°A . One experiment with a lead coil was very remarkable. By means of a powerful magnet, a current was induced in a coil of lead in the superconductive state. This current continued apparently without diminution for *over four hours*. It was found that a magnetic field with the lines of force in the plane of the coils increased the resistance, acting like

an increase of temperature. The next step which Kamerlingh Onnes makes in the attainment of his goal, the "absolute zero," will be awaited with great interest.

PICQUART, MARIE-GEORGES. A French soldier and public official, died Jan. 19, 1914. He was born in Strassburg, Sept. 6, 1854, and received his education at the Military Academy at Saint Cyr, and in the Staff High School. He first served in Algeria, and later in Tongkins under the staff of General de Courcy. At the age of 33 he was a major and a chevalier of the Legion of Honor, and in 1888 he was appointed instructor in the Higher School of War. One of his pupils here was Major Dreyfus, in whose later career he became so closely identified. When the Dreyfus trial began in 1894, General Mercier, then Minister of War, chose Picquart to represent him in the secret sessions and to carry to the court the "secret dossier" which was such a notorious feature of that trial. After Dreyfus had been convicted and sent to Devil's Island, Picquart, then made a general, was a member of the general staff of the army. Coming across several documents which had been used in finding Dreyfus guilty, he became convinced that these were forgeries, and immediately took up the cause of Dreyfus, fighting for a reversal of the judgment against the convicted officer. When it became evident to the faction of the army opposed to Dreyfus that Picquart was determined to have the case threshed out, they caused his arrest first on one charge and then on another; these charges, however, were dismissed. General Picquart was abused in the press; forced into a duel with Colonel Henry, one of the chief opposers of Dreyfus and at that time a popular favorite; and finally obliged to resign from the army. During this period of retirement and official disgrace, he was able, with the help of Emile Zola, the novelist, and others, to have the Dreyfus case reviewed by a second court-martial at Rennes; which resulted in Dreyfus being again convicted by his enemies, but pardoned by President Loubet. Picquart, not being satisfied with the pardon, insisted upon a vindication of Dreyfus, and he and his associates kept up the fight until they had obtained a verdict of innocence from the highest court, and Dreyfus was restored to the army.

When M. Clémenceau, one of the most determined of the Dreyfus supporters, became Premier, he restored General Picquart to his rank in the army and made him Minister of War. Although he now possessed the power to punish those who had persecuted him, he showed himself just and magnanimous. As Minister of War he encountered strong opposition because of his support of the policy of lightening the war burden. General Hagron, commander-in-chief of the army, resigned because of this policy and insisted that Picquart should have called attention to the national dangers arising from this policy when Germany's superior war strength was considered. General Picquart resigned when the Clémenceau ministry fell in 1909, and from that time took no active part in the government. Opinion was divided as to Picquart's success as Minister of War; government organs insisted that he was the best war chief that France ever had, while the opposition papers declared that his administration was a failure. He wrote in 1908 *Projet de loi*

relatif à la constitution des cadres et des effectifs des armées active et territoriale.

PIERCE, ARTHUR HENRY. An American psychologist and educator, died Feb. 20, 1914. He was born at Westboro, Mass., in 1867, and graduated from Amherst College in 1888, taking post-graduate studies at Harvard University, Berlin, Strassburg, and Paris. In 1900 he became professor of psychology at Smith College and retained that chair until his death. He was the editor of the *Psychological Bulletin*, the author of *Studies in Space Perception* (1901), and was a member of several psychological associations.

PIETRO, ANGELO DI A Roman Catholic Cardinal, died Dec. 5, 1914. He was born in Vinaro, Italy, in 1828, and was educated at the Seminary of Tivoli, also graduating in law at Rome. For a time he served as secretary and vicar to the Bishop of Velletri, and in 1877 was chosen Archbishop of Niuiauzo and Apostolic Delegate to Argentina, Uruguay, and Paraguay. He then became Papal Nuncio at Munich and in 1887 was transferred to Madrid. In 1893 he was created a Cardinal priest and was designated Archbishop of Vienna.

PITTSBURGH, UNIVERSITY OF. An institution for higher education, founded at Pittsburgh, Pa., in 1787. The university has shown great increase in enrollment in recent years. There were in all departments in 1914, 2830 students, and the faculty numbered 329. The productive funds amount to about \$525,000, and the annual income to about \$500,000. The library contains about 20,000 volumes. The chancellor is Samuel B. McCormick.

PITUITARY GLAND. This structure, located at the base of the skull, was the subject of active investigation during 1914. The body is a neuroglandular mass, which in the higher animals consists of two principal parts, an anterior or glandular lobe, and a posterior lobe containing mainly nerve tissue. The posterior lobe is smaller than the anterior and is surrounded by an epithelial covering, the so-called *pars intermedia*, separating it from the anterior lobe. While the functions of the pituitary body are not fully known, certain facts have been discovered with regard to it which indicate that it has a profound influence on the growth and well-being of the body. In fact its existence is necessary to life. The extract of the gland when injected causes a rise in the blood-pressure and a contraction of the involuntary muscles. For these reasons it has been used to stimulate the uterus in delayed labor, in paralytic distention of the bowel, and in shock. Recently it has been advocated in exophthalmic goitre. Interesting observations along the lines of comparative physiology were made by Cushing and Goetsch, who called attention to the striking resemblance between the phenomena of hibernation in animals like the woodchuck with the train of symptoms which attends deficient activity of the pituitary body. In the human subject the most noticeable symptoms of "hypopituitarism" are a lowering of the body temperature, slowing of the pulse and respiration, fall in blood-pressure and somnolence, and a tendency in the chronic cases toward the deposition of fat. The investigators observed that in the dormant period of a series of hibernating animals the pituitary

gland not only becomes smaller, but undergoes extreme histologic alterations, more especially in the cells in the anterior lobe. At the end of the dormant period the gland again enlarges, and the cells resume their characteristic appearance. Cushing and Goetsch also discovered that the administration of pituitary extract has a stimulating effect on the growth and development of the reproducing glands in young animals of both sexes. Extracts of the anterior lobe only have this effect. See EPILEPSY.

PIUS X (GIUSEPPE MELCHIORE SARTEO), POPE. Died Aug. 20, 1914. He was born June 2, 1835, in the small hamlet of Riese, in the province and diocese of Treviso, Venice. His mother, Margarita Sanson, kept a small village shop, and his father, Giovanni Batista, was a postman and the son of a soldier, a zouave in the Pope's army. It is a tradition among the Italian peasantry that the sons or the grandsons of one of the Pope's soldiers should contribute at least one to the priesthood, and Margarita Sanson vowed her firstborn son to holy orders. During the childhood of the boy Venice was in the hands of the Austrians, and conditions were so hard in the communities that the schools were of little value. Giuseppe was taught by the parish priest the elements of Latin, and he was then sent to pursue his studies further in the neighboring and larger town of Castelfranco Veneto. Here he showed such diligence and application to his studies, that when a small scholarship of the diocese of Treviso became vacant, it was given to him. With this help, which was in reality a mere pittance, he went to the University of Padua, which for centuries was the centre of Italian culture. There he carried on his classical, philosophical, and theological studies. His companions at the university agreed, that while his study never rose to brilliancy, he was always firmly grounded upon accurate knowledge and sound logic.

Sarto was ordained priest Dec. 15, 1858, and was assigned at once as curate at Tombolo, but he had in reality charge of the parish, for the rector was aged and infirm. He held this post for nine difficult years, and in carrying out his duties there he acquired experience which proved in good stead in the future. In 1867 he was assigned as archpriest to Salzano where he spent eight years. In the face of the greatest difficulties he succeeded in restoring a dilapidated parish church, in bettering its schools, and in enlarging and endowing a hospital. Here began his association with the Society of St. Vincent de Paul, whose work was always close to his affection and care. During his stay at Salzano the cholera swept over Italy and his parish did not escape the visitation, but he remained at his post and was fearless in his duty. His service in this parish attracted the attention of the Bishop of Treviso, and, in 1875, Sarto was raised to a canonry in the Cathedral of Treviso; not a mere honorary post, but one imposing hard administrative work. He was at the same time rector of the diocesan seminary, examiner of the clergy, and vicar-general of the diocese. His work was so successful that three years later, on the death of the bishop, he was unanimously elected by the chapter as its vicar-capitular. Six years later, on Nov. 10, 1884, he was consecrated Bishop of Mantua, a stormy diocese, the turbulent centre of socialism, liberalism, and agnosticism. In the course

of years of hard work, however, Bishop Sarto succeeded in winning Mantua, and in so doing, two things in particular developed for him: from the necessity of the conditions with which he found himself surrounded, he was obliged to investigate the appeal which Socialism in its various forms possesses for the people; and to study the causes which left the parochial clergy weak to resist in themselves and to combat in others the social disorders. These topics he mastered in all their phases. He was able to cope with them in the diocese and he healed much of the derangement of the conditions of the community and of the church. So closely did he become identified with Mantua that, when he was elevated to the position of Patriarch of Venice he was continued by title and office as Apostolic Administrator of Mantua. As at Treviso, so at Mantua he served for nine years.

In recognition of his remarkable work at Mantua, he was created by Pope Leo, Cardinal Titular of San Bernardo alle Terme, and preconized Metropolitan and Patriarch of Venice, on June 15, 1893. The see of St. Mark the Evangelist of Venice is one of the oldest in Christendom, and has an uninterrupted history of nearly sixteen centuries, but in modern times the style of its Metropolitan is hardly more than an empty honor; yet it serves as a reminder of earlier ecclesiastical government in which the Pope, as patriarch of Rome, was but the primate of a small group of associated patriarchs. Sarto did not assume the patriarchate of Venice until 1894 on account of the refusal of the Italian government to grant the official exequatur. This situation brought about a certain hostility toward the newly appointed patriarch, but his charm of manner soon succeeded in smoothing out the asperities of a trying situation, and the Metropolitan and the city officials became warm friends. For nine years they worked together for the betterment of the city.

In 1903 Leo XIII died, and the Conclave to choose his successor held its first session on August 1 of that year. After four days' voting, in the morning poll of August 4, Cardinal Sarto received fifty-five votes out of a possible fifty-nine in the Conclave, and was elected Pope, the two hundred and fifty-ninth successor of Saint Peter. As his title he chose the name Pius X, and was crowned on Aug. 9, 1903; taking as his motto *Instaurare omnia in Christo* ('to renew all things in Christ'). He began almost immediately many wise reforms and important measures that his admirers consider will rank him among the Church's great popes. He began by abolishing the traditional right of veto at the election of the Pope which several European governments claimed and which Austria had exercised against Cardinal Rampolla at the time of his own accession. On November 22 of the same year, he issued the *Motu Proprio* reforming the music of the ritual and restricting it to the authentic Gregorian chant of which he had made a special study during his administration of the bishopric of Mantua. The decree insisting on early communion for children and frequent, even daily, communion for all, was one of the most radical and far-reaching of his efforts to restore the Church to the fervor of the primitive times. In 1904 he established a commission whose duty it should be to codify the canon laws, and another commission to re-

form the Breviary. He also created a Biblical Institute, which he entrusted to the Jesuits and called on the Benedictines to restore the true text of the Vulgate of St. Jerome. These projects were but initial in his greater plan for the clearing away of the accretion of ill usage and the restoration of sound doctrine in the Church. As the first step toward the treatment of this problem he attacked the methods of diocesan seminaries and insisted that each diocese should support its seminary for the priesthood; but with the proviso that weak dioceses should not assume to maintain seminaries which must essentially be weak, but must join themselves to their more flourishing neighbors. Thus he provided that the means of education should be strong or should not exist at all. This cleared the way for the decree *Lamentabile*, issued in 1907. This at once received the popular designation of the "Syllabus of Pius X," in which sixty-five propositions were condemned, that being the number of errors which he declared were rife in the instruction of candidates for holy orders. On September 8 of the same year this decree was followed by the great encyclical *Pascendi*, in which Modernism, then assuming important proportions in the Church, was re-proved. As a result of this and succeeding decrees the open advocacy of Modernism was practically brought to an end.

In Italy the years of the reign of Pius X were filled with efforts to cope with the spread of Socialism, but the Socialism of Italy soon became obscured in the greater troubles of the Church in France. He was confronted in 1906 by the Separation Laws passed there, and by the abolition of the Concordat. Some of the French bishops favored a compromise to *associations canoniques* that would meet the requirements of the new law, but Pius X refused to sanction the plan. He refused to fetter the Church with the chains of the *loi Briand*, and the complete sacrifice of the property of the Church in France that this policy involved seemed to his critics an insane one. Before his death the revival there of the religious spirit made him and his followers sure that it had really benefited religion and saved the independence of the Church from destruction. The material losses in France were followed by the drastic legislation and the spoliation of Church property by the new Republic of Portugal.

Pius X's relations with the United States were particularly friendly and cordial. During the reigns of his predecessors, the United States remained under the missionary jurisdiction of the propaganda. Pius X raised it to the autonomous position of the other great nations, and this step was followed by the creation in 1911, of two additional American cardinals.

The last great administrative act of Pius X was the consistory held on May 25, 1914, when he created thirteen new cardinals and brought the number of the Sacred College to 66, of whom half were Italians.

It is probable that the outbreak of war in Europe hastened his death, for although he had been in ill health for several months, no alarm was felt until war had been declared. His last message to the world was an appeal for peace made on August 19.

While there may be a difference of opinion as to the ability with which Pius X administered

his office, there can be none as to the beauty and purity of his life. He died a poor man and so loath was he to accept honors for members of his family, that although he might have raised them to positions of great dignity, his brother continued to act as postman in the small village in which he had been born, and his three sisters remained in humble circumstances in Rome.

PLAGUE. An outbreak of plague in New Orleans took place in June, 1914. The first case was noted on June 27, and the epidemic lasted until August. Altogether some 22 cases were found. Immediately on discovery of the first case an active campaign against rats was undertaken with the result that numerous animals were found to harbor the germs of the plague. The destruction of rats, together with rigorous sanitary measures, prevented the spread of the disease. (See VITAL STATISTICS.) It appears that other animals besides rodents may act as carriers of bubonic plague. Klodnitzky reports that camels are not immune, but are probably the chief cause of epidemics among the Kirghiz tribes in the southeastern part of Russia. Camel's meat is eaten by these people, sick animals being slaughtered for human consumption. The skins also are used for various purposes, and help to spread the disease. In 1911 and 1913 plague occurred mostly in the form of the winter pulmonic type, and this the author explains by the fact that camels are butchered early in the winter in great numbers. Marmots, which were implicated by several observers in the Manchurian outbreak several years ago, could not be responsible in this locality, for they burrow underground, at the end of July, to stay for the winter. The question of human carriers was also raised by the case of a young man in Tripoli, who was kept under surveillance because he had been living with another who had developed the cutaneous form of the disease. The first young man was apparently healthy, but puncture of an enlarged lymph-node in the groin revealed the presence of the *Bacillus pestis*. He was evidently a healthy bacillus-carrier, and the local infection in his case probably acted as a vaccine, rendering him immune. Such cases are liable to occur in any epidemic. See INSECTS AND THE PROPAGATION OF DISEASE; VITAL STATISTICS.

PLANÇON, POL HENRI. A French operatic basso, died Aug. 12, 1914. He was born at Fumay, in the Ardennes, in 1854, and was educated in music at the Ecole Duprez in Paris. He made his debut in *Les Huguenots* at Lyons in 1881; spent one season at the opera house of Monte Carlo; and appeared in 1883 in the Paris Opéra as Mephisto in *Faust*, a rôle in which he achieved great success. He sang for 10 years in Paris; appeared 15 consecutive seasons at Covent Garden in London; and was engaged each winter for 13 years at the Metropolitan Opera House of New York City. The rôle of Ramfis in Verdi's *Aida* was one of his most brilliant successes. He created the rôles of Norfolk in *Henry VIII*, of Don Gormas in *Le Cid*, and of Francis I in *Ascanion*. He took part in the revival of Gounod's *Sapho* in 1893, and appeared in leading rôles in *Hamlet*, *Le prophète*, *La favorite*, and *Lohengrin*. Plançon was for 10 years the favorite singer of Queen Victoria, from whom he received many presents.

PLANT BREEDING. See BOTANY; HORTICULTURE.

PLATINUM. There was little increase in the production of crude platinum in the United States in 1913. The entire production was from California and Oregon, and amounted to 482.87 crude ounces, valued at \$18,477. Of this, 460.37 crude ounces came from California, and were rated at 80 per cent fine. The greater part of the California platinum came from the large gold-dredging operations in Butte, Yuba, Sacramento, and Calaveras Counties. A considerable output of platinum is annually made in the United States from the refining of gold and copper bullion. A portion of this originates from old scrap, sweepings, etc., sold by jewelers and dentists. About 650 fine ounces, however, were derived in 1913 as new metal from gold and copper bullion from domestic mines. The crude platinum sand imported into the United States in 1913 amounted to 48,942 ounces. If the content of fine platinum in this sand is assumed to be 80 per cent, the approximate production of refined platinum in the United States in domestic refineries from foreign sands in 1913 was 39,154 ounces. The total importation of ore or crude platinum into the United States in 1913 was 48,942 troy ounces, and of unmanufactured platinum 69,551 troy ounces, with a total value of \$5,040,210. The larger part of the world's supply of platinum comes from Russia, the estimated production of that country in 1913 being 250,000 troy ounces. A considerable quantity is obtained from Colombia, and smaller quantities from New South Wales and Tasmania. The Russian production has in recent years shown signs of exhaustion, but in 1913 new deposits were discovered in the northern part of the Ural region. Metals allied with platinum are iridium, palladium, and osmium. Practically the only use for osmium is for pen points. Palladium is also used as an alloy of platinum for ornamental purposes. See also the article CHEMISTRY, INDUSTRIAL.

POLAR RESEARCH. **ANTARCTIC.** South-polar exploration has been largely in the way of correlation and preparation, with which the great European conflict has seriously interfered. The Argentine government has apparently placed its meteorological work in the South Orkneys on a permanent footing. The growing productivity of the fishing industries, of which South Shetlands is the main base, is shown by the report that they approximated \$1,000,000 in value last year. In this connection appears the importance of territorial rights, exemplified by Great Britain, calling attention to its declaration of 1908 that Graham (Palmer) Land was a British possession, extending "to the south of the 50th parallel of south latitude, and lying between 20 and 80 degrees of west longitude." Arrangements have been made to scientifically explore Graham Land by an Anglo-Swedish expedition under the leadership of Otto Norden-skiöld, at a cost of about \$40,000. The work is to cover five years, and involves the establish-

ment of a permanent biological observatory on or near Joinville Island. From this centre research and exploration will be pursued both by land and by sea. Among other problems are those connected with the past history of Graham (Palmer) Land, and its continuity southward as an integral part of the continent of Antarctica.

An Austrian Antarctic expedition was planned for 1914, under command of Dr. König, which was to sail from Trieste. König planned to occupy as a base a bay discovered in the ice-barrier of Prince Luitpold Land by Filchner. Thence three sledge parties, traveling in different directions, were to explore the adjacent regions. The beginning of war caused the postponement of the expedition.

The only south-polar expedition to take the field during 1914 was the Imperial Transantarctic, under Shackleton, which proposed to cross the continent of Antarctica from Weddell Sea to Ross Sea. It involved a minimum travel of 1700 statute miles, and a sledge trip of five months. The problems to be solved were the continuity of Antarctica from Ross to Weddell Sea, and the collection of such specimens as might complete the geological history of the continent. While the selected route from Weddell Sea was direct to the Pole, the return to Ross Sea would probably be east of Amundsen route, possibly to Edward VII Land, so that the country visited would be entirely new. While such a journey appeared to be most hazardous, it had engaged the financial support of the British government, and of the Royal Geographical Society.

Shackleton left Buenos Aires in the *Endurance* on Oct. 27, 1914, having somewhat modified his preliminary lines of action. The geologist and his sledging outfit were to be landed in South Georgia, while he investigated the ice conditions of Weddell Sea. If it seemed open and navigable, the party from South Georgia would be taken up, and the *Endurance* would proceed southward. He expected to put the ship in quarters in about 77° 30' S., in a bay of Luitpold Land. A wireless receiver, installed by the Argentine government, was to keep the party in wireless communication during its voyage. If fortune favored, the transantarctic journey was to be commenced in the autumn of 1914, otherwise it was to be postponed until October, 1915. The field party was to consist of six men, equipped with 120 dogs, with sledges, an aeroplane for short journeys, and two sledges driven by aeroplane propellers with suitable engines as power. The station in Ross Sea was to be under Lieutenant McIntosh, who occupied it with the steamer *Aurora* from Australia.

The return of Sir Douglas Mawson in 1914 makes possible a summary of the results obtained by the Australasian Antarctic expedition of 1911-13, on that part of the continent of Antarctica known to geographers as Wilkes Land. At sea Captain Davis discovered a submerged plateau to the south of and as large as Tasmania, and a deep between Macquarie and Auckland Islands. On land two stations were established, Wild on the Shackleton ice-shelf, or oceanic ice-cap, in 95° W. longitude on the Antarctic circle, and Mawson, likewise on the circle, at Commonwealth Bay, in 140° W. longitude. By sledge journeys, under most adverse conditions, aggregating 3200 miles, the various members explored land between 63° and 68° S. latitude, and covering 27 degrees of longitude in the

regions between 90° and 153° E. longitude. By soundings, the continental slope, and in most cases the shelf itself of Antarctica, was indicated through 55 degrees of longitude. It has been demonstrated that in this region, unvisited for 70 years, there exists the Antarctic continent discovered and reported by Wilkes in 1840, though, as was surmised, there were errors in determining the exact location of the mainland. Mawson himself was the only survivor of a sledging party of three which made an outward journey of 310 miles, to the vicinity of the south magnetic pole, where Lieutenant Ninnis was lost in a crevasse with sledge and supplies. Dr. Mertz succumbed within 100 miles of the home station.

ARCTIC REGIONS. *Arctic America.* Its failures and its disasters have largely excited public sympathy and interest in the operations of the Canadian Arctic expedition under command of V. Stefansson. When Stefansson left Nome, Alaska, to enter the Arctic Ocean his perfected plans were as follows: The steamer *Karluk* was to explore the unknown sea to the west of Parry Islands, where he hoped to reach the 141° W. longitude to the northwest of Prince Patrick Land. The *Mary Sachs* was to establish a base at the head of Prince Albert Sound, whence a field party was to fill in the unknown coasts of Northeast Victoria Land. The destination of the *Alaska* was Dolphin and Union Strait for winter quarters, whence scientists were to explore the unknown country between the sea and Great Bear Lake. Unusually bad ice conditions made it impossible to carry out these plans. Despite every effort the *Alaska* and *Mary Sachs* were obliged to winter in Camden Bay, Alaska, where they were joined by Stefansson, who was separated from the *Karluk* owing to its drift. The *Karluk*, commanded by Capt. Robert Bartlett, was most unfortunate. She was frozen in near the northeastern coast of Alaska on Aug. 17, 1913, where Stefansson left her in early September, in order to hunt for fresh meat, and was prevented from returning by a severe storm. This easterly gale disrupted the pack and drove the *Karluk* to the west, where she was again and permanently ice-beset. Carried once within 4 miles of the coast, near Tangent Point, the plans of the crew to land were frustrated by ice activities. The ship's drift was now in a northwest direction, where the most northerly point was reached in about 73° N. latitude, 164° W. longitude. The ice then carried her to the southwest to a point nearly due north and 60 miles from Herald Island, where, on Jan. 11, 1914, the *Karluk* sank in 38 fathoms of water. During the drift soundings and dredging went on regularly. Among the large collections obtained were new species of starfish and other marine life from depths of more than 1200 fathoms. It appeared that the continental shelf, which is a narrow border along the coast of northeastern Alaska, projects several hundred miles from the adjacent Asiatic coast and a somewhat less distance directly north of Alaska west of Point Barrow. The maximum depth, some 1250 fathoms, is nearly double any previously recorded in these regions.

When in November Bartlett found his ship had reached the continental shelf he, as a matter of wise precaution, built a house on the floe and stocked it with food, clothing, general supplies, and sledging equipment to ensure the

safety of his men. When the ship sank the party went comfortably into camp, pending steps to ensure a safe line of retreat. Dissensions now arose when Bartlett announced his decision to proceed to Wrangel Land, as the point whence relief would be obtained easiest. Dr. Forbes Mackay strongly disagreed, insisting that the party should seek the nearest land, which was Herald Island 60 miles distant, as against Wrangel Land, over 80 miles. Finally, after being released from responsibility in writing by Mackay, Bartlett yielded and gave him an ample outfit in food and sledge equipment. Mackay, confident through his Antarctic experiences with Shackleton, started with Murray and two other men, but the party was never seen again. It may be added that in September, 1914, when the *Bear* was unable to approach nearer than about 10 miles of Herald Island, there were no signs of life, though the air was clear.

In preparation for the main retreat Bartlett sent the mate Anderson forward with three other men, to haul food and explore the ice on the way to land. The party, left with supplies within 3 miles of Herald Island, disappeared, its fate being one of those polar mysteries that remain unsolved. It may be added that the casualty list of the *Karluk* was ultimately 11, as 3 died on Wrangel Land. Bartlett succeeded in bringing his remaining men safely to Wrangel Land, where they arrived on February 13. Camping near Cape Berry, where driftwood was abundant, the party with its ample food and improvised shelter were fairly comfortable. On March 18, believing that the proper time had come to seek relief, Bartlett with an Eskimo crossed Long Strait, 90 miles wide, under arduous and dangerous conditions. On the Asiatic coast he ultimately fell in with a Russian official, Baron Kleist, by whose aid he reached Providence Bay, whence Captain Pederson, whaler *Herrmann*, brought him to St. Michael on May 31. The United States Revenue Ship *Bear* was sent to bring back the shipwrecked men, but heavy ice prevented her reaching within 20 miles of Wrangel Land. Pending renewal of the efforts of the *Bear*, the surviving men were rescued by the schooner *King and Wing*, under Mr. Swenson, on September 7.

Recurring to Stefansson, after wintering in Camden Bay and exploring adjacent regions, he started in March, 1914, northward over the polar pack, along the 144th meridian, about 100 miles to the east of the route of Leffingwell and Mikkelsen, to discover the shores of the unknown land, whose existence has been separately predicted by Greeley and by Harris. Stefansson reached the edge of the continental shelf in about 70° 20' N., 140° 30' W. After 16 days the supporting party under McConnell returned to the ship, while Stefansson and two men continued their northerly journey with the intention of turning back after 15 days. Stefansson had with him two men, six dogs, fifty days' dog food, and rations for sixty days, while the presence of bears and abundance of seal ensured other food through their rifles and 400 rounds of ammunition. The party has not been seen since. The Canadian government sent the whaler *Herrmann* to seek them, without results. The whalers *Belvedere* and *Polar Bear* later visited Banks Land without finding any traces of the missing men. It is reported that northeasterly winds largely prevailed from May to

August along the Alaskan coast, and while favorable drift and judicious travel might bring them to Herald Island or Wrangel Land, it is evident that such had not been the case up to early September. Anderson and others of the scientific party did work in the spring and summer in the Mackenzie watershed. Independent of this expedition, Leffingwell renewed around Flaxman Island his exploration of ice-areas underlying plant-bearing lands, which problem he thinks that he has solved for that region.

It was reported last year that the Crocker Land Expedition, under D. B. MacMillan, had been forced by impassable ice-floes to establish its base at Etah, Greenland. MacMillan reports the failure of the main object of the expedition, not due, however, to the party. Geographical inaccuracies on the part of previous explorers, similar to that which removed Peary Channel of 1892 and 1895 from the map of Northeastern Greenland, now causes the disappearance of Crocker Land from the charts of the Polar Ocean. With energy and success MacMillan and Ensign Green in March, 1914, crossed Smith Sound and ice-covered Grinnell Land to Heiberger Land, where they laid down their reserve depots at Svarte Huk (Cape Hubbard). Thence they sledged northwest across the floes of the Arctic Ocean in quest of the expected land, which Peary reported that he had twice seen, on different days in June, 1906, from separate mountain summits. MacMillan and Green succeeded in reaching a point in the neighborhood of 82° 30' N. latitude, 102° W. longitude, where Peary had charted the land. Although this point is about 90 miles beyond the sea-horizon of Peary from Svarte Huk, no land was seen. The ice-journey of MacMillan and Green was one of great peril, owing to water-leads and thin ice, and most of their dogs were lost. They reached land barely in time to save their own lives, for the next day the polar pack was entirely disrupted to such an extent as would have caused their death. It is believed that the soundings and collections of the sledging party will prove to be valuable. In the region between Cape York and Etah biological, geological, and other work was carried on by MacMillan's assistants and will be continued for another year.

Franz Josef Land. In August, 1912, a Russian Arctic expedition, under Captain Sedoff, left Archangel in an attempt to reach the North Pole via Franz Josef Land, and to return via Greenland. Wintering, 1912-13, on Pankratyev Island, in 76° N., Sedoff explored some adjacent and unknown parts of Nova Zembla. He reached Hooker Island, Franz Josef Land, in the *Foka*, September, 1913. Starting northward by sledge the following spring with 2 men and 24 dogs, he fell sick and died in March, between Rudolf and Hohenloe Islands. The expedition returned that summer to Archangel.

The Russian explorer Brussilof attempted to make the Northeast Passage by a route to the north of Nova Zembla, but his ship was ice-beat off the south coast of Franz Josef Land. Dissensions occurred, and of the 23 members, 11 left the ship, of whom 9 perished and 2 joined Sedoff in the *Foka*. When his ship was released from the ice-pack Brussilof, although provisioned only for a year, decided to push north, hoping that his ship would be carried along to the north of Spitzbergen to the west, as was the *Fram*. The Russian government, solicitous for

the safety of the expedition, in July dispatched the famous Arctic navigator, Sverdrup, from Norway in the *Eclipse*.

Greenland. Apart from MacMillan's scientific work in the Cape York region, Rasmussen has continued his ethnographical and other researches in that district. He also made arrangements for his North-Polar Expedition of 1915, when Cape York will be made the home station. Under the direction and inspiration of the efficient Greenland Commission, Denmark has continued its exploration of fauna, flora, ethnology, and geology of Greenland. A knowledge and appreciation of the value of such extended researches has been limited among other nations, owing to the text of the volumes of the *Meddelelser* (the official publication) being in Danish. In 1914, however, under the editorship of W. Thalbitzer, there were compiled and correlated all available ethnographical data relative to the Ammassalik Eskimo, natives of the east coast. This volume appears in English, and is published in Copenhagen at the expense of the Carlsberg Fund. It treats of the environment, climate, material and intellectual culture, social life, beliefs, character, traits, hunting weapons, dress and ornament, toys, music, housekeeping, and social customs of the Ammassaliks. These natives practically pertain to the stone age period, which makes this memoir valuable to ethnologists.

Siberian Ocean. Brussilof's attempt to make the Northeast Passage is referred to under *Franz Josef Land*. Geological examination of rocks from Nicholas II Land disclose an identity of geological formation with that of Cape Cheliuskin and of the east coast of Taimur Peninsula, thus indicating that the newly discovered land is a northern extension of the Asiatic mainland. The observations of Nansen and Lied in 1913 indicate the feasibility of regular summer navigation via Kara Sea between the Baltic and the Yenesei, 3000 miles distant. Lied renewed his investigations on a much larger scale in 1914. Meanwhile Vilkitaki has again attempted the Northeast Passage from Bering Strait. The vast importance of summer navigation over 2500 miles in distance, between the Pacific and the Yakout region, via the Siberian Ocean, is greater from year to year. That region with its 300,000 inhabitants is developing very slowly. Rich in furs, oil, horses, cattle, etc., transportation charges eat up everything.

Spitzbergen. Although the corporations exploiting the coal resources of Spitzbergen have made it a land of industrial appliances, and of wireless installations, yet explorations continue. Bruce renewed his hydrographical and geological work in Stor flord, although ice conditions and war exactions interfered. Stoll, under the patronage of the Prince of Monaco, crossed from Van Mijens to Agardh Bay, covering an unknown area. It appears that Southern Spitzbergen is not continuously glaciated, the region seen by Stoll being broken into massifs by open, verdant valleys.

POLIOMYELITIS, EPIDEMIC (INFANTILE SPINAL PARALYSIS). Capt. R. H. Pierson of the United States Army, Medical Corps, of Fort Gibbon, Alaska, published a study of a small epidemic of this disease which occurred among the Indian fishing villages on the Yukon River. There were about 30 cases, with 4 deaths. The interesting feature of the epidemic was its ap-

parent connection with an epidemic of distemper among dogs. The human subjects were attacked following the dog epidemic, and the symptoms manifested by the dogs were the same as those in the human victims. Pierson points out that the association of the dogs with their masters is very close. The dog is almost the only domestic animal, towing boats in summer, and drawing sleds in winter. They are scavengers of the fish camp. Epidemics of distemper occur among them every three or four years, young animals being mostly affected. In the summer of 1913 an epidemic occurred among the dogs of the Yukon and Tanana valleys, becoming prevalent during July and August and ceasing in September. The type of this distemper was very severe, 50 to 80 per cent of the young animals dying or becoming so badly affected that they had to be killed. The disease begins with coryza, running from the nose, collection of pus in the eyes, with fever and loss of appetite. The animal may die in two or three days, or the disease may become more chronic and the animal live for several weeks and ultimately recover. Convulsions and paralysis of the extremities occur early in the disease, in severe cases. In human subjects the symptoms were parallel, the disease beginning with an attack of influenza, paralysis of the legs or arms, and involvement of the lungs, with fever and general malaise. Pierson does not think that the disease spreads by direct contact, but that there is an intermediate carrier, probably a fly. When the flies go, the distemper ceases.

POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF. A learned society founded in 1889 for the purpose of promoting political and social science in the broad sense of the term. Its membership is about 6000, distributed in every State in the Union, and 35 foreign countries. The society issues a bi-monthly publication called *The Annals*. During the year the subjects dealt with in the *Annals* were: "Housing and Town Planning," January; "Reform in the Administration of Justice," March; "State Regulation of Public Utilities," May; "International Relations of the United States," July; "Government Regulation of Water Transportation," September; "Women in Public Life," November. A meeting was held on Dec. 5, 1914, which discussed "Child Labor Regulation and Its Results." The officers for 1914 were: President, L. S. Rowe, Ph.D., University of Pennsylvania; secretary, J. P. Lichtenberger, Ph.D., University of Pennsylvania; editor of the *Annals*, Clyde Lyndon King, Ph.D., University of Pennsylvania; clerk, N. J. Smith-Fisher, West Philadelphia P. O., Philadelphia.

POLITICAL ECONOMY. A considerable number of articles will be found elsewhere in this volume treating various problems and movements of economic interest. A general survey of business conditions during the year is given under FINANCIAL REVIEW. In the article LABOR will be found references to the various topics treating different aspects of the labor problem. The article BANKS AND BANKING includes statistics of all banks in the United States, and the history for banking and currency reform, and is supplemented by articles on the several kinds of banking institutions, and by that entitled AGRICULTURAL CREDIT. Other articles related to the general subject of economics are: INSURANCE; OLD-AGE PENSIONS;

PRICES; SOCIAL ECONOMICS and subjects there referred to; **TARIFF; TAXATION; and TRUSTS.**

AMERICAN ECONOMIC ASSOCIATION. The twenty-seventh annual meeting of the American Economic Association was held at Princeton, N. J., December 28-31. At the same time and place were held the sessions of the American Statistical Association and the American Sociological Society. At the opening session the presidential addresses of all three of these societies were given. President John H. Gray of the Economic Association spoke on "Economics and Law"; President John Koren of the Statistical Association on "Some Statistical Ideals"; and President Ross of the Sociological Society on "Free Communication and the Struggle for Life." (See SOCIOLOGY.) A second session dealt with "Speculation on the Stock Exchanges and Public Regulation of the Exchanges," with papers by Samuel T. Untermyer of New York, and Prof. Henry C. Emery of Yale University. "Market Distribution" was treated by Royal Meeker, Commissioner of Labor Statistics, and Prof. L. D. H. Weld of the University of Minnesota. "The Statistical Work of the United States Government" was considered at a joint session with the American Statistical Association. Other subjects considered were: "The Relation of Education to Industrial Efficiency"; and "The Effect of Inheritance and Income Taxes on the Distribution of Wealth," with papers, respectively, by Prof. Edward B. Jones of the University of Michigan, and Prof. T. S. Adams of the Wisconsin Tax Commission. A final session on "The Public Regulation of Wages" was based on papers by Prof. Frank H. Dixon of Dartmouth College and Mrs. Glendower Evans of the Massachusetts Minimum Wage Commission.

POLITICAL PARTIES IN THE UNITED STATES. See UNITED STATES, section *Elections in 1914*; also section *Politics and Government* of the various State articles.

POLO. In a year remarkable for upsets in the sporting world, perhaps the greatest surprise was the capture of the International Challenge Cup by the polo players of Great Britain. America's "big four" had wrested the trophy from the Hurlingham Club in 1909. In 1911, and again in 1913, British teams tried in vain to retrieve their loss.

The 1914 matches were played on the field of the Meadow Brook Club at Westbury, L. I.,

on June 13 and 16, and 35,000 persons witnessed the struggle. The American four comprised Devereux Milburn, J. M. Waterbury, Jr., Lawrence Waterbury, and Rene Montagne. The British representatives were all army officers who responded to the hurry call of Lord Wimborne after several attempts to rally a strong team had failed. The British in fact were on the verge of withdrawing their challenge when Wimborne stepped into the breach. The challenging four consisted of Capt. Lealie St. George Cheape, who had played in the international matches of 1913; Capt. Vivian Lockett, also a member of the 1913 team; Maj. F. W. Barrett, and Capt. H. A. Tompkinson.

Lord Wimborne's team was not regarded in England as a serious contender for the cup, and the American defenders were strong favorites in the betting on the eve of the matches. The first game was set for June 9, but an injury to Captain Cheape, received in a practice scrimmage, led the Americans, unrequested, to grant a postponement until June 13.

The fours lined up for the opening conflict as follows: America—No. 1, La Montagne; No. 2, J. M. Waterbury, Jr.; No. 3, Milburn; back, L. Waterbury. Great Britain—No. 1, Captain Tompkinson; No. 2, Captain Cheape; No. 3, Major Barrett; back, Captain Lockett.

The invaders displayed a wonderful burst of speed from the outset, showing a marked superiority in both play and riding. The work of Captain Lockett and Captain Cheape was especially brilliant, and the final score gave a total of $8\frac{1}{2}$ goals to the British, as against 3 for the Americans.

The second and deciding match resulted in another triumph for Lord Wimborne's men despite a shift in the line-up of the cup defenders, whereby Milburn went to back, and L. Waterbury to No. 3. In the second battle each team tallied 5 goals, but America was penalized $2\frac{1}{4}$ goals, whereas the British lost only 1 point in this manner. The visitors used the same tactics, as in the first game, and swept their opponents off their feet by the fury of their early attack. The score at the end of the second period was 3 to 2 in favor of Great Britain. The defenders then rallied, and playing in whirlwind fashion scored four times in the fourth, fifth, and sixth periods. There was no scoring in the second chukker, but in the final period Milburn counted for America in 1 minute, 40 seconds. Major Barrett followed with the tally for his side which meant victory. Much credit for the triumph of the Britons must be given to their ponies, which proved speedier and better trained than the American horses.

Aside from the international matches, little interest was shown in the sport in the United States, although some polo clubs were organized in the Western States which may furnish material in the future for a four that will recover the lost trophy. The best showing of the season was made by the Meadow Brook Magpies, who defeated the Aiken Tigers in the finals for the junior championship, and later routed the Narragansetts for the senior title. The Atlantic Cup, the gift of W. A. Hazard, was won by the Newport four, who defeated the Philadelphia Country Club team in the final match by a score of $11\frac{1}{2}$ to $4\frac{1}{4}$. Point Judith captured the Gladstone Cup by its victory over Bryn Mawr. The score was $7\frac{1}{2}$ to 7.

POOL. See BILLIARDS AND POOL.

PORT IMPROVEMENT. See DOCKS.

PORTO RICO. POPULATION. The estimated population on July 1, 1914, was 1,184,489. The population in 1910 was 1,118,012.

AGRICULTURE. The important industries of the island are related entirely to agriculture, and of these industries the raising of sugar is the most important. Although great improvements have been made in the methods of growing sugar, there has been for several years a marked decline in the industry. To a large extent this is due to changes in the duty on sugar. The decrease in the exports of sugar in 1914 amounted to \$6,378,823. This was produced by a sharp decline both in quantity, which was about 62,000 tons less than in 1913, and in price, which was \$6.43 per ton less than the year previous. The total value of the sugar exports in 1914 was \$20,240,335, compared with \$26,619,158 in 1913. In quantity, 320,633 short tons were exported in 1914, compared with 382,700 in 1913. The raising of tobacco is the second industry in agricultural importance. The exportations of unmanufactured tobacco increased in 1914 to 9,244,490 pounds, valued at \$3,206,610. There was a decrease of about 8 per cent in the number of cigars consumed and exported, due largely to a strike of the cigar workers which lasted nearly four months, the total output being 283,075,534. The growing of coffee is an industry of great and increasing importance. In 1914 the coffee crop exceeded all previous records, aggregating 50,211,947 pounds, but owing to a decrease of eight-tenths of a cent per pound in price, the value of the coffee exported was \$8,193,544, or \$317,772 less than the value of the exportations in 1912-13. Other agricultural products of importance are fruits, including pineapples, oranges, and grapefruit. The total value of the shipments of fruit of all kinds showed an increase in 1914, reaching a total of \$3,400,903.

Careful attention has been given to the development of agriculture in the island, for which purpose the insular board of agriculture, in co-operation with the agencies of the Federal government, has spread information to the various producers throughout the island as to the most effective means to be adopted in working out the various problems of cultivation, preservation, transportation, and marketing of crops. Only a beginning has been made in the broad field of scientific agriculture, but the insular government has thoroughly aligned its work with that of the Federal government. The representatives of the two governments are endeavoring to work together toward the development of intensive farming and diversified agriculture to the end that the rural inhabitants, working upon small plants of land in which they will have a proprietary interest, may become more independent and self-respecting citizens.

COMMERCE. The value of the imports and exports in the fiscal year 1913-14 aggregated \$79,509,549, a decrease of \$8,494,078 in the corresponding total of the previous year. Imports were valued at \$36,406,787, and exports at \$43,102,762, a decrease in the former of \$493,275, and in the latter of \$6,000,803. As noted above, the decrease in the value of exports is due almost entirely to the smaller exports of sugar. Outside of sugar there was a slight increase of about \$378,000 in the value of exports. Exports to

the United States reflected quite accurately the decline in sugar, falling off \$6,115,443. There was a slight increase in the imports from the United States, namely \$586,637. In 1914, 84 per cent of the external commerce of the island was carried on with the United States, Cuba being the largest customer outside of the United States. Of the external purchases approximately 90 per cent were made in the mainland markets of the United States, representing an expenditure of over \$32,500,000, chiefly manufactured articles. In exchange for this the mainland markets received from Porto Rico \$34,423,180 worth of merchandise, consisting almost entirely of raw products.

Internal business, while slowly adjusting itself to the changes made necessary in the sugar industry, has naturally assumed a conservative and waiting attitude which has prevented the inauguration of new enterprises. Dread of the possible results of the free sugar provision of the tariff law has tended to check progress and developments of other lines of business interwoven with this industry.

TRANSPORTATION. Road building was carried on in 1914, and a number of bridges were constructed. During the fiscal year 45.1 kilometers of macadamized road were completed. The Legislative Assembly of 1913 appropriated \$15,000 for the repair of the old Southern Coast Road between Guayanilla and Ponce. During 1914, 14 kilometers of this road were repaired, and over 1000 kilometers of road have been constructed in the island since the American occupation. Improvements to the harbor of San Juan were continued during the year by dredging and other works. It is proposed to reclaim a large portion of the swamps surrounding San Juan Bay with the material dredged from the harbor.

IRRIGATION. The irrigation commission worked during the year upon tasks which have in the main been completed. These were first to form a temporary irrigation district, and second the appraisalment of water concessions. The second task had to be performed first, for this involved the appraisalment of bad water concessions on the rivers used by the irrigation service for the irrigation of lands in the district; and as credits for these concessions at their appraised value had to be given to their owners, they must also be charged against the total area of land to be included in the temporary district. All these appraisalments have practically been completed, and settlements made with the holders of them without recourse to the courts. This has left the way open for the formation of the temporary district, which also has been practically completed. Work was carried on on a number of irrigation canals and dams during the year.

EDUCATION. The problem of illiteracy is the chief one relating to education in Porto Rico, and great efforts have been made by the authorities to deal with it. Expenditures for elementary education have been very large, and efforts to improve conditions have been loyally supported by the people of the island, who realize that the foundation stone of their school system is the rural school. Over 79 per cent of the people live in the rural districts, and of these 70 per cent are illiterate, and this in spite of all the efforts that have been made in the 14 years of American rule. In 1914 there were 331,000

children of school age in rural districts, and of these only 109,534 were enrolled some time during the fiscal year. These schools were taught in about 1200 separate buildings, of which only 300, or one-fourth, are the property of the school boards and constructed especially for school purposes. Of these buildings 53 were constructed during 1914.

In addition to the effort of the extension of rural school work much attention and thought were given during the year to improvement and enriching the course of instruction. Elementary courses in practical agriculture were taught in the rural schools throughout the island, and while the Spanish language is generally used as the vehicle of instruction, the English language is taught in all the rural schools, beginning with the second grade.

In the urban zone, where the educational work is done in graded schools, there is naturally much more rapid progress. Of the 83,000 children of school age in the cities and towns, 85 per cent were enrolled in 1914. Forty-one per cent of the buildings belong to the school boards, and the course of instruction includes vocational training for both sexes in the last three of the eight grades. The English language is the vehicle of instruction in nearly all subjects. The average daily attendance in all public schools during the year was 155,830, an increase of nearly one-third over 1913. The total enrollment in all public schools was 207,010, an increase of 45,225 over the preceding year. The number of schools in operation was 4330, and the average number of teachers 2564. Complete high schools are maintained in five cities, San Juan, Ponce, Mayaguez, Arecibo, and Humacao. These schools offer four years' work in Spanish, English, mathematics, science, Latin, music, and drawing, three years' work in history, and two years' work in French. Commercial departments are maintained in these schools, and they have also industrial departments. Practical instruction in agriculture has been attempted with success, as has also manual training and household economics. The total amount expended for education by the insular government in 1914 was \$1,770,419, and by the local authorities \$728,165. The enrollment in the University of Porto Rico in 1914 was 208.

HEALTH AND SANITATION. The work of sanitation went forward with success throughout the year. The lowest death rate ever recorded was achieved, and the special work against hookworm disease and tuberculosis was steadily prosecuted. At two or three stations in the interior of the island many hundreds of cases of hookworm were treated in the few months during which it was possible to continue them in operation. The sanitation commission has also directed a systematic and very successful campaign for the provision of pure water supply and other sanitary necessities in the cities of the island. Nine cities installed departments of waterworks during the year, making 26 cities in the island which now possess this modern necessity. There were 45,609 births and 21,775 deaths recorded during 1913-14, an excess of 4607 births over the number recorded during the previous year. Under an act of the Legislature of 1913 the Institute of Tropical Medicine and Hygiene of Porto Rico was reorganized as an independent body for the purposes indicated by its name. The Institute is composed of a di-

rector and one member appointed by the Governor (both being positions achieved by experience in tropical medicine), and the director of sanitation as an ex officio member.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions include the Insane Asylum, an Asylum for the Blind, Girls' Charity School, Boys' Charity School, and the penal institutions, including the Penitentiary, Reform School, and the jails. The charitable institutions, with the exception of the Blind Asylum, are in San Juan. The total number of prisoners admitted to the prison and jails during the year was 6032. A large number of prisoners are employed in labor on the roads.

POLITICS AND GOVERNMENT. The Legislature met in regular and extraordinary session in 1914. The regular session lasted from January 12 to March 12, and the extraordinary session from March 14 to March 28, 28 acts and 13 joint resolutions being passed. The most important measures included the following: An act providing for secondary railroads subventioned by the insular government; an act authorizing an issue of \$1,000,000 worth of insular bonds for public roads, bridges, and buildings; an act amending the closing law; an act amending the sanitation law and placing the cleaning and watering of streets, sewers, and collection of dead and stray animals under the municipalities; an act authorizing the municipalities to levy and collect industrial and commercial license taxes; a resolution providing for the appointment of a joint commission to investigate expenditures and recommend economies which should be made in conducting the business of the insular government; a resolution accepting the donation of \$100,000 by Mr. Andrew Carnegie for a library building; and a resolution authorizing a free issue of \$150,000 of insular bonds for completion of the irrigation system. There were no political events of importance during the year.

PORTUGAL. A European republic occupying the western coast of the Iberian Peninsula. Capital, Lisbon.

AREA AND POPULATION. In the table below are given areas by districts with the results of the census of Dec. 1, 1911, as compared with figures for 1900; density for 1911:

	Sq. kms.	1900	1911	D.
Aveiro	2,758	303,169	336,243	110
Beja	10,255	163,612	192,499	19
Braga	2,698	357,159	382,276	142
Bragança	6,510	185,162	192,024	29
Castello Branco	6,683	216,608	241,184	86
Coimbra	8,907	332,168	359,387	92
Evora	7,400	128,062	148,295	20
Faro	5,019	255,191	272,861	54
Guarda	5,482	261,680	271,616	49
Leiria	8,412	238,755	262,632	77
Lisbon	7,941	709,509	852,354	107
Portalegre	6,231	124,431	141,481	23
Porto	2,312	597,935	679,540	294
Santarem	6,619	283,154	325,775	49
Vianna do Castello	2,221	215,267	227,250	102

	Sq. kms.	1900	1911	D.
Villa Real	4,273	242,196	245,547	57
Viseu	5,019	402,259	416,744	88
Total	88,740	5,016,267	5,547,708	62
Azores	2,888	256,291	242,565	101
Madeira	815	158,574	169,783	208
Republic	91,984	5,428,182	5,960,056	65

In 1900 the continental urban population was 32.4 per cent of the total, the rural population 67.5 per cent. The population according to the census of Dec. 1, 1911, included 2,828,691 males and 3,131,385 females. The principal towns, with their population in 1911, were: Lisbon, 435,359; Oporto, 194,009; Setúbal, 30,346; Funchal (Madeira), 24,687; Bragança, 20,844; Coimbra, 20,581; Evora, 17,901; Ponta Delgada (Azores), 16,179; Covilha, 15,745; Faro, 12,680; Tavira, 11,665; Portalegre, 11,603; Aveiro, 11,523; Elvas, 10,645; Vianna do Castello, 10,486; Beja, 10,113; Angra do Heroísmo (Azores), 10,067.

Primary instruction is theoretically compulsory, but over 70 per cent of the population over six years of age remain illiterate. All creeds are now tolerated.

PRODUCTION AND COMMERCE. The census of 1900 returned 3,367,199 persons as engaged in agriculture. The principal agricultural products are corn, and oxen in the north, rye, and sheep and goats in the highlands, wheat and corn in the central regions, and wheat and swine in the south. Vines flourish all over the country, and olive oil, figs, fruits, and vegetables are produced for export. Forests cover 4,005,072 acres. No recent complete figures are available for area and production of principal crops. The mineral wealth of the country remains largely unavailable because of lack of fuel and cheap transportation. The output and value at the mines of the chief mineral products in 1912 were as follows: lead, 54,562 metric tons and £23,029; copper precipitate, 5582 and £99,528; sulphur ore, 339,096 and £103,632; wolfram, 982 and £102,483; silver ore, 4640 and £28,116; anthracite, 15,366 and £11,640; arsenic, 941 and £9406; iron, 29,413 and £6362; copper pyrites, 8843 and £2278; copper, 905 and £1160; uranium, 850 and £798; antimony ore, 100 and £689; gold, 3514 and £518. The value of the fisheries products in 1910 was 5,919,842 escudos. Imports and exports by great classes, special trade, are given in the table at the foot of this page for 1911 and 1912, in escudos.

The import of wheat was valued in 1911 at 582,418 escudos; cotton, 6,104,997; coal, 5,105,592; codfish, 3,872,729; cottons and yarn, 3,895,251; industrial machinery, 2,305,415; sugar, 2,875,938; hides and skins, 2,567,473; rice, 1,772,677; chemical products, 1,758,244; oil seeds, 1,903,552; wool, 1,685,372. The export of wine was valued at 11,923,478 escudos; cork,

	Imports		Exports	
	1911	1912	1911	1912
Living animals	3,031,518	2,515,098	3,943,344	3,041,498
Raw materials	32,498,284	33,688,887	7,140,220	7,997,069

Food substances	12,805,429	17,020,291	19,043,840	19,776,154
Machinery, etc.	6,077,472	6,891,058	188,936	144,970
Various mfrs.	5,899,736	6,915,922	2,276,701	2,293,765
Packing	187,210	182,159
Total	68,126,841	74,639,488	34,065,250	34,824,973

3,402,202; preserved fish, 2,300,602; fruits and vegetables, 1,635,610; cottons and yarn, 1,184,535; cork manufactures, 975,778; timber, 914,986; copper ore, 868,857; olive oil, 543,867; fish, 803,389. The United Kingdom contributed imports valued at 19,398,000 escudos, and received exports valued at 6,935,000; Germany, 12,128,000 and 3,300,000; United States, 5,836,000 and 842,000, etc.

Vessels entered (1911), 10,370, of 19,154,239 tons. There were in the merchant marine Jan. 1, 1911, 66 steamers, of 70,193 tons, and 259 sailing vessels, of 43,844 tons.

COMMUNICATIONS. Railways in operation Dec. 31, 1913, 1849 miles, of which 711 were State-owned. Late in the year 1914 the President of the Portuguese Republic signed a decree for the electrification and lease of the railway connecting Lisbon and Cascais, a line about 16 miles in length, owned by the Portuguese Railway Company, double tracked, broad gauge, and rock ballasted. This line serves the so-called Riviera of Portugal, and it was proposed to operate electric trains every half hour, each making the entire run in 25 minutes.

NAVY. The effective fleet, exclusive of training ships, yachts, etc., included 1 armored coast-defense vessel, of 3030 tons; 4 cruisers, of 9410; 6 gunboats, of 2573; 11 gunboats, of 4300; 1 torpedo gunboat, of 535; and 4 torpedo boats, of 252. There were under construction 2 torpedo-boat destroyers and 3 torpedo boats. The new programme contemplates a new squadron to contain 3 dreadnoughts, 3 cruisers, 12 large destroyers, and 6 submarines.

ARMY. In Portugal military service is compulsory between the ages of 20 and 45, the army consisting of an active militia with an active reserve and territorial forces. The recruit is summoned in his 21st year for 15 weeks' service in the infantry, 20 in the artillery, and 30 in the cavalry, and each year thereafter up to the end of the 30th year he is required to undergo an annual training period of 2 weeks. He is then held for service in the active reserve, but without training for 10 years, and afterwards for 5 years in the national army. The army on a peace footing, exclusive of the colonial garrisons, is estimated at about 30,000, which on a war basis could be raised to 120,000 men, who had had military training, and eventually could be augmented by 140,000 men, who also had been trained.

FINANCE AND GOVERNMENT. The escudo, worth \$1.08, is the unit of value. The budget for 1913-14 estimates the revenue as follows: Direct taxes, 12,479,069 escudos; registration and stamps, 9,997,700; indirect taxes, 23,847,700; port dues, 45,575; national property and income on investments, 14,858,519; revenue-earning administrations, etc., 10,891,401; total ordinary, 72,119,964; extraordinary, 3,774,250; total revenue, 75,894,214. Expenditure: Public debt, 27,911,770 escudos; presidency, congress, 2,474,546; ministry of finance, 5,205,858; interior, 6,115,409; justice, 1,266,697; war, 9,856,470; marine, 3,825,373; colonies, 2,296,644; foreign affairs, 566,711; public works, 14,663,977; general treasury of deposits, 731,872; total ordinary and extraordinary, 74,915,327.

The President, elected for four years, is the executive. The legislative authority is vested in a congress composed of a chamber of deputies of 164 members, and a senate of 71 mem-

bers. President, 1914, Dr. Manoel de Arriaga, elected Aug. 24, 1911, for four years.

HISTORY

OVERTHROW OF COSTA. The cabinet which Dr. Alfonso Costa formed in January, 1913, was compelled to resign in January, 1914, after having misgoverned Portugal for a little more than one year. To be sure, Dr. Costa pointed with pride to the surplus of \$3,500,000 which appeared in the budget estimates for the year 1914-15, but the apparent favorable balance was subsequently discovered to have rested upon a false financial foundation. A railway strike in January served as an emphatic reminder that the working classes had not yet experienced that improvement which the government had promised them in their economic condition. Mr. McCullagh, writing in the *Nineteenth Century and After* continued his exposures of the abuses of the Republican régime. The republic had become an engine of tyranny in the hands of corrupt politicians. Editors were imprisoned and journals suppressed if they ventured to criticise the ministry. A word from one of the government's spies was sufficient to cast a man into prison. Scores of prisoners who had committed no fault, or whose only fault had been adherence to convictions which the government disliked, suffered the tortures of solitary confinement and were not even given a legal trial. The franchise was so restricted as to be a mockery of democracy. Anti-clericalism was being pushed to such extremes that freedom of worship no longer existed, and the power of the State was used to prevent the Catholic clergy from taking disciplinary action against priests who married or lived immoral lives. School children were paraded through the streets bearing the motto: "No God! No Religion!" Even those who sympathized with Costa's attacks on the Church were scandalized by his cynical disregard for civil liberty and political integrity. Machado Santos, "the founder of the Republic," and Bernardino Machado, foreign minister under the first provisional government, bitterly reproached the premier who had made Republicanism a disgrace. Senator Joao de Freitas publicly accused Costa of scandalous abuse of power and corruption, of accepting bribes, of manipulating the revenues of San Thome for the benefit of his brother-in-law. On January 9, speaking before the Senate, Freitas gave further details of the prime minister's shame. So violent was the sensation caused by the Senator's disclosures, that soldiers had to be called in to restore order in the Senate. Finally President Arriaga invited Costa to resign, in order that a new and more popular ministry might be formed, which would be able to pass the budget, amend the law of public worship, declare a generous political amnesty, and preside over a general election. On January 26 Dr. Costa offered his resignation. On February 8 Senhor Bernardino Machado formed a new cabinet as follows: Premier, interior, and foreign affairs, Bernardino Machado; justice, Manoel Monteiro; finance, Thomaz Cabreira; war, Gen. A. Pereira d'Eca; public works, Achilles Gonçalves; marine, Captain Neuparth; colonies, Lisboa Lima; education, Sobral Cid. The programme of the Machado ministry included electoral reform, amnesty for political offenders, and the revision of the law regarding the separation of Church and State.

AMNESTY FOR POLITICAL OFFENDERS. Public opinion abroad was so deeply stirred by the revelation of the shocking treatment of Portuguese political offenders, that on February 6 a meeting in London resolved, "that this meeting protests against the violation of justice on the part of the Government of Portugal in arresting and imprisoning men and women on account of their religious and political opinions, denying them the right of trial by due form of law; and calls upon the British government to make representations to Portugal with a view to securing a general amnesty for all political prisoners, so that the principles of ordinary justice and humanity may be established in the country." Whether or not the British protest had effect, on February 19 the Portuguese government introduced an amnesty bill, providing that insurrectionary leaders should be exiled, and amnesty granted to others; the persons then in prison to be given free trial, with the purpose of determining whether they should be exiled or acquitted. The bill was passed by the Chamber, February 19, by 102 votes to 24; after a dispute between Senate and Chamber, a joint sitting of both houses approved the bill on February 21. The list of the prisoners who were to be exiled included four priests, Senhor Homem Christo (who had attacked the government through the press), Capt. Paiva Couceiro, Senhor Joao Azevedo Coutinho, Joao d'Almeida, Jorge Camacho, Mario Dias, and Victor Sepulveda.

MACHADO CABINET AND THE WAR. Dissensions within the cabinet made it necessary for Premier Machado to eliminate the three Democratic members, and to reorganize the ministry as follows: Premier and minister of foreign affairs and interior, Bernardino Machado; justice, Manoel Monteiro; finance, Santos Lucas; war, Gen. Antonio Pereira d'Eca; marine, Peres Rodriguez; public works, Almeida Lima; colonies, Couceiro Costa. As the ally of Great Britain, Portugal was liable to be called upon for assistance in the war against Germany and Austria-Hungary. On August 8 Premier Machado announced that Portugal was ready to furnish 10,000 soldiers to fight for Great Britain. Congress was convoked October 16 to authorize mobilization, and on November 23 voted to join the allies whenever it should be necessary. Already 500 men had been sent to Africa on board British transports. Later rumors from Paris indicated that 28,000 Portuguese soldiers were assisting the allies in France. The war did not affect the interests of Portugal vitally enough to arouse the nation to a high pitch of enthusiasm. On October 20-21 Adriano Beca started an insurrection in the cities of Braganza and Mafra; the revolt was suppressed, but it proved that Portugal was not inspired with a unanimous national resolve. Still more convincing evidence of dissatisfaction was afforded when the cabinet resigned on December 5 as the result of criticism. A Democratic cabinet was formed on December 13 by Victor Coutinho. Senhor Coutinho announced that he would take such steps as would enable Portugal to bear a creditable part in the war, for he believed that Portugal's colonial possessions as well as her national existence were at stake. See the **WAR OF THE NATIONS**; also **UNITED STATES**; and **INTERNATIONAL ARBITRATION AND PEACE**, *Bryan-Wilson Treaties*.

PORTUGUESE EAST AFRICA (MOZAMBIQUE). A colony of Portugal, on the east coast of Africa, between German East Africa and British South Africa. Area, 293,860 square miles, carrying a population of about 3,120,000. The capital is Lourenço Marques, with about 10,000 inhabitants, nearly half European. It is also one of the principal ports; other ports are Mozambique, Beira, Inhambane, and Chinde. The leading products are rubber, sugar, coconuts, beeswax, and minerals. Coal and gold exist. A considerable part of the trade of British South Africa passes through Beira and Lourenço Marques and thence by the Beira or the Delagoa Bay Railway. The latter has a length of 57 miles in the colony. The Beira Railway extends 204 miles to the British border and thence to Bulawayo. A line from Lourenço Marques to the Swaziland border is under construction. The Gaza line from Chai-Chai to Manjacase has 32 miles in operation, and that from Mutamba to Inharrime 25 miles. The beginning of the work on the proposed Mozambique-Nyassaland was made during the year, and \$185,000 was placed, as an installment of the cost, at the disposal of the engineer in charge. This line was estimated to cost about \$17,500 per mile, and to be about 342 miles in length, of which 62 miles was to be in British territory, and to extend from Mozambique on the east coast of Portuguese East Africa inland to British territory on the west. Imports, 1912, 13,483,297 milreis; exports, 6,229,276; re-exports, 6,294,516; transit, 32,322,748. The trade is divided among the state territories, the Mozambique Company, and the Nyassa Company. The budget for 1910-11 estimated the revenue at 5,418,332 milreis, and the expenditure at 5,118,832. A Governor-General administers the colony.

PORTUGUESE GUINEA. A Portuguese colony on the west coast of Africa, between Senegal and French Guinea. It includes the adjacent archipelago of Bijagoz with the island of Bolama, in which the capital (Bolama) is situated. Area, 13,940 square miles, carrying a population of about 820,000. Imports, 1908, 875,155 milreis, and exports, 492,238 milreis; an English source gives the trade for 1911 at £304,049 imports, and £187,962 exports. In 1912, 72 vessels, of 80,098 tons, were entered at the ports. The budget balanced for 1910-11 at 309,900 milreis. A Governor administers the colony.

POST, CHARLES WILLIAM. American manufacturer and publicist, died May 9, 1914. He was born in Springfield, Ill., in 1854, and attended the University of Illinois, but did not graduate, and became in turn a hardware merchant, a commercial traveler, and manager of a plow factory. In 1881 his health broke down and he traveled for seven years during which period he studied medicine, hygiene, dietetics, and physiology in the United States and Europe. He made a special study of cereal foods, and as a result of these researches established a plant at Battle Creek, Mich., for the manufacture of prepared foods. Mr. Post was very active in his opposition to organized labor, and carried on for years a struggle against the American Federation of Labor, on the issue of the closed shop. He was for four years president of the National Manufacturers' Association, which was organized to combat certain of the policies of organized labor, and was chair-

man and director of many important industrial companies.

POSTAL SAVINGS BANKS. The following statistics of postal savings banks of the world were compiled in 1914 by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, Washington, D. C. The growth of such banks in the decade 1902-04 to 1912-14 has been very notable. At the earlier period the total number of depositors was 29,067,000, while at the latter it was 52,386,000. At the former date the total deposits approximated \$1,600,000,000, while at the latter they were \$2,657,000,000. See also SAVINGS BANKS.

POST-IMPRESSIONISM. See PAINTING AND SCULPTURE.

POTASH. See FERTILIZERS.

POTATOES. The world's potato production during recent years has ranged from about 4% to nearly 6 billion bushels. Of the world's crop Germany, by far the leading potato-producing country, produces about 30 per cent. Russia, ranking next, produces about three-fourths the quantity produced by Germany, although a larger area is devoted to the crop. Austria-Hungary, ranking third, yields annually from 600 to 700 million bushels, and France, generally standing fourth, yields from 400 to over 500 million bushels yearly. The great preponderance of Germany in the production of potatoes is due to a more extensive consumption than in most other countries of the tubers as an article of food and their use in feeding stock, and for manufacturing purposes. As published by the United States Department of Commerce, the normal annual application of the crop in Germany is about as follows: Manufacture of spirits, 93,000,000 bushels; starch, 52,000,000; dried potatoes, 23,000,000; human consumption, 485,000,000; replanting, 224,000,000; and loss from decay and other causes, 149,000,000 bushels. In 1913, 460 potato-drying plants, of which 144 were coöperative, consumed over 23,000,000 bushels. The dried product is mostly used for feeding stock, but a potato meal is also produced which partly replaces the flour of wheat and other grains in baking. Germany relies largely upon her immense potato production to tide her over the crisis in her food and feed supply occasioned by the European War. It is pointed out that an increased per capita consumption of 100 kilograms of potatoes will affect all import requirements of bread grains.

The crop of 1914 as shown by data published by the International Institute of Agriculture was smaller in most countries than the crop of 1913, although the acreage was a little larger. The crop of the United Kingdom, estimated at 268,500,000 bushels, was 5 per cent below the crop of 1913, which was the largest on record. In Ireland the crop was about 10 per cent below that of 1913. The 1914 crop of Spain was estimated at 76,560,000 bushels, of Italy at 62,390,000 bushels, and of Germany at about 1,750,-

000,000 bushels. The Canadian crop was 85,672,000 bushels, and the average yield for the entire dominion 180 bushels per acre, as compared with a yield of 78,544,000 bushels from 473,500 acres in 1913. The production of the United States is about one-fourth that of Germany, although the area in potatoes is nearly half of the German acreage. In 1914, the crop, as reported by the Department of Agriculture, amounted to 405,921,000 bushels from 3,708,000 acres, the average acre-yield being 109.5 bushels. The value of the crop, based on a bushel value of 48.9 cents, the average price received by farmers December 1, was \$198,609,000. These figures compared with a production of 331,525,000 bushels, an area of 3,668,000 acres, an average yield of 90.4 bushels, and a total value of \$227,903,000 in 1913. *American Agriculturist* reports New York the leading State, with a yield of 41,470,000 bushels, followed by Michigan with 39,790,000 bushels.

POTTER, FRANCES BOARDMAN (SQUIRE). An American educator and suffrage leader, died March 25, 1914. She was born in Elmira, N. Y., in 1867, and graduated from Elmira College in 1887, taking post-graduate courses in Cambridge University and at the University of Minnesota. After teaching in high schools, she became in 1901 instructor in Old English at the University of Minnesota, being appointed assistant professor of English in 1903, professor in 1907, and acting also as extension lecturer in the College of Education. She was active in the cause of woman suffrage, and in 1909 was corresponding secretary of the National American Woman Suffrage Association, as well as general lecturer of the National Woman's Trade Union League and lecturer for the General Federation of Women's Clubs. She was a member of the Modern Language Association of America, and economic and political associations. She was the author of *Germelshausen* (a play, 1904; collaboration), *The Ballingtons* (a novel, 1905), and *Jamieson* (a play, 1909). She contributed to magazines under the pen names of Frances Boardman and Frances Squire.

POTTER, WILLIAM BLEECKER. An American mining engineer, died July 14, 1914. He was

born in Schenectady, N. Y., in 1846, the son of Bishop Horatio Potter. He graduated from Columbia University in 1866, and for the three years following studied at the School of Mines in that university, receiving the degree of E.M. in 1869, and in the same year was appointed assistant in geology at Columbia, serving until 1871. From 1871 to 1893 he was professor of mining and metallurgy at Washington University. He founded and became manager of the St. Louis Sampling and Testing Works; from 1872 to 1874 was assistant to the Missouri Geological Survey; and until 1873 acted as engineer and metallurgist for several large steel corporations and mining companies. He was a member of several mining and scientific societies, and in 1888 he was president of the American Institute of Mining Engineers.

PRESBYTERIAN CHURCH. The total number of Presbyterian Church members in the United States in 1914, was 2,083,617, with 16,834 churches, and 14,066 ministers. There are four large and several smaller denominations under the Presbyterian system. The largest is the Presbyterian Church of the United States of America, known as the Northern Presbyterians, with 1,442,498 communicants, 10,019 churches, and 9413 ministers in 1914. The Presbyterian Church of the United States, known as the Southern Presbyterians, had, in 1914, 310,602 communicants, 3430 churches, and 1819 ministers. Other bodies, which are treated under their own titles, are the Cumberland Presbyterian Church, the United Presbyterian Church, and the Reform Presbyterian Church. A very small body is the Associate Presbyterian denomination, which numbered 786 communicants, 22 churches, and 12 ministers.

The Northern Presbyterian Church, officially known as the Presbyterian Church of the United States of America, is divided into 40 synods, with 295 presbyteries. The Sunday school members in 1914, numbered 1,318,628. The total

contributions received for all purposes amounted to \$27,681,970. Of this amount, \$19,771,059 was for congregational purposes; \$1,833,173 for home missions; \$1,562,800 for foreign missions; and \$614,441 for colleges. The chief governing body of the church is the General Assembly. The missionary work of the denomination is under control of the board of foreign missions and the board of home missions. There were, in 1914, 27 foreign missions, 165 stations, 1226 missionaries, 5766 native helpers, 728 fully organized churches, and 133,713 communicants. There were printed 95,105,452 pages of Christian truth in over 20 languages. Educational work of the denomination is in charge of the board of education. Other important boards are the board of publication and Sunday school work, the board of church erection, and the board of ministerial relief and sustentation. The denomination supports 11 theological seminaries, and many colleges and universities. In coöperation with the several synods, the board of education provides pastoral care and religious instruction for students in 27 State universities and colleges, where the number of Presbyterian students in 1914 was about 15,000.

The sessions of the General Assembly, in 1914, were begun in Chicago on May 21, with Maitland Alexander, D.D., LL.D., as moderator. Among the important acts of the assembly were the following: a resolution was adopted urging the reading of the Bible in public schools and other educational institutions; a plan of union between all Presbyterian Churches was approved; it was resolved that only ordained men can be appointed by the presbyteries, synods, and the General Assembly to serve on committees; the endowment of chairs of the English Bible in colleges was approved; the preparation of a programme for the observation of the 500th anniversary of the martyrdom of John Huss was recommended; the use of nonalcoholic wine in the Lord's Supper was recommended; it was decided that the finding of the judicial commission of a presbytery is the final judgment, and that a presbytery has no power to review the same. Resolutions disapproving all secular uses of the Sabbath day, and condemning Sunday newspapers and the white slave traffic were passed. It was decided that definite steps are to be taken by the presbyteries to provide adequate salaries for ministers. See also RELIGIOUS DENOMINATIONS AND MOVEMENTS.

PRICES. The movement of the general level of prices has attracted general interest for a number of years owing to its intimate relation with the increasing cost of living. The upward movement began in 1895 or 1896, and except for temporary recessions has been continuous ever since. *Bradstreet's* index number, which is the sum of the wholesale prices of 96 commodities, rose from an average of 5.9124 for the year 1896 to 9.0354 on Dec. 1, 1914. For some other years this index was as follows: 1900, 7.8839; 1905, 8.0987; 1906, 8.4176; 1907, 8.9045; 1908, 8.0094; 1909, 8.5153; 1910, 8.9881; 1911, 8.7132; 1912, 9.1867. Prices had risen continuously, though slightly, during the second half of 1913. The average for December of that year was 9.2290; for January, 1914, it had dropped to 8.8857. Thereafter it dropped steadily to 8.6220 for June, and thereafter rose to the maximum of 9.8495 on August 15, the highest ever recorded, and reflecting the effect of the European War.

It dropped then rapidly to 8.8620 for the month of November. On Dec. 1, 1914, the general index was 1 per cent lower than one year previous, and 5.3 per cent lower than 2 years previous; it was, moreover, only 5 per cent higher than on Dec. 1, 1914.

WHOLESALE PRICES. *United States, 1860-1913. Bulletin No. 149* of the United States Bureau of Labor Statistics gave comparative wholesale prices since 1860, based on the average wholesale prices for the ten years 1890-99. These indexes were based on different numbers of commodities ranging from 127 to 261, since 1890 never less than 251. The index of 1860 was 141.0. It fell slightly the following year and then rose rapidly to 317.5 in 1864. The decline thereafter was continuous to 132.4 in 1879. The next four years were somewhat higher; but there was a continuous fall from 145.5 in 1882 to 89.7 in 1897, except for a slight wavering in the middle 80's. The index rose to 110.5 in 1900, 115.9 in 1905, and to 129.5 in 1907. A slight reaction in 1908 was followed by further advances to 131.6 in 1910; and a slight fall in 1911 was followed by subsequent advances to 135.2 in 1913. In other words, the average level of prices in 1913 was higher than at any previous date since 1883, but was lower than any year between 1860 and 1883, except the single year 1879; and less than half as high as in the later years of the Civil War.

CANADA. A report, *Wholesale Prices, Canada, 1913*, by the Department of Labor (Ottawa, 1913), showed that, as in the United States, wholesale prices had advanced almost continuously in Canada since 1897. There was a slight reaction following the panic of 1907. An index of 92.2 for 1897 was compared with 108.2 for 1900, 113.8 for 1905, 124.2 for 1910, and 135.5 for 1913. The recession of prices following 1907 was declared not to have lowered the cost of living to the same extent that it lowered general prices, since foodstuffs and clothing were less affected than other commodities. The total advance of individual articles over their lowest prices in the middle 90's ranged from 282.5 per cent for furs, 145.1 per cent for jute, 128.8 per cent for hides and tallow, and 119.4 per cent for animals and meats, to 13.4 per cent on implements, and 21.4 per cent on drugs and chemicals.

GREAT BRITAIN. The increase in prices in Great Britain, while only about two-thirds the increase in the United States, was nevertheless very marked during the same period. Thus the index of the London *Economist* stood at 88 on July 1, 1896; rose to 99 July 1, 1904; and to 121 July 1, 1907. It then dropped to 94 on Jan. 1, 1909. It thereafter rose almost continuously to 125 on Jan. 1, 1913. While prices rose in the early part of 1913, they fell during most of that year, the index on November 1 being 122. It continued to fall to 116 on July 1, 1914. Thereafter, owing to the effects of the European War, prices moved upward. This upward movement in England, as in Germany and France, was largely controlled by governmental action, the supplies of numerous commodities being subjected to official supervision. Comparable statistics were therefore not available, but estimates indicated that prices had risen 15 to 20 per cent in all of these countries. The American Consul General at Berlin estimated roughly the increase in Germany between August 1 and No-

vember 15 at 50 per cent for most articles of common household consumption.

CAUSES. There is still much speculation as to the causes of the rising price level, even after several years of discussion and a few notable public investigations. While scientific opinion is firm in the conviction that the enormous increase in the gold output of the world is the principal cause, and while opinion of the public has steadily drifted to the same position, nevertheless, current literature still gives credence to the following causes among others: Extravagance; the meteoric rise of the automobile industry; enormous increase of public expenditures; pure food laws and other regulations of industry; cold storage; the inefficiency of American farmers; greediness of middlemen; overcapitalization of American corporations; the unreasonable demands of trades unions; the shifting of the population to the cities, disturbing the normal proportion between producers and consumers of food products; the great increase in population concurrently with the disappearance of free public land; the tariff; monopolies and trusts. A careful analysis of all of these causes shows that while minor importance may be given to some of them, as for example the tariff and trusts as explaining a more rapid rise in the United States than abroad, nevertheless almost the only great cause operating throughout the world has been depreciation in the value of gold. Since prices are merely the ratios of the value of gold, which is the general standard of value, to the value of other things, a decrease in the value of gold would result in an increase of prices. A decrease in the value of gold has therefore taken place, otherwise prices would not have risen. This decrease may be explained by the remarkable increase in the world's production of gold. Preceding 1890 for many years the world's production had averaged about \$100,000,000. It rose to nearly \$200,000,000 in 1895; to \$259,000,000 in 1900; to \$378,000,000 in 1905; to \$454,000,000 in 1910; and to \$463,000,000 in 1913. The world's available supply of gold had increased from slightly above \$4,000,000,000 in 1895, to more than \$6,000,000,000 in 1905, and to \$8,520,000,000 in 1913. While the world's demand for gold had also increased during this period there had been at least a partially compensating factor in the great expansion of banking and credit institutions, and credit instruments such as checks, drafts, and bills of exchange. It seems probable that these factors may continue to operate with a consequent continued increase in prices during many future years.

PRINCE EDWARD ISLAND. An insular province of the Dominion of Canada. Area, 2184 square miles, with a population (1911) of 93,728. The capital is Charlottetown, with (1911) 11,198 inhabitants. The province is administered by a Lieutenant-Governor, appointed by the Governor-General of Canada and acting through a responsible executive council. There is a unicameral legislative assembly of 30 elected members. The Lieutenant-Governor in

1914 was Benjamin Rogers, appointed June 1, 1910. President of the executive council in 1914, J. A. Matheson. See **CANADA.**

PRINCETON UNIVERSITY. The total enrollment in all departments of the university in the autumn of 1914 was 1641, divided as follows: Undergraduate department, including candidates for A.B., Litt.B., and B.S., 1327; civil engineering, 128; school of electrical engineering, 11; graduate school, 175. The faculty numbered 204. Among the additions to the faculty during the year were the following: Alan Wilfred Cranbrook Menzies, Ph.D., formerly professor at Oberlin College, professor of chemistry; Alfred Noyes, M.A., was elected visiting professor of English literature on the Murray Foundation; Frank Henry Constant, formerly at the University of Minnesota, was elected professor of civil engineering and head of the department of civil engineering; Prof. Charles McMillan, formerly head of the department of civil engineering, retired, and was elected professor emeritus. Temporary appointments for 1914 include Prof. George Herbert Palmer of Harvard University, lecturer on ethics; Prof. Chantant Robinson of Yale University, visiting professor of mediæval history; Prof. Westel Woodbury Willoughby of Johns Hopkins University, lecturer on jurisprudence and politics, replacing Prof. W. F. Willoughby, who was granted leave of absence to accept the appointment as constitutional adviser to the President of the Chinese Republic.

The most noteworthy benefaction received by the university during the year was the Palmer Memorial Stadium, given by Edgar Palmer, at a cost of \$300,000, in memory of his father, the late S. S. Palmer. The terms of the gift are such that the university receives an income of \$10,000 a year in the form of rent from the Athletic Association. The productive funds, according to the latest report, amount to \$5,327,535, providing an income of \$242,263. The library contains about 320,800 volumes. The president is John Grier Hibben, Ph.D., D.D.

PRISON REFORM. See **PENOLOGY.**

PRISONS. See **PENOLOGY.**

PRIVATE BANKS. In 1914 the Comptroller of the Currency received reports from 1064 private banks. These are most numerous in the Middle Western States, which comprised 76 per cent of those reporting. There were 811 in the Middle Western States; 88 in the Eastern States; 78 in the Western States; 73 in the Southern States; and 14 in the Pacific States. Illinois alone reported 226; Ohio, 196; and Indiana, 189. Their aggregate capital was only \$21,101,000. Their loans and discounts totaled \$123,189,000; and their deposits were \$145,848,000.

PRIVATE BANK FAILURES. Early in January was reported the failure of the department stores promoted by Henry Siegel and Frank Vogel, New York merchants. In connection with their stores they solicited savings deposits upon which they agreed to pay 4½ per cent interest. They secured nearly 15,000 depositors who had \$2,550,000 to their credit at the time of the failure. To offset this was \$15,000 in cash, a \$1000 bond held by the State Comptroller at Albany, and \$24,000 due as balances. These deposits had been used by the managers in loans to the several department stores in New York

and Boston. Superintendents of the State Banking Department had strongly urged supervision of such banks. The Van Tuyl Commission (see BANKS AND BANKING) made an extensive investigation of the Siegel failure. Their recommendations were embodied in bills before the State Legislature providing for the supervision and examination, and the requirement of ample reserves and guarantees from all private banks. It was reported that \$150,000 had been contributed by private bankers to oppose these bills, but passage was secured. Mr. Henry Siegel was tried at Genesee, N. Y., on one of fourteen indictments and convicted of securing sums from various banks on false statements. He was sentenced to ten months in prison and a fine of \$1000. The execution of the prison sentence was postponed until June, 1915, on condition that meanwhile he repay the bulk of the deposits in his bank.

Among the notable bank failures of the year were eight banks in which former Senator Lorimer was the leading spirit. These banks held considerable amounts of the savings of the poor; and were favored with more than \$1,000,000 of the funds of the City of Chicago. It was understood that they loaned extensively to Messrs. Lorimer and Munday for various enterprises. Examination developed the fact that a State bank examiner had recommended that these banks be closed six months before they actually failed. Messrs. Lorimer, Munday, and others were indicted in the Federal and State courts for misapplication of funds. In November Mr. Lorimer pleaded not guilty. The case was pending at the close of the year.

PROBATION. See PENOLOGY.

PROHIBITION. See LIQUOR REGULATION.

PROSTITUTION. Considerably less attention was given to the social evil in 1914 than in the preceding year. In Chicago the needs of young girl sex-offenders had resulted in 1913 in the appointment of a woman judge in the girls' division of the juvenile court; this was followed by the appointment in St. Louis in 1914 of two women assistant judges in the juvenile court to hear girls' cases. Legislation in California in 1913 had included the Red Light Abatement Law making property owners of disorderly houses responsible. The law would have been effective in August, but was held up by the property owners and submitted to the referendum in the November election, when it was approved. In New York City various white slave films given in certain picture houses provoked an extensive discussion with arguments for and against. The preponderance of opinion seemed to be opposed to such moving pictures. Investigations were carried on in Hartford, Little Rock, Syracuse, and Massachusetts. See *Bibliography* below.

The Bureau of Social Hygiene, organized in 1912 by John D. Rockefeller, Jr., continued its scientific inquiry at its laboratory in connection with the New York State Reformatory for Women at Bedford. This bureau had also undertaken an investigation of commercialized vice in New York, the United States, and European countries. Mr. Abraham Flexner published in *Prostitution in Europe* the results of inquiries in the principal cities in England, Scotland, France, Italy, Belgium, Switzerland, Holland, Denmark, Norway, Sweden, and Austria. He viewed the social evil from numerous stand-

points, as legislation, demand, supply, methods of regulation, and limitation. Excluding all forms of illicit intercourse except promiscuity for pay he found that prostitution existed throughout Europe. He believed it to rest in part upon the Old World tradition which holds woman inferior, an estimate in which she herself acquiesces. The supply of prostitutes was found to come mainly from the unmarried members of the lower working classes—for the most part girls away from home. Of 168 girls in a London house, 85 were born elsewhere. Of 12,707 inscribed prostitutes in Paris, two-thirds were born outside the Department of the Seine. The causes set down by Mr. Flexner included defective mentality, broken homes or no homes, poverty, congestion, and evil associations. Fallen women are not, according to the study, very often innately vicious, and consequently by removing causes, reform and social reconstruction may begin. Hopeful signs were found in the fact that more than one-half abandon immoral lives, and that there is a strong sentiment favorable to a single standard of morality. Legislation is becoming constructive; and there is nearly everywhere opposition to the publication and display of books, pictures, and plays of a vicious character. The study showed that Denmark, Norway, and England have already abandoned the idea of regulation, as have also 48 of the 162 German cities. Commissions in France and Sweden recommended similar action. Among the remedies suggested were education, social uplift, the abandonment of regulation and segregation, and above all the removal of basic causes.

Under the Mann White Slave Act there had been 4434 cases tried in the United States from the passage of the act in 1912 to Dec. 1, 1914. Of these 901 had resulted in conviction.

WISCONSIN. An anti-vice committee of the Wisconsin Legislature after 15 months' investigation submitted its report on December 5. It found the chief cause of commercialized vice in the use of intoxicants. Among contributory causes it included public dance halls, road houses, poorly lighted parks and public places, lack of responsibility among parents, nonenforcement of laws, lack of public amusement and recreation facilities, and automobiles. It did not think low wages had any importance as a cause. Among its recommendations were: that a State law applying to towns and cities, as the Mann Act applies to States, be enacted; that a permanent State morals police department be created; that the sale of liquor at dance halls be prohibited; that all hotels, rooming and lodging houses be required to secure licenses, to keep permanent registers, and to state on their fronts the names of owners; that the age of consent be raised from 14 years for any and 18 years for chaste females to 18 and 21 years, respectively; that an industrial home and hospital be created for immoral women; that cities be required to provide special classes, and if needed also books, meals, and clothing for sub-normal children in order to make compulsory education effective; that cities develop social centres and supervised amusements; that male patrons be not fined, but sentenced to a term in prison.

NATIONAL CONFERENCE. The section on Social Hygiene of the National Conference of Charities and Correction at Memphis in May gave chief

attention to prostitution. The almost universal sentiment favored a policy of steady repression of the evil; condemned the policy of segregation; demanded the education of the adult public; instruction of parents and teachers in facts of social hygiene; favored the segregation of the feeble-minded, medical diagnosis for venereal diseases, and the study and control of environmental factors. Mrs. John M. Glenn included among such factors the following: Failure of the family to adequately protect its more adventurous members; superior attractiveness of street to home; meagreness of education for home-making; effects of immigration in destroying traditional sanctions for conduct; ignorance of the laws of sex; faithlessness to family vows; demoralizing work conditions; low pay; broken homes; feeble-mindedness; ease with which centres of pauperism and crime are allowed to breed their kind in both city and country. The committee on Social Hygiene stated that every one of the 14 vice reports thus far made in the United States had favored the policy of repression and opposed the segregated vice district. A plan for developing agencies having in view the reduction in the sources of supply and demand for prostitutes was advocated. Rabbi Berkowitz showed the need of sane sex education and the evils attending various unwise methods of spreading and exploiting sex information. Other topics were social hygiene exhibits by Dr. William F. Snow of the American Social Hygiene Association; the work of the committee of 14 in suppressing disorderly hotels in New York by Frederick H. Whitin; treatment of offenders before trial, by Zenas Potter; and corrective institutions by Mrs. Martha P. Falconer of Sleighton Farm, Darlington, Pa.

PROTESTANT EPISCOPAL CHURCH. The total number of communicants in this denomination in the United States in 1914, was 1,015,248, an increase of 28,641 over 1913. The total number in the Church, throughout the world, was 1,032,637, an increase of 28,420 over the previous year. In the Sunday schools, in the United States, were enrolled 51,501 teachers and 455,251 scholars. The total contributions of the denomination for all purposes, during the year, were \$19,736,577. The denomination is divided into 91 dioceses in the United States, each of which is presided over by a bishop. In addition, there are 12 dioceses in foreign countries. The missions of the denomination are in charge of the Domestic and Foreign Mission Society. The net appropriations made for missions, during the year, were \$1,047,312, an increase of \$28,225 over the previous year. The Church lost by death during the year, seven of its bishops: Bishop Strange, of East Carolina; Bishop Niles, of New Hampshire; Bishop Scarborough, of New Jersey; Bishop Scadding, of Oregon; Bishop Penick, formerly of Cape Palmas, West Africa; Bishop Robinson, of Nevada; and Bishop Spalding, of Utah. The bishops elected during the

year, were William Cabell Brown, bishop coadjutor of Virginia; John Poyntz Tyler, missionary bishop of North Dakota; William Theodotus Capers, bishop coadjutor of West Texas; Paul Matthews, bishop of New Jersey; Frank Du Moulin, bishop coadjutor of Ohio; William Frederick Faber, bishop coadjutor of Montana; Walter Taylor Sumner, bishop of Oregon. Richard Henry Nelson, bishop coadjutor of Albany, entered upon the bishopric of the diocese at the death of Bishop Doane, May 17, 1913, and he was enthroned Nov. 18, 1913. Charles B. Colmore was consecrated missionary bishop of Porto Rico, Dec. 17, 1913. Frederick B. Howden, elected missionary bishop of New Mexico at the General Convention in 1913, was consecrated Jan. 14, 1914.

Work in connection with the World Conference on Faith and Order was vigorously carried on in 1914. Commissions thereon have been authorized by 49 communions in North and South America, Asia, Europe, Africa, and Australia. Practically all the Protestant Communions in English-speaking countries, as well as the Old Catholic Churches of Europe, have given their aid to this movement. Eminent Russian ecclesiastics have also promised their coöperation; and some well-known Roman Catholic dignitaries have also expressed interest in the cause. A deputation, consisting of the Bishop of Chicago, the Bishop of Connecticut, the Bishop of Pennsylvania, Rev. Dr. William T. Manning, and Dr. John R. Mott, proceeded to England, but high expectations of success, which had been justly formed by reason of promised coöperation in Europe, could not be realized on account of the outbreak of the European War. Plans for the Conference were suspended. The enactment of the rule on Provinces, by the General Convention of 1913, resulted in combining into fewer and more efficient organizations, several branches of church work—missionary, educational, and social service—which had hitherto been done by a large number of separate departments. The first Province to be organized was the Province of the Southwest. All the dioceses, with the exception of Alabama, Duluth, Easton, and West Virginia, accepted the provincial system. The educational interests of the denomination are in charge of the General Board of Religious Education. In 1914, educational organization and teacher training were made prominent. Three departments of parochial education, collegiate education, and theological education, were created. Teacher training was advanced by the organization of schools of religious instruction in St. Louis, Chicago, Milwaukee, Cincinnati, Detroit, Rochester, Newark, New York, and Massachusetts. The Joint Commission on Social Service, besides coöperating with various church agencies, took a practical part in investigating the Paterson (N. J.) strike of 1913, by participating therein, with the commission appointed by the Federal Council of the Church of Christ in America. Special committees were also appointed to investigate prison labor and social insurance. See also RELIGIOUS DENOMINATIONS AND MOVEMENTS.

PSYCHIC RESEARCH. In two of the more important volumes written in this field during the year (*On the Cosmic Relations*), Henry

Holt has brought together a vast amount of data designed to show that there is no lack of evidence for the belief in the "universe of the unknown." "Cosmic relations" is defined as "a brief term for the interactions between Soul and Universe." These interactions, if successful, are productive of happiness which "is the only known justification of the existence of either soul or universe" (p. 4). The cosmos is taken to consist "of the soul and the universe external to it." The first book presents such a "sketch of evolution as may impress, more than abstract statements can, a living consciousness of the existence of the universe beyond our knowledge." Book II gives "some account of a mass of phenomena which of late have fitfully emerged from the unknown." These phenomena science has thus far neglected, but Holt attempts (in Book III) to correlate them in terms of a "universal mind" or "cosmic soul," on the ground that if we have been endowed with telekinesis, the exertion of power at a distance by means unusual, and with telepsychosis, the communication between minds through unusual channels, we can certainly believe the evidence which comes from these sources, because, as a rule, "we are not entrusted with dangerous tools before we learn how to use them" (p. 935). Holt contends, with a good deal of competence, for the existence of mind after death. *Adventurings in the Psychical* is the title of a book by H. A. Bruce in which is given a narrative account of various personal experiences and experiments, designed to prove that there are phenomena which science does not yet adequately explain. Although Sir William Crookes did attempt to interpret these facts in terms of Roentgen rays, Sir Oliver Lodge and others claimed that the cause was nonphysical. Just now there is a tendency to explain the phenomena of ghosts, crystal gazing, automatic writing, and cross correspondence (v. YEAR BOOK, 1913, 574) as manifestations of dissociated and submerged "subconscious" perceptions. The question that is still to be answered is: "Under what conditions do these 'perceptions' emerge?"

In spite of meagre endowments, the American Society has maintained its high level of research and has continued the publication not only of its monthly *Journal*, but also of its more elaborate *Proceedings*. Since the dissolution of the American branch of the British Society in 1905 (v. YEAR BOOK, 1907, 657) the financial support of the organization has not been encouraging, but a more ample fund will hereafter be available. Already is announced a donation to meet the expense of an assistantship to which E. W. Friend, M.A. (Harvard), formerly a fellow in classics and Indic philology from Harvard at the University of Berlin, has been appointed. Early in the year J. H. Hyslop reported (*Journal*, viii, 28) his investigation of Beulah Miller, whose ability as a mind-reader the newspapers of the country proclaimed, and H. Münsterberg disproved. Hyslop thinks it unlikely that a code of signals between child, mother, and sister was used because the persons concerned were plainly not clever enough to follow the intricate code that the circumstances would have demanded. While there was no direct evidence for telepathy, the investigator did get some evidence of automatic writing. In addition to a group of incidental and personal experiences, the most significant investigations reported

(*Proceedings*, viii, 1) deal with the telepathic and telæsthetic communications of Mrs. Canton in a series of experiments conducted by H. A. Burr. P. F. Hall's summary shows the scientific conservatism with which the society accepts its data (*ib.*, 151): "In the absence of evidence that certain observations were made, certain precautions taken, or certain statements verified, we have to assume that they were not; otherwise we do not know with what we are dealing. . . . For the reasons given above, I am obliged to say that, although Mr. Burr's report is very interesting, it seems to me impossible to draw any definite conclusions from it."

The work of the British Society again centres about correspondences which tend to indicate either (1) the unusual transference of thought from individual to individual, or (2) the attempt of the living to obtain messages from the deceased. A novel experiment in thought-transference of the first type was performed by the Misses C. Miles and H. Ramsden (*Proceedings*, xxvii, 279) in which simultaneously written postcards were compared for similar references of thought. A number of such occurrences were found in the series. One of the characteristics of automatic correspondence of the second type is that it is often incoherent and sometimes even illegible. But in the scripts of Mrs. Verrall, Mrs. Holland, and Mrs. Piper, Miss A. Johnson points out (*ib.*, 1) that isolated passages from standard literature are just as incoherent as are these automatic scripts, and that the obscurity of the meaning may be explained on the assumption that the author deliberately intends thereby to conceal his identity. G. W. Balfour points to evidence in the correspondence of Mrs. Willett (*ib.*, 221) that Dr. Verrall was actually revealed to her. M. A. Bayfield (*ib.*, 244, 318) explains the phenomena on the grounds of subconscious communication.

A noteworthy event of the year was the election of F. C. S. Schiller of Oxford University to the presidency of the British Society. In his inaugural address (*ib.*, 191) Dr. Schiller laid weight upon a matter which H. Bergson had considered upon a similar occasion; namely, that the nonexperimental, historical approach to psychic phenomena is the only adequate means at hand for their envisagement, inasmuch as (1) immaterialized souls are not interested in us, (2) they are beyond our control, and (3) we have scarcely sufficient control over our own psychic forces. After discussing the ambiguity of the term "reality," he makes a plea (*ib.*, 219) for the concept of "the individual soul which science seemed to abstract from and philosophy despised. [The soul] is after all the principle of unity and order, because it is the only available agency of selection. It stands at the core and centre of the cosmos and occupies the sole point at which all the various sorts of reality intersect, the sole position from which they can be controlled and unified."

E. C. Sanford (*Am. J. of Psych.*, xxv, 1) shows the likeness of problems presented in the realm of psychic phenomena to those connected with the "intelligent" or "calculating" horses of Elberfeld. He suggests "that perhaps the delicate responsiveness of horses and dogs offers us a means of bringing some of the mediumistic phenomena into the laboratory in manageable fashion." L. T. Troland proposes (*J. of Abn. Psych.*, viii, 405) with a similar intent, to apply

the methods of psychoanalysis to the problems of psychic research.

PSYCHOLOGICAL ASSOCIATION, AMERICAN. See *PSYCHOLOGY, Meetings, and passim.*

PSYCHOLOGY. MEETINGS AND GENERAL NEWS. The annual meetings of the American Psychological Association and the Southern Society for Philosophy and Psychology were conjointly held at the University of Pennsylvania, Philadelphia, on December 29-31. R. S. Woodworth gave the presidential address for the American Association on "A Revision of Imageless Thought." The 11th annual conference of Experimental Psychologists took place at Columbia University, New York City, on April 9th and 10th. The 6th Congress for Experimental Psychology was held at the University of Göttingen on April 15-18, and the International Congress of Neurology, Psychiatry, and Psychology was to have been held at Bern on September 7-12, but of this we have no further news. Early in the year, fire destroyed the building which contained the psychological laboratory of Wellesley College. Almost all of the apparatus and experimental records were either damaged or entirely lost. In honor of the completion of his 25th year as Professor of Psychology, the former students of J. McK. Cattell tendered him a memorial *Festschrift* which contains a series of essays on Professor Cattell's contributions to the problems of the reaction-time, of reading and perception, of the associative method, of psychophysics, of relative statistical position, and of individual differences. Several new serials and periodicals are under way: some of them have already appeared. W. Peters, of Würzburg, edits *Das Zentralblatt für Psychologie und psychologische Pädagogik*, in which summaries of articles and treatises are published. A. Adler and C. Furtmüller, of Vienna, have issued the first number of *Die Zeitschrift für Individualpsychologie*, while F. Krüger, of Halle, is editing a series of studies in genetic, ethnic, animal, and child psychology under the title, *Arbeiten zur Entwicklungspsychologie*. The second number, appearing before the first, contains a study by H. Volkelt on the *Ideational Processes of Animals*. There is news of an *Archiv für Religionspsychologie*, edited by Herren Stählin and Koffka and published from Tübingen, and also of an *Année psychologique polonaise*, from Warsaw. To meet the needs of an increased supply of articles on psychological subjects, the editor has proposed the exclusive assignment of theoretical papers to the *Psychological Review*, and the organization of a new bimonthly *Journal of Experimental Psychology* for investigational articles. After the death of A. H. Pierce, former editor of the *Psychological Bulletin*, S. I. Franz, of Washington, D. C., was put in charge of that publication.

The death-toll for the year was unusually heavy. Mention has been made of the death of A. H. Pierce, whose publications were chiefly concerned with the subjects of space perception, attention, and the subconscious. E. B. Huey was known for his work in the field of reading and of mental deficiency; Miss T. L. Smith, for her contributions to the literature of child-psychology; G. E. Dürr, for his treatises on attention and epistemology, and for his revision of two of Ebbinghaus's principal works; T. Lipps, for his systematic treatises on general

psychology, aesthetics, and the higher mental functions; L. Hermann, and H. Kronecker, for their physiological contributions to psychology.

GENERAL BOOKS AND TREATISES. The current year has been unusually productive of textbooks and general works. Among the textbooks, there is a marked tendency to make the subject-matter and scope of psychology less abstract by introducing the purposes and the aims of the individual in terms of appreciation and value. One of the best examples of this tendency is H. Münsterberg's *Psychology, General and Applied*. The realm of psychology is demarcated, in this work, by two sharply defined attitudes toward mind: (1) mental content may be explained in terms of a causally related objective series of events, or (2) mental processes may be valued and understood in terms of a purposive, subjective self. In Book I are discussed problems which arise from the assumption of the first attitude: the scope and methods of causal psychology, the elementary and complex processes of the individual and of the group, and the interpretation of these from the point of view of a causally related series. In Book II these divisions are followed into the realm of purposive psychology; the concepts of soul, meaning, creation, and social activities are analyzed. And, finally, in Book III, both of these types of psychology are traced through their more evident applications in education, law, economics, medicine, and general culture, but in all of these applications purposive psychology appears in a minor—not to say ambiguous—role. The same endeavor to make psychology less removed from the issues of a purposive world appears in R. M. Ogden's *An Introduction to General Psychology*, in which the author has aimed to meet the "demands of the average student beginner a little more adequately than has been done hitherto," by enabling him, "on the one hand, to connect his psychology with everyday life, and, on the other, to apprehend the bearings of this science upon philosophy, education, sociology, and biology." The author rejects "the science of behavior in this narrower sense" (*v. YEAR BOOK*, 1913, 576), but follows the trend toward a purposive psychology. In addition to the usual captions there are chapters on character, and personality, with its derangements, and sections on dreams, hypnosis, and telepathy. A notable feature of the book is its support of imageless thought, and its treatment of recent results in audition. Another attempt to rehabilitate the purposive soul is to be found in W. Wundt's *Die sinnliche und uebersinnliche Welt*. The author describes the various world-realities of the naïve mind, the physicist, the psychologist, and the moralist, and he suggests that these may be unified in the ethical ideals of Christianity, which has passed, in its development, through the stages of mythology, symbolism, and philosophical interpretation. It is significant, in this connection, that the textbook which has recently stood for the most energetic interpretation of the self on the basis of its aims and purposes, has already passed into its fourth revision since the first edition of 1909. In the new edition of M. W. Calkin's *A First Book in Psychology*, the bibliography of former issues is continued to the present time, and several textual changes of importance are made. The subject of the fluctuation of attention is

omitted; but new classifications of attention, conception, and emotion are introduced. A new edition of D. R. Major's *The Elements of Psychology* has appeared with slight rewording and additions. The second edition of C. S. Myers's *Text Book of Experimental Psychology* has this year been reprinted without change. In a manual of *Psychological Experiments*, J. V. Breitwieser has written out in abbreviated form a series of simple experiments which can be performed without the aid of expensive or elaborate apparatus. H. L. Hollingworth has contributed an *Outlines for Experimental Psychology*.

The bearing of psychology on social ideals is brought out in H. Münsterberg's *Psychology and Social Sanity*. Among the issues which receive attention are those that centre about sex-education and the dance, the evils connected with advertising and with schemes of investment, Socialism, the efficiency of the jury and of the farm, and the dangers underlying belief in telepathy. His *Grundzüge der Psychotechnik* is a more serious estimation of the service which psychology may render to commerce and culture. In systematic criticism, the author traces out in some detail the problems, premises, and influences of applied psychology in connection with the demands of society, of health, of industry, of justice, of education, of art, and of science. It embodies the first deliberate attempt to define, on theoretical grounds, the boundaries of application.

B. Sidis's large volume on *The Foundations of Normal and Abnormal Psychology* may be classed either with "general treatises," or with the psychopathic works. It succeeds better than do most books which treat of the abnormal in laying a consistent and reasoned foundation within general psychology. It is especially to be commended for its serious attempt to lay down laws of mental synthesis and organization. The appearance during the year of a new edition of C. B. Burr's *A Handbook of Psychology and Mental Disease* illustrates the current demand made by physicians and alienists for an appropriate psychology of the abnormal. In the case of the *Handbook*, the description of disorders is more heartily to be commended than are the psychological foundations. Students of the psychology of religion will make good use of the extensive bibliography (over 1000 titles) collected by G. Berguer in the *Archives de psychologie* (xiv, 52). In *Behavior: An Introduction to Comparative Psychology*, J. B. Watson has swept together a large amount of experimental material bearing upon the minds and the performances of animals. The large volume on *Principes de psychologie biologique* (French translation, 1914), by José Ingenieros of the University of Buenos Aires, is a genetic treatise which includes comparative, social, and individual psychology. It rejects "Wundtism" and "Bergsonism," and it is ambitious to erect instead of these "a natural science conformable to the most general hypotheses of scientific philosophy." The first volume (*The Senses of Invertebrates*) of a large work on animal psychology, *Einführung in die Tierpsychologie*, by G. Kafka, appeared during the year. The lively interest manifested by philosophy in the definition of mind is illustrated by E. B. Holt's book entitled *The Concept of Consciousness*. The definition proposed, which "is in no small part

inspired by the radical empiricism of Professor James," runs as follows: "the consciousness that depends on any given living organism is the sum total of all neutral entities [not mental or physical 'substances'], to which that living organism responds." In accordance with this definition, psychology is described as "primarily the science of response."

SENSATION AND PERCEPTION. *General.* In a study (*Arch. f. d. gesam. Psychol.*, xxxii, 68), which seeks to reveal the criteria that make for objective reference in sense-impressions, A. Berliner comes to the conclusion that the criteria are not always reliable and that confusion frequently occurs. L. T. Troland (*Am. J. of Psych.*, xxv, 500) makes a mathematical modification of the Hering theory of vision which meets many of the objections to that theory and serves as well to explain adaptation in the sense-departments of temperature and taste.

Vision. K. Lohmert has found (*Psychol. Stud.*, ix, 147) that the apprehension of rectangular geometrical figures depends in part upon a factor of satisfactory absolute size which begins to show its influence when a variable rectangle is adjusted by an observer to a standard rectangular figure in a long series of comparisons. P. Schwirtz (*Arch. f. d. gesam. Psychol.*, xxxii, 339) tested the Müller-Lyer illusion under hypnosis and concluded that the effect was not due to associations because these had been inhibited by suggestion, nor to any other conscious processes, nor to physiological functions in the retina of the eye, but to physiological conditions in the central nervous system. V. Benussi, however (*ib.*, 396), explains illusory perceptions in general—and among them the Müller-Lyer—on the basis of ideated movements of parts. W. Wundt returns to the defense of his theory of assimilative completion under fixation and eye-movement (*Psychol. Stud.*, ix, 272). R. Dittler and Y. Sasaki have given a valuable table of complementary lights derived from spectral beams and set down in terms of wave-length (*Zeitschr. f. Psychol.*, xlviii, 240). Their results, which depended upon the colorlessness in after image of their mixed pairs of complementaries, are introduced by a note written by E. Hering. There has, of late, been a strong tendency closely to limit color-vision in the animal kingdom; but F. W. Fröhlich (*ib.*, xlviii, 28, 354) interprets the dependence of response upon wave-length, found in certain cephalopods, to mean that different lights set up different color sensations; and W. F. Ewald (*ib.*, xlviii, 285), who worked with the water flea, *Daphnia pulex*, found evidence of dichromatic vision (red-green blindness) with maximal sensitivity to greenish-yellow and a complementary blue-violet. Ewald's important results confirm those of Frisch and Kupelwieser published last year, and they stand in line with Hering's theory of visual sensation. These recent investigations have sensibly advanced the doctrine of color vision.

Audition. C. E. Seashore describes (*Psych. Rev. Monographs*, lxi, 1) an improved form of the tonoscope, an instrument which directly determines the pitch of a singing voice or of an instrument. Experiments conducted with this instrument lead W. R. Miles to the following conclusions: (1) the human voice is about equally accurate, in terms of vibration, at all points well within its range, (2) vowel quality

affects the accuracy of vocal reproduction, and (3) the average error of the voice in reproducing a tone given by a tuning fork is 1.5 vibrations for men at range 128 vibrations, and for women at 256 vibrations, in a representative group of students (*ib.*, 65). In a study of pitch discrimination, T. F. Vance (*ib.*, 115) obtained from 50 Obs. much larger liminal values than those of Luft and of Meyer. The same experimenter, working with large steel forks, obtained the values 12-15 vibrations, for the lowest audible tone (*ib.*, 104). The research brought out new stimulus conditions which probably bear upon the stimulus threshold. A convenient review of the definitions and theories of consonance has been made by H. T. Moore (*ib.*, lxxiii). Moore himself operates with the vague genetic concepts of "synthesizing activity," "conflict," "equilibrium," "output of consciousness," and the like. Continuing his studies of auditory localization, C. S. Myers finds evidence for his belief that relative binaural intensities determine the left-right position of a source of sound whereas timbre and loudness place the sound with respect to a horizontal plane which should pass through the two ears (*Proc. Royal Soc.*, B, lxxxviii, 267). Assuming that the statements of K. Bücher and A. Nikisch are true when they allege the degeneration of rhythmic perception in the minds of musicians of to-day, A. Charon (*Arch. f. d. gesam. Psychol.*, xxxi, 274) gives directions for cultivating the disappearing sense of rhythm by making those appropriate movements in playing which will fit into the rhythmic responses of the bodily musculature. H. J. Watt has proposed to combine Helmholtz's principle of resonance with ter Kuile's areal analysis of stimulus to explain the facts of auditory sensation. The new conception better accounts for the phenomena of fusion than the old theories did (*Brit. J. of Psych.*, vii, 1).

Articulation. Stuttering has received attention this year in a monograph by A. Liebmann (*Vorlesungen über Sprachstörungen*), in which the writer emphasizes the need of psychological investigation of the defect, with special reference to the rôle of imagery; and an experimental investigation by J. M. Fletcher (*Am. J. of Psych.*, xxv, 201), as the result of which the author comes to the conclusion that stuttering is the consequence of a want of coördinated control in breathing, vocalization, and articulation.

PSYCHOPHYSICS. This subject appears in several ways to be coming again into its own. Renewed interest has been aroused by discussions concerning the relation which obtains between the mental and the physical (*v. YEAR BOOK*, 1913, 578-9). E. Minkowski (*Arch. f. d. gesam. Psychol.*, xxxi, 132), in a criticism of the doctrine of psychophysical parallelism, points out the fact that many of the theories advanced in psychology are not so much psychophysical as they are psychophysiological; but E. Hurwicz (*Arch. f. d. gesam. Psychol.*, xxxiii, 213) believes that the correlation must be sought in the fact that objects obtain their reference to the non-psychical through affective responses. There are a number of studies in psychophysics proper. C. Herfurth (*Psychol. Stud.*, ix, 220) has shown the constancy of median values with the temporal reversal of standard and variable series; F. M. Urban has drawn up new formulæ (*Arch. f. d. gesam.*

Psychol., xxxii, 456) for more accurate determination of liminal values on the basis of his system of psychometric functions, and S. W. Fernberger has made it appear that the extreme values in each series in the method of constant stimuli may be eliminated without seriously affecting the final result (*Am. J. of Psych.*, xxv, 121). Fernberger also warns the experimenter against assuming that the observer is following the *Aufgabe* without controlling this factor in order to avoid variability of results (*ib.*, 538). The prize of \$100 recently offered for the best paper on the availability of Pearson's formulæ for psychophysics should tend to stimulate interest in this field.

MEMORY, LEARNING, ASSOCIATION, AND ATTENTION. G. Frings (*Arch. f. d. gesam. Psychol.*, xxx, 415) records the results of investigation in the field of associative inhibitions of two of the three varieties found by Müller and Pilzecker (1900) in their classical experiments on memory: (1) the effective or reproductive inhibition which prevents the appearance of two complexes whose associative tendencies with a third complex are equal, and (2) the generative or associative inhibition which tends to prevent the appearance of the third complex without the reproduction of the intervening second complex in the serial formation. Neither of these inhibitions is found, according to Frings, when the associations are normally formed, but they do affect reproduction when the associations have been loosely formed. (3) The third, "retroactive" inhibition of Müller and Pilzecker, according to which associative bonds tend to be dissolved by subsequent mental work, has again been made the subject of investigation. R. Heine, experimenting in Müller's laboratory at Göttingen, now finds (*Zeitschr. f. Psychol.*, lxxviii, 161) that retroactive inhibition affects reproduction but not recognition. She explains the fact by the assumption that recognition of an object or word does not involve the reestablishment of old associative bonds. The law itself seems to have been stated too broadly. It has been demonstrated only that *certain kinds* of mental function, notably those called out by memorizing, affect the subsequent reproduction of materials previously acquired. The relation of the phenomenon to "perseveration" and to the "set" of associative tendencies has not yet been made clear. Indeed, the very existence of the "perseverative tendency" has recently been called in question. W. S. Foster (*Am. J. of Psych.*, xxv, 393), whose scrutiny of the literature brought to light no less than four different uses in psychology of the term, declares that in his experiments, which were carried out by the Göttingen methods, he "met no facts which seem to make necessary the supposition of a tendency for an idea to arise without the probable co-operation of associative tendencies." Comparing the learning-methods of *reading* (i.e., reading over and over the matter to be committed to memory) and of *recital* (i.e., free rehearsal without the text), A. Kuhn discovered that pure reading, taken by itself, was almost worthless, and that, for most observers, recital was much more economical (*Zeitschr. f. Psychol.*, lxxviii, 396). The difference rests mainly upon the organization of the material; a process that contains many factors. E. O. Finkenbinder finds (*Am. J. of Psych.*, xxv, 32) that the act of vol-

untary recall is usually characterized by two stages. The initial stage consists of an *Aufgabe* to recall and an act of "searching." "A second stage is characterized by imagery of various sorts, present in more or less profusion, and in greater or less degree of intensity, or vividness. . . . No recall of an affective state, of an attitude, of an *Aufgabe*, of steps in reasoning, or of a concept has been reported, except with images." In a review of the association method, S. C. Kohs (*ib.*, xxv, 544) finds that individuals differ mentally in terms of the grouping of associated complexes and that a psychological study of character should take these complexes into account. M. Scheinermann (*Arch. f. d. gesam. Psychol.*, xxxiii, 1), in a comprehensive investigation, analyzes the difference between a fatigued and an unfatigued mental condition in terms of the attentive state. The former shows feelings of passivity, indifference, narrow span of consciousness, and difficulty of apprehension, as against the opposites of these in the latter. In a study of adult methods of learning (taking the term "learning" in the sense of acquirement of performance), F. A. C. Perrin, who used various sorts of maze (*Psych. Rev. Monographs*, lxx), found the learning to be largely of the perceptual kind, which can neither be called "trial and error" nor "reasoning." Significant experimental evidence from children for the general effect on mental functions of specific drill (observing visual forms, figures, and the like) has been presented by K. Dallenbach (*J. of Educ. Psych.*, v, 321, 387). As the author remarks, this looks like "formal discipline." N. P. Hewins's historical and experimental research (*vide ib.*, v, 168) is a contribution to the same vexed problem. On the basis of experiments done with adults and children, C. Fox was convinced (*Brit. J. of Psych.*, vi, 420) that easy and unimpeded thinking is unfavorable to mental imagery, while delay and conflict are favorable to its arousal. Total abstinence from food for 31 days "had little effect upon the higher mental functions" of H. S. Langfeld's starving subject (*Psych. Rev. Monographs*, lxxi). The popular maxim "slow, but sure," receives slight support from researches (*ib.*, lxxii) which were carried out in order to ascertain whether persons who are deliberate in forming decisions and judgments are more likely to be correct and accurate than others. No correlation was discovered between (1) time and constancy in either logical or æsthetical judgments, and (2) time and accuracy in objective decisions. The neural conditions immediately underlying the higher mental complexes are almost wholly unknown. An hypothesis designed to make up, in part, for this deficiency,—an hypothesis based upon recognized physiological principles, clearly and definitely formulated,—makes clever use of incipient activities of the motor mechanisms of the brain (M. F. Washburn, *Psych. Rev.*, xxi, 376).

LANGUAGE. What is the best way to teach a foreign language? The question is at least as old as the practice of teaching modern "living" languages alongside the classics. L. Schlüter, working in the psychological institute at Göttingen and at Münster (*Zeitschr. f. Psychol.*, lxviii, 1), tried to subject to analysis and to a comparative test the older "translation" method, which uses the mother-tongue as the primary

vehicle of instruction, and the "reformed" or "natural" method, which uses the foreign language in a similar way. In her experiments Miss Schlüter instructed her observers (nearly 20 adults) to translate into and out of foreign words and also to learn foreign names for objects presented. The two sorts of learning were carried on, day by day, in parallel series. She found that if foreign words are to be translated into native speech (as in translating a book), then it is more economical directly to associate the foreign and the native words than to learn from objects; but if the learner is subsequently to designate things by foreign words, then it is more economical not to associate the native to the foreign name of the object but at once to attach the new name to the object. There is an indication, therefore, that neither the older method of translation nor the newer method of presentation is to be preferred without qualification. The one seems to offer a better preparation for getting the meaning out of a foreign language when written, the other for conversation about objects and situations. In view of the greater directness claimed by the adherents of the "reformed" method, it is worth noting that when, in the experiments, the object was shown and the foreign name called for, the observer was very likely first to associate with the object the common designation in his mother-tongue and only then to give the foreign name. This process makes the "direct" method appear less direct than it is assumed to be. The author wisely refrains from wide generalization from her results. Before the whole problem of instructional methods in language can be settled a large number of such considerations as the use in practice of the language acquired, the kind and value of the mental training afforded, the age of the pupil, the preparation and experience of the instructor, must be carefully weighed; but it is an achievement so to have formulated the problem as to render it amenable to scientific approach. Thus far the research touches only the acquisition of a part of the vocabulary (nouns): it must go on to analyze the processes involved in the total integration of the sentence and of the paragraph. The methods of instruction in the languages are also considered in R. Wähmer's little book, *Spracherlernung und Sprachwissenschaft*.

THOUGHT, JUDGMENT, ACTION, AND EMOTION. Probably because of the logical doctrines advanced by E. G. Husserl, professor of philosophy at the University of Göttingen, and the bearing they have on psychological investigations (v. A. Messer, *Arch. f. d. gesam. Psychol.*, xxxii, 52, 281), a fresh attack on problems connected with thought and judgment has been made by the psychologists of Germany. An instance of this is to be found in a critical review by G. Anschütz of the late T. Lipps's doctrine of judgment, of which the second part has appeared during the year (*Arch. f. d. gesam. Psychol.*, xxx, 329). The review interprets judgment as simply the result of a voluntary effort to meet the demands made upon us by the objects of our environment.

It is important to note in these days of behaviorism that a physiologist of the reputation of W. B. Cannon should make the statement (*Am. J. of Psych.*, xxv, 256), "for reasons given above I agree with Sherrington's conclusion

'that the reverberation from the trunk, limbs, and viscera counts for relatively little, even in the primitive emotions of the dog, as compared with the cerebral reverberation to which is adjunct the psychological component of emotional reaction.'" R. Beck indicates, in a series of introspections (*Arch. f. d. gesam Psychol.*, xxxiii, 221), that consciousness attending imminent danger is at an extraordinarily high pitch of attention so that the experiences remain exceedingly vivid in memory for a number of years. E. B. Titchener (*Am. J. of Psych.*, xxv, 427) wonders at James's failure to notice the many historical anticipations of the James-Lange theory of emotion. G. S. Hall in "a synthetic genetic study of fear" (*ib.*, xxv, 149, 321) defines fear as "the anticipation of pain" and as an inhibition of "the will to live." He gives a list of 134 kinds of morbid fear.

A. Hammer has attacked the question of inhibition from the angle of the reaction experiment (*Psychol. Stud.*, ix, 321), and has shown that an inhibition set into operation by anticipative reactions previously executed has a progressive effect, in spite of renewed voluntary attempts to suppress the conflicting factor. See also **PSYCHOTHERAPY**.

PSYCHOLOGY, EXPERIMENTAL. See **PSYCHOLOGY**, *Meetings and General News*.

PSYCHOPHYSICS. See **PSYCHOLOGY**, under section *Psychophysics*.

PSYCHOTHERAPY. S. Freud's *Psychopathology of Everyday Life*, now translated into English by A. A. Brill, is an exceedingly clever attempt to discover, in the normal and the commonplace, mild forms of the same manifestations as appear in exaggerated measure in mental disorder. These mild manifestations Freud remarks in the slips and lapses of speech, memory, and action common to all persons. The explanation of these lapses, in terms of "repressions," serves to illuminate, in the manner characteristic of Freud, the symptoms observed in psychoneuroses. The doctrine of repression, as it is applied to lapses of memory, was made the subject of a symposium at Durham during July (*v. Brit. J. of Psych.*, vii, 139), and an attempt to interpret the alleged phenomena in terms of neural functions was made independently by W. Brown (*ib.*, vi, 265). An appeal made to *The Unconscious* to clarify psychological facts, normal and morbid, appears in M. Prince's book of this title. The author identifies the unconscious with the "neurograms" or neural dispositions, which are ultimately responsible, as he thinks, for the "fundamentals of human personality normal and abnormal." It is chiefly when the unconscious represents an *affective* residue of experiences (instincts and emotions), that the mental functions are disturbed. Another recent book about the unconscious, *La vie inconsciente et les mouvements*, has been written by the venerable Th. Ribot. Ribot maintains that "what persists [as the unconscious] is the kinesthetic portion of the conscious states"; for "every state of consciousness is a complex of which the kinesthetic elements form the stable and resistant part." Persons interested in the resemblances and differences between Freud's "psychoanalysis," and the "psychological analysis" of the French psychopathologists will find instructive P. Janet's articles on *La psycho-analyse* in the *Journal de psychologie* (xi, 1, 97) and in the *Journal of*

Abnormal Psychology (ix, 1, 153). The journal last named continues to devote itself primarily to Freudian interpretations, although it did also contain, last year, a violent criticism of psychoanalysis, re-named by the critic "sexuo-analysis" (J. C. Haberman, *ib.*, ix, 265). The *Jahrbuch der Psychoanalyse* for the year (vol. vi), which will from this time be devoted exclusively to the advancement of "psychoanalytic science," contains four original articles, a lengthy and instructive history of the psychoanalytic movement (207), and a series of reports upon the work of the last five years. Helpful suggestions toward the discrimination of healthy and unsound "personalities" were made on the basis of "mental adjustment," by F. L. Wells (*Psych. Rev.*, xxi, 295).

PUBLIC HEALTH SERVICE, UNITED STATES. The annual report of the Surgeon-General for the year 1913 gave a résumé of the work of this bureau for the year and demonstrated the great extent and value of its activities. In the Philippine Islands, for example, not a single case of cholera occurred during the year, and only a few cases of plague. Of small-pox, which formerly killed 40,000 people in the islands, there were very few cases, and these among persons inaccessible to vaccination. Yellow fever did not appear. In continental United States some of the most important activities of the service were the field investigations of pellagra, trachoma, malaria, Rocky Mountain spotted fever, typhoid fever, tuberculosis, parasitic diseases, water pollution, sanitary administration, occupation hygiene, and school sanitation. Much of the work was done in coöperation with State health boards and included laboratory studies of many of the diseases cited. Other activities included the supervision of viruses and vaccines, serums and toxins, the manufacture and distribution of antirabic virus, and the enforcement of the white-phosphorus-match law. A goodly proportion of the work of the Public Health Service is in connection with quarantine and immigration services, an important function being the admission or exclusion of the feeble-minded and insane. PUGILISM. See **BOXING**.

PUGNO, RAOUL. French pianist, died Jan. 3, 1914. He was born in Paris, in 1853, and studied at the Conservatoire, winning there several prizes. His first studies were for organ playing, and at the age of 19 he became organist at the Church of St. Eugene, Paris, which post he continued to hold for 20 years. In 1874 he was chorus-master of the Théâtre Ventadour, and from 1893 to 1896 was a professor of harmony at the Conservatoire, later becoming first instructor in piano at that institution and holding that post until his retirement from all but private instruction. He was well known in the United States where he made several tours, the last being in 1912. After the retirement of Camille Saint-Saëns he was considered to be the foremost French pianist. His compositions were chiefly in the smaller forms, al-

though he also wrote ballets, operas, operettas, and oratorios.

PUMPING MACHINERY. Some important units were put under construction during 1914. For the city of Philadelphia contracts were awarded for two 20,000,000-gallon steam turbine driven geared centrifugal pumps, to operate against a 330-foot head under a duty guarantee of 145,000,000 foot pounds per thousand pounds of steam. This was but one of the orders for such units in the hands of a large manufacturing company, which was also building two 24,000,000 imperial gallon pumps, designed for the Toronto water-works, to operate against a 268-foot head, and two 6,500,000-gallon pumps against a 273-foot head for San Antonio, Texas. These and other installations previously installed indicated that the centrifugal pumping engine already was a strong competitor of the older reciprocating pumping engine, notwithstanding the fact that it was only within the last 15 years that the centrifugal pump had been in operation against high heads. The products of Swiss and German designers were followed by mechanical engineers and pump builders in the United States, and improvements were added so as to secure increased efficiency. In combination with the steam turbine, as well as with the electric motor, the centrifugal pump illustrates again the advantages of a machine with a rotary over a reciprocating motion. During the year a number were installed at the various plants at the Plaquemine and Jefferson Drainage District of Louisiana, including four 76-inch, and one 48-inch, centrifugal pumps. The larger pump had a capacity of 168 gallons per minute at 1-foot head, and 40,000 gallons per minute against a head of 13 feet. These pumps were used to pump water back to the Mississippi River over a levee. A 100,000,000-gallon De Laval centrifugal pump was installed at Pittsburgh with a 48-inch outlet, designed to raise water against a total head of 56 feet.

Arrangements were made during the year for the construction of Humphrey gas pumps in the United States, and the first large American machine of this kind was installed near Del Rio, Texas, for irrigation purposes. This pump, which is of the general type described in previous issues of the YEAR BOOK, had a cylinder 66 inches in diameter and was supplied with gas by a 300-horsepower Akerlund down-draft producer, which used as fuel either soft coal or mesquite wood. This American Humphrey pump differs in design somewhat from the English original pattern, and the working parts have been standardized so as to secure parts available for pumps of different sizes; throughout the entire design the aim has been to secure high economy with simplicity, reliability, durability, and low cost of maintenance.

One of these Humphrey pumps, it is stated, can be put in full operation from the cold condition in less than a minute, and requires little skilled attention when once started. None of the heat and lubrication difficulties customary with the big gas engines are encountered, and the only possible mischances are stoppage from lack of water, gas, or ignition, all of which needs have been taken into consideration, and the means of supply duplicated. In connection with the Humphrey patents, those of W. H. Smyth of Berkeley, Cal., have been used, and he was the first inventor to raise water by the

direct explosion of fuel gas in the United States.

During the year the Boston Public Works Department was building at Union, Park, and Albany Streets the largest automatic sewage pumping station in the world, with a total capacity of 151,000,000 gallons per day. Four pumps were installed, 3 having 36-inch suctions and 36-inch discharges, to deliver 30,000 gallons per minute, while 1 had a 26-inch suction and a 24-inch discharge, and could deliver 15,000 gallons per minute. The larger pumps were to be driven by 150-horsepower constant speed motors on a 440-volt circuit, and a small pump by a 75-horsepower motor. The automatic control was to be secured by a float actuating a multi-point switch, which would close five circuits consecutively with the change of elevation in the suction chamber.

PUMPS. See PUMPING MACHINERY.

PURDUE UNIVERSITY. A State institution for higher education, founded at Lafayette, Ind., in 1869. The total enrollment in all departments in the autumn of 1914 was 1978, and the faculty numbered 206. There were no notable changes during the year. The benefactions received amounted to about \$50,000, and the productive funds amount to about \$340,000. As the university is supported by appropriations from the State, there is little or no endowment. The library contains about 44,000 bound volumes and 30,000 pamphlets. The president is W. E. Stone.

PURPURA. See SERUM THERAPY.

QUAKERS. See FRIENDS.

QUALES, NILES THEODORE. An American physician, died at Chicago, May 23, 1914. He was born at Hardanger, Norway, in 1831, was educated in Norway and Denmark, and came to Chicago in 1859. He enlisted in the United States army in 1861, served during the Civil War, and at its conclusion entered Rush Medical College. He was first interne in the old Cook County Hospital, was city physician of Chicago, and director of the small-pox hospital during the small-pox epidemic of 1868-70, and was head of the United States Marine Hospital until the Chicago fire of 1871. He was president of the Scandinavian-American Medical Society (1894), and received the Norwegian decoration of the Order of St. Olaf (1910). He founded the Norwegian Old People's Home, Norwood Park, Chicago; and did much charitable work among the Norwegians of that city.

QUEBEC. A province of the Dominion of Canada. Area, 351,873 square miles, with a population (1911) of 2,003,232. Area, including that portion of the Northwest Territories annexed to Quebec in 1912, 706,834 square miles, carrying a population of 2,005,779. The capital is Quebec, with (1911) 78,710. The executive authority rests in the Lieutenant-Governor, appointed by the Governor-General of Canada and acting through a responsible ministry. The legislative power devolves upon a parliament of two houses, a legislative council of 24 appointed life members, and a legislative assembly of 74 members elected for 5 years. The Lieutenant-Governor in 1914 was Sir François Langelier, appointed May 5, 1911. Premier in 1914, Sir Lomer Gouin. See CANADA.

QUEENSLAND. A State of the Commonwealth of Australia. The estimated area is 670,500 square miles; the population returned by the census of April 3, 1911, was 605,813, exclu-

sive of full-blooded aboriginals. The capital is Brisbane, which with suburbs had in 1911, 139,480 inhabitants. The Governor in 1914 was Sir William MacGregor, who assumed the administration Dec. 2, 1909; appointed to succeed him was Maj. Sir Hamilton John Goold-Adams, who had been high commissioner for Cyprus. Lieutenant-Governor, Sir Arthur Morgan; Premier, Digby Frank Denham. See AUSTRALIA.

QUICKSILVER. The production of quicksilver in the United States in 1913 was 20,213 flasks, valued at \$813,171. Of the amount produced, 15,591 flasks were obtained from California, and 4622 flasks in Arizona, Nevada, and Texas. Owing to generally low prices, the quicksilver industry was not prosperous in 1913. The world's production in 1911-12 was the largest for many years, and probably overran the demand. Figures of the world's production in 1913 showed a slight decrease from those of 1912, and the domestic production was the lowest, with the exception of 1908, since 1860. Much of the California production comes from old mines whose richest ores have been removed, and which cannot be operated with profit when the metal is low. Quicksilver is used mainly in the manufacture of fulminate, drugs, electric appliances, scientific apparatus, and in the recovery of precious metals by amalgamation. A new use in Scotland is the floating of lights of lighthouses on a bath of quicksilver. The metal is now but little employed in silvering mirrors, as nitrate of silver is now chiefly used for that purpose. The imports of quicksilver in the United States in 1913 amounted to 171,653 pounds, valued at \$75,361; of this quantity the larger part came from England, and was presumably Spanish in its origin. There were exported, in 1913, 1140 flasks, valued at \$43,524. The total world production of quicksilver in 1913 was 4171 metric tons, the larger portion coming from Spain, large quantities from Italy and Austria-Hungary, and a small amount from Mexico.

QUININE. See HYGIENE.

RABIES. That hydrophobia exists among the Philippine dogs has already been proved by investigations pursued since 1907 by Ashburn, Craig, Dudley, and others. More recently Captain Schmitter, of the United States army, found a case in a monkey. The animal was bought for laboratory purposes and when it was received appeared unusually excited. The following day it became savage, and frothed at the mouth, and died the following day with paralysis of the hind legs and muscles of deglutition. The existence of rabies was proved both by finding Negri bodies in the brain, and by injecting a guinea pig with emulsified brain tissue. An epidemic of canine rabies occurred in Seattle between September, 1913, and July, 1914. In dogs, 361 cases were found, nearly 100 of which were proved positive by laboratory methods, and in many other cases the disease was so well defined as to leave no room for doubt as to the genuineness of the infection. Previous to this time Seattle had not had any cases of rabies. In New York City during the first five months of 1914 there was a decided increase in the number of cases. During this period there were 160 cases of the disease in dogs, but there was no increase among human beings. A city ordinance was made at the instance of the Commissioner of Health which required dogs to be both kept in leash and

muzzled. In 1913, 60,000 dogs and 200,000 cats were gathered up by the New York Society for the Prevention of Cruelty to Animals, a number ten times as great as that in the previous year. The Arkansas State Board of Health announced that it would give free antirabic treatment to all persons bitten by dogs or other animals suspected of being rabid.

RACING. The year 1914 saw a wonderful revival of thoroughbred racing in the United States, especially in New York. Two tracks, the Aqueduct and the Empire City, opened their gates for the first time in five years, joining Belmont Park in holding regular meetings. *Roamer*, owned by Andrew Miller, made the best showing of the year, equaling the world's record for 1 mile, 1:36 $\frac{3}{4}$, made by August Belmont's *Stromboli* earlier in the season. The stakes won by *Roamer* included the Whitestone, the Carter Cup, the Brooklyn Derby, the Midsummer, the Travers, the Huron, and the Municipal Handicap. Other horses to gain fame in 1914 were H. P. Whitney's *Regret*, and James Butler's *Comely* and *Pebbles*. *Rose Tree II* won 12 out of 16 starts, and only once finished out of the money. This horse also was the biggest money maker of the year, capturing purses to the total of \$29,105. Ranking next to *Rose Tree II* in winnings was H. C. Applegate's *Old Rosebud*, with \$19,057. The winning American owners were H. P. Whitney, \$55,056; J. L. Holland, \$42,445; R. T. Wilson, \$41,585; B. G. Bedwell, \$40,110.

H. B. Duryea's *Durbar II*, an American horse, won the English Derby, while *Sardanaple*, owned by Baron Maurice de Rothschild, carried off the honors in France, capturing the French Derby, the Grand Prix de Paris, the Prix du Jockey Club, and the Prix du Président de la République.

In trotting and pacing, 27 new records were established. *Peter Volo*, who has lost only one heat in his career, went through the season without defeat, and reduced the mile record for a three-year-old to 2:03 $\frac{1}{2}$. This gives him the distinction of being the first trotter to race to a world's record in three consecutive years. As a yearling, *Peter Volo* held for a time the mark of 3:19. In 1913 he reduced the two-year-old figure from 2:09 $\frac{1}{4}$ to 2:04 $\frac{1}{2}$. *Etawah* broke the four-year-old mark for trotters, 2:05 $\frac{1}{4}$, which had stood for 21 years, by setting the record at 2:03 $\frac{3}{4}$. Among the pacers, *Directum I*, *Williams*, *Frank Bogash, Jr.*, *R. H. Brett*, and *Anna Bradford* did the best work. *Directum I* paced five heats in 2 minutes or better, and covered the mile in 1:58, the fastest ever paced either in a race or against time. *Williams* paced one heat in 2:00, and three consecutive heats in an average of 2:01. *Anna Bradford*, a three-year-old filly, paced one heat in 2:00 $\frac{1}{4}$.

RACQUETS AND COURT TENNIS. Lawrence Waterbury retained the United States singles title in racquets only after a gruelling struggle in the final round with C. G. Osborn of Chicago. The scores were 17-15, 10-15, 18-17, 9-15, 15-11. In the doubles final, Dwight F. Davis and J. W. Wear defeated Hugh D. Scott and George F. Fearing, Jr., 12-15, 6-15, 15-3, 15-6, 15-11, 15-4.

Jay Gould again reigned supreme in court tennis, not only holding his United States amateur title, but defeating George F. Covey of England, holder of the world's professional championship,

in a match for the open title. The first half of the match was played in England, where Gould lost by a narrow margin. The second half, played in Philadelphia, resulted in an easy victory for the American player, who captured seven of the eight sets. Gould and W. H. T. Huhn successfully defended the doubles honors, defeating George R. Fearing, Jr., and C. T. Russell 6-5, 6-5, 6-4. Gould and Huhn lost a special match to Joshua Crane and Fearing 5-6, 2-6, 6-4, 3-6.

In England E. W. Baerlein won the amateur championship, defeating Joshua Crane 6-2, 6-1, 6-2. Walter Kinsella, the American professional, defeated E. H. Miles, the English amateur, 6-4, 6-5, 6-5.

RADIO-TELEGRAPHY. See WIRELESS TELEGRAPHY and TELEPHONY.

RADIOTHERAPY AND ROENTGENOLOGY. The difficulties attending the use of the X-ray for deep cancers are gradually being solved. Bumm and Warnekros state that after disappointing trials with mesothorium and other radioactive substances, they modified their technic and obtained most encouraging results. The secret of success, they declare, is to use hard tubes, by the cross-fire technic, so as to generate 500 X units in the depths of the tumor. As about six-sevenths of the rays applied to the surface do not penetrate 10 cm. deep, fully 3500 X units have to be applied to the skin in order to obtain 500 units in the focus. No serious injury resulted from this intensive exposure of the skin to the hard rays, even with 8000 X units. Under this treatment the cancer tissue becomes indurated, and loses its malignant characteristics. These treatments are given in massive doses, far apart, and improvement takes place as early as the third week.

The above technic is rendered possible by the invention of an American, Coolidge, of a tube which opens a new field in Roentgen therapy. This tube differs decidedly from the ordinary type. As described by Johnston in the *Journal of the American Medical Association*, in the Coolidge tube "the cathode consists of a spiral of tungsten placed about three-fourths of an inch from a heavy tungsten target. Both these tungsten elements are mounted in an ordinary Roentgen-ray bulb, which is then exhausted by a special series of processes to an almost perfect vacuum. In this condition the tube permits the passage of no electric current, and in order to render it operative it is necessary to heat the tungsten spiral by the passage through it of an electric current of 12 volts from a storage battery. The storage battery, rheostat, amperemeter, and tungsten spiral form an electric circuit. The incandescence of the spiral is controlled by permitting the passage of more or less current by means of the rheostat. This storage battery circuit is carefully insulated, and on the storage battery circuit there is impressed a potential of from 50,000 to 10,000 volts from a high-tension transformer, whereupon tungsten electrons from the incandescent spiral are hurled across the gap in the vacuum, striking on the tungsten target, and from the points of impact Roentgen-rays are emitted. This tube permits the passage of enormous quantities of current for long periods of time, result-

ing in the emission of great quantities of Roentgen-rays. The penetration of rays depends entirely on the voltage impressed on the tube circuit, and if this is kept constant, the penetration remains constant. There is thus placed in the hands of the roentgenologist an instrument of precision and of extreme power, but it must be remembered that he is dealing with a two-edged sword. It was greatly feared that the introduction of this tube would be followed by a series of grave accidents, both to the roentgenologist employing it and to the patient who may be subjected to its use, unless exceeding care in technic is scrupulously followed. The employment of aluminum filters of at least 3 mm. thickness was advised when this tube is used for deep therapy."

The X-ray had proved to be a great value in the treatment of tuberculous glands, whether they are hard or soft, and even when they are broken down and form fistulas. Under X-ray exposure the glands diminish in size and the fistulas heal with a flexible scar. Danger of interfering with growth processes contraindicates this form of treatment in patients under the age of 10, and in children of this age the great proportion of enlarged glands are found.

RADIUM THERAPY is going through a period of enthusiasm such as the X-ray enjoyed 10 years ago. A good many sensational articles appeared in the press during 1914. Scientific investigators, however, are not so enthusiastic. An important centre for the study of the effects of radium is the Radium Institute of London. It possesses 4 grams of radium, more than the quantity owned by any other single institute; the *Laboratoire biologique du radium* was organized in 1906, since which time 1000 patients have been treated. The Vienna Institute began work in 1912 with half a gram of radium, and now owns one and a half grams. The Samaritan Hospital in Heidelberg possesses 20 mg. of radium. All of these institutions submitted reports of their work for 1913. The English Institute draws no conclusions, but a comparison of the various reports justifies the statement that radium produces a selective destructive action on the majority of cancers, but that its action is limited in extent. It is pointed out that unless the greatest care is used in the application of this substance the more distant portions of the tumor may be stimulated to active growth. Insufficient dosage will stimulate a tumor to renewed activity. All users of radium are emphatic in advising that no operable tumors except those of the skin should be treated by radium in preference to operation. More successful methods of applying this remedy must yet be sought. At present radium does not replace surgery, but merely supplements it.

ULTRAVIOLET RAYS. Friedberger made the important announcement that vaccine can be sterilized in 30 minutes, without impairing its potency, by exposure to the violet rays. He also observed that experimental infections of the interior of the mouth could be neutralized by exposure to these rays or to direct sunlight, especially if "sensitized" previously by the application of eosin. The bacteria in the mouth were killed off so promptly and constantly that the investigator thought that throat affections in human beings might be cured and bacillus-carriers sterilized. During his experiments he sprayed the region repeatedly with an eosin, or

fuchsin solution of 1 to 100,000. Consult Bainbridge, *The Cancer Problem* (New York, 1914); Coolidge, in *Physical Review of the American Physical Society* (December, 1913).

RADIUM. See CHEMISTRY; and CHEMISTRY, INDUSTRIAL.

RADIUM, URANIUM, AND VANADIUM ORES. The production of these carnotite-bearing ores during 1913 was the largest ever made, and amounted to about 2269 short tons of dry ore, which contained about 81,990 pounds of metallic uranium. The quantity of radium in equilibrium with uranium is equivalent to about 1 grain of radium to 3000 kilograms of uranium, and it is also estimated that the uranium in carnotite is accompanied by about 90 per cent of the radium required for equilibrium. On the supposition that these figures are approximately correct, and that 90 per cent of the radium present is recoverable, then the ores produced in 1913 contained 8.5 grams of recoverable metallic radium, equivalent to 15.9 grams of hydrous radium bromide, valued at \$120,000 a gram of metallic radium, or \$1,020,000. In the United States uranium minerals were produced in commercial quantities during 1913 only in Colorado and in southeastern Utah, the quantity produced in Colorado being much in excess of the Utah output. The great bulk of the uranium mineral was carnotite, but a small tonnage of pitchblende ore was taken from the Belcher and Calhoun mines, near Central City, Gilpin Co., Colo. A few pounds of uraninite, the crystalline form of pitchblende, were saved in South Carolina as a by-product of feldspar and mica mining. A

large number of vanadium minerals occur with the carnotite, so that in mining for uranium a large amount of vanadium is also obtained; in general the vanadium in the ore amounts to more than twice the uranium content. The vanadium in the carnotite ores is saved as a by-product, probably most of it as ferric vanadate, which is sold to manufacturers of ferrovandium. No important discoveries of carnotite-bearing territory were made in 1913. Two companies during the year endeavored to isolate radium salts, and at the end of the year both were apparently about ready to produce refined radium salts. The value of the imports of radium salts in 1913 was \$16,218.

RAILWAY ACCIDENTS. The year 1914 showed distinct improvement in conditions of operation on American railways with fewer accidents, and with a greater recognition of responsibility on the part of operating officials and employees. The question of rail failures and defects in the track with heavy equipment was a cause of serious concern to the maintenance of way officials, and the metallurgists of both the railways and of the steel rail manufacturers. The Interstate Commerce Commission published its usual tables of casualties, and in addition to the number of collisions, increased interest attached to accidents due to defects of equipment and defects of roadway, as the equipment was being inspected by officials of the Interstate Commerce Commission, and the defects of roadway were receiving the attention of the railways themselves. These statistics are summarized in the accompanying tables.

SUMMARY OF CASUALTIES TO PERSONS IN THE U. S. FOR THE YEARS ENDED JUNE 30, 1914 AND 1913

Item	1914		1913		1914		1913	
	Steam railways		Electric railways					
	Killed	Injured	Killed	Injured	Killed	Injured	Killed	Injured

SUMMARY OF ACCIDENTS RESULTING FROM COLLISIONS AND DERAILMENTS FOR THE FIVE YEARS ENDED JUNE 30, 1914 *

Year	Number	Persons—		Damage to road and equipment, and cost of clearing wrecks
		Killed	Injured	
1910	11,779	773	12,579	\$9,828,958
1911	11,865	785	11,798	9,851,780
1912	13,698	772	15,096	11,527,458
1913	15,526	791	14,565	13,049,214
1914	13,806	605	11,437	10,965,181

* For 1910 the figures for persons killed and injured are restricted to passengers and to employees on duty. Returns for electric railways are included in the figures for that year.

SAFETY FIRST. During the year the Safety First campaign continued, and safety organizations were extended on a number of important railway lines, securing the interest and coöperation of the employees. The interest of the public in safety movements was solicited, and figured in the advertising on not a few of the larger systems, which had creditable records in this direction. It was noticeable that safety rather than speed was more and more an important consideration and a condition of efficient operation. On some of the systems where there had been serious accidents in the years immediately preceding, improved conditions of operation were established, and large volumes of passenger traffic were handled without mishap. In many cases the public at large were beginning to see the justice of the position of the railroads that they should be allowed to spend money on improved signal systems and other features of equipment, rather than on unnecessary employees, such as were demanded by full crew laws in several States.

One of the most serious accidents of the year was a butting-collision of passenger trains on the Kansas City Southern near Tipton Ford, Mo., on August 5, in which 38 passengers and 5 employees were killed, and 34 passengers and 4 employees injured. This collision occurred on a single track railway at a point where there

was a side line with a view from curve to curve of about 900 feet, and was due to the southbound train failing to wait at Tipton Ford for the northbound train as directed by order. This accident was unique in that it was the first one to be investigated by the Interstate Commerce Commission wherein a gasoline motor car was involved, and to the fire caused by the ignition of the gasoline was due the large loss of life. Considerable attention was attracted to the disaster on account of the rapidly increasing use of motor cars which carry large quantities of gasoline, as the collision hazard naturally will grow in importance.

A serious passenger train disaster occurred at Lebanon, Mo., on September 15, when 27 persons were drowned by a derailment on the St. Louis and San Francisco line 2 miles west of Lebanon, 182 miles southwest of St. Louis. A westbound passenger train was derailed in a flood caused by a cloudburst, and two passenger cars toppled into a deep gully filled with water. In addition to those killed, 18 persons were injured, but none seriously. A 12-foot embankment on which the track crosses a ravine had been completely washed away, and while the locomotive and the first two cars passed on the sagging track safely, the chair car and smoker were rolled over into the torrent.

Another serious accident of the year was a

derailment on the Alabama Great Southern, near Livingston, Ala., September 10, in which 10 persons were killed and 40 were injured. The cause was the malicious misplacement of a switch. In the interval before the passage of the passenger train it was tampered with, and the train was thrown to a siding. In a wooden passenger car 3 out of 7 passengers were killed, and in a steel underframe car 5 out of 15. The inspector of the Interstate Commerce Commission questioned whether, in case of an accident like this, the steel underframe car afforded additional security.

An interesting record of safety on one of the leading American railway systems was that of the Pennsylvania with 26,198 miles of track. Not a single passenger was killed in a train accident during 1914, although 188,411,876 passengers were carried, and the aggregate distance traveled by passenger trains was 67,380,381 miles. More than 3000 trains were run every day, and more than a million trains during the year.

TRESPASSERS. A question that was attracting greater interest than usual was the large number of deaths annually caused by persons trespassing on railway property, especially those using the tracks as a highway and crossing at unauthorized points. From 1901 to 1910, 33,000 persons under 21 years of age were killed or injured while trespassing, and the total number killed in this period was 50,025, with 53,027 injured. In Great Britain during the same period those killed from trespassing amounted to but 4434, and the injured 1315. The reasons assigned for this striking difference are the strictness of the law in the latter country, and the greater care accorded the protection of the right of way by fencing, etc., though in the United States improvements of the right of way such as elevation of tracks has made little difference on account of the laxity of the enforcement of the law and the lenience of magistrates before whom those responsible have been brought by the railway police, as usually the local police manifest very little interest in offenses of this nature. In Great Britain persons other than passengers or employees found on railroad property are fined \$10 for each offense, while in France trespassers are liable to a fine up to \$589 and jail up to a month. In Germany fines up to \$25 are imposed, and Canada imposes fines up to \$50 and an imprisonment up to 2 months.

GREAT BRITAIN. In Great Britain the accident record for 1914 reflected considerable credit on British railway management. An accident occurred at Carr Bridge, June 18, on the Highland Railway, in the course of which a passenger car fell into the stream and 5 passengers were drowned. This was due not so much to defects in operation or maintenance as to an abnormal flood, so that the collision outside the Cannon Street Station on June 27 in which 1 passenger was killed and about 20 injured was otherwise the most noteworthy of the year. In 1908 and 1901 no passengers whatsoever were killed on British railways, and in 1909, but 1 passenger, while up to June 30, the record showed that in 1914 only 6 employees had been killed, and in the second six months of the year so far as information was available but 2 in addition. There had been great improvement in engine drivers not running past signals, and while there was much less traffic after the outbreak of the

war, yet there was considerable transportation of recruits and of complete military organizations as well as military supplies, which had to be done expeditiously and under unusual conditions. Such work was carried on safely and with better success than on the continental railways, no casualties being reported for British lines.

RAILWAYS. During the calendar year 1914, a smaller mileage of new railroads was built in the United States than in any year since 1895. In December, 1914, there were in the United States 21,048 miles of railway in the hands of receivers. The greatest mileage of railways in the United States which was ever placed in the hands of a receiver in a single year was in 1893, and in that year 29,340 miles went into the hands of a receiver, but by 1898 all but 12,744 miles had been taken out of receivership. Wages of all classes of employees in railway service were never as high as they were in 1914. On the other hand, almost without exception, there were fewer men employed in railway service in 1914 than in 1913. Even before the beginning of the European War none but the strongest railway companies were able to raise new capital except through the issue of short term notes, in most cases secured by a very ample margin of high grade collateral. It was with this condition of affairs that the railways in Official Classification territory presented a case to the Interstate Commerce Commission, in which they asked for a horizontal increase in freight rates approximating 5 per cent. On original hearing of the case, the Interstate Commerce Commission refused to grant the increase except to roads west of Buffalo and Pittsburgh and east of Chicago, by a vote of 5 members to 2, the decision being handed down on July 29, 1914. (See the 1913 YEAR BOOK for a discussion of the conduct of the earlier part of this case.)

After the outbreak of the European War, a rehearing before the Interstate Commerce Commission was requested. The request was granted, and on Dec. 18, 1914, the Interstate Commerce Commission handed down a decision which was favorable to the roads, granting with one exception (coal) a 5 per cent increase in rates. In the original case, roads in Central Freight Association territory, which includes the roads running between Buffalo and Pittsburgh and Chicago and St. Louis, were granted a 5 per cent increase in certain rates. Central Freight Association territory is included in Official Classification territory, the ascertaining part of Official Classification which takes in all the roads north of the Ohio River and west of Chicago and St. Louis. When schedules were prepared by the Central Freight Association roads in accordance with the commission's original findings in the rate advance case, it was found that because of competitive conditions, but a small percentage of all of the rates could be increased, notwithstanding the commission's permission. When, however, the Trunk Lines (lines east of Buffalo and Pittsburgh) were also permitted to raise their rates, this difficulty was in a large measure removed, and all rates, including those formerly excepted, were raised, coal rates, however, not being increased.

It is always hard to accurately distinguish between cause and effect in contemporary events. In 1914 the full significance of the Interstate

Commerce Commission rules in regard to accounting practices of the railways was apparent. Previous to 1907, there had been widely different methods used by the different railway companies in regard to what they considered expenses of operation and expenditures for property account which could be properly capitalized and paid for from the proceeds of the sale of securities. The strong roads had treated as expenses not only renewals and replacements of existing property, but also their liberal expenditures for the betterment of existing property. Weak roads, on the other hand, not only charged all betterment of property to capital account, but had narrowly restricted the meaning of expenses so as to exclude the cost of obsolescence. Since strong and weak roads are in a great many thousands of cases competitors, the enforcement of the principle of uniformity in regard to expenses and capital expenditures extending over a series of years, sharply emphasizes the weakness of the weak roads. Whether or not the present very large mileage of roads in bankruptcy is the result of the publicity given to the weakness of these roads' conditions through the enforcement of the Interstate Commerce Commission's accounting principles, or whether it is simply the manifestation of other economic principles, of which the enforcement of the uniform system of accounting is also a result, it is hard to say. At any rate, the combination of events has tended to make clear certain fundamental principles which govern the railway development which would probably have been less clear had not the Interstate Commerce Commission activities brought them so dramatically before the public.

The point so clearly brought out in 1914 in regard to railways was that in the United States there are cycles, during which, as traffic increases, the railway companies experience the working of the law of increasing returns, each additional ton carried and each additional passenger carried reducing the unit cost. But at the end of this cycle, there is a sudden reversal of the law and railways suffer under the law of decreasing returns. For the 4 or 5 years previous to 1914 it had been the law of decreasing returns that had apparently been operative. It was nominally through their ability to prove this to the Interstate Commerce Commission that the railways succeeded in obtaining their rate advance. Actually the railways carried their case to the public and proved it to the public, and it was public pressure very largely which was effective in deciding the commission to reverse itself. Comparatively seldom have newspapers all over the United States been so unanimous in their opinion in the discussion of a question of broad public policy as they have in 1914 in their discussion of the railway situation. From Houston to Seattle, and from Tampa to Bangor, newspapers both editorially and in their news columns gave prominence to the deplorable condition to which the roads had been brought. The case often was overstated, but possibly not more so than was necessary to arouse and enlighten interest in a very real danger that threatened the country.

It is interesting, instructive, and rather encouraging to see that, while the State and Federal courts by long series of decisions had given more and more power to the Interstate Commerce Commission in its regulation of railway

matters, the first serious check to the arbitrary exercise of this power came directly from public opinion. The railways overruled in their appeals from the commission to the courts, appealed to the public and to President Wilson.

It will probably be a distinguishing event of 1914 that after the 5 per cent rate advance had been refused by the Interstate Commerce Commission, and while the appeal for a rehearing of the case was pending, a committee of railway presidents, headed by Frank Trumbull, chairman of the board of directors of the Chesapeake and Ohio, and the Missouri, Kansas, and Texas, went openly and directly to the President of the United States, and laid before him in a petition, which was classic in its simplicity, a statement of their case, with the request that he express his opinion in regard to it. He granted the request by giving out a letter which he addressed to Mr. Trumbull, in which he said:

"You ask me to call the attention of the country to the imperative need that railway credits be extended, and the railroads helped in every possible way, whether by private coöperative effort or by the action wherever feasible of government agencies, and I am glad to do so because I think the need very real. . . . The law must speak plainly and effectively against whatever is wrong or against the public interest, and these laws must be observed; for the rest, and within the sphere of legitimate enterprise, we must all stand as one to see justice done and all fair assistance rendered and rendered ungrudgingly."

SUMMARY OF THE RATE ADVANCE CASE. In the original 5 per cent rate advance case, which was begun in 1913, railways attempted to prove that, because of the increased wage schedules, the higher standard of service, the general increase in the cost of materials, and the large increase in the cost of new capital, their present revenues were inadequate, and the best way to increase these revenues was through a horizontal increase of 5 per cent in freight rates. This argument was opposed by Louis D. Brandeis, acting as special counsel for the Interstate Commerce Commission, on the ground that although it was true that the revenues were inadequate, a 5 per cent increase in freight rates was not the best way to meet the situation, but that the railways should study their own services, and increase the price of those services which were not now bearing their share of the burden of expenses. Chief among such services were terminal services in respect to both freight and passenger services. The commission in the majority opinion adopted Mr. Brandeis's view.

Two minority opinions were handed down, one by Commissioner Daniels, and one by Commissioner McChord, in both of which the belief was expressed that if revenues were inadequate, and the minority commissioners agreed with the other members of the commission that they were inadequate, the 5 per cent advance should have been granted. Commissioner Daniels's opinion in particular was very clearly and concisely reasoned, and discussed in detail each one of the suggestions which had been made by Mr. Brandeis and most of which were embodied in the majority opinion. When the case came up for rehearing the commission limited the evidence to new facts which had occurred since July 29. As a matter of fact, counsel for the railroads went back over many of the arguments made in

the original case. In his final argument, lukewarmly opposing the petition of the railways, Mr. Brandeis claimed that the only new thing which had occurred since July 29 in regard to the railway situation in America was the European War, and that since all classes of the people had to bear the hardships incident to the war, railway stockholders should not be permitted to shift their burdens to other shoulders, and that if new economies were necessary to permit of solvent railway operation, the situation should be met by the reduction of dividends.

On December 18 the commission handed down a very brief opinion in which they granted a 5 per cent increase on all freight rates with the exception of the rates on coal, and the so-called lake and rail rates. The lake and rail rates are those under which freight moves from New York to Buffalo, and from there either all the way by water, or part way by water to Chicago or vice versa. Those rates were already lower than the all-rail rates, and the effect of not permitting increases in these rates simply accentuated the differences already existing. In effect the commission said that the events which had taken place since July 29 showed that the roads were more badly in need of additional revenue than the commission had thought, and that the financial situation caused by the war was so serious as to make it dangerous to wait for additional revenue until the former suggestions of the commission could be carried out. Two commissioners, Chairman Harlan and Commissioner Clements, dissented, both stating that the horizontal increase in freight rates was not in their opinion the right way for the roads to obtain the needed additional revenue.

THE NEW ENGLAND SITUATION. In December, 1913, the New York, New Haven, and Hartford had passed its quarterly dividend. In 1914 the Interstate Commerce Commission made a rather sensational report in regard to an investigation which it had undertaken of New Haven affairs. Suit was brought by the Attorney-General of the United States to compel the separation of the Boston and Maine and the New Haven, and of the numerous trolley lines and steamship companies which had been controlled through stock ownership by the New Haven. The final result was that an agreed judgment was entered, which provided for putting the controlling stock of the Boston and Maine in the hands of trustees, representing variously the minority stockholders of the Boston and Maine, the New Haven, the States of Massachusetts, New Hampshire, and Maine. The trolley lines and steamship companies were also placed in the hands of trustees, and then criminal suits were brought against former directors of the New Haven under the Sherman Anti-Trust Law.

OTHER INVESTIGATIONS MADE BY THE INTERSTATE COMMERCE COMMISSION. An investigation was made by the Interstate Commerce Commission into the affairs of the St. Louis and San Francisco, which had been placed in the hands of receivers in 1913. No definite conclusion was reached by the commission, but in general blame for the 'Frisco receivership was placed on the policy of overextension and of buying short lines at exorbitant prices. It was also brought out that some of the directors had an interest in the short lines which were sold to their company.

An investigation was made by the Interstate Commerce Commission into the Chicago, Milwaukee, and St. Paul accounting methods. The commission's report criticised very severely some of the practices of the company, and in particular pointed out that just previous to selling an issue of bonds, the road made an annual report which quite considerably overstated the revenues of the year by including in these revenues amounts which were arbitrarily charged for hauling material over the old St. Paul to be used in the construction of the Pacific Coast extension of the road. While the commission's rules permitted of the charging of a reasonable rate on this construction material if the charge was made during the year in which the construction was done, the commission pointed out that the St. Paul had waited 3 years and then had taken into its earnings of the last of these 3 years all which would have been chargeable during each one of the 3 years.

An investigation was made into the Chicago, Rock Island, and Pacific situation. The report, however, in this case was not given out in 1914. The situation was a particularly interesting one. In 1902, D. G. Reid, Judge Charles F. Moore, and William B. Leeds bought in the open market sufficient stock to control the board of directors of the Chicago, Rock Island, and Pacific Railway Company, an Illinois corporation. They then formed two holding companies, the Chicago, Rock Island, and Pacific Railroad Company, and the Rock Island Company. The railroad company was an Iowa corporation, and the Rock Island appropriately enough was a New Jersey corporation. The plan was for the Iowa corporation to buy the stock of the Illinois corporation and deposit this stock as collateral for an issue of bonds, and to issue its own stock to the Rock Island Company. The holders of the old Illinois corporation were offered \$100 in railroad collateral bonds, \$100 in Rock Island Company—New Jersey corporation—common stock, and \$75 in Rock Island preferred. Whereas the railway stock had been selling at from \$150 to \$200, the holders were offered exchange securities bearing a face value of \$250. The only income available for the payment of 4 per cent interest on the collateral bonds of the railroad were dividends paid on the railway stock, and no adequate provision was made for raising new capital. Control of the whole top-heavy affair was vested in the preferred stock of the New Jersey corporation, and although the 7000 miles of railway constituting the system were well operated and well maintained, sufficient new capital was not raised to make the conditions and betterments to the property which should have been made to keep it in shape to operate at a low enough cost to offset the various tendencies which increased the total cost of operation. In 1914, the railway company was no longer able to pay dividends. This necessitated a default on the collateral bonds, which gave the holders of these bonds the right to bring foreclosure proceedings and sell or take the railway stock which was deposited as collateral, and thus entirely wipe out the common stock and preferred stock of the New Jersey corporation. The foreclosure sale took place, and the bondholders bought and distributed among themselves pro rata the railway company stock.

LEGISLATION. The Clayton Bill supplementing the anti-trust laws was passed by Congress

and became a law on Oct. 15, 1914. It consists of 26 sections, but deals with common carriers only in Sections 7, 9, and 10. Section 7 forbids one corporation to acquire stock of another, if such acquisition will restrain commerce or lessen competition; but with certain provisos; and one of these provisos is that Section 7 shall not prohibit common carriers from aiding or buying branch lines or feeders where competition is not lessened by such action. Section 9 makes it a felony for an officer of a common carrier to willfully misapply funds; maximum penalty, 10 years' imprisonment and a fine limited only by the discretion of the court. Section 10 is designed to forbid collusive contracts for supplies.

In 1912 the Missouri Legislature had passed a full crew law, similar to the laws now in effect in New York, Pennsylvania, and New Jersey. These laws require one more man on the train than under most circumstances would be assigned to such a train. The Missouri Constitution provides for a referendum, and the railway companies in that State went to work to get sufficient petitions for a referendum vote of the people on the full crew law. They succeeded in getting the petitions, and in 1914 at the general elections, the people overruled the Legislature and defeated the full crew law. As an indication of popular sentiment toward railways and of the success of the plan of public education which railway executives have been so vigorously working on for some years, this Missouri referendum vote ranks in importance with the attitude of the newspapers toward the 5 per cent rate advance case.

LEGAL DECISIONS. In the so-called Shreveport case, the United States Supreme Court held that the Interstate Commerce Commission, by prescribing rates between Texas and Louisiana which were necessarily on a par with certain State rates in Texas, had assumed jurisdiction, and the State of Texas could not make rates for the Intrastate traffic which would nullify the action of the Interstate Commerce Commission. The Supreme Court thus gives the Interstate Commerce Commission jurisdiction over State rates where these rates affect interstate business.

WAGE DISPUTES. The enginemen and firemen of 98 railways operating west of Chicago early in 1914 presented demands for increased wages and superimposed changes in working conditions which the railways estimated would cost them in the neighborhood of \$33,000,000 a year. The demands were refused, and a strike vote was taken. The employees refused to ask for mediation, but submitted to it after it had been requested by the railway companies, and after the Board of Mediation and Conciliation, of which Judge Chambers was chairman, had failed to bring about an agreement. H. E. Byram, vice-president of the Chicago, Burlington, and Quincy, W. L. Park, vice-president of the Illinois Central, F. A. Burgess, assistant grand chief of the Brotherhood of Locomotive Engineers, Timothy Shea, assistant to the president of the Brotherhood of Locomotive Firemen and Enginemen, Charles Nagel, ex-Secretary of Commerce and Labor, and J. C. Pritchard, presiding judge of the United States Court of Appeals of the Fourth Circuit, were appointed arbitrators. Hearings continued during December and were to extend on into 1915.

On Jan. 19, 1914, all of the enginemen and

trainmen of the Delaware and Hudson went on a strike because of the refusal of the company to reinstate an engineman who had been discharged because he had permitted one of the cars of his train to be dragged over the ties for a long distance after it had been derailed. The Board of Mediation and Conciliation at once offered its services, and the company agreed to abide by its findings. The board advised the reinstatement of the engineman, and the strike was called off. The facts in the case were never made public, but the situation was substantially as follows:

The employee had had a bad record, but had not done anything to lay himself open to discharge, and when he committed the offense of dragging the car over the ties, this was used as a good chance to get rid of an undesirable employee. Under ordinary circumstances an engineman would not be discharged for this offense, because such a thing might happen in a long train and the engineman not know it. The Board of Mediation apparently took the position that no matter how undesirable the employee might be, the railway company had shown bad judgment in the selection of this particular offense as the one for which he should be discharged.

EQUIPMENT. The total number of cars built in 1914 was 104,541, comparing with 207,684 built in 1913. The total number of passenger cars built in 1914 was 3691, comparing with 3296 built in 1913. The total number of locomotives built in 1914 was 2235, comparing with 5332 built in 1913. The 1914 figures were the smallest for any year since 1899. The total number of cars and locomotives ordered (which is not the same as will be noted as the number built) was as follows:

	1913	1914
Locomotives	3,467	1,265
Freight cars	146,782	8,264
Passenger cars	3,179	2,002

MOTIVE POWER. The large locomotive was again to the fore in 1914. The Pacific type locomotives built by the American Locomotive Company for the Chesapeake and Ohio led in point of total weight for this type, this being 312,600 pounds, while the maximum tractive effort of 46,000 pounds developed by these engines was also the greatest for this type. The heaviest locomotive of the Mikado type was also a Chesapeake and Ohio engine, and weighed 322,500 pounds. The Baldwin Locomotive Works built during the year for the Baltimore and Ohio a 2-10-2 type locomotive which had a total weight of 406,000 pounds, and was the heaviest locomotive ever built on a single set of drivers. The world's record for large locomotives was again broken by the construction for the Erie Railroad by the Baldwin Locomotive Works of a 2-8-8-2 type, Triplex compound articulated locomotive using the weight of the tender for adhesion, and having a total weight of 853,000 pounds. This locomotive had a theoretical maximum tractive effort of 160,000 pounds, and had hauled a train of 251 loaded cars weighing 17,912 tons.

ELECTRIFICATION. The first year of electric operation of the Butte, Anaconda, and Pacific, where heavy tonnage ore trains have been handled regularly on steep grades with marked reductions in operating costs, was completed in

1914. The New York, New Haven, and Hartford also finished the electrification of its four-track main line into New Haven. The Chicago, Milwaukee, and St. Paul was proceeding with the electrification of the first engine district of 114 miles from Harlowton, Mont., to Deer Lodge, crossing the Rocky Mountains, which was the first step in the electrification of 440 miles of main line extending west to Avery, Idaho. Trolley poles were erected for a considerable distance and a contract was awarded for 12 electric locomotives and substation equipment. It was expected that the first district would be completed for operation late in the fall of 1915. The Norfolk and Western was engaged in the electrification of 30 miles of its line between Bluefield, W. Va., and Vivian. The power house and overhead construction were completed during the year, and the first locomotive tests were being conducted. Another large project under construction involved the electrification of 80 miles of suburban tracks on the Paoli subdivision of the Pennsylvania in the suburbs of Philadelphia. This project was also approaching completion.

RECEIVERSHIPS AND FORECLOSURES. During the calendar year 1914, 22 roads, with a total mileage of 4222, with a funded debt of \$137,250,296, and with a capital stock of \$62,321,150 were put into the hands of receivers. There was only one year in which a greater mileage of road went into bankruptcy, and no year since 1896 in which there was as great a mileage in the hands of receivers. Whereas, however, 1896 was not the culmination of a period of depression, but was the beginning of better times, and by 1898 the mileage in the hands of receivers was reduced to 12,744, 1914 showed no tendency toward improvement, but a continuance of the downward tendency. There were only eight roads which were taken out of the hands of receivers in 1914, and none of these were important.

Of the roads that went into the hands of receivers in 1914, the two most important were the Cincinnati, Hamilton, and Dayton, operating 1015 miles of road, and the International and Great Northern, operating 1106 miles of road. The immediate cause of the Cincinnati, Hamilton, and Dayton receivership was the road's inability to recover from the effects of the flood of the year before, and the Baltimore and Ohio's unwillingness to jeopardize its own position by making further advances to its controlled road at a time when its own credit was put to so severe a strain by business depression and the war. The immediate cause of the International and Great Northern receivership was the European War, and the inability of the company to refund \$11,000,000 notes which fell due August 1.

NEW CONSTRUCTION. The new railroad built in 1914 totaled 1532 miles of road, which was the smallest mileage built in any year, except 1895, of which the *Railway Age Gazette* had any records, its records extending back to include 1893. In 1913, 3071 miles of road were built, and in 1902, which was the best year of which there is any record, 6026 miles were built. Nineteen fourteen was the first year in which more railroad was built in Canada than in the United States, the total first-track built in 1914 in Canada amounting to 1978 miles.

The following table shows the new mileage built in 1914 in each State:

NEW TRACK BUILT IN 1914

United States	First track	Second track
Alabama	1.00	88.81
Arkansas	27.10	.50
California	108.91	18.94
Connecticut	2.10
Delaware	1.15
Florida	220.46
Georgia	14.66	7.84
Idaho	117.22	12.89
Illinois	8.17	9.24
Indiana	12.80	13.15
Iowa	26.16	110.00
Kansas	11.00	.49
Kentucky	31.57	16.68
Louisiana	7.79
Maine	.21	.61
Maryland	12.14
Massachusetts13
Michigan	18.81
Minnesota	8.42
Mississippi	19.15
Missouri	4.82	4.89
Montana	48.13	2.00
Nebraska	.88
Nevada	10.01	.70
New Jersey	.80
New Mexico	29.47
New York	10.45	9.90
North Carolina	84.00	71.61
North Dakota	68.24	4.83
Ohio	17.05	28.80
Oklahoma	4.00	5.00
Oregon	90.42	2.80
Pennsylvania	62.74	.97
Rhode Island
South Carolina	66.60
South Dakota	41.80
Tennessee	11.21	45.56
Texas	50.86	.80
Utah	41.95
Virginia	66.05	74.00
Washington	142.73	61.80
West Virginia	19.80	5.99
Wisconsin	29.78	9.41
Wyoming	61.43
Total	1,531.80	565.58
Canada	1,978.07	152.50

See RAILWAY ACCIDENTS. See also section *Communications* under the different countries, and under the separate States of the United States.

RAISULI, MULAI AHMED BEN MOHAMMED. A Moroccan chieftain and bandit, died Sept. 5, 1914. He was born in 1867, a prince of the royal blood of Morocco, and among the tribesmen subject to him was held to be a patriot who would rid the land of foreigners. The area over which he ruled was in the desert region of Morocco, and for many years he carried on a desperate guerrilla warfare against tyrants of his own country and against foreign invaders. His name became prominent in the United States in 1904, because of his abduction in that year of Ion Perdicaris, an American citizen, and his stepson, Cromwell Varley, a British subject, who were seized in their chateau, four miles from Tangier and carried into the mountains. After tedious diplomatic representations failed, John Hay, at that time Secretary of State, became convinced that the government of Morocco was not acting in good faith in the negotiations for the release of the two men, and Rear Admiral Chadwick was ordered to land a force at Tangier. An ultimatum is said to have been sent to the Sultan of Morocco by President Roosevelt, to the effect that the United States government must have "Perdicaris alive or Raisuli dead." Shortly afterwards the Moroccan government moved to such purpose that the prisoners were freed after the payment of ransom

money; the price extorted by Raisuli being a pardon, \$70,000 in cash, and a governorship. Three years later he kidnapped a British subject, Kaid Sir Harry Maclean, but finally released him after negotiations carried on by the British government in Morocco. On account of his cruelty and daring the name of Raisuli became a terror in Morocco, and when France and Spain decided to police Tangier jointly, it was resolved to get rid of the man who was an ever present obstacle in the side of order. In 1907 he was deposed from the governorship, his fortresses razed, his tribesmen scattered, and he himself obliged to flee to the mountains. In 1913 and early in 1914 he organized a new revolt against the Sultan and he was reported to have proclaimed himself Sultan of Morocco.

RAMSAY, FRANCIS MUNROE. Rear admiral (retired) of the United States navy, died July 20, 1914. He was born in 1835 and was appointed midshipman in 1850; after serving for five years on the Pacific squadron he entered the United States Naval Academy from which he graduated in 1856. He served in the Civil War and took part in several engagements connected with the opening of the Mississippi River. He was appointed captain in 1877, and commodore in 1889. From 1881 to 1886 he was superintendent of the Naval Academy and was chief of the bureau of navigation from 1889 to 1897. In 1894 he was appointed rear admiral and in 1897 retired upon reaching the age limit.

RANKIN, ARTHUR M'KEE. An American actor, died April 17, 1914. He was born in 1841 in Canada, and first appeared on the stage under the name of George Henley in Rochester, N. Y. In the early '60s he acted in London under his own name and his first New York appearance was in 1870 with Lydia Thompson. He was for a time associated with the Continental Theatre Company in Boston, and after playing for one season in California, he joined the stock company of A. M. Palmer, where he became one of the best known American actors. He was especially successful in *The Two Orphans*, and after securing the dramatic rights to Joaquin Miller's novel, *The First Families of the Sierras*, he made it into a play called *The Donites*, which had a successful run in New York and also in London. In 1883 he built Rankin's Theatre in New York, which was opened by Joseph Jefferson in *Rip Van Winkle*. He married Kitty Blanchard, who as Mrs. M'Kee Rankin obtained considerable reputation as an actress; they were separated about 25 years before Mr. Rankin's death, but were reunited in 1911. In the same year Mrs. Rankin died. In his later years Mr. Rankin appeared chiefly in Shakespearean rôles.

RAPID TRANSIT. The year 1914 witnessed the construction of facilities for providing additional communication within cities and between urban centres and the suburbs. The great New York Dual Subway System was under construction, and the work was proceeding regularly and systematically during the year with a marked improvement in method and organization over that characterizing the original subway. In Boston some of the works in progress were being brought to completion, and new extensions were planned. In Europe there were notable increases of facilities in London and Paris, and in South America a certain amount of construction was also being done.

NEW YORK DUAL SUBWAY SYSTEM. The Public Service Commission for the First District of New York, in charge of the construction of subways in Greater New York, reported the continuation of its work under the Dual System agreements. From Jan. 1 to Dec. 31, 1914, it awarded 24 construction contracts besides several contracts for track materials, installation of tracks, and station finish, aggregating in contract prices about \$52,000,000. This was more than double the amount awarded in the year 1913, when 13 contracts were awarded, aggregating about \$24,000,000. The money disbursed by the city and the companies during the year 1914 in payments to the several contractors and for the purchase of real estate on city-owned lines was about \$28,000,000, or an average of more than \$2,000,000 per month. Of these payments the Interborough Rapid Transit Company, which is obligated to contribute \$58,000,000 toward the construction of city-owned lines, provided about \$4,000,000, and the New York Municipal Railway Corporation, a corporation formed by the Brooklyn Rapid Transit Company, which is pledged to contribute about \$14,000,000, furnished about \$600,000. At the close of the year 64 of the 83 sections on the city-owned lines of the Dual System were under contract, the aggregate of the contract prices for the same being about \$142,000,000.

The total cost of the new system was estimated at \$330,000,000, of which the city was to supply about \$164,000,000, the Interborough Rapid Transit Company about \$105,000,000, and the New York Municipal Railway Corporation about \$61,000,000. This includes both construction and equipment. The cost of construction alone of the city-owned lines was estimated at \$236,000,000.

During the year work was in progress in New York City to provide transit relief during the year 1915 by the temporary operation of the Steinway tunnel and the Fourth Avenue subway in Brooklyn. The Steinway tunnel runs from 42d Street, Manhattan, under the East River to Long Island City, and was being put in shape for temporary operation by the Interborough Rapid Transit Company, with transfers to and from the existing subway, this work requiring considerable repair and readjustment. The Fourth Avenue subway in Brooklyn, running from the Municipal Building, in Manhattan, through the Centre Street Loop subway to the Manhattan Bridge, over that bridge to Flatbush Avenue Extension, and through Flatbush Avenue Extension, Fulton Street, Ashland Place, and Fourth Avenue to 86th Street, was practically completed as far as 43d Street, and work was well advanced on the extension from 43d to 86th Street. The commission expected to have the extension completed as far as 65th Street so that track-laying might begin by April 1, 1915. The reconstructed Sea Beach railroad of the New York Municipal Railway Corporation, also approaching completion, joins the Fourth Avenue subway at 65th Street and runs from there to Coney Island. The commission was planning to have temporary operation of the whole line from the Municipal Building, Manhattan, to Coney Island before the opening of the summer season of 1915.

Contracts for the third-tracking of the elevated lines in Manhattan and the Bronx were awarded during the year, and work was well ad-

vanced. In Brooklyn the New York Municipal Railway Corporation began work on the third-tracking of the Fulton Street and Broadway elevated railroads, completed an extension to Lutheran Cemetery, and was making good progress on the extension of the Fulton Street line out Liberty Avenue to Lefferts Avenue, Queens, so that operation of all these extensions, as well as the new city lines in Queens, should be possible during the year 1916.

An important event in connection with the construction of the new subways was the Labor Law litigation which arose toward the end of the year, when the question of the employment of alien laborers on the subway contracts was raised. A taxpayer's suit was brought to restrain the commission from forfeiting any contracts or suspending any payments to contractors on account of the employment of aliens, as forbidden by the State law. The Supreme Court sustained the Labor Law, but the plaintiff appealed to the Appellate Division, First Department, which, on Dec. 31, 1914, reversed the court below and held the alien labor provision unconstitutional. The commission instructed its counsel to take an appeal to the Court of Appeals.

In October, 1914, the original subway ended its tenth year of operation. Its total cost to the city up to Dec. 31, 1914, was \$56,129,785.76. From the day it was opened, Oct. 27, 1904, up to the close of the fiscal year ended June 30, 1914, the ticket sales aggregated \$2,332,401,435, and the gross receipts \$120,084,198. Of this, \$20,421,069 was paid as rental to the city, namely, for interest and sinking fund on the municipal bonds issued for construction.

BOSTON SUBWAY SYSTEM. The Boston Subway System, which provides a new rapid transit route through the Back Bay district, brings the suburban sections of Allston, Newton, and Brookline seven minutes nearer the business centre, and at the same time enables the Boston Elevated Railway to withdraw a large percentage of its surface cars from the most congested trackage of the system, was opened October 3. This work was typical of the progress being made by the Boston Transit Commission in subway building in that city, where it has become largely a matter of routine, and the aim is made to complete every year or so a new section, so that while there never is under construction a project as large as those in New York, nevertheless the work is being carried on thoroughly and systematically. The new line extended from Park Street Station, which was to be early enlarged, and made stops at Copley Square and Massachusetts Avenue, with transfers at various points. The general scope of this work was referred to in the 1913 YEAR BOOK.

LONDON. Within London and the suburbs various improvements were in progress, and the connection of existing stations, junctions, and railway lines, was being carried on energetically, as well as suburban electrification. The London and Northwestern continued the electrification of the Watford line, and at the end of the year the final portion from Harrow to Euston, and the through service between Watford and the Elephant and Castle Station, was inaugurated. An extension of the Bakerloo Railway between Paddington and Queen's Park, belonging to the London Electric Railway Company, was almost completed at the end of the year. The various London railways were better connected than be-

fore by the completion of the Earls Court Junctions, and the construction of passenger escalators at the principal stations. Thus new escalators were opened at Oxford Circus, Charing Cross, and the Baker Street Station, the first mentioned being capable of transporting 27,000 passengers per hour. The total number of escalators in use amounted to 16, and they served to save two minutes on each journey. In connection with the development of the underground systems of London it was recorded that the District Railway Company could run 239 trains daily between Hammersmith and Earls Court in place of 107 trains operated by steam previously.

RECLUS, PAUL. A French surgeon, died at Paris on July 29, 1914. He was born in 1847, practiced his profession for some time in Southern France, and after coming to Paris became surgeon in chief at the Hotel Dieu. Later he was appointed professor of clinical surgery at the Faculté de Médecine de Paris. He was a member of the Académie de Médecine, held decorations and offices in various other medical and surgical societies, and in 1913 was made a commander of the Legion of Honor. He wrote, in collaboration with Kirmisson, Bouilly, and Peyrot, a standard work on surgery; in collaboration with Emil Forgue, a treatise on surgical therapeutics; and also a treatise on medico-surgical practice. He introduced the use of cocaine in surgical operations; and it was chiefly to test the value of cocaine as a local anesthetic that J. Regnault, a French army surgeon, operated successfully and without pain on himself for hernia in 1912. Reclus also experimented successfully with novocain as a local anesthetic; and disinfected wounds with tincture of iodine.

RED CROSS, THE AMERICAN NATIONAL. The volunteer reserve emergency organization of the American people to relieve distress in times of peace and war. The year 1914 was by far the most remarkable in the history of the association by reason of the outbreak of the European War and the unprecedented measures of relief thereby made necessary. The regular work of the association in the field of national and international relief was also carried on. Red Cross societies were originally intended only to supplement the regular army medical services in war time; but the occurrence of great disasters by famine, fire, pestilence, and flood indicated the need of a permanent organization during times of peace, and in order to provide the necessary authority and efficiency Congress in 1905 incorporated the American National Red Cross. Government supervision, the annual appointment of five members of the Central Committee, the governing body of the American Red Cross, by the President of the United States, an annual report made to the Secretary of War and printed as a public document, the annual auditing of the accounts of the American Red Cross by the War Department—these provisions effectively guarantee integrity of administration and that the funds given to the Red Cross for benevolent purposes will be properly expended and accounted for. The results of this widening of the field of operations and of increased effi-

ciency are seen in the fact that since 1905 the American Red Cross has helped the sufferers and victims of over 75 disasters and spent therefor over \$12,000,000 in money and supplies.

EUROPEAN WAR RELIEF. The primary objects are the care of sick and wounded soldiers and sailors of the belligerent nations and the relief of distressed noncombatants by supplies of money, food, and clothing. This is accomplished through the foreign Red Cross societies, ambassadors, consuls, and reliable relief committees abroad. In many ways the most urgent form of relief is that destined for the wounded on the field of battle. The new conditions of the gigantic conflict in Europe, which has involved so large a part of the land and water area of the world, called for the utmost effort, both in liberality and resourcefulness, to fulfill the purposes of the Red Cross. They were met with all possible promptness. The countries at war were offered, and accepted, the services of surgeons, trained nurses, also surgical equipment, including bacteriological and sterilizing outfits and hospital supplies. A Red Cross ship was at once chartered and carried to Europe 171 surgeons and nurses, together with the necessary supplies and equipment. Between Aug. 1, 1914, and the beginning of 1915 a total of 45 surgeons and 150 nurses had been sent to Europe and distributed among the English, French, Russian, German, Austro-Hungarian, and Servian hospitals. All funds for Belgian relief, excepting those sent to the Belgian Red Cross, have been transmitted to the Belgian Relief Committee. To the latter committee have also been sent all funds designated for the Committee of Mercy.

The different units (a unit is a working force of 3 surgeons and 12 nurses sent to a hospital, together with the necessary supplies) are distributed as follows: The English units are in charge of the American Women's Hospital at Paignton; the French, in charge of a hospital at Pau; the Russian, a hospital at Kiev; the German, hospitals at Gleichwitz and Kosel; the Austro-Hungarian, hospitals at Vienna and Budapest; the Servian, a hospital at Belgrade and other hospitals which had not reported up to Dec. 31, 1914. Very satisfactory reports as to the quality and amount of the work done by the Red Cross surgeons were received. Funds have been received and transmitted to aid the American Ambulance at Paris, the American Women's Hospital at Paignton, the American Red Cross Hospital at Munich, the hospitals in charge of Red Cross units in Austria-Hungary and Germany, the Netherlands Red Cross, the American Relief Clearing House in Paris, the American Red Cross Committee at Peking, China, Belgian refugees in Holland, the Prisoners' Bureau of the International Red Cross Committee at Geneva, British and French hospitals in Turkey, the American Mission Hospital in Turkey, Austrian and German prisoners in Siberia, and the relief and hospital work at Beirut, Syria.

A vast quantity of supplies have been bought and sent to the Red Cross societies and various hospitals and committees in Europe. These include: cotton, 772,900 pounds; gauze, 802,400 yards; bandages, 709,000; adhesive plaster, 3168 rolls; chloroform and ether, 13,965 pounds; drugs and medicines, 77 cases; surgical instruments and accessories, 35 cases; United States army field medical outfits, 20; sterilizers for

dressings and instruments, 7; disinfectants, 20 cases; antityphoid treatments, 15,000 doses; tetanus antitoxin, 50,000 doses; smallpox vaccine, 10,000 tubes; blankets, 9500; shawls, 2211; coats, 516; sweaters for women and children, 1740; alcohol, 10 donated barrels; miscellaneous donated supplies, 2638 cases. American ambassadors and surgeons abroad inform the American Red Cross what supplies are most urgent in each of the warring countries. It is a strict rule of the society that no administrative expenses are paid from the relief fund. During the last five months of 1914 there were received in behalf of the American Red Cross for European War relief \$1,188,112; funds were transmitted amounting to \$760,510, leaving a balance of \$427,602, against which, however, there was charged \$150,000 to support the personnel then abroad and to pay the expenses of their return.

NATIONAL RELIEF. During the year the following amounts have been expended for the relief of sufferers from disasters within the United States: Texas floods, \$10,585; Mississippi River flood, \$5000; Ohio and interior floods, \$23,465; Red Cross Christmas seals, sold in the crusade to stamp out tuberculosis in the United States, \$1,800,000; fire in Salem, Mass., money raised for relief and rehabilitation and disbursed by the Massachusetts Red Cross State Board, \$625,000. During 1914 there was an increase of 47 Red Cross chapters in the United States and an increase of Red Cross members of all classes of about 2500. The work of the First Aid Department was broadened by the organization of an American Red Cross Life Saving Corps. The Town and Country Nursing Service increased in efficiency and scope during the year. *The American Red Cross Magazine*, which was published quarterly during 1914, will appear monthly in 1915.

INTERNATIONAL RELIEF. The following sums have been expended in 1914 for the relief of sufferers from disasters outside of the United States and apart from the European War: relief of destitute Turks, \$1009; Japanese famine and volcanic disaster relief, \$10,500; relief incident to Mexican Revolution, \$8412; Newfoundland sealing disaster, \$5000; for study of flood and famine prevention in China, \$2578; second Balkan War relief, Bulgaria, \$18,000; Chinese river conservancy work, \$75,000.

ADMINISTRATION The annual meeting of the society was held at Washington, D. C., Dec. 9, 1914. The president of the society, Woodrow Wilson, President of the United States, took the chair at one of the afternoon sessions. Reports from the various departments were read. One of the most important acts of the meeting was a decision not to solicit contributions hereafter for non-combatant relief in Europe, but to restrict American Red Cross activities in the European war zone chiefly to the relief of the sick and wounded of the armies of all the warring nations. The society will act as an intermediary, however, in transmitting to specified and approved organizations or persons any moneys received as donations for that purpose. The officers of the American Red Cross for 1915 are as follows: President, Woodrow Wilson, President of the United States; vice-president, Robert W. de Forest; national director, Ernest P. Bicknell; treasurer, John Skelton Williams; counselor, John W. Davis; secretary, Charles L. Ma-

gee. The five members of the Central Committee appointed by President Woodrow Wilson to represent the government were: Maj.-Gen. George W. Davis; Robert Lansing, Counselor of the Department of State; John Skelton Williams, Comptroller of the Currency; Surg.-Gen. William C. Gorgas; Rear Admiral W. C. Braisted; Sol.-Gen. John W. Davis. See HOSPITALS; and RELIEF FOR WAR VICTIMS.

REFORMED CHURCH IN AMERICA

(DUTCH REFORMED). This denomination numbered, in 1913, 121,640 communicants, 707 churches, and 774 ministers. For administrative purposes it is divided into four particular synods and 35 classes. The Sunday Schools have an enrollment of about 150,000 pupils. The denomination contributes annually for benevolent objects about \$500,000, and for congregational purposes, about \$1,700,000. Its missionary work is conducted through the foreign missionary board, women's foreign mission board, and the domestic missionary board. The board of education and board of publication have general charge of educational and publishing interests.

REFORMED CHURCH IN THE UNITED

STATES, known also as the GERMAN REFORMED CHURCH. This denomination had, in 1913, 306,337 communicants, 1776 churches, and 1210 ministers. The affairs of the denomination are administered by 8 district synods and 59 classes corresponding to the presbyteries in the Presbyterian bodies. The Sunday Schools contained about 250,000 scholars, and 125,000 teachers. The missions of the church are conducted in practically all the States of the Union and in Canada. Theological seminaries are maintained in Lancaster, Pa., and Dayton, Ohio. The colleges include Franklin and Marshall College, and Heidelberg College, at Tiffin, Ohio. Colleges for women are maintained at Frederick, Md., and Allentown, Pa.

REFORMED EPISCOPAL CHURCH.

In this denomination there were, in 1913, 10,800 communicants, 80 churches, and 83 ministers. At the head of the denomination are six bishops. Domestic missions are carried on among the colored people of South Carolina, and foreign missions are maintained in India. The theological seminary is in Philadelphia, and in the same city is published the official organ, the *Episcopal Recorder*.

REFORMED PRESBYTERIANS.

Under this title are included five branches, the Associate Reformed, South; the Reformed (Synod); the Reformed (General Synod); the Reformed (Covenanted); and the Reformed in the United States and Canada. The Associate Reformed South is the largest branch. It had, in 1913, 14,182 communicants, 154 churches, and 113 ministers. In the Reformed Synod were 9015 communicants, 110 churches, and 143 ministers. In the Reformed General Synod were 3400 communicants, 18 churches, and 16 ministers, the other branches being very small. The Reformed Presbyterian General Synod maintains two churches in India. The General Synod maintains a theological seminary in Philadelphia and a college at Cedarville, Ohio.

REFUSE DISPOSAL. See GARBAGE AND REFUSE DISPOSAL.

RELIEF FOR WAR VICTIMS. Following the outbreak of the European War it soon became evident that a most unusual problem in the way of caring for innocent victims of that great conflagration would confront the people of neutral countries. The invasion of Belgium especially had rendered probably 6,000,000 people homeless and had reduced one-fourth of that number to actual destitution. The military plans of the Germans resulted in the confiscation of available supplies, and most of the live stock of the country was likewise sacrificed to military needs. It was estimated that fully 700,000 Belgians found refuge in Holland, a condition which imposed upon the Dutch Republic a most extraordinary burden. Nearly every family in the Netherlands was reported to be caring for one or more refugees. The homeless from Belgium also flocked to England and France to the number of several hundred thousand, where they aggravated the problem of unemployment and imposed upon charitable and philanthropic agencies additional burdens. A condition not less heart-rending was created in Serbia by the Austrian invasion there and the terrible devastation following violent efforts of both parties to hold possession of Servian territory. Likewise Russian Poland had suffered, first from a German invasion, then from the battles whereby the Russians drove the Germans back, and then again from the German campaign for the capture of Warsaw. Thus an extensive territory had been laid waste. It was estimated that nearly 2,000,000 Jews or one-sixth of the Jewish population of the world had by these campaigns been rendered homeless. Before the close of the year relief activities had been begun by Hebrews of America and elsewhere for their relief. In January it was reported that the Russian government had appropriated \$50,000,000 for Polish relief work.

In the United States relief committees began to be organized in September, and before the close of the year a considerable number were in active operation. These committees duplicated each other only to a moderate extent since most of them, as is indicated below, were engaged in meeting special problems. The response of the American people to their appeals was instantaneous and generous. In nearly every State in the Union State committees were formed, and every city, even down to those of moderate size, had its local organizations. Numerous devices were resorted to for raising money, including newspaper appeals, endless-chain whist parties, bazaars, theatrical and musical benefits, and appeals through the churches and various kinds of organizations.

THE COMMISSION FOR RELIEF IN BELGIUM. This was the most extensive organization engaged in war relief activities, since it embraced all neutral countries within its activities. It was brought into existence by the American and Spanish Ambassadors at London and Ministers at Brussels, the American Ambassador at Berlin, and the American Minister at The Hague. These six constituted its honorary chairmen. It at once sought the permission of the belligerent powers and of Holland to ship food and other necessities into Belgium for the sole use of destitute noncombatants. England agreed to the passage through the North Sea of food con-

signed to the Commission; Holland agreed to permit exportation to Belgium; and Germany pledged herself not to commandeer supplies of the Commission. This pledge was strictly kept according to the Commission's handbook. The headquarters were at London, the chief American office was at 71 Broadway, New York City, and the Continental offices were at Rotterdam and Brussels. The purposes of the Commission were to secure foodstuffs from any quarter of the world through subcommittees, independent organizations, direct contributions, and purchases; to provide transportation from any point to Rotterdam and Brussels; and to safeguard foodstuffs in the belligerent area. Its organization included the American, Spanish, and Italian commissions of the same name, and the Comité National de Secours et d'Alimentation described below. This last, with headquarters at Brussels, and the American consuls in Belgium served as distributing agencies throughout the stricken country. The problem was large, as a portion of the daily food of nearly 6,000,000 had to be supplied; about 1,400,000 were destitute and required, in addition, all other necessities, especially clothing, blankets, and shelter. Wheat and flour were the largest items of necessities. It was estimated that from 80,000 to 90,000 tons of food per month, or a shipload every other day would be required to afford the necessary minimum of 10 to 12 ounces of bread per day for each inhabitant. The cost of this food, including transportation, was estimated at \$3,000,000 a month.

The Commission was the trustee of two funds: one supplied by patrons and donors anywhere for the payment of transportation charges from givers of any country to Belgium; and the other provided by the Belgians themselves for the purchase of food supplies. Its resources were supplied also by the Belgian Relief Fund (see below), and a subsidy from the British government through Count de Lelaing. Because of its official recognition by belligerents, it was the sole agency through which food could enter Belgium. It thus made its chief function the organization of transportation. It therefore secured the coöperation of shipping firms in London and New York, and organized an extensive fleet of relief ships, and arranged for free transportation from any part of the world. The cost of such transportation was paid in large part by Belgian bankers and institutions. A statement issued December 28 showed that the Commission had received cash contributions to the amount of £1,222,414; food supplies valued at £74,210; and a transportation fund from Belgians amounting to £600,000. At that time there had been delivered at Rotterdam supplies from United States, Canadian, British, and Dutch ports valued at £734,267, of which value one-third was given by others and two-thirds purchased by the Commission. In addition, there had, on December 28, been arranged 38 cargoes from North and South America, Bangkok, and the United Kingdom, with a total value of £3,222,506. Of this value somewhat less than one-third was given by sources not included in the Commission. These supplies, including those already delivered and those arranged for, consisted of 75,470 tons of wheat; 39,079 tons of flour; 8030 tons rice; 3146 tons peas and beans; 6390 tons salt; 5444 tons maize; 2955 tons potatoes; 3049 tons sundry foodstuffs; and 1259

tons and 3577 packages of clothing and miscellaneous articles.

AMERICAN COMMISSION FOR RELIEF IN BELGIUM. The most extensive organization in the United States was this branch of the Commission for Relief in Belgium, with Lindon W. Bates and Robert D. McCarter as executive officers, and with headquarters at 71 Broadway, New York City. Preceding its entrance into the American field about November 20, numerous relief organizations had been formed. It sought to bring these into harmonious coöperation and at the same time to extend organized effort over the whole country. It made direct appeals to each of the States to send a carload of food and other supplies to European War victims. It organized or affiliated with itself local relief committees to the number of more than 1000 in various parts of the country; and formed State executive committees in 36 States. It published a bulletin entitled *Food for Belgium*. About December 1, it was officially designated the sole agency for transmitting foods and supplies and had secured the active coöperation of the 65,000 Federal post offices as well as the six great express companies, Adams, American, Wells Fargo, Southern, Great Northern, and Northern. By the close of the year it completed arrangements whereby any private donor could ship supplies to any one of numerous assembling depots, at least one in each State, and receive reimbursement for shipping charges. It made arrangement for the collection of provisions at the following ports: New York, Philadelphia, Baltimore, Norfolk, Richmond, New Orleans, Portland, Seattle, and San Francisco. In its statement to the country it indicated that the articles most needed were: condensed milk for babies and children, bread, salt, flour, rice, potatoes, peas, beans, wheat, sugar, wooden shoes, boots, blankets, clothing, and oil cakes for the few cattle remaining. By the close of the year this organization had established a line of 31 steamships sailing between various American ports and Rotterdam. It was then preparing to dispatch eight cargoes valued at about \$2,400,000. Gifts in money to the Commission up to the close of the year were about \$800,000. The statement of the American Commission showed that 50,748 tons of cargoes had been shipped from New York, Philadelphia, and San Francisco up to December 31. At that time 30,880 tons were loading at New York, Philadelphia, Boston, Baltimore, and Norfolk; and 116,500 tons were being arranged for shipment in January or early February, 1915.

The American Commission had a *Woman's Section* with headquarters at 1 Madison Avenue, New York City. Mrs. Lindon Bates, Miss Anne Morgan, Mrs. August Belmont, Mrs. Edward R. Hewitt, Mrs. William K. Vanderbilt, Miss Mary Parsons, Miss Maude Wetmore, and Miss Grace Parker were its executive committee. Its organization included the presidents of numerous national and international women's societies, and presidents of State federations of women's clubs. It had committees in 23 States. Queen Elizabeth of Belgium and Princess Henriette, Duchess of Vendôme, acted as patronesses for the section.

THE COMITÉ NATIONAL DE SECOURS ET D'ALIMENTATION was created by business men of Belgium to organize and carry out an equitable distribution of food supplies throughout the cities

and provinces of Belgium. Its head office was in Brussels; and it had branches in every province which cooperated with municipal and communal officials. It had numerous volunteer workers in Belgium and throughout England and America. It divided the Belgium population into three groups for convenience in food distribution: the absolutely destitute; working people of small means; and middle and upper classes. Destitute persons, after inquiry, were given free nontransferable tickets entitling them to rations twice daily at Communal canteens. Working people received the same ration but were required to pay 9 francs (\$1.80) per month for tickets. The middle and upper classes were able to purchase food. Special canteens were provided for children. The Communal officers had complete control of the supply of flour and breadstuffs. They were required to pay to the Comité three francs per month for all tickets issued in their Commune; this was taken as a precaution to insure economy of resources.

BELGIAN RELIEF FUND. This fund was created by the Belgian Relief Committee, the pioneer Belgian relief organization in America; it began operations on September 10. Its president was Rev. J. F. Stillemans; the chairman of its executive committee was Robert W. de Forest; its treasurer, J. P. Morgan and Co.; and its head office at 8-10 Bridge Street, New York City. Its organization embraced numerous local committees, committees in every State, and in Cuba and Hawaii. It published the *Belgian Relief Bulletin*. This fund engaged in collecting cash, food, and other supplies, and forwarding same. After the American Commission for Relief in Belgium was organized, the fund was relieved of the cost of transportation, so that it claimed that for every dollar contributed 99 cents' worth of food was delivered into the hands of Belgian civilians. Up to the close of the year it had received \$776,475 in cash, \$700,000 in food, and \$35,000 in clothing. It then stated that thereafter only cash contributions would be accepted. It thus constituted a reservoir for the pooling of cash gifts, and an expert food purchasing bureau.

ROCKEFELLER FOUNDATION. Another of the most important American relief agencies was the Rockefeller Foundation. This was one of the large endowments originated by John D. Rockefeller to which he had given \$100,000,000. Its first important activity had been an effort to eradicate the hookworm disease in various Southern States and the creation of an International Health Commission to continue the same work in various tropical countries. It had also created the China Medical Commission to inquire into the need for medical education and public health work in China. It had appropriated \$750,000 to Wellesley College because of a recent fire; \$2,550,000 to the Rockefeller Institute for medical research; and \$225,000 to purchase 85,000 acres of land on the Louisiana coast as a refuge for migratory birds. It had also recently organized an international investigation into industrial relations. (See under **LABOR**.)

In the way of immediate relief work the Foundation had appropriated \$45,000 to the New York Association for Improving the Condition of the Poor, for widows' pensions, and general relief; and \$20,000 to other New York and

Brooklyn charities. In a statement issued on December 6th, the Foundation stated that it had purchased three shiploads of food at an expenditure of \$1,000,000, to be sent to Belgium. It had in addition sent abroad a commission consisting of Wickliffe Rose, Henry James, Jr., and Ernest P. Bicknell, the latter being Director of the American Red Cross, to advise "where further relief to noncombatants may be most effectively provided." It also stated that it was ready to spend millions of dollars, if necessary, in that direction. The Foundation also provided a steamship pier, chartered vessels, and agreed to transport free all supplies that might be contributed toward Belgian relief. It was the principal aid of the above mentioned Commission in the transportation and distribution of supplies in Belgium.

OTHER FUNDS. Among the other organizations the principal ones together with the funds received by them up to December 30th, were as follows: the American Ambulance Fund for the American Hospital in Paris received \$259,053. Its treasurer was J. P. Morgan and Co., 23 Wall Street, New York City. The Fund for the Relief of Women and Children of France, with Mrs. Whitney Warren, 16 East 47th Street, New York City, as chairman, had received \$50,019. The American Jewish Relief Committee for Sufferers from the War, with Felix M. Warburg, 52 Williams Street, New York City, as treasurer, had received \$252,465. The Dollar Christmas Fund, which had in view the purchase of Christmas gifts for homeless Belgians and of which Henry Clews was treasurer, was closed about December 30, with a total of \$51,761. The War Children's Christmas Fund, of which Mrs. John Hays Hammond was treasurer, had sent extensive gifts, consisting mainly of warm clothing, to English children.

The Christmas Ship, the U. S. Collier *Jason*, sailed from New York, December 14, with 43 carloads of gifts for children in the various war areas. Ten per cent of the cargo was food, 30 per cent toys, and most of the remainder garments. The plan for this ship was originated by James Keeley of the *Chicago Herald*, and was carried out with the cooperation of 200 leading newspapers throughout the United States. Gifts came from every corner of the country, and 43 railroads, 6 express companies, and other corporations donated their services. The distribution of the gifts was carried out through the Red Cross in Belgium, Germany, France, Austria-Hungary, Servia, and Greece.

The Committee of Mercy Fund, Elihu Root president, and August Belmont, treasurer, 200 Fifth Avenue, New York City, had received \$91,910. It was engaged in forwarding condensed milk, food, clothing, and other necessities, especially for women and children. It was divided into various sections: general fund; Belgium fund; French fund; British fund; and American fund. The Vacation War Relief Committee, with Miss Anne Morgan as treasurer, had received nearly \$25,000. The Prince of Wales National Relief Fund in this country, Mr. R. M. Stuart Wortley, treasurer, 25 Broad Street, New York City, had received approximately \$100,000. (See below for British section.) The American Woman's War Relief Fund, of which Lady Paget was president, and which controlled the American Hospital at Paignton, England, with Brown Brothers and

Co., 59 Wall Street, New York City, as American treasurer, was a branch of an English organization of which the Duchess of Marlborough was head. She announced a total of nearly \$200,000 at the close of the year. The Lafayette Fund was engaged in forwarding comfort kits to French soldiers. In December a 10 days' charity bazaar in a New York armory netted nearly \$200,000 for the benefit of German and Austrian soldiers. There was also the American Committee for the Relief of Babies of Belgium, located at 2 West 45th Street, New York City. The American Ambulance Hospital at Paris was supported by cash gifts and the proceeds of dances and other social events. The Mayfair Association was engaged in distributing clothing and other supplies in France.

The International Red Cross had begun its extensive efforts in behalf of the wounded at the very outbreak of the war. Physicians and nurses from every nation were enlisted and hospital supplies furnished. The American Red Cross received contributions up to December 30 of about \$425,000, but the use of any part of this in distinctly civilian relief work was incidental to its military hospital activities.

GREAT BRITAIN. Relief activities of a similar sort sprang up in Great Britain. Thus the *Times* of London solicited contributions to a Fund for the Sick and Wounded. This met with a generous response, and on December 25 had reached the grand total of £788,708, and was increasing at the rate of £25,000 to £30,000 per week. This fund consisted of special donations for particular purposes in addition to large amounts which were turned over to a Joint Committee of the British Red Cross Society and the Order of St. John. Thus among the special donations was a gift of £23,000 by the United Kingdom Flour Millers, which was used to provide two hospital trains for service with the allied forces in France and Belgium. The Order of St. John supported various hospitals and co-operated with the Red Cross Society in military relief. The English Red Cross was generously assisted also by Red Cross Societies in various British colonies. Thus the Canadian Red Cross Society had, up to December 18, donated £22,000 for a Canadian hospital at Cliveden, for a hospital train in France, and for the general purposes of the Red Cross Society.

Various other funds, known as the Royal Funds, had been organized. Of these the largest was the Prince of Wales National Relief Fund organized for the purpose of insuring families of enlisted men a minimum subsistence. On December 25 it amounted to £4,188,000. The Queen of England had organized a Work for Women Fund which amounted to £100,000. Its purpose was to organize employment for needy women affected by war conditions. The Princess Mary's Fund to provide Christmas gifts for army and navy reached the sum of £153,200. There was also collected an Indian Soldiers' Fund amounting to more than £110,000. There were numerous other more private relief funds and organizations.

The British Women's Emergency Corps was organized shortly after the outbreak of the war by women who wanted to be of every possible assistance. It established an employment department to secure work for shop girls, clerks, typists, seamstresses, and others who had lost their positions through the war. It sought

also to get contracts for workshops almost ready to shut down; and it opened several relief work rooms. It had a surplus food department which secured food from hotels, clubs, and markets. Its interpreting department assisted in the courts, at railway stations, and at ports in caring for the refugee aliens. It had a nursing department, a hospitality department, and numerous other activities.

RELIGIOUS DENOMINATIONS AND MOVEMENTS. Statistics of the religious denominations in the United States in 1914 were covered by Dr. H. K. Carroll for the Federal Council of the Churches of Christ in America. The general results of this investigation are given in the table below, with statistics covering the territory of the United States only. Ministers, churches, and communicants of various denominations in foreign countries are deducted from the denominational totals. Where denominational official returns are made they are used, and where such returns are not to be had, the best denominational sources of information are sought for approximate figures. In some cases the census returns for 1906 are the latest and the only ones available.

A word is necessary in connection with the figures for the Roman Catholic Church. The *Official Catholic Directory* reports only "population," which includes with communicants the unconfirmed baptized; that is, children who have not been admitted to confirmation. The rule followed in the census 1906 deducts 15 per cent from Catholic population and sets down the remaining 85 per cent as communicants. Representatives of that church object to this method, but as the rule to report only members or communicants is applied to all other denominations, there seems to be no convenient way of making an exception in this case.

The figures for members of the Jewish faith are misleading. There are no official statistics and nothing later than the figures gathered directly by circular from congregations by the government in 1906 is obtainable. The census gives an even smaller number of members than this table, counting only heads of families, according to the Jewish rule. The number of adults connected with Jewish congregations must exceed 700,000. Certain small churches, including the Christian Catholic Church and the Catholic Apostolic Church, give no statistical information. The Church of Christ Scientist has furnished no returns for members since 1907.

The grand total of communicants for 1913 was swelled by an abnormal increase reported by the Roman Catholic Church. A great body of Ruthenian Catholics, numbering about 500,000, not included in the returns of previous years, were put into the tables. Making allowance for this addition, the churches in general had as good a year in 1914 as in 1913. The churches included in the Federal Council, which includes all the larger denominations, had a net increase of upward of 502,000, or nearly 3 per cent, which is above the average. The Methodist Episcopal Church had an even larger increase than in the previous year. The Disciples of Christ report an unusually small gain—less than 500. This is explained as due to a continued separation of conservative brethren, known as the Churches of Christ, and more exact reports in place of estimates. Both the Lutheran and Presbyterian groups show a larger

increase in 1914 than in 1913. In the totals, the gains in the number of ministers were considerably more than double those of 1913, while the churches show an increase of less than half that of the previous year.

The following table gives the summary for 1914 with the net gain over the preceding year.

anced at 4,823,000 francs; the debt stood Jan. 1, 1912, at 13,457,000 francs. Governor, 1914, M. Cor.

RÉUNION (BOURBON). An island in the Indian Ocean; a French colony. Its area is 1980 square kilometers (754 square miles), carrying a population in 1911 of 173,822. Attached administratively to Réunion are St. Paul (7 square kilometers), New Amsterdam (66), and Kerguelen (3414). Saint-Denis, with 25,689 inhabitants, is the capital. There are 126 kilometers of railways. Imports 1912, 20,683,615; exports, 16,111,723. The budget for 1911 bal-

April 29, 1914. He was born in 1856, entered the diplomatic service early in life, served as French Minister to Tangier, and in 1901 as Governor-General of Algeria. In 1905 he was appointed Ambassador to Switzerland, in the following year became Ambassador to Spain, and was head of the French delegation to the International Moroccan conference. In the early part of his career he was Under Secretary of State for the Colonies, for Foreign Affairs, and for Agriculture.

REYBURN, JOHN EDGAR. An American public official, died Jan. 4, 1914. He was born in New Carlisle, Ohio, in 1845, and was educated at the Saunders Institute in Philadelphia, Pa. After graduation he took up the study of law, and was admitted to practice in the Philadelphia bar in 1870. In the same year he was elected Representative to the State Legislature, where he served until 1876, when he was

elected to the State Senate. He was a member of Congress from the Fourth Pennsylvania District from 1890 to 1897, was reelected to the Fifty-ninth Congress 1906 to 1907 for an unexpired term, and to the Sixtieth Congress from 1907 to 1909. On his election as Mayor of Philadelphia in 1907, he resigned from Congress. During his term of office as mayor he was identified with the Republican machine which controlled the affairs of the city.

REYMOND, EMILE. A French surgeon, aviator, and senator, died in the Eastern part of France, between the French and German battle lines, in October, 1914. He was born at Tarbes, April 9, 1865, the son of the eminent French engineer, Francisque Reymond. After completing his medical and surgical education he soon acquired a large practice, and published several surgical works. After the death of his father he was elected senator of the department of the Loire. He was among the first to perceive the possibilities of aviation and in the senate spoke and worked in its behalf. On Aug. 9, 1910, he passed his examination for pilot, later made numerous flights across France, and even made his electoral campaign in an aeroplane. The same year he was appointed head of the National Aviation Committee of France, and made strong efforts to provide 700 aeroplanes for the aviation branch of the French army. He believed in the great usefulness of the aeroplane to the health service in searching for the wounded on the battlefield after action. When the war in Europe broke out, Reymond was a major of the first class in the military health service, was transferred to the aviation corps and sent to the firing line. Wounded while reconnoitring in an aeroplane above the German lines, he nevertheless controlled his machine so that he brought it safely to the ground, was removed in a French ambulance, and gave an accurate report of the observations which he had successfully made. He received the decoration of the Legion of Honor at his bedside and died shortly afterward.

RHODE ISLAND. POPULATION. The estimated population on July 1, 1914, was 591,215. The population in 1910 was 542,610.

AGRICULTURE. The area, production, and value of the principal crops in 1913-14 are shown in the following table. The figures are from the United States Department of Agriculture, and those of 1914 are estimates only.

		<i>Acres</i>	<i>Prod. bu.</i>	<i>Value</i>
Corn	1914	11,000	462,000	\$453,000
	1913	11,000	402,000	398,000
Potatoes	1914	5,000	825,000	578,000
	1913	5,000	650,000	585,000
Hay	1914	58,000	68,000	1,374,000
	1913	58,000	68,000	1,442,000

a Tons.

MINERAL PRODUCTION. The only mineral products of Rhode Island are stone, mineral waters, lime, amorphous graphite, soapstone, coal, and the manufactures of clay. The total value of the mineral products in 1913 was \$813,952, of which the quarries contributed \$643,995. In 1912 the total value was \$942,842, of which the quarries contributed \$768,067.

TRANSPORTATION. The total mileage of main and branch railroad lines within the State in 1913, was 211, and the total length of all railroad tracks was 468. The total mileage of roads, operated by railroad corporations which

either owned or operated within the State, was 2097 miles. The aggregate capital stock of railroad companies either owning or operating lines in the State was \$49,816,400.

EDUCATION. The total school population of the State in 1914 was 107,645. The total enrollment in the public schools was 84,327, and the average daily attendance was 66,896, the female teachers numbering 2261 and the male 208. The average yearly salary of male teachers was \$1312.80, and of female teachers, \$626.14.

CHARITIES AND CORRECTIONS. The Board of Charities has control of the following institutions (the population of these in 1914 is given in parentheses): State Hospital for the Insane (1319); House of Corrections (345); State Almshouse (579); State Prison and Providence County Jail (529); Sockanosset School for Boys (342); Oaklawn School for Girls (49). The Rhode Island School for Feeble-Minded is under the control of the Board of Education.

FINANCE. The report of the State Treasurer for the fiscal year ending Dec. 31, 1913, showed a balance on January 1 of that year of \$68,020; the receipts for the period amounted to \$3,459,251, and the payments to \$3,511,513, leaving a balance in the treasury on Dec. 31, 1913, of \$15,758. The funded debt of the State on Jan. 1, 1914, was \$5,830,000, and there was a sinking fund of \$788,428, leaving a net debt of \$5,041,571.

POLITICS AND GOVERNMENT. The State Legislature met in 1914 as the sessions are annual. Elections were held for Governor, the Republicans nominating R. L. Beekman, and the Democrats P. H. Quinn. In the elections on November 3 the Republicans were successful in electing their candidate, Mr. Beekman, by a vote of 41,996, compared with 32,182 for Quinn, and 1256 for Thompson, Progressive. The total vote cast was 82,300, compared with 82,445 in 1912. The Republican vote showed an increase of about 7900 votes, the Democratic vote a decrease of about 550, and the Progressive vote a decrease of about 7200. The Democrats elected representatives to Congress in one district and the Republicans in two.

STATE GOVERNMENT, 1914. Governor, R. Livingston Beekman; Lieutenant-Governor, Emery J. San Souci; Secretary of State, J. Frederick Parker; Attorney-General, Herbert A. Rice; Treasurer, Walter A. Read; Adjutant-General, Charles W. Abbott, Jr.; Auditor, Charles C. Gray; Commissioner of Public Schools, Walter E. Ranger; Commissioner of Insurance, Charles C. Gray—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Clarke H. Johnson; Associate Justices, C. Frank Parkhurst, W. B. Vincent, William H. Sweetland, Darius Baker; Clerk of the Court, B. S. Blaisdell—all Republicans.

STATE LEGISLATURE, 1913.

	<i>Senate</i>	<i>House</i>	<i>Joint Ballot</i>
Republicans	32	56	88
Democrats	7	38	45
Progressives	0	4	4
Republican majority	25	14	39

The representatives in Congress will be found under the section *Congress*, article UNITED STATES.

RHODESIA. A country (named for Cecil

Rhodes), under the administration of the British South Africa Company; a British protectorate which is divided into Northern Rhodesia (estimated area, 291,000 square miles; estimated population, 1,001,400) and Southern Rhodesia (148,575 square miles, 769,471 inhabitants). Administrator for the British South Africa Company (1914), Sir William Milton.

NORTHERN RHODESIA was formerly divided into two provinces—Barotseland (Northwestern Rhodesia) and Northeastern Rhodesia—amalgamated by an order in council of May 4, 1911, under the title Northern Rhodesia. Lewanika, the native king, chief of the Barotse, resides at Lealui; the administrator for the British South Africa Company (L. A. Wallace in 1914) resides at Livingstone.

SOUTHERN RHODESIA includes the provinces of Mashonaland (European population, 12,631) and Matabeleland (10,975). The native population numbers 744,559—495,451 in Mashonaland. Salisbury is the capital, with a white population of 3479. Bulawayo (5200 white inhabitants) is the commercial centre; other towns are Hertley, Gatooma, Umtali, and Victoria in Mashonaland, Gwelo and Sulukwe in Matabeleland.

PRODUCTION, COMMERCE, ETC. The country is well adapted to stock raising and agriculture. Soil and climatic conditions favor the growth of European cereals and vegetables. Gold has been mined from medieval times. The output in 1913 was 689,954 fine ounces, valued at £2,903,267. Coal output 1913, 243,328 tons; silver, 142,389 ounces; lead, 327 tons; diamonds, 9558 carats; chrome iron ore, 279,651 tons. Imports and exports for the year 1912 were valued at £2,979,006 and £3,181,998, respectively. Revenue 1912-13, £757,733; expenditure, £884,632.

RAILWAYS. The total length of the Rhodesian Railway systems (including the Beira Railway) at the end of 1912 was 2357 miles. Through connection exists between Cape Town and Beira, over 2000 miles. Branches extend to the mining-districts and to the burial place of Cecil Rhodes in the Matopos. The extension of the Salisbury-Jumbo Mine line was completed to Shamva on April 23, 1913.

RICE. The world's annual rice production ranges approximately from 150 to 175 billion pounds of the cleaned product. The production of rough rice at 45 pounds per bushel of some of the principal rice-growing countries in 1914 was estimated as follows: British India, 1,400,000,000 bushels; Japan, 400,000,000 bushels; Italy, 49,000,000 bushels; and Spain, 9,800,000 bushels. China, which is the leading rice country of the world, does not publish complete statistics or estimates. Of the countries mentioned, Spain ranked first in average yield per acre with 98 bushels, and British India last with 20 bushels. The production of Japan represented 114.6 per cent, and that of Spain 87.7 per cent of the crop of 1913, while in the other countries it was practically 100 per cent as compared with the preceding crop. The rice production of the United States in 1914, due to a reduction in acreage, was over 2,000,000 bushels less than in 1913, which was a record year in acreage as well as yield. In 1914, according to data published by the Department of Agriculture, the production amounted to 23,649,000 bushels, as compared with 25,744,000 bushels in 1913. The

area devoted to the crop for the two years was 693,530 and 827,100 acres, and the average yield per acre 34.1 and 31.1 bushels, respectively. The total value of the 1914 crop, based on a value of 92.4 cents per bushel, the average price paid farmers on December 1, amounted to \$21,849,000, which was exceeded only in the years 1912 and 1913. In bringing about this comparatively high value of the crop, the reduced acreage was largely offset by an increase of 3 bushels in the average yield per acre, and of 6.6 cents in the price per bushel, as compared with the preceding year.

RICHARD, ERNST D. An American lecturer and peace advocate, died Nov. 20, 1914. He was born at Bonn, Germany, in 1859, and graduated from the Gymnasium in that city in 1879, afterwards studying at the universities of Marburg and Bonn. He came to the United States in 1883, and from 1890 to 1897 was principal of the Hoboken Academy. He took the degree of Ph.D. at New York University in 1894. From 1903 to the time of his death he was lecturer on the history of German civilization at Columbia University; was active in world-peace movements founding the German-American Peace Society in 1904, and the New York Peace Society in 1906. He was author of: *History of German Civilization* (1911); and contributed to American and German magazines.

RICHARDSON, JAMES DANIEL. Former Congressman from Tennessee, died July 24, 1914. He was born in Rutherford Co., Tenn., in 1843 and was educated at the country schools and at Franklin College, leaving the latter institution before graduating, to enter the Confederate Army as a private. He served for three years as adjutant of the Forty-fifth Tennessee Infantry, and after the war began the practice of law at Murfreesboro, Tenn. He was a member of the Tennessee Legislature in 1871-72, and in 1873-74 was State Senator. He was a delegate to the Democratic National Conventions of 1876, 1896, and 1900, being permanent chairman of the latter. In 1885 he was elected to Congress and was reelected for successive terms until 1905. In the Fifty-sixth and Fifty-seventh Congresses he was Democratic nominee for Speaker of the House. He was chairman of the National Congressional Committee for several years, and was a very prominent member of the Masonic Order. He edited and compiled: *Messages and Papers of the Presidents*, and *Messages and Papers of the Confederacy*.

RICHARDSON, RUFUS BYAM. American archaeologist and educator, died March 10, 1914. He was born in Westford, Mass., in 1845 and graduated from Yale College in 1869, studying at the Yale Divinity School from 1869 to 1872, and for the two years following in Berlin. From 1880 to 1882 he was professor of Greek at Indiana University, and from 1892 to 1893 held the same chair at Dartmouth College, and was director of the American School of Classical Studies at Athens, Ga., from 1893 to 1903. While he held this post he directed excavations in many important sites in Greece, including Corinth and Eretria. He was a member of many archaeological and geographical societies, both in the United States and foreign countries, and was the author of: *Vacation Days in Greece* (1903); *Greece Through the Stereoscope* (1907); *History of Greek Sculpture* (1910);

also contributing to leading periodicals and to the *American Journal of Archaeology*. In the latter journal he published from 1892 to 1902 about 20 articles relating chiefly to the excavations of the American School at Eretria and Corinth.

RICHARDSON, WILLIAM. Representative in Congress from Alabama, died March 31, 1914. He was born in Athens, Ala., in 1841. He served in the Confederate Army and was severely wounded at the Battle of Chickamauga. He was admitted to the bar in 1867, and practiced in Huntsville, Ala. From 1865 to 1867 he was a representative in the General Assembly of Alabama, and from 1875 to 1886 was judge of the court of probate and county court, of Madison Co. He was elected to fill an unexpired term in the Fifty-sixth Congress, and was elected to successive Congresses up to and including the Sixty-third. He was delegate-at-large at the Democratic National Convention in 1904.

RIIS, JACOB AUGUSTUS. An American civic reformer and journalist, died May 26, 1914. He was born in Ribe, Denmark, in 1849, and was one of a family of 14 children. In 1870, having worked as a newspaper writer and a carpenter's apprentice, he landed in New York City, and after several years' hardship in attempting to earn a living, he became a reporter for the *New York Sun*. His work had chiefly to do with the police headquarters and police courts, where the conditions which he saw in tenement houses led him to begin the fight to remedy these. His first efforts were directed to the abolition of the police lodgings which were in a deplorable condition, and with the support of Theodore Roosevelt, who at that time was police commissioner, this result was accomplished. Mr. Riis then began his efforts to improve the tenement house situation, and wrote a book which was widely read, entitled *How the Other Half Lives*. In the period from 1877 to 1897 he worked unceasingly for the city's welfare; a history of this period is given in his book, entitled *The Ten Years' War*. He also was responsible for a number of small parks taking the place of some of the worst spots in the city. He labored for years to have more schoolhouses built, and compelled indifferent city officials to concede the reforms which he suggested or approved. Among the important results accomplished through his efforts was the purchase of the Croton watershed as a water supply for the city, after he exposed the contaminated state of the water which the city was previously using. He brought about the destruction of rear tenements and enforced the obliteration of Mulberry Bend, the worst tenement block in the city, the space being turned into a park. He fought for and secured a truant school; drove bake-shops out of tenement basements; worked for the abolition of child labor, and when a law was enacted, compelled its enforcement. Playgrounds for schools and the opening of school-rooms to boys' and girls' clubs were brought about largely through his efforts. President Roosevelt, with whom he was associated for years, said of him, "He is a man who acts squarely, works hard, wears no sour visage and not only holds high ideals but fights for them; and he carries on no rose-water revolutions." Mr. Riis declined many offers to hold public office. He wrote many arti-

cles for magazines on social and economic subjects, and was also a well-known lecturer. Among his published writings, in addition to those mentioned above, are: *The Children of the Poor* (1892); *The Making of an American* (autobiography, 1901); *The Battle with the Slum* (1902); *Children of the Tenements* (1902); *The Peril and the Preservation of the Home* (1903); *Theodore Roosevelt, Citizen* (1904); *The Old Town* (1909).

RITUAL MURDER TRIAL. See JEWS AND JUDAISM.

ROADS AND PAVEMENTS. Throughout the United States immense sums were spent during the year for highway improvements by States and counties, besides all the road and street work being done by towns and cities. Massachusetts and New Jersey continued on a moderate scale the State construction and State aid which they began many years ago as pioneers. New York spent a portion of its second \$50,000,000 road bond issue. Ohio let \$7,500,000 worth of State highway contracts, and other States spent money more or less lavishly for roads. In general, the State and county funds went for water-bound or bituminous-bound macadam, bituminous concrete, and gravel, but some went for brick, and some for concrete surfaces.

According to J. E. Pennybacker, Chief of Road Economics, United States Office of Public Roads (*Engineering Record*, Jan. 2, 1915), 18,000 miles of roads were surfaced in the United States at a cost of about \$225,000,000, of which \$42,500,000 was from State funds. All the States of the Union, save only South Carolina, Georgia, Florida, Tennessee, Indiana, and Texas, had some form of State highway department, and of the 42 States having such, 30 had granted State aid. Late in 1913 the Federal government began, and in 1914 it continued the construction of 17 post roads, which will have a total length of 464 miles, and will cost about \$1,500,000. Of this sum the Federal government pays one-third, and States and localities two-thirds. One of these post roads is a part of the old National Road. It extends west 24 miles from Zanesville, Ohio, and is being surfaced with concrete.

A growing feature of city pavements was the use of smaller granite blocks than formerly, with carefully cut vertical edges, and the blocks laid with close joints. After four years of study of the subject, and observation of such pavements laid in New York and elsewhere, a committee of consulting engineers in the employ of New York City drew up specifications for small close-jointed granite block pavements. These specifications call for carefully dressed blocks not less than 6 nor more than 10 inches long, not less than 3½ nor more than 4¼ inches wide, and about 5 inches deep, laid close together and with either coal tar or asphaltic paving cement as a joint filler. Still smaller blocks, cubical in shape, and about 3½ inches on a side, laid on a sand or stone chip cushion resting in turn on concrete had been used extensively in British and Continental European and in South American cities for some years past, and were coming into use in the United States. The blocks are machine cut. Standard paving specifications, recommended by committees which had given the subject long study, were adopted by

the American Society of Municipal Improvements in October, 1914, and were to be printed for distribution (C. C. Brown, secretary, Indianapolis, Ind.). The specifications included stone block, brick, concrete, broken stone and gravel, the last with bituminous surface, bituminous macadam, and asphalt. Progress reports on specifications for wood block and for bituminous concrete were made. Road Congresses were held at Atlanta and at Chicago. For various road statistics, road legislation, officials, etc., see *Good Roads Year Book* of the American Highway Association. See also *STREET CLEANING AND SNOW REMOVAL*.

ROBERTS OF KANDAHAR, PRETORIA, AND WATERFORD, FREDERICK SLEIGH, first EARL. An English soldier, died Nov. 14, 1914. He was born in Cawnpore, India, on Sept. 30, 1832, the son of Gen. Sir Abraham Roberts, who was at the time in command of a regiment in India. When two years of age Frederick Roberts was taken to England by his parents, and at the age of 13 was sent to Eton for a year. In January, 1847, he entered Sandhurst, and on Dec. 12, 1851, after two years at Addiscombe, he was commissioned second lieutenant in the Bengal Artillery. He landed in Calcutta in April of the following year, for a year following served as aid to his father, and as battery officer, and in 1854 was commissioned in the Bengal Horse Artillery.

The news of the great Indian mutiny of 1857 reached Peshawar, where Roberts was at the time stationed, on May 12 of that year. His first service was as staff officer to the Movable Column operating against the mutineers in the Punjab, but toward the end of June he joined the Delhi Field Force, in which he did excellent service as deputy-assistant-quartermaster-general with the artillery. Even more notable were his services in the relief of Lucknow; although hardly more than a boy, he was chosen by Sir Colin Campbell to guide the relieving force from Alambagh to the Dilkusha. After the relief of Lucknow, Roberts was attached to a cavalry division, and in a cavalry charge at Khudaganj in January, 1858, he won the Victoria Cross. On account of ill-health, he returned to England in 1858, was married in 1859 to Miss Bews of Waterford, and set out in the same year for India again.

His subsequent career was most active. He took part in the Abyssinian campaign of 1868 as assistant-quartermaster-general to Stewart's Bengal Brigade; and as a reward for his services was sent home with dispatches, and brevetted lieutenant colonel. He made the arrangements for the Lushai Expedition, 1871-72, which he accompanied, and on his return became deputy-quartermaster-general in Bengal, and in 1875, quartermaster-general and colonel.

The advance of Russia in central Asia was at this time causing great alarm to the British government. It was a problem which specially concerned Roberts as quartermaster-general in India. In March, 1878, he was in command of the Punjab Frontier Force. This was a step downward in rank, but offered unequalled chances of active service. A few months later, the repulse of a British mission, following the welcome given to a Russian general at Kabul, brought matters to a rupture with the Ameer of Afghanistan. The British at once began preparations against that country. Three columns were

formed: one to advance on Kandahar by the Bolan; one to make a demonstration in the Khyber, and the third to threaten Kabul from the Shutargardan. The last column was entrusted to Roberts, and consisted of about 1300 British and 4000 native soldiers, with 13 guns. The advance was begun on Nov. 20, 1878. Roberts was obliged to leave one-third of his men behind as he moved up the Kuram Valley. Near its head he found eight regiments of Afghan troops in a strong position, but after a sharp struggle the pass was won. On May 26 of the following year a treaty of peace was signed with Yakub Khan. The treaty conceded all the British demands. Roberts, however, thought the treaty insecure, and returned to India with many misgivings.

On September 5, news of the massacre of the Cavagnari mission at Kabul reached Simla, where Roberts had taken his seat on the Army Commission. The force he had left behind in the Joram was the only one available to strike at Kabul. This was reinforced and he hastened back to command it as lieutenant general. Arriving at Charasia, about 12 miles south of Kabul, he found the enemy in force, and in a strong position. He routed them, however, and Kabul fell into his hands without further fighting. He was now placed in command of all the troops in Afghanistan, which gave him the control of 20,000 men, but of these only 8000 were in the neighborhood of Kabul. On December 11 he withdrew to Sherpur, where he was surrounded by a force of Afghans estimated at 100,000 men. For 10 days he was besieged by this force, but on December 23, following a furious assault upon the cantonment, the Afghans were defeated and put to flight. In the latter part of July of the next year, hostilities ceased, and orders were issued for the British troops to return to India. On July 27, however, came news of the disaster of Maiwand. A British brigade under General Burrows was here defeated by Ayub Khan. The British, deserted by the troops of their ally, and greatly outnumbered by the Afghans, 2500 in number, were routed, losing 1000 out of 2500 British troops engaged. As a result, Lieutenant General Primrose found himself besieged in Kandahar. Roberts proposed that he should lead a column from Kabul. This was approved, and accordingly he set out on August 9 with a specially selected force of 10,000 men, and his newly organized transport corps. On the 31st he arrived at Kandahar, a famous march of 313 miles in 23 days. The next day in the battle of Kandahar, he completely defeated the Ayub Khan's army.

For his services in the Afghan campaigns, Roberts received the thanks of both Houses of Parliament, and was made a baronet. He was now appointed to the command of the Madras army, but before taking up this appointment, went to England on leave. While at home, news was received that Sir George Colley and 600 British troops, who had occupied Majuba Hill, in Northern Natal, on the night of Feb. 26, 1881, had been defeated the following morning by the Boers under Piet Joubert, and Colley killed. To check the possibly serious consequences of this disaster, Roberts was appointed Governor of Natal, and commander-in-chief in South Africa, but on arriving at Cape Town he found that peace had been made. He went back to England, and declining the post of quartermaster-general, re-

turned to India, where, in 1885, he became commander-in-chief. This post he held for seven years, instituting many measures for the benefit of the army, and greatly developing the important subject of frontier defense and communication. In 1886 he took command for a time of the forces in Burma, for the suppression of dacoity. On Jan. 1, 1892, he was raised to the peerage as Baron Roberts of Kandahar and Waterford, and returned to England in 1893. After his return to England he had two years of leisure, which he employed in writing a remarkable book of reminiscences, entitled *Forty-one Years in India*. In May, 1895, he was made field marshal, and in October of that year became commander-in-chief in Ireland.

After the failure of the British in South Africa in 1899, Lord Roberts was sent out as commander-in-chief. Arriving at Cape Town in January, 1900, he proceeded on Bloemfontein. The sieges of Kimberley and Ladysmith were raised, Cronje overtaken, and forced to surrender at Paardeberg (February 27). Bloemfontein entered (March 13), Mafeking relieved May 17, and Pretoria occupied in June. On his return to England in 1901, Roberts was given the Garter, and advanced in the peerage as Earl Roberts of Kandahar, Pretoria, and Waterford. For his services in South Africa he received the thanks of both Houses of Parliament, and a grant of £100,000. He had in the meantime been appointed commander-in-chief of the army. He at once began to initiate reforms in army administration, but as the result of reorganization of the army, the office of commander-in-chief was abolished in 1903, and on February 18 of that year the retirement of Lord Roberts was officially announced. At the request of the Prime Minister, Lord Roberts continued to be a member of the Imperial Defense Committee after he had ceased to be commander-in-chief. He was unable to secure the support of the several ministries under which he served in his plans for the extension of the army, and in December, 1905, he resigned and became president of the National Service League, organized for the purpose of bringing about universal training for home defense. On Sept. 30, 1912, when he had reached the age of 80 years, he was given £5000 as a birthday gift. The bulk of this money was devoted to the work of the National Service League.

Lord Roberts had for years prior to the breaking out of the European War pointed out the precise conditions which were found to exist at the beginning of hostilities. His efforts to arouse the sentiment for a larger army were unceasing. When the war really began he became a resolute and alert supporter of the government. He took an active part in the work of collecting ammunition and equipment for the troops, and he was in constant consultation with the war office. His interest in the Indian troops inspired him to visit the detachments in France, where he was received with the greatest enthusiasm; but the exposure and excitement led to an attack of pneumonia which caused his death. Lord Roberts was the idol of the army, and was hardly less popular with the general public. He was universally known by the excellent nickname of "Bobs." His only son was killed in the South African War. Though small of stature, Lord Roberts was every inch a soldier in bearing and in appearance. He will for long stand as the

type of faithful, devoted, and able British soldier. Gifted with great abilities as an organizer, his conceptions of military situations were sound, his plans accurate, his execution thorough and successful. England probably regrets today the persistent neglect with which she received his pleas and appeals for a proper constitution of her military resources.

ROBESON, HENRY BELLOWES. A rear admiral (retired) of the United States navy, died July 16, 1914. He was born in New Haven, Conn., in 1842, and graduated from the United States Naval Academy in 1860, being appointed midshipman in the same year. He took part in numerous engagements during the Civil War and was made lieutenant in 1866; commander in 1874; captain in 1886; commodore in 1898; and rear admiral in 1899. He was commandant at the New York Navy Yard from 1874 to 1876, and again from 1883 to 1888. In 1891-92 he was supervisor of New York Harbor. He was at the Naval War College in 1895, and from that year until 1898 was captain at the Navy Yard at Portsmouth. In 1899 he was retired from active service.

ROCKEFELLER INVESTIGATION. See LABOR, section entitled as above.

ROCKHILL, WILLIAM WOODVILLE. American diplomat, died Dec. 8, 1914. He was born in Philadelphia, in 1854, and was educated at the military school at St. Cyr in Paris. For the three years following graduation he was an officer of the French Foreign Legion. From his earliest years he had been attracted by China and her institutions, and when in 1884 he was appointed second secretary to the American Legation in Peking he began an enthusiastic study of conditions in China, which continued throughout his life. He remained in Peking until 1888, except a few months during which he acted as chargé d'affaires at Seoul, Corea, and for the next four years carried on investigations for the Smithsonian Institution in Mongolia and Tibet. In 1893 he was appointed chief clerk of the State Department and in the following year became Third Assistant Secretary of State. In 1897 he was appointed Minister to Greece, Rumania, and Servia, retaining these positions until 1899 when he was appointed director of the International Bureau of American Republics. In 1905 he was appointed Minister to China and held this post for four years, when he was appointed Special Commissioner of the United States to that country. This was a critical time in the history of the Chinese Empire, and the United States government wished to have its affairs in charge of a man who knew the country and had a sympathetic interest in the fortunes of its people. In the following year Mr. Rockhill represented the United States in the congress of Peking and signed the protocol which was the settlement of the Boxer troubles. In 1908 Mr. Rockhill, having already written a standard life of Buddha from Tibetan sources, visited the Dalai Lama, the head of the Buddhist religion in Tibet. In 1909 Mr. Rockhill was appointed American Ambassador to Russia, and after two years of service in that country became Ambassador to Turkey, in which post he

FIELD MARSHAL EARL ROBERTS
DIED NOVEMBER 14, 1914

remained until he was succeeded in 1913 by Henry Morgenthau. Early in 1914 he was invited by President Yuan Shih-kai to become his general adviser. This position he accepted, returned to the United States to settle his affairs, and was on his return to China when he died at Honolulu. He was the author of various works on Oriental subjects and was a correspondent of the Institute of France.

ROJAS, PEDRO EZEQUIEL. A Venezuelan diplomat, Minister to the United States, died June 26, 1914. He was born at Cumana, Venezuela, in 1844, and from his majority was identified with the politics of his country. He began life as a newspaper writer, for a time was in exile, and served as a Representative in Congress, a national Senator, and president of the National Congress. He was Minister of Foreign Affairs from 1893 to 1898. It was while he was in this post that the boundary dispute between Great Britain and Venezuela was submitted to arbitration through the good offices of the United States. He was appointed Minister to the United States in 1909. Dr. Rojas was one of the leading public men of Venezuela, a noted jurist and authority on international law, and wrote much on political and literary subjects.

ROMAN CATHOLIC CHURCH. The year 1914 will go down in history as one of the most important in many decades for the government, influence, and progress of the Church. The death of Pope Pius X (q.v.), and the election of his successor, Benedict XV (q.v.), on September 3 were the most notable of the incidents of the year. At the conclave for the election of the new Pope, which assembled August 31, 57 cardinals were present, 30 Italians, and 27 other nationalities. The American cardinals, Gibbons and O'Connell, did not arrive in time, but Cardinal Farley, who was in Switzerland when the Pope died, had the distinction of being the first American prelate of note to vote for the election of a Pope. One result of the European War has been the general recognition of the prestige and authority of the Pope on the part of Old World rulers. All the belligerent powers, except France, are now represented at the Vatican, England sending a special envoy, Sir Henry Howard. Even Italy granted an *exequatur* to the Archbishop of Genoa, which had been refused since 1912. With the close of the year the College of Cardinals consisted of 63 members, 31 Italians, and 32 of other nationalities. During the year eight cardinals died: Gennari, Katschthaler, Von Kopp, Lugarri, Ferrata, Cavallari, Dubilliard, and Di Pietro. One of the first acts of Pope Benedict was to appoint, on September 4, Cardinal Ferrata as his Secretary of State, but the cardinal died on October 10. The Pope immediately named Cardinal Pietro Gasparri, who had been his former companion in the State Department under Cardinal Rampolla, to fill the vacancy. Pope Benedict held his first consistory on September 8, at which he gave the red hat to four cardinals, who were absent from the previous consistory, and delivered an allocution urging peace in Europe, and lamenting the evils and disorders of the day. He referred to the great work done by

Pope Pius X in reforming Church music, in condemning Modernism, and in promoting piety among the faithful. Concord of action and obedience to bishops were strongly insisted on, and holiness of life should be promoted in the clergy, whom he wants to be united with and obedient to their bishops. While praying for peace he wished for the entire freedom of the Church to protect the rights and dignity of the Apostolic See.

On May 25, Pope Pius X held his last consistory, at which he created 13 cardinals: 5 Italians, 2 Germans, 2 Austro-Hungarians, and 1 each for Canada, France, Spain, and England. These cardinals were: Louis N. Bégin, Archbishop of Quebec; Vittoriano Guisasola y Menendez, Archbishop of Toledo, Spain; Giacomo Della Chiesa, Archbishop of Bologna; F. G. Piffi, Archbishop of Vienna; Domenico Serafini, Archbishop of Seleucia and Assessor of the Holy Office; Filippo Giustini, Secretary of the Congregation of Sacraments; Michele Lega, Dean of the Rota Tribunal; Scipione Tecci, Secretary of the Consistorial Congregation; Abbot Aidan Gasquet, President of the English Benedictines; Francis von Bettinger, Archbishop of Munich; Felix von Hartmann, Archbishop of Cologne; John Czernoch, Archbishop of Strigonia. In April the Pope issued an important *motu proprio* establishing a college in Rome for the training of priests charged with the care of Italians emigrating to foreign lands; in July, another on the teaching of theology and philosophy; and on July 23 concluded a concordat with Serbia by which the free exercise of the Catholic religion in that kingdom was recognized. On April 25 the Apostolic Delegation of Australia was established. Mgr. Bonaventure Cerretti, who had been auditor of the delegation at Washington, D. C., was appointed the first delegate, and consecrated titular Archbishop of Corinth, July 12. On August 4 the Jesuits commemorated the centenary of the restoration of the Society of Jesus, and the Pope marked the event by a letter of eulogy and congratulation to the Father General.

STATISTICS. The total Catholic population of the world was estimated by the Church officials at 301,172,712; in 1913 it was 298,734,824. The *Official Catholic Directory* for 1914 gives 18,067,985 as the number of Catholics in the United States. The hierarchy is made up of 3 cardinals, 14 archbishops, and 99 bishops. There are 18,568 priests, an increase of 623 for the year, of whom 4864 belong to the religious orders. The churches number 14,651, and of these 9740 have resident pastors. The educational totals show 82 seminaries; 7062 seminarians; 230 colleges for boys; 680 academies for girls; and 5403 parochial schools, with 1,429,859 children. The States having the largest number of Catholics are: New York, 2,884,723; Pennsylvania, 1,684,220; Illinois, 1,461,634; Massachusetts, 1,395,892; Ohio, 781,179; Louisiana, 585,000; Michigan, 582,500; Wisconsin, 578,195; New Jersey, 565,000; Missouri, 470,000; Minnesota, 461,950; Connecticut, 438,483; California, 410,000; Texas, 313,000; Iowa, 277,095; Rhode Island, 270,000; Maryland, 261,000; Indiana, 239,238; Kentucky, 166,070; New Mexico, 140,573; Kansas, 130,700; New Hampshire, 130,081; Maine, 124,400; Nebraska, 115,959; Colorado, 109,182. Including the insular possessions, there are 24,224,609 Catholics under the Stars and Stripes.

THE HIERARCHY. The changes during the year in the hierarchy of the United States included the addition of two titular bishops, Mgr. P. J. Hayes, appointed auxiliary of New York, and Mgr. T. J. Shahan, rector of the Catholic University, named titular of Germanicopolis. Archbishop Seton, long resident in Rome, returned and located permanently at Emmitsburg, Md. Bishops James Trobec of St. Claud and Joseph J. Fox of Green Bay resigned, the former being succeeded by Bishop J. F. Busch, transferred from Lead, S. Dak. The Rev. Henry Althoff was consecrated Bishop of Belleville, Ill., Feb. 24; and the Rev. Michael J. Curley was appointed Bishop of St. Augustine, April 5. Bishop A. F. Schinner, formerly of Superior, Mich., was installed as Bishop of Spokane, Wash., June 18. Archbishop P. J. Riordan of San Francisco died April 27, and the auxiliary Bishop Hanna took charge as administrator. Bishop Foley of Detroit asked for a coadjutor because of age. A new diocese, the fifth, was erected in Texas with the see city at El Paso; it comprises 20 counties taken from the diocese of Dallas, San Antonio, and Tucson. The Very Rev. John J. Brown, S.J., president of the College of the Sacred Heart, Denver, was appointed its first bishop. The United States now has 101 sees, the largest number of any nation after Italy.

ASSEMBLAGES. The 25th International Eucharistic Congress was held at Lourdes, July 22-26, and was attended by 10 cardinals, more than 200 bishops, and a multitude of priests and laymen from all over the world. Cardinal Gennaro presided, representing the Pope, and the American delegation was headed by Cardinal Farley. The annual National Catholic Congress of England was held at Cardiff, July 10-13.

The Supreme Court of the United States decided July 1, that the vow of poverty taken by members of religious orders was legal, and not void, as against public policy. The War Department refused to allow a Catholic chapel to be erected on Governors Island, N. Y., military reservation, Judge Advocate General Crowder holding that the law authorizing the Y. M. C. A. buildings there, and on other reservations, did not grant authority for the erection of denominational places of worship. See *FRANCE, History*.

ROTCH, THOMAS MORGAN. An American physician and educator, died March 9, 1914. He was born in Philadelphia in 1849, graduated from Harvard College in 1870, studied medicine, and after admission to practice, became medical house professor in the Massachusetts General Hospital in 1873. After remaining there for one year he studied in European hospitals until 1876. From 1878 to 1888 he was assistant professor of diseases of children at the Harvard Medical School, becoming full professor in 1893, and professor of pediatrics in 1903, which chair he held until his death. He was a visiting physician in several hospitals in Boston, was consulting physician of St. Francis' Hospital for Infants in London, and was a member of many scientific and medical societies. He wrote *The Roentgen Ray in Pediatrics*, and contributed to medical journals.

ROWING. The rowing season of 1914 was marked by the triumph of the Harvard junior varsity eight in the historic Henley Regatta on the Thames, England, after a bitter struggle with the Union Boat Club of Boston, a crew

made up of former Harvard oarsmen. It was the first time an American crew had ever captured the Grand Challenge Cup. Also of interest is the fact that Great Britain for the first time was not represented in the final heat. The two American crews battled their way through the semi-finals and then struggled gloriously for individual supremacy. The same good fortune, however, did not attend the American scullers in the regatta. They were all eliminated in the semifinals. Robert Dibble of Canada lost in the final to Giuseppe Sinigilia of Italy.

College rowing in the United States furnished two surprises. Columbia won the varsity race at the intercollegiate regatta held on the Hudson River, near Poughkeepsie, while Yale at last broke Harvard's long winning streak in the annual races on the Thames, near New London, Conn. At the Poughkeepsie regatta, Pennsylvania finished second in the varsity eight-oared event, Cornell third, and Syracuse, the 1913 winner, fourth. Cornell was victorious in the junior varsity and the freshmen races.

The Columbia varsity eight consisted of H. Naumer, bow; A. C. Rothwell, 2; E. I. Williams, 3; V. Sanborn, 4; Studdiford Pitt, 5; Norman Bratton, 6; I. W. Hasdell, captain, 7; and C. F. McCarthy, stroke. The crew's time for the four miles was 19:37½. The record for the event, 18:53½, was made by Cornell in 1901. The times made by the varsity crews were: Pennsylvania, 19:41; Cornell, 19:44½; Syracuse, 19:59½; Washington, 20:01½; Wisconsin, 20:20. In the freshmen race the time of Cornell, the winner, was 10:07½; Syracuse, 10:50½; Pennsylvania, 10:50½; Columbia, 10:56½; Wisconsin, 10:59. The winning freshmen eight comprised: D. S. Morgan, bow; G. D. Stahl, 2; H. A. Meyers, 3; L. W. Overlock, 4; J. A. Worn, 5; A. A. Cushing, 6; G. E. Lund, 7; J. L. Collyer, stroke.

The Yale varsity crew, which triumphed over Harvard on the Thames, included: Low, bow; Meyers, 2; Titus, 3; Sheldon, 4; Sturtevant, 5; Rogers, 6; McHenry, 7; Appleton, stroke. Yale's time was 21:16, and Harvard's 21:16½. Harvard won both the second varsity eight, and the freshmen race, the times being 11:34 and 11:49, respectively. Yale's times for these events were 12:02 and 12:04. The winning Harvard second varsity crew comprised Saltonall, bow; Talcott, 2; Meyer, 3; J. Middendorf, 4; H. Middendorf, 5; Morgan, 6; Curtis, 7; Lund, stroke. The winning freshmen were: Potter, bow; Culbert, 2; Richardson, 3; Young, 4; Ely, 5; Stebbins, 6; Cabot, 7; Brown, stroke.

In the Pacific Coast intercollegiate varsity race over the 3-mile course at Oakland, Cal., Washington for the second consecutive year finished first. Leland Stanford was second, and California third. Washington's time was 18:58. Leland Stanford won the freshmen event with California second. Dual college regattas in 1914 resulted as follows: Cornell varsity eight defeated Harvard; U. S. Naval Academy defeated Harvard; Pennsylvania defeated the U. S. Naval Academy. Cornell won the triangular race with Yale and Princeton, and Columbia in another triangular affair defeated Princeton and Pennsylvania.

The United States and Canada divided the honors at the 42d annual championships of the National Association of Amateur Oarsmen held on the Schuylkill River, near Philadelphia.

SUCCEEDED TO THE PAPACY, 1914

Ed Butler of the Argonaut Rowing Club of Toronto won the quarter-mile dash, while Robert Dibble of the Don Rowing Club of Toronto again captured highest honors in the single sculls. The Duluth Boat Club won the international and senior eight-oared races, and the international four-oared event. The Grand Rapids Club was victor in the junior eights, and the University Barge Club of Philadelphia took the laurels in the senior four oars.

The twelfth annual regatta of the National Rowing Association, popularly known as the American Henley, also was held on the Schuylkill. The winners of the principal events were: First eight-oared shells, Harvard; special four-oared shells, University of Pennsylvania; freshmen eight-oared shells, University of Pennsylvania; junior collegiate eight-oared shells, Harvard. John B. Kelly of the Vesper Boat Club of Philadelphia won the first single sculls in 8:03, breaking the record of 8:05 made by J. Williamson in 1905.

The Oxford-Cambridge race was won by Cambridge for the first time since 1908.

RUBBER. In connection with the European War an important and serious situation in the rubber industry, especially in the United States, was provoked by the British decision to hold crude rubber as contraband of war, as in this way some 50 per cent of the normal supply required for the United States was cut off. This decision was reached in the early days of October, and at the same time an embargo on shipments of rubber from the British colonies, which include Ceylon and the Federated Malay States, to any but British ports was made; and as a result all direct shipment from Singapore and Colombo to New York was stopped, although at first rubber came by the way of London. On November 13 the embargo was extended to all shipments of crude rubber from all English ports to any countries except those of Great Britain's allies, and as a result no plantation rubber was shipped to the United States. The reason for this was to prevent Germany and her allies from obtaining any of the crude rubber grown in the British possessions, as it was important in warfare for the use of automobiles, and for making rubber footwear, rubber blankets, clothing, and balloon fabrics. The result of this embargo was to increase the price of rubber from 35 to 45 cents a pound, or 50 per cent in the crude product, and the estimated cost to the American rubber industry was stated at \$250,000 a day. The American industry naturally is dependent on the crude rubber imported and once the greater part of the supply came from Brazil, but latterly 60 per cent of the crude rubber used in the American factories was derived from the British Empire, as the Brazilian rubbers were considered more expensive, and the African and Mexican rubbers were of inferior quality. Of the 60,000 tons of rubber annually consumed in the United States, 35,000 tons are plantation rubber, which normally sells at about 45 to 55 cents a pound, but by the end of 1914 the price was raised to about 90 cents a pound by the effect of the embargo. This led to the slowing up of mills, and the laying off of a number of the 125,000 people directly or indirectly employed in the American rubber industry, and the trade was naturally seriously agitated. It was hoped that some arrangement could be secured by which the embargo could be

removed or its effects mitigated, and a representative of the American rubber industry was sent to Great Britain, while the United States Department of State took up the question through diplomatic channels. The industry was seriously disturbed and was unable to exploit the South American field, as it was feared that at any time the embargo might be reduced, and the markets be flooded with the British product, which naturally would involve loss on the part of those who had contracted for South American supplies at higher prices.

It was stated that Germany, in taking possession of Antwerp, took possession of a large amount, somewhat in excess of 100 tons, and that the peak price was paid for it. In Great Britain makers of waterproof cloth, type makers, and surgical goods makers were very busy after the outbreak of the war, but there was a corresponding decline in other fields, especially those ministering to sports and pastimes, and the general engineering and the building trades.

The world's production of rubber during 1914 was estimated at about 115,500 tons, and for the first time plantation grades were in preponderance as the supply from Ceylon and Malaya was estimated at about 65,000 tons, while from Amazonas and Brazil 37,000 tons were shipped, from West Africa 8500 tons, and from various other sources 4500 tons. The shipments from Brazil were slightly under the average, being estimated at 37,000 tons for 1914, as compared with 39,000 tons in 1913, 40,500 tons in 1912, 39,500 tons in 1911, and 40,500 tons in 1910. The Brazil rubbers seemed to be more highly appreciated in the markets of the world, but the extensive imports of plantation rubbers seemed to indicate that the Far East was destined to play a still more important part in the production of this product. This estimate of the rubber crop of the world, which was prepared in London, takes into consideration the distribution of the available supply about as follows:

	Tons
England	24,000
Germany, Austria, etc.	18,000
France	8,000
Russia	14,000
Italy, etc.	2,500
Japan and Australia	8,000
United States and Canada	51,000
Total	115,500

The sources of supply are given in the following table, and a more detailed table from an authoritative American summary is also included.

The sources of estimated supply for 1914:

	Tons
Plantation	65,500
Amazonas and Brazil	87,000
West African	8,500
Mattogrosso, Manicoba, Assare, etc.	1,800
East African, Manihot, etc., Penang, Borneo, Rangoon, Assam, Madagascar, etc.	1,500
Central American, Mexican, etc.	1,200
Total	115,500

To this must be added considerable quantities of reclaimed rubber, but less than in 1913.

No account is taken in this computation of stocks in hand for the reason that, on account of war conditions at the end of the year, it was impossible to ascertain how much of the rubber stored in the various foreign ports was already

CONSUMPTION OF INDIA RUBBER BY UNITED STATES AND CANADA (IN TONS)
 [From the Annual Statistical Summary of Meyer & Brown, New York.]

Details—	1910	1911	1912	1913	1914
Imports to United States	82,916	85,088	50,051	48,724	59,876
Exports to Liverpool and Continent	1,840	823	430	298	955
.....	81,576	84,265	49,621	48,426	58,921
Add stock on January 1	1,832	522	636	605	395
.....	32,908	84,788	50,257	49,031	59,316
Less stock close of year	523	636	605	895	141
Deliveries to manufacturers (rubber)	32,885	84,152	49,652	48,636	59,175
Deliveries to manufacturers (guayule)	10,656	8,091	6,105	2,756	850
Total rubber and guayule	43,041	42,248	55,757	51,392	60,025

sold, and was being held awaiting opportunity for shipment.

The rubber acreage in British Malaya continued to increase, and the official statistics of the planted surface from Jan. 1, 1913, to Jan. 1, 1914, were as follows:

	Acres	
	1913	1914
Federated Malay States	399,197	438,224
Straits Settlements	94,268	111,316
Johore	91,827	117,022
Kelantan and Kedah	84,837	45,373
Trengganu	1,497	1,510
	621,621	708,545

In Sumatra the acreage under *hevea* increased from 400 acres in 1902, to 197,530 acres by the end of 1912, in addition to plantations of *ficus elastica*. The nominal capital in Sumatra rubber plantations at this time was estimated at \$53,000,000, of which one-half was British. See CHEMISTRY, INDUSTRIAL.

BUGSKY, GENERAL. See WAR OF THE NATIONS.

BUM. See LIQUORS.

RUMANIA. A constitutional European monarchy, bordering on the Black Sea, and composed of the former principalities of Moldavia and Wallachia, with the territory of Dobruja. Bucharest in the capital.

AREA AND POPULATION. In the table below are given the area and population of the 32 districts which compose the kingdom, according to the census of Jan. 1, 1913 (Dec. 19, 1912), as compared with the returns for 1899; together with the density in 1913.

	Sq. km.	1899	1913	D.
Argesh	4,435	207,605	242,946	55
Bacau	3,978	195,194	232,146	60

New territory *	8,340		858,600	40
Total	189,693	5,956,690	7,601,660	

* Territory ceded to Rumania by Bulgaria by the treaty of Bucharest, Aug. 7, 1913.

The population was divided according to nationality (1899) into 5,489,296 Rumanians, 182,875 foreign subjects, 256,588 Rumanian, and 5859 foreign, Jews, etc. Descendants of the Magyars people central Moldavia. Bulgarians and Servians are numerous along the Danube. Hordes of gypsies are scattered over the country, and in the Doubruja are found Turks, Tatars, Bulgars, Russians, and Germans. Marriages in 1911 numbered 62,400, births 314,090, deaths 165,616, stillbirths 9082. In 1913 Bucharest had 338,109 inhabitants, Iasi (Jassy) 75,882, Galatz 71,719, Braila 64,750, Poleshti 56,594, Craiova 51,973, Botoshani 32,813, Buzau 28,781, Constantza 26,608.

EDUCATION, ETC. Primary instruction is free and nominally compulsory, but inadequate provision is made. Nearly 60 per cent of the population over 7 years of age remain illiterate. In 1900, 43.12 per cent of the army recruits could neither read nor write, and in 1910, 41 per cent.

The treaty of Berlin provides for religious tolerance and equality, but the Jews have been harshly treated. The Greek Orthodox is the national religion, and only the clergy of this Church are recognized and paid by the State. Of the total population in 1900, 5,408,743 were Orthodox, 268,015 were Jews, 168,176 Catholic or Protestant Christians, 43,470 Mohammedans, and 16,598 Armenians.

PRODUCTION. The soil is very fertile, and were it not for severe droughts would be among the most productive in Europe. A large majority of the population is engaged in agricultural pursuits, over 40 per cent of the agricultural land being in small holdings of 25 acres or less possessed by peasant proprietors. The total area returned as productive in 1913 was given at 6,003,520 hectares, of which 71.73 per cent were small enterprises of less than 100 hectares, and 28.27 per cent enterprises of 100 hectares or over. Devoted to cereals were 5,001,041 hectares, or 83.30 per cent; textile fibres, 118,715 hectares; legumes, 78,345 hectares; industrial plants (beets, tobacco, etc.), 24,757 hectares; market gardens, 23,691 hectares; forage plants, 599,010 hectares; vines and plum or

chards, 166,961. The country amply feeds itself and is able to export grain, fruits, and vegetables in large quantities. In the table below are shown area devoted to principal crops, production in quintals, and quintals per hectare yielded in 1912-13.

	Hectares		Quintals		Qs.
	1912-13	1913-14	1912-13	1913-14	ha.
Wheat	1,628,105	2,111,416	22,918,840	12,665,000	14.1
Rye	90,588	84,067	948,025	578,000	10.5
Barley	562,589	568,219	6,020,000	5,108,000	10.7
Oats	522,149	427,497	5,820,000	3,402,000	10.2
Corn	2,146,971	2,065,285	81,118,288	28,000,000	14.5
Flax	27,299	8,357	184,447	88,000	4.9
Beets *	18,014	14,785	2,828,646	217.0
Vines †	90,026	87,983	1,518,888	16.9
Tobacco	10,976	10,955	94,989	8.7

* Sugar beets.

† Production in hectoliters.

The production of wine in 1912 and 1913 (1,518,883 hectoliters) represents a value of about 55,200,000 lei. In 1912-13 the plum orchards yielded 1,844,394 quintals of fruit, valued at over 21,000,000 lei. Yield of legumes, 1912-13, 2,407,949 hectoliters; of forage plants, 13,767,915 metric quintals.

Forest products form a valuable asset. Cattle and sheep raising is an important industry, though stock raising has declined since the closing of the Austro-Hungarian frontier to the export of live animals. There were in the country (1911) 824,714 horses, 2,666,945 cattle, 5,269,493 sheep, 186,515 goats, 1,021,465 swine, 4248 mules and asses.

The fishing industry has shown notable development, so that in place of the large importation common in former years there is now an annual export valued at nearly 3,000,000 lei. Minerals and precious metals are said to abound, but only salt, coal, and petroleum are worked. Salt is a government monopoly. The output of petroleum in 1913 reached 1,885,225 metric tons—1,677,759 tons from Prahova, 125,722 from Buzau, 41,583 from Dambovita, 40,161 from Bacau.

COMMERCE. The total imports and exports for the year 1911 were valued at 616,504,872 and 691,720,408 lei, respectively. Details of the 1911 trade are given in the table below, values in thousands of lei:

Imports	1000 lei	Exports	1000 lei
Metals & mfrs.	122,555	Cereals, etc.	557,658
Textiles	91,558	Petroleum, etc. ..	40,742
Machinery	59,156	Legumes, etc.	35,217

Germany contributed imports valued at 183,713 thousand francs, and received exports valued at 33,008 thousand francs; Austria-Hungary, 136,906 and 62,874; United Kingdom, 85,470 and 55,980; France, 35,273 and 48,879; Italy, 28,554 and 49,592; Belgium, 28,109 and 263,468; Turkey, 13,476 and 21,030; Russia, 13,526 and 6971; Switzerland, 10,802 and 193; Netherlands, 4803 and 76,907; Gibraltar, 36,775 exports; etc. Vessels entered in the 1912 trade numbered 36,968, of 10,805,605 tons; cleared, 36,729, of 10,740,173. The merchant marine included Jan. 1, 1913, 117 steamers, of 30,762 tons, and 532 sail, of 167,397 tons.

FINANCE AND COMMUNICATIONS. The leu, worth 19.295 cents, is the unit of value. In the

table below are shown in lei revenue and expenditure for 1909-10, and for 1911-12, with estimates for 1912-13.

	1909-10	1911-12	1912-13
Revenue	522,842,688	478,895,230	587,983,251
Expend.	481,921,854	478,895,230	487,576,942

In the table below are details of the budget for 1913-14, amounts in thousands of lei:

Revenue	1000 lei	Expend.	1000 lei
Direct taxes	46,380	War	81,893
Indirect taxes	87,600	Finance	219,085
Stamps	84,000	Instruction	51,075
Monopolies	78,810	Interior	49,145
Public services ...	148,115	Public works	101,568
Domains	32,501	Justice	11,400
Subventions	22,518	Agriculture	10,157
Finance	73,718	Industry	4,868
Interior	3,872	Foreign affairs ...	8,187
Justice	2,219	Council	65
Foreign affairs ...	120	Extraordinary ...	8,864
Agriculture	98		
Industry	1,496		
War	550		
Public works	37		
Instruction	6,827		
Total	536,307	Total	536,307

The capital of the debt stood April 1, 1913, at 1,640,895,699 lei.

There were in operation Sept. 1, 1913, 3763 kilometers of railway, of which the State owned 3549 kilometers. State telegraph lines, 7706 kilometers, with 21,661 kilometers of wires, and 3125 stations.

NAVY. The effective fleet was composed in 1913 of 1 protected cruiser (1320 tons), 1 dispatch boat (130), 5 gunboats (607), 1 training ship (350), 1 torpedo depot (104), 3 gunboats (135), 4 torpedo gunboats (128), 3 torpedo boats (150), 4 police boats (2720), 8 torpedo vedettes (360).

ARMY. Rumania, like other European countries, requires compulsory service with liability from 21 to 42 years of age, though previous to this the recruits have a preliminary training from the age of 19 to that of 21. The peace strength of the army was estimated at slightly over 100,000, while the war strength was probably 500,000. The Rumanian army, on account of the political situation and the war, was under arms during 1914. Previous to the outbreak of the war the five army corps of which the army was composed were distributed as follows: First army corps at Craiova; second army corps at Bucharest; third army corps at Galatz; fourth army corps at Jaffy; fifth army corps at Constantza.

GOVERNMENT. The executive power is vested in a king, assisted by a council of eight members. The legislative body is composed of a senate of 120 members, and a chamber of 183 deputies, elected by a system of direct and indirect popular vote based on property qualifications. The reigning sovereign in 1914 was Charles I

(see biography of him, under his name), born April 20, 1839 (n.s.), elected to the princship in 1866, crowned King May 10, 1881. Nov. 15, 1869, he married Princess Elizabeth von Wied. He died Oct. 10, 1914, and was succeeded by Prince Ferdinand, born Aug. 24, 1865, the second son of his elder brother.

HISTORY. On Jan. 7, 1914, M. T. Majoresco announced that his cabinet, having safely conducted the country through the Balkan War, was now ready to resign. The Majoresco cabinet had been formed in October, 1912, on the basis of a coalition between the Old Conservatives (T. Majoresco) and the Conservative-Democrats (Take Jonesco), but the coalition was not firmly cemented, and in January, 1914, gave place to the Liberals (Joan Bratiano). M. Joan Bratiano formed a Liberal cabinet as follows: President of the council and minister of war, Joan Bratiano; finance, M. Costinesco; foreign affairs, M. Porumbaru; interior, M. Mortzun; agriculture, M. Constantinesco; commerce, M. Radovici; justice, M. Antonesco; public works, M. Angelesco. Beginning May 31, elections were held for the Parliament. To the Chamber were elected 143 Liberals, 2 Dissident Liberals, 21 Conservatives, 18 Conservative-Democrats, 2 Nationalists, and 2 Independents; to the Senate were elected 80 Liberals, 2 Dissident Liberals, 22 Conservatives, and 13 Conservative-Democrats. It will be seen that the Liberals controlled a clear majority in both houses. In June the Czar of Russia paid a brief visit to King Charles. The meeting of the two monarchs on Rumanian soil at Constantza was regarded as an international event of great importance, emphasizing Rumania's predominant position among the small nations of the Near East, and signaling the desire of the Russian government to win the affections of Rumania. The widespread expectation, that at this time would be announced the engagement of Prince Charles of Rumania to the grand duchess Tatiana of Russia, was disappointed. But even without that seal of the Russo-Rumanian *rapprochement*, Austria-Hungary was severely displeased by the Constantza meeting; for within the dual monarchy there was much anxiety lest Rumania, forsaking her old friendship with the Triple Alliance, should become a satellite of the Triple Entente and conceive the ambition of "redeeming" the 3,000,000 Rumanians living under Hapsburg rule in the Provinces of Transylvania and Bukovina, and adjacent regions of Hungary. This anxiety, and a series of untoward incidents, tended to trouble the relations between Rumania and Austria-Hungary. In the summer of 1914 Rumania appeared to be exerting all her influence to maintain the treaty of Bucharest. The Rumanian capital was the rendezvous for Greek and Ottoman delegates, who came to arrange an agreement between Greece and Turkey. These negotiations were interrupted by the advent of the great European War in August, but the Rumanian government still declared its intention of defending the Bucharest treaty, and rumor pointed to efforts of Rumania in the direction of forming a neutral Balkan bloc. Within Rumania there was a considerable demand for immediate participation in the war against Austria-Hungary, a demand which was all the more insistently made since far-reaching military reforms and the formation of 40 new reserve battalions of infantry had but recently added to the

strength of the excellent Rumanian army. That Rumania nevertheless remained neutral was ascribed in no small part to the influence of King Charles, who naturally favored the Germanic Powers, having himself been a German Hohenzollern prince before his election to the throne of newly united Rumania, almost half a century ago. The entry of Rumania into the war was confidently predicted, however, when the death of King Charles, on October 10, brought to the throne Crown Prince Ferdinand Victor Albert Meinrad (of Hohenzollern), who, having married an English princess, was presumed to be more favorable to the Triple Entente. At the opening of Parliament on November 28, King Ferdinand exhorted his people to be united in their patriotism, but he exhibited no intention of abandoning the policy of neutrality. The report that Rumania had ceded the Dobrudja back to Bulgaria, if reliable, would seem to indicate that either for the purpose of preserving peace in the Balkans, or for the purpose of securing Bulgarian neutrality, in case of Rumania's entering the war, it was desirable to purchase Bulgarian good-will. At the same time it was widely reported, though without official confirmation, that some kind of working agreement had recently been formed between the governments of Rumania and Italy relative to their respective relations to the War of the Nations.

RURAL CREDIT. See section so entitled under AGRICULTURE.

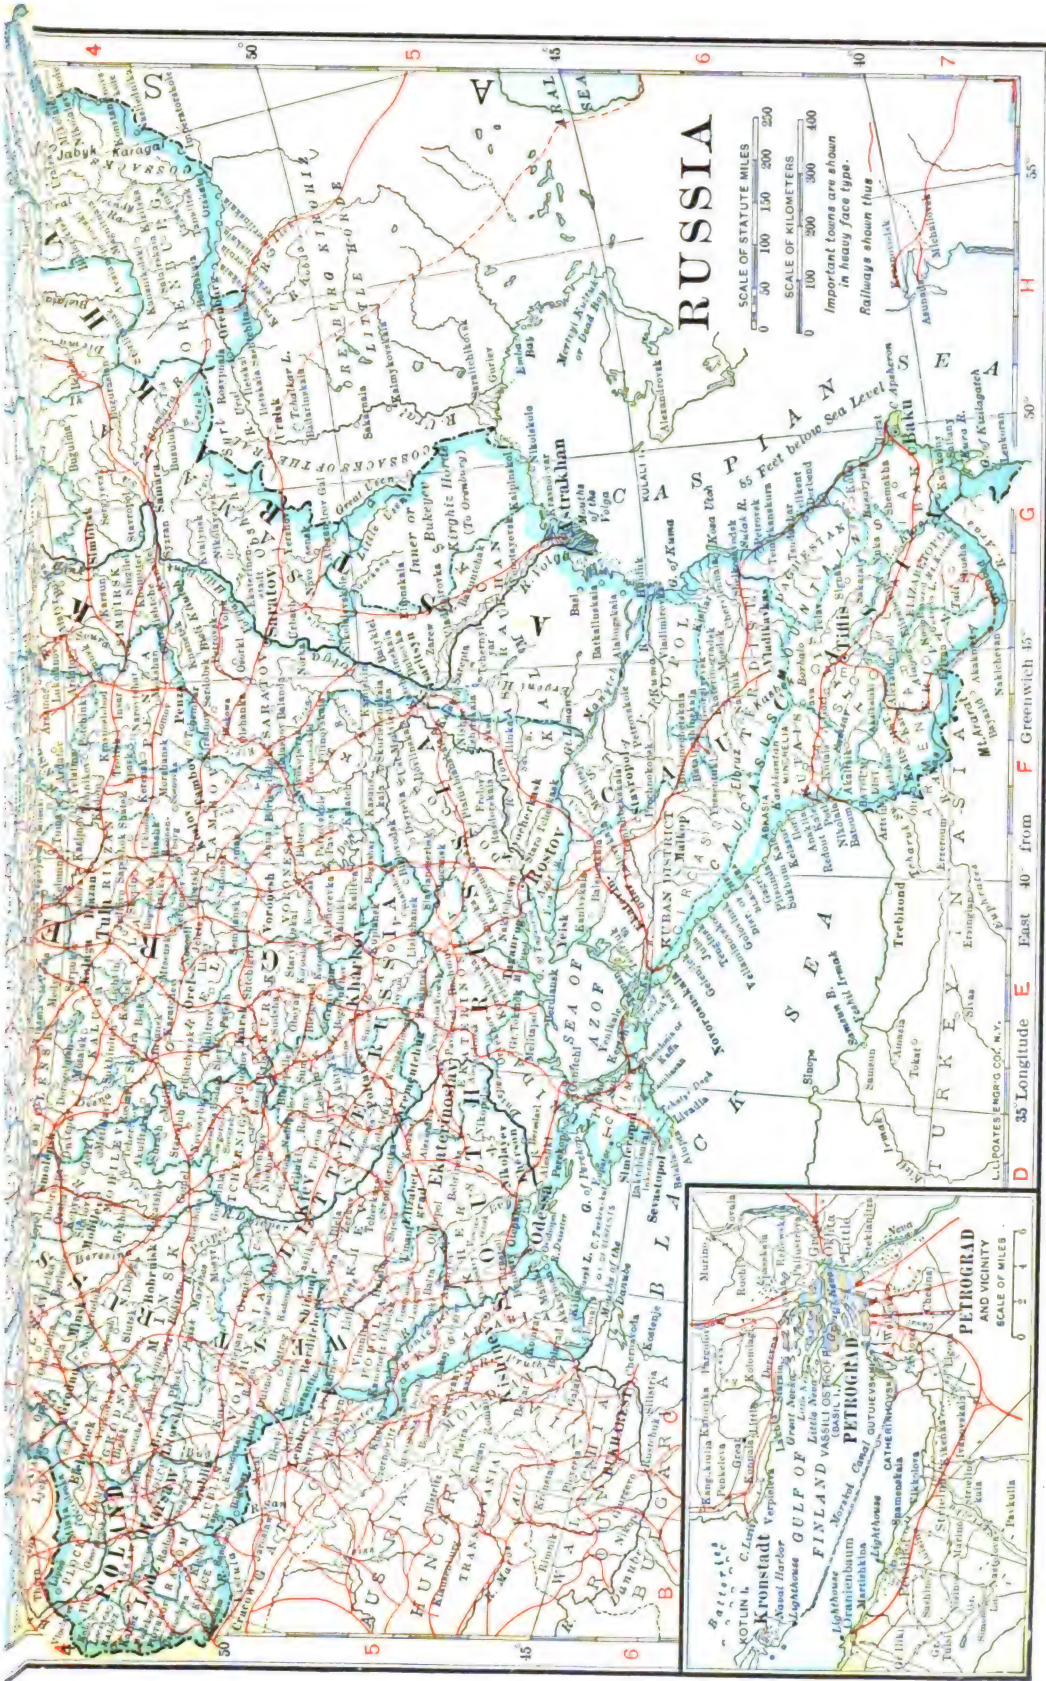

RUSSIA. A vast empire made up of a large part of eastern Europe and northern Asia; it extends from the Baltic to the Bering Sea, and from central Europe and Asia to the Arctic Ocean. Capital, Petrograd.

AREA AND POPULATION. The first Russian census was taken Jan. 28, 1897. The results of that census, and the population as calculated Jan. 1, 1911, together with the area, exclusive of the great internal waters, in square versts (1 square verst = .439408 square mile), are shown in the table below:

	Sq. versts	1897	1911
European Russia	4,238,711.7	94,215,400	120,528,000
Poland	111,554.2	9,455,900	12,467,800
Caucasus	412,810.8	9,248,700	12,087,200
Siberia	10,946,644.7	5,699,000	8,719,200
Central Asia	3,110,628.7	5,724,700	10,107,800
Finland	286,041.8	2,555,500	3,115,197
Total	19,099,886.9	126,896,200	167,084,200
* 21,741,600 sq. kilometers; 8,394,018 sq. miles.			

As calculated for 1858, the total population numbered 74,556,300; as calculated Jan. 1, 1912, the total for the empire was 171,059,900. Of the total in 1912, 122,550,700 (a density of 28.9 to the square verst) were in European Russia, 12,778,100 (114.5) in Poland, 12,288,100 (29.8) in the Caucasus, 9,577,900 (0.9) in Siberia, 10,727,000 (3.4) in central Asia, 3,140,100 (11.0) in Finland. The density of the empire as a whole was 8.9 in 1912. Of the total population, 85,726,300 were male, and 85,333,600 female. The population of the towns was 23,839,900 in 1912, or 13.9 per cent of the whole. In European Russia the town population was 13.2 per cent; in Poland, 23.3; in the Caucasus, 13; in Siberia, 11.6; in central Asia, 13.6; in Finland, 15.1; including Bokhara, Khiva, and the inland seas, the total area of the empire is

22,556,520 square kilometers, or 8,709,116 square miles; total population, Jan. 1, 1912, 173,359,900 (Bokhara 1,500,000, Khiva 800,000).

The Slav element predominates, totaling, in 1897, 92,100,000—Russians, 83,900,000 (66.3 per cent Great Russians, 26.6 Little Russians, and 7.0 White Russians); Poles, 7,900,000. In the table of races by percentages in the divisions of the empire, seen below, A=Russians, B=Turco-Tatars, C=Poles, D=Finns, E=Jews, F=Lithuanians, G=Teutons, H=Kartve-

316,163 emigrants and 36,787 forerunners); 1911, 226,062 (189,791 and 36,271); 1912, 259,585 (201,027 and 58,558). The number returned to European Russia in 1910 was 146,145; 1911, 142,952; 1912, 98,388. The growing confidence in friendly relations between Russia and Japan greatly favors the eastward movement. Emigration to the United States and other overseas destinations is impossible of accurate calculation, as many escape from Russia without passports. The number of Russian emigrants

	A	B	C	D	E	F	G	H	I	J	K	L
European Russia	80.0	4.9	1.2	3.6	4.0	8.0	1.4	0.1	0.2	1.6
Poland	6.7	0.1	71.8	0.1	18.5	8.8	4.8	0.2
Caucasus	34.0	20.2	0.8	0.1	0.4	0.1	0.6	14.5	11.7	12.0	0.2	5.9

lians, I=Caucasian mountaineers, J=Armenians, K=Mongols, L=others.

Of the total population, 69.90 per cent belong to the Orthodox creed, 10.83 are Mohammedans, 8.91 Roman Catholics, 4.85 Protestants, 0.96 other Christians, 0.50 other non-Christians. Those belonging to the Orthodox Church form 89.97 per cent of the total population of Siberia, 83.58 per cent of the total population of European Russia, 50.94 per cent of that of the Caucasus. Mohammedans form 90.29 per cent of the population of central Asia, 34.54 of that of the Caucasus. In Poland, 74.32 per cent of the population are Roman Catholics; in Finland, 98.0 Protestant. The Jews are found in Poland, forming 14.01 per cent of the population, and in European Russia 4.07. All Russians, Rumanians, the majority of the Kartvelians, and a few Turco-Tatars and Finns belong to the Orthodox Church; the majority of the Turco-Tatars and the Caucasian mountaineers are Mohammedans. There are calculated to each thousand of the population 771 peasants, 107 burghesses, 66 native non-Russians, 23 Cossacks, 15 nobles, 5 clergy, 5 professional, official, etc., persons, 8 of other classes. Engaged in agriculture are 74.6 per cent of the people; in the industries, including the making-up of raw materials, 9.6; commerce, 3.8; transport, 1.6; State service, 1.4; private employment, 4.6.

The latest figures available for the movement of the population in European Russia are for 1909, and return 917,287 marriages, 5,123,976 births, 3,374,915 deaths. The highest percentage of marriages is found among the Mohammedans, 10.9; Orthodox, 8.9; Jews, 7.4; Roman Catholics, 7.1; Protestants, 6.7. The average birth rate is 46.1 (Germany, 34.1; Austria, 36.0; Hungary, 37.2; Italy, 32.4; United Kingdom, 28.1; France, 19.7). The death rate is equally high, being 29.4 (Austria, 24.1; Hungary, 26.2; Italy, 21.8; Germany, 19.8; France, 19.6; United Kingdom, 16.0). Of the total number of infants born in 1908 (5,043,114), 32.7 per cent died under one year. The highest percentage of these deaths was in Perm government, 67.

The figures which follow regarding emigration from European Russia into Siberia are from information furnished by the Board of Emigration, and are far from complete. The total number of emigrants into Asiatic Russia from 1896 to the end of 1909 is returned at 3,616,993, of whom 2,920,626 were actual emigrants, and 696,367 were forerunners sent ahead to search out sites. Emigrants in 1910, 352,950 (of whom

who landed in New York in 1910 was stated at 136,860. Total emigrants to the United States in 1910, 189,377; 1911, 160,970.

A few of the larger cities in European Russia follow, with their population as calculated in the year given in parenthesis: Petrograd (1913), 2,018,596; Moscow (1911), 1,533,400; Warsaw (1911), 864,000; Odessa (1911), 498,100; Kiev (1911), 446,800; Lodz (1911), 403,720; Riga (1912), 331,300; Kharkov (1911), 223,700; Saratov (1912), 206,300; Vilna (1911), 188,300; Kazan (1911), 182,540; Ekaterinoslav (1911), 151,200; Astrakhan (1912), 150,200; Revel (1914), 136,500; Tula (1912), 131,125; Rostov-on-Don (1911), 124,500; Kishinev (1912), 123,100; Minak (1912), 112,600; Nizhni-Novgorod (1912), 108,800; Samara (1912), 104,400; Nikolaiev (1911), 97,500; Orenburg (1911), 93,600; Orel (1912), 93,200; Voronezh (1912), 92,400; Berdichev (1912), 88,600; Vitebsk (1911), 86,100; Libau (1911), 86,000; Kherson (1911), 85,300; Kursk (1912), 84,400; Kovno (1912), 84,100; Yaroslavl (1912), 82,800. In Asiatic Russia: Baku (1912), 226,400; Tiflis (1912), 194,900; Tashkent (1912), 194,600; Omsk (1912), 129,200; Kokand (1912), 117,200; Tomak (1911), 108,800; Namangan (1912), 107,200; Ekaterinodar (1912), 100,600; Ussurisk (1912), 94,200; Vladivostok (1911), 93,200; Irkutsk (1912), 90,800.

EDUCATION, ETC. The control and maintenance of primary schools is divided between the ministry of public instruction and the holy synod. Excepting in Finland, education facilities are totally inadequate, and in the rural districts many of the reported schools exist on paper only. The teachers are without proper qualifications, and a large part of the appropriation intended for educational purposes is entrusted to the holy synod for disbursement. Such provision as exists is out of all proportion to the needs of the population, not more than 10 per cent of whom receive instruction of any sort. Russian has been made the language of instruction in primary schools in Poland for all subjects except religion. The admission of Jews into the universities within the pale is limited to 10 per cent, in other provincial universities to 5 per cent, and in Petrograd and Moscow to 2 per cent. There were reported to be in the empire Jan. 1, 1911, a total of 123,864 educational establishments, with 7,901,477 pupils (5,412,156 male, and 2,489,321 female)—90,418, with 6,304,366 pupils, in European Russia; 2780, with 235,534, in the cis-Caucasian provinces;

6776, with 475,105, in Poland; 5923, with 213,634, in Finland; 2693, with 144,254, in the Caucasus; 5687, with 309,422, in Siberia; and 9587, with 218,962, in central Asia. There are estimated to be 14,166 non-Christian schools in the

of 62 pounds in 1911). In the table below are given official figures for area in hectares, and production in quintals of main crops for comparative years, with the production per hectare in 1912-13:

	Hectares		Quintals		Qs. ha.
	1912-13	1913-14	1912-13	1913-14	
Wheat (a)	6,997,857	7,370,005	79,874,137	80,841,993	11.4
(b)	18,119,961	17,849,265	147,601,442	106,246,121	8.1
Rye (a)	28,841,839	28,786,027	242,578,859	286,876,080	8.4
(b)	246,778	254,552	1,879,887	1,598,078	7.6
Barley (a)	174,034	187,585	1,699,047	1,934,878	9.8
(b)	12,088,657	12,394,995	119,699,938	101,595,544	9.9
Oats	17,018,445	17,277,887	160,475,747	128,421,033	9.4

Flax	1,487,781	6,209,780	4.2
Beets *	740,462	128,276,527	123,517,160	166.5

(a) European Russia (63 governments).

(b) Asiatic Russia (10 governments).

* For sugar.

empire—Jewish kheders and Mohammedan madrasahs. Secondary establishments include gymnasia, progymnasia, realschulen, and commercial schools, but the attendance is small. A list of universities follows, with an approximate estimate of the number of students: Moscow 9940, Petrograd 8466, Kiev 4098, Kharkov 5274, Yuriev (Dorpat) 2749, Warsaw 1556, Kazan 3484, Odessa 3193, Tomsk 1347, Saratov 197.

AGRICULTURE. The area extending from the Baltic Sea to the Black Sea is exceedingly fertile, and produces cereals in abundance. The northern tundras are frozen nearly the year round, producing pasture grass and berries only for a few weeks in midsummer. The greater part of the area in the interior provinces and nearly all of Siberia are covered with dense forests, and in the south are great sand steppes. The total area returned as under private ownership in 1909 was 102,935,619 dessiatines (1 dessiatine = 2.7 acres), of which 26,812,251 belonged to the peasants, 49,361,865 to the nobles, 16,093,971 to merchants, etc., 154,689,573 to the crown, churches, etc., 15,778,677 to corporations. The distribution of agricultural lands in 1909 is as follows, in dessiatines: European Russia (50 governments), 74,880,300 under crop, 23,549,600 under pasture, 139,543,700 under forest; Poland, 5,163,700 under crop, 867,700 pasture, 2,177,200 forest; Caucasus, 7,546,300 under crop, 1,953,100 pasture, 4,967,200 * forest; Siberia, 5,273,600 under crop, 5,568,500 pasture, 228,189,100 * forest; central Asia, 1,733,600 under crop, 2,597,900 pasture, 15,370,700 * forest (the * indicates the forests administered by the forestry department). In the following table are shown areas in the great divisions under all cereals in dessiatines, the total production of cereals in thousands of poods (1 pood = 36.113 pounds) for 1912, and the mean crop in thousands of poods for the period 1907-11:

	Des.	P. 1912	P. 1907-11
European Russia ..	68,848,552	3,896,205	2,852,474
Poland	3,182,682	243,230	215,527
Transcaucasia	1,680,522	85,670	72,634
Western Siberia	8,480,100	155,787	126,672
Eastern Siberia	607,129	27,758	26,844
Steppes	1,747,682	72,048	85,545
Turkestan	2,057,890	106,815	94,887
Total	76,004,557	4,087,007	3,428,674

The above figures are exclusive of winter barley and oats. Hemp and flax are extensively cultivated, and of late years potatoes (37,399,474 tons in 1912) and tobacco (7,716,926 poods

The production of flax given above is for seed. The production of fibre in 1912-13 was 7,725,704 quintals.

LIVE STOCK. Official returns of live stock in 1911 included the following: 34,554,932 horses, of which 26,565,460 for work purposes; of the total number, 22,055,376 were in European Russia, 1,215,001 in Poland, 1,942,707 in the Caucasus, 4,643,371 in Siberia, 4,498,477 in the steppes and central Asia. European Russia had 32,241,216 cattle, 39,143,464 sheep and goats, 10,913,006 swine; Poland, 2,205,648 cattle, 950,761 sheep and goats, 587,228 swine; Caucasus, 5,915,226, 11,606,961, and 1,180,633; Siberia, 6,009,608, 5,529,864, and 1,271,722; the steppes and central Asia, 4,498,477, 21,101,420, and 135,213—making a total for the empire of 51,622,417 cattle, 78,331,475 sheep and goats, and 14,087,802 swine. In 1913 the total number of horses in the empire aged four years and over was given at 25,482,126; of horses under four years, 8,381,043; cattle, 51,354,564; sheep and goats, 73,961,797; swine, 14,232,321.

Owing to the high price of foodstuffs in recent years, tracts of land formerly used for pasture and meadow have begun to be turned over to grain cultivation, and the live stock industry has declined accordingly. The large herds of inferior stock, chiefly fed on rough pasture and wild hay, are giving way to a better grade, better fed and kept, but fewer in numbers. On the other hand, owing to this grading up and to the constant rise of beef prices, the value of cattle has increased approximately 25 per cent.

FUR-BEARING ANIMALS in the empire in 1910 were killed as follows: 159,779 ermine, valued at 309,071 rubles; 8101 sable, 184,760 rubles; 52,656 Siberian martin, 73,140 rubles; 4,918,861 squirrel, 1,702,225 rubles; 682,966 hare, 102,684 rubles; 3196 bear, 57,921 rubles; 17,025 wolf, 71,295 rubles; 43,163 fox, 315,653 rubles; 7425 martin, 78,107 rubles; 82,575 weasel, 61,725 rubles; 26,612 arctic fox (*Vulpes lagopus*), 303,313 rubles. No method of conservation is practiced and no close season obtains. The fur-bearing animals are therefore rapidly decreasing, and ultimate extermination will be the inevitable result unless government measures are taken to promulgate game laws as in other countries.

Off Novaya Zemlya and Spitzbergen, the White Sea and the Mourman coast, great numbers of the harp seal are captured annually, as many as 60,000 being taken off the Mourman coast. The Caspian Sea and the Sea of Aral also contain large numbers. The Caspian fish-

eries yield between 150,000 to 200,000 poods of oil annually, 1000 seals yielding about 10 tons of oil.

FISHERIES. The principal regions where fishing is carried on, the number of persons engaged in the industry, the quantity yielded in poods, and the value in rubles are shown in the table below for 1912.

	No.	Poods	Rubles
Caspian	172,000	23,167,000	66,867,000
Upper Volga	10,000	2,916,000	2,208,000
Black Sea	85,000	4,182,000	6,262,000
Baltic Sea	21,000	2,697,000	5,294,000
Lakes	11,000	1,909,000	2,928,000
Mourman *	14,000	900,000	2,000,000
Total European			
Russia	268,800	35,671,000	85,281,000
Total Asiatic Russia	38,800	8,252,000	11,924,000
Total Empire ..	298,200	43,923,000	97,155,000

* And White Sea.

The export of red caviare in 1912 was 105,000 poods, valued at 648,000 rubles; other caviare, 33,000 poods, 2,536,000 rubles.

FORESTS. Exclusive of Finland, the forests of European Russia cover an area estimated at 345,000,000 acres, of which 61.8 per cent belong to the state, 25.6 per cent to private owners, 7.6 per cent to the peasants, 3.2 per cent to the crown, and 1.8 per cent to other owners. Of the 17,500,000 acres in forest in the Caucasus, about 7,500,000 belong to the state. Seventy per cent of the Ural provinces is under forest, 68 per cent of the northern provinces and 57 per cent of the Lake provinces. Approximately 65 per cent of the total forests of the empire are government-owned, 23 per cent is owned by landed proprietors, and 9 per cent by the peasants. The table below shows area in dessiatines of crown forests, area worked by the government, gross receipts, and net expenses (not including Zemstvo taxes) in rubles for 1910:

	Total D.	Worked D.	Receipts	Expenses
European Russia	105,838,965	84,810,741	62,911,848	17,966,152
Poland	778,536	720,878	6,690,888	748,040
Caucasus	4,930,524	8,099,068	1,008,877	605,478
Siberia	217,192,875	77,455,522	8,185,856	2,058,214
Central Asia	20,864,292	14,264,890	1,099,133	653,998
Empire	349,094,692	179,851,094	74,840,602	22,018,882

With the additional expenses of station maintenance (837,651 rubles), the total expenditure of the crown forest administration amounted to 22,851,533 rubles; leaving a total net profit of 51,989,069 rubles.

MINING AND METALS. Vast mineral treasures are found in the Obdorsk, Ural, and Altai mountains. The table below gives the production for comparative years of the most important products of the mining and metallic industries, in poods:

	1909	1910	1911
Gold	3,467 1/4	3,885 1/4	3,584
Platinum	812 1/4	884 1/4	852 1/4
Silver	941	906	947
Lead	49,678	79,743	75,585
Zinc	586,484	661,638	745,575
Copper	1,125,885	1,385,044	1,594,087
Pig iron	176,122,472	185,115,752	219,113,278
Iron and steel	146,415,257	178,198,487	176,245,287
Manganese	45,092,205	44,653,627	43,122,508
Coal	1,682,218,785	1,521,984,858	1,724,689,649
Naphtha	568,002,720	587,669,880	558,748,855
Salt	148,437,840	126,254,728	122,940,880

For the year 1912 the Russian customhouse returns show a total export of petroleum and petroleum products of 48,591,000 poods, valued at 36,013,000 rubles (50,264,000 poods, 29,039,000 rubles in 1911), made up as follows: lighting oils, 21,773,000 poods, valued at 15,380,000 rubles; lubricating oils, 16,466,000 poods, 12,799,000 rubles; light oils (benzine, etc.), 7,072,000 poods, 6,539,000 rubles. There were Feb. 1, 1912, 4284 oil wells in the Baku districts—2322 producing, 185 drilling, 270 cleaning and deepening, 44 trial bailing, 14 cementing, and the remainder temporarily idle. Petroleum refineries in operation in 1912, 29, of which 11 produced kerosene, 8 part kerosene and part lubricating oil, 3 lubricating oil, 7 benzine, etc. Kerosene produced 1912, 1,247,000 tons, benzine 215,000 tons, lubricating oil 375,000 tons, mazout (petroleum residue) 2,620,000 tons. An estimate of the total output of petroleum for the empire in 1912 is 565,300,000 poods, and for 1913, 560,000,000. The total coal output for the empire in 1912 is given at 1,904,400,000 poods. Pig iron 1912, 256,264,000 poods; steel and rails, 274,946,000; copper, 2,046,780.

MANUFACTURES. The total number of industrial establishments Jan. 1, 1913, was 17,356, employing 1,347,874 men, 571,721 women, and 136,010 male, and 95,586 female, children. Of these, distilleries numbered 2974, producing alcohol aggregating 133,230,000 gallons. Sugar works in operation, 287, with a total sugar production of 86,823,000 poods. Cottons are manufactured, chiefly in Poland. Other manufactures are flax and silk, tobacco, hemp, paper, flour, furniture, etc. Agricultural machinery is now made on a large scale. Distilling is a government monopoly. Prohibitive import duties protect the manufacturer, but the high cost of fuel and the inadequacy of transport facilities are insurmountable obstacles at present to the proper development of home industries.

COMMERCE. In the table below is shown the

1912 trade, total imports and exports, and imports and exports by great classes, by the great avenues of distribution—A, by way of the European and Black Sea (Caucasus) frontiers; B, across the Asiatic frontier; C, to and from Finland; D, total across all frontiers.

	A	B	C	D
Total imports ...	972,502	156,683	42,587	1,171,772
Foodstuffs	183,645	71,280	4,772	209,647
Raw mtrls., etc.	505,254	40,432	9,880	555,516
Live animals...	1,553	9,401	1,025	11,979
Manufactures .	882,050	85,620	26,960	894,680

	A	B	C	D
Total exports ...	1,267,779	201,896	49,622	1,518,797
Foodstuffs	798,587	81,086	81,829	821,452
Raw mtrls., etc.	510,656	70,613	7,776	589,045
Live animals ..	80,058	948	20	81,021
Manufactures ..	18,488	48,799	9,997	77,279

The statistics to follow relate to trade by way of the European and Black Sea (Caucasus) frontiers and to and from Finland. Some of the important exports are shown below in thousands of rubles for three years.

	1911	1912	1913
Cereals, flour, etc.	785,171	546,567	589,942
Eggs	80,747	84,655	90,639
Dairy produce	78,068	70,221	71,159
Sugar	48,259	36,384	6,198
Fish and caviare	7,891	5,958	7,893
Tobacco and cigarettes ...	5,783	5,957	6,544
Meat	5,907	8,984	9,398
Alcohol, gin, and wines ..	7,059	8,791	4,680
Various	25,167	21,686	21,298

In the table below is detailed the export of cereals for three years, values in rubles.

	1910	1911	1912
Wheat	405,200,000	258,700,000	192,200,000
Rye	29,900,000	42,600,000	29,000,000
Barley	158,400,000	214,400,000	152,800,000
Oats	63,700,000	78,200,000	51,800,000
Corn	19,200,000	57,500,000	87,800,000
Wheat flour ...	11,500,000	9,700,000	7,800,000
Rye flour	5,800,000	9,700,000	6,100,000
Bran	24,500,000	21,500,000	86,300,000

The next table gives imports and exports by great countries of origin and destination in thousands of rubles for four years.

Imports:	1909	1910	1911	1912
Germany	354,000	440,900	476,800	519,100
United Kingdom	128,000	153,500	153,800	139,800
United States ...	57,900	73,800	100,800	85,700
France	49,000	59,400	56,200	55,200
Austria-Hungary ..	26,900	34,100	33,800	82,100
Netherlands	18,000	19,800	17,400	19,100

Exports:	1909	1910	1911	1912
Germany	887,000	890,500	490,100	453,700
United Kingdom ..	288,700	815,000	336,700	327,200
Netherlands	189,200	196,000	188,800	154,000
France	89,100	93,600	90,800	98,000
Italy	60,900	49,700	68,000	73,400
Belgium	64,400	66,500	55,800	58,900
Austria-Hungary ..	67,800	75,200	52,700	52,500
Denmark	86,700	26,500	35,600	88,100

A decrease is apparent in the export of foodstuffs and an increase in raw and partly manufactured articles. The exports of wheat, rye, barley, and oats were the smallest since 1908. The export of cereals declined in value 25.7 per cent. The export of eggs in 1912 was valued at 84,655,000 rubles; butter, 68,077,000 (80,757,000 and 70,862,000 in 1911). Leaf tobacco, 4,633,000 rubles; alcohol and spirits, 8,338,000; timber, 152,500,000.

The import of cereals has declined. The import of tea by all frontiers in 1912 was 2,267,501 poods black, 1,273,943 brick, 504,049 green. The import of raw cotton by European frontiers was valued at 81,628,000 rubles and by Asiatic frontiers, 12,608,000. An increase in the import of pig iron is due to a government bill permitting its importation under a temporarily reduced tariff.

SHIPPING AND COMMUNICATIONS. The latest available figures are for 1911. In the table below are shown number and tonnage of ships entered and cleared for comparative years:

	Number		Tons	
Entered:	1910	1911	1910	1911
White Sea	1,180	1,054	830,000	797,000
Baltic	7,448	7,898	5,547,000	5,805,000
Black & Azov.	5,835	4,749	7,555,000	7,344,000
Pacific Coast	725	1,068,000
Total	13,911	14,226	14,932,000	15,014,000
Cleared:				
White Sea ...	1,079	1,101	829,000	794,000
Baltic	7,525	7,729	5,629,000	5,837,000
Black & Azov.	5,220	4,575	7,424,000	7,168,000
Pacific Coast	708	1,035,000
Total	13,824	14,013	13,882,000	14,829,000

The Caspian Sea coasting traffic totaled 16,903 vessels, of 10,094,000 tons, in 1911; the Danube coasting traffic, 1230 vessels of 479,000 tons. The registered merchant marine Jan. 1, 1913, was as follows: White Sea, 490 vessels, of 35,023 tons (70 steamers, of 12,230 tons); Baltic, 963, of 186,129 (243 of 12,908); Black and Azov, 1322 of 281,895 (413 of 230,826); Pacific, 47, of 20,308 (38, of 19,896); Caspian, 823, of 232,250 (252, of 111,054)—a total of 3645 vessels, of 756,605 tons (1016 steamers of 486,914).

Exclusive of Finland there are in European Russia 153,782 miles of rivers, canals, and lakes, and in Asiatic Russia 86,422; of these, 20,670 miles in European and 21,421 miles in Asiatic Russia are navigable for steamers, 7482 and 8678 for small sailing vessels, and 88,739 and 33,224 for rafts.

In the following table are shown the length in miles of railways in European Russia and in Asiatic Russia; length of telegraph lines and of wires; number of letters and post cards carried, books, periodicals, and parcels sent by post, and money and postal orders registered:

Railways:	1909	1910	1911
E. Russia	34,465	34,581	35,447
A. Russia	10,485	10,497	10,578
Telephones:			
Lines ..	120,865	126,488	134,036
Wires ..	425,969	459,530	476,177
Posts:			
Letters ..	1,209,656,000	1,851,456,000	1,463,258,000
Book post ..	610,926,000	677,558,000	718,047,000
Postal orders ..	41,828,000	46,055,000	47,670,000

The total length of railways in operation Jan. 1, 1913, was 46,839 miles, including 2347 miles in Finland and 1079 miles of the Eastern China Railway. Lines under construction in 1913, 4991 miles of which 2823 State. Lines authorized Jan. 1, 1914, 4205 miles. Passengers carried in 1912, 235,179,382; freight transported, 229,283,479 tons. Post offices 1912, 16,991.

The Russian ministry of ways of communication announced, during 1914, that the mileage of Russian railroads was 43,788, of which 29,594 miles belonged to government railroads. In addition the railroads in Finland covered 2430 miles and the Eastern Chinese Railroad 1073 miles. There were also temporary lines covering 2031 miles, and 5657 miles under construction, while permission had been granted for new building to the extent of 3899 miles. The Russian railways naturally played an important part in the great European War of 1914. These railways have a different gauge from other European lines.

During the year the Russian government de-

cided to commence the construction of a railway between Petrozavodsk and Kem, and it was proposed to extend the line to the port of Alexandrovsk on the White Sea, so as to connect that body of water with the main Russian railway system. The line was to be completed within a year, and its construction was to be undertaken by the Olonetz Railway Company, which was to build a line connecting Petrozavodsk with Zvank on the Northern Railway system.

The construction of a railway has been approved by the Russian council, to extend from Moizekul, on the Perna-Revel narrow gauge line, to Riga, with a branch line to Mählgraben, near the mouth of the Dvina. A line is projected between Kharkov and Kherson, to be built by the government. The new line from Odessa to Bakhmach was to be completed in 1914; the bridge, 1200 yards long across the Dnieper was finished in February, 1913. Surveys were completed for the Kahetian Railway, a private enterprise. The Amur Railway will ultimately be carried along the north bank of the Amur to Nikolaievsk. With the improvement of navigation facilities of the lower Amur and the Amur estuary, a complete system by water and rail will unite Central Siberia with the Pacific. A line connecting Peking directly with the Siberian Railway is to be built from Peking north through Eastern Mongolia; the section from Peking to Kalgan (135 miles) is in operation.

FINANCE. Gold is the standard of value, and the ruble, par value 51.456 cents, is the unit of value. In the table below are shown in rubles actual revenue and expenditure, ordinary and extraordinary, for 1912, and the budget estimates for 1913 and 1914.

	1912	1913	1914
Rev. ord...	3,105,916,980	3,240,559,006	3,572,169,478
" extraord.	1,812,923	10,000,000	41,899,925

Exp. ord.	2,721,763,595	3,012,264,284	3,309,523,517
" extraord.	449,296,921	288,294,722	804,045,881
Total ...	3,171,060,516	3,250,559,006	3,613,569,393

The details of the budget for 1914 are given in the table below in thousands of rubles:

Rev.	1000 r.	Expend.	1000 r.
Direct taxes ...	276,007	Public debt	402,108
Indirect taxes ..	781,442	Council	8,317
Customs	287,937	Holy Synod	58,098
Royalties	1,070,228	Civil list	16,360
Domains	1,119,890	Foreign affairs ..	7,775
Land sales	1,935	War	621,565
Redemptions	945	Marine	246,111
Repayments	118,449	Finance	498,163
Various	15,852	Commerce, etc. ..	70,893
Total ord.	3,572,169	Interior	206,540
Extraord.	41,400	Instruction	169,579
		Communications ..	719,089
		Agriculture	157,520
		Justice	104,909
		Audit	12,919
		State stud	4,583
		Other	10,000
		Total ord.	3,309,524
		Extraord.	804,046
Total	3,613,569	Total	3,613,569

The national debt stood Jan. 1, 1914, at 8,811,380,000 rubles. The total gold in the state bank Nov. 1, 1914, was 1,832,742,908 rubles.

The important items of increased expenditure

for the ministry of war in 1914, were for construction of barracks, etc., 10,500,000 rubles; supplies, 7,400,000; extra pay to soldiers serving beyond their term, and their families, 3,800,000 rubles; engineering equipment, 4,600,000. The project for 1914 of the ministry of marine includes 10,180,000 rubles for new construction, 13,717,000 for naval ports, 6,171,000 increased expenditure for cruising, owing to the increased number of battleships riding the Baltic and Black Seas and to the increased cost of fuel. Extraordinary expenditure includes 435,000 rubles consequent upon the Russo-Japanese War—300,000 rubles in settlement with the Red Cross Society, 35,000 rubles auditing expenses, etc., 110,324,485 rubles for railway construction—63,280,595 for the Amur Railway, 15,000,000 for the Meref-Kherson Railway, 9,900,000 for the second track on the Siberian Railway, 6,000,000 for the strengthening of the Ussuriak Railway, and 2,016,000 for the Moscow Circular Railway, etc. Additional extraordinary expenditures were 1,406,300 rubles advances to railway companies for construction on the Chinese and Ussuriak lines, and 18,000,000 rubles for harbor construction and improvement.

ARMY. Statistics and details regarding the strength and organization of the Russian army, always more or less meagre and non-authoritative, were naturally more so in 1914, in connection with the mobilization of the troops and the actual prosecution of the war. The order for the partial mobilization of the Russian army issued on July 28 was a main cause of the war, as Germany declared war on Russia August 1. It may be desirable, however, to consider the peace strength of the Russian army on a basis of compulsory service, personal service being required from 20 to 43 years of age, and 500,000 men being forthcoming yearly. An estimate made of Russia's peace strength was 1,365,000 men, exclusive of 155,000 Cossacks and old soldiers. In 1905, after Russia had been defeated by Japan, there was considerable reorganization and modernization of the army, and between 1905 and 1914 the yearly expenditures for the army increased from over \$200,000,000 to over \$320,000,000, and the mechanical efficiency, including the aviation branch, was highly improved, while a comprehensive scheme of rapid and effective mobilization was worked out. The Russian army had modern quick-firing guns, but their rifles dated from 1891.

The disposition of the Russian forces in Europe immediately previous to the outbreak of the war, was as follows:

St. Petersburg military district, guards corps, first, eighteenth, and twenty-second army corps with the first and second guards cavalry divisions; Vilna military district, second, third, fourth, and twentieth army corps, with the second and third cavalry divisions; Warsaw military district, sixth, fourteenth, fifteenth, nineteenth, and twenty-third army corps, with the fourth, thirteenth, fourteenth, sixth, fifteenth, seventh cavalry divisions, and the first Don Cossack cavalry division; Kiev military district, ninth, tenth, eleventh, twelfth, and twenty-first army corps, with the ninth, tenth, eleventh, and twelfth cavalry divisions, and the second Cossack cavalry division; Odessa military district, seventh and eighth army corps, with the eighth cavalry division; Moscow military district, the grenadiers' corps, fifth, thirteenth, seventeenth,
